As production of soyabean in India increases, the company foresees tremendous export possibilities and hopes to be exporting soyabean meal by 1987.

4753. *Asahi Shinbun* (*Asahi Daily News, Tokyo*). 1986. Tônyû to daizu tanpaku aisukuriimu [Soymilk and soy protein ice cream. Tofutti now sold in Dipper Dan Shop in Tokyo]. Jan. 23. [Jap]
• ***Summary:*** Daie (Captain Cook) and Tofu Time have joined forces to sell Tofutti in Japan. 1 pint costs 800 yen. Soft serve is 180 yen. There are three flavors including vanilla, chocolate. Address: Tokyo, Japan.

4754. **Product Name:** Tofu Loaf.
Manufacturer's Name: Ashland Soy Works.
Manufacturer's Address: 280 Helman St., Ashland, OR 97520.
Date of Introduction: 1986. January.
Ingredients: Tofu, okara (soyfiber), oats, soymilk, onion, carrot, tamari, soy oil, nutritional yeast, spice.
Wt/Vol., Packaging, Price: 14 oz.
New Product–Documentation: Label. 1986. 4 by 2.5 inches. Red on white. "Slice & eat or fry or heat. Sprinkle in soups & salads. Makes great sandwiches too."Talk with Diana Muhs. 1988. Feb. 10.

4755. Bhatnagar, P.S. 1986. Soybean–its food uses and modern food industry. Paper presented at International Seminar on "Modernization of Food Industry." 20 p. Jan. 31. Held Jan. 31 to Feb. 3 at New Delhi. Organized by Trade Fare Authority of India. [15 ref]
• ***Summary:*** Contents: Non-food uses of soya oil. Food uses of soybean. Tofu. Soya-beverage. High protein frozen desserts. Defatted soya flour. Food uses of soya oil. Includes 12 tables. Address: Coordinator, All-India Coordinated Research Project on Soyabean (ICAR), G.B. Pant Univ. of Agriculture & Technology, Pantnagar, UP, 263145, India.

4756. **Product Name:** Nutriline (Non-Dairy Soy Ice Cream) [Chocolate, Strawberry, Coconut].
Manufacturer's Name: Fraser & Neave (Singapore) Pte. Ltd.
Manufacturer's Address: 475 River Valley Rd., Singapore 1024.
Date of Introduction: 1986. January.
How Stored: Frozen.
New Product–Documentation: *Journal of the American Oil Chemists' Society.* 1986. 63(1):60. Jan. "Soy Dessert." Fraser & Neave plant to establish a plant to make a soy ice cream in Singapore. The firm estimates that about 45% of the Chinese residing in Singapore are lactose intolerant. The marketing will stress that the product does not contain lactose, cholesterol, or preservatives. Soya Bluebook. 1987. p. 92.

4757. Frentz, Jean-Claude. 1986. Le tofu [Tofu]. *Filiere Viande* [*The Meat Industry*] 9(85):49-50. Jan. [1 ref. Fre]
• ***Summary:*** This article, in a meat industry magazine, begins: This mysterious product, whose origin is lost in the mists of time, actually seems to be going through renewed interest. Already well known and appreciated in the United States, on the West coast in particular, it has appeared in Europe, and, more precisely, in France.

Discusses the composition of tofu and the processes used to make it. A table gives the nutritional composition of the following: Tofu, firm tofu, (*tofu ferme*), soft or silken tofu (or perhaps tofu cutlets *tofu "flanc"*–it's water content is higher than that of regular tofu), tofu burger (fried), soymilk, grilled tofu, dried-frozen tofu, okara, dried yuba, pressed tofu, whole dry soybeans.

Concerning the journal title *Filière Viande,* the word *filière* normally means the thread, the path that leads to discovery. However here it is being translated as 'meat industry.' When advancing anti-meat arguments, one can speak of *la filiere viande sur le gril* ("The meat industry on the grill")–a sort of play on words. Address: Directeur technique, Soussana SA, France.

4758. Plenty Canada. 1986. The Soya Centre (Calendar). Castries, St. Lucia.
• ***Summary:*** This is the head of a calendar, 8½ by 11 inches. On the top three-fourths of the page is a large black-and-white photo of the Soya Centre, looking from the outside in through two open doors–on each of which is written "Soya Beans" in large diagonal letters, above an illustration of a soya bean plant. Inside are about 10 local black people. On the back right is a food retail counter and snack bar, staffed by several women. On the back wall is a blackboard with a price list and menu written on it in chalk.

On the bottom quarter, in large black letters is written "The Soya Centre" in an arch. A laughing Santa Claus on the left is holding the word "The." Below the arch is written the Center's address: "19 Grass St., Castries, St. Lucia. Tel: 26421." To the right of the arch is a line drawing of a dove, and below it: "With the Compliments of Plenty Canada and the Staff of the Soya Centre." The calendar itself is missing.

Talk with Maya Clarke of Ontario, Canada. 1998. June 25. Maya worked for 7 years as a nutritionist and soyfoods instructor/technician for Plenty Canada at this Soya Centre in St. Lucia. She remembers this calendar well but does not have a copy. "There could possibly be one in the Plenty archives" at Lanark, but she is not too sure. Plenty made a calendar like this for two years, and this was the first of the two. It was designed by Plenty and printed in Castries (the capital city, by the person who prints *The Voice* newspaper) in December 1985 and presented on 1 Jan. 1986 as a New Year's gift to the Center's popular customers and friends. The calendar had a photograph as the head, then one page for each month below. The soya bean plants on the two big doors were painted by a Rastafarian man named Papa. Many of the people shown in the picture, the same as those who came to the Centre, were Rastafarians, who are vegetarians (very important) and consider themselves members of the lost tribe of Israel. They esteem Marcus Garvey, who they consider one of their forerunners. Note: *Webster's Dictionary* (1985) defines Rastafarian (derived from *Ras Tafari,* the precoronation name of Haile Selassie), a word first used in 1955, as "an adherent of Rastafarianism." The latter word, first used in 1968, is defined as "a religious cult among black Jamaicans that teaches the eventual redemption of blacks and their return to Africa, employs ritualistic use of marijuana, forbids the cutting of hair [it is worn in long braids called dreadlocks (first used in 1960)], and venerates Haile Selassie as a god."

The Soya Centre, which was constructed specifically for this purpose by the team just before Maya (John Baranni and Christine Kilgour from Plenty with local labor), was located in the middle of a black ghetto in Castries, and there were lots of social problems in the area. In the back of the Centre was a soyfoods factory. The factory was used to train all the people who subsequently opened up soyfoods businesses in St. Lucia. "What went on with soyfoods in St. Lucia was very significant–much more so than what happened in Jamaica, etc. At any given time, up to ten local people worked (for pay) at the Centre. The Centre was self-sufficient, so the money from the foods they sold went to pay the workers. Two guys would start very early in the morning (about 4:00 a.m.) to make soymilk and tofu. Then a crew of ladies would come in about 7:00 a.m. and use the tofu and soymilk to make second generation products from soymilk, tofu, and okara–such as "bakes" (like a little doughnut) and "accras" (like a fritter, in which the traditional salt cod was replaced by okara). The use of okara made the products more affordable. Tempeh was made at time, but it did not catch on as well as tofu and soymilk, and it was somewhat hard to get the spores. "Tofu caught on almost immediately "The local people just took it up; they just seemed to know what to do with it." Soymilk ice cream was one of the most popular products. Soymilk, imported soy flour, and okara were use to make little breads. Many people would bike or walk to the Centre to buy tofu in bulk over the counter–which was also a snack bar. The Centre was both a business and an education/training center. Many local Seventh-day Adventists came to cooking classes at the center, and Maya also taught classes in their churches, schools, and homes. Maya remembers that one day a 13-year-old kid named Sooner knocked on the door of the Center at 7 o'clock in the morning and said to her: "I want to know everything there is about soyfoods." She happily invited him in, and began to teach him. For a while there was a "Comments Book" at the Centre; in it people wrote soy poems and soy songs–some of which Maya still has.

At one time some 10-12 soyfoods businesses were started in St. Lucia by local people who had first trained at Plenty Canada's Soya Centre. About 6 of those businesses are still in operation. A good example is La Soyarie. The reasons the others did not survive had nothing to do with local acceptance of soyfoods; they failed largely for reasons related to money or business management skills.

St. Lucia is a very small (27 miles long) independent country; It was granted self-government by the British in 1967 and attained independence on 22 Feb. 1979. The population is about 160,000 (1998). About 90% of the population is of African descent, with a small minority of Europeans and a few Carib Indians. Bananas are the chief crop. The official language is English, but Creole is the language most widely spoken. It is largely an oral culture.

Note: This is the earliest calendar seen (Oct. 2001) that mentions soy. Address: 19 Grass St., Castries, St. Lucia. Phone: 26421.

4759. Sig, Marie. 1986. Soja: la protéine du futur [Soya: The protein of the future]. *Physic.* Jan. p. 32, 34-35, 110. [Fre] • ***Summary:*** A brief introduction to tempeh, miso, tamari, tofu, soymilk, and soy flour from a macrobiotic viewpoint. One recipe is given, from the forthcoming French-language book, *Mysteries and Secrets of Soya,* by C. and L. Clergeaud. Address: France.

4760. **Product Name:** Soya Kaas (Cheese Alternative Containing Casein) [Mozzarella Style].
Manufacturer's Name: Soya Kaas, Inc. A subsidiary of Swan Gardens, Inc. Distributed by American Natural Snacks.
Manufacturer's Address: Manufacturer: 218 Laredo Dr., Decatur, Georgia 30030. Distributor: P.O. Box 1067, St. Augustine, FL 32085.
Date of Introduction: 1986. January.

Ingredients: Soy milk, soy oil, calcium caseinate, tofu, salt, lecithin, citric acid, guar, annatto (natural color).
Wt/Vol., Packaging, Price: Seven-pound deli blocks and 12-ounce consumer sizes. 12 oz. retails for $3.89 (1986/06, at Real Foods, San Francisco, California).
How Stored: Refrigerated.
Nutrition: Per 1 oz.: Protein 6.7 gm, fat 5.6 gm, carbohydrates 1.8 gm, calories 78, sodium 168 mg.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1986. April. p. 13 and Sept. p. 61. "Soya Kaas. The delicious, nutritious alternative to cheese. Available in consumer packages or deli blocks. Cholesterol free. Lactose free." A photo shows the product label. "Manufactured by Soya Kaas, Inc. for American Natural Snacks, St. Augustine, FL 32085."

Leaflet (2-sided, color, 8½ by 11 inches). 1986. "Soya Kaas. The Delicious, Nutritious Alternative to Cheese." On the front is a large block of the sliced cheese alternative on a cutting board atop a purple and black table cloth. To its upper left are red and green bell peppers and a pizza. To its lower left are cubes of the cheese with purple grapes and red apples on a gold plate. To its right is the grated cheese with a grater. On the back are three recipes using Soya Kaas: Chicken a la Kaas, Pita Pizza, and Eggplant Lasagna. The nutritional information per ounce is given but Soya Kaas' ingredients are not listed.

Marc Medoff. 1986. "Whole frauds in the news: Will the *real* soy Mozzarella please stand up (that is, if there is one)." *Whole Life* (New York City). June. p. 82-84. Contains a critical discussion of Soya Kaas for appearing to be a non-dairy product when it actually contains casein. The actual label for Soya Kaas: Mozzarella Style, taken from a wholesale block of Soya Kaas, is reproduced 4 inches square; the ingredient listing is shown.

Spot in Food Distributors Magazine. 1986. Oct. American Natural Snacks of St. Augustine, Florida, introduces Soya Kaas, billed as a natural alternative to mozzarella. Unlike the cheese, Soya Kaas contains no cholesterol and is lactose free. "Soya Kaas is available in seven-pound deli blocks and 12-ounce consumer sizes. Stickers and shelf talkers are available. American Natural Snacks also is known for its nationally distributed Carafection line, which consists of carob and date sweetened bars (Almond Crunch, Cashew Coconut Crunch, Plain, Mint and Crispy Crunch) as well as a variety of bulk candies.

"The firm also manufactures Rice Crisps and Original Honey and Mint Honey Grahams, an interesting desert and snack product."

Talk with Richard Rose. 1988. Jan. 7. He thinks this is the best soy-based cheese on the market, although it contains casein. Richard McIntyre probably makes the soymilk for this cheese himself and he probably uses fresh (rather than dry) tofu, which he also probably makes.

Talk with Richard McIntyre, founder and owner of Swan Gardens, Inc. 1988. Nov. 23. His company developed this product, then launched it in Dec. 1985 and Jan. 1986. See interview.

Dec. 1988. "Fresh soy milk" is listed as the first ingredient. The manufacturer is Swan Gardens.

Talk with Richard Rose. 1990. Nov. 26. Pacific Foods of Tualatin, Oregon, sells soymilk to Richard McIntyre for use in making Soya Kaas.

Note: At least one person has tried to visit this plant using the given street address and was unable to locate it. The local police knew of no such street name and it did not appear on any maps of the area.

Letter from Atlanta Kashruth Commission. 1993. Dec. 12. Soya Kaas products are produced under the Orthodox Rabbinical Supervision of the Atlanta Kashruth Commission. The plant in which these products are made is located at 6029 Lagrange Blvd., Atlanta, Georgia 30336.

Label for Soya Kaas Mozzarella Style. 1992 (Copyright). 4.5 by 3.5 inches. Green and red on white. "No cholesterol. Lactose free." The list of ingredients reads: "Tofu (organic* soy milk, calcium sulfate), casein (a milk protein), soy oil, sea salt, lactic acid, natural flavor, lecithin. * Organic ingredients are grown and processed in accordance with the California Organic Foods Act of 1990."

Note: This is the earliest commercial soy product seen (March 1998) made or marketed by Soya Kaas or American Natural Snacks.

4761. Wasserman, Debra; Stahler, Charles. 1986. No cholesterol Passover meals. Vegetarian Resource Group, P.O. Box 1463, Baltimore, MD 21203. ii + 49 p. Jan. Illust. Index. 22 cm. [9 ref]
• ***Summary:*** This vegan cookbook contains 100 vegetarian Passover recipes. No soyfoods are used. Address: VRG, Baltimore, Maryland. Phone: 301-366-8343.

4762. Ruchi Soya Industries Limited. 1986. Display ad: Far ahead and growing stronger. *Times of India* (*The*) (*Bombay*). Feb. 3. p. 6.
• ***Summary:*** A large, creative, and very important ad. "While others in the soya industry are still talking about making Soya Food, Ruchi has already achieved it 5 years back.

"The promoters: Ruchi Soya Industries Limited has been promoted by General Foods Private Limited and Ruchi Private Limited of the Shahara Group of Industries based in Indore have an annual turnover [sales] of Rs. 50 crores [500 million rupees].

"General Foods Private Limited, the flagship Company, recognised export house, is engaged in a wide spectrum of activity which includes a solvent extraction plant of 250 tonnes (metric tons) per day, Washing Soap Plant, Edible Soya Protein Plant of 50 tonnes per day and Soya Proteins etc. It has also established a Research and Development Centre...

"Ruchi Private Limited, the other Promoter, has been a pace setter in the soya protein industry. The Company is engaged in the manufacture and marketing of high protein soya food chunks and granules for the last several years under the brand name of Nutrela. This product is an undisputed market leader having a market share of over 60%."

"The project and profitability: Ruchi Soya Industries Limited is setting up a Rs. 2.25 crores (22.5 million rupees) project to manufacture 6,000 tonnes per annum of Soya Chunks and Granules at Noida, just outside Delhi. Ruchi Soya Industries Limited has taken over the existing business of Ruchi Private Limited... This unique arrangement will eliminate gestation period and the Company will earn a handsome profit from day one.

Bright future: Ruchi Soya looks to the future with confidence. On the anvil are major diversification plans in the field of snack foods, Soy Beverages, Soya Isolates, Soya Protein Concentrates, Edible Soya Proteins, high solubility defatted soya proteins, etc.

"Issue opens on: 20th February, 1986."

"Assured 15% dividend. A sumptuous success now for you to share."

A photo shows a package of Ruchi's Nutrela lying flat on a table with coins pouring out. Address: Registered Office: 214, Tulsiani Chambers, Nariman Point, Bombay 400 021.

4763. *SoyaScan Notes.* 1986. Tally and analysis of clips from Soyfoods Clipping Service (Overview). Feb. 6. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Soyfoods Center received from Luce Press Clippings a total of 311 clips on the subject of soyfoods during the ten weeks from 17 Oct. 1985 to 6 Feb. 1986. These clips were on the following subjects: Tofu 130 clips (41.8% of total), soy ice creams 83 (26.7%; including 49 clips on Tofutti), tofu second generation products 17 (5.5%), whole dry soybeans 17 (5.5%), modern soy protein products 10 (3.2%, incl. isolates and concentrates), soy oil 10 (3.2%), soymilk 9 (2.9%), miso 8 clips (2.8% of total).

4764. Chung, Mr. 1986. Dr. Chung, Dr. Chung's Foods Company, and Vegemil in Korea (Interview). *SoyaScan Notes.* Feb. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The interviewee is Dr. Chung's nephew. Dr. Chung is a pediatrician (an M.D. in pediatrics) but he never went to high school or college. He originally developed soymilk for babies with allergy problems. Now he has 2 soymilk factories and about 1,000 employees. One plant is near Suwon (south of Seoul) and one is in Chongju (50 miles south of Seoul). He still teaches his employees, "You are the pioneers."

His Vegemil soymilk is by far the best selling brand in Korea. The flavors are plain, dairylike (lightly sweetened), with apple, and chocolate. Roughly 80% of his product is sold in soft drink bottles, 10% in Combibloc (which prints better than Tetra Brik cartons), and 10% in plastic pouches that have a shelf life of 2-3 days. Combibloc does not presently have FDA approval in the USA so these products cannot be exported to America. The second best selling soymilk in Korea is Sun-Dew, a distant second. Address: Seoul, South Korea.

4765. Karlen, Michael. 1986. Re: New developments at Soyana. Letter to William Shurtleff at Soyfoods Center, Feb. 16. 4 p. Handwritten. [Eng]
• ***Summary:*** The company recently moved to this new address with a lot more space and modern equipment. They have started to sell soymilk and soy yogurt, and also to make Tofu Ravioli and Spaetzli (pasta), in addition to their organic nigari tofu. "The general situation looks promising with Migros, Co-op, and Galactina making their own new products, like tofu ice cream, tofu bread (still in test market), and soy dessert. I believe that 1986 could become a year with another major step toward general acceptance of soy products in Switzerland... More and more of the 13 big milk processing cooperatives are getting involved in the soy business... The whole situation is really exciting." Address: Friedensgasse 3, Postfach 8039, Zurich, Switzerland. Phone: 01-202-8997.

4766. Associate Director, Import Operations Unit, (HFC-131). 1986. Revision to Import Alert #40-01–"Soy drinks, milk substitute drinks and other drinks that may serve as infant formulas." *Import Alert.* Feb. 21. 3 p. U.S. Food and Drug Administration, internal document.
• ***Summary:*** Concerns: Eden Foods' Edensoy, Soy Moo, Sun Soy, Ah Soy, Westsoy, Vitasoy, Westbrae Malteds. "All soy-type beverages, whose labeling do not recommend or imply use as infant formula and do not make claims as a substitute for milk, should be released with the comment: 'This product is not to be used as an infant formula or as the sole source of nutrition. If this product is subsequently found to be offered for those purposes, FDA will take legal or administrative action against this and/or future shipments.' The labeling of these products should also be reviewed for compliance with nutrition labeling requirements (21 CFR 101.9). If the product does not comply with nutrition labeling requirements, comment to that effect should be included in the release." Address: Washington, DC.

4767. *Times of India* (*The*) (*Bombay*). 1986. City notes: Noble Soya House. Feb. 27. p. 10.
• ***Summary:*** The company will enter the capital market on April 24 by issuing 23.53 lakh [2.353 million] equity shares at Rs. 10 each to partly finance its 18,000,000 litres per year soyamilk plant and its 2,000 tonnes per year extruded soya

products plant to be constructed at Mandideep in Madhya Pradesh.

Note: For a good history of the company Google: "Wadala Commodities" home stock. Select the URL: http://economictimes. indiatimes.com/ stocks.cms? companyid=13348. Click "Company info" then "History." On 1 Jan. 1991 Vegoils Ltd. (a profitable unit) was merged with the company. On 30 July 1991 the company name was changed from "Noble Soya House Limited" to "Godrej Foods Ltd." In 2008 the company name was changed from "Godrej Commodities Ltd." to "Wadala Commodities Ltd."

4768. *Australian Dairy Foods.* 1986. "Tofutti" takes off in Australia. Feb. p. 84.
• ***Summary:*** Distributor with sole Australian franchise for Tofutti is David Grossbaum of Shoyu Natural Foods in Melbourne. Photos show: (1) Dale Code and David Grossbaum making soft serve Tofutti. (2) "Some of the soy foods now being marketed in capital city health food shops:" Earth Angel Soyoghurt (tub), Pureharvest Soy Drink (two sizes, Vanilla, Tetra Brik), Soypreme natural soymilk in a Pure-Pak carton made near Melbourne, and Bonsoy soymilk (Barley Malt flavor in a Tetra Brik carton) imported from Japan.

Note: This is the earliest document seen (Sept. 2012) that uses the word "Soyoghurt" to refer to soy yogurt. Address: Australia.

4769. *Australian Dairy Foods.* 1986. Soymilk sales decline in Japan. Feb. p. 85.
Address: Australia.

4770. Bhatnagar, P.S. 1986. Current aspects of soybean in India. Paper presented at International Convention of "Prospects for Soybean Utilization." 25 p. Feb. Organized by Soyabean Processors Assoc. of India on 15-16 Feb. 1986 at Indore, MP, India. [11 ref]
• ***Summary:*** Contents: Introduction. Soybean in India. Production potential in India. Place in cropping system: Will not affect groundnut production since optimum soil and climatic requirements of the two crops are not the same. Progress of research. Utilization: Food uses of soybean, food uses of soya oil, potential food uses in India (defatted soya flour, tofu, soy beverages, frozen desserts). Major constraints (to development of soybean in India).

Oilseed production in India is about 12 million tonnes. In addition, India imports 1.5 million tons of edible oil at a cost of about 10,000 million rupees a year to provide only 11 mg per person per day, which is less than the recommended [by whom?] 18 gm per day. This the importance of the soybean in India become overwhelmingly apparent.

The soybean is also a good source of high-quality, low-cost protein, yielding 2-3 times as much per acre as traditional Indian pulses and at a much lower price per unit weight.

"Farmers have liked soybean because of its low input requirements for labour and nitrogenous fertilizers and wider adaptability. Due to its ability to fix atmospheric nitrogen in the soil, more than its own requirement, the fertility of the soil is improved and the crop following soybean yields better. About 30-40 kg of nitrogen per ha is saved for the succeeding crop."

"Although black soybean has been cultivated for ages in the low hills of the Kumaon and Garhwal regions of Uttar Pradesh as well as in the foothills of the Himalayas and in some scattered pockets of Central India, the crop, strangely enough, had not become popular in the sub-continent."

Tables show: (1) Average yield, oil and protein content of soybean and other pulse crops in similar conditions in India. The other crops are pigeon pea (*Cajanus cajan*), black gram (*Phaseolus mungo*), cowpea (*Vigna sinensis*), green gram [mung bean] (*Vigna radiata*). Soybean has by far the highest yield, oil, and protein content.

(2) Biological value of protein from selected commodities: The commodities are egg, soybean, corn, wheat flour, rice (milled [white]). The values are Biological Value, Protein Score, and Net Protein Utilization.

(3) Targeted and actual cultivation (ha) as well as production (tonnes) in India under the centrally sponsored scheme for soybean development (1978-1984, in 7 states).

(4) Estimated area potentially available for soybean in Madhya Pradesh and Uttar Pradesh. (5) Indigenously bread released varieties of soybean (19 varieties). Five columns show: (1) Name of variety. (2) Whether released by central or state variety release committee. (3) Area of adaptability. (4) Duration (days to maturity) (5) Yield potential (quintals per ha; 1 quintal = 100 kg). (6) Recommendations on package of practices for soybean cultivation in India. (6a) Important food uses of soybean. (7) Composition of defatted soya flour. (8) Protein and energy densities of some cooked foods and commercially available soya flours. (9) Chemical properties of wheat flour, animal protein (egg and milk) and soya flour. (9a) Protein per cent (by weight) in different food products (incl. may soy products). (10). Net protein utilization of different food commodities. (11) Composition of nutrients in 100 gm of different types of tofu. (12) Composition of whole cow milk and soya beverages. Address: Project Coordinator, All-India Coordinated Research Project on Soyabean (ICAR), G.B. Pant Univ. of Agriculture & Technology, Pantnagar, UP, 263145, India.

4771. Brady, Mary Sue; Rickard, K.A.; Fitzgerald, J.F.; Lemons, J.A. 1986. Specialized formulas and feedings for infants with malabsorption or formula intolerance. *J. of the American Dietetic Association* 86(2):191-201. Feb. [71 ref]
Address: Dep. of Pediatric Nutrition and Dietics, James Whitcomb Riley Hospital for Children, Indiana Univ. School of Medicine, Indianapolis.

4772. **Product Name:** Sustagen Gold (Dairy-soy Energy Drink) [Dutch Chocolate, or Honey Nut].
Manufacturer's Name: Bristol Meyers.
Manufacturer's Address: Australia.
Date of Introduction: 1986. February.
Ingredients: Milk, soy protein?
Wt/Vol., Packaging, Price: 250 ml Combibloc.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Australian Dairy Foods. 1986. Feb. p. 84. "Sustagen Gold uses dairy and soy foods. The increasingly popular Combibloc carton is now being used by Bristol Myers for Sustagen Gold, a high-protein, high-carbohydrate milk-based nutritional energy drink using dairy and soy foods." The new product has been under development for the past 2 years in Australia, with assistance from the CSIRO division of food research. The vitamin- and mineral-rich drink comes in the single-serve 250 ml pack in two flavors. The product is being contract packed by Murray Goulburn at its Leongatha UHT plant.

• ***Summary:*** Full page, color. "Since July, 1983, the New Food, Edensoy, has been America's #1 soymilk. Overnight it became and remains the best selling soy drink in the U.S.A." A photo shows packages of Edensoy plain and carob standing on a table. A second package of Edensoy plain is being poured into a tall glass. Address: Clinton, Michigan.

4774. Lecos, Chris. 1986. Of microbes and milk: Probing America's worst *Salmonella* outbreak. *FDA Consumer* 20(1):18-21. Feb.

4775. **Product Name:** Mamvy Kid U.H.T. Soy Milk, Mamvy Raw Soybean Milk Powder, and Soy-Beverage.
Manufacturer's Name: Odeiga and Company.
Manufacturer's Address: Umejei St., P.O. Box 100, Ibusa, Bendel/Delta State, Nigeria.
Date of Introduction: 1986. February.
Ingredients: Mamvy Kid UHT: Whole soy bean, water, sugar.
Wt/Vol., Packaging, Price: 1 liter UHT carton.
New Product–Documentation: Letter from J.A. Ogbugwo, Chairman/Proprietor. 1993. April 12. Their company has been researching and processing soybeans since 1985. "We have many local products/recipes from soyabeans at present."

Letter and labels sent by Joseph O. Ogbugwo of Odegai & Company. 1993. May 24. These products were launched in Feb. 1986. The Soy-Milk is no longer on the market.

Label #1. "Mamvy Kid U.H.T. Soy Milk." 6 by 3 inches. Blue ink on white paper. Illustration of a glass with a bulge in the middle. "Supplementary food. Keep refrigerated. Unopened it will keep for weeks without refrigeration. Best served cold. Shake before opening." The company name is given as "Odeigai Foods, P.O. Box 100, Ibusa, Bendel State, Nigeria."

Label #2. Mamvy Raw Soybean Milk Powder. 4.5 inches square. Green ink on white paper. "To prepare: To every cup of Raw Milk Powder add five (5) cups of water. Stir briskly to dissolve. Allow to boil for 15-20 minutes. To collect your milk, filter using a clean muslin cloth / linen bag. Simmer (gentle heat) for another 5-10 minutes. Cool (fast cooling advisable) by allowing to stand in a cold water container or under a running tap. Bottle, and refrigerate." The company name is given as Odeigai Foods, P.O. Box 100, Ibusa, Delta State, Nigeria.

THE BEAN COMES TRUE
Enjoy America's Favorite

Since July, 1983, the New Food, Edensoy, has been America's #1 soymilk. Overnight it became and remains the best selling soy drink in the U.S.A. Here's why:

Everyone in the family, young or old, loves Edensoy hot or cold. Edensoy is the best tasting, creamiest, smoothest, most versatile soymilk available, not to mention refreshing and nutritious. Edensoy is a staple in countless healthy households. Use as an ingredient in baking, cooking, soups, sauces, desserts, and on your cereal.

- **No Cholesterol**
- **Low Sodium**
- **High Protein**

Far more than entertainment, Edensoy is a sincere food.

Insist on Edensoy at your favorite store.

Both Eden and Edensoy are registered trademarks of Eden Foods, Inc., Clinton, Michigan 49236
(517) 456-7424

Date of Introduction: 1986. February.
Ingredients: Filtered water, organic soy beans, barley. Malted: Natural ingredients, barley malt, natural vanilla, sea salt. Mocha: Roasted chicory, dandelion, and carob.
Wt/Vol., Packaging, Price: 1 liter.
How Stored: Refrigerated.
New Product–Documentation: The Healing Exchange News. 1988. Jan. p. 7. "The only organic tofu and soymilk available in Victoria." Address: Sooke Soy Foods Ltd., 2625 Otter Point Rd., R.R. 2, Sooke, BC, V0S 1N0. Phone: 642-3263. Label. 1988, received. "Super Soy Non Dairy Beverage." Flavors: Natural, Mocha, and Malted. 5.5 by 4 inches. Self adhesive. Blue, green, and yellow on white. "Organic. Refrigerate. Use within 4 days after opening for quality, freshness."

Feb. [Ger]
• ***Summary:*** The soy-based formula resulted in significantly lower blood cholesterol levels. Address: Univ.-Kinderklinik, Wien (Vienna), Austria.

4779. Roller, Ron. 1986. New developments with Edensoy, and sales figures (Interview). *SoyaScan Notes.* March 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Eden Foods has a joint venture with Marusan (Japan), building a soymilk plant in Saline, Michigan. Some Marusan technicians are now working with them in Saline, building the plant. Its about half done and should be on stream by June or July 1986. They plan a big plant opening. The new Edensoy will be packed in Tetra Pak, which has a lower packaging cost.

In the last 2 months sales of Edensoy have been 40,000 cases of 30 packs per case. This is 600,000 packs/month. Each pack is 6.0 U.S. fluid ounces or 0.1875 quarts. So this is 28,125 gallons/month, or 337,500 gallons/year. Note: This is the first news of this exciting new venture. Edensoy soon became America's leading brand of soymilk and a very famous and profitable soy product. Address: Vice president, Eden Foods Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 800-248-0301 or 517-456-7424.

4780. Gupta, Rajendra P. 1986. Making soymilk in the absence of oxygen (Interview). Conducted by William Shurtleff of Soyfoods Center in Lafayette, March 4. 1 p. transcript. [Eng]
• ***Summary:*** Raj has applied for a patent on a process and equipment for making soymilk that eliminates oxygen from the processing environment. His unique grinder is the key piece of equipment. He does not expose the slurry to air until after it is cooked. He cooks and grinds in the same equipment. The use of alkali is not essential.

He does not want to discuss details until the patents are issued. He started by processing soymilk under a vacuum. Address: Ontario, Canada.

4781. Jones, Paul. 1986. On Michael Cole and his many soyfoods successes in England (Interview). *SoyaScan Notes.* March 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Cole started in late 1984. His partner, who has all the risk and 51% equity, is Mr. Arora, a Sikh from India. Cole has 30% equity and the finance company has 19%. Cole spent years in Los Angeles, and is a bit of a hype artist. He launched a soymilk ice cream for the Regular Tofu Co. He now has an inexpensive Japanese tofu plant with a continuous roller extractor. He tanks the milk to a spray drier or Tetra Pack machine. He has had big success with soymilk in the supermarkets. Before him all soymilk came from Vandemoortele/Alpro in Belgium. He produces private label Tetra Pak soymilks for 3-5 national supermarket chains. He is also doing an organic soymilk. His ice cream looks like it will be very successful. It is made under license for him by Bayvilles, a big company. He has made genuine inroads into the mainstream market. Last year his total sales were $525,000. He also has okara burgers. He tried a soy yogurt made from thin soymilk but it fell flat on its face. Address: Owner, Paul's Tofu, England.

4782. Noble Soya House Limited. 1986. Display ad: Soya. In Hong Kong, soya drinks outsell Coca-Cola. *Times of India* (*The*) (*Bombay*). March 23. p. 15.
• ***Summary:*** See next page. One of the most interesting, creative, well researched and well designed ads for soya foods ever seen in India. A full page ad interspersed with illustrations and logos. The text continues: "In the USA, they put soya into burgers. In the UK, soya foods earn millions every year.

"In Sri Lanka, soya flour has been added to bakery flour. And all over Europe, soya yogurt is already a rage.

"Enter Noble Soya House. A company that is getting into the exciting world of soya foods and beverages. With an investment of Rs. 11.8 crores [118 million rupees]. A company that is managed by some of the most experienced people in the foods industry. And is financially supported by two of the larger business houses in the country. Godrej. And Bhiwandiwalla, of Great Eastern Shipping fame. Both will participate in the equity and have Board representation.

"The other names: Beverage technology for the project is being supplied by Kibun of Japan, acknowledged international leaders in the field.

"Plant and equipment for beverages will be supplied by

Soya.

In Hong Kong, soya drinks outsell Coca-Cola.

In the USA, they put soya into burgers.

In the UK, soya foods earn millions every year.

In Sri Lanka, soya flour has to be added to bakery flour.

And all over Europe, soya yogurt is already a rage.

Enter Noble Soya House.

A company that is getting into the exciting world of soya foods and beverages.

With an investment of Rs.11.8 crores.

A company that is managed by some of the most experienced people in the foods industry.

And is financially supported by two of the larger business houses in the country.

Godrej.

And Bhiwandiwalla, of Great Eastern Shipping fame.

Both will participate in the equity, and have Board representation.

The other names.

Beverage technology for the project is being supplied by Kibun of Japan, acknowledged international leaders in the field.

Plant and equipment for beverages will be supplied by Alfa-Laval of Sweden, one of the world's largest suppliers of this equipment.

Equipment and know-how for extruded soya foods will be supplied by Simon Food Engineers of the UK, a major name in extruded foods.

Distribution of products will be handled by Godrej Soaps Pvt Ltd, who reach over 2,00,000 retail outlets countrywide. And by an established multinational firm that is a major force in specialised healthcare markets.

The engineered food.

The technology that Noble Soya House will be using is unlike anything presently available in India.

Technology that allows soya to be engineered to reproduce just about any food texture, flavour, shape and colour. And to produce ones not found in nature.

Technology that makes soya possibly the single most versatile food source known to man. A food source that can be engineered into soft drinks, health foods, infant formulations, bakery products, meat analogues, dairy product analogues and more. Much more.

And what makes all this particularly exciting is the fact that soya is actually a better food source than many of the foods it is replacing.

The richest vegetable protein source known.

Soya protein is the only known vegetable protein that comes close to animal protein in quality.

But that's not all. The soya bean has an exceptionally high protein content. As high as 40%.

Which means that, weight for weight, soya products can be a better protein source than cereals, most legumes, even milk.

And that's why, worldwide, governments and health organizations have backed the development of soya all the way.

The time has come.

Noble Soya House could not have been timed better.

Soya bean production in India has just crossed the 1 million tonne mark. By 1990, annual production of the crop is expected to have risen to 2½ million tonnes.

What's more, the processed foods industry in India has finally reached the take-off stage. The growing pace of urbanization, changes in social norms and changes in attitudes towards foods have all combined to create a truly large market for processed foods. As is evident from the number of food companies that have crossed the Rs.50 crore turnover mark in the last few years.

And Noble Soya House, with a wide, wide range of food and beverage products lined up, looks set to lead the take-off.

The idea is taking root.

Land for the project has already been acquired near Bhopal, the heart of soya country. Civil work has already begun.

Plant and equipment have already been ordered, and installation will start by the middle of the year.

Products specially formulated by Kibun using Indian raw materials have been tested with consumers in four cities, with a very favourable response.

Commercial production of the first products will begin before the end of the year. Other products will begin reaching shop shelves a few months later.

To change, for ever, the face of the processed foods industry.

4785. EEC Commission. 1986. EEC report on imitation milk and milk products. Brussels, Belgium. 26 p. March. [17 ref. Eng]
• ***Summary:*** Contents: Explanatory memorandum on the designations used in the marketing of milk and milk products: Issued by the EEC Commission on 20 May 1986. Introduction. General: Definitions (milk products [milk, milk products, composite products], imitation and substitute products), list of imitation products. Market for imitation milk and milk products: Factors influencing the market, market situation, commentary and forecasts. Labelling/ publicity. Conclusions.

Concerning the market situation: (a) "Cheese imitation: the UK market for these products was estimated at 2,000 tonnes/year or 0.8% of the 240,000 tonnes of UK natural cheese production in 1981. The substitute products were mainly used in formulated foods as a replacement for imported cheese.

"In the USA imitation cheese is presenting increased competition for natural cheese. In 1980 it accounted for–available reports differ–either 73,000 tonnes (4.2% of total cheese production) or 95,000 tonnes (5% of total cheese production) or up 150% from 1978.

"The major uses of imitation cheeses are in the production of frozen pizzas and school meals. Increased consumer acceptance of these products is explained in particular by their lower prices. A market forecast estimates the annual growth rate at 6.8% and sales for 1988 at 135,000 tonnes. Another market forecast for the USA suggests that by 1987 imitation cheese products could hold 15% of the total cheese market, with a growth rate of 26.4% per year. Projections for the year 2000 indicate a 50% market share for substitute cheese products.

"In Switzerland the Union Fromagere estimates that exports of Swiss cheese fell by 6.5% per year between 1982 and 1983 due to sales of imitation Emmentaler, Gruyere and Sbrinz on many major European markets.

"In Sweden it was reported in 1984 that imitation cheese products accounted for 2.5% of the cheese market.

"(b) Yellow fats: A report on the UK market for 1983 states that, in volume terms, butter accounted for 36% of the yellow fats market, compared with 64% for margarine and low-fat spreads...

"(c) Soya milk: In the United Kingdom, sales of soya

milk increased fivefold to total UK£3.5 million and estimates are that sales could reach UK£20 million by mid-1988. Taking the retail price at UK£0.64 per liter, these values correspond to 5,600 tonnes of soya milk for 1984 and 32,000 tonnes projected for 1988. (d) Coffee whiteners and artificial creams: A report dating from 1979 stated that these products accounted for less than 1% of condensed milk and cream consumption. In Denmark a report dating from 1979 stated that they account for 3% of the market in cream."

Note: This report is contained within an undated 1987 booklet titled "Soymilk Versus EEC Legislation," published by STS–Soya Technology Systems. It is also summarized in the April 1987 edition of Soyfoods (ESFA). 1(2):11-17. The full bibliography of 17 references is included. Address: Brussels, Belgium.

4786. **Product Name:** Firm Tofu (Doufu), Soft Tofu (Sui Doufu), Soymilk (Dou-nai), and Pressed Tofu (Doufu-gan).
Manufacturer's Name: Golden Gate Tofu.
Manufacturer's Address: 1265 Griffith St., San Francisco, CA 94124. Phone: 415-822-5613.
Date of Introduction: 1986. March.
How Stored: Refrigerated.
New Product–Documentation: 1987. Talk with Richard Rose. 1988. Aug. Bob Chen is the cousin of Maung Ming of Mighty Soy. The company is at Hunters' Point. Talk with Bob Chen. 1988. Aug. 16. He was born in Calcutta, India, of Chinese parents, and raised in Burma. Golden Gate is his first tofu company, and he started it from scratch in March 1986, with three products. He added pressed tofu in late 1986. Today he sells mostly to the Chinese market but some to health food stores.

Label for Soft Tofu purchased at a grocery store in Chinatown, Oakland, California. 1992. Oct. 28. 4.5 inches square. Red, blue, and white on clear plastic film. Illustration of a large red gate. Ingredients: Soy bean, water, 1/10 of 1% natural calcium sulphate. 16 oz water pack.

Form filled out and faxed by Robert Chen. 1998. July 2. The company is still in business; the address and phone number are unchanged.

NOBLE SOYA

brings together.....

Godrej

Bhiwandiwalla
(Great Eastern Shipping)

Kibun *of Japan*
(World's largest producer of Soya Milk)

Alfa Laval *of Sweden*

Tetra Pak *of Switzerland*

Simon Foods *of U.K.*

..... unmatched and versatile combination to tap the vast potential in processed food industry.

NOBLE SOYA HOUSE LIMITED has been promoted by Dr. A.S. Aiyar, a leading food technologist of international repute and is financially supported by the Godrej Group and the **Bhiwandiwalla(Great Eastern Shipping)** Group.

The Rs. 11.8 crore project, ideally located at Mandideep (M.P.) in the heart of the soyabean growing area, will manufacture Soya milk and texturised soya products.

Noble Soya has entered into technical collaboration with **Kibun Co., Ltd.,** Japan, the world's largest producer of soya milk and the complete soya milk plant is being custom-designed and supplied by **Alfa-Laval** of Sweden and **Vulcan Laval Limited** as per Kibun's specifications on a turn-key basis. Sophisticated aseptic packaging machinery is being supplied by **Tetra Pak Development Limited** of Switzerland.

The machinery and know how for the manufacture of extruded soya products is being supplied by **Simon Foods Engineers,** U.K., an international leader in the field of food extrusion technology.

Soya milk has already been widely accepted in countries like U.S.A., Japan, Korea, Singapore, Indonesia, Hongkong as well as in Europe. On account of its high nutritive value and varied uses, the market potential in India is tremendous.

Extruded soya food products also have tremendous market potential and is used as a high protein ingredient in the processed food industry as well as food products for direct consumption.

Noble Soya is entering the capital market with a **Public Issue of 26,40,000 Equity Shares of Rs. 10 each for cash at par.**

The issue will offer investors an opportunity to participate in a Company that is all set to savour big success in the processed soya food industry. An opportunity no investor can afford to miss.

NOBLE SOYA — AT A GLANCE

- Company financially supported by Godrej and **Bhiwandiwalla (Great Eastern Shipping) Groups.**
- Promoted by a leading technocrat in food and nutrition.
- Access to Godrej's vast distribution network of over **200,000** outlets.
- Technical collaboration with **Kibun Co. Ltd., Japan — World Leaders in the soya milk industry.**
- Main Plant and machinery imported from **Sweden & U.K.**
- Commercial production by last quarter 1988.
- Entry into the processed food industry which is the fastest growing sector.
- Professional management with extensive experience in food industry.
- 80 CC, 80 L and Wealth-tax benefits.
- Backward Area Concessions.
- Listing on Bombay, Indore and Ahmedabad Stock Exchanges.

• ***Summary:*** Today almost all of India's defatted soybean meal is being exported to affluent countries for use in livestock feeding. This amount increased from 140,420 tonnes in 1981-82 to 432,819 tonnes in 1984-85. In the latter period the meal, selling at 1,968 rupees/tonne earned India 851 million rupees of sorely needed foreign exchange. The author emphasizes the need for a program to utilize soy flour (especially defatted) in India. Address: Coordinator, All-India Coordinated Research Project on Soyabean (ICAR), G.B. Pant Univ. of Agriculture & Technology, Pantnagar, UP, 263145, India.

4799. Celnat. 1986. Une large gamme d'aliments de base [A large line of basic foods]. *Compas* (*Le*) (*France*) No. 26. p. 36. March/April. [Fre]

• ***Summary:*** A choice of proteins: A line of legumes. Shoyu, tamari, and miso made from soya. Soyo brand soymilk, 100% non dairy (végétal) without added sugar. Wheat gluten flour for making seitan. Whole grains. A large line of macrobiotic specialties. Futons.

Most of Celnat's cereal and legume products bear the CINAB logo meaning organically grown as certified by the Comité Interprofessionel National de l'Agriculture Biologique. Address: Z.I. Blavozy–St. Germain, 43700 Brives-Charensac, France. Phone: 71.03.04.14.

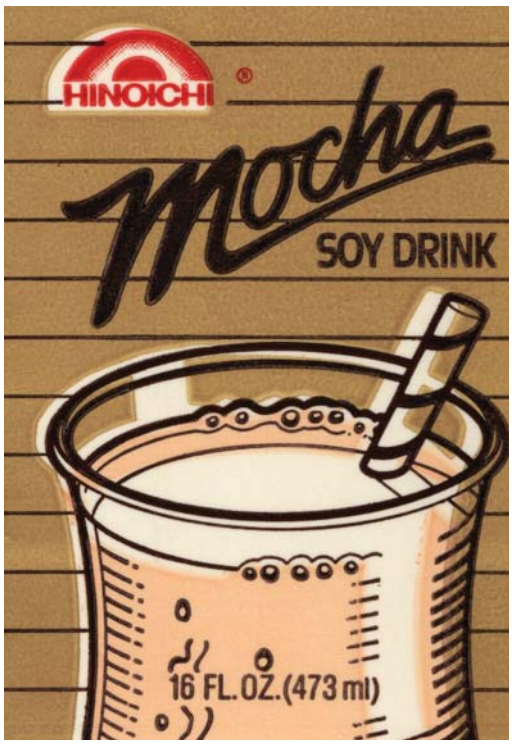
4800. Dietrich, Barbara. 1986. The Supreme Bean [Soy Supreme, St. Peter Creamery, and Oberg Foods]. *FarmFutures.* April. p. G.
• ***Summary:*** The process for making Soy Supreme (soymilk powder or spray-dried tofu powder) was developed by E.B. Oberg, founder of Oberg Foods Co. "The sole manufacturer, St. Peter Creamery Inc. of St. Peter, Minnesota, sold 500,000 pounds of the product in 1985, a spokesman says. And plans are to quadruple production this year."

4801. **Product Name:** Genice Ice Delight [Vanilla, Strawberry, Raspberry Ripple, Hazelnut, and Pistachio & Almond].
Manufacturer's Name: Genice Foods Ltd.
Manufacturer's Address: Pinfold Lane, Llay Industrial Estate, Wrexham, Clwyd LL12 0PX, Wales, UK. Phone: 0978-853-787.
Date of Introduction: 1986. April.
Ingredients: Vanilla: Soya milk [spray dried soymilk], raw cane sugar, corn syrup, vegetable oil, soya protein, vanilla bean extract, vegetable gums (guar, locust bean gum), lecithin, natural colour (annatto).
Wt/Vol., Packaging, Price: 1 litre tub.
How Stored: Frozen.
New Product–Documentation: Note: The Haldane Foods Group acquired Genice Foods Ltd. in March 1989. Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 4 and 8. This non-dairy frozen dessert was Genice's first product, launched in April 1986 in five flavors. Initially the main soy ingredient was powdered soymilk obtained from Michael Cole of Soya Health Foods Ltd., which probably imported it. But soon Genice switched to using soy protein isolates because they were less expensive and seemed to give a better product. At that time Genice bought the isolates from Macauley-Edwards (in Peterborough, eastern England), which later somehow became Purina Protein. Genice developed this product largely because they needed an actual product to show potential customers, but they never put much effort into marketing the product because they had already decided that Genice wanted to be a product development and manufacturing company and leave sales and marketing to other companies. By Jan. 1993 the product was seen an extraneous and was even competing with other soy ice creams made by Genice, so it was discontinued as part of the company's "rationalization" program.

Labels sent by Genice Foods Ltd. 1994. Feb. 18. The labels (vanilla, or raspberry ripple) for 1 liter tubs are 6.75 by 4.25 inches. A color photo shows a dish of this soy ice cream next to fruits or flowers with a brown background photo of woven reeds. "Naturally delicious. Non-dairy frozen dessert. Contains no salt, lactose, artificial colourings, emulsifiers, or flavourings." With UPC indicia.

4802. Givant, Marlene. 1986. Soy foods come of age on Long Island: No reason to resist tempeh-tation at Appropriate Foods. *Whole Life.* April. p. 63-64.
• ***Summary:*** Robert Werz and Shelley Martin, the owners, make 2,500 lb/week of tempeh and 150 gallons/week of soymilk. They also distribute some 200 other purely vegetarian and kosher products.

4803. **Product Name:** Hinoichi Soy Drink [Plain, Original (Dairylike), Mocha, or Chocolate].
Manufacturer's Name: House Foods & Yamauchi, Inc.
Manufacturer's Address: 526 Stanford Ave., Los Angeles, CA 90013. Phone: 213-624-3615.
Date of Introduction: 1986. April.
Ingredients: Mocha: Water, whole soybeans, corn sweetener, corn oil, soy oil, coffee extract, cocoa, caramel color, mono and diglycerides (prevents oil separation), sodium citrate (emulsifying salt), calcium carbonate (calcium source), salt, dipotassium phosphate (regulates acidity), carrageenan (stabilizing salt [sic]), artificial and natural flavors.
Wt/Vol., Packaging, Price: 16 fl. oz. (473 ml) Pure-Pak cartons, with 3-week shelf life.
How Stored: Refrigerated.
Nutrition: Per 6 fl. oz Mocha: Calories 150, protein 4 gm,



carbohydrates 25 gm, fat 4 gm, sodium 95 mg, cholesterol 0. **New Product–Documentation:** Ad in Rafu Shimpo and/or Kashu Mainichi. 1986. In Japanese. "Hinoichi Soy Drink. New product. Healthful beverage fresh and delicious." Talk with Harry Tanikawa. 1986. Nov. 15. The product was launched in April 1986 in Pure Pak cartons. These four flavors, targeted only to the Asian-American market, are scheduled for nationwide distribution in a foil pouch sometime in 1987. Labels. 1987. Pure Pak pint cartons for each flavor. Three or four colors on white (Blue, red, and beige for Original; Dark and light brown, red and peach for mocha; Chocolate brown, red and beige for chocolate). On side panel: "Enjoy Hinoichi Soy Drink: a delicious non-dairy alternative." Note: In the Plain product, the only ingredients are water and soybeans. Per 6 fl. oz. serving it contains 85 calories, 6 gm protein, and 80 mg or Visit HFYI plant in Los Angeles. John Yamauchi is in charge of this product. On sale at Yaohan Japanese supermarket in Los Angeles. 1988. Oct. 23. For 32 oz. sizes: Plain retails for $1.19 and mocha for $1.29. For 16 oz.: Original retails for $0.59 and mocha for $0.69.

4804. **Product Name:** ["Big Bean" (Soymilk)].
Foreign Name: Dekamame.
Manufacturer's Name: Marusan-Ai Co., Ltd.
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21, Japan.
Date of Introduction: 1986. April.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Shurtleff & Aoyagi. 1986. Soymilk Industry & Market. Update. "Marusan, Japan's second largest soymilk maker, as part of a diversification into health drinks to compensate for decreasing soymilk sales, introduces Dekamame ("big bean"), a soymilk in a liter Tetra Brik carton, made entirely from soybeans grown in Japan." • ***Summary:*** Bombay–"Textured soya protein and soya milk have been exempted from excise duty."

4809. Gupta, Rajendra ("Raj") P. 1986. Re: Selling tofu in Kanpur, India, and soymilk equipment to developing countries. Letter to William Shurtleff at Soyfoods Center, May 9. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "It is not even one year since we started selling tofu to consumers in Kanpur [India] and suddenly every one seems to be interested in soyfoods in India.

"There is a great deal of interest here in our process, and it is likely that we would have a tie up with a few companies for the use of our process. APV Crepaco (USA), APV Texmaco (India) and Kurihara (Japan) have begun making soymilk equipment based on our process. Some companies here are also interested in no-beany soymeal. I am hopeful that my extended stay here (up to the end of Aug. 1986) will help move things at a reasonable pace.

"Godrej, a large business house here, is setting up a 4000 liter/hour soymilk plant with know-how from Kibun and equipment from Alfa-Laval. Kalyan Solvent Extraction Limited is expected to setup a similar size plant with process and know-how from us and equipment considering to go into large scale soymilk production. In addition, we have enquiries from 50 companies keenly interested in setting up small scale tofu and soymilk operations similar to ours in Kanpur. Several of them have made deposits with us of up to Rs. 5,000 for the purpose." Address: Ph.D., Vice President, ProSoya Foods International Inc., 801-275 Slater St., Ottawa, ONT, K1P 5H9, Canada. Phone: 613-237-5814.

4810. Business Trend Analysts, Inc. 1986. The health and natural food market. 2171 Jericho Turnpike, Commack, NY

11725.
• ***Summary:*** Section VII is titled "The Market for Soyfoods." It is a combination of material taken without permission from Shurtleff & Aoyagi's *Soymilk Industry and Market* (especially the overview on page 96) and little bits and pieces for various sources that fail to give an accurate picture of this market. The report repeatedly speaks of the "soyfoods market" without defining which product types it is including. Part of the information is said to be based on "A special survey of 5,000 households, providing up-to-date information on changing consumer attitudes and buying patterns with respect to soyfood products." The results of this survey include consumption levels by household income, type of retail outlet, geographic region, race, age and presence of children. They project manufacturers' sales of soyfoods to be $499.5 million in 1995, assuming a compound annual growth rate of 15.3% from 1985 to 1995. Generally a disappointing study, especially for the price. Address: Commack, New York.

4811. Byrne, Maureen. 1986. Cool and classic. *Food Manufacture* (*London*) 61(5):64, 67. May.
• ***Summary:*** Sunrise Soya Ice Dream, is a soymilk ice cream from Soya Health Foods Ltd. and Hillsdown Holdings Group's Classic Ices. Classic Ices, based in Clwyd, Wales, was founded in 1983 and privately owned until February, 1985, when the giant Hillsdown Holdings Group (£1,135 million) took over. Classic Ices now makes a soy-based frozen dessert called Ice Dream under license for Soya Health Foods, Ltd. The product is based on soya milk powder rather than isolates. This non-dairy product is targeted at the health food market and those allergic or intolerant to dairy products. The same equipment is used as for regular dairy ice cream but the product requires a longer aging period of greater than or equal to 12 hours. The product is available in 4 flavors: vanilla, hazelnut, carob, and wildberry. A photo shows four liter packs of the product.

The dairy ice cream market in the UK is currently worth over £430 million. and is dominated by Lyons Maid and Wall's. Address: UK.

4812. Escueta, Elias E.; Bourne, M.C.; Hood, L.F. 1986. Effect of boiling treatment of soymilk on the composition, yield, texture and sensory properties of tofu. *Canadian Institute of Food Science and Technology Journal* 19(2):53-56. May. [23 ref. Eng; fre]
• ***Summary:*** Soymilk was boiled for 0, 12, 30, and 60 minutes before coagulation with calcium sulfate to make tofu. A texture profile and analysis was performed on the product obtained. Hardness and gumminess increased slightly up to 12 minutes of boiling but decreased significantly after 30 and 60 minutes of boiling. Chewiness decreased significantly after 30 and 60 minutes of boiling. Springiness was not affected by boiling. Cohesiveness increased slightly after 12 minutes boiling and then decreased slightly but not significantly after 30 and 60 minutes of boiling. Composition and sensory qualities of tofu were not significantly affected by the length of time soymilk was boiled prior to coagulation. Address: Inst. of Food Science, Cornell Univ., Geneva, New York 14456.

4813. **Product Name:** [Tofu Stew].
Foreign Name: Tofu-Blanquette.
Manufacturer's Name: Jonathan P.V.B.A.
Manufacturer's Address: Antwerpsesteenweg 336, B-2080 Kapellen, Belgium. Phone: 03/664 58 48.
Date of Introduction: 1986. May.
Ingredients: Tofu (soya-proteins)*, peas*, onions*, carrots*, mushrooms, celery*, seaweed. Sauce: Soya milk*, water, wheat meal*, vegetable fats, soya sauce, seasoning spices. * = biological crop.
Wt/Vol., Packaging, Price: 300 gm.
Nutrition: Minerals 1.4%, vegetable proteins 6.3%, vegetable fats 3.52%, carbohydrates 5%. 76.9 calories (Kcal) per 100 gm.
New Product–Documentation: Label. Received 1988. 6.25 by 5.25 inches. Card stock. Color photo of tofu cubes stewing with various vegetables with item name in white on orange. "Vegetable product." Form filled out by Jos van de Ponseele. 1989. Jan. 11. This product was introduced in May 1986.

4814. **Product Name:** Tofu Mozzarella (Soy Cheese Containing Casein).
Manufacturer's Name: Kononia Foods (Distributor).
Manufacturer's Address: Fresh Meadows, New York. Phone: 718-969-2960.
Date of Introduction: 1986. May.
Ingredients: Tofu (51%), soybean oil, casein, sea salt, citric acid, soy lecithin, guar gum.
Wt/Vol., Packaging, Price: 5 lb loaves.
How Stored: Refrigerated.
Nutrition: Per ounce: Calories 80, Protein 8 gm, carbohydrates 1 gm, fat 4 gm, calcium 120 mg, sodium 170 mg.
New Product–Documentation: Medoff. 1986. Whole Life. June. p. 82-84. "Will the Real Soy Mozzarella Please Stand Up." "Several weeks after Soya Kaas came out, a third 'soy' cheese hit the market, distributed by Kononia Foods of Fresh Meadows, New York [phone: 718-969-2960], called *Tofu Mozzarella* (claiming to be 51% tofu). When *Tofu Mozzarella* first appeared in early May [1986] its labels said 'Non-dairy,' but their ingredient list read: tofu, soybean oil, casein, sea salt, citric acid, soy lecithin, guar gum." A black-and-white photo shows the product.

4815. **Product Name:** [Bonsoy Soymilk].
Foreign Name: Bonsoy Sojamelk.

Manufacturer's Name: Manna Natuurvoeding B.V. (Importer-Distributor). Made in Japan.
Manufacturer's Address: Weerenweg 28, 1161AJ Zwanenburg, Netherlands.
Date of Introduction: 1986. May.
Ingredients: Water, soybeans, pearl barley, kombu (sea vegetable), barley malt.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic Carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Calories 40, water 87.9 gm, protein 3.4 gm, fat 3.0 gm, carbohydrate 5.0 gm, fiber 0.1 gm, calcium 40 mg, iron 1.5 mg, ash 0.6 gm.
New Product–Documentation: Manna Bulletin. 1986. May. No. 12. p. 3. "100% natural. 100% from plants (plantaardig). Cholesterol free." A photo shows the package and lists ingredients.

4816. **Product Name:** Tofu Salad.
Manufacturer's Name: Michigan Soy Products Co., Inc.
Manufacturer's Address: 1213 N. Main St., Royal Oak, MI 48067. Phone: 313-544-7742.
Date of Introduction: 1986. May.
Ingredients: Tofu, almond soy milk, corn oil, honey, onion, celery, carrot, pickles, garlic, lemon juice, salt, paprika.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Blair. 1987. Detroit News. Nov. 4. p. 1E, 2E. Tofu. Talk with Dorothy Hwang. 1988. Feb. 18. Label. 1987.

4817. **Product Name:** Natural Soymilk Products: Soy Milk.
Manufacturer's Name: Natural, Inc.
Manufacturer's Address: 6650 Santa Barbara Ct., Elkridge, MD 21227. Phone: 301-796-3211 (Balt.); 301-621-5388 (DC).
Date of Introduction: 1986. May.
Ingredients: Organic soybeans, water.
Wt/Vol., Packaging, Price: 32 fluid oz, 64 fluid oz, or 128 fluid oz plastic jugs.
How Stored: Refrigerated.
New Product–Documentation: Talk with Larry Betzler. 1988. April 1. This company opened in the spring of 1986. Their first two products were tofu and soymilk made for Betzler's American Soyfood Industries.

4818. **Product Name:** Nectar Soy (Sweet Soymilk).
Manufacturer's Name: Natural, Inc.
Manufacturer's Address: 6650 Santa Barbara Ct., Elkridge, MD 21227. Phone: 301-796-3211 (Balt.); 301-621-5388 (DC).
Date of Introduction: 1986. May.
Ingredients: Soy beans, water, sugar.
Wt/Vol., Packaging, Price: 64 fl oz. (2 quarts).
How Stored: Refrigerated.
New Product–Documentation: Talk with and Label sent by William Tsai. 1998. July 30. This soymilk product was introduced in 1986.

4819. Perez, Oswaldo. 1986. La soya en la alimentacion humana [Soya in human nutrition]. *La Era Agricola* (*Merida, Venezuela*) No. 0. May. p. 14-15. [1 ref. Spa]
• ***Summary:*** Shows how soya makes most efficient use of the earth's ability to produce protein. Address: Granja Tierra Nueva, Aldea San Luis, La Azulita, C.P. 5102, Estado Merida, Venezuela.

4820. **Product Name:** [Sahm Yook Soy Cool (Plain Soymilk)].
Foreign Name: Sahm Yook Soy Cool.
Manufacturer's Name: Sahm Yook Korean Foods.
Manufacturer's Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.
Date of Introduction: 1986. May.
Ingredients: Soy milk, high fructose corn syrup, raw cream, salt, vitamin C.
Wt/Vol., Packaging, Price: 200 ml foil retort pouch (Doypack). Retails for 200 Won (6/90).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out and label sent by C.Y. Yoon, General Manager, Sahmyook Korean Foods. 1990. June 23. The product was introduced in May 1986. Ingredients are listed in English.
Label (Foil retort pouch). Sent by C.Y. Yoon. 1990. June 23. 4 by 6.75 inches Red, yellow, dark green, and light green on silver. Front panel says "Soyalac" and an illustration shows 3 yellow soybeans in a green pod. The back panel shows the package being heated in a microwave oven. So this package is probably sold during the cold months. Note that this product contains dairy cream.

4821. **Product Name:** White Waves (Soymilk). Soon renamed White Wave Soya Milk (Plain/Unsweetened, or Sweetened with Raw Cane Sugar).
Manufacturer's Name: Unisoy Milk 'n By-Products Ltd.
Manufacturer's Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire, England. Phone: 061-430 6329.
Date of Introduction: 1986. May.
Ingredients: Soya beans, purified water, raw cane sugar.
Wt/Vol., Packaging, Price: Both: 500 ml Tetra Brik Aseptic carton. 29 pence (10/86). Unsweetened also in 1 liter Tetra Brik carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in The Vegetarian. 1986. Sept/Oct. "Making Waves." "There's a new, very economical soya milk on the market. White Waves is a completely natural product. A real bargain at only 29 pence

for 500 ml, 52 pence per litre."

Simon Bailey. 1988. *Natural Choice.* Aug. 15. "Soya-Based Products." A photo shows the label. "White Wave Soya Milk–Sugar Free." On the front (large) and top (small) of the brick-shaped 500 ml aseptic package is a square logo, with one corner at the top–so that it looks like two triangles, one facing up and one down. In the top triangle is an illustration of a breaking wave, and in the bottom half are the words "White Wave." Note: This combined brand name and logo is strikingly similar to that used for many years by White Wave in Boulder, Colorado, USA.

CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date of introduction as spring 1986 and product name as White Wave Soya Milk. The Vegan. 1989. Spring. p. 12. Mentions the product. Talk with Neil Rabheru of Unisoy. 1990. July 3. This soymilk, in 2 flavors, was the company's first product. Production began in May of 1986. Inorganic soya beans were used. The name has always been White Wave Soya Milk; it was never named "White Waves."

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. He exported some of this soyamilk to Crivellaro in Italy, packaged under their own brand/label.

4822. Westbrae Natural Foods. 1986. Q&A. Answers to most-asked questions about WestSoy (Poster). P.O. Box 8711., Emeryville, CA 94662. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.
• ***Summary:*** Questions and answers about this soymilk. The shelf life is 1-2 years. It is sweetened with barley malt made from sprouted barley. It contains less than 1% added oil. Other soydrinks seasoned with seaweed averaged 144 mg of sodium per serving vs. 125 mg for WestSoy. Address: Emeryville, California.

4823. Devasia, T.K. 1986. Soybean can bring revolution in nutrition. *Free Press Journal* (*Indore, India*). June 8. p. 7.
• ***Summary:*** In India, a large number of children die every day of malnutrition. But nutritious foods are too expensive for the poor "Health administrators and researchers are working overtime to find a solution to this problem. Soyabean as been found to be the single best answer as it is cheap and nutritious. Its nutritional merits have been established beyond doubt by researchers all over the world.

"Agricultural scientists and medical practitioners at Indore feel that soyabean can bring about a revolution in this field of nutrition." Although Madhya Pradesh produces about 85% of all soyabeans produced in India, "a large share of the production goes as cattle feed, for extracting milk and other industrial uses. The State Government... has not done anything to promote human consumption."

"The most simple form of soyafood is soya milk, which contains 4.4% protein compared with 2.9% in cow's milk and 1.4% in breast milk. Soyamilk can be easily prepared at home. Approximately 10 liters of soymilk can be prepared from one kilogram of dry soyabeans. It becomes much more acceptable if mixed in equal proportions with cow milk.

The soymilk can be used for making tofu by causing curds to form, then straining with a cheese cloth. There is a perennial shortage of cow milk in urban areas. Farmers can produce and market soymilk on a small scale to be consumed the day it is made.

A sidebar titled "Plan to popularise soya foods in rural areas" explains that "Manoj Soni, a resident of Mhow and student of Boston University Medical School, USA, has conceived a plan to popularise the use of soya foods in the rural areas of the state. Under the project he has selected and trained 15 village health workers from selected villages in Indore tehsil. These in turn will educate the masses about the soya products." "Soni, who was inspired by his mother in undertaking the project, feels that soyabean holds great promise for the rural and urban population."

"Soni, his mother, and Mrs. Pushpa Pandey have prepared 150 recipes of soys food, which will be published soon... Soni has been given funds under the Smith-Kline Packman medical scholarship."

Photos show: (1) Manoj Soni. (2) Mrs. Pushpa Pandya delivering a lecture on soyabean foods to the village health workers at Rau near Indore. Address: India.

4824. Khosla, Mukesh. 1986. Chinks in the bamboo curtain. *Times of India* (*The*) (*Bombay*). June 22. p. 1.
• ***Summary:*** Since 1949, when it went communist, China has been widely admired in India. Discusses China's one-child policy and the difficulty of seeing things as they are in China. At least 5 million Chinese were massacred in the 1950s–as an unfortunate necessity of the goal of the Great Cultural Revolution.

In China's larger cities, like Beijing, Shanghai, or Guangzhou (Canton), it is not unusual to see a woman bicycling to work with her only child perched in a one-wheeled outrigger-like attachment to her bike. "She has a choice of either putting her child in the office creche or admitting it to the subsidised neighbourhood child care centre at a nominal charge of two yuans a month where he gets two meals and a glass of soya milk daily."

4825. **Product Name:** [Cereal Mate (Soymilk for Use with Breakfast Cereal)].
Manufacturer's Name: Alpro. Div. of Vandemoortele NV.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1986. June.
Wt/Vol., Packaging, Price: 500 ml in paper pack.
Nutrition: Claimed to have 2.1 gm/pint more protein than whole cow's milk.
New Product–Documentation: Food Report (Lehmann). 1986. June. This product is being introduced to the U.K. and aimed at the breakfast market.

Soyfoods (ESFA). 1987. April. p. 28. "Alpro, U.K., has introduced Cereal Mate soya milk for the breakfast market. The product has 2.1 g more protein per pint than whole milk and is also lower in saturated fat, higher in polyunsaturated fat and free of cholesterol, preservatives and coloring."

Talk with Philippe Vandemoortele, president of Alpro. 1990. April 17. This product was introduced to a test market about 4 years ago. It was discontinued after about 6 months.

4826. **Product Name:** Tofu, Soymilk, and Tofu Ice Cream.
Manufacturer's Name: Basics (The). Renamed Kootenay Soyfoods in May 1989. Renamed Kaslo Soyfoods in Feb. 1990. Renamed Silverking Soyafoods in Oct. 1990.
Manufacturer's Address: Box 933, Kaslo, BC, V0G 1M0, Canada. Phone: 604-353-7726.
Date of Introduction: 1986. June.
How Stored: Frozen.
New Product–Documentation: Talk with Greg Lundh, owner. 1988. Aug. 9. He started making tofu and soymilk in Sept. 1986, and introduced a tofu ice cream shortly thereafter. The latter was an instant hit. All of his tofu is made with nigari and delivered fresh to the homes of his 125 customers in his Volkswagen van. Most customers have standing orders. He features service and freshness. The business is very small but growing. Talk with Greg Lundh, owner. 1988. Aug. 24. The company started making tofu and soymilk in June 1986. They started making the ice cream in about August 1986. Greg delivers his own products door to door.

Talk with Greg Lundh, owner. 1989. April 28. He now makes 300 lb of tofu a week, one day a week, using a boiling water grind. Still delivers door to door. His company is still unregistered. His only competitor in the interior of British Columbia, Okanagon Soyfoods, went out of business 10 days ago. Now he wants expand from a large blender up to a grinder.

Talk with Greg Lundh. 1990. Oct. 20. His company has been renamed 3 times, as shown above.

4827. **Product Name:** Tofu (15 kinds, incl. Doufu-gan, Fried Tofu), and Soymilk.
Manufacturer's Name: Calco of Dallas.
Manufacturer's Address: 714 N. Justin Ave., Dallas, TX 75211. Phone: 214-331-6122.
Date of Introduction: 1986. June.
New Product–Documentation: List of Tofu and Sprout Manufacturers. 1989. Louis Wang, owner. Talk with Calco of Dallas. 1989. Nov. 13. They started business in 1983. Tofu types include fried tofu, deep-fried tofu balls, etc. They also make alfalfa sprouts, wonton skins, egg roll skins, noodles. Letter (fax) from then talk with Louis Wang. 1998. Sept. 28. His company is now named Dallas Calco; it changed from Calco of Dallas about 10 years ago. His first name may also be spelled Luis, which is the Spanish spelling. He started making soy sprouts in 1983, then tofu and soymilk on 19 Aug. 1986.

Talk with Louis Wang. 2001. March 15. On 1 Jan. 2001 he moved into a new facility at 2726 Barge Lane, Dallas, Texas 75212. His offices and factory are in the same place.

4828. Chatterjee, Julie. 1986. The Noble Soya story. *Technocrat* (*India*). June. p. 32-41. Cover story.
• ***Summary:*** A detailed story of the life of Dr. A.S. Aiyar, an ex-NRI technocrat and international food technologist, and his unique collaborative venture with the Houses of Godrej and Bhiwandiwalla (of Great Eastern Shipping). These three have embarked on a major business venture with three of the world's most respected corporations: Kibun Company of Japan, Alfa-Laval of Sweden, and Simon Foods Engineers, U.K. Estimated to produce 18,000,000 liters of soymilk and 2,000 tonnes of extruded soya food products annually, the plant is being set up at Bhopal.

Ayar, then 28, graduated in Food Technology from Bombay University in 1961. After getting his PhD he spent a year at the Central Food Technology Research Institute (CFTRI), India's top food research institute, run by the Council of Scientific and Industrial Research at Mysore. There he began to take an interest in vegetable proteins. Later, at the Univ. of Pittsburgh (Pennsylvania, USA) he got involved in research on nutrition and soyfoods for 4 years. In late 1965 he returned to India and worked on food irradiation at BARC, leaving in frustration in 1980. By this time soya was showing food promise in India. He joined the newly formed Protein Foods and Nutrition Development Association of India (PFNDAI) as executive director. Noble House was incorporated on 9 March 1984. An agreement was signed with Kibun on 12 Dec. 1985 to provide technical and process know-how. (Kibun began as a fish processor). Alfa-Laval will supply the soymilk plant and Simon Foods will supply the twin screw extruder. Noble Soya products will be mainly distributed by Godrej Soaps.

Three portrait photos show Dr. A.S. Aiyar. An interview with Dr. Aiyar (p. 32) is titled "Looking for the right technology." Another interview with Ghanshayam Sheth (p. 35-36) is titled "We can make a headstart." A portrait photo shows Sheth. A long sidebar (p. 38-39) is titled "Collaborating with the best: Noble Soya." Another long sidebar (p. 40) is titled "The forces join together: Noble Soya–Kibun." A photo shows Masahito Hoashi, President of Kibun. The last sidebar (p. 41) is titled "The processed food industry's potential." In India, this potential is constrained by the high cost and shortages of energy. Address: India.

4829. **Product Name:** Soymilk [Plain, or Sweetened].
Manufacturer's Name: China Express.
Manufacturer's Address: 1324 E. 8th St., Tempe, AZ 85281.
Date of Introduction: 1986. June.

New Product–Documentation: Talk with Richard Jennings. 1987. Dec. 28. Gave date of introduction. This company is run by a Chinese man Tony Lee. The company also makes bean sprouts and pasta, and has a produce line. Talk with Tony Lee. 1987. Dec. 28. Gave introduction date.

4830. **Product Name:** [Mamina Soya {Infant Formula/ Mother's Milk Substitute} (Plain)].
Foreign Name: Mamina Soja.
Manufacturer's Name: Galactina Ltd.
Manufacturer's Address: Belp, Switzerland.
Date of Introduction: 1986. June.
Wt/Vol., Packaging, Price: 300 gm aluminum bags in a paperboard box.
How Stored: Shelf stable.
New Product–Documentation: Soya Bluebook. 1986. p. 111; 1989. p. 131. Talk with Peter Speck. 1990. June 2. Soya Bluebook contains a misprint. Maurina Soja (Infant formula) is actually Mamina Soya. Talk with Conrad Seewer of Galactina. 1990. May 17. Mamina Soya (pronounced ma-MEE-nah ZO-yah) was Galactina's first infant formula after Bebe Nago. Since it is a better product, using new technology, it replaced Bebe Nago. It has a better taste and completely fulfills the baby's nutritional needs according to modern pediatric standards. It was launched 5-6 years ago. It is made from whole soybeans that are made into soymilk, which is then spray dried and formulated. It contains no isolates, and this is part of Galactina's philosophy and history. This allows better control of the product quality and the milk is less highly processed. The processing method has solved the problem of flatulence.

Talk with Peter Speck. 1990. May 23. The market for Galactina's new line of two baby products looks very promising. There is Mamina Soya and then 2-3 different types of gruels.

Letter (fax) from Conrad Seewer of Galactina. 1990. July 13. The three basic products in the line are mother's milk substitutes. Both these and the gruels for spoon feeding are in powder form, sealed in aluminum foil bags that are packed in paperboard boxes. The products contain no soy isolates; rather they are made with powdered soymilk made directly from soybeans. Flatulence is prevented by a special technical manufacturing process that is confidential and that eliminates trypsin inhibitor. The first Mamina Soya product was introduced in June 1986.

4831. **Product Name:** Genice Ice Delight Cone [Vanilla and Hazelnut with Carob Coating, Strawberry and Hazelnut with Carob Coating, Vanilla with Raspberry Ripple and Carob Coating].
Manufacturer's Name: Genice Foods Ltd.
Manufacturer's Address: Pinfold Lane, Llay Industrial Estate, Wrexham, Clwyd LL12 0PX, Wales, UK. Phone: 0978-853-787.
Date of Introduction: 1986. June.
Ingredients: Raspberry Ripple: Soya milk [spray dried soymilk], raw cane sugar, corn syrup, vegetable oil, vanilla bean extract, carob, raspberries, stabilisers (guar gum, locust bean gum), emulsifier (vegetable mono diglycerides), natural raspberry flavour, natural colours (annatto, beetroot red).
Wt/Vol., Packaging, Price: 100 ml cone.
How Stored: Frozen.
New Product–Documentation: Label and leaflet sent by Genice Foods Ltd. 1994. Feb. 18. The small round label reads "Genice Ice Delight Cone–Raspberry Ripple flavour. All natural non dairy vanilla with raspberry and carob." 2½ inch diameter. Black on pink. The 8½ by 11 inch color leaflet reads: "New from Genice. Ice Delight Cones: The non-dairy alternative to ice cream. Lactose free. All natural ingredients. Available in three delicious flavors." Three colorful cones, with gold foil as part of each design, are shown against a blue background.

Talk with Ray Pierce of Genice Foods Ltd. 1994. Feb. 23.

4832. **Product Name:** Tofu, Fried Tofu, Soymilk Curds, Soybean Sprouts, and Soymilk.
Manufacturer's Name: M.S.B. Food Enterprises, Inc.
Manufacturer's Address: 430 Casanova St., Bronx, NY 10474. Phone: (212) 617-6700.
Date of Introduction: 1986. June.
How Stored: Refrigerated.
New Product–Documentation: Order for tofu books from, then talk with Michael Lee, V.P. Gomé Tofu Inc. 1996. Nov. 14. His father, John Lee, a Korean-American, started M.S.B. Food Enterprises in 1986 in the Bronx to make different foods from soybeans using all natural processes. Their main products in 1986 were regular tofu, fried tofu, soymilk curds (*sun tubu*), soybean sprouts, mung bean sprouts, and a small amount of soymilk. In 1992 they introduced *doen jang* (pronounced TEN-jang, Korean Soybean Jang, like miso). MSB Food Enterprises is the parent company for a number of smaller companies, all of which make soyfoods. In 1995 they started a new division, Gomé Tofu Inc., to make tofu specially for the Caucasian American market. In December 1995 the company moved to a new address: 710 Longfellow Ave., Bronx, NY 10474. Phone: (718) 617-4105. The company's main market is still Korean-Americans in the tri-state area (New York, New Jersey, and Connecticut).

Form filled out and Label sent (faxed) by Mike Lee of M.S.B. Food Enterprises / Gômi Tofu. 1998. July 7. The address and phone number are unchanged from 1996. The company began making tofu in June 1986. One label is in Korean and the other in English. The text on the English label states: "Tofu–Original. Excellent meat substitute. More protein and calcium than meat or milk! New! Go natural... Its good for you! Gômi. Easily digestible. Cholesterol free. Low fat food. It blends in beautifully! Slice to fry or broil it. Dice

it raw for salad. Mash or whip it to make an inspiring dish! No preservatives. All natural. Keep refrigerated. Change water daily after opening." Note: Gômi means "garbage" in Japanese.

4833. **Product Name:** Tofait Creme Drink [Raspberry, Orange, Chocolate, or Piña Colada].
Manufacturer's Name: Tofoods, Inc.
Manufacturer's Address: 1827 Walden Office Square, Schaumburg, IL 60195.
Date of Introduction: 1986. June.
Ingredients: Incl. soymilk, fruit juice, calcium, vitamins.
Wt/Vol., Packaging, Price: 1 quart Pure-Pak carton. Retails for $1.49.
How Stored: Refrigerated.
Nutrition: Per 8 oz.: Orange: Calories 140, protein 3 gm, carbohydrate 30 gm, fat 1 gm, sodium 70 mg, calcium 100% of the U.S. RDA (vs. 30% of RDA for regular or 2% fat milk).
New Product–Documentation: Spot in Call-Chronicle (Allentown, Pennsylvania). July 13; Interview with Charles Chase. 1986. Aug. 1. See next page. Four leaflets (one for each flavor, glossy, full color, 1 p., 28 cm). 1986, undated. "100% daily calcium in one 8 oz glass." Front of carton reads "High in Calcium and Protein." Contain 10% raspberry or orange juice respectively. Lieb. 1987. Dairy Foods. March. p. 32. "Tofoods has been promoting its four-flavor Tofait Creme Drink line for the past 6 months. Tofoods' most innovative introduction to date is this line of vitamin- and calcium fortified drinks, which are slightly thicker than milk, although not as thick as a milkshake;" Call-Chronicle (Allentown, PA). 1986. July 13. "Tofu/Tofait Creme Drinks." Leaflet, full color. 8½ by 11 inches. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Tofait. Delicious Non-Dairy. 100% All Natural. 8 oz. Contains 100% of Daily Calcium Requirements."

4834. **Product Name:** Tofu Mozzarella (With Casein).
Manufacturer's Name: Tree Tavern Products.
Manufacturer's Address: 1133 Seagull Lane, Cherry Hill, NJ 08003.
Date of Introduction: 1986. June.
Ingredients: Tofu (51%), soybean oil, casein, sea salt, citric acid, soy lecithin, guar gum.
Wt/Vol., Packaging, Price: 5 lb loaves.
How Stored: Refrigerated.
Nutrition: Per ounce: Calories 80, Protein 8 gm, carbohydrates 1 gm, fat 4 gm, calcium 120 mg, sodium 170 mg.
New Product–Documentation: Medoff. 1986. Whole Life. June. p. 82-84. "Will the Real Soy Mozzarella Please Stand Up." "Several weeks after Soya Kaas came out, a third 'soy' cheese hit the market, distributed by Kononia Foods of Fresh Meadows, New York called *Tofu Mozzarella* (claiming to be 51% tofu). When *Tofu Mozzarella* first appeared in early May [1986] its labels said 'Non-dairy,' but their ingredient list read: tofu, soybean oil, casein, sea salt, citric acid, soy lecithin, guar gum." Kononia put Medoff in touch with an individual named Bob Savar in Cherry Hill, New Jersey, an independent broker who sells the Tofu Mozzarella to them as well as along the east coast. "We asked Savar who made the *Tofu Mozzarella,* and where he got it. He would only tell us that it was made by a company that was 'part of a large conglomerate in New York.' Savar would not tell us who or where this company was, only that they did not want any publicity."

• ***Summary:*** "Offers are invited from manufacturers and suppliers of machinery / technical consultants, by a public limited company of repute for setting up a 30 M.T. [metric tonne] per day (10,000 M.T. per year) capacity plant in Rajasthan for manufacture of soyabean milk, beverages, paneer, yogurt etc. Please write to:

"Technical director, Diamond Group." Address: B-27-A, Alaknanda, Pocket B & C, New Delhi-110 019.

4839. *Commercial-News* (*Danville, Illinois*). 1986. Value-added goods key to marketplace. July 17.
• ***Summary:*** "Illinois, which has a sizeable proportion of the world's richest agricultural land, enjoys a tremendous natural advantage in the production of agricultural products. This, however, has not prevented severe economic problems resulting from over-production and shrinking world market shares.

"But, according to John Campbell, dean of the College of Agriculture at the University of Illinois, an important key to returning the state to its natural position as leader in the world marketplace is to produce new value-added products that have a price and quality edge over competitors.

"'While the benefits from agricultural exports have been important,' Campbell said, 'a much greater potential exists for exporting value-added products, rather than raw, bulk materials.

"'In a highly competitive world, a nation cannot afford to fall behind on research into value-added technology. Our competitors understand this. The U.S.–and especially the state of Illinois–must be determined to meet this challenge.'

"Campbell said even a 1 percent increase in the use of cooking oil, shortening or an equivalent soybean-based product would mean an increase of more than $21 million in gross sales for Illinois.

"That translates into approximately $4 million in wages from new jobs and $500,000 in added state tax revenues." Campbell also mentions soy milk, soy yogurt, and soy ice cream developed at the University of Illinois.

"'Less developed countries, especially those suffering from deficiencies of edible oil and protein, are potentially a huge market for many low-cost soyfoods and soy-fortified cereals,' Campbell said." No industrial uses of farm crops are mentioned. A photo shows John Campbell.

4840. *Toyo Shinpo* (*Soyfoods News*). 1986. Tônyû ni karushiumu kyôka [Fortification of soymilk with calcium]. July 21. p. 15. [Jap; eng+]

4841. Hovelson, Jack. 1986. New soybean processing plant to be built in Iowa. *Des Moines Register* (*Iowa*). July 24.
• ***Summary:*** The plant, to be located in Iowa Falls, is a joint venture of Advanced Foods USA (a newly formed company based in Louisville, Kentucky; partners Lowery Stallings and Ralph Pettit Sr.) and Advanced Foods of Japan Inc. (Alan Konno of Tokyo). The product, in flour and liquid protein forms, is a tasteless substance, made by a new process, to be used as a food extender or substitute in Japan or other Asian countries. The plant is expected to employ 23-30 persons and process 300,000 bushels/year of soybeans.

4842. Hulm, Trevor. 1986. County gets big soy milk plant [American Soy Products, a $10 million joint venture of Eden Foods, Kawasho International (USA), Marusan Co. Ltd., Muso Co. Ltd., and Seikensha Co. Ltd.]. *Ann Arbor News* (*Michigan*). July 30. p. A1, A4.
• ***Summary:*** "A Clinton [Michigan]-based company has clinched a $10 million deal with four Japanese joint venturers to produce soy milk in Michigan for the North American market. The company, Eden Foods Inc., and its partners have almost completed construction of a manufacturing plant at Saline. Production is expected to start in September, with an initial staff of 35."

Eden Foods' president Michael Potter estimates that Eden presently has 38-40% of the $20 million a year soymilk retail consumer market in the USA.

"Potter, 36, will be chairman and chief executive officer of the new company, American Soy Products Inc. The four Japanese companies involved in the joint venture are Kawasho International (USA), Marusan Co. LTD., Muso Co. Ltd. and Seikensha Co. Ltd.

"Under terms of the agreement, Eden Foods will handle product marketing, sales and distribution; Kawasho will oversee administration and financing; Marusan will be responsible for product production; and Muso will coordinate international sales. Seikensha has patents on key pieces of the manufacturing equipment and is supplying the processing equipment for the plant.

"The joint venturers have already spent $2.3 million on the factory and land at Saline. Another $4.3 million has been invested in the latest equipment available in the industry, with a $700,000 outlay for start-up costs. The company has committed $1.8 million in marketing funds and $700,000 in working capital."

"The new plant is expected to consume 85,000 bushels of soybeans and 8,000 bushels of barley annually, almost all of which will be obtained in Michigan."

Note 1. This is the earliest document seen (July 2013) concerning American Soy Products or this new American soymilk plant. A photo shows the soymilk equipment.

4843. American Soybean Association. 1986. Soya Bluebook '86. St. Louis, Missouri: American Soybean Assoc. 278 p. July. Index (bold face type indicates advertiser). 22 cm.
• ***Summary:*** Contents: Index of advertisers (p. 4). Soybeans: Your profit opportunity, by Dr. Kenneth L. Bader, CEO, ASA (p. 5). Organizations (by country, within each country alphabetically): For each gives the name, address, contact person, year founded, number of members, objectives and activities, publications. Countries are: USA, Australia, Austria, Bangladesh, Belgium, Brazil, Canada, England, Germany (Federal Republic of), Finland, France, Hungary, India, Indonesia, Italy, Ivory Coast, Japan, Malaysia, Mexico, Netherlands, Norway, Philippines, Portugal,

Senegal, Spain, Sweden, Taiwan, Turkey, Yugoslavia, Zaire, Zimbabwe. U.S. agricultural education, research & extension (by state; mainly state agricultural / land-grant colleges), ASA international offices and world regions (colored world map and photo of each country director), government trading agencies.

Soy directory: Oil extraction plants / refineries (alphabetically by state in USA, then by country), soyfoods / edible soy products manufacturers (lecithin, soy flour, soy grits, soy protein concentrates & isolates, textured soy protein, binders, extenders, simulated meat products, soy oil products {margarine, shortening, cooking / salad oil, salad dressings}, soyfoods–beverages [soymilk], frozen desserts, soy sauce, tempeh, tofu, whole soybean snacks {soynuts}, other soy-based foods), within each product by country, producers of soy products for industrial manufacturers (by products, etc.): Industrial lecithin, industrial soy flour / soy protein, industrial soy oil, soy sterols and tocopherols, soybean fatty acids.

Soybean manufacturing support industries: Manufacturing equipment & supplies, soybean processing equipment & supplies, manufacturing services. Marketing and auxiliary services: Brokers, financial services, forwarding agents, marketing consultants, trading companies, transportation, warehousing–export / import.

Soy statistics (tables & graphs): Soya conversions [weights & measures], metric conversions, temperature conversions. U.S. soybean planting and harvesting dates (by state). U.S. soybean acreage, yield and production, 1925–1985 (by year). U.S. soybean planted acreage by state (1970–1985). U.S. soybean harvested acreage by state (1970–1985). U.S. soybean yield by state (1970–1985). U.S. soybean production by state (1970–1985). U.S. soybean production major crops (1920–1985): One graph each for soybeans, corn, wheat, and cotton. U.S. harvested acreage of major crops (1920–1985): One graph each for the big 4. U.S. yield per acre of major crops (1920–1985): One graph each for the big 4. Argentine soybean area, yield and production by province (1975-1986). Brazilian soybean area, yield and production by province (1975-1986). Canadian soybean production: Acreage, yield, production, farm price and value (1950-51–1984-85). Canadian soybean production and utilization (1950-1984, year beginning Aug. 1): Production, imports, supplies, exports of beans, processed for oil and meal, soy oil produced, soybean oilcake produced. World soybean production: Area and production in specified countries and the world total (1980/81–1985/86). Soybean production by major countries (one graph, 1925-1985): U.S., Brazil, PRC [China], Argentina. Share of world soybean production [percentage] by major countries (one graph, 1925-1985): Big 4. Soybean acreage by major countries (one graph, 1925-1985): Big 4. Share of world soybean acreage [percentage] by major countries (one graph, 1925-1985): Big 4. U.S. soybeans: Supply, disposition, acreage, yield and price (1970–1986). Soybean usage in the U.S. for crush and exports (one graph, 1925-1985, million bushels). U.S. soybean exports: Percent of total usage (one graph, 1925-1985). Argentine soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Brazilian soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Prices of U.S. soybeans, No. 1 yellow: Average price per bushel, Illinois country shipping points (by year and month, 1950–1984, dollars). Prices of U.S. soybeans received by farmers: Average price per bushel (by year and month, 1950–1984, dollars). U.S. soybean price support operations (1945-1985, incl. CCC). U.S. soybean crop value: U.S. and major producing states (1925-1985): Illinois, Iowa, Indiana, Ohio, Missouri, Minnesota, Arkansas. Fold-out color map of U.S. soybean acreage by county. U.S. farm marketings of soybeans: Percent of open market farm sales by month (1975/76–1984/85). Map of U.S. soybean processing plants. Value of U.S. soybean products per bushel and crush margin (1950-1984): Soy oil, soybean meal, soybean price (received by farmers, No. 1 yellow Illinois), margin (ditto). U.S. soybean meal: Prices paid by farmers–44% protein, dollars per 100 lbs, by year and month (1950-1984). U.S. soybean meal: Average wholesale price–44% protein, dollars per ton, bulk Decatur, Illinois, by year and month (1950–1984). U.S. soybean meal: Beginning stocks, production, exports and domestic disappearance, by year and month, thousand short tons (1978/79–1984/85). U.S. soybean cake and meals: Supply, disposition and price (1977-1985): Soybean, cottonseed, linseed, peanut. Major world protein meals: Supply and utilization (1981/82–1985/86; Production, exports, imports, consumption, ending stocks): Soybean, cottonseed, rapeseed, sunflowerseed, fish, peanut, copra, linseed, palm kernel. World major oilseeds: Supply and utilization (1981/82–1985/86). World major vegetable and marine oils: Supply and utilization (1981/82–1985/86). Prices of U.S. soybean oil: Soy oil, domestic crude, average cents per pound in tank cars at Midwestern mills, by year and month (1950/51–1984/85). U.S. soybean utilization, by year (1960-1984): Food–Shortening, margarine, cooking and salad oils, other edible, total. Nonfood–Paint and varnish, resins and plastics, fatty acids, other inedible (incl. soap), total. Total domestic utilization. U.S. soybean oil value as percent of total soybean value (1930–1985). Note: Peaked at about 55% in 1930, fell to about 32% in 1980-81. U.S. soybean oil: Supply, disposition and price (1960-1985). U.S. edible fats and oils: Supply and disappearance (1978-1985): Coconut, corn, cottonseed, lard, palm, peanut, soybean, sunflower, tallow (edible). U.S. exports of soybeans, by year and month (1953–1984). U.S. soybean exports by port and country of destination (Sept. 1984–Aug. 1985): Ports are–St. Lawrence Seaway, Lakes, Atlantic, Gulf (by far the largest), Pacific, Interior. U.S. exports: Soybeans–Volume of exports by country of destination (in metric tons) and total

value (1981–1985). U.S. exports: Soybean oil–Volume of exports by country of destination (in metric tons) and total value (1981–1985). U.S. exports: Soybean oilseed cake and meal–Volume of exports by country of destination (in metric tons) and total value (1981–1985). Map of U.S. soybean exports by port areas: Sept. 1984–Aug. 1985 (1,000 bushels). U.S. exports of soybean, cottonseed and sunflowerseed oils: U.S. commercial and P.L. 480 exports–Volume of exports by region and country of destination (in metric tons) and total value (1979/80–1984/85; year beginning in October). U.S. exports: Soybean oil–P.L. 480, Title I and III, volume (in metric tons) and value (in $1,000) by country of destination (FY 1981–1985). U.S. exports of soybean and cottonseed oils: U.S. commercial and P.L. 480 exports (1950–1984, million lbs; incl. P.L. 480 as a percentage of the whole). Brazilian exports of soybeans and products to major countries (1,000 metric tons; 1976-1984). Graph of soybean & product exports by major countries (U.S., Brazil, Argentina) (soybean equivalent; 1970-1985). Graph of world share of soybean & product exports by major countries (U.S., Brazil, Argentina) (1970-1985). Note: U.S. share has fallen from 95% in 1970 to about 50% in 1984.

Glossary: General terms, soy protein terms. Standards & specifications: NSPA, Association of American Feed Control Officials (AAFCO), USDA (definitions and grades). Index. Address: P.O. Box 27300, St. Louis, Missouri 63141.

4844. Bean Supreme Soyfoods. 1986. Price list. P.O. Box 78 084, 1 Wallingford St., Grey Lynn, Auckland, New Zealand.
• ***Summary:*** The company makes Tofu, Tempeh, Cottage Spread, Soymilk, Soysage, and Non-Dairy Frozen Dessert. Address: Grey Lynn, Auckland, New Zealand.

4845. **Product Name:** Bean Supreme Soymilk.
Manufacturer's Name: Bean Supreme Soyfoods.
Manufacturer's Address: P.O. Box 78 084, 1 Wallingford St., Grey Lynn, Auckland, New Zealand.
Date of Introduction: 1986. July.
New Product–Documentation: Manufacturer's price list. 1986. July. Sold in 0.5 and 2 liter sizes.

4846. **Product Name:** Aussie Soy [Natural, Vanilla, Carob, and Barley Malt {with Chocolate}].
Manufacturer's Name: Ceres Natural Foods Pty. Ltd. (Importer & Distributor). Made in Australia.
Manufacturer's Address: East Bentleigh, Victoria, Australia.
Date of Introduction: 1986. July.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik carton.
How Stored: Shelf stable.
New Product–Documentation: Letter (fax) from Don Lazzaro of Ceres Natural Foods. 1995. June 15. In July 1986 they introduced their first Australian-made 1 liter soymilk product named Aussie Soy in four flavours in a Tetra Pak carton.

4847. Cox, Peter. 1986. Why you don't need meat. Wellingborough, England and New York: Thorson's Publishing Group. 237 p. July. Illust. 20 cm. Revised ed. 1992. [119* ref]
• ***Summary:*** A convincing, health oriented popularization of the case against meat. Well researched and well written, with many references.

Contents: Acknowledgements. Introduction. 1. Connections. 2. Meat-eaters vs. wheat-eaters. 3. Meat, you and cancer. 4. Breaking free! 5. Eating your heart out. 6. There's junk in your joint. 7. How not to wreck a marriage. 8. The deadly duo: Diabetes and hypertension. 9. How to get high on fibre [How to get adequate dietary fibre]. 10. A view into hell [the slaughterhouse]. 11. What every body needs [a nutritious, healthy, balanced diet]. 12. The baby that eats five people [Eating meat and other animal products causes world hunger, malnutrition, and starvation]. 13. Changes. Appendixes: 1. Using the nutrition checker. II. Resource directory.

Soya milk, soya beans, tofu, tempeh, tamari and miso are mentioned in the nutritional tables and resource directory (p. 208-09, 214, 226, 229).

Cox, who was the first chief executive of the Vegetarian Society of the United Kingdom, is very familiar with both the scientific and popular literature on the subject.

Thorsons states in an ad: "There is mounting scientific proof that the meat we eat today actually *causes* heart disease, cancer, obesity and other degenerative diseases. The author exposes the black market in animal growth hormones, looks at the unregulated use of antibiotics in animal feed, and shows why a meat-oriented diet can actually be nutritionally deficient." A portrait photo on the rear cover shows Peter Cox.

Note: According to Vegetarian Times (Sept. 1987, p. 35), this book "has become a best seller in the U.K. and was selected by the Booksellers' Association of Great Britain as 'best paperback non-fiction campaign.'" See this issue of VT for more on Cox, Chrissie Hynde, and Reprieve! Address: First Chief Executive of the Vegetarian Society of the UK, England.

4848. *Food Review* (*South Africa*). 1986. Soya 'milk' from Mechanical Cow. 13(3):29. June/July.
• ***Summary:*** The Mechanical Cow, a compact soymilk plant, was developed in Brazil some years ago when it won the Brazilian invention of the year award for its mechanical ability and contribution to society. It is now manufactured by Vanguarda Mecanica, which has already made over 100,000 units. Food Processing Engineering Services at Verulam in Natal is the agent for the machine in South Africa. It is seen as having potential for use in South Africa, since soymilk amino acids complement those of corn. The machine consists

of a water vessel, centrifugal crusher, ultra-pasteurization system, and control panel, complemented by a cooler, packaging unit, and dryer. Features of the equipment are simplicity, ease of use and maintenance, hygiene (all food contact surfaces are stainless steel), speed (200 liters/hour) and packaging versatility (soymilk packed in plastic sachets of 100 ml to 1 liter sizes).

4849. *J. of the American Oil Chemists' Society.* 1986. Soymilk focus of protein luncheon. 63(7):832, 834. July.
• ***Summary:*** More than 80 persons turned out at noon Friday, May 16, 1986, to attend the Protein and Co-Products Section luncheon and business meeting. The featured speaker was Darshan S. Bhatia, director of corporate research and development for The Coca-Cola Co., Atlanta, Georgia. He spoke on "Soy Beverages–Some Unresolved Problems". The total volume of soy beverage is perhaps on the order of 1% of the world's soft drink volume. According to Bhatia, marketing soy beverages as an alternative to dairy milk is a mistake. We should promote the product in its own right with its own flavor, and the promotion material should be consistent with the product's intrinsic attributes. Bhatia recalled that in 1967-68 when he first drew up a proposal that Coca-Cola produce soy beverages, "I predicted a time when soft drinks would be fortified with more and more nutrients." Address: Coca-Cola Co.

4850. *Toyo Shinpo* (*Soyfoods News*). 1986. Hatsu no Beikoku genchi seisan: Marusan-ai no tônyû. Gôben-gaisha Michigan seiritsu [The first American production of Marusan-Ai's soymilk. Joint stock company established in Michigan]. Aug. 1. p. 1. [Jap; eng+]
• ***Summary:*** Japan's second largest soymilk maker, after Kibun, is Marusan-ai K.K. (Head office: Araki 1 banchi, Nikimachi Aza, Okazaki-shi, Aichi-ken, Japan. President: Koji Sato). They have recently established a joint stock company to produce soymilk in Saline, Michigan. Production is scheduled to start at the end of August, 1986.

The new company's name is American Soy Products. The start-up capital is $200,000. There are 4 Japanese companies and one U.S. company involved. Their respective percentage ownerships are: Marusan-Ai (25%, soymilk and miso maker from Okazaki), Kawatetsu Shoji (25%, the New York based company that was previously in charge of exporting soymilk to Eden Foods from Japan), Eden Foods Inc. (25%, natural foods distributor and importer from Clinton, Michigan), Muso Shokuhin (15%, macrobiotic and natural foods exporter from Japan), and Seikensha (10%, soymilk equipment maker from Tokyo).

The chairman of the board is Mr. Michael Potter of Eden Foods Co. and the president is Mr. Hiroyasu Iwatsuki. As before, Eden Foods will continue to distribute the soymilk. The head plant is located in Saline, Michigan (50 km west from Detroit) on a site of 15,000 square meters. The main facilities are 1 Soymilk Line and 2 Tetra packaging lines. The initial run is scheduled to produce 100,000 packages of 250 ml equivalent. They are actually going to make both 250 ml and 1-liter packages. The company's first year sales goal is $5,000,000. Address: Kyoto, Japan.

4851. *Times of India* (*The*) (*Bombay*). 1986. Fresh decline in equities: Wednesday's traded scrips. Stock quote. Aug. 14. p. 13.
• ***Summary:*** In Group 'B," Noble Soya is selling at 22, 23.

Note: This is the first stock quote seen for Noble Soya.

By 9 Jan. 1987 the stock price had risen to 30, 31. But by 5 Jan. 1988 it had fallen to 15. By 6 Jan. 1989 it had risen to 18. It was still at 18 on 3 Jan. 1990. But on 12 Sept. 1990 it had risen to 25, 27, 23, 25. Address: Registered office: E-7/638 Shahpura, Near Campion School, Arera Colony, Bhopal, Madhya Pradesh.

4852. **Product Name:** [Soymilk, and Soja Drink (Regular, With Cane Sugar, or Chocolate)].
Foreign Name: Sojamilch, und Soja-Drink (mit Rohrzucker, Schoko).
Manufacturer's Name: Bio Quelle.
Manufacturer's Address: Austria.
Date of Introduction: 1986. August.
New Product–Documentation: Food Report (Lehmann). 1986. Aug.

4853. **Product Name:** [Soymilk Dessert (Vanilla, Chocolate)].
Foreign Name: Soja-Dessert.
Manufacturer's Name: Bio Quelle.
Manufacturer's Address: Austria.
Date of Introduction: 1986. August.
How Stored: Refrigerated.
New Product–Documentation: Food Report (Lehmann). 1986. Aug.

4854. deMan, J.M. 1986. Processing of protein-rich foods. In: V.H. Potty, et al. eds. 1986. Traditional Foods: Some Products and Technologies. 292 p. See p. 246-52. Aug. Presented at the UN University Workshop on "Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies." Held June 1983 at CFTRI, Mysore, India. [17 ref]
• ***Summary:*** Under soybeans (the major crop discussed in this chapter), the author mentions tofu, soy milk, fried tofu and tofu puffs. Includes a proximate analysis of various Canadian soybean cultivars. Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, N1G 2W1, Canada.

4855. Eden Foods, Inc. 1986. Sweet summer soy milk treats: While Life recipe corner. *Whole Life.* Aug. p. 71.
• ***Summary:*** Contains 5 soy milk recipes provided by Eden

Foods: Coconut creme pie. Banana bread. Mocha mousse (set with agar flakes; serve chilled). Carob creme pie. Edensoy fruit shake. Address: Clinton, Michigan.

4856. Fomon, S.J.; Ziegler, E.E.; Nelson, S.E.; Edwards, B.B. 1986. Requirement for sulfur-containing amino acids in infancy. *J. of Nutrition* 116(8):1405-22. Aug. [28 ref]
• ***Summary:*** For infant formulas containing 2.8 and 3.0 g/100 kcal of protein for isolated soy protein (levels found in commercial infant formulas), there was no benefit of methionine supplementation. At lower protein levels, nitrogen balance studies showed that methionine supplementation was of some benefit. Address: 1. Dep. of Pediatrics, College of Medicine, Univ. of Iowa, Iowa City, IA 52242; 2. Univ. of Iowa.

4857. *Iowa Soy News.* 1986. Let's hear it for soy product promotion. 5(9):3. Aug.
• ***Summary:*** Discusses Iowa soyfoods companies: Alex Green of American Pride Tofu Co. (Fairfield), makes 15,000 to 20,000 lb of tofu a month. Don Alger of Iowa Nuts Inc. (Spencer) says the company was founded in about June 1986. They grow the soybeans then buy them back in bulk as soynuts to package them in a 5 oz can and 1.5 oz foil packs, and distribute them. Plans are to market 400,000 lb the first year. The Iowa Chip is an extruded mixture of 90% corn and 10% soybeans developed at Iowa State Univ. using an Insta-Pro extruder. Grain Processing Corp. of Muscatine makes a soy ice cream. Miller Farms Food Co. of Cedar Falls has a portable soymilk plant built on two 45-foot trailers. It can produce up to 2,000 gallons of soymilk a day. INARI Ltd. in Michigan has made Super Soynuts since 1976. A new product is soynut butter with less calories per ounce (only 157) than peanut butter. Address: Iowa.

4858. **Product Name:** Natural Prepared Entrees: Tofu Burger.
Manufacturer's Name: Natural, Inc.
Manufacturer's Address: 6650 Santa Barbara Ct., Elkridge, MD 21227. Phone: 301-796-3211 (Balt.); 301-621-5388 (DC).
Date of Introduction: 1986. August.
Ingredients: Nigari tofu, carrots, cabbage, onions, celery, okara, soymilk, sesame seeds, sunflower seeds, soybean oil, sea salt, spices.
Wt/Vol., Packaging, Price: 7 oz vacuum pack.
How Stored: Refrigerated.
New Product–Documentation: Label. 1986, undated. "Completely vegetarian. All natural. No preservatives." Talk with Larry C. Betzler of American Soyfood Industries. 1988. April 1.

Papers presented at the UN University Workshop on "Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies" held June 1983 at CFTRI, Mysore. 25 cm.
• ***Summary:*** This publication contains 27 papers presented by scientists from countries of Asia, Africa, Europe, and the Americas. Chapters related to soy are cited separately. The traditional foods of the following countries are discussed specifically: Ethiopia, Nigeria*, Sudan, Senegal, Pakistan*, India, Nepal*, Burma*, Thailand*, Malaysia*, Indonesia*, Philippines, Korea*, China*, Japan*, and Mexico*. Countries with foods related to soy are followed by an asterisk (*). Address: Central Food Technological Research Inst. (CFTRI), Mysore–570 013, India.

4860. Proceedings of the 4th International Lupin Conference: Organised by the International Lupin Association in collaboration with the Western Australian Department of Agriculture, August 15-22, 1986, Geraldton, Western Australia. 1986. South Perth, Australia: Western Australian Department of Agriculture. x + 350 p. Held at Geraldton, Western Australia.
• ***Summary:*** Many papers discuss food uses of lupins. For example: Fluid milk analogue prepared with sweet lupin (p. 296). Fermentation of a yoghurt simulate prepared with lupin milk (p. 296).

4861. Saio, Kyoko. 1986. Interactions among traditional and emerging processing technologies observed in Japanese food industries. In: V.H. Potty, et al. eds. 1986. Traditional Foods: Some Products and Technologies. 292 p. See p. 209-15. Aug. Presented at the UN University Workshop on "Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies." Held June 1983 at CFTRI, Mysore, India.
• ***Summary:*** Contents: Soybean food technologies: Traditional but local products include Rokujo-dofu (made in a small mountainous region of Yamagata prefecture), Hoshi Abura-age or Kanso Abura-age (made in Matsuyama city, Ehime prefecture), Yuba (made fresh mostly in Kyoto), and Shimi-dofu (made in cold, mountainous regions of northern Japan). Emerging soybean food technologies related to traditional foods: Soymilk (tonyu), Daizu-no-Hana (developed by Asahimatsu Shokuhin; marketed with help from Takeda Yakuhin Kogyo; a flowchart is given). Traditional foods prepared from vegetable products: e.g. Tofu derivatives. Address: National Food Research Inst., 2-1-2 Kannondai Yatabe, Tsukuba, Ibaraki 305, Japan.

4862. Smith, Paul. 1986. General comments on F.G. Roberts, his philosophy and company, and the history of Soy Products of Australia Pty. Ltd. Bayswater, Victoria, Australia. 5 p. Unpublished manuscript. Handwritten.

• ***Summary:*** F.G. Roberts' philosophy of health: "F.G. Roberts was opposed to smoking and alcohol consumption. He believed in and prescribed mainly eating fresh fruit and vegetables, followed next by whole grains, with all concentrated foods like meat, nuts, eggs, cheese and dairy foods being eaten sparingly. Roberts was also strongly opposed to all highly refined and processed foods, particularly white flour and white sugar. He discouraged the use of tea and coffee due to their caffeine content and acid forming tendencies. He recommended that salt be used sparingly and that it should be cut out entirely where the kidneys may be overloaded as in the case of pregnant women.

"Roberts believed that a well-planned and balanced diet should provide the body with all necessary minerals, vitamins and nutritional elements without the need to resort to mineral and vitamin supplements. However such supplements may be necessary for people who live in flats in inner city areas and have no access to *fresh* fruit and vegetables. He also believed that by careful attention to diet and exercise the body would become self-cleansing and self-healing, and that many common health problems and diseases could be avoided. The latter usually stemmed from nervous disorders, emotional problems, poor blood circulation, poor food combinations, inadequate diet, faulty elimination of bodily waste products, or complex combinations of these factors.

"Roberts believed that simple prevention was better than a cure after your bad habits had caught up with you. He was opposed to the use of drugs since the side effects were often worse than the initial problem. In most cases he was opposed to surgery, regarding it as a last resort. He did not believe in any procedures which interfered with any of the body's immunity systems or normal functions. He believed in assisting the body to sort out its own problems and heal itself.

"All the products formulated and developed in the 1930s by F.G. Roberts were designed for their basic healthy and nutritional qualities and to address some of the deficiencies in conventional diets and foods. All were made form whole seeds, grains, etc. Most of the community suffers from constipation, acidity, mineral deficiency, or kidneys and livers overloaded with toxic waste products.

Roberts advocated the use of molasses for its high mineral content, its alkaline reaction, and its mildly laxative qualities. Alfalfa Tea was developed as a tea and coffee substitute, for its high natural mineral content and its gentle alkalising qualities. Malted and Vita Bran were designed to introduce additional dietary fiber or roughage into the diet in a pleasant way. Cleansing Herbs is a natural herbal laxative product with no addictive or side effects problems; it is particularly useful for the older person with sluggish bowel movements. Soy Compound was developed as a milk substitute and is particularly useful in cases where dairy milk cannot be tolerated. Vita Elm, with the healing properties of slippery elm, is a bland, nutritious cereal for the very young and the elderly.

F.G. Roberts believed in three good, satisfying meals a day. He disapproved of snacking, and thought that most people eat too much too often, overloading their digestive system, liver, and kidneys.

F.G. Roberts believed that the first step in healing any human complaint was to increase intake of fluids and to get the bowels moving regularly once or twice a day to eliminate the buildup of waste products. He also advocated exercise programs–the forerunner of the current aerobic exercise programs–to stimulate muscles, organs, and blood circulation. He would recommend a cleansing diet, followed by a gradual return to a balanced diet in which the quality, quantity and mixtures of foods would be carefully considered depending on the age, physical type and occupation of each person.

F.G. Roberts was an expert iradiagnostician. A favorite trick was calling unknown people from lecture audiences and tell them where and when bones had been broken, what operations they had had, what drugs and medication they were taking, and many other things not apparently obvious. His knowledge of and ability to read people healthwise and personality wise was almost uncanny. He was once arrested and jailed for fortune telling based his knowledge of iradiagnosis. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

4863. **Product Name:** Original Pizsoy (Whole-Wheat Non-Dairy Pizza Made with Tofu Mozzarella [Which Contains Casein]).
Manufacturer's Name: Tree Tavern Products.
Manufacturer's Address: P.O. Box 1314, Cherry Hill, NJ 08034. Phone: 609-667-1763.
Date of Introduction: 1986. August.
New Product–Documentation: Ad in Whole Foods. 1986. Aug. p. 59. Oct. p. 80. Also in Natural Foods Merchandiser. 1986. Oct. p. 80 and Dec. p. 19. "The naturally delicious alternative to pizza." "Made with Tofu Mozzarella." A photo shows the product label.

Leaflet (color, 2-sided, 8½ by 11 inches). 1987. "The Naturally Delicious Alternative to Cheese Pizza–Without the lactose, cholesterol, butterfat, sugar and heavy doses of sodium and calories." The front shows a large color photo of the package. The back describes how the product is made, and gives ingredients and nutritional analysis. But nowhere is the consumer told that casein, a key ingredient in Tofu Mozzarella, is derived from cow's milk.

Talk with a reporter. 1990 Nov. Robert Savar says he developed the first soy cheese in America. First he developed a regular whole-wheat pizza with regular cheese. Then he wanted to developed Pizsoy with soy cheese. This led to his

work on soy cheese.

4864. **Product Name:** Vitasoy Natural Soy Drink [Creamy Original, Rich Chocolate (renamed Rich Cocoa by Jan. 1992), Carob Supreme, or Vanilla Delite].
Manufacturer's Name: Vitasoy (USA) Inc. (Importer). Made in Hong Kong.
Manufacturer's Address: 435A Brannan St., San Francisco, CA 94107.
Date of Introduction: 1986. August.
Wt/Vol., Packaging, Price: 250 ml (8.45 fluid oz) Tetra Brik Aseptic carton.
How Stored: Shelf stable.
New Product–Documentation: Ad in East West. 1987. March. Inside rear cover, full-page color. "Vitasoy brings you a new exciting flavor." Existing flavors are Creamy Original, Rich Chocolate, and Carob Supreme. Offers free Vitasoy Recipes brochure. Send coupon to Vitasoy Recipes, Box 77321, San Francisco, California 94107. Same ad in Vegetarian Times. 1987. March. Inside from cover. Introducing Vanilla Delite. These products, launched in July-August 1986, are reformulated and repackaged versions of those introduced in March 1984. They contain more solids and nutrients, and are sweetened with barley malt instead of maple syrup. In March 1987 the average retail price per 8.45 oz pack was $0.59 to $0.69.

Talk with Grace at Vitasoy. 1988. Sept. 7. The first small vanilla carton was launched in December 1986. The liter size original and vanilla were launched in July 1987.

Ad in Bestways (½ page color). 1989. Sept. "New to our organic family: Carob Supreme Vitasoy in liter size."

Label (250 ml aseptic carton) for Rich Cocoa sent by Anthony Marrese. 1994. May. He purchased this in Ireland in early 1993 for 49 pence.

4865. Watanabe, Tokuji. 1986. Traditional foods: Their values, problems and research and development. In: V.H. Potty, et al. eds. 1986. Traditional Foods: Some Products and Technologies. 292 p. See p. 201-08. Aug. Presented at the UN University Workshop on "Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies." Held June 1983 at CFTRI, Mysore, India. [7 ref]
• ***Summary:*** Contents: Introduction (ways of classifying traditional foods). Structural characteristics of traditional food industries in Japan. Traditional food processing technologies. Problems and reevaluation of traditional foods. New food processing technologies applied to traditional

foods. Technologies applicable to traditional foods. Assessment in modernization of traditional food production. Some activities related to traditional foods. Conclusion.

Traditional foods can be classified as staple or non-staple, fresh or processed (processing technologies include fermentation [e.g. miso, soy sauce, natto], salting, acidifying, drying after freezing [kori-tofu], sun-drying, fractionation [tofu], fabrication [ganmodoki], simulation of animal foods [soy milk, ganmodoki, su-ho-tai made from yuba in China]), animal or vegetable origin, and region or national production.

In Japan, rice consumption is decreasing year after year. It is thus not surprising that consumption of traditional foods closely associated with rice production are also decreasing. The reevaluation of traditional foods and their advantages and disadvantages are discussed. New food processing and packaging technologies are being applied to traditional foods, including tofu, miso, natto, and koji. Recently a method has been found to extend the shelf life of natto beyond the traditional 1-2 day period. Miso has been freeze-dried.

"Another application of a new process for the traditional foods is the emulsion curd which is a semi-solid mixture with definite proportion of soybean protein, oil and water. It keeps its form without flow. Even the dried or frozen product recovers its original texture by hydration or thawing. Therefore, it is used as a substitute in dried or frozen *Tofu*. Regular *Tofu* cannot recover its texture once it is frozen or dried...

Miso can be enriched with vitamin B-2 and calcium, and its salt content lowered. Since 1980 the Laboratory of Food Science at Kyoritsu Women's University has been conducting a research survey on traditional foods and dishes in Japan in cooperation with the Cooking Research Laboratory. "This project consists of three components: (a) survey of the present status of traditional foods on local basis at respective regions by visiting prefectural research organisations–universities and colleges; (b) sending questionnaires to students for seeking information on the position of the traditional foods in the dietary patterns of individual homes and also to obtain their comments on the future prospects of the local traditional foods; (c) and documentation regarding local traditional foods, followed by classification according to preparation or cooking method for analysis. On the basis of the collected data, the relationship between each local traditional food and its natural, cultural and historical background has been studied and published in the university's journals. More efforts are being made to identify the reasons as to why and how some traditional foods have survived in certain regions, while the others have disappeared or reached the verge of extinction.

"Another related activity is the one carried out by Ajinomoto Company, a major food manufacturer in Japan, which has got the modern audio-visual media, video-tapes and 36 mm-films. Their team has been documenting the processing of some selected traditional foods like *Tofu, Yuba, Fu* and such other foods as demonstrated by professionals by using the old traditional methods and facilities. This would help in the documentation of traditional technologies before they disappear in the event of modernisation of such foods. Such tapes and films have been made available by the company...

"Traditional foods, especially those of plant origin, are prepared by such complex multi-step processes as to be called 'products of human wisdom.' Therefore there is so much to learn from such products if serious attention be paid. Indeed they have great potential for developing new food industries." Address: Kyoritsu Women's Univ., Tokyo, Japan.

4866. Yin, Zong Lun. 1986. Development and industrialization of traditional food production in China. In: V.H. Potty, et al. eds. 1986. Traditional Foods: Some Products and Technologies. 292 p. See p. 191-200. Aug. Presented at the UN University Workshop on "Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies." Held June 1983 at CFTRI, Mysore, India.

• ***Summary:*** Under "Oilseeds, Soy products," the author discusses soymilk, soybean curds (tofu; soft tofu is popular in south China and hard tofu in North China), fried bean curd, smoked bean curd, "stink" flavoured bean curd, soymilk skin sheet [yuba], dried soymilk skin sticks [dried yuba sticks], fermented bean curd or soy cheese, and soybean powder.

Under "Condiments," soy sauce is discussed. Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "soymilk skin" or "soymilk skin sheet" to refer to yuba, or that uses the term "dried soymilk skin sticks" to refer to dried yuba sticks. "These products form an important part in a vegetarian's diet and are used in conjunction with other ingredients to prepare imitation meat and fish like products for vegetarian dishes" (p. 194).

"Soymilk is a very popular breakfast beverage. In order to supplement milk supplies and also meet the special needs of those who, for some reason cannot drink milk, processing factories have been set up with relatively large-scale production capacities for soymilk. With the same distribution pattern as milk, soymilk is supplied to various catering departments, schools, kindergartens, nurseries and families. The process employed for soymilk ensures destruction of trypsin inhibitor and effective deodorization to reduce the unpleasant bean-taste...

"Fermented bean curd or soy cheese can be produced by the fermentation of bean curd. The fermented bean curd may differ in shape (square bits, cubes), colour (white, red), flavor and smell; the products can also be steeped in seasoned rice wine or preserved with drags of rice wine. Sometimes they contain added pepper, rose leaves or

shrimp spawn. The traditional production procedure is very subtle. The aging process requires high levels of skill and experience. The product is liable to break down and careful handling is needed. Presently, a new type of fermented bean curd in the form of paste which is more amenable to handling and packaging, and consuming has appeared on the market. However, this product does not conform to Chinese traditional eating habit and is, therefore, now [not?] widely accepted, either for nutritional value or flavour. Soy cheese has a great potential for development...

"In several baby food recipes, soybean constitutes an important source of protein. The well known milk substitute 5410 formulated during the 1950s contained soybean powder as the main ingredient. Formula 5410 has proved to be a success in terms of its nutritional value. It has become the basic recipe for many milk substitutes. Some factories use spray drying process to produce instant blended milk powder consisting of soymilk, milk and other ingredients; they have gained some technological and financial benefits. In recent years, there has been a continuous flow of such products into the market.

"Based on previous research efforts, and in conformity with China's present situation, work is being done to develop an oil-containing concentrated soy protein. The techniques involved have certain positive characteristics. The end product can be a liquid for direct use as a food ingredient or a spray-dried powder for the formulation of dry-mixes." Address: Research Inst. of Light Industry, Beijing, People's Republic of China.

4867. Mitchel, Diana. 1986. Re: New developments with soymilk in Australia. Letter to William Shurtleff at Soyfoods Center, Sept. 1. 2 p. Handwritten.
• ***Summary:*** (1) Castle Trading (Ranwick, NSW) are now selling non-sweetened fresh soymilk in 2 litre containers at $3.00 Australian. (2) Biogenic (owned by Russels-Russels, which is owned by a New Zealand health chain) are selling 1 litre Tetra packs sweetened with honey at $3.40 each. (3) Sanitarium Health Food Company, a Seventh-day Adventist chain, are producing their own soya milk. It is apparently nice and cheap. (4) Soyfoods Australia P/L [Pty. Ltd.] at 14/2 Paton Place, Manly Vale (Phone: 02-949-7314) are producing soy milk "and have just spent $100,000 on equipment that is quite unsophisticated in comparison to the English equipment I was thinking of buying. Anyhow, they are contracting to sell fresh soya milk to all Coles supermarkets in NSW in plastic bottles." (5) Quite a few brands are selling in NSW, including: "Simply Better" (24-B Braeside Drive, Braeside, VIC 3195. Phone: 03-580-8505); Light Foods (37 Richards St., Hindmarsh, SA 5007); Earth Angel Soy Foods (Mt. Waverley, Victoria). Address: Squirrels on the Park, P.O. Box 4, Surry Hills 2010, NSW, Australia.

4868. Tsuchiya, Kanji. 1986. Plans to visit the USA to attend opening ceremony of American Soy Products soymilk plant in Saline, Michigan (Interview). Conducted by William Shurtleff of Soyfoods Center in Japan, Sept. 1. 1 p. transcript. [Eng]
• ***Summary:*** Mr. Tsuchiya called from Japan to say he plans to attend the opening ceremony Sept. 7-8 in Saline, Michigan. The president of the new company is Mr. Hiroyasu Iwatsuki. He will explain later about 12 soymilk plants he helped to open in China. Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

4869. Lee, Geok Boi. 1986. Soya bean milk packs more water than flavor. *Sunday Times* (*Singapore*)**.** Sept. 7. [Eng]
• ***Summary:*** A comparison of five soymilk varieties sold in Singapore: Drinho (made in Malaysia), Magnolia (Singapore), Marigold (Singapore), Vitasoy (Hong Kong), and Yeo's (Singapore). Magnolia was considered the best buy because "it was the only brand with a hint of soya bean flavour."

4870. Fracassa, Anne. 1986. Mo-o-o-ve over cows, new milk to hit market. *Tribune* (*Royal Oak, Michigan*)**.** Sept. 9.
• ***Summary:*** Wayne State University professor Leora Shelef and associate professor Michael Zemel have developed a new soymilk fortified with calcium to containing 60% more than cow's milk, and with less beany flavor. The university has applied for a patent on the new product and the process is being commercialized by Elef, Inc. in Lathrop Village, Royal Oak, Michigan. For information call Leonard Wanetik at Elef: 443-1776.

4871. Olson, Lise. 1986. Soymilk plant opens: State farmers to reap benefits of new facility [American Soy Products plant at Clinton, Michigan]. *Detroit News.* Sept. 10.
• ***Summary:*** The American Soy Products soymilk plant was dedicated on 9 September 1986. A small package (8.45 oz) of Edensoy sells for $0.59; the larger (33.8 oz) sells for $1.99. Edensoy comes in three flavors: plain (which has a wheat germ flavor), carob, and vanilla. In 1985 privately held Eden Foods had sales of about $12 million.

A large photo shows Yasuo Watanabe and Teizo Okada, two Japanese partners in American Soy Products, at the dedication of the new soymilk facility. Address: Michigan.

4872. Bennett, Gordon. 1986. Re: Soymilk standards and the Soymilk Standards Committee. Letter to Judy Walker, Soyfoods Association, 1101 Connecticut Ave., N.W. #700, Washington, DC 20036. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Regarding the Soymilk Standards Committee: the self-appointed ad hoc committee consists of myself, and Steve Snyder and Yvonne Lo of Vitasoy. Since the standards are on my word processor, I guess that makes me the ad hoc

chairperson.

"The soymilk standards draft #1 was composed about two years ago entirely by myself, based on the format of the then-current draft of the tofu standards and incorporating information primarily from Bill Shurtleff's Tofu and Soymilk Publications. After comment from various people in the tofu standards group (especially Tom Timmins), I put together draft #2 in time for the Washington meeting last October.

"Draft #2 was offered at the general meeting to any members who had interest, and I suggested that comments be forwarded to my attention. To this date, I have received written comments from the technical people at Vitasoy (Hong Kong) and a copy of the Chinese National Standards for Soymilk from Mr. Chen of the Food Industry R&D Institute of the Republic of China (which unfortunately is in Chinese). Steve and Yvonne and I also met and discussed Draft #2. Most of their comments and some later ideas that I had have been incorporated into Draft #3 ("Third Draft Soymilk Standards"), which is enclosed and which I plan to hand out at the general meeting, again soliciting comment.

"At this general meeting, it might be wise to formalize this committee, and I would like to get a few other soymilk producers on the committee–Harry Tanikawa from House Foods would be good, for example, if he is willing. Peter Golbitz of Island Tofu Works may also be interested. I do hope, however, that we can avoid clogging the committee with people who may have good intentions but who are not knowledgeable in the field and who are not among the more important factors involved. One last point: all expenses to date have been borne by Westbrae, including some conferences with the same law firm that is advising on the Tofu Standards. I am happy to continue to do this, so long as these expenses stay "reasonable."

"Please advise if you want copies of Drafts #1 and #2 for your records."

Copies mailed to: Gary Barat, Tom Timmins, Bill Shurtleff, Steve Snyder, Yvonne Lo, and Harry Tanikawa.

Note: The Third Draft of the Soymilk Standards is 21 pages, typewritten, double spaced, with 12 sections. Address: Westbrae Natural Foods, 4240 Hollis St. (P.O. Box 8711), Emeryville, California 94608 (or 94662). Phone: (415) 658-7518.

4873. *Japan Economic Journal* (*Tokyo*). 1986. Mouthwash rides tide of new garglers after high and dry years on the shelf Sept. 13. [Eng]

• ***Summary:*** "Fall of soy bean milk: While there are markets that explode after years of dormancy, some commodities lose popularity just as quickly, in most cases because of faddish consumers and over-competition.

"Riding on a health food boom, soy bean milk suddenly became an 'in' drink in 1981, doubled sales in the following two years, and created a ¥25-billion market, This year, only half that many soy bean milk packages are likely to be sold.

"The business ballooned to an 80-company industry in a year or so, and the market was severely hurt by low-quality products supplied by me-too makers, says Mitsuru Onozawa, a planning manager at Kibun Health Foods Co., a pioneer in that field.

"'We and other forerunners removed the strong soy flavor from the milk, and thus gained the popularity. The latecomers entered the market without that technology, and many customers found the soy bean milk repelling because of the soy smell.'"

4874. Wygent, Debbie. 1986. Old farm produces a new protein [Warren Reynolds at Green Valley Farms]. *Local News* (*West Chester, Pennsylvania*). Sept. 14. p. C-2, C-6.

• ***Summary:*** Warren Reynolds, age 26 and a vegetarian for 6 years, now makes tofu. His Green Valley, once a dairy farm, no longer keeps any animals. Photos (by Bill Stonebeck) show four steps in the tofu-making process: (1) Warren Reynolds pours soaked soybeans into the hopper of a grinder, where they will be ground (with added water) to a smooth puree. (2) Liquid nigari being poured onto a stainless steel paddle above the surface of a vat of hot soy milk. The nigari makes the soymilk curdle–resulting in pure white curds floating in yellow whey. (3) Susie Macunga cuts a large block of tofu (on a table) into individual bricks / cakes. (4) A hand in a plastic-glove holding a brick of tofu; it can be refrigerated and wrapped for storage.

4875. Bhatnagar, P.S. 1986. Summary of the present situation with soya in India. Tape prepared for William Shurtleff at Soyfoods Center, Sept. 15–in reply to specific questions. 3 p. transcript. Unpublished manuscript.

• ***Summary:*** William Shurtleff was away (on the East Coast doing library research) during this team's visit to Soyfoods Center (Lafayette, California), so Akiko took care of them. William left questions about soy in India which he asked them to answer.

All visitors in his team were impressed with Soyfoods Center and its work–"overwhelmed."

Soybean has a bright future in India. The increase in acreage from 300 ha in the late 1960s to the present 1 million speaks for itself. Initially there were several obstacles. The most important opposition was from India's groundnut lobby. The groundnut is an important oilseed in India. When soybean was introduced, they feared it might replace groundnut. Various people expressed apprehension. They said: Soybean is not good for health, it has toxins and soybean trypsin inhibitors (which are very widely discussed), antinutritional factors, and cause flatulence. They will disturb the commodity balance, etc.

But with time and effort, it has been established that these were not valid criticisms. Soybean would not disturb the commodity balance, as the land required would not be suited for groundnuts. Since all food is well cooked, there is

no problem with trypsin inhibitors. Chickpeas, and green and black gram also cause flatulence, but no one bothers about it, They have been eaten since time immemorial.

With these facts: (1) The lobby against soy weakened. (2) At the same time the Indian government realized the importance of soy, especially in decreasing imports of edible oil.

Initially black seeded soybeans were cultivated in India from very early times. Then yellow soybeans were introduced in late 1960s to 1970s to use as a low cost source of protein. Farmers grew it but could not sell it so they stopped. For a while it looked as if soybean would never take off in India. However, then the edible oil industry saved the day. Expansion of acreage has been mainly a result of its use for oil. (3) An oil industry grew up and created a market. (4) The agricultural feasibility of growing soybean in different parts of the country was established, as was its economic viability and place in cropping system... through the All-India Coordinated Project on Soybeans.

Then more industry and new expanded cultivation.

Madhya Pradesh is the center of soybean cultivation and industry. New entrepreneurs are now also going there since the supplies are established. But now soybean acreage is saturated in Madhya Pradesh. However, a little is still available. Now his efforts are to expand areas that are not reaching their full potential.

A cause of worry now is that most of (95% of) the soybean protein (defatted soybean meal) is being exported as livestock feed. This situation is rather dangerous. The Indian oil industry is dependent on foreign countries. If the soybean meal were not sold abroad, the Indian industry would crumble. So the need is to develop products in India based on defatted flour and popularize these. To do this, there are two essentials: (1) The cost of the product should be low compared to other similar products. (2) The taste should not be drastically different from traditional products. Indian food habits are very conservative, orthodox, and rigid. Also, use of the whole soybean must be encouraged in soya dairylike products at the home, village, and cottage industry levels.

Among soya dairylike products, tofu is one product that will definitely become popular subject to (1) High quality. (2) The profit margin is so small that the price difference between tofu and milk panir is small. He prepared some panir for us. Panir is very popular, especially in North India. All who can afford it would like to buy it. It is used for many curries, snacks, and other dishes. All are considered to be luxury dishes. Only the rich can afford them. The cost of panir is about $3 per kilogram, or 36 rupees per kilogram. Average monthly income is 250-300 rupees per month in India. As a result, only a few in the upper middle class can afford it. Tofu must sell for 7-8 rupees per kilogram. He calculated tofu production cost to be 3-4 rupees per kilogram. He feels this will catch on rapidly in North India.

With this in mind, many entrepreneurs have shown interest in tofu and soymilk. One big plant, Noble Soya, is starting in Bhopal. Another is United Soya. Plants are also planned in Kanpur and Delhi. So tofu has a good future. But Dr. Bhatnagar's worry is that small producers are making a poor quality product, which turns off consumers forever. Already many people have developed a negative prejudice. He also noticed this prejudice about soy in the USA.

To summarize: Prospects to narrow the oil gap are bright. The future of soy as food is also bright.

Tempeh has not yet been tried in a sincere sense, but he feels it has a good future.

In India, isolates, concentrates, and lecithin are now being extracted on a very small and limited scale. In a few areas, soy is taking land way from rice cultivation. Due to a slump in the international market for soybean meal, farmers' prices dropped, which led to a decrease in acreage the next year. It seems temporary. Government has set a minimum support price. On the initiative of Rajeev Gandhi, a technical mission of oilseeds has been established. The main goal is to increase oilseed production in India. Imports are now huge. India should become self sufficient in oilseeds, as she has become self sufficient in food grains. Soybeans are included in the mandate of this technology mission. Increase of production is planned, in both horizontal (area) and vertical (yield, presently very low–0.7 metric tons per hectare) growth. There will be a new thrust with government support.

The main idea is to reduce, then cut, foreign dependence on soya as (1) imported oil, and (2) imported meal. Solution: use defatted soybean meal for foods in India, and use whole soybeans in dairylike soybean products.

Closes with thanks to Akiko. He will send Bill some of the papers Bill needs. He looked though his manuscript briefly and made some suggestions. Send it to him for a careful read after the next update. He will check with literature he has in India. Let him know of companies that make plants for soy oil and lecithin, etc. He wants Akiko to come to India too. Address: PhD, Coordinator, All-India Coordinated Research Project on Soyabean (ICAR), G.B. Pant Univ. of Agriculture & Technology, Pantnagar, UP, 263145, India.

4876. Abdul Rahman, Hussein. 1986. An update in the manufacturing of traditional fermented and non fermented soyfoods in Malaysia. In: F.G. Winarno, ed. 1986. International Soyfoods Symposium. xiv + 403 p. See p. 59-73. Held 16-18 Sept. 1986 in Jogyakarta, Indonesia. [38 ref]
• ***Summary:*** Contents: Abstracts. Introduction. Present status of soybean utilization in Malaysia. Manufacture of traditional fermented soyfood in Malaysia. Manufacture of traditional non-fermented soyfood in Malaysia. Research and development of soyfood in Malaysia. Conclusion. Address: Extension Services, Food Technology Div., Malaysian Agricultural R&D Inst., P.O. Box 202, Serdang, Selangor, Malaysia.

• ***Summary:*** Contents: Abstract. Soy milk. Tofu. Soy sauce. Miso. Natto.

Table 1 (p. 28) shows changes in the size of the soymilk market in Japan from 1979 to 1985. For each year there are statistics for the amount of soymilk sold (in kiloliters), the ratio of that amount to the amount sold during the previous year, the total retail value in yen, the ratio of the retail value that year to the value the previous year, and the ratio of the retail value that year to the value in 1979. The amount of soymilk sold in million liters is as follows: 1979–6.5 million liters. 1980–12.0. 1981–25.2. 1982–54.3. 1983–111.5. 1984–84.013. 1986–55.354.

Also contains a detailed analyses of the off-flavors in soymilk. These off flavors are brought about through the hydrolysis of the glycosides by the Beta-glycosidase contained in soybeans. Contains 46 figures, including many photos, flowcharts, and equipment designs. Address: Food Research Inst., Kikkoman Co. Ltd., 339 Noda, Noda City, Chiba prefecture, Japan.

4881. Fukushima, Danji. 1986. Preservation of traditional soy products. In: F.G. Winarno, ed. 1986. International Soyfoods Symposium. xiv + 403 p. See p. 267-93. Held 16-18 Sept. 1986 in Jogyakarta, Indonesia. [25 ref]
• ***Summary:*** Contents: Abstracts. Soy sauce and miso. Soy milk, tofu, and their related products. References. Address: Food Research Inst., Kikkoman Co. Ltd., 339 Noda, Noda City, Chiba prefecture, Japan.

• ***Summary:*** Contents: Introduction. Function of flavorings. Constraints on flavor development. Processing constraints on flavoring development. Soyproducts: Europe, USA and Asia. Flavoring problems associated with soy products. Flavoring problems in the application of soy milk. Flavoring problems in the application of soy protein meat products. The future for soy products. Acknowledgment. Appendixes.

Note: This is the earliest English-language document seen (Jan. 2004) that contains the word "soyproducts" (spelled as one word).

4883. Leufstedt, Goran. 1986. Continuous process for low beany taste soybean products. In: F.G. Winarno, ed. 1986. International Soyfoods Symposium. xiv + 403 p. See p. 79-93. Held 16-18 Sept. 1986 in Jogyakarta, Indonesia. [2 ref]
• ***Summary:*** Contents: Abstract. Introduction. Continuous process systems. Continuous soyfood processes. Soy extraction line: Soybean grinding, deactivation of lipoxygenase enzymes, fiber separation, trypsin inhibitor deactivation, deaeration/deodorization. Aseptic soy beverages. Ultrafiltration of soy extract. Soy-yogurt. Frozen desserts. Tofu. Prepared foods–forming, frying. Residue–okara. Conclusion.

In the dairy industry ultrafiltration (UF) of cow's milk has long been used for continuous concentration of protein. UF is also common in the cheese industry for continuous production of soft cheese. "As far as I know, no UF plant in commercial operation has been reported on soy, but two

applications are described in the literature: Concentration of the protein and diafiltration, i.e. washing out anti-nutritional compounds." Address: Alfa-Laval South East Asia Pte. Ltd., 11-Joo Koon Circle, Singapore 2262.

4884. McSweeney, Daniel. 1986. Consumer survey 1986. *Whole Foods.* Sept. p. 39-40, 43.
• ***Summary:*** This survey appeared as a readership survey in the July 1986 consumer-directed *EastWest* magazine. The sample size is not given. The percentage of respondents who purchased a type of product at a natural foods during the past 12 months, in descending order of popularity and by sex: Grains: women 91.1%, men 84.4%. Tofu: women 85.8%, men 82.2%. Miso: women 72.3%, men 66.6%. Sea vegetables: women 68.2%, men 60.0%. Yogurt (dairy): women 48.8%, men 44.4%. Nondairy frozen desserts: women 45.8%, men 40.0%. Soy milk: women 41.1%, men 37.7%. Natural meat: women 10.0%, men 11.1%.

The top 5 reasons for shopping at natural foods stores are: Food quality (32.6%), better selection (21.8%), brands preferred (15.5%), helpful clerks (9.1%), individual food dept. (6.9%).

• ***Summary:*** The healthy image ranking, based on a survey of 1,000 households in October 1985. Conducted by Shokuhin Sangyo Center in Tokyo (Toranomon. Tel. 03-591-7451) and titled "Health and Food." 1. Sardines (340 points out of a possible 1,000), 2. Shirasu (the young of sardines, 298), 3. Process cheese (259), 4. Real fruit juice (241), 5. Umeboshi salt plums (227), 6. Natto (227), 7. Natural cheese (225), 8. Brown rice (218), 9. Honey (210), 10. Tofu (204), 11. Wakame (sea vegetable, 197), 12. Soymilk (196), 13. Yogurt (193), 14. Sesame oil (181), 15. Konnyaku (180), 16. Cow's milk (180), etc.

4890. Vandemoortele, Philippe. 1986. Re: History of Vandemoortele N.V. Letter to William Shurtleff at Soyfoods Center, Oct. 23. 3 p. Typed, on plain paper without signature. [Eng]
• ***Summary:*** 1899–Foundation. The first factory was established in Izegem, Belgium, by Constant Vandemoortele in conjunction with his sons, Adhemar and Edgard. Adhemar was Philippe Vandemoortele's grandfather. The original company name was written in French, Huilerie Vandemoortele. The company started with the crushing of linseed and rapeseed.

1921–Foundation of N.V. Oil Factories Vandemoortele. The company was officially renamed (from its original French name to a Flemish Dutch name) and started with a capital of 1 million Belgian francs.

1934–First production of oils for consumers. Before this the company produced mainly linseed oil for industrial use.

In 1934 Adhemar Vandemoortele first imported soybeans from Manchuria. Besides soya, other raw materials such as coconuts, groundnuts, corn, oil palm kernels, and sunflower seeds were processed.

1936–An oil refinery was established. The company continued to expand and in the late 1930s an installation for oil hydrogenation and an oil extraction plant were constructed.

1939-1945–World War II forced the original plant to stop its activities, and the rest of production was slowed down considerably. Soon after the war, the original factory was partially destroyed and most of the equipment was out of date. In 1945 Vandemoortele resumed its activities. Adhemar Vandemoortele decided to build a new and modern installation for the processing of oilseeds. The extraction department doubled its capacity.

1951. -Takeover of the Albers company. Albers was the most important Belgian producer of margarine. Taking over this business led to a significant increase of production and sales.

1957–Construction of an extraction plant in Merksem. The plant is located very close to the Antwerp seaport. It currently crushes 1,600 tons soybeans per day.

1966–Construction of a new extraction plant in Izegem. A new, modern installation was built and is known to be one of the most important in Europe. It has a capacity of 750,000 kg soybeans per day.

1968–Foundation of "N.V. Vandemoortele". This is still the official name.

1969–Construction of a new extraction plant for soybeans in Merksem. To allow the processing of larger quantities, a new extraction unit was built. The capacity increased to 1,500 tons per day.

1971–Construction of a new ultra-modern factory in Izegem for the production of sauces and mayonnaises.

1974–In Izegem, a new department for purifying soaps (which were obtained from the neutralization of oils) was built. Its capacity amounts to 300,000 liters/day. A storage yard is located next to this department. In 1975 the capacity of the tank park was increased significantly to 50,000,000 liters.

1976–Foundation of "N.V. Metro." This subsidiary organizes the transport when distributing the Vandemoortele products.

1978–Foundation of "N.V. Vamix." Through N.V. Vamix, Vandemoortele delivers raw materials and partially-finished products to catering and bakery industry.

1978–Foundation of "N.V. Edo." After the partial take-over of "Oleofina", a new company called "Edo" was created and consists of an oil refinery and packing unit.

1980–Foundation of "N.V. Alpro." This company is involved in the production and distribution of high-quality soyfoods.

"N.V. Vandemoortele is operating in foreign countries through several sister companies (England, the Netherlands, France, Germany, the United States). A holding company located in Belgium, N.C. Safinco Cc, controls the financial interests and coordinates the activities of the different subsidiaries.

"The sophisticated and ultra-modern installations allow Vandemoortele to produce a variety of products which are sold at home and abroad at competitive prices. Thanks to the continuous evolution and innovation of the equipment, Vandemoortele N.V. has grown to one of the most important agro-industrial concerns in the world." Address: General Manager, Alpro, Zuidkaai 33, B-8700 Izegem, Belgium.

4891. Vandemoortele, Philippe. 1986. Re: Soymilk in Europe. Letter to William Shurtleff at Soyfoods Center, Oct. 23. 2 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** Concerning Gary Null's allegations of radiated soymilk: "The sole European company exporting soymilk (with long life) to the USA is Alpro, distributing Sunsoy soymilk throughout the country. Sunsoy is exclusively produced from America soybeans which are–to my knowledge–not submitted to radiation. (I don't think Chernobyl reached that far)." There is no use of radiation during the aseptic Tetra Brik packaging.

"Some months ago, quite a serious problem as to irradiated cow's milk arose in Europe since cows were eating irradiated grass. All this trouble started right after the Chernobyl disaster through which many consumers of cow's milk switched over to the consumption of soymilk. Especially in Germany, this phenomenon was very impressive." Address: General Manager, Alpro, Zuidkaai 33, B-8700 Izegem, Belgium. Phone: (051) 30.96.01.

4892. *Times of India* (*The*) (*Bombay*). 1986. City notes: Universal Solvex. Oct. 25. p. 10.
• ***Summary:*** Universal Solvex, incorporated in 1982, will enter the capital market on May 26 with a public issue of 6.1 lakh [610,000] equity shares of Rs. 10 each. The company is presently implementing a project in Piliphit, Uttar Pardesh, for the manufacture of vegetable oils using solvent extraction; the plant has an annual capacity of 36,600 tonnes in terms of rice bran, soyabean, salseeds, oilcakes. Trial runs are expected to start in December, with commercial production shortly thereafter.

In the north, this is the first soya plant with state of the art double rotary extraction technology from Extractions Technik, West Germany, the world leader in designing plants for vegetable oil extraction.

The company plans to add a refinery and then to diversify into winterised edible soya oil, soya milk, curd [tofu] cheese, and lecithin.

4893. Asociación Americana de Soya. 1986. Preparaciones culinarias con soya para instituciones Latinoamericanas

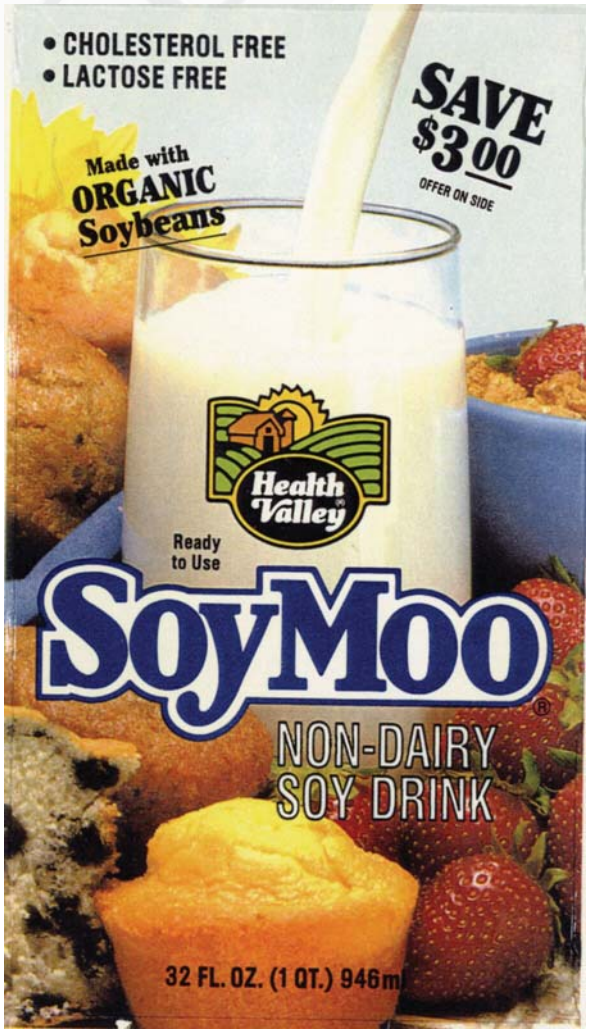
[Culinary preparations with soya: For Latin American institutions]. Caracas, Venezuela: American Soybean Assoc. 120 p. Oct. 17. Recipe index. 22 cm. [Spa]
• ***Summary:*** The development of these 85 recipes was supervised by José Félix Chávez, director of the American Soybean Assoc. office in Caracas. Nutritionists and dietitians in Venezuela developed and tested the recipes. Most recipes contain soy flour or textured soy flour.

Contents: 1. Introduction. 2. Pre-treatment and recommendations for the use of soy flour and texturized soy proteins. 3. Preparations for institutions (by recipe type): Beverages, contornos, entrees, main dishes, desserts, sauces, soups. 4. Latin American preparations, by country: Bolivia (5 recipes), Colombia (4), Chile (7), Ecuador (5), Peru (4). 5. Preparations from whole soybeans: Croquettes, salad with soy sprouts, soy sprouts (brotes de soya), soymilk, soya cream soup, Soyannaise. Address: Caracas, Venezuela.

4894. Fangauf, K.W. 1986. Bedeutung der Sojabohne und Sojaprodukte fuer die Welternaehrung [Significance of the soybean and soya products for world nutrition]. *Schriftenreihe aus de Fachgebiet Getreidetechnologie* No. 8. p. 9-23. Sojaprodukte: Herstellung und Verwendung. [15 ref. Ger]
• ***Summary:*** Discusses history of the soybean, cultivation and composition, the world industry for soybean production, consumption, and products, world production of soy oil and competing oils, trends in the use of soy products (incl. soymilk and soymilk products, soy sauce, tofu, miso, and tempeh; table based on Shurtleff & Aoyagi 1983), results of Hamburg poll (American Soybean Assoc. 1982) on attitudes of German consumers toward qualities and use of soya (e.g., price, nutritional value, good protein source, versatile, healthful, recommended by a doctor, good for young people), conclusion. Address: American Soybean Assoc., Hamburg, West Germany.

4895. Fort, P.; Fach, R.L.; Dahlem, S.; et al. 1986. Breast feeding and insulin-dependent diabetes mellitus in children. *J. of the American College of Nutrition* 5(5):439-441. [5 ref]
• ***Summary:*** This paper evaluates the hypothesis of a protective effect of human milk and breast feeding on the development of insulin dependent diabetes mellitus (IDDM). 95 children with IDDM were studied; their mean age was 14, the mean age of onset of IDDM was 8½ years, and 18% had been breast-fed for various lengths of time (average 4.6 months). The authors were "unable to document any relationship between the history of breast feeding and subsequent development of IDDM in children." However children were twice as likely to develop diabetes mellitus if they were fed soy formula in infancy. "However, these differences were not statistically significant." The majority of formula-fed children were given either Enfamil or Similac soy-based formulas. Address: Dep. of Pediatrics, North Shore Univ. Hospital, Manhasset; and Dep. of Pediatrics, Cornell Univ. Medical College, New York.

4896. **Product Name:** Health Valley Soy Moo: Non-Dairy Soy Drink.
Manufacturer's Name: Health Valley Natural Foods (Marketer-Distributor). Contract packaged in the Western USA.
Manufacturer's Address: 700 Union St., Montebello, CA 90640.
Date of Introduction: 1986. October.
Ingredients: Pure water, organically grown soybeans*, concentrated grape juice, malted barley, vanilla, dulse (sea vegetable) (2/91). * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.
Wt/Vol., Packaging, Price: 250 ml and 1 liter Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 6 fl oz.: Calories 90, protein 6 gm, carbohydrate 9 gm, fat 3.5 gm, cholesterol 0 mg, sodium 85 mg, potassium 25 mg. RDA of calcium = 2%.



New Product–Documentation: Shurtleff & Aoyagi. 1985. Soymilk Industry and Market, Update. "During early 1985 Alpro continued to make a private-label soymilk, brand-named Soy Moo, for Health Valley in Los Angeles. Then in mid-1985 Health Valley switched to having their product made in America, probably from powdered soymilk, packaged in 250 ml and 1 liter Tetra Brik cartons by a contract packer in the western USA."

Golbitz. 1987. Soya Newsletter. March/April. p. 8. After severing ties with Vandemoortele in 1985, Health Valley worked for nearly a year on a new Soy Moo soymilk and re-launched the produced in the fall of 1986. Talk with Gordon Bennett of Westbrae. 1988. April 2. Health Valley uses a soymilk powder from some source (perhaps Clofine) and trucks it to a Tetra Brik company, that reconstitutes and packages it.

Product with Label purchased at Open Sesame in Lafayette. 1991. Feb. 16. 3.75 by 6.5 by 2.5 inches. Tetra Brik Aseptic carton. Front: Color photo of milk being poured into a glass that is surrounded by muffins, strawberries, and a blue bowl of cereal against a sky-blue background. The Health Valley Logo is in the center of the glass. "Cholesterol free. Lactose free. Made with organic soybeans. Ready to use." The company address now given as 16100 Foothill Blvd., Irwindale, California 91706-7811. "Product of U.S.A." Soyfoods Center product evaluation. Flavor: So-so, with a somewhat unpleasant and unnatural aftertaste. Package design: Excellent.

4897. Hertrampf, Eva; Cayazzo, Marisol; Pizarro, F.; Stekel, A. 1986. Bioavailability of iron in soy-based formula and its effect on iron nutriture in infancy. *Pediatrics* 78(4):640-45. Oct. [14 ref]
• ***Summary:*** The effect of a commercial soy based formula on iron nutrition was examined in 16 adult women and 47 healthy term infants. The prevalence of anemia (27.2%) in breast-fed infants was markedly reduced in infants fed the soy formula (4.3%) and the cow's milk formula (2.2%). The study showed that despite the low iron absorption in adults (1.7%), the soy formula was as effective as an iron-fortified cow's milk formula in preventing iron deficiency in infants, and was superior to breast milk in preventing anemia. Address: Hematology Unit, Div. if Human Nutrition and Medical Sciences, Inst. of Nutrition and Food Technology, Universidad de Chile, Santiago.

4898. Jain, Manoj. 1986. Proposal for an integrated soy nutrition educational program in Madhya Pradesh, India. Boston, Massachusetts: Plenty International. 10 p. [10 ref]
• ***Summary:*** Recently, Jain (the author) conducted a 3 month soy nutrition program in 15 villages in Indore District (M.P.), India. Jain developed a 40-page training manual for a two day training program. The project will be done in conjunction with Bharti Gramin Mahila Sang, (BGMS) a non-profit voluntary organization funded in part by the government.

4899. Lehnert, Dick. 1986. Eden Foods' new product: Milk from soybeans. *Michigan Farmer* (*Duluth, Minnesota*). Oct.
• ***Summary:*** The new $10 million soymilk plant at Saline in Washtenaw County will use 85,000 bushels/year of Michigan-grown soybeans. These beans will be grown under contract with Michigan farmers to be processed in the 22,000 square foot stainless steel plant. One such farmer, Fred Schettenhelm, from Milan, has worked with Eden Foods for 10 years. He and a few other farmers will provide Beeson soybeans to the new plant. Fred works with Ron Roller who is in charge of procurement for Eden Foods. The soybeans will not be organic initially, but they must be of premium quality and guaranteed Beeson variety.

"Eden began in 1967 as a student-run cooperative in Ann Arbor. Now it is privately held by six stockholders. Headquarters are near Clinton in northern Lenawee County." The U.S. market for soymilk is now about $50 million a year. Edensoy, which has captured 38% of it in the last 3 years, is now Eden Foods' most successful product. "The taste is nutty, not beany, reminiscent of sunflower seeds."

While the plant is not big by world standards, it is the first low-acid food producing and aseptic processing plant in the USA. As the author left the plant on Sept. 9, six weeks of FDA inspection was to begin before the plant would begin operation. Photos show: Michigan Department of Agriculture Director Paul Kindinger, Michael Potter, and a Japanese investor. A view of the outside of the plant with a silo. Address: Minnesota.

4900. **Product Name:** Supersoy [Original, Vanilla, Carob, Cocoa, Lemon, or Coffee].
Manufacturer's Name: Mitoku USA (Importer). Made in Japan by Kibun Health Foods Co., Ltd.
Manufacturer's Address: 292 Washington Ave. Ext., Albany, NY 12203. Phone: 518-456-8006.
Date of Introduction: 1986. October.
Ingredients: Original: Water, whole soybeans, brown rice malt, brown rice, kombu (seaweed).
Wt/Vol., Packaging, Price: 6 oz retort pouch or 6.7 oz Tetra Brik Aseptic carton with straw.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 6 fl oz.: Original: Calories 110, protein 7 gm, carbohydrate 10 gm, fat 4 gm. Vanilla: Calories 180, protein 6 g, carbohydrate 32 g, fat 3 gm. Carob: Calories 180, protein 6 gm, carbohydrate 33 gm, fat 3 gm.
New Product–Documentation: Labels. 1986. 3.75 by 6 inches. Plastic pouch. Yellow, black and white. Original: on blue background. Carob: On cherry background. Vanilla: on tan background. All have glass of soy drink with straw illustration. "Rich, refreshing flavor! No added oil. Low sodium." Ad, full-page color, in East West. 1986. Oct. p.

105. "All Natural Supersoy. Original Soy Drink. Made from whole soybeans with brown rice. No added oil, salt, refined sugar, or preservatives." Three packages: 6 fl oz pack; 6.7 fl oz box with straw; 16.8 oz family size.

Ad in East West. 1987. March. Inside front cover. "New! 6.7 fl oz box w/ straw." Golbitz. 1987. Soya Newsletter. March/April. p. 8. In Oct. 1986 Mitoku USA began to import Supersoy from Japan, where it was made by Kibun. This late entry product was originally available in 6 oz retort pouches but is now packaged in 6.7 oz Tetra Paks in original, vanilla, carob, and cocoa flavors according to Mitoku's Joel Wollner. Lemon and coffee flavors were just unveiled. Retail prices are $0.49 to $0.69 per unit. Talk with Martin Roth. 1989. Aug. 17. He played a key role in developing the concept and graphics for this product.

Letter from Joel Wollner, Executive Dir., Mitoku USA, Albany, New York to East West Journal. 1989. Jan. p. 6. Like Edensoy, Supersoy contains no added oil in any of its 4 flavors and never has since its introduction in 1986.

Talk with John Belleme. 1991. March 7. The company that imported this product and a cola drink, Mitoku (USA), went bankrupt about 18 months ago. Talk with Sherry Kelly of a marketing company. 2001 Sept. 14. Walmart sold Supersoy until several weeks ago, a 3-pack totaling 18.2 oz. in vanilla flavor.

4901. **Product Name:** Plamil Soya Milk (Non-Dairy in Mini Pots).
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1986. October.
Ingredients: Soya protein [isolate], sunflower oil, raw sugar, calcium phosphate, sea salt, soya lecithin, carrageen extract [carrageenan].
Wt/Vol., Packaging, Price: 14 ml Mini Pot plastic cup with

peel-off foil lid.
How Stored: Refrigerated.
New Product–Documentation: Ad in The Vegetarian. 1986. Sept/Oct. "New 14 ml size mini pot sugar free soya milk."

Letter from Arthur Ling, Managing Director of Plamil Foods. 1990. July 24. The Mini Pots have been discontinued "We had a loan of expensive, specialised machinery and the form loaning it required it for its own use."

4902. **Product Name:** Plamil Plain Chocolate with Soya (Non-Dairy).
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1986. October.
Ingredients: Incl. chocolate, soy protein isolate, sugar.
Wt/Vol., Packaging, Price: 100 gm candy bar.
How Stored: Shelf stable.
New Product–Documentation: Ad in The Vegetarian. 1986. Sept/Oct. Label reads: "100% non dairy. 100 g."

4903. S.D. 1986. Duel lait/soja, où en est-on? [The duel between milk and soya: Where are we?]. *RIA–Technicien de Lait.* Sept/Oct. p. 12-15. [3 ref. Fre]
• ***Summary:*** On page 1 is a large cartoon showing a startled dairy cow, standing beside a pail of milk, watching the invasion of an army of upright snake-like or sprout-like creatures, each with slanted eyes and wearing a conical Chinese-type hat, and bearing a banner "Yellow Peril." The large text reads: At this time of milk quotas, imitation milk products and their derivatives make French dairy producers afraid. France has adopted a very restrictive policy toward them, while the European Commission insists that they be allowed to be sold freely."

An estimated 60,000 tonnes of imitation products are consumed today in the EEC. A French law of 24 June 1934 prohibits in France the production, sale, import, or export of all products that imitate cream, cheese, powdered milk, condensed milk, ice cream, etc. The French Ministry of Agriculture still supports this law and demands strict regulation of imitation dairy products. The European Commission's position advocating free trade and freedom of choice for consumers was first set forth in the spring of 1984 and upheld in April 1986. The regulation of imitation products within the EEC varies widely. Belgium is the most liberal. The UK and Ireland allow these products but place emphasis on labeling. Denmark, Germany (RFA) and the Netherlands are opposed to imitation products but make allowances for things like coffee whiteners. Italy and France are not much concerned. France and Luxembourg prohibit them firmly.

But it is difficult to define exactly what products are imitations. The problems started in 1869 when the Frenchman Hyppolitte Mauries [sic, Hippolyte Mège] was issued a patent for margarine. Soymilk ("lait de soja," a term which is clearly a misnomer) is one of the clearest imitation products; 9-10 million liters were consumed in the EEC in 1983. This is not much compared with 30,000 million liters of cow's milk. Tofu can be used as a substitute for meat and fish. An estimated 5,000 tonnes are consumed yearly in the EEC, not much, but the market seems to have a promising future in part due to tofu's excellent nutritional properties. Yet it can also be used in place of milk and cheese. The main tofu makers in France are Sojadoc and Soy (in Cerny). Soy uses soybeans grown organically in southwest France. Labels of 3 of Soy's products (Croque Tofou in Leek/Ginger, Mushroom, and Emmenthal flavors) are shown. In the USA the tofu market is making rapid progress, growing at 15-20% a year and having 181 producers.

Coffee whiteners are also a problem. In the USA 100,000 tonnes are made. In the UK, Carnation has 80% of the market and is the sole producer in Belgium. In the UK production has grown 20% a year, from 2,850 tonnes in 1978 to 6,700 tonnes in 1984. Still another problem is imitation cheeses. In the USA in 1984 they represented more than 5% of the total cheese market, estimated to grow to 12.5% by 1990.

Little by little soy-based imitation products are gaining ground. Recently soyfoods producers have organized the European Soyfoods Association to defend their interests against unfriendly regulators. They held a conference at Dravail on 13-14 March 1986. The association is headquartered in Paris and Philippe Vandemoortele of Alpro is its head. Its secretary general is Guy Coudert, director of communication and marketing at ONIDOL, the French national interprofessional oilseeds organization (Organisation Nationale Interprofessionelle Oléagineux). Address: France.

4904. Shurtleff, William. 1986. Eden Foods, Edensoy, and American Soy Products: Bold and innovative venture–marketing soymilk in America. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 5 p. [1 ref]
• ***Summary:*** A brief history of Eden Foods and an analysis of the development of American Soy Products, based on interviews and other publications. Address: Lafayette, California.

4905. *Vegan Views* (*England*). 1986. The milk of human kindness. An interview with Arthur Ling [chairman of Plamil Foods Ltd.]. Autumn. p. 6-8.
• ***Summary:*** The company, originally named Plantmilk Ltd. and based on the vegan philosophy, began making its product (originally named Plantmilk) in 1965 in a small factory in Iver, Buckinghamshire, England. At that time there were no other soymilks being made or sold in England. In 1972 the company bought a factory in Folkestone and coined the trademark Plamil (plant + milk). It was fortified with calcium

and vitamins B-2, B-12, and D-2 to meet vegan needs. In the early days they were not allowed to use the term "soya milk" to describe the product. They supported the milk by producing a non-dairy soy-based chocolate.

An illustration (line drawing) shows Arthur Ling.

4906. *Vegetarian Times.* 1986. Imitation cheese raises suspicions in natural foods world. Nondairy labeling scrutinized. Oct. p. 6-7. [1 ref]
• ***Summary:*** Soyarella, an early soy cheese, claimed to be dairy-free but it was not. Now two other imitation mozzarella soy products, Soya Kaas and Tofu Mozzarella, have joined Soyarella on store shelves, but both contain products derived from milk. Casey Van Rysdam of American Natural Snacks, the distributor of Soya Kaas, does not believe an imitation mozzarella product can be made without calcium caseinate to hold it together. Bob Savar, the distributor for Tofu Mozzarella, says it is possible to make his product without caseinate but it doesn't melt. Note: This is the second earliest publication that mentions Soya Kaas. *Kaas* is the Dutch word for cheese.

Part II of this article examines some labeling problems and improprieties related to casein and caseinates. "Nondairy" is not an FDA term. A number of states with large dairy lobbies came up with the term, according to Judith Riggins of the U.S. Food and Drug Administration. These states required products made with added casein to be differentiated from dairy products. The FDA decided not to oppose these state laws if the ingredient statement bears the term "milk derivative" in parentheses after the word casein. However vegans who choose not to consume dairy products for ethical reasons have been left feeling deceived.

4907. Vitasoy (USA) Inc. 1986. Vitasoy. You've been looking for a soymilk that is healthful, great-tasting and reasonably priced. And we got just the right product for you (Ad). *Vegetarian Times.* Oct. p. 41.
• ***Summary:*** This full-page color ad also appears in Natural Foods Merchandiser. Oct. p. 39. Address: San Francisco, California.

4908. *SoyaScan Notes.* 1986. What are barley, pearl barley, and Job's tears? (Overview). Nov. 1. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Note: Barley was one of the first grains cultivated to provide food for both humans and animals. Because it has two hard, inedible husks, most barley is milled to some degree to make it more edible. The word "pearling" is used to describe the refining of barley down to the grain's endosperm (starch) layer. After the husks, bran and germ are removed, the remaining grain resembles a pearl. For the highest protein, fiber, vitamins, and mineral content, look for barley kernels that have been pearled enough only to remove the tough outer layers.

Barley comes in many forms and degrees of refinement. Hulled (also called whole) barley, has only the tough outer husks removed; it still contains the nutrient-rich germ and bran. Scotch or pot barley is husked and coarsely ground. Barley grits are husked and ground into medium-coarse pieces. Pearled barley has the husk and bran removed and has been steamed and polished; it comes in coarse, medium (the most commonly packaged), and fine sizes.

A new barley hybrid, high beta-glucan hulless, does not require pearling, contains more soluble fiber, and contains starch that is more stable during freezing and thawing.

Job's tears (*Coix lachryma-jobi*), used as an ingredient in some varieties of soymilk (such as Edensoy) and known as *Hato Mugi* in Japan, are the seed kernels of an annual grass long prized in the Orient for its health giving and nutritional properties. The term *Hato Mugi* is translated in some Japanese dictionaries as "pearl barley," but this is not correct; *hato* means "dove or pigeon" and *mugi* means "barley."

4909. *Toyo Shinpo* (*Soyfoods News*). 1986. Tettai-gumi ga zokushutsu no tônyû [Many major companies withdrawing from soymilk market in Japan]. Nov. 11. p. 6. [Jap; eng+]

4910. Potter, Michael. 1986. History of Eden Foods and development of American Soy Products joint venture and Edensoy–1971 to 1986 (Interview). *SoyaScan Notes.* Nov. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michael Potter joined Eden Foods in Oct. 1971, and by Aug. 1973 he and Tim Redmond each owned 50% of the shares. Under their leadership the company grew steadily until 26 Nov. 1979, when a fire destroyed the Eden warehouse and $800,000 inventory. The firm with 100 employees and 2,400 products struggled for its life. After the fire, Redmond sold his stock back to the corporation and resigned. Thereafter the company moved to rural Clinton, Michigan, decreased its size and number of products, while switching its emphasis to manufacturing and marketing carefully selected imports.

A major reason for Eden's recovery after the fire can be traced to support from Muso, Eden's export partner in Japan. In the mid-1970s Muso had about 12 importers in America but by 1979 many of these had gone out of business. Each bankruptcy dealt Muso a painful blow, as had the fact that many of the natural food products that Muso had pioneered in Japan were now being imitated and launched by other, bigger companies in mainstream Japanese markets. Muso was hurting.

In July 1983 Eden Foods surprised the American natural foods industry by launching two designed-for-America long-life soymilks named Edensoy in plain and carob flavors. Made in Okazaki, Japan by Marusan Ai, packaged in stand-up retort pouches, and exported by Muso, the product was the result of a 15-month process involving trips to Japan to visit Marusan and consultations with the U.S. Food and

Drug Administration in Washington, DC. [Note: Individual 6-ounce pouches retail for $0.69-79, making Edensoy the most expensive soymilk on the U.S. market, selling for 12.3 cents per ounce, or more than 5 times the price of cow's milk.]

Eden was the first Caucasian-American company to import soymilk, and their gamble paid off; sales skyrocketed sparked by extensive magazine advertising. Between September and December over 1 million 6-ounce packs had been sold. Now a host of competitors rushed to follow Eden's lead, and many of them went to Muso to ask for a similar product made by Marusan. Eden strongly objected. The result was that in January 1984 Eden became Muso's exclusive import agent in the United States, not only for soymilk but for all products. Both companies considered the agreement beneficial.

Just as Edensoy was getting into high gear, the product had its first serious encounter with the U.S. Food and Drug Administration, which on 2 March 1984 sent Eden Foods a strongly worded letter citing eleven claims in Eden's pamphlets that the agency considered erroneous. FDA expressed concern about the company's apparent endorsement of Edensoy as an infant formula; FDA asked Eden Foods to stop distributing the pamphlet in which Edensoy was promoted as "Good for Babies." Despite the hassle that followed, Edensoy performed much better that year than Eden had dared to hope: 1984 sales were 11 million units (individual pouches), 70% above target, and Potter began to dream about a Marusan soymilk plant in America.

By 1985 privately owned Eden Foods had about 50 employees and annual national sales of about $12 million. Sales that year were 10.25 million units, down 7% compared with 1984. By 1986 Potter estimated that Eden Foods had 38-40% of the $50 million a year of the soymilk retail consumer market in the US. Edensoy accounted for 20% of Eden Foods' sales, and Edensoy plain was selling better than any other brand in a small-sized carton. But the market was getting crowded. Yuppies were buying Edensoy. The macrobiotic market was only a small segment for Edensoy.

See also interview with Potter (Nov. 1986) on "History of Eden Foods: Building a soymilk plant in America." Address: President, Eden Foods Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 800-248-0301 or 517-456-7424.

4911. Snyder, Steve. 1986. New developments at Vitasoy and with soymilk worldwide (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 14. 2 p. transcript.
• ***Summary:*** A good overview. "Sunsoy is a force, but when Edensoy and Ah Soy come out in liter sizes they will tear hell out of Sunsoy's sales. The US products are better tasting and with better packaging. Sunsoy does not taste that good." Address: San Francisco, California 94107.

4912. Tanikawa, Harry. 1986. Recent developments at House Foods and Yamauchi Inc. (Interview). *SoyaScan Notes.* Nov. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Their soymilk was launched in April 1986 in Pure Pak, named Hinoichi Soy Drink, in 4 flavors: Plain, original (with fructose and oil added), mocha, and chocolate. It is sold only in the Los Angeles area in Asian-American food stores. It will never be sold in natural food stores. Pure Pak limits geographical distribution.

House Foods and Mr. Yamauchi now each own 50% of the company. It seems like a happy marriage. Mr. Yamauchi is still very involved in the daily operation of the business. They dropped the parfait before the partnership. Address: Los Angeles, California.

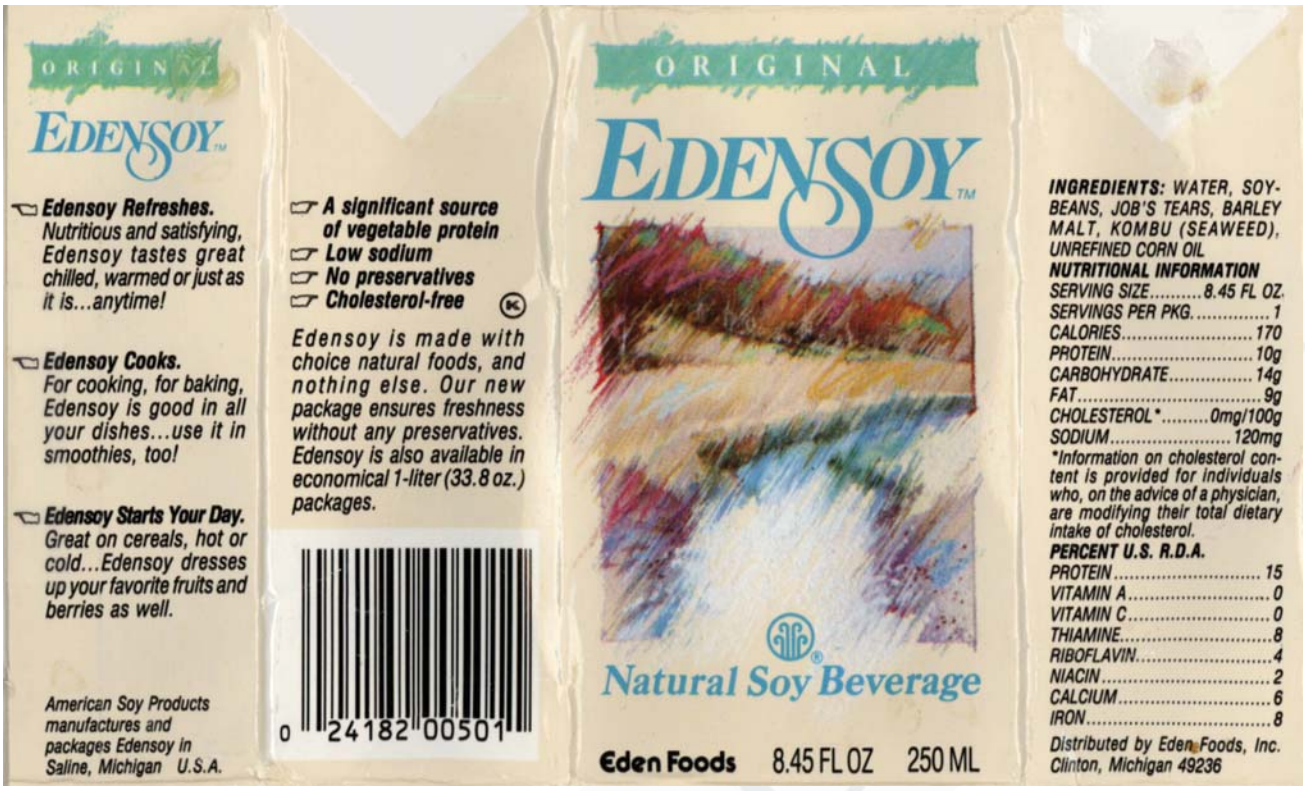
4913. Burum, Linda. 1986. Breakfast in Chinatown and other Asian spots. *Los Angeles Times.* Nov. 16. p. S106.
• ***Summary:*** The section titled "Japanese" begins: "Amid the jangle of downtown traffic, A Thousand Cranes is an oasis of flagging civility." This lovely, calm restaurant, with its own stylized Japanese garden, is in the New Otani Hotel, at 120 S. Los Angeles St., Los Angeles. Dressed in a classical kimono, the waitress brings breakfast on a lacquered tray. On it is a covered bowl of miso soup, plus rice and other delicacies. "One may select from several other *okazu* (the things to eat with rice) such as squares of delectably garnished and very fresh *tofu* or *natto,* a little mound of flavorful fermented bean" [sic, beans].

"A jar of *umeboshi,* the mouth puckering tiny sour plums known as nature's own mouthwash, is placed on each table; one of these cleanses the palate."

The section titled "Chinese" begins with a visit to Yi Mei, a very good traditional Chinese bakery in Monterey Park (near downtown Los Angeles), known for its "Northern-style breakfasts centering on large bowls of soy milk that may be ordered slightly sweetened or seasoned with a dash of sesame oil and salt. Look around and watch everyone dipping *yu t'iao,* long, airy fried buns that resemble unsweetened crullers, into their soy milk." The crullers soak up the soy milk, then everyone noisily (its impossible to do this quietly) eats the crullers.

4914. Hoefnagels, Herman. 1986. History of Vamo Foods, Vandemoortele, and work with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 17. 2 p. transcript.
• ***Summary:*** This import company is owned by Vandemoortele and Alpro makes their product, Sunsoy. They began U.S. operations on 1 Jan. 1984. Their first product was a frozen dough, which they distributed to the foodservice market. They started importing Sunsoy on 1 Jan. 1985, in both the small and liter sizes.

Initially Balanced Foods was their sole distributor, but



that exclusive relationship was ended this year because Vamo wanted to pick up additional distributors. Balanced was always free to distribute other soymilks if they wished.

Both the liter and the small package are selling well.

Future: New dessert product, is a soymilk pudding brand-named "Sunsoy Chocolate Dessert." Packaged in both 1 liter and 250 ml Tetra Briks. Already on market in USA. When introduced? Nothing else new.

He will not disclose sales figures.

Vamo Foods imports two lines, the Banquet d'Or line, which is a frozen dough unbaked puff pastry, produced by Vamic. Vamo Foods distribute them via Incotra, which is their mother company. "All products are sold via our export company, of which I am president in Belgium. We export many other products besides this one.

"We (Vandemoortele) are Europe's biggest soybean crusher. All exports of soybeans and products etc. go via Incotra. It is owned by Safinco, which is the largest company (holding company?).

"Vandemoortele, Alpro, Vamic, and Incotra are all daughter companies of Safinco. Safinco is the largest entity, not Vandemoortele." Address: President, Vamo Foods USA Inc., 20 Shawnee Dr., Watchung, New Jersey 07060. Phone: 201-769-0290.

4915. Null, Gary. 1986. Soymilk irradiation in Europe (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 19. 2 p. transcript.
• ***Summary:*** An unknown German soymilk distributor was suspected of irradiating soymilk, but no firm evidence was ever obtained. The product was never sold in America, and Null never said that it was. Address: New York City.

4919. **Product Name:** Edensoy: Natural Soy Beverage [Original, Vanilla, or Carob].
Manufacturer's Name: American Soy Products, Inc.

Manufacturer's Address: 1474 N. Woodland Dr., Saline, MI 48176. Phone: 800-248-0301.
Date of Introduction: 1986. November.
Ingredients: Original: Water, soybeans, job's tears, barley malt, kombu (seaweed), unrefined corn oil. Carob: Same but carob listed after barley malt. Vanilla: Water, soybeans, barley malt, vanilla flavor, kombu, unrefined corn oil.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic cartons. 250 ml (8.45 fluid oz) retails for $0.59, or 1 liter (33.8 oz, 1.06 quart) retails for $1.99.
How Stored: Shelf stable.
Nutrition: Per 250 ml Original: Calories 170, protein 10 gm, carbohydrate 14 gm, fat 9 gm, sodium 120 mg.
New Product–Documentation: Labels (the packages). 1986, dated. 2.5 by 4 inches by 1.5 wide. Paper package. Original: Light blue and pastels on beige. Vanilla: Blue and pastels on light blue. Carob: Blue and pastels on pink. Country scene illustration. On back: "Edensoy Refreshes. Edensoy Cooks. Edensoy Starts Your Day."

Ad (full page, color) in Natural Foods Merchandiser. 1986. Nov. p. 37. "Our research shows you expect big things from Edensoy." Product distributed by Eden Foods, Inc. of Clinton, Michigan 49236. Production started November 1986. Note: Job's tears (*Coix lachryma-jobi*) is a tan grain about the size of a mung bean. Soya Bluebook. 1987. p. 88. Leaflet. 1987, dated. Updated 1988. 4 p. "Enrich Your Life with Quality Foods: Edensoy." Gives detailed nutritional analysis of all 3 flavors, calculated diabetic exchanges, description of ingredients, and 6 recipes. Ad in Whole Foods. 1988. April. p. 95. "Looking for a new food? A solution is amazingly delicious Edensoy." Shows a huge liter carton in a pastoral landscape surrounded by angels with a hand reaching down from heaven. Ad in Whole Foods. 1988. Oct. p. 38. Nov. p. 48. "Edensoy pours... Pours... Pours it on." Ad (full-page, black and white) in Vegetarian Times. 1988. Sept. p. 29. Nov. p. 13. "Edensoy... A lot of pluses. Nutritious. Delicious. Dairy free. Quality. Satisfying. Convenient. Fresh. Versatile." Shows 8 black-and-white photos of Edensoy ads. "Only one bean in 20,000 makes it into Edensoy." "Next time you draw straws, choose Edensoy." "What most soymilks forget as a main ingredient... Flavor." "One more thing you can do for your family." "Draw on our experience." "The closer you look... the better we look." "Edensoy pours it on." "The competition has arrived!" (Shows a cow with football helmet standing behind cartons of Edensoy). This ad also appeared in Whole Foods (Jan. 1989, p. 18).

Ad in Natural Foods Merchandiser. 1989. Feb. 14. "Edensoy Original and Vanilla flavors have been reformulated to contain no oil." New 1989 label for liter carton. The top of the front panel states: "Organically grown. Double certified (Eden/OCIA). Organic soybeans and barley." The OCIA (Organic Crop Improvement Association) "Certified Organic" logo is shown. Product with Label (liter carton) purchased from Berkeley Natural Grocery Co., California. 1990. Dec. 28. Price: $1.69/liter.

Talk with Ron Roller of Eden Foods. 1991. Nov. 26. The first year that Edensoy was made in America there were not enough organic soybeans available to call any of the products "organic," so the company just mixed the organically grown soybeans with the non-organic. In about Aug. 1990 Edensoy Original flavor started to be made with only organically grown soybeans. In about April 1991 Eden Foods was finally able to get enough certified organically grown soybeans to supply the entire plant, so vanilla and carob started to be labeled as made with organically grown soybeans. Today the two best-selling flavors are vanilla and original.

4920. Barrett, Mariclare. 1986. The cook's glossary of soyfoods. *Vegetarian Times.* Nov. p. 28-35. [10 ref]
• ***Summary:*** Gives good definitions, with a full-page color illustration by Emily Soltanoff, of: Soybeans, soynuts, soy flour and grits, soy oil, textured vegetable protein, soymilk, okara ("the pulp that remains after the soymilk has been strained"), soy yogurt and soy cheese, tofu, fermented soyfoods, tempeh, miso, natto, soy sauce.

The article begins: "For 60 seconds on a national television commercial, a small, round soybean rolls past a lineup of infant formula, bread, pizza, chili, salad dressing, ice cream [Tofutti], soymilk and cubes of tofu; meanwhile the narrator intones, 'The newest development in nutrition is actually one of the oldest foods known to man.' Through advertising, the concept of soyfoods is brought home to millions of Americans by the soy giant, Archer-Daniels-Midland Company." Address: Staff.

4921. **Product Name:** [Bioforme Soymilk (Natural Chocolate, Vanilla). Renamed Formoja in early 1989].
Foreign Name: Bioforme Soja à Boire (Nature, Chocolat, Vanille); Formoja.
Manufacturer's Name: Cacoja. Affiliate of Coopérative Agricole de Colmar (CAC).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France. Phone: 68.74.17.07.
Date of Introduction: 1986. November.
Wt/Vol., Packaging, Price: 500 ml and 1,000 ml Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Journal of the American Oil Chemists' Society.* 1987. Oct. p. 1602. Talk with American Soybean Assoc. 1988. Feb. This French co-op is a partner in a cooperative venture with Alfa-Laval. Talk with Richard Rose. 1988. March 12. They visited him and he has their brochure. The company was founded about 40 years ago. About a year ago they entered a joint venture with Alfa-Laval to build a fully automated soymilk plant at Issenheim, France. The plant took less than a year to build. They make UHT soymilk and puddings. The facility uses Alfa-Laval

equipment to produce vanilla, plain and chocolate-flavored soy drinks and vanilla and chocolate-flavored desserts under the brand name "Bioforme". Coopérative Agricole des Colmar / Céréales, a cooperative of 3,000 French farmers, joined forces with Alfa-Laval to build the facility.

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the package. This and the closely related dessert package designs are among the least interesting, creative, and appetizing seen to date for any major soy product. Poor!

Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soybase plant to Cacoja in France. It had a capacity of 1,500 liters/hour and began operation in 1986. Food Focus. 1987. No. 3. Shows a color photo of the cartons.

Cacoja brochure. 1990. April. Formoja "Plain Soy Milk" is sold in 500 ml and 1 liter long-life packages. "Chocolate Drink" and "Vanilla Drink" are sold in 500 ml packages.

Note: This is the earliest record seen (Feb. 2003) concerning Cacoja (later Sojinal) of Issenheim, France.

4922. Eden Foods, Inc. 1986. Edensoy recipes (Ad). *East West.* Nov. p. 53-56. Also published in 1986 as a 12-page booklet (15 x 9 cm) titled "Original Edensoy Natural Soy Recipes."

• ***Summary:*** One of these four pages of color ads bears the headline: "Edensoy–America's first soymilk!" Another states "Delicious, nutritious & versatile: Low sodium, high protein, cholesterol free, lactose free, non-dairy." The recipes include: Creamy Edensoy "cheese" topping for pizza. Lasagne. Edensoy salad dressings: Thousand island, poppy seed. Mocha mousse. Edensoy hollandaise sauce–No eggs! Corn chowder. Vegetable pot pie. Edensoy yogurt. Custard filled applesauce cake (with amasake). Creamy white sauce. Edensoy Italian style fettucini. Seafood Newburg. Banana bread or muffins. Eden easy pie crust. Edensoy coconut creme pie. Address: Clinton, Michigan 49236.

• ***Summary:*** A full-page black-and-white ad. Note: This is the earliest English-language document seen (Aug. 2013) that uses the term "milk alternative" to refer to soymilk.

Note 2. Ah Soy soymilk has been sold commercially since July 1984. It is the quart size that is coming soon. Address: Asheville, North Carolina.

4927. Honer, Clem. 1986. Minnesota's soy-blend specialist: St. Peter's transition from country creamery to specialty-ingredient supplier. *Dairy Foods.* Nov. p. 49-51.
• ***Summary:*** Stanley Davis, president of St. Peter Creamery in St. Peter, Minnesota, had the foresight to guide his company away from the declining market in butter and skim milk powder (they stopped producing these items in 1977), and into the expanding market for soy-based ingredients. Dried soy milk and dried tofu now make up about 80% of this company's soy product sales, with each accounting for an equal share. The remaining 20% of St. Peter's soy product sales consist of wet blends. The company recently had to build a new specialty, computerized drying and blending plant at Lake Norden, South Dakota, to keep up with sales growth.

The company processes soybeans like a milk product rather than a grain product. start with whole soybeans, which are extracted, homogenized, and dried in 7 minutes. The soy oil is encapsulated to prevent further oxidation.

• ***Summary:*** This full-page glossy color ad shows two red straws in a class of soymilk. "Made from whole soybeans with brown rice. Non dairy. Lactose free. No cholesterol. No added oil. 40% less fat. No added salt. 80% less sodium. No refined sugar. No preservatives. 6 fl oz pouch pack. 6.7 fl oz box with straw. Convenient 16.8 oz family size." Address: 292 Washington Ave. Ext., Albany, New York 12203. Phone: 518-456-8006.

4930. **Product Name:** [Soymilk Bread].
Foreign Name: Tônyû pan.
Manufacturer's Name: Mitsubishi Chemical (Kasei) Foods Co.
Manufacturer's Address: 5-13-12 Ginza, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1986. November.
Ingredients: Incl. flour and soymilk.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1986. Nov. 21. p. 1. "Hyoban no yoi tonyu pan. Mitsubishi Kasei Shokuhin ga hatsubai [Good response to soymilk bread. Mitsubishi Kasei Foods has started to sell it]." Soymilk has replaced egg, nonfat dry milk, and water in the bread formula.

4931. Nanba, Kazuyoshi; Nagasawa, Taro. 1986. Tônyû no __ jôteki anteisei ni oyobosu Ca^{2+} tenka no eikyô ni tsuite [Effects of the addition of calcium ion on the colloidal stability of soymilk]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 33(11):745-51. Nov. [16 ref. Jap; eng]
• ***Summary:*** In order to prepare soymilk with a high calcium content equivalent to cow's milk (25mM), the effects of the addition of calcium salts on the colloidal stability of solutions containing 7S or 11S globulins and commercial soymilk were investigated by determining relative viscosity, soluble nitrogen (protein), and pH. When various calcium salts, such as calcium chloride ($CaCl_2$), calcium sulfate ($CaSo_4$), calcium citrate, and calcium phosphate were added to a solution containing 0.1% of 7S or 15S globulins, or to soymilk, calcium chloride affected the stability more than calcium sulfate, calcium citrate, and calcium phosphate, in decreasing order of sensitivity. Colloidal stability of the solutions was increased with an increase in pH in the buffer solution. Soymilk containing disodium hydrogen phosphate (20mM) or sodium citrate (20mM) did not show any precipitation, even when 19mM of calcium chloride was added to the soymilk. Stability of soymilk in the presence of calcium salts increased with increasing chain length of the phosphates. Calcium fortified soymilk

(19mM Calcium chloride added) containing sodium citrate (20mM), disodium hydrogen phosphate (20mM), sodium pyrophosphate (15mM), or sodium tripolyphosphate (10mM) were highly stable without any signs of precipitation and coagulation at 4ºC for 7 days. Address: Dep. of Agricultural Chemistry, Faculty of Agriculture, Tamagawa Univ., 6-1-1, Tamagawagakuen, Machida-shi, Tokyo 194, Japan.

4932. **Product Name:** Natural Prepared Entrees: Vegi Burger.
Manufacturer's Name: Natural, Inc.
Manufacturer's Address: 6650 Santa Barbara Ct., Elkridge, MD 21227. Phone: 301-796-3211 (Balt.); 301-621-5388 (DC).
Date of Introduction: 1986. November.
Ingredients: Nigari tofu, carrots, cabbage, onion, celery, potato, yam, okara, soymilk, sesame seeds, sunflower seeds, soybean oil, sea salt, spices.
Wt/Vol., Packaging, Price: 7 oz vacuum pack.
How Stored: Refrigerated.
New Product–Documentation: Talk with Larry C. Betzler of American Soyfood Industries. 1988. April 1. Eddie Tsai, the Taiwanese manager, makes Tofu Burgers and Veggie Burgers for Larry.

4933. Swientek, Robert J. 1986. Merging of two technologies produces aseptic soy milk: East meets West. *Food Processing* (*Chicago*) 47(12):128-29. Nov.
• ***Summary:*** In July 1983, Eden Foods introduced Edensoy soymilk into the U.S. market. Made by Marusan Co., Ltd. in Japan, the product is packed in retortable pouches. Today the product is distributed nationwide and sold in about 20 supermarket chains, including Kroger in the Detroit area and Tops in Buffalo. "According to Michael Potter, President of Eden Foods and C.E.O. of American Soy Products, Edensoy holds a 38-40% market share of the $20 million/year soy milk retail consumer market."

Construction of the Edensoy plant began in October 1985 and was completed in August 1986. It was officially dedicated on September 9. Address: Associate Editorial Director.

4934. Tanaka, Yoshikazu; Azuma, Keiko; Hirata, Takashi. 1986. [Studies on quality index of aseptic soymilk on preservation]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 49. p. 135-40. Nov. [20 ref. Jap; eng]
• ***Summary:*** Reprinted from *Nihon Shokuhin Kogyo Gakkai Shi* (*J. of Food Science and Technology*) 32(7):457-62 (1985). Soymilk prepared commercially using an aseptic packaging system was stored at 5, 25, or 37ºC for 2 months. The quality of this soymilk was then evaluated by determining the microbial count, oxidation-reduction potential (ORP), chemiluminescence, and free amino acid contents. The soymilk was also subjected the a Color Test and organoleptic evaluation.

No microorganisms were detected in the stored soymilk at any temperature, indicating the effectiveness of the process. Organoleptically, however, the soymilk deteriorated during storage, at 25ºC for 2 months or at 37ºC for half a month. The color also changed from yellowish to whitish or faded. The pH of the soymilk decreased [it became more acidic] almost immediately after storage. The ORP decreased and the chemiluminescence increased during storage. No change was observed in the composition or content of free amino acids. However the ammonia content increased during storage and was found to be closely correlated with storage period and temperature. Therefore, ammonia content can be used as a good index of the quality of aseptically packed soymilk. Address: National Food Research Inst., 2-1-2 Kannondai, Yatabe, Ibaraki, Japan.

4935. *Vegetarian Times.* 1986. Top entries in the Vegetarian Times soyfoods recipe contest: The winners! Nov. p. 36-39.
• ***Summary:*** Some 125 recipes were submitted to the contest. The full recipe for each of the winners is given. For main dishes, the first prize went to Messilla Valley Tempitas (with tempeh), the second prize to Tofu Slices with Mushrooms, and the third prize was a tie between Kid's Favorite Tofu Loaf, and Tofu Manicotti with Sesame-Miso Sauce.

For desserts, the first prize went to Tofu Cheesecake, the second prize to Cranberry-Walnut Baked Apples with Maple-Custard Sauce (with soymilk), and the third prize to Creamy Peach Rice Pudding (with tofu).

In the "Other" category, first place winner was Smoked Tofu with Dipping, 2nd place was Bombay Chowder, and 3rd place was Tofu-Shallot Dip.

A color photo by Katherine Phelps shows the dish that won first place in each category.

4936. Potter, Michael. 1986. Re: History of Eden Foods. Letter to William Shurtleff at Soyfoods Center, Dec. 2–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** In July 1967 the name "Eden Organic Foods, Inc." started to be used as the name of this company. This was changed to "Eden Foods, Inc." in November of 1969.

In Feb. 1972 Eden Foods began to import foods from Japan, and in June 1972 Muso Shokuhin in Japan became their supplier.

"In Oct. 1971, after providing effective services to Eden Foods, Inc., 13.5% of the common stock of Eden Foods, Inc. was given to Michael Potter by the corporation. At this point the common stock ownership of Eden was: Between William and Judith Bolduc 43.25%, Timothy Redmond 43.25% and Michael Potter 13.5%.

In Feb. 1972 Eden began to import foods from Japan, and in June 1972 Eden began to import foods from Muso Shokuhin.

"In August of 1973 the Bolducs offered to sell their stock in Eden to Michael Potter. Michael Potter accepted this offer and purchased their stock. Because of Tim Redmond's dedication to Eden, Mr. Potter gave enough of this common stock to Mr. Redmond so that the common stock ownership of Eden Foods, Inc. became 50% M. Potter and 50% T. Redmond.

"This situation remained the same until January 1980 when, after a fire destroyed our offices and warehouse, Mr. Redmond sold his stock back to the corporation and resigned, the corporation awarded common stock to its management and Mr. Clifford Adler purchased a significant block of this common stock."

In Jan. 1984 Eden Foods became Muso Shokuhin's exclusive American import agent. In June 1985 American Soy Products was founded. Presently the suggested retail price of Edensoy is $0.59 per 250 ml pack and $1.99 per liter pack. They are selling for less in some places, i.e. $0.49 and $1.65, respectively.

11,000,000 individual units (6 fl. oz. = 180 ml retort pouches) of Edensoy were sold in 1984 (Jan.–Dec.) and 10,250,000 were sold in 1985 (Jan.–Dec.). This is equivalent to 515,633 gallons or 1,980,190 liters in 1984, and 480,476 gallons or 1,845,018 liters in 1985. Address: President, Eden Foods Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: (517) 456-7424 or (313) 973-9400.

4937. Potter, Michael. 1986. History of Eden Foods: Building a soymilk plant in America (Interview). *SoyaScan Notes.* Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On 1 August 1986 it was announced that a major new joint stock company, named American Soy Products, had been established to produce Edensoy soymilk in Saline, Michigan, 30 miles west of Detroit, at a new state-of-the-art manufacturing and packaging facility. Michael Potter played a major role in conceiving and pulling together this innovative, exciting, and promising new venture. In July 1983 Eden Foods launched their first Edensoy soymilk, made by Marusan Ai in Okazaki, Japan. It soon proved to be a great success. When Potter began to talk with Marusan Ai about building a soymilk plant in the USA, he found that they were wary. In 1982-83 Marusan had had extensive discussions with Hinode Tofu Co. in Los Angeles, California, about a soymilk joint venture, but the talks eventually broke down over small points; Marusan felt they had wasted a lot of time and money to no avail. So Potter focused on Muso. With competition eating into their domestic Japanese health food market, a venture in America looked promising. Yet neither Eden nor Muso had the capital to build a soymilk plant in America. Enter Kawatetsu Shoji, better known as Kawasho International. A big New York based firm with money, influence, power, and experience in international business and joint ventures, they were looking to diversify out of coal, steel, and other commodities, into branded foods. They already knew Eden Foods (they had been financing their growing Edensoy imports and inventories from Japan) and they liked the fact that Eden knew Japan and seemed to have a solid, growing product. Kawasho's endorsement of the project was enough to overcome Marusan's reluctance. And with Marusan came Seikensha, the Tokyo based company that had built Marusan's state-of-the-art soymilk equipment. The historic joint venture package, called American Soy Products, was officially founded in June 1985.

Gross investment in the new company was $10 million. Percentage ownership was Marusan Ai 25%, Kawatetsu Shoji (Kawasho Intl.) 25%, Muso 15%, Seikensha 10%, and Eden Foods Inc. 25%. The chairman of the board was Michael Potter of Eden Foods and the president was Mr. Hiroyasu Iwatsuki, Marusan's soymilk manager, who soon moved to Michigan to go to work.

Each partner had a unique and valuable set of skills to offer. As before, Eden Foods would continue to be responsible for marketing, selling, and distributing all soymilk made by the new company. Kawasho would oversee administration and financing. Marusan would take care of soymilk production. And Muso would coordinate international sales. Seikensha, which has patents on key pieces of soymilk manufacturing equipment, would supply the plant equipment.

Open houses in mid-September were attended by the media and a host of state dignitaries, including the Director of Michigan's Department of Agriculture, who called the new plant "a perfect marriage of high technology and the area's farming." These events, and additional promotion done by a newly-hired, local marketing and advertising firm named Group 243, gave the project extensive, very positive publicity. Widespread color print media advertising, focusing on Edensoy's new larger size package, was also started.

In late October 1986 the sparkling new 22,000 square foot stainless steel plant at Saline (12 miles northeast of Clinton and just south of Ann Arbor, in the southeast corner of Michigan) started test runs, which were carefully monitored by the FDA for 6 weeks. Both the Japanese soymilk equipment and the Swedish low-acid Tetra Brik packaging lines were said to be the most modern of their kind in the world. The company had spared no expense to "do it right." Japanese technicians now living in Saline were training American counterparts.

The factory and land had cost $2.3 million and equipment cost $4.3 million. The company committed $700,000 for startup costs, $1.8 million for marketing funds, and $700,000 for working capital. By November 1986 most of this money had been spent.

The new Edensoy was packaged in both regular (250 ml or 8.45 fl. oz. for $0.59) and large (1 liter for $1.99) Tetra Brik cartons, in plain, carob, and vanilla flavors. The new prices were significantly lower than before. For example, in

1984 (when it was historically least expensive) Edensoy in a 6-ounce retort pouch had retailed for $0.69 to $0.79, or an average of 12.3 cents per ounce. The new 250 ml (8.45 fl. oz.) pack retailed for only 7.0 cents per ounce (down 43%), while the liter size (33.8 fl. oz.) retailed for only 5.9 cents per ounce (less than half the retort pouch, and 16% less than the 250 ml pack). Yet compared with cow's milk at 54 cents per quart (32 fl. oz.) or 1.7 cents per ounce, the Edensoy products are still 3.5 to 4.1 times as expensive per ounce; a much lower ratio than in 1984 but still quite high.

A cornerstone of Eden's food procurement policy since 1973 was the support of local farmers. And Saline was in the heart of Michigan's soybean country. The estimated 85,000 bushels a year of soybeans used to make Edensoy will all be grown on contract with individual Michigan farmers located within a 10-mile radius of the plant. Beeson variety soybeans will be used; though low yielding for farmers, they have a low-oil, high-solids composition and give excellent soymilk. Numerous standard grade parameters will also be specified. Growers will typically receive premiums of 15-30% over conventional markets. By mid-1987 American Soy Products (ASP) hopes to start using organically grown soybeans.

One nice by-product of the new ASP plant was the fact that it was the only plant and Tetra Brik line located in that part of the USA especially designed to package low-acid foods; there were only two others in the entire country, both on the West Coast, and used mostly to pack milk. Thus a host of other companies, wishing to have their own low-acid products packed on Tetra Brik machines, started to line up to use ASP's equipment. This sort of contract packing would serve as an important source of income and keep the packaging operation running 24 hours a day.

ASP's initial run is scheduled to produce 100,000 packages of 250 ml equivalent. The company's first year sales goal is $5,000,000 produced on 2 shifts. But the first problem is to fill the 20 truckloads that were back ordered.

In November Eden Foods decided that on 1 Jan. 1987 they will stop serving as a wholesale distributor to retail stores in the Midwest (10% of their total business), drop 150 products, and serve as a master distributor, selling only through other distributors. This will allow additional attention to be paid to American Soy Products. Still big marketing and distribution questions remain: Will ASP use brokers? Go direct? Go through grocery distributors? Who does ASP see as their stiffest soymilk competition? Vitasoy and Sunsoy?

What about future plans? A French label for the Canadian market. Organic soybeans. The use of a grain (such as brown rice, barley, etc.) in the Edensoy formula. A cautious attempt to break into the mass market via super markets, but only after careful test marketing in specific areas. Eventually other similar plants in other parts of the United States.

American Soy Products and the new Edensoy are the most exciting soymilk ventures of 1986, and ones that the industry will be watching closely. Address: President, Eden Foods Inc., Clinton, Michigan.

4938. Fischer, R.W. 1986. Miller Farms, Dr. Harry Miller, and work with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 22. 2 p. transcript.
• ***Summary:*** Fischer has been involved with soy since 1960. He formed Soypro International in 1963. Before that he was with the Soybean Council of America. Address: Iowa.

4939. Miller, Clarence. 1986. Harry Miller, Willis Miller, and their work with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 24. 2 p. transcript.
• ***Summary:*** Clarence Miller, M.D., Dr. Harry Miller's eldest son, lives on the grounds of the St. Helena Hospital and Health Center.

The main purpose of this visit is for Shurtleff to pick up a copy of a manuscript on the life of Dr. Harry W. Miller written by Mr. Herbert T. Ford, 531 Sunset Dr., Pacific Union College, Angwin, California 94508. Phone: 707-965-2047.

Ford is in PR and a good writer. He interviewed Dr. Harry Miller in 1958. Raymond Moore later plagiarized this work. Ford does not have a copy of this manuscript. Clarence has the best original, which is a carbon copy.

The BIG picture in China. High level contacts are the key to getting somewhere in that country.

Harry's full name was Harry Willis Miller. His son Willis was named Harry Willis Miller, Jr.; he was generally called "Willis."

In Feb. 1948 Dr. Miller went to China for a few weeks and stayed in Shanghai with Clarence who, who had been there since 1946. Then back to states. When other Adventists had to vacate to Hong Kong the church asked Harry to go back to Shanghai. He stayed about 6 months after Dec. 1940 to early 1950. The Communists took over 14 Adventists hospitals in China.

Dr. Miller and his wife and group established the FIRST Adventist presence in China, in 1903. There were 4 physicians and 2 nurses. Maude was a physician. So they were of great historical significance.

The quality of medical care in Adventist hospitals in Asia is slipping dramatically, according to Clarence. He says: "My interest is in improving our medical activities."

Willis Miller started working with Bob Fischer about 3 years ago. They developed a mobile unit. Can ship these units to foreign countries. There are Now there are three other principals.

Dr. Thrasher is interested in having a soymilk plant as a student industry at an Adventist college in Thailand. This is the strongest interest Clarence found in Asia.

Miller Memorial Foundation. Clarence wants to set this up in Miller Farms contracts. The money would be used to advance Adventist health care activities.

Bob Fisher has traveled a lot outside the US in past years. Willis is a very competent soymilk engineer. Bob runs the business.

Their future has promise. Fisher went to China at the invitation of a corporation or group of entrepreneurs in Peking. Maybe interest in Shanghai via Dr. Yeung (spell?). Now at Kettering.

Clarence wants to reestablish Harry's original plant 50 years later. He wrote Mr. Milne, who is 90 some years of age and colleague of Harry, now in Hong Kong doing medical work. Has names of 5 people in Shanghai, settled on a few promising investors. One is a SDA businessman, in the cotton business. President of Rawcot International. Owns lots of cotton land.

In the early 1960s Dr. Miller went to Hong Kong, had a home there at the SDA college at Clearwater Bay, and was working with Longway and Milne to raise money to build the 2 hospitals. He had many old friends from Hong Kong. He wanted to have a little soy dairy at the college. It was established but did not take off. Chinese students see themselves as scholars, not domestic workers.

While Harry was in Hong Kong, Sally Awe, who lives in Hong Kong and is the heiress of the Tiger Balm Fortune, suggesting that she build a soymilk plant in Hong Kong for the use of the Chinese people. Dr. Miller encouraged her but his main interest was in the 2 hospitals. It never happened.

Dr. Miller's last surgery was in 1973, when he was 94 years old. From 1961-62 to 1973 he did only goiter operations–his specialty.

Dr. Miller's first West Coast distributor, in early 1940s, was Joseph Lessin & Co. which later became Kahan & Lessin. It wasn't until 1941 that the plant in Mt. Vernon, Ohio, actually started to make any soyfoods. Harry basically didn't have a dime to his name when he returned to US in 1939 because he had been a missionary all the time. His brother Clarence, who lived in Chiff? City, Ohio, loaned him $5,000 to pay for the 150 acre farm that Harry bought in Mt. Vernon, Ohio. Harry then flew back on the Clipper to the Philippines and did thyroid surgery. He left half the money there for the Church and brought home $20,000.

Adventists developed Miller Memorial Sanitarium and Hospital in Cebu City, Philippines. He made only 2 trips to the Philippines to do thyroid surgery and each time came back with $20,000. He was only there a few weeks but would do 10-l2 operations a day. They were all lined up and ready to go.

This manuscript by Herbert Ford did not come from Mr. Ford but from Mr. Milne in Hong Kong, out of a pile of papers that he said Dr. Miller left with him. Address: P.O. Box 97, Deer Park, California 94576. Phone: 707-963-7446.

4940. Tsuchiya, Kanji. 1986. Re: Soymilk and new soymilk plants in China. The soymilk market in Japan. Letter to William Shurtleff at Soyfoods Center, Dec. 25.–in reply to inquiry. 6 p. Typed, with signature.

• ***Summary:*** All soymilk plants in China are run by provincial governments. Private companies are not allowed to start them. All soymilk made in China is for domestic consumption; none is exported. During the past three years, 14 soymilk plants have been constructed in China under the leadership of Seikensha, with cooperation from Marusan. Seikensha built the plants and Marusan taught the Chinese how to use them to make quality soymilk. Mr. Tsuchiya supervised all aspects. There are no additional orders at present, probably because of the high yen exchange rate, but perhaps because (according to rumors) the Chinese are trying to develop their own soymilk plants.

In terms of the management of Chinese soymilk plants, one person is in charge of construction, one is in charge of running the plant, and then there is always a third person from the Communist party. It is difficult to know who is really responsible, and there is frequent personnel turnover. The Chinese use a lot more sugar in their soymilk than Japanese (often twice as much) and they prefer not to add oil. The soybean solids content is about 6%. Pure/plain soymilk, with nothing added, has a good reputation in China.

I am enclosing the names and addresses of the 13 Chinese soymilk plants that I supervised. They started operation from Aug. 1984 to Aug. 1986. Nine have a capacity of 350 liters/hour, and four have a capacity of 2,000 liters/hour in Beijing, Qingdao (Shandong), Liuzhou (Guangxi), and Jamusi (Heilongjiang). In Feb. 1986 Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy, bought a dehulling machine, lipoxidase inactivator, and micro-pulverizer from Seikensha. Capacity: 2 tons/hour.

Soymilk production in Japan peaked in 1983, then dropped sharply. Production in tonnes was 17,280 in 1981, 68,245 in 1982, 116,724 in 1983, 84,013 in 1984, 55,356 in 1985, and 44,400 in 1986 (est.). Thus the 1986 level is only 38% of the 1983 peak. As I see it, the main reasons for this drop are: 1. The image of poor flavor (Japanese did not traditionally drink soymilk), or actual poor flavor. 2. The three major manufacturers (Kibun, Marusan, Mitsubishi) all position soymilk as a health food or specialty food for the old and sick, keeping it away from mass market soft drinks. 3. Soymilk is a sideline for each of the three major manufacturers. Kibun focuses on seafood products, Marusan on miso, and Mitsubishi Kasei on chemical products. 4. Product managers have taken a short-run profit-oriented approach, rather than building for the future. Address: Kamiogi 3-1-1, Suginami-ku, Tokyo 167, Japan. Phone: 03-312-0775.

4941. Morohoshi, Yozo. Assignor to Hidekatsu Kuroyanagi (Kanagawa, Japan). 1986. Process for manufacturing soymilk products with wheat germs. *U.S. Patent* 4,632,839. Dec. 30. 4 p. Application filed 5 Aug. 1985. See also Japanese Patent 84-239,688 (FSTA 84-11-14). Application

also filed in Japan on 3 Sept. 1984. [7 ref]
• ***Summary:*** Nigari or magnesium chloride, a natural coagulant used in the preparation of tofu, gives very rapid coagulation. Other coagulants such as calcium sulfate and glucono-delta lactone give less rapid coagulation, easier mixing, and a softer curd, but have inferior flavor. If soymilk is mixed with a wheat germ dispersion (which has been prepared from fresh wheat germ homogenized at 95ºC) before addition of the nigari or magnesium chloride, the wheat germ slows the speed of the coagulation and allows sufficient time for the curd to mature into a delicious product of even texture. Variations in the ratio of soybean to wheat germ in the suspensions allow different products to be made, e.g., tofu or bean curd, "a dessert pudding" or a "dressing or yogurt substitute." Address: Hiratsuka, Japan.

4942. *SoyaScan Notes.* 1986. Chronology of soybeans, soyfoods and natural foods in the United States 1986 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. Ron Ishida, an attorney with no previous knowledge of tofu, working for Azumaya Inc. (South San Francisco, California), rewrites the Tofu Standards without authorization. They have already gone through 8 drafts. This creates a crisis.

Jan. Soymage, the first casein-free soy cheese, is introduced by Soyco Foods.

Jan. *Soyfoods: The Journal of the European Soyfoods Association* (*ESFA*) begins publication from Paris. Philippe Vandemoortele of Alpro is president of the association and Guy Coudert is editor of the periodical. The association plans to organize a soyfoods conference every 2 years. But the journal is discontinued after 3 issues.

Jan. Tomsun Foods is reorganized, changing its name (for the fourth time) to Tomsun Foods International. The firm's new chairman is Juan Metzger, founder of Dannon Yogurt. The company produces nearly 3 million lb. of tofu a year.

Jan. First Tofutti Shop opened in Japan by Daiei Co. Inc, Japan's largest retailer. Shop sells non-dairy soy-based ice cream and related snacks.

Feb. 7. Fire destroys Island Spring tofu plant in Vashon, Washington, with an estimated $1 million loss.

Feb. Soya Kaas, an imitation cheese containing soymilk and casein, launched by American Natural Snacks, a marketer. The manufacturer is Swan Gardens of Georgia.

Feb. Jofu, a tofu-based, non-dairy, nonfermented, yogurt-like product, sweetened with fruits, launched by Tomsun Foods International of Greenfield, Massachusetts. The product is a hit, grossing nearly $400,000 in its first 32 weeks on the market.

Feb. Barricini Foods has its first public stock offering. Raises $1.5 million, gross to use in marketing Tofulite and Ice Bean soy ice creams.

Feb. Central Soya purchases Staley's protein line, including Mira-Tex, Procon [soy protein concentrate], and Textured Procon brands.

Feb. ASA hires Jim Guinn as technical director of soybean quality programs. Soybean quality is an area of growing interest, with two parts: 1. The traditional area of soybean condition, concerning grades, damage, foreign material, etc. 2. The newly emerging area of soybean composition and its relation to grades. New measurement technologies make it likely that soybeans may soon be sold based on their composition of oil and protein. Both effect exports and price.

March 5. Pesticide control now tops the Environmental Protection Agency's list of most pressing problems, announces *The New York Times* (and *Soybean Digest,* June/July). Stricter pesticide laws are enacted.

March 7. Richard E. Lyng of California becomes U.S. Secretary of Agriculture, replacing John R. Block. Policies remain unchanged.

April 18. Wm. Shurtleff, in charge of compiling the original tofu standards, submits a strong criticism of the illegitimate Ishida draft in the form of a detailed chronology of the development of the tofu standards.

April. Tofu cheesecake revolution in New York City profiled by *Whole Life.* Thirteen restaurants now offer them.

May. Tofutti Love Drops (chocolate covered graham cookie drops) launched by Tofutti Brands with much fanfare.

May. Nasoya's new million-dollar automatic tofu-making system, imported from Sato Shoji in Japan, begins operation.

June. Increasing consumer deception by "soy cheese" manufacturers. Whole Life publishes "Whole Frauds in the News: Will the Real Soy Mozzarella Please Stand Up (That is, If There is One)," an exposé of mislabeling involving Soyarella, Tofu Mozzarella, and Soya Kaas (though the latter brand is not at fault). Argues that it is deceptive for health food stores to call a product "non-dairy" if it contains casein (milk protein), even though FDA rules allows such a designation. In Oct. Whole Life shows that "Independent lab tests prove Soyarella hoax; Large quantities of casein [19.6%] found in so-called soy cheese." Soyarella had previously been marketed as casein free.

July. Ralston Purina Co. starts publication of Nutrition Overview, a newsletter focusing on soy protein and fiber.

July. Soyfoods win big in 7th Annual Natural Foods Merchandiser merchandising awards: Gold: San-J tamari and shoyu. Silver: Fantastic Foods' Tofu Scrambler and Tofu Burger, Westbrae Natural miso soups. Honorable mention: Walker & Wilks frozen entrees, White Wave boxed tofu.

July. Vitasoy reintroduces its line of reformulated and repackaged soymilk products, originally launched in 1984. They contain more solids and nutrients, and are sweetened with barley malt instead of maple syrup.

July. A Roper poll in the U.S. finds that tofu is the "most

hated" food. 35% of a sample of 2,000 adults checked it on a list of foods said to be disliked, ahead of liver (34%), yogurt (29%), Brussels sprouts (28%), and prunes (24%). Results do not vary significantly by age, but tofu dislike is somewhat less among those with higher incomes. The poll results are very widely publicized, and are even the subject of a question on the TV program Jeopardy (in early 1988)–and its rerun! These findings suggest both a widespread awareness of tofu and a split image: Some like it and others don't.

Aug. Kikkoman's new shoyu plant starts operation in Chitose, Hokkaido, in northern Japan. The first product was shipped on 30 Jan. 1987.

Sept. 9. American Soy Products Inc. plant dedicated in Clinton, Michigan. A $10 million joint venture between Eden Foods and four Japanese companies (Kawasho, Marusan, Muso, Seikensha), construction on the plant began in Oct. 1985. It will make Edensoy soymilk in Tetra Brik cartons. The first products are shipped in November.

Sept. 19. Tofu standards passed by Tofu Standards Committee in San Francisco, after all committee members except Shurtleff agree to start with a blank slate in drafting new standards–thus erasing years of work by hundreds of people. Shurtleff resigns in protest, arguing that this is a violation due process. Shortly thereafter Barricini and Ralston Purina also refuse to give final approval. Tofu standards are stalled indefinitely after many years of hard work.

Sept. 24. First International Tofu Products Expo, Seminar, and Soyfoods Buffet, held in Munich, West Germany. Sponsored by Bernd Lehmann International Consultants. 100 people attend.

Oct. Supersoy brand soymilk introduced to America by Mitoku USA. It is made by Kibun Health Foods Co. in Japan.

Oct. Ralston Purina sells its domestic agricultural products business, Purina Mills. Total sales for 1986 were $5.5 billion.

Nov. Island Spring announces $6.5 million investment from Edward Lynch Co. to finance an expansion plan. Construction of a new 30,000 square foot factory is now underway on Vashon Island.

Dec. 1. White Wave of Boulder, Colorado, acquires Soyfoods Unlimited, a tempeh manufacturer of San Leandro, California. This makes White Wave America's largest tempeh manufacturer.

Dec. 8. Central Soya purchases 7 of 9 Bunge processing plants. ADM is now estimated to control 30% of U.S. crushing capacity followed by Cargill (25%), Central Soya (20%), and other (25%).

Dec. Tomsun Foods International nets about $3.45 million in its first public stock offering. Most of the funds will be used for sales and marketing of Jofu, and to repay $800,000 in debts. Total Tomsun sales in 1986 were about $3.1 million.

Dec. Haagen-Dazs will drop Tofutti and start distributing Barricini Tofulite, a non-dairy frozen dessert.

Dec. Brightsong Foods is named as one of the top ten food innovators for 1986 by Food & Beverage Marketing magazine. In fact, Brightsong is listed first!

Dec. Tofruzen Inc., a soy ice cream marketer from Englewood, Colorado, raises $1.6 million in a public stock offering. Sales of Tofruzen in fiscal 1986 were $91,000, rising to $158,000 in 1987, and $213,000 in the first quarter of 1988.

Dec. Edible Soy Products in Hudson Iowa is sold to Solnuts of Tilburg, The Netherlands, and renamed Solnuts, Inc. The Hudson and Tilburg plants are the only ones in the world that dry roast soybeans to make soynuts.

Dec. More than 60,000 Italian farmers harvested nearly 25,000 hectares (61,700 acres) of soybeans this year. Italy is now Europe's largest soybean producing country, followed by France. Five years ago, Italy produced virtually no soybeans. The Ferruzzi Group is the leading promoter, helped by hefty subsidies from the EEC.

1986 New Trends:

So Called Tofu Cheeses. Eight new soy cheeses were launched during 1986, many with the term "Tofu" in the product name. Many have been shrouded in mystery, with the names of the manufacturer and ingredients often not disclosed. There has been much consumer deception, mislabeling, and several attempts to conceal the fact that they usually contain casein, the protein in cow's milk.

Soy Yogurts and Yogurt-Style Products. The leader in this exciting new category is Jofu from Tomsun Foods. The two basic types are fermented soymilk products (e.g. Cream of the Bean, Soy-O), and non-fermented tofu-fruit blends (e.g. Jofu).

Move to Manufacturing Soymilk in America. The rising cost of soymilk imports is making them unprofitable. Domestic production, which obviates shipping U.S. soybeans to Japan, then shipping the beans and water back, will have major, beneficial long-term Edensoy, Ah Soy, and Westbrae Malteds. Still imported are Vitasoy (from Hong Kong, whose exchange rate is tied to the dollar) and Sunsoy (from Belgium).

The declining value of the dollar against the yen starting in late 1985 led to a steady rise in soymilk prices. But the combination of domestic production and larger size packages (see below) has led to a drop in soymilk prices during 1986. For example, Edensoy, selling for 6 times the price of dairy milk per unit volume in early 1984, was selling for only 3.5 to 4.1 times as much in late 1986, a drop of about 37%.

Soymilk Switches to Tetra Brik Cartons and Liters or Quarts. Edensoy, Westsoy, and Ah Soy have all switched to Tetra Brik cartons this year. Lower total manufacturing and shipping cost is the main reason. The liter/quart size was pioneered in the U.S. by Alpro/Vamo Foods/Sunsoy, and followed by Edensoy, Ah Soy, and Vitasoy. These

counterparts of dairy milk in quarts suit the needs of regular soymilk users by offering a more economical price per unit volume plus greater convenience. Soymilk may be the first liter-size Tetra Brik product to succeed in America.

INTSOY is doing outstanding, pioneering work with soyfoods and soybean utilization in the Third World and America. Research is focusing on extrusion cooking, extruder-expeller processing for small-scale oil expression, and fresh green soybeans. Since April 1987 the INTSOY Newsletter has become one of the best soy-related publications available.

Morinaga Long-life Silken Tofu becomes a major force in the U.S. tofu market. Traditional manufacturers consider the product a major threat to their markets. Azumaya has hired an attorney who spends considerable time causing troubles for Morinaga.

4943. American Committee on Nutrition. 1986. Aluminum toxicity in infants and children. *Pediatrics* 78(6):1150-54. Dec. [36 ref]

4944. **Product Name:** [Soymilk].
Manufacturer's Name: Dansk Sojakagefabrik ApS.
Manufacturer's Address: 24, Islands Brygge, DK-2300 Copenhagen S, Denmark.
Date of Introduction: 1986. December.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1982. July 23. Note: This company is a large soybean crusher. They make soy oil and soy lecithin for food and industrial uses, plus soybean meal for livestock feed. Their last listing in a Soya Bluebook is in 1986.

Talk with Thomas Andersen. 1990. May 24. There was a company in Copenhagen named Dansk Sojakagefabrik ApS that processed soybeans to make oil, lecithin, and meal plus soy products, especially for pets, sausage ingredients, and industrial use. The plant blew up in a big explosion 2-3 years ago–probably caused by chemicals in the plant. This gave all soyfoods in Denmark, including tofu, a bad reputation for a long time.

4945. Ferreira, V.L.P.; et al. 1986. Estabilidade e aceitabilidade do leite de soja formulado [Stability and acceptability of a soymilk formula]. *Boletim do Instituto de Tecnologia de Alimentos* (*Campinas, Sao Paulo, Brazil*) 23(4):425-36. Oct/Dec. [Por]*

4946. Haytowitz, David B.; Matthews, Ruth H. 1986. Composition of foods: Legumes and legume products. Raw, processed, prepared. *USDA Human Nutrition Information Service, Agriculture Handbook* No. 8-16. 156 p. Dec. See p. 126-152. By Nutrition Monitoring Division. [29 ref]
• ***Summary:*** Data are presented for 133 legumes and legume products. Of these, only 53 were included in *USDA Agriculture Handbook* No. 8, published in 1963. The following soy-based foods are included: Simulated meat products (bacon, meat extender, and sausage), raw soybeans, cooked boiled soybeans, roasted soybeans, dry-roasted soybeans, soybean products: miso, natto, tempeh, full-fat soy flour (raw, and roasted), defatted soy flour, low-fat soy flour, defatted raw soy meal, fluid soy milk, soy protein concentrate, soy protein isolate, soy sauce (shoyu, tamari, and HVP), raw tofu (firm {p. 147}, regular, dried-frozen/koyadofu, and fried) [Note 1. Tofu is called "tofu" and at "Soybean curd" it says, see "tofu." Note 2. Footnote 2 states that the calcium content of tofu curded with calcium sulfate is 683 mg/100 gm, compared with 205 mg/100 gm for tofu curded with nigari. As of May 1997 Soyfoods Center believes that both these values are far too high; the two figures should be about 159 mg/100 gm (range 128-168) and 45 mg/100 gm respectively], okara, salted and fermented tofu (fuyu).

For each food the following information and number of values are given: Vertically: Proximate (7 values), Minerals (9), Vitamins (9), Lipids (Fatty Acids [Saturated (9), Monounsaturated (5), Polyunsaturated (7)], Cholesterol, Phytosterols), Amino acids (18). Horizontally: Amount in 100 gm edible portion (mean, standard error, number of samples), amount in edible portion of common measures of food (e.g. ½ cup or 1 cup), amount in edible portion of 1 lb of food as purchased.

Minerals include calcium, iron, magnesium, phosphorous, potassium, sodium, zinc, copper, and manganese (not aluminum).

Vitamins include ascorbic acid, thiamin, riboflavin, niacin, pantothenic acid, vitamin B-6, folacin, vitamin B-12, vitamin A.

Amino acids include tryptophan, threonine, isoleucine, leucine, lysine, methionine, cystine, phenylalanine, tyrosine, valine, arginine, histidine, alanine, aspartic acid, glutamic acid, glycine, proline, and serine.

For Adzuki beans (raw, cooked boiled, canned sweetened, and Yokan {yôkan–sugar-sweetened confection}) see p. 24-27.

For peanuts (all types raw, cooked boiled, oil-roasted, dry-roasted, Spanish raw, Spanish oil-roasted, Valencia raw, Valencia oil-roasted, Virginia raw, Valencia oil-roasted) see p. 109-18. For peanut butter (chunk style, smooth style), defatted peanut, and low-fat peanut flour, see p. 119-22. Address: USDA Human Nutrition Information Service.

4947. *Natural Foods Merchandiser.* 1986. A soymilk first: Made in the U.S.A. Dec. p. 4.
• ***Summary:*** A new soymilk plant in Saline, Michigan is a joint venture of 4 companies in Japan plus Eden Foods. It will make Edensoy soymilk.

4948. *San Francisco Vegetarian Newsletter.* 1986. Attention

vegans! [Advertising for soy cheeses is misleading]. Nov/Dec. p. 1.
• ***Summary:*** "Joyce Thornton, a Vegan Member of the SF Society, has researched the soy cheeses and discovered their advertising to be misleading. The following is an excerpt from a letter to her from Brightsong Foods, P.O. Box 2536, Petaluma, California 94953-2536, (707) 778-8638.

"Casein, referred-to on the label as a 'milk-free protein,' is indeed derived from milk. However, it is free of all other constituents normally found in milk (such as cholesterol and lactose), besides the protein. Calling it a 'milk-free protein' was our way of explaining that fact as succinctly as possible. In fact, the FDA considers it to be a non-dairy ingredient, meaning that, say, Tofu-Rella or Tofutti could contain casein and still be labelled as 'non-dairy'... All soy cheeses currently on the market contain casein... Sincerely, Richard Rose, President.

"Richard Kane, (415) 388-3310 distributor of Soy Mozzarella which was served as vegan by the Vegetarian Society, still insists that his company used no dairy or casein."

Note: This is the earliest English-language document seen (March 2007) that uses the registered trademark "Tofu-Rella" to refer to a Western-style soy cheese.

4949. *SoyaScan Notes.* 1986. New Trend: Soy yogurts and yogurt-style products (Overview). Dec. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** At least 7 new soy yogurt products have been introduced this year, worldwide. The leader in this exciting new category is Jofu from Tomsun Foods. The two basic product types are non-fermented tofu-fruit blends (e.g. Jofu), and fermented soymilk products (e.g. Cream of the Bean, Soy-O).

4950. **Product Name:** Noelnog (Soymilk Eggnog, without Eggs or Dairy Products).
Manufacturer's Name: Sunrise Market Ltd.
Manufacturer's Address: 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
Date of Introduction: 1986. December.
How Stored: Refrigerated.
New Product–Documentation: Talk with Michael Weiner. 1987. Dec. 16. The major market is Los Angeles.

4951. *Tetra Pak Age.* 1986. Edensoy: Born of American and Japanese ideas. 4(4/4):12-13. Fall/Winter.
• ***Summary:*** Six color photos show Edensoy packages. Describes how the new plant in Michigan was built.

4952. **Product Name:** Tripple Delight (Soy Protein Based Chocolate Drink).
Manufacturer's Name: Tripple Products Inc.
Manufacturer's Address: Victoria, BC, Canada.
Date of Introduction: 1986. December.
New Product–Documentation: Food in Canada (Toronto). 1986. Dec. Tripple Delight, incorporated in February 1985 and headed by Don and Deedrie Ballard, has launched a soy protein-based ice cream and a soy protein-based chocolate drink. These have been developed in concert with Dr. William Powrie of the University of British Columbia Food Sciences Department.

4953. Vitasoy (USA) Inc. 1986. Vitasoy recipes (Leaflet). San Francisco, California. 3 panels each side. Each panel: 22 x 10 cm. Dec.
• ***Summary:*** Contains 14 recipes for using Vitasoy soymilk in such things as whole wheat pancakes, blue corn muffins, cold avocado soup, and creamy basil dressing. Address: P.O. Box 77321, San Francisco, California 94107.

4954. Long, J.F. 1986-1988. Dietary induced aluminum encephalopathy, animal models. *CRIS Database.* Project No. OHOV-RF-71977. Agency: CSVM OHOV.
• ***Summary:*** "Objectives: To attempt to identify environmental factors and physiologic states in animals (of relevance to humans) whereby toxic levels of aluminum are able to breach the normal barriers of the body (gut-epithelial barrier, blood-brain-barrier, renal excretion) and gain entrance to the nervous system." The project starts on 30 Sept. 1986 and ends on 29 Feb. 1988. Address: Veterinary Pathobiology, Ohio State Univ., Columbus, Ohio 43210.

4955. Halas, E.S.; Penland, J. 1986-1991. Role of trace elements in brain development, brain function, and adaptive behavior. *CRIS Database.* Project No. 5450-51000-004-00D. Agency: ARS 5450. Sponsor: USDA-ARS.
• ***Summary:*** "Objectives: To study the effects of trace element deficiencies and toxicities on brain development, brain function, and adaptive behavior of animals. These studies will help define dietary requirements for optimal mental function and performance in humans. The main emphasis will be on zinc, copper and boron deficiencies and aluminum toxicity." The project starts on 1 March 1986 and ends on 28 Feb. 1991. Address: ARS, Grand Forks, North Dakota 58201.

4956. **Product Name:** Soypreme: Non Dairy Soy Drink [Regular, or Vanilla].
Manufacturer's Name: Berrivale Orchards.
Manufacturer's Address: McKay Road, Berri, SA 5343, Australia.
Date of Introduction: 1986.
Ingredients: Natural soy bean extract, maltodextrin, malt, flavor [vanilla only], and water added.
Wt/Vol., Packaging, Price: 1 liter PurePak milk-type carton.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Australian Dairy Foods. 1986. Feb. p. 84. A photo shows "Soypreme Natural Soymilk" in a Pure-Pak carton. It is said to be made near Melbourne.

Form filled out by Margot Sloan, Hawkesbury Agric. College, Private Bag. No. 3., Richmond 2573, NSW, Australia.

Letter from C.H. Lee of Blissquik Food Products. 1992. Feb. 17. This company currently makes Soypreme brand soymilk. Address is the same as shown above.

Note: By 1995 this product had apparently been renamed Good Life: Non Dairy Soy Drink, still sold in a 1 litre PurePak Carton.

4957. *Brauindustrie.* 1986. Soja-Getraenke [Soy beverages]. 5:218. [Ger]*

4958. **Product Name:** Spray-Dried Soymilk Powder.
Manufacturer's Name: Clofine Dairy Products, Inc.
Manufacturer's Address: P.O. Box 335 (1407 New Rd.), Linwood, NJ 08221. Phone: 800-441-1001.
Date of Introduction: 1986.
New Product–Documentation: Soya Bluebook. 1986. p. 102. Kingma. 1987. Soya Newsletter. March/April. p. 3.

4959. Cole, Michael. 1986. Soya Health Foods Ltd. Company profile. Unit 4, Guinness Road, Trafford Park, Manchester M17 1AU, England. 4 p.
• ***Summary:*** Michael Cole is an entrepreneur, born in Manchester, England. The company was formed in 1984 in Manchester. The factory is sited in Trafford Park Industrial Estate and was the first to be built for the sole purpose of Soya Milk manufacture. The company is headed by Mr. M.S. Arora (Chairman), Mr. M.P. Cole (Managing Director), and Burns Anderson p.l.c. (Financial Controllers). Production of Soya Milk began in January 1985. The Sunrise brand is currently being sold throughout the 2,500 independent health food shops and in many supermarkets. The company has 5 products. Their soymilk is private labeled for 5 other companies. Soya Health Foods Ltd. has also been established in Australia and New Zealand, with its own private labels (milk in New Zealand and Burgers, Ice Cream, and Dessert in Australia). Address: Manchester, England.

4960. **Product Name:** Soy Juice (Soymilk).
Manufacturer's Name: Fresno Tofu Co.
Manufacturer's Address: 943 E Street, Fresno, CA 93706. Phone: 209-268-1717.
Date of Introduction: 1986.
New Product–Documentation: Talk with Brad Kubota, owner. 1990. Nov. 28. He got serious about making and selling this product in 1986.

4961. Fujiwara, S.; Inoue, K.; Hirota, T.; Kawanishi, G. 1986. [Studies on hydrolysis of soybean phytate by phytase from *Rhizopus sp.* EF-78]. *Reports of Research Laboratory, Snow Brand Milk Products Co.* No. 83. p. 31-41. [25 ref. Jap; eng]*
• ***Summary:*** Optimal conditions for the operation of phytase, isolated from *Rhizopus* species, on phytate from soybeans were determined. The improvement in digestibility of soymilk exposed to this phytase was also quantified. Address: Technical Research Inst., Snow Brank Milk Products Co. Ltd., 1-1-2 Minami-dai, Kawagoe, Saitama 350, Japan.

4962. **Product Name:** [Baole Soyabean Milk (Regular, Cocoa, or Orange)].
Manufacturer's Name: Guangdong Cannery. Later renamed Guangzhou Cannery.
Manufacturer's Address: Guangzhou, China.
Date of Introduction: 1986.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. Tetra Brik carton. Red, black, pea green, and white. Product name written on carton in English is "Baole Soyabean Milk. Made by Guangdong Cannery, Guangzhou, China."

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the package. Red, black, white, and yellow on pea green. The product name is above a coffee cup on a saucer.

Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Guangdong Cannery in China. It began operation in 1986 with a capacity of 2,500 liters/hour.

4963. Gupta, M.P.; Gupta, R.P.; Gupta, R.R. 1986. Food processing in oxygen-free environment [Soymilk]. *PCT International Patent Application* WO 86/05659. *
• ***Summary:*** Legumes are disintegrated and heated under vacuum in an oxygen free environment to inactivate lipoxygenase. The resulting soymilk is claimed to be bland and free from off-flavors or beany flavors. It also has no throat catching sensation or chalky mouthfeel. Address: Raj Gupta, ProSoya Foods International Inc., 801-275 Slater Ave., Ottawa, ONT, K1P 5H9, Canada. Phone: OF 613-237-5814. HM 613-741-2558.

4964. Gupta, S.K.; Patel, A.A.; Patil, G.R. 1986. Soyfoods to combat malnutrition in developed countries. Paper presented at APO Seminar in Hong Kong. 11 p. *
Address: Div. of Dairy Technology, National Dairy Research Inst., Karnal 132 001, India.

4965. **Product Name:** Tofu, Tofu-Fa (Curds), Soymilk, Egg Tofu (with Soy), Tofu Pau (Fried Tofu Puffs), Tofu Noodles,

Dofu-Gan.
Manufacturer's Name: Kong Kee Food Corp.
Manufacturer's Address: 108 Charlton St., 3rd Floor, New York, NY 10014-3643. Phone: 212-234-5261 or 212-645-3780.
Date of Introduction: 1986.
New Product–Documentation: Talk with George Lin, company representative. 1995. Oct. 23. The company was started in 1986 as a new company by Mr. Ip-Wing Kong. All of the above products were introduced in about 1986.

Form filled out by Ying Kwong. 2010. Nov. 18. The company (the name is the same) is now located at 48-31 Van Dam Street, Long Island City, New York 10191. Phone: 718-937-2746. Person in charge: Ying Kwong. The company still sells soy drinks, tofu (silken, soft, and firm), tofu puffs, and egg tofu.

4966. **Product Name:** Soysage. A Spicy Vegetarian Soy Pate.
Manufacturer's Name: Local Tofu.
Manufacturer's Address: 307 Route 59, West Nyack, NY 10994. Phone: 914-358-2309.
Date of Introduction: 1986.
Ingredients: Soy pulp and soymilk from farm verified organically grown soybeans, whole cornmeal, whole wheat flour, nutritional yeast, wheat germ, safflower oil, tamari sauce, herbs and spices.
Wt/Vol., Packaging, Price: 16 oz.
How Stored: Refrigerated.
New Product–Documentation: Talk with Sam Weinreb. 1987. Dec. 29. Label. 1987. 3.25 inch diameter. Orange or red and blue. "Mold into non-meat balls, scramble with eggs, slice-heat-eat, pre-cooked, refrigerate or freeze, spread on bread, use in lasagna, sprinkle on pizza." Sam learned this from a Scotch tofu maker, Sian McLean, in Nova Scotia, Canada.

4967. Ministry of Agriculture, Forestry & Fisheries (Japan). 1986. [Japanese agricultural standard for soymilks]. Tokyo. 38 p. [Jap]
• ***Summary:*** This sets standards for soymilk, prepared soymilk, soymilk beverage, and soy protein beverage. It specifies requirements for quality (properties, soy protein content, ingredients, additives, etc.) and labeling for the four products. Address: Tokyo, Japan.

4968. Nakagawa, A.; Murasawa, H. Assignors to Asahi Foods Company Ltd. 1986. Process of manufacturing bean curd and bean milk. *European Patent Application* 170,507 A2. [Eng]*
• ***Summary:*** For soymilk, the soybeans are dried at room temperature, crushed and dehulled. The resulting particles are soaked, ground, then boiled with steam in a closed container. Foam is removed by application of a jet of steam to the surface. The okara is separated from the soymilk. To make tofu, a coagulant (such as glucono lactone, nigari/bittern, or calcium sulfate) is added to the soymilk.

4969. **Product Name:** [Soya Drink (Soymilk)].
Foreign Name: Sojadrink.
Manufacturer's Name: Natuerliche Lebensmittel. Zacharowicz–Pollmann.
Manufacturer's Address: Staudgasse 70, A-1180 Vienna, Austria. Phone: 0222/48 50 03.
Date of Introduction: 1986.
Ingredients: Soymilk (Sojafiltrat), vanilla, cane sugar, vegetable oil.
How Stored: Refrigerated.
New Product–Documentation: Label. 1986. 4 by 2.75 inches. Maroon and green on white, self adhesive. "Erzeugung von rein pflanzlichen Lebensmitteln" (Production of pure plant foods). Letter from Paul: The product was only sold for 6 months.

4970. Nguyen, Dinh Mao. 1986. [Food products based on soy milk and process for preparing them]. *French Patent Application* 2,578,396 A1. [Fre]*

4971. **Product Name:** Noble Bean Swedish Tempeh Balls.
Manufacturer's Name: North Coast Tempeh Co.
Manufacturer's Address: 18320 Euclid Ave., Cleveland, OH 44112.
Date of Introduction: 1986.
Ingredients: Tempeh, whole wheat flour, vegetable soup stock, soymilk, corn oil, onion, tamari, parsley, spices.
Wt/Vol., Packaging, Price: 16 oz.
New Product–Documentation: Label. 1987. Ink stamp. Jeff Narten. 1987. "History of North Coast Tempeh and its Products." 4 p. Dec. 7.

4972. Ohara, T.; Sakai, T.; Ohinata, H.; Muramatsu, N.; Matsuhashi, T. 1986. [Studies of tofu and dried-frozen tofu (kori-dofu). VIII. Monitoring coagulation of soymilk via electrical conductivity]. *Research Report of the Nagano State Laboratory of Food and Technology* No. 14. p. 91-98. [6 ref. Jap]*
Address: Nagano State Lab. of Food Technology, Kurita, Nagano-shi, Japan.

4973. **Product Name:** [Soialat {Bottled Soymilk}].
Foreign Name: Soialat: Alimento de Soia.
Manufacturer's Name: Parmalat S.p.A.
Manufacturer's Address: Collecchio di Parma, Parma, Italy.
Date of Introduction: 1986.
Wt/Vol., Packaging, Price: Bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Alfa-Laval. 1988, June.

Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the bottle and label, which contains an illustration of a red-roofed farmhouse on a hill. Below it is written "La Fonte della Vita" (The source/fountain of life).

Letter (fax) from Xavier Karis in Italy. 1990. June 14. "About the name Soialat, I have asked several people but nobody has heard of the name or seen the product. However I did find out that Soialat is a registered trademark of a company named Parmalat S.p.A. It was registered on 15 July 1986 and paid for 10 years. Parmalat is located in Collecchio di Parma in the province of Parma. It is a rather big company with a large line of dairy products.

"There is however another problem with the name Soialat. Italian law forbids use of the terms 'soia' and 'latte' together. A company cannot promote its product as 'Latte di Soia.' Therefore the name Soialat probably cannot be used legally. A short time ago a lawsuit concluded that it was legal to call a soymilk product 'Soia Milk,' but there is still big chaos in Italy over the naming of soymilk products."

Note: This is the earliest document seen (May 1999) showing Parmalat as a manufacturer of soymilk.

4974. **Product Name:** Soy Beverages.
Manufacturer's Name: Prestige Foods Ltd.
Manufacturer's Address: Main Office: 30, Jaora Compound, M.Y.H. Rd., Indore 450021, MP, India.
Date of Introduction: 1986.
New Product–Documentation: Soya Bluebook. 1986. p. 103. Note: In Soya Bluebook. 1982. p. 78. Prestige Foods Private Ltd. is listed as a "Soy Dairy." Address: 32, 11-C, New Palasia, Indore 452 001, MP, India. Other location: Dewas, MP.

4975. **Product Name:** Yeo's (Soy Beverage).
Manufacturer's Name: PT Salim Graha Food & Beverage Industry. Affiliate of Yeo Hiap Seng, Singapore.
Manufacturer's Address: Jalan Raya Bekasi, Jawa Barat (West Java), Indonesia.
Date of Introduction: 1986.
New Product–Documentation: Soya Bluebook. 1986. p. 103. Soya Bluebook Plus. 1997. p. 150. PT Salim Graha, a maker of soy beverages, is located at Jalan Raya Bekasi, Km. 27, Pondok Ungu, P.O. Box 140 Bekasi, Bekasi 17132, West Java, Indonesia. Phone: +62 21 511258. Fax: 21 971929. Contact: Ario Mahendra, Marketing Director.

4976. Shinoda, S.; Yoshida, T. 1986. [Phytic acid content of soy-milks and fermented soybean]. *Tachikawa Tandai Kiyo* 19:71-73. (Chem. Abst. 105:151795). [Jap]*

4977. **Product Name:** Soymilk.
Manufacturer's Name: Soy Foods Australia P/L.
Manufacturer's Address: Australia.
Date of Introduction: 1986.
Wt/Vol., Packaging, Price: Plastic bottle.
New Product–Documentation: Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. This company has just spent $100,000 on basic soymilk equipment. They plan to sell fresh soymilk to all Coles supermarkets in New South Wales in plastic bottles.

4978. **Product Name:** Soya Drink [Honey Sweetened Chocolate, Honey Sweetened Vanilla/Almond, Sweetened

Plain, Unsweetened Plain].
Foreign Name: Boisson de Soya (Sucré au Miel Chocolat, Sucré au Miel Vanille/Amande, Sucré, Non Secré).
Manufacturer's Name: Sunrise Market Ltd.
Manufacturer's Address: 729 Powell St., Vancouver, BC, V6A 1H5, Canada. Phone: 604-254-0701.
Date of Introduction: 1986.
Ingredients: Vanilla/Almond: Soy milk (water, organically grown soya beans), honey, barley malt, natural flavours, locust bean gum, carrageenan, sea salt.
Wt/Vol., Packaging, Price: 1 litre carton.
How Stored: Refrigerated.
New Product–Documentation: Talk with Michael Weiner. 1987. Dec. 16. Peter Joe of Sunrise now makes soymilk for the Chinese market and flavored soymilks for the supermarkets. 4 Labels. 1987. Vanilla/Almond: Brown, light green, and red on white. Illustration of a sun rising over the fields plus flower motif. "A good source of protein." Note the use of the term "soy milk" or "lait de soja" in the bi-lingual ingredient listing! Form filled out by Peter Joe. 1988. May 20. Gives date as 1986.

4979. **Product Name:** Promo (Infant Food Based on Soy Protein Isolate).
Manufacturer's Name: Tata Oil Mills Co. Ltd.
Manufacturer's Address: Bombay House, Homi Mody Street, Bombay 400-023, India.
Date of Introduction: 1986.
New Product–Documentation: Soya Bluebook. 1986. p. 111.

4980. **Product Name:** [Soymilk].
Foreign Name: Soja–Getraenk.
Manufacturer's Name: Tofuhaus Tiefenthal.
Manufacturer's Address: Hauptstrasse, D-6719 Tiefenthal, West Germany. Phone: 06351-43718.
Date of Introduction: 1986.
Ingredients: Soybeans, water.
Wt/Vol., Packaging, Price: 380 ml glass.
How Stored: Refrigerated.
New Product–Documentation: Form filled out by Albert Hess. 1988. Jan. 25. Leaflet. 1988. Sterilized for long shelf like. They make 300 liters/month. Form filled out by Albert Hess. 1988. Dec. 1. This product was introduced in April 1984. Label. 1988, received. 2.5 by 3.5 inches. Black on white.

4981. Toho Bussan Kaisha, Ltd. 1986. Company profile. Nihonseimei Shimbashi Building 3 floor, Shimbashi 1-18-16, Minato-ku, Tokyo 105, Japan. 13 p. Manufacturer's catalog. [Eng]
• ***Summary:*** Established in 1947, this trading company employed 147 people in Jan. 1986. One affiliate was Tokyo Tofu Co. Ltd., Chiba, Japan. The soybean and oilseeds dept. trades soybeans and sells a tofu manufacturing plant and its related materials (dried tofu powder). Note: The latter is probably spray-dried soymilk for making tofu. Address: Tokyo, Japan.

4982. **Product Name:** Chocolate Sunsoy Dessert (Soymilk Pudding).
Manufacturer's Name: Vamo Foods USA, Inc. (Importer). Made in Belgium by Alpro.
Manufacturer's Address: 20 Shawnee Dr., Watchung, NJ 07060.
Date of Introduction: 1986.
Ingredients: Incl. soymilk, chocolate.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable.
New Product–Documentation: Golbitz. 1987. Soya Newsletter. March/April. p. 8. Sales of Sunsoy were strong during 1986. At $1.79 to $1.99 a liter, the product is still the least costly product per ounce of all the imports. Friedman, Martin. 1987. April 6. Spot in Adweek East. Label reads: "Non-dairy soy dessert. Ready to serve. Europe's best-selling non-dairy chocolate dessert." Available in Europe since 1982.

4983. **Product Name:** Yeo's Soy Beverage.
Manufacturer's Name: Yeo Hiap Seng (Malaysia) Bhd. Affiliate of Yeo Hiap Seng, Petaling Jaya.
Manufacturer's Address: Pandan, Johor Bahru, P.O. Box 115, Johor Bahru, Malaysia.
Date of Introduction: 1986.
New Product–Documentation: Soya Bluebook. 1986. p. 103.

4984. **Product Name:** Yeo's Soy Beverage.
Manufacturer's Name: Yeo Hiap Seng (Sarawak) Sdn. Bhd. Affiliate of Yeo Hiap Seng, Petaling Jaya.
Manufacturer's Address: P.O. Box 238, Kuching, Sarawak, Malaysia.
Date of Introduction: 1986.
New Product–Documentation: Soya Bluebook. 1986. p. 103.

4985. Zemel, M.B.; Shelef, L.A. 1986. Calcium fortified soy milk. *European Patent Application* 195,167 A2. *
• ***Summary:*** The soymilk is calcium fortified by adding a polyphosphate and a bioavailable calcium source. The polyphosphate acts as a chelating agent for the calcium source, while promoting microbial stability of the soymilk. The polyphosphate enables the calcium to be added in amounts such that the resulting products has calcium levels equal to or greater than those found in cow's milk. Address: Wayne State Univ.

4986. Ang, H.G.; Kwik, W.L.; Lee, C.K.; Theng, C.Y. 1986. Ultrafiltration studies of foods. I. The removal of undesirable components in soymilk and the effects on the quality of the spray-dried powder. *Food Chemistry* 20(3):183-99. [25 ref]
• ***Summary:*** "Reverse osmosis (RO) and ultrafiltration (UF) are relatively new hydraulic pressure-operated membrane techniques in the food industry, particularly in soymilk processing. Their use as a concentration step in industrial unit operations is fast becoming an attractive alternative to conventional evaporation processes as it is a non-thermal treatment, as well as one with mild operating conditions."

Ultrafiltration (UF) can be used to remove low molecular weight antinutritional factors, especially the oligosaccharides, raffinose and stachyose (which cause flatulence), and phytic acid. Using a membrane with a 20,000 molecular weight cut-off, at 60% water removal, greater than 80% of each oligosaccharide was removed, but only 50% of the phytic acid (perhaps because phytic acid exists as phytates or is associated with native protein, and thus complete or near complete removal would be difficult to achieve even using multiple stage UF). 50% of the acid was detected in the soybean soak water. Thus the actual amount of phytic acid present in the soymilk was about 1/3 that originally present in the soybean.

In spray drying the UF soymilk concentrates, the nitrogen solubility index (NSI) of the spray dried powder improved with the percentage of water removed during UF, and also with the addition of sucrose to the concentrate before spray drying. There was hardly any detectable difference in taste and flavor. Address: Chemistry Dep., National Univ. of Singapore, Kent Ridge, Singapore 0511.

4988. Chang, Wonona W.; Chang, Irving B.; Kutscher, Austin H.; Kutscher, Lillian G. 1986. Chinese dessert, dim sum & snack cookbook. New York, NY: Sterling Publishing Co., Inc. 160 p. Illust. (color photos). Index. 26 cm.
• ***Summary:*** "Many of the dessert recipes in this book have been prized as family treasures for generations and are authentic; others have been adapted to the Chinese cuisine by the addition of oriental ingredients..." (p. 7).

The "Guide to ingredients" has interesting entries for "Bean curd or tofu (*dow foo*)" and "Bean filling, sweet (*Cantonese: dow sa*) (*Mandarin: do sa*)" ("Color: red {kidney beans [azuki]}, green {mung beans}. Available form: canned. When available: most commonly at Chinese New Year. Where purchased: Chinese bakery or grocery," p. 13), and for "Hoisin sauce (Red seasoning sauce) (*hoy sin joing*) (*hai hsien jiang*)" (p. 16).

Desserts: Doughnut slices with Chinese flavors (with "sweet bean paste" [probably *an*], made with azuki beans, p. 33). Glutinous (sweet) rice cake (with "1 lb. black bean paste (dow sa)," p. 33). Fried bean paste pancake (with "4 oz. bean paste," p. 40). Lychee peach tofu cooler (with "8 oz. tofu," p. 56). Soybean milk (homemade recipe with "1 cup soybeans," p. 58). Red bean paste ice cream (with "1 cup sweetened red bean paste" [azuki], p. 64). Lychee tofu custard (with "8 oz. tofu," p. 91). Strawberry tofu pudding (with "6 oz. chilled tofu," p. 91). Peach tofu custard (with "8 oz. tofu," p. 93). Mandarin oranges with tofu (with "6 oz. Chinese-style tofu," p. 93). Ginger sweet red bean dessert / spread (with "½ cup sweet bean paste" [azuki], p. 106). Orange tofu icing (with "12 oz. tofu," p. 107). Sweet red bean dessert sauce (with "½ cup sweetened red bean paste" [azuki], p. 110).

Dim sum and snacks: New Year dumplings with sweet black bean paste (with "½ cup sweet black bean paste (*dow sa*)," p. 113). Bean paste sesame balls (with "sweet black bean paste," p. 118). Dow sa won ton ("Prepare the same as Fried Won Tons {p. 139} except use *dow sa* (black bean paste) as a filling... Dow sa is available at Chinese bakery shops, p. 140).

• ***Summary:*** An article titled *La plante qui donne du lait* [The plant that gives milk] appears in the section on *Proses Diverses* [Various writings in prose] on pages 443-47. At the end is written "16 décembre 1945."

An article titled "Le Soya" [The soybean] appears in the same section on pages 447-451. At the end is written "[P. 24 janvier 1946] meaning that it appeared in the French magazine *Le Figaro* on 24 Jan. 1946.

Note: Paul Claudel lived 1868-1955. Address: Académie française, France.

4990. Committee for Soybean (The). 1986. The Philippines recommends for soybeans. Los Baños, Laguna, Philippines: Philippine Council for Agriculture and Resources Research and Development. 111 p. Technical Bulletin Series No. 14A. Revision of 1976 edition. [51 ref. Eng]
• ***Summary:*** Written by The Soybean Committee (Dr. Florendo C. Quebral, a plant pathologist at UPLB, chairman), this work focuses on recent technologies for soybean production. A foreword by Ramon V. Valmayor, Executive Director of PCARRD, notes: "The importance of soybean has been stressed continuously. To encourage its widespread production, the Ministry of Agriculture and Food (MAF) launched the Soybean Production Program in Mindanao. Likewise, PCARRD initiated and coordinated the implementation of Soybean Pilot Production Project in 1983 to demonstrate the feasibility of growing soybean profitably in Luzon."

Contents: Foreword. Acknowledgments. The Soybean Committee. Introduction. Production management. Marketing. Soybean cropping system. Crop protection. Seed production. Processing and utilization: Raw materials for industry, soybean as food. References. Appendixes. List of tables. Lists of figures.

Table 1 shows soybean production in the Philippines from 1974 to 1985. Area in hectares grew from 2,780 ha in 1974 to a peak of 11,250 ha in 1976 and was 8,479 ha in 1985. Production grew from 2,214 tonnes in 1974 to a peak of 11,466 tonnes in 1982 and was 8,430 tonnes in 1985. Yield grew from 0.80 tonnes/ha in 1974 to a peak of 1.05 in 1982 and was 0.99 in 1985. Local production does not begin to supply local demand. In 1984 380,691 tonnes of soybeans and products were imported. Most of the imports were soybean meal.

Table 2 shows imports and exports of tausi (salted, fermented soybeans), oil cake (huge imports), soy sauce (large exports), soy oil (refined; large imports), soybean paste, taho (soymilk curds, often sold topped with a little brown sugar), bean cheese (tokwa [tofu]), hypoallergenic soy food, crude soy oil. Page 50 shows all current uses of soybeans in the Philippines, and p. 51 gives the nutritional composition of Philippine soyfoods. Note the terms Geerligs cheese (Tahu; 92.7% moisture and 2.9% protein), Soybean curd (Tahuri; 61.3% moisture and 11.4% protein), Fermented soybean cheese (Tausi; 51.5% moisture and 13.8% protein), and Soybean cheese (Tokwa; 77.0% moisture and 12.9% protein).

Recipes are given for preparing soy sauce (p. 53), miso, tahu (soymilk curds, p. 59), tokwa (soybean cheese, or firm tofu), tao-si (salted, fermented soybeans [fermented black soybeans]), soybean milk (p. 61), and soybean coffee. Descriptions are given for sufu (p. 62), tempeh, soy flour and grits, soy protein concentrates and isolates.

Note: In the section on nutritional composition, two words are incorrectly defined. The term "Tahuri" actually refers to tofu in brine, and "tausi" refers to salted, fermented soybeans.

Appendix E (p. 90+) contains recipes for green vegetable soybeans, whole dry soybeans, soy sprouts Address: PCARR.

4991. Elliot, Rose. 1986. The vegetarian mother and baby book. New York, NY: Pantheon Books. vii + 261 p. Index. 24 cm.

• ***Summary:*** A complete guide to nutrition, health, and diet during pregnancy and after–with easy recipes for mother and baby to enjoy together. The author "is one of England's most popular cookbook writers, a radio and TV commentator, and a columnist. A vegetarian since the age of three, she is also the author of *Vegetarian Dishes from Around the World* and *The Festive Vegetarian.*" She has also raised three children according to the principles described in this book. Contents: Part I: A vegetarian diet for healthy mothers and babies. Part II: Recipes. Appendix. A. Summary of Nutrients: Where they are and what they do. B. How it all adds up: Analysis of one day's vegetarian menus. C. Recommended daily dietary allowances for women.

In Part I, the author recommends that if soy milk is used, it should be fortified with riboflavin (vitamin B-2), and calcium. Regular soymilk provides a little (0.5 mg/cup) of zinc. In Part II, soy-related recipes include: Miso pick-me-up (p. 99; with watercress). Tofu dressing (p. 110). Soybean salad (p. 127). Curried soybean and apple spread (p. 137). Soy sausages (p. 159; made with cooked whole soybeans). Soy and walnut loaf (p. 160; made with cooked whole soybeans). Mushroom and tofu quiche (p. 175). Tofu fritters with lemon (p. 186). Creamy tofu and almond topping (p. 203; for use like heavy cream with desserts). Whipped tofu topping (p. 204). Tofu ice cream (p. 218). Vegan yogurt (p. 219; made with soy milk; fermented).

In the Sept/Oct. 1994 issue of *Vegetarian Journal,* Reed Mangels, PhD, RD, an expert on vegetarian nutrition, says that this is her favorite book on pregnancy for vegetarian women. Address: England.

4992. Goddard, Susan. 1986. Focus on soya. Hove, E. Sussex, England: Wayland (Publishers) Ltd. 48 p. Illust. Index. 21 x 22 cm. Series: Focus on Resources. [3 ref]

• ***Summary:*** This is a brief introduction to the subject with many color photos. Contents: 1. The importance of soya. 2. The beginnings of soya. 3. Where soya beans are grown. 4. The beginnings of soya processing. 5. The soya plant. 6. Planting. 7. Harvesting. 8. Threshing and storage. 9. At the processing plant. 10. Extracting and refining the oil. 11. Making margarine. 12. Animal feed. 13. Soya protein products. 14. Textured vegetable protein. 15. Other soya products. 16. The nutritional importance of soya. 18. Soya as a world commodity. 19. The future. Facts and figures. Glossary. Books to read. Sources of further information.

Numerous large color photos show commercial soya products. Page 23: Granny Ann High Fibre Cooked Soya-Bran, Bilsons Fibrefit, Nature's Way Soya Flour. 4993. Hesseltine, C.W. 1986. Future of fermented foods. *Mycologia Memoir* No. 11. p. 303-16. Chap. 17. (C.W. Hesseltine and Hwa L. Wang, eds. Indigenous Fermented Food of Non-Western Origin. Berlin & Stuttgart: J. Cramer.) Previously published in 1981 in USDA Miscellaneous Publication FL-MS-333. [11 ref]
• ***Summary:*** Contents: Introduction. Positive factors for increased use of fermented foods. Trends in production of fermented foods. Factors that may effect the wider use of fermented foods in the West. Literature cited. Address: USDA/NRRC, 1815 N. University St., Peoria, Illinois 61604.

4994. Hoshijo, Kathy. 1986. The art of dieting without dieting! Recipe and guidebook. The Self-Sufficiency Association, 2525 South King St., Honolulu, Hawaii 96826. Or: P.O. Box 1122, Glendale, California 91209. xiv + 729 p. Illust. Index. 24 cm.
• ***Summary:*** A whopper of a cookbook, with 300 easy-to-prepare lacto-vegetarian recipes (no eggs) from the star of the PBS television series "Kathy's Kitchen." Kathy has 6 healthy children (see color photo on rear cover) and 5 years of experience on television teaching Americans how to eat healthy foods. Each recipe contains a detailed (full-page!) nutritional analysis.

This book contains a wealth of recipes using soyfoods. For example, the index lists 57 recipes for tofu and tofu mayonnaise, 13 recipes for tempeh, 9 recipes for yuba, 6 recipes for miso, and 4 recipes for soybeans (including soymilk). One section titled "Soyfriends" (p. 63) explains: "In eliminating meat from my diet, one food that has become a real friend in the kitchen is soybeans and by-products made from soybeans. From a nutritional standpoint, soybeans are a good nutritional replacement for meat as they are the only legume which contains all essential amino acids... Soybeans by themselves have a Net Protein Utilization about equal to that of beef and chicken." Address: Honolulu, Hawaii; and Glendale, California.

4995. Hunt, Janet. 1986. The compassionate gourmet: The best of international vegan cuisine. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 160 p. Illust. Index. 22 cm.
• ***Summary:*** An excellent vegan cookbook, written for animal lovers. Soy-related recipes include: Avocado tofu pâté (p. 31). Celery miso pâté (p. 36). French bean salad with tofu dressing (p. 66). Tofu curry (Thailand; p. 74). Tofu and vegetable pakora (p. 86). Tofu layered casserole (p. 96). Tomato flan with tofu (p. 104). Tofu Lemon flan (p. 137). Yogurt dessert (made with cultured soya milk, p. 140). Rhubarb fool (dessert in soya milk, p. 141). Maple pancakes (with soya flour, p. 149). Walnut tofu balls (p. 156).

At least one recipe uses Holbrook's Worcester Sauce–a Worcestershire-type sauce without animal products. Many recipes call for soy sauce or soya milk, and some for canned soy or nut "sausage." Page 9 lists a number of special ingredients including Direct Foods Protoveg (soya "meat"), Infinity Foods (distributors [in Brighton, at Sussex University]) Soya mayonnaise, Lotus Foods TVP (soya "meats" in a varieties of forms and flavors), Plamil concentrated soya milk (use diluted as a milk, undiluted as a cream), and Tomor Margarine (the author's favorite of the many vegan margarines now available in the UK). In all recipes, each ingredient is listed twice in side-by-side columns: once in its Imperial (metric) form and once in its American form, e.g. 385 ml soya milk, 1 1/3 cup soya milk. A number of recipes call for the use of alcohol (whiskey, brandy, etc.). The author has written at least 14 other books on vegetarian or wholefood cookery. Address: England.

4996. Island Tofu Works. 1986. Market Research & Product Development Specialists for the Soyfoods and Health Foods Industry (Leaflet). Bar Harbor, Maine. 1 p. Front and back. 28 cm.
• ***Summary:*** "Island Tofu Works was originally founded in 1980 as a manufacturer of tofu and other related soyfoods products. Its success in product development and production, and the rapidly growing and changing soyfoods market, led to the company's decision to take its hands-on experience, and combine it with in-depth and ongoing market and product research to become *a market research and food product development company that specializes in soyfoods.*

"Our company's product development experience includes soymilks, spray-dried soymilk powders, tofu or soy-based desserts, yogurts, ice creams, meat and cheese analogs, flavored tofu products, tofu dips and dressings." Address: 318 Main St., Bar Harbor, Maine 04609. Phone: (207) 288-4969.

4997. Kim, Kil-Hwan. 1986. [Soymilk]. Seoul, South Korea: American Soybean Assoc. 67 p. [15 ref. Kor]
• ***Summary:*** The full-color cover of this book shows the labels of more than 20 soymilk cartons sold in Korea. Address: Head, Food Science & Technology Lab., Korea Food Research Inst., P.O. Box 131, Cheongryang, Seoul, South Korea.

4998. Leneman, Leah. 1986. The international tofu cookery

book. London and New York: Routledge & Kegan Paul. 122 p. Illust. by Megan Dickinson. Index. 20 cm.
• ***Summary:*** Contents: Introduction. Types of tofu readily available: Morinaga silken tofu, Japanese instant silken tofu ("House" brand, soya milk powder and a coagulant), medium tofu, Chinese tofu, converted Japanese tofu, firm tofu (and address of 4 makers of vacuum-packed firm tofu in UK–Cauldron Foods, The Regular Tofu Co., Paul's Tofu {organic}, and Bean Machine). More unusual forms of tofu: Fermented tofu, dried-frozen tofu, deep-fried tofu, bean curd sticks or sheets [yuba]. General notes: Quantities, tofu mayonnaise, soya yogurt, American measurements. Making tofu at home. Table of metric equivalents. British- and American-style dishes (More than 100 recipes). Mexican-style dishes. The Mediterranean. Asia. Desserts.

A discussion of the author and her works appears on the half-title page at the front of the book. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

4999. Ludlow, Rose Budd. 1986. Total health and food power: Principles of healthful living and outstanding vegetarian recipes from Glendale Adventist Medical Center. Santa Barbara, California: Woodbridge Press. 239 p. Illust. Recipe index. 23 cm.
• ***Summary:*** Section 1 of this book consists of 18 chapters on Seventh-day Adventist principles of healthful living. Part 2 contains more than 200 vegetarian recipes from the Glendale Adventist Health and Medical Center. Soy-related recipes include: Soybean waffles (p. 118). Corn chowder with imitation Baco-Bits (p. 127). Lemon juice-soy mayonnaise (with soy milk powder, p. 149). Gado-gado salad (with fried tofu, p. 165). Tofu salad deluxe (p. 171). Chinese-style sautéed tofu (p. 185). Fried tofu patties with eggs and vegetables (p. 192). Leafy Chinese tofu (p. 196). Soy-cheese patties (with tofu, p. 206). Soy-cheese scallops (p. 207). Tofu balls or cutlets (p. 210). Tofu balls with tartar sauce (p. 210). Tofu with mushroom sauce (p. 211). Tofu and brown rice casserole (p. 212).

Many recipes also use meatlike products made by Seventh-day Adventist food companies; a list is given on p. 174. These include Soyameat (p. 162), Meatless Chicken (p. 167), Nuteena (p. 200, 213), Vege-Burger (p. 211, 214). Address: Consulting Dietitian, Formerly, Director of Dietary Service, Glendale Adventist Medical Center, Glendale, California.

5000. Madison College Alumni Association. 1986. A pictorial history of Madison College, a school of divine origin 1904-1964. Madison, Tennessee. viii + 269 p. Illust. 28 cm.
• ***Summary:*** Several articles about Madison from other publications (e.g. Hastings 1938; Holman 1941) are reprinted in this book. Pages 42 gives a history of "The Madison Food Factory." There are photos of the outside and inside of the building on pages 43 and 46. "In a letter dated March 10, 1907, directed to the directors of the Nashville Sanitarium and Southern Union Conference Committee, Ellen G. White wrote: 'It would be a great advantage to the school in Madison if a food factory were put into operation in connection with the work of the school.'

"About this same year a large flakefood factory was built at Edgefield, near what is now known as Edenwold. The people of the South had not yet become conditioned to the eating of health foods; so the factory became a white elephant on the hands of the owners. It passed from hand to hand without success. [One of the operators was Jethro Kloss.] After much discussion on the part of the school faculty a decision was made to purchase the plant, dismantle it and bring it to Madison. It was opened in 1918. The plan was to begin in a small way and to educate the workers, step by step, in the new industry. Mr. and Mrs. Andrew Wheeler were in charge of the work, under the direction of Mrs. Druillard, who had had years of experience in other institutions.

"The purpose of the Food Factory was to produce foods that would be suitable substitutes for meat in the dietary of the vegetarian and others whose health required the elimination of animal products. Consequently most of the foods manufactured were rich in protein. The foods were made from such products as soy beans, peanuts, and gluten. Some of the trade names developed were Zoyburger, Yum, Mock Chicken, Nu-Steak, Not-Meat, Vigoroast, and Ches-O-Soy. A cereal substitute for coffee was Zoy-Koff.

"Some of the men who played an important part in the later growth and development of the food factory were Joe Hansen, C.H. Dye, T.A. McFarland, Captain Calvin Bush, Edwin Bisalski, George Norris, Leslie Brooks, John Brownlee, H.M. Mathews and Frank Holland. Of this group, H.M. Mathews and John Brownlee played a very important part in experimentation and development of the foods. Dr. P.A. Webber and Ulma Doyle Register did outstanding work in research to develop better texture, more palatability, and greater nutritional value. Mr. E.M. Bisalski was outstanding in the experimentation and development of the foods. During his term as manager of the Factory, great expansion took place. A practically new plant, with one section four stories in height was constructed in 1941. Car loads of products were shipped to jobbers in Chicago, Boston, New York, and other large distributing centers until Madison products were found in all states and Canada.

"In August of 1964 Madison Foods was sold to Worthington Foods, Inc. Worthington, Ohio. The same products that had been produced in the past were continued to be available under the Madison label and brand names used in the past. Mr. K.P. Stepanske was appointed manager. The food factory was operated on the Madison Campus until 1972 when it was moved to Worthington, Ohio (p. 42).

Elder Julius Gilbert White, a nationally-known health

lecturer, came to Madison and delivered a 10-day series of lectures on health, with the use of illustrated slides. This led to the development of many health institutes and short courses at Madison from 1932-1940 (p. 44).

"Vegetarian Cafeterias: Another type of health work carried on by the Madison school was the operation of a treatment room and vegetarian cafeteria in Nashville. Workers drove back and forth each day from the school to Nashville. It was started in rented quarters in 1917. In 1922, because of advancing rents, a new building was constructed on a permanent location at 151 Sixth Ave. North. A successful work continued for over a decade. Advancing trend of business in the center of the city made the location undesirable and the business closed out and the building was sold. The Birmingham [Alabama] cafeteria was started in 1920. An eighty-seven acre farm purchased as a rural base supplied vegetables and farm produce.

"In 1920 the Louisville treatment rooms were making good progress and opened a cafeteria.

"In December of 1920 a group of workers opened a city cafeteria in the cities of Knoxville, Memphis, and Chattanooga. These were among the early beginnings of this type of work in our denomination." A photo shows the Vegetarian Cafeteria and Treatment Rooms, 151 6th Ave., Nashville, Tennessee (p. 45).

There are photos of each graduating class. Pages 126-173 are biographical sketches, usually with a photo, of Madison "Personalities," including E.A. Sutherland, Bessie DeGraw Sutherland, Percy Magan, Nellie Druillard, Frances L. Dittes (1891-1979) and her sister Florence, Dr. Ulma Doyle Register, Dorothy Mathews, William Cruzen Sandborn, and Mable H. Towery.

A sample student menu is given (p. 265). Breakfast includes "Fried Soyburger," and dinner includes "Soyburger Patties." "At the noon and evening meals toasted Soyburger sandwiches, chocolate soy milk, and soy buttermilk are always available." Cow's milk is also available at all 3 meals. Address: Madison, Tennessee.

Soybean in Tropical and Subtropical Cropping Systems. Shanhua, Taiwan: Asian Vegetable Research and Development Center. xv + 471 p. See p. 421-25.
• ***Summary:*** This country was formerly called Upper Volta. Soybeans were introduced for experimental studies in 1958 by IRHO in an attempt to diversify traditional cropping patterns. Experiments were established at two research stations–one in the central part of the country (Saria, rainfall 800 mm) and one in the southwest (Niangoloko, rainfall 1,200 mm). In the 1970s, after suitable varieties had been identified, and following the successful extension of improved groundnut cultivars to small farmers in the vicinity of research stations, a similar attempt was made to popularize soybean.

"The crop was gradually accepted by small landholders. 'Nere' seeds (*Parkia biglobosa*) are used for making a fermented condiment known as 'soumbala.' The soybean cultivars that were distributed (black seed coats) looked much like nere, and could be prepared in the same way. This culinary use has become widespread, and some families prefer soybean to nere. The black seed coat is no longer a reason for preference; cream-colored seeds are equally acceptable."

Note: This is the earliest English-language document seen (Jan. 2012) that mentions "soumbala" (also called soumbara or dawadawa), a condiment made from soybeans resembling natto.

Constraints: "In 1975, the Regional Development Organization (RDO) in the eastern part of the country attempted to promote soybean. The RDO's intention was to train the farmers and then purchase their crops.

"A total of 4.5 tonnes of seed were distributed in 1976 and 25 tonnes in 1977. The RDO, however, did not concern itself with the sale of the product, and in 1977 found that the farmers had produced about 200 tonnes, most of which RDO could not purchase. The experiment was, of course, a

disaster, and the following year soybean production dropped dramatically.

"Farmers have no particular objections to soybean, since it presents no basic agronomic problems, but marketing is a major problem."

Future Development: "Recent events provide some hope for soybean production. A pilot soybean milk manufacturing unit with a capacity of 200 liters/hour should be operational by 1984. A factory with much greater capacity will be built if the first plant is successful.

"In addition, a hydroponic center is now operational. From 1984 onwards it will require 250 tonnes of soybean for use as fish food." Address: Institut de Recherche pour les Huiles et Oleagineux (IRHO), BP 1345 Ouagadougou, Burkina Faso.

5005. Rachim, Abdul. 1986. Indonesia: Notes on the soybean food industry under producers' co-operatives in Indonesia. *CGPRT* No. 4. p. 244-54. Includes 7 tables and figures.
• ***Summary:*** Contents: Background. Indonesian soybean foods. Fermented products: Tempe, oncom, tauco, kecap. Non-fermented products: Tofu, soymilk. Function and role of Kopti (and BULOG). Traditional processing industry: Current situation of small-scale home industry, further studies on the food industry / marketing system.

The Food Balance Sheets of the Central Bureau of Statistics show that 90% of Indonesia's soybeans are used for food. Most of the human consumption is in the form of a variety of popular processed foods: tempe, tahu (tofu), tauco, and a number of other less popular foods: soybean sprouts (tauge), sere in Bali, yuba, soybean milk, fried soybeans (eaten as a snack), beans boiled in the pod (also a snack), and the beans cooked as a vegetable or as an ingredient in soups. Only one factory (Sari Hasuda, in Yogyakarta) produces soybean milk. It is enriched with nonfat dried milk, vitamins, and minerals.

To coordinate and improve the economic viability of the small tofu and tempeh producers, a cooperative system, called Kopti (*Koperasi Produsen Tempe dan Tahu Indonesia;* Indonesian Tempe / Tofu Processors' Co-operative) was founded in 1979. The main function of Kopti is to procure and distribute soybeans to its members, the number of which has increased from 25 in 1980 to 286 in May 1985. It handles about 407,160 tons/year. The purchase price of soybeans is as follows (Rupiah/kg): From USA 415, from China 425, from Indonesian farmers 475-80. Certificate [certified] seeds cost 550-75.

Tofu, tempe, kecap, tauco and oncom processing is primarily done in small factories. 3 studies have been made on the size of these factories and the quantities they process: as part of the 1974 Industrial Census of the Central Bureau of Statistics (CBS); by Winarno, et al., in 1976; and by the study team on Soybean Commodity System (SCS) in the Garut area of West Java in 1984. The findings of these 3 studies are presented in Table 2.

"We should be cautious in comparing their results, however, because of biases in the collection of the information. The CBS study, for instance, was part of an industrial census, which divided processors into two categories: small-scale industries (5-19 labourers), and home factories (1-4 labourers, some of whom may be family members). However, there may also be wide variations in the industry in different parts of the country.

"Despite these limitations, it seems that the volume of soybean processed by each unit has increased appreciably, probably reflecting a favorable growth of the industry. Yet the number of labourers per unit has remained small, and is probably diminishing. This may be because of the use of mechanical crushers or dehullers for both tempe and tofu productions." Address: Research Asst., ESCAP CGPRT Centre, Bogor, Indonesia.

5006. Reddy, N.R.; Pierson, Merle D.; Salunkhe, D.K. eds. 1986. Legume-based fermented foods. Boca Raton, Florida: CRC Press. viii + 254 p. Illust. Index. 26 cm. [585 ref]
• ***Summary:*** An overview with information on nutrition and processing of fermented soyfoods. Contents: 1. Introduction. 2. Soy sauce. 3. Miso. 4. Sufu. 5. Natto. 6. Tempe. 7. Fermented soybean milk and other fermented legume milk products. 8. Oncom (fermented peanut press cake). 9. Idli. 10. Dhokla and Khaman. 11. Dawadawa. 12. Papads. 13. Other legume-based fermented foods (Inyu, kecap, kenima, meitauza, Philippine tao-si). 14. Future of legume-based fermented foods. Address: 1-2. Dep. of Food Science & Technol., Virginia Polytechnic Inst. and State Univ., Blacksburg, VA; 3. Vice-Chancellor, Mahatma Phule Agricultural Univ., Rahuri, Maharashtra State, India.

5007. Reisner, Marc. 1986. Cadillac desert: The American west and its disappearing water. New York, NY: Viking. 582 p. 24 cm. [543* ref]
• ***Summary:*** This carefully researched and superbly written history of water in the American West focuses on the U.S. Bureau of Reclamation, the Army Corps of Engineers, and the remarkable but illusory success they had in building the largest dams in the world, reclaiming the western deserts, and transforming them into gardens for the benefit of large landholders who received publicly subsidized low-cost water. The pioneer was John Wesley Powell, the most illustrious early reclamationist in America who got things moving in the 1860s. Western irrigation began in Colorado in the 1870s, sponsored by the publisher of the New York *Herald Tribune,* Horace Greeley whose motto was "Go West, young man." In 1902 congress passed the Reclamation Act, which created the Reclamation Service, whose name was changed in 1923 to the Bureau of Reclamation. The Bureau's era of great growth was during the 1930s and the Great Depression, with Franklin D. Roosevelt as its strongest

supporter. Projects included the Central Valley project in California ("the most mind-boggling public works project on five continents"), great dams such as Hoover, Shasta, Grand Coulee, Bonneville, and Teton.

Yet the West's water shortage has only worsened. "Cadillac Desert offers a bleak portrait of the future the West faces: over the next 50 years, millions of acres of America's most productive farmland will be abandoned due to the exhaustion of groundwater reserves; within centuries, perhaps within decades, hundreds of reservoirs will silt up, turning to mud and renewing the danger of floods; more and more soil and irrigated water is being contaminated by salt– the downfall of nearly every previous desert civilization. The natural resources of the West, sparse to begin with, have been stretched, exploited, and depleted. How much longer can the gold-plated civilization we have be sustained?" As writer Wallace Stegner stated: In the pages of this book "is visible the shape of a future we have stubbornly refused to foresee."

California agriculture was transformed with the invention, shortly after World War I, of the centrifugal pump. Now they could draw hundreds of gallons of water a minute out of the valley's shallow aquifer. The water table dropped precipitously and the industry was rescued from certain self destruction in 1933 by the Central Valley Project Act. Subsidized water was offered to any farmer and wife owning up to 320 acres of land. In the San Joaquin Valley of California pumping now exceeds natural replenishment by more than 500 billion gallons per year and there are no regulations to limit the amount pumped. In California agriculture uses 85% of all the water in this most populous and industrialized of states.

A section at the end titled notes and bibliography (p. 519-64) contains a chapter-by-chapter personal evaluation of the author's key sources, followed by a listing of the major books, then articles consulted, and the most important people interviewed.

This book was nominated for the National Book Critics Circle Award in 1986. The former staff writer for the National Resources Defense Council lives in San Francisco. An article based on this book and on a speech presented at the Aquavision Conference in Las Vegas was published as "The Next Water Wars: Cities Versus Agriculture" in *Issues in Science and Technology.* The book and article both note: "In California, growing grass and hay for cows and sheep uses as much water as that consumed by all 27 million in the state." "One seventh of the water in California goes to irrigated pasture, which in turn provides about $100 million of income, which is less than one 5,000th of the total state revenues." Thus we are using a lot of water to create relatively little revenue. A portrait photo shows Marc Reisner.

Note: Cadillac Desert applies only that part of California south of San Francisco. North of San Francisco there is much more water and much less agriculture. Address: San Francisco, California.

5008. Schaefer, Mary Jane. 1986. The phytic acid and trace mineral content of soybeans and their effects on tofu texture. PhD thesis, Iowa State University. 145 p. Page 4366 in volume 47/11-B of Dissertation Abstracts International. [187 ref]

• ***Summary:*** Dissertation supervisor was J.A. Love. Only 39% of the iron in soybeans was recovered in soymilk. Of the copper in soymilk, 37% was lost in the whey during tofu making. The components of soybeans that were found to be the best indicators of tofu texture were iron and phytic acid, which were related to tofu fracturability (r=0.73) and elasticity (r=0.82), respectively. In finished tofu, lipid was best related to tofu cohesiveness (r=0.92). Thus a low-fat tofu would expect to break easily. Address: Iowa State Univ., Ames, Iowa. Presently: Dep. of Human Nutrition, Univ. of Missouri, 217 Gwynn Hall, Columbia, MO 65211. Phone: 314-882-4288.

5009. Spivack, Ellen Sue. 1986. The Johnny Alfalfa Sprout handbook. Johnny Alfalfa Sprout, P.O. Box 294, Lewisburg, PA 17837. 94 p. Illust. No index. 22 cm. [17 ref]

• ***Summary:*** The section titled "Super soy sprouts" (p. 21-22) describes several methods for sprouting soybeans at home. Chapter 2 describes many different seeds that can be sprouted, including lentils, alfalfa, sunflower seeds, wheat berries, fenugreek, radish, buckwheat, millet, common legumes (incl. peas, soybeans, aduki), amaranth, and quinoa.

Chapter 3, titled "Recipes for simple meals with sprouts" contains vegetarian recipes that call for the use of soymilk (p. 44, 46-47), tofu (p. 51-52, 55, 59), miso (p. 51, 59), sesame tahini or ground sesame seeds (p. 53, 72), non-dairy soy cheese (p. 60). A photo on the inside rear cover shows the author and her husband (a professional sprouter) gathering sprouts. Address: Lewisburg, Pennsylvania.

5010. Stidham, Martin. 1986. The fragrant vegetable: Simple vegetarian delicacies from the Chinese. Los Angeles, California: Jeremy P. Tarcher, Inc. x + 224 p. Illust. Index. 24 cm.

• ***Summary:*** Chapter 3 (p. 57-84), titled "'Meat without bones'–Tofu," contains 3 preparatory techniques and 16 recipes. Chapter 4 (p. 85-98), titled "More 'meat without bones'–Pressed tofu," contains two basic recipes for pressed and spiced pressed tofu plus 9 additional recipes. "The highly odiferous 'stinking' tofu (*chou doufu*) is made by fermenting tofu or pressed tofu, or allowing it to grow moldly, then deep-frying it. Usually eaten with a hot sauce, this is available at movable carts..." (p. 58).

"The dense cakes are fermented to become tofu 'cheese' (see Chapter 1) as well as 'stinking' tofu..."

Chapter 5 (p. 99-126) titled "'Duck,' 'chicken,' and other specialties," first discusses the basic ingredients in

making these traditional meatlike products (Bean curd sheet [pressed tofu sheets], bean curd skin [yuba], and bean curd sheet noodles), then gives numerous recipes, many containing soy. Chapters on fried gluten, soups, and fruit and nut desserts follow. Soy sauce, "green soybeans" [green vegetable soybeans], soymilk, soy sprouts, and soy-pickled cucumbers are also mentioned.

The author, a graduate of Northwestern University, lived in East Asia for over 10 years, first as a student at National Taiwan Univ. in the Graduate Inst. of Chinese Literature, and later as a translator of short stories, poetry, and novels. "A long-standing interest in the cuisines of the region, especially vegetarian, has taken him into home, restaurant, and temple kitchens. He has studied privately with instructors from the area's well-known cooking schools, including Wei-Chuan and Pei Mei's, besides being tutored in special techniques by tofu makers and manufacturers of other Chinese specialty food items."

5011. Tofu Shop (The). 1986. Soyfood specialties: Fresh–natural–nutritious–delicious (Leaflet). Arcata, California. 1 p. Single sided. 28 cm.
• ***Summary:*** This marketing flyer is printed with black ink on light brown paper. Each of the following is described in one of six equal-sized rectangular boxes (2 rows of three each), each with a Japanese crest: (1) Handmade tofu & soymilk. (2) Baked tofu cold-cuts. (3) Light tofu salads. (4) Delicious tofu desserts. (5) Tempeh (new!). (6) About our products. Address: 768 18th St., Arcata, California 95521. Phone: (707) 822 7409.

5012. Tofu Shop Specialty Foods Company (The). 1986. Price list. Arcata, California. 1 p. Single sided.
• ***Summary:*** At the top left is an illustration of a dragon in a circle. At the top right is an illustration of a tofu shop on stilts on a cliff by the ocean, with a tree arching over the top–all in a diamond. "Fresh prepared natural foods since 1977."

The Tofu Shop now makes 39 products in seven categories: (1) Tofu, organic nigari: 14 oz water-pac, bulk pounds, bucket deposit. (2) Soymilk, organic: Natural unflavored (pint, quart, half gallon, or gallon), vanilla-maple (1/3 quart or quart), carob-barley (1/3 quart or quart). (3) Cold cuts, pre-baked: Tofu-vegie patty tray (3), 10 oz, tofu-vegie patty bulk (12 minimum). Marinated tofu cutlet tray (5), 8 oz, marinated tofu cutlet bulk (12 min). Tofu sausage patty tray (6), 8 oz tofu sausage patty bulk (12 min). (4) Combo's: Tofu-cutlets 'n rice, 8 oz. Tofu-sausage 'n pasta, 8 oz.

(5) Deli salads: Eggless-tofu (5 oz or 2 quart). Potato-tofu (5 oz or 2 quart). Tahini-tofu (5 oz or 2 quart). Corn pasta primavera (4 oz or 2 quart). Brown rice 'n vegies (4 oz or 2 quart). Sea palm & bean sprout (4 oz or 2 quart). Tabouli (4 oz or 2 qt).

(6) Desserts: Cocoa-carob mousse, 5 oz. Maple-almond charlotte, 5 oz. Pina colada pie (6 oz or 9 inch). Pumpkin pie (6 oz or 9 inch). Address: 768 18th St., Arcata, California 95521. Phone: (707) 822 7409.

5013. Wakeman, Alan; Baskerville, Gordon. 1986. The vegan cookbook: Over 200 recipes all completely free from animal produce. London and Boston: Faber & Faber. 298 p. Index. 22 cm. [28 ref]
• ***Summary:*** The 200 recipes in this cookbook demonstrate that a vegan diet can be rich and varied and reach the highest culinary standards. Within each chapter (e.g. main dishes, or soups) the recipe are listed with the quicker, cheaper, or simpler ones first and the slower, more expensive, or more elaborate ones last. A nutritional analysis per serving is given with each recipe.

Soy-related recipes include: Tofu stir-fry (p. 63). Tofu chips with walnuts and olives (p. 105). Vanilla dessert (with soya milk, p. 147). Caramel Cream Pudding (with tofu, p. 153). Orange and Chocolate Mousse (with soya milk, p. 154). Banana tart (with soya milk, p. 157). Chocolate tart (with soya milk, p. 158). Banana curd cake (with tofu and soya milk, p. 160). Lemon cheesecake (with tofu and soya milk). Rum and chocolate cheesecake (with tofu and soya milk, p. 162). Basic plain sauce (with soya milk, p. 166). Lemon curry sauce (with soya milk). Custard (with soya milk, p. 175). Hot chocolate sauce (with soya milk, p. 176). Tofu dressing (p. 181). Yoghurt salad dressing (with cultured soymilk yogurt, p. 182). Mayonnaise with soya milk (p. 185). Tahini spread with miso (p. 192). Scrambled tofu and herbs on toast (p. 254). Lassi (Traditional Indian sweet or salty yoghurt drink, p. 256). Soy sprouts (p. 262).

Many recipes call for the use of soy sauce or soya milk (especially desserts, dairylike products, or cream sauces), and tofu is used as an ingredient in many recipes in which it does not appear in the recipe name (e.g. Bulgur bake, p. 59; Mushroom pie, p. 88). In all recipes, each ingredient is listed twice in side-by-side columns: once in its Imperial (Metric) form and once in its American form, e.g. 385 ml Vegan Yoghurt, ½ cup.

One excellent chapter titled "The Alternative Dairy" (p. 231-50) is designed to tempt even the most determined cream addict. It contains descriptive sections on soya milk, margarine, tofu, vegan yoghurt, and vegan ice-cream, followed by recipes for: Vegan single cream. Vegan double cream. Vegan sour cream. Vegan piping cream. Cashew cream. Coconut cream. Vegan yoghurt (2 methods). Plain ice cream. Banana ice-cream. Pineapple ice-cream. Chocolate ice-cream. and Peach sorbet.

Appendixes include: 1. Notes on vegan nutrition. 2. Seven reasons to be a vegan (health, economic, ecological, altruistic {world hunger}, compassionate (to animals), ethical {what right do we have to kill animals?}, spiritual). 3. Useful addresses. 4. Selected bibliography. 5. Abbreviations and measures. 6. Glossary of unusual ingredients: Incl.

demerara sugar (dark brown, often used raw), miso, soya flour, soya milk, soya sauce, tofu. Address: England.

5014. Young, Robert. 1986. [The manufacture of soy milk products with the inclusion of egg white]. MSc thesis, University of Pretoria, South Africa. Page 266 in volume 25/03 of Masters Abstracts. [Afr]*
Address: Univ. of Pretoria, South Africa.

5015. **Product Name:** Isocal (Soy-Based Infant Formula).
Manufacturer's Name: Bristol Meyers.
Manufacturer's Address: -
Date of Introduction: 1986?
New Product–Documentation: Chatterjee. 1986. p. 40.

5016. **Product Name:** Soymilk (Fresh & Unsweetened).
Manufacturer's Name: Castle Trading–Ranwick.
Manufacturer's Address: New South Wales.
Date of Introduction: 1986?
Wt/Vol., Packaging, Price: 2 liter container. Retails for $3.00 Australian.
New Product–Documentation: Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update.

5017. **Product Name:** Chin-Tao Strong Soybean Milk.
Manufacturer's Address: Taiwan.
Date of Introduction: 1986?
Wt/Vol., Packaging, Price: Plastic bottle.
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. Plastic bottle. Red and brown graphics.

5018. **Product Name:** [Norsul].
Foreign Name: Norsul.
Manufacturer's Name: Companhia de Exp. Comercial e Industrial "Norsul."
Manufacturer's Address: Av. Edouard Six, 540, 12300 Jacarei, Sao Paulo, Brazil.
Date of Introduction: 1986?

5019. **Product Name:** [Lactovit].
Manufacturer's Name: Companhia de Exp. Comercial e Industrial "Norsul."
Manufacturer's Address: Av. Edouard Six, 540, 12300 Jacarei, Sao Paulo, Brazil.
Date of Introduction: 1986?

5020. Crivellaro S.p.A. 1986? Soia e salute [Soya and health (Leaflet)]. Via Mazzini 30, 35030 Sarmeola di Rubano, Padova, Italy. 2 panels each side. Each panel: 30 x 21 cm. Undated. [Ita]
• ***Summary:*** In this full-color, glossy leaflet, large photos show Tetra Brik cartons of Crivellaro's soy oil and soya milk, plus their canned lecithin granules. The American Soybean Association's soy mark (copyright 1982) is also prominently displayed.

Photos show: (1) On front panel, a large photo of the aseptic package, with the top of the package dated June 1986 and Dec. 1987. (2) Inside, another view of the aseptic soy oil package. (3) A round metal can of Crivellaro lecithin. (4) A 1-liter aseptic package of "soya milk." (5) On the rear panel, an illustration shows an aerial view of the factory. (6) A map of Crivellaro's location in Europe, with yellow arrows pointing to the many directions to which its products could be shipped. (7) A 20 liter bag of oil in a box with a spigot. Address: Padova, Italy. Phone: 049/63.14.55.

5021. **Product Name:** [UU (Soymilk)].
Manufacturer's Name: Food & Nutrition Foundation.
Manufacturer's Address: Thailand.
Date of Introduction: 1986?
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. Tetra Brik carton. Brown, red, yellow, and blue on white. Shows a cartoon of a cow riding a bicycle carrying a yellow soybean character on the back.

5022. **Product Name:** Fruit Gold Mineral Water Soya Bean Drink.
Manufacturer's Address: Taiwan.
Date of Introduction: 1986?
Wt/Vol., Packaging, Price: Plastic bottle.
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. Tall plastic bottle with screw-on lid. Red letters. yellow soybeans.

5023. **Product Name:** [Soymilk].
Manufacturer's Name: Gaspar Soy Products.
Manufacturer's Address: P.O. Box 1039, Krobiastraat 20, Paramaribo, Suriname.
Date of Introduction: 1986?
New Product–Documentation: Letter from M. Gaspar. 1988. Sept. 12. "For some time already we have been making soymilk on a small scale (something like a cottage industry), however the price is more expensive than milk."

Note: This is the earliest known commercial soy product made in Suriname.

5024. **Product Name:** Tofu Carob Drink Mix (Dry Mix).
Manufacturer's Name: Magic Mill. A Div. of CI. Made in the USA by Great American Foods.
Manufacturer's Address: 1911 South 3850 East, Salt Lake City, Utah. Phone: 801-972-0707.
Date of Introduction: 1986?
Ingredients: 100% organic cane juice, partially hydrogenated soy oil, cereal solids (from corn), carob

powder, calcium carbonate, tofu, sodium caseinate, sea salt, natural color, natural flavors, carrageenan, soy lecithin.
Wt/Vol., Packaging, Price: 27.6 oz (784 gm) can. Retails for $7.95 (7/90, California).
How Stored: Shelf stable.
Nutrition: Per 8 oz (28.1 gm): Calories 130, protein 2 gm, carbohydrate 20 gm, fat 5 gm, cholesterol 0 mg, sodium 150 mg.
New Product–Documentation: Product with Label purchased at Adventist Book Center, Pleasant Hill, California. 1990. July 8.

Talk with Magic Mill. 1990. July 11. These products were introduced in about 1986. They are selling well. Magic Mill was founded in about 1986. The company's best-selling products are the Magic Mill Grain Grinders/Mills. Steve Storey was with the company but he no longer is. Jim Harrison was the founder and present president. Great American Foods makes the product, and Magic Mill markets it. The parent company is named Constellation Incorporated. It was started before 1986 by Jim Harrison. Its divisions are Magic Mill International and Great American Foods. All three companies are located in the same building.

5025. **Product Name:** Biogenic Soymilk (Honey Sweetened).
Manufacturer's Name: Russels-Russels.
Manufacturer's Address: Australia.
Date of Introduction: 1986?
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton. Retails for $3.40 Australian.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. This company is owned by a New Zealand Health Chain.

5026. **Product Name:** Sunny Soya Bean Drink.
Manufacturer's Address: Brunei.
Date of Introduction: 1986?
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. Can. Red, white and light green on dark green.

Note: This is the earliest known commercial soy product made in Brunei.

5027. Pratt, Dan. 1987. Ice Bean, Tofulite, and Tofutti (Interview). *SoyaScan Notes.* Jan. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "Tofulite is preferred to Tofutti in every taste test that I have ever seen results on." Tofutti is too sticky and for some people too sweet. The name Ice Bean, coined in a moment of jest, is now a liability, but it's hard to switch. The main ingredient differences between Ice Bean and Tofulite are: Ice Bean is sweetened with honey and made with fresh soymilk. The "Tofu Flavors" of Ice Bean contain tofu and are sweetened with fructose. Tofulite is made with 15% real tofu plus some isolates, and sweetened with sugar. Address: Barricini, Oyster Bay, New York.

5028. Hahn, Barbara. 1987. A soybean success story. Tofu factory finds market right at home [Ashland Soy Works]. *Courier* (*Grants Pass, Oregon*). Jan. 12.
• ***Summary:*** Ashland Soy Works, owned by Diana Muhs, was started 5 years ago. They make about 1,800 lb of tofu a week, plus soy milk, Tophoria (tofu ice cream), baked tofu, and tofu loaf.

5029. Frick, Elaine E. 1987. Soybeans: South Carolina's ugly duckling gets exciting when it changes. *Record* (*Columbia, South Carolina*). Jan. 14. p. 1B, 2B.
• ***Summary:*** In 1969 the South Carolina Soybean Board was created. In 1984 soybeans were the state's top income-producing crop.

5030. **Product Name:** Provamel Organic Soya Milk.
Manufacturer's Name: Alpro.
Manufacturer's Address: Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium.
Date of Introduction: 1987. January.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: Energy 46 kcal (calories; 196 kJ), protein 3.6 gm, carbohydrates 3.3 gm, total fat 2.1 gm (of which polyunsaturated fatty acids: 60%), cholesterol 0 gm.
New Product–Documentation: Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. In Jan. 1987 Alpro launched Provamel Organic Soya Milk, the first soymilk containing organically grown soybeans that was made by Alpro and launched under one of the company's own brands. In Aug. 1983 Alpro had first used organically grown soybeans to make soymilk, but that product had been sold by Lima Foods.

5031. **Product Name:** Soy Milk.
Manufacturer's Name: Ashland Soy Works.
Manufacturer's Address: 280 Helman St., Ashland, OR 97520. Phone: 503-482-1865.
Date of Introduction: 1987. January.
Ingredients: Water, organically grown soybeans, honey, vanilla extract.
How Stored: Refrigerated.
New Product–Documentation: Label. 1987. Jan. 1.5 by 3 inches. Brown on yellow. "Non-Dairy Product. High protein. No cholesterol. No artificial ingredients. Keep refrigerated." Talk with Diana Muhs. 1988. Feb. 10. The company started making soyfoods in October 1981. Their first product was tofu, followed by soymilk about a year later.

5032. **Product Name:** [Bioforme Soy Dessert {Pudding/Dessert} (Vanilla, or Chocolate). Renamed Formoja in early

1989].
Foreign Name: Bioforme Soja en Dessert (Vanille, Chocolat).
Manufacturer's Name: Cacoja. Affiliate of Coopérative Agricole de Colmar (CAC).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France. Phone: 68.74.17.07.
Date of Introduction: 1987. January.
Ingredients: Water, soybeans (7%), cane sugar, corn starch, natural vanilla extract, carrageenan (extract of marine algae), sea salt.
Wt/Vol., Packaging, Price: 510 gm Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Vanilla, Per 100 gm: Protein 3.2 gm, lipids 1.7 gm, carbohydrates 15.4 gm, lecithin 20 mg, calories 90, sodium 30 mg, calcium 30 mg, phosphorus 50 mg, magnesium 30 mg, phosphorus 160 mg, iron 0.5 mg.
New Product–Documentation: Article in Toyo Shimpo. 1987. Dec. 1. Cacoja makes soymilk in Europe. Label. 1988. Red, yellow, green, and white. "Food preparation of soya. 100% Vegetarian. Without cholesterol. Rich in protein. Soya is rich in protein, lecithin, polyunsaturated fatty acids, and is very balanced in amino acids. A group of farmers in Alsace deliver to us rigorously selected soybeans. They undergo more than 10 controls before processing to guarantee that the Soja Bioforme line is of irreproachable quality. Enjoy Soja Bioforme throughout the day. At home, a delicious light dessert. For parties, a stimulating taste, on picnics it is practical." This plant was established in a joint venture with Alfa-Laval.

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the package. "100% vegetarian (vegetal). No cholesterol. Rich in protein."

Technique Laitiere & Marketing. 1988. Nov. p. 65. Cacoja was introduced by the cooperative of Colmar.

Food Focus. 1987. No. 3. Shows a color photo of the cartons.

Formoja brochure. 1990. April. The Formoja dessert line consists of chocolate and vanilla soybean desserts, each in 510 gm Tetra Brik cartons. "These two non-dairy products are light smooth custards. They can be eaten as a dessert or used to make cakes."

Letter from Sylvain Stievenard of Sojinal (named Cacoja prior to Aug. 1990). 1990. Sept. 24. Only these two flavors were produced. The date is correct.

5033. Haren, Chuck. 1987. The Plenty Canada Soy Project in Dominica. *Plenty Bulletin* (*Summertown, Tennessee*) 3(1):4. Jan.
• ***Summary:*** A group of Dominicans, who have been working with Plenty Canada on a student/employee basis for 30 months, are organizing the Kari Soy Cooperative to produce soyfoods. Address: Plenty's soy processing education center, Roseau, Dominica, West Indies, Caribbean.

5034. Jain, Manoj. 1987. Educating health workers and villagers in India on the dietary use of soybean. Boston, Massachusetts. 14 p. Jan. Unpublished manuscript. [10 ref]
• ***Summary:*** The soybean today has become one of the prominent crops in Madhya Pradesh (M.P.), India. The soybean is economical and easily available in Madhya Pradesh. One kilogram of soybeans, which makes ten liters of soy milk, costs Rs. 4.00 (U.S. $0.40) in the retail market. Hence, soy milk costs Rs. 0.40/liter while cow milk costs Rs. 4/liter. Similarly, the price of tofu is one tenth that of curdled cow milk. Cow milk is often in shortage, especially during the summer months, while soybeans can be available all year.

The study had three objectives. 1. Developing an educational and training program for rural workers on the uses of soy products especially soymilk. 2. Conducting a training program for rural workers. 3. Having health workers do demonstrations in 15 villages. The educational and training program was developed at the Mahatma Gandhi Memorial Medical College, Indore, M.P. The sessions were held at Bharatiya Grameen Mahila Sangh (BGMS), a non-profit voluntary agency. Villagers response to each food was different. They tried the following: Roasted and fried soybeans, soy halwa [halva] (sweet cake), soy chutney, soy milk, okara, tofu, and soy yogurt. This field study conclusively reveals that soybeans have a tremendous potential in India. Address: Boston, Massachusetts: Boston Univ. School of Public Health.

5035. Kjellker, Monica. 1987. Continuous soyfoods production from whole soybeans. *Soyfoods* (*ESFA*) 1(1):21-24. Jan.
• ***Summary:*** A description of the Alfa-Laval process for making tofu and soymilk. Contents: 1. Towards continuous processing: General food industry, soy processing. 2. Continuous production of soyfood: Soybean/water extraction, final products from soybean/water extract (soy beverage, tofu). 3. Automation in food industry: Development in automation, why automation?, automation levels, continuous soy processing.

Note: The author has an MSc in Chemical Engineering. Address: Product Manager, Soy Processing Dep., Alfa-Laval, Lund, Sweden.

5036. *Natural Foods Merchandiser.* 1987. Let's all give a warm round of applause for: Legume, Westbrae, Vitasoy (Ad) Jan. p. 35.
• ***Summary:*** "For sponsoring a great evening of entertainment and a delicious 'soyabration' at the Halloween Rock 'n Roll Masquerade Party."

5037. Pasilac-Danish Turnkey dairies Ltd. 1987. Our company. 2, Europaplads, DK-8000 Aarhus C, Denmark. 32 p. Jan.
• ***Summary:*** Contains a 1-page description of Soya Technology Systems (which was established in 1982); a color photo shows its managing director, Anders B. Lindner. A consolidated balance sheet shows total assets in 1 May 1986 of DKr 1,747,598,000. Address: Aarhus, Denmark.

5038. Setchell, K.D.R.; Welsh, Mary Beth; Lim, C.K. 1987. High-performance liquid chromatographic analysis of phytoestrogens in soy protein preparations with ultraviolet, electrochemical and thermospray mass spectrometric detection. *J. of Chromatography* 386:315-23. Jan. [30 ref]
• ***Summary:*** Concerns the phytoestrogens (plant estrogens, which are hormones) daidzein, genistein, coumestrol, formononetin, and biochanin. Only daidzein and genistein were detected in the soy protein preparations analyzed, and were found in high concentrations respectively: textured soy protein 568 and 568 micrograms/gm, soy flakes 221 and 280 micrograms/gm, soymilk formula No. 1, 17.1 and 21.8 micrograms/gm, and soymilk formula No. 2, 19.1 and 22.6 micrograms/gm. Address: 1-2. Dep. of Pediatric Gastroenterology, Children's Hospital Medical Center, Cincinnati, Ohio 45229; 3. Div. of Clinical Cell Biology, Clinical Research Center, Watford Road, Harrow, Middlesex HA1 3UJ, England.

5039. **Product Name:** [Tonyu {Soymilk}].
Foreign Name: Tônyû.
Manufacturer's Name: Sojadoc. Affiliate of Cooperative Occitane.
Manufacturer's Address: Zone Industrielle La Viscose, 81000 Albi, France. Phone: 6345-4645.
Date of Introduction: 1987. January.
Ingredients: Water, soybeans.
Wt/Vol., Packaging, Price: 20 liter polyethylene goat skin bottle.
How Stored: Refrigerated.
Nutrition: Per 100 gm: Total solids 7.1 gm, protein 2.8 gm, lipids 1.3 gm (which which linoleic acid is 60%), total soluble carbohydrates 0.8 gm, ash/minerals 0.83 gm, calcium 14.4 mg, sodium 1.2 mg, phosphorus 58.4 mg, potasium 204 mg, magnesium 9.9 mg.
New Product–Documentation: Soyfoods (ESFA). 1987. Jan. Soya Bluebook. 1987. p. 90. Note: This company's original address was apparently: Alain Lacombe & Jacques Isnard, Sojadoc, Par Castelnau, Presb. de St. Paul d'Mammiac, 81140 Penne du Tarn, France. Phone: 3-393-1015.

Manufacturer's brochure. 1987. In French. "Sojadoc tofu: New source of vegetable protein. The products of French soybeans. Soymilk (Tonyu) and Tofu." A single insert sheet describing the company's soymilk gives a flowchart of the production, 8 general dietetic and nutritional characteristics, 8 technical characteristics, it composition (92.5% water, 7.5% soja), detailed composition (see above), and its uses: charcuterie (pates, terrines, sausages), plats cuisinés and plats surgelés (quiches, pizzas, etc.), sauces (bechamel, mayonnaise, salad dressings), and pastries and desserts (bavarois, desserts glacés, biscuits).

5040. *Soyfoods* (*ESFA*). 1987. Seen at the SIAL food show. 1(1):30. Jan.
• ***Summary:*** This show was held in Oct. 1986 at Paris. Sojadoc presents Tofu and Tonyu (soymilk). At SIAL Société Soy of France launched Soyeux (a new dessert in vanilla and chocolate flavors), and Tof'in (tofu cakes precooked without oil in 3 flavors: Garlic & Herbs, Provençale, and with Mushrooms). Cygne d'Or confectionery launched Tofu Kiss (a tofu based non-dairy frozen dessert, distributed by Maho Distribution). Galactina introduced four ready-to-eat tofu salads (Tofu Nature, Tofu Gourmet, Tofu Jardinière, and Tofu Provençale). Address: Paris, France.

5041. *Soyfoods* (*ESFA*). 1987. ESFA objectives. 1(1):31. Jan.
• ***Summary:*** 1. To prevent consumer deception, ESFA encourages soyfoods producers to establish voluntary standards for the various soyfoods. 2. To work with regulatory agencies in laying out the basis of requirements for the soyfoods on labeling, marketing, and health issues. 3. To provide reliable information to dietitians, press people (the media), and generally speaking to all people looking for information on soyfoods. 4. To promote utilization of soyfoods for their food value. "By soyfoods, we refer among others to the oriental traditional products directly derived from the soybeans, such as soybean milk, tofu, tempeh, soya sauce, and soybean sprouts."

Those interested in joining the European Soy Foods Association should contact Guy Coudert, ESFA, 12 Avenue George V, 75008, Paris, France. Subscriptions to *Soyfoods* magazine (published by ESFA), 4 issues per year, are 300 French francs. Address: Paris.

5042. **Product Name:** Living Foods Organic Soy Drink.
Manufacturer's Name: Unisoy Milk 'n' By-Products Ltd.
Manufacturer's Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.
Date of Introduction: 1987. January.
Ingredients: Incl. barley malt.
New Product–Documentation: Talk with Neil Rabheru of Unisoy. 1990. July 2. This product was launched by Living Foods in early 1986. It is exported to the Netherlands. It contains barley malt. It was made as a private label brand for a company named Living Foods, but after that company went into liquidation (bankruptcy), Unisoy decided to continue making the product and marketing it themselves. It is not

selling very well because the product concept is wrong. But it has potential.

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. This product was introduced after White Wave Soya Milk. It contained a little organic barley malt and pearl barley. The product originally belonged to a company named Living Foods (in Brighton, England), founded by David White. Living Foods was an importer-marketer, not a manufacturer. They imported products (such as tofu from the Netherlands) and sold it under the Living Foods brand. They were an agent for Lima Foods, and imported Lima rice cakes. This soyamilk was originally made by Soya Health Foods (Sunrise), but Living Foods was not happy with the price and quality, so they asked Unisoy to make the product, starting in late 1986 or Jan. 1987. In the process, Living Foods went bankrupt, so Unisoy bought the Living Foods brand to use for soyamilk.

5043. Vandemoortele, Philippe. 1987. Editorial. *Soyfoods* (*ESFA*) 1(1):2. Jan.
• ***Summary:*** Contents: What are soyfoods? Why was the Association founded? What will the Association do to achieve its goals. What can a member expect from the Association?

"Soyfoods cover all products deriving from the whole soybean produced according to a traditional process and manufactured into soya milk, tofu, tempeh, miso, soya sauce, soya sprouts and other products. Why was the European Soyfoods Assoc. founded? Until only a few years ago, only industrial soya protein such as defatted and fullfat flour, concentrates, isolates, and textured protein were used in the food industry. They are mainly used for their functional properties rather than for their nutritional characteristics." Now there is a growing interest in soyfoods. The ESFA will organize a Soyfoods Conference every 2 years. Address: President of the ESFA (European Soyfoods Assoc.).

5044. Wang, H.L. 1987. Tofu and soybean milk production. *Soyfoods* (*ESFA*) 1(1):9-17. Jan.
• ***Summary:*** Discusses all the major processing variables including soaking, soybean to water ratio, extraction, heat treatment, separation of soymilk from insoluble residues, coagulation temperature and mode of mixing, soybean variety, proximate composition, and microbiological quality.

Dr. Wang was born in China and came to this country after graduation from the National Central University, Nanking. She received her PhD in Biochemistry from the University of Wisconsin, Madison, in 1952. She worked intermittently for 10 years in the field of nutrition and at the Marquette University Medical School, Milwaukee, and at the Univ. of Wisconsin Medical School. In 1963 she joined the NRRC as a research chemist. Address: USDA NRRC, Peoria, Illinois.

5045. **Product Name:** Westbrae Natural Malteds [Carob Malted, Vanilla Malted, Cocoa-Mint Malted, Almond Malted, or Caffeine-free Java Malted].
Manufacturer's Name: Westbrae Natural Foods (Marketer). Made in Los Angeles by House Foods & Yamauchi, Inc.
Manufacturer's Address: 4240 Hollis St., Emeryville, CA 94608. Phone: (415) 658-7521.
Date of Introduction: 1987. January.
New Product–Documentation: Ad in Vegetarian Times. 1987. April. p. 1. "Malteds... thicker and richer than ever–half the fat of a shake! A non-dairy delight. Five delicious flavors. Organic soybeans. Grain sweetened [rice syrup]." No gums or carrageenan are used to enhance thickness. Spot in Soya Newsletter. 1987. 1(3):6. Note: Introduced in 1984 and imported from Japan. In Jan. 1987 the product started being made, packaged, and retorted for Westbrae by House Foods & Yamauchi Inc. in Los Angeles.

5046. Wilson, Geoff. 1987. Special report from Australia [on soyfoods]. *Soyfoods* (*ESFA*) 1(1):25-29. Jan.
• ***Summary:*** Much of this material appeared in the National Farmer (1984), Australia. John Wilson, in charge of soymilk for Alfa-Laval and Owen Price, managing director of the Dairy Farm group of companies in Hong Kong (he has made a soy ice cream) are both expatriate Australians. Contents: New markets beckon soybeans (especially soymilk in Australia and Southeast Asia). Expatriate Australians boosting soy (John Wilson of Alfa-Laval in Sweden, and Owen Price, managing Director of the Dairy Farm group of companies in Hong Kong). Soybeans poised for big growth (in Australia, especially as soymilk). Tofutti takes off in Australia (David Grossbaum of Shoyu Natural Products in Melbourne has the sole Australian franchise for this popular soy-based product). Tofutti is tantalising U.S. tastebuds. Sustagen Gold uses dairy and soy foods (The increasingly popular Combibloc carton is now being used by Bristol Meters to package this product). Soy-dairy blends to overcome disadvantages. Six new soy drinks expected (following Golden Life, the first Australian soy drink launch late last year by Martin Pharmaceuticals). Soy products will enter the market (in Australia, believes Anders Lindner of STS–Soya Technology Systems). Flavored Soy Drinks selling well (according to Don Lazzaro of Ceres Natural Foods Pty Ltd. in East Bentleigh, Victoria). Address: Freelance journalist, Australia.

5047. Elmer, Vickie. 1987. Loma Linda Foods Inc. consolidates for growth. *Daily Commerce* (*Los Angeles, California*). Feb. 2. Also in Press-Enterprise (Riverside, CA). Jan. 26.
• ***Summary:*** Loma Linda Foods was founded in October 1906. Company sales now top $20 million a year, growing at 7% annually. Worthington sales top $30 million, and grew

last year by 13%. Loma Linda Foods plans to shut down its plant in Mount Vernon, Ohio, and move it to Riverside in late 1987. Mr. Alejo Pizzaro is now company president. Address: Riverside, California.

5048. **Product Name:** Noble House Great Shake (Soymilk) [Chocolate, Strawberry, Mango, American Ice Cream, or Rich Coffee].
Manufacturer's Name: Noble Soya House Ltd.
Manufacturer's Address: Arera Colony, Bhopal 462 016, India.
Date of Introduction: 1987. February.
Ingredients: Mango: Soymilk, sugar, mango pulp, edible vegetable oil, minerals, citric acid and vitamin C. Contains permitted colours and added flavour.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photo of four Tetra Brik cartons. 1987. This is India's first major soymilk venture. The partners are Noble House Ltd., Great Eastern Shipping Co. and Godrej. The plant was supplied by Alfa-Laval and the technical know-how by Kibun. The product got off to a slow start. See Lindner 1987. Labels. 1988, Oct. received. Black-and-white photocopies. Front panel shows the top of a glass filled with the beverage, with a striped straw in it. At the bottom is written "Soymilk Beverage" or "Soymilk."

Deccan Herald. 1988. March 11. The company started production on 12 Feb. 1987.

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the package. Shows the top of a glass with a straw in it against a pink and reddish purple background.

Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Noble Soya in India. It had a capacity of 4,000 liters/hour and began operation in 1987.

Letter (e-mail) from Ratan Sharma, PhD, of India. 2010. Oct. 9. This was a joint venture of Godrej and Noble Soy House (plus Great Eastern Shipping Company) with a share of 24% each, in the chairmanship of Godrej. The rest of the shares were issued to the general public. They brought the soymilk plant from Japan [Kibun] after the Indian Government gave them a reduction in import duty. They launched their brand Great Shake in Tetra Pak at the beginning of 1987 and closed down the business in 1989. This is a 4,000 L per hour plant from Kibun. Godrej had four Tetra Pak lines at that time for this product only.

5049. B.P.; C.R. 1987. L'irrésistible poussée des produits de substitution: Dossier produits laitiers [The irresistible push of substitute products: Dossier on dairy products]. *Marches Agricoles.* Feb. 16. p. 14. [Fre]

• ***Summary:*** Part 1 by B.P. is titled "The debate is launched concerning substitute dairy products." A table lists the following countries: Austria, Belgium, Canada, Denmark, UK, Finland, Japan, Netherlands, Switzerland, and the USA. Column 2 lists substitute products (such as cheese, cream, milk, melorine). Column 3 lists the market share of these products in 1983. And column 4 compares the price of the substitute with the real dairy product. For example, in the USA: imitation cream (non-dairy creamer) has 50% of the market and is less expensive. Imitation cheese has 5% of the market and is 30% less expensive. Flavored milklike drinks have 15% of the market and are 25% less expensive. No imitation products are shown to have a significant market share in Europe.

Part II by C.R. is about CAC in Colmar, its Cacoja subsidiary founded in Jan. 1987, and its Bioforme line of soymilks and soymilk desserts. Address: France.

5050. Kahn, E.J., Jr. 1987. Profiles: The absolute beginning [Dwayne Orville Andreas and ADM]. *New Yorker* 62:41-68. Feb. 16.
• ***Summary:*** The best biography seen of Dwayne Andreas, with emphasis on his work with soy. On the first page is a long discussion of Nutri-Bev, a soy-based milk substitute.

Contains a nice portrait (illustration, line drawing) of Andreas on the first page. Address: New York.

5051. Lytel, Laurie. 1987. Soy Plant bankruptcy: collectivism gone haywire. *Crain's Detroit Business.* Feb. 16. p. 1, 6.
• ***Summary:*** The collective, established in 1976, filed for Chapter 7 bankruptcy in early January. The company has lost money for at least 4 years, the result of disorganized management. Last year's revenues were $168,000 and expenses $180,000. The company makes 8,500 lb/week of fresh tofu, plus tempeh and soymilk.

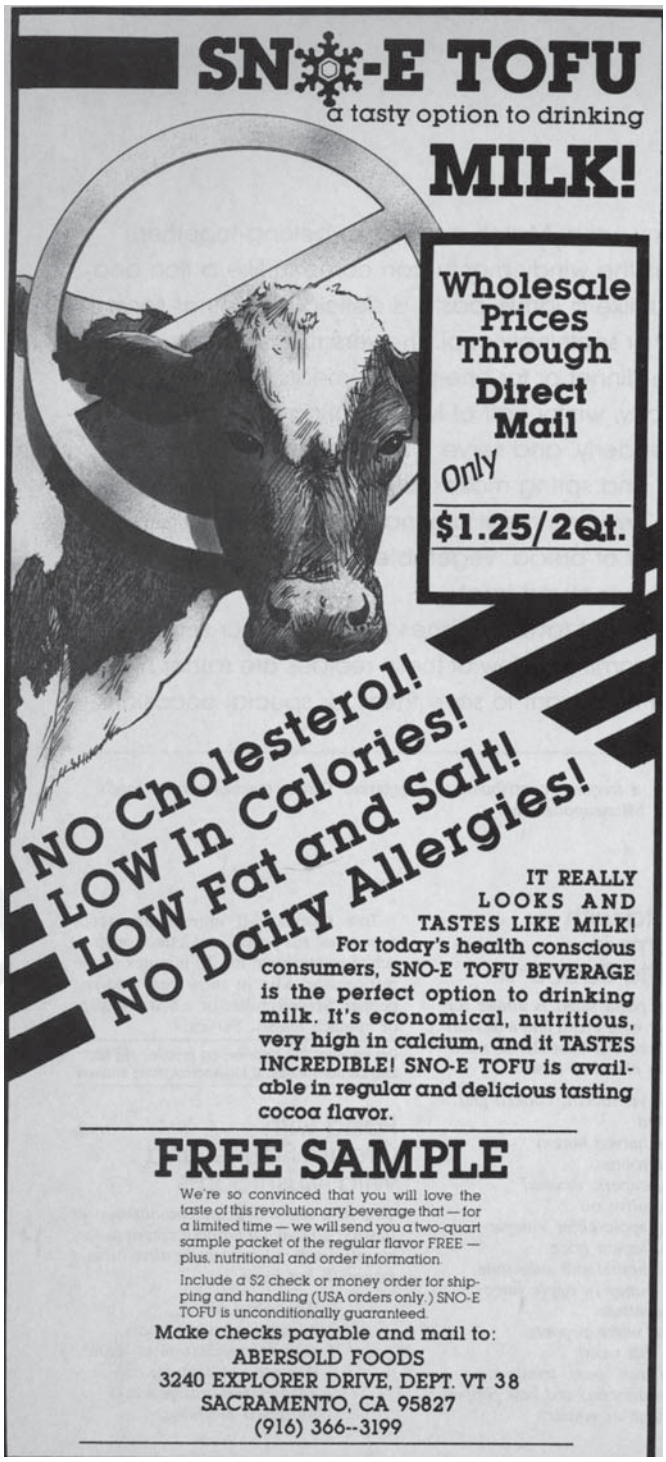
5052. *Irish Times* (*Dublin*). 1987. Plenty of products on the boil. Feb. 17. p. 17.
• ***Summary:*** "The Food Technology Business Unit in the Food Centre at Raheen is a place where people can come and try out their food ideas, while at the same time receiving basic business training." About 20 people are presently working on projects.

Lin Thakker, who trained as a nurse in England before coming to Limerick with her husband six years ago, is supplying the public in Limerick with foods she ate growing up in Japan. "Her first product was tofu, a fermented bean curd [sic], which has a mild flavor and which can be used instead of cheese." She first had the idea when she saw the high price of imported tofu. Now she also makes fresh soya milk, vegetarian pizzas and vegetarian burgers." She sells all of these to hotels and fastfood outlets as well as to wholefood shops.

Note: Tofu is also occasionally called "soybean curd." It is not fermented, and is very different from "fermented tofu," which is rarely found in Japan.

5053. **Product Name:** Sno-e Tofu Non-Dairy Beverage Mix (With Sodium Caseinate) [Plain, or Cocoa].
Manufacturer's Name: Abersold Foods.
Manufacturer's Address: 3240 Explorer Dr., Sacramento, CA 95827. Phone: 916-366-3199.
Date of Introduction: 1987. February.
Ingredients: Cereal solids (from corn), soy oil, dehydrated tofu, soy protein isolate, calcium fortifications (calcium carbonate, tri-calcium phosphate, calcium chloride, calcium sulfate), sodium caseinate, sea salt, carrageenan, natural flavors.
Wt/Vol., Packaging, Price: Dry powder in 5.2 oz foil packet, makes 2-quarts. Retails for $1.25. 2 lb economy size makes 4.9 gallons for $9.00. Only sold by mail order. Add $3.00 per order for processing and UPS postage.
How Stored: Shelf stable.
Nutrition: Per 8 oz. serving: Calories 90, protein 2 gm, carbohydrates 10 gm, fat 5 gm, sodium 120 mg. Percent of RDA: Calcium 30%.
New Product–Documentation: Ad in Vegetarian Times. 1987. June. p. 16 "A tasty option to drinking milk. NO Dairy Allergies! NO Cholesterol! LOW fat and salt! LOW in Calories! It really looks and tastes like milk! Free sample." Similar ad in New Age Journal. 1987. Sept/Oct. p. 92. Spot in Soya Newsletter. 1987. 1(4):6. Talk with Vance Abersold. 1988. March 10. The product was launched in Feb. 1987. See separate interview with him. The calcium fortifiers settle when the milk stands. He used the sodium caseinate because it is a standard ingredient in the food industry, and this ingredient makes the product taste much better. Ad in East West. 1988. Feb. p. 17, and in Vegetarian Times. 1988. March p. 24 and May p. 21. 2/3 page. Picture of a cow with its head through a "No" sign. "Wholesale prices through direct mail. Only $1.25 for 2 quarts... It really looks and tastes like milk." For a "free sample" send $2 to cover shipping and handling. This company gets our "Questionable Product of the Year Award." A product aggressively marketed as non-dairy that contains sodium caseinate made from cow's milk. An incorrect ingredient listing "cereal solids (from corn)" and refusal by the company on two occasions to return phone calls enquiring about this. A "free sample" offer that requires you to send $2. A product that sells for $1.25 per 2 quart package but which requires that you pay an additional $3.00 "processing" fee not included in the company's price comparisons with other products. How deceptive can you get?

5054. Appropriate Foods, Inc. 1987. Eat Appropriately! [Catalog and price list]. 292 Liberty Ave., Brooklyn, NY 11207.



• ***Summary:*** The following lines are carried and distributed: Appropriate Foods, New York Soy Deli, The Soy Source, Emperor's Best, Cedar's Mediterranean Foods, Grainaissance (amazake and mochi), Infinity Foods (amazake puddings), Integrity Baking Co., Jofu, Maine Coast Sea Vegetables, Malka's Foods (Blueberry Tofu Pie), Miso Master, Nasoya Foods, New England Country Dairy, Ray's Seitan Wheat Meat, Soya Kaas, Stonyfield Farms (Yogurt),

Sunshine Burgers. Address: Brooklyn, New York.

5055. *Monthly New Food Products in Japan.* 1987. Puddings: "Tonyu Pudding" from Taishi Shokuhin Kogyo in Japan is a soymilk based pudding. 12(2):15. Feb. *
• ***Summary:*** Free from soybean odors. Address: Japan.

5056. Murata, K.; Kusakabe, I.; Kobayashi, H.; Akaike, M.; Park, Y.W.; Murakami, K. 1987. Studies on the coagulation of soymilk-protein by commercial proteinases. *Agricultural and Biological Chemistry* 51(2):385-89. Feb. [5 ref. Eng]
• ***Summary:*** 17 proteinases from microorganisms, plants, and animals were tested as coagulants for soymilk. Those which did coagulate soymilk were bromelain, papain, trypsin and proteinases from *Bacillus amyloliquefaciens, B. subtilis, B. polymyxa, Streptomyces griseus, S. caespitosus, Aspergillus oryzae, A. sojae, Endothia parasitica, Rhizopus* species, and *Mucor miehei.* Ineffective were rennin, pepsin, and proteinases from *Aspergillus saitoi.* Soymilk clotting activity fell as the pH rose from 5.9 to 6.7. Temperature optima for the enzymes varied from about 50ºC for *Rhizopus sp.* to 85ºC for *Bacillus subtilis* and *B. thermoproteolyticus* and as high as 95ºC for papain. Address: Research Development Sect., Kibun Food Chemifa Co. Ltd., Takinogawa 7-38-15, Kita-ku, Tokyo 114, Japan.

5057. **Product Name:** Calci-Fu Non-Dairy Tofu Milk Drink.
Manufacturer's Name: Nature's Plus. Div. of Natural Organics, Inc.
Manufacturer's Address: 10 Daniel St., Farmingdale, NY 11735. Or Long Beach, California. Phone: 213-494-2500 or 516-293-0030.
Date of Introduction: 1987. February.
Ingredients: Incl. calcium.
Wt/Vol., Packaging, Price: 19 gm individual serving packet retails for $0.95, or 22-serving can retails for $8.95.
How Stored: Shelf stable.
New Product–Documentation: Product Alert. 1987. April. Soya Newsletter. 1987. March/April. p. 7. A dry mix, fortified with 1200 mg of calcium per serving. Talk with company. 1988. Feb. 17. Product is still being sold.

5058. **Product Name:** Calci-Fu Non-Dairy Tofu Chocolate Shake.
Manufacturer's Name: Nature's Plus. Div. of Natural Organics, Inc.
Manufacturer's Address: 10 Daniel St., Farmingdale, NY 11735. Or Long Beach, California. Phone: 213-494-2500 or 516-293-0030.
Date of Introduction: 1987. February.
Wt/Vol., Packaging, Price: 25 gm individual serving packet retails for $0.95, or 22 serving can retails for $9.95.
How Stored: Shelf stable.
New Product–Documentation: Product Alert. 1987. April. Soya Newsletter. 1987. March/April. p. 7. A dry mix, fortified with 1200 mg of calcium per serving. Talk with company. 1988. Feb. 17. Product is still being sold.

5059. Sakai, K.; Tachiki, T.; Kumagai, H.; Tochikura, T. 1987. Hydrolysis of α-D-galactosyl oligosaccharides in soymilk by α-D-galactosidase of *Bifidobacterium breve* 203. *Agricultural and Biological Chemistry* 51(2):315-22. Feb. [41 ref]
• ***Summary:*** The bacterium *Bifidobacterium breve,* isolated from human feces, grew well on soymilk, assimilating the oligosaccharides stachyose and raffinose in preference to sucrose, and causing the pH to fall to 4.0 resulting in solidification of the soymilk medium. Alpha-D-galactosidase was isolated from *B. breve,* which had pH and temperature optima at 5.5 and 50ºC, respectively and was capable of hydrolyzing all the galactosyl compounds present in soymilk. Address: Dep. of Food Science & Technology, Kyoto Univ., Kyoto 606, Japan.

5060. **Product Name:** [Soymilk Pudding].
Foreign Name: Tônyû Pudingu.
Manufacturer's Name: Taishi Shokuhin Kogyo K.K.
Manufacturer's Address: Kawamorita, Aza Okinaka 68, Santo-machi, Santo-gun, Aomori-ken 039-01, Japan.
Date of Introduction: 1987. February.
New Product–Documentation: Monthly New Food Products from Japan. 1987. 12(2):15. Feb. "Puddings: 'Tonyu Pudding' from Taishi Shokuhin Kogyo in Japan is a soymilk based pudding." The product is free from soybean odors.

5061. Atkinson, Harold. 1987. Re: Plamil Foods firsts. Letter to William Shurtleff at Soyfoods Center, March 12. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Plamil Foods Limited was the first: (1) Vegan company in the U.K. (2) To introduce soya milk in concentrated form in the U.K. (3) To sell soya milk concentrate commercially anywhere to our knowledge. (4) To market soya milk in personal portions (mini pots) anywhere. (5) To produce a dessert chocolate confection with soya. (6) To produce an organic rice pudding in the U.K.

Note: The letterhead reads: Plamil–Pioneers of British made soya milk since 1965. An independent company specializing in non-animal health foods. The word "Plamil" is green, and the rest of the words on the letterhead are chocolate brown. Address: Secretary, Plamil Foods Ltd., Plamil House, Bowles Well Gardens, Dover Rd., Folkestone, Kent CT19 6PQ. Phone: 0303 58588.

5062. Brown, Judy. 1987. Suiting America's tastebuds: The new American soyfoods. *Whole Foods.* March. p. 37-40, 42-43. [1 ref]

• ***Summary:*** An overview, drawing heavily (with acknowledgment) on Shurtleff & Aoyagi's *Soyfoods Industry and Market* for statistics. Address: Alban & Associates, San Francisco, California.

5063. **Product Name:** Chocolate Fiber Float.
Manufacturer's Name: Energy Factors, Inc.
Manufacturer's Address: 8300 Ulmerton Road #A-2, Largo, FL 34641. Phone: 800-654-2347.
Date of Introduction: 1987. March.
Ingredients: Calcium caseinate, tofu, soy protein, cellulose (insoluble fiber), fructose, lecithin, bee pollen, papaya, carob, natural flavors, vitamins, minerals.
Wt/Vol., Packaging, Price: 12 oz.
How Stored: Shelf stable.
Nutrition: Per serving (2 heaping teaspoons): Calories 55, fiber 1.6 gm, carbohydrates 6.4 gm, protein 3.0 gm, fat 2.4 gm.
New Product–Documentation: Label. 1987. Brown on white. "Protein and fiber in its most delicious and satisfying form. Calcium enriched nutritional fiber drink with tofu & guar." Interview with Susan VerHage of EFI. 1987. Sept. 14.

5064. Jacobs, Leonard. 1987. All-American soymilk. This popular Oriental import is now being made in the U.S. *East West.* March. p. 22-23.
• ***Summary:*** Discusses U.S. ventures of American Soy Products (Edensoy), Great Eastern Sun (Ah Soy), Health Valley, and Westbrae. Great Eastern Sun found a manufacturer of soymilk in Minnesota that uses a patented process to eliminate the beany flavor. They aseptically package in quart containers. Health Valley purports to make their soymilk in California.

5065. Marty, Denise. 1987. Les dérivés de soja, un marché pour les Pme [Products derived from soya, a market for the small- and medium-sized companies]. *Agro Industries* No. 26. p. 40-41. March. [Fre]
• ***Summary:*** "At SIAL this year, 5 soyfoods companies will present their products. For a sector this small, this is important, and it indicates that the sector is in full growth." Four companies are Soy, Sojadoc, Daizou, and Lima N.V. Daizou was created in 1985 by the Japanese restaurant Le Bol en Bois, one of the first to sell tofu in France. Daizou makes only 50-100 tonnes/year of specifically Japanese products. The Société Soy, founded in 1980 [sic, actually 1982], is busy transforming tofu into new foods. This year it launched the new tofu yogurt-like dessert Soyeux. Its new plant at St. Chamond (Loire) has a capacity of 7 tonnes/day of tofu, or 1,500 tonnes/year. In June 1986 the society Sojadoc in Albi took the same step, changing from an artisans production of 10 tons/year of tofu to large scale (1,500 tonnes/year) production of tofu and soymilk over the next 3 years from an investment of 12.5 million French francs. Lima-France, affiliate of a Belgian company, is at Lot-et-Garonne. Jan Kerremans is their miso master, making about 70 tonnes a year.

In 1983 about 10 million liters of soymilk were consumed in Europe, compared with 30,000 million liters of dairy milk. Guy Coudert of the European Soyfoods Association estimates that by the year 2000 some 25,000 tonnes/year will be consumed in France. Address: France.

5066. **Product Name:** Instant Tofu Mix (Makes GDL Silken Tofu).
Manufacturer's Name: Mikado Foods Inc.
Manufacturer's Address: 4710 41st St. N.W., Washington, DC 20016.
Date of Introduction: 1987. March.
Ingredients: Soymilk powder, glucono delta-lactone coagulant.
Wt/Vol., Packaging, Price: 2.29 oz foil packet in a paperboard box. Makes 600-700 gm tofu.
How Stored: Shelf stable.
New Product–Documentation: News (Beloit, Wisconsin). 1987. March 10. "Make Fresh Tofu at Home." Add water, cook for 5 minutes, add coagulant, let stand for 30 minutes in any shaped container. Sold mail order.

5067. *Prepared Foods* (*Chicago*). 1987. Non-dairy tofu products [from Rose International]. March.
• ***Summary:*** Rose International's tofu ingredients used in a range of "dairy" applications: dry tofu soft-serve mix powders (just add water), frozen tofu dessert concentrate, soy yogurt, tofu imitation cheeses and soymilk. "Soy-O" yogurts have been marketed under license from Rose.

5068. Shurtleff, William; Aoyagi, Akiko. 1987. The Vitasoy success story. *Vitasoy Vitabrations* 1(1):3-6. March.
• ***Summary:*** A condensed history of Hong Kong Soya Bean Products Co., Ltd. and Vitasoy, adapted (without permission) from Shurtleff and Aoyagi. 1984. Soymilk Industry and Market. p. 130-153.

Photos show: (1) Portrait of K.S. Lo, the founder of Vitasoy. (2) Aerial view of the Vitasoy plant in Aberdeen, Hong Kong. (3) Three Hong Kong children sipping Vitasoy from glass bottles (shaped like soft-drink bottles) with straws. (4) State of the art Vitasoy packaging equipment at work. (5) A carton of Vitasoy Creamy Original Natural Soy Drink (250 ml). Address: Soyfoods Center, Lafayette, California.

5069. Soyatech. 1987. Soyatech launches Soya Newsletter (News release). 318 Main St., P.O. Box 84, Bar Harbor, ME 04609. 3 p. March.
• ***Summary:*** "'Retail sales in the soyfoods industry have risen from $20 million in 1978 to nearly $150 million in 1986,' said Soyatech President Peter Golbitz, 'yet no one

was covering the industry in a way that could provide professionals in the marketplace with concise, accurate and timely information. During 1986 alone, over $30 million was invested in the soyfoods industry in the U.S. and at least 60 new products were introduced into the marketplace. Based on our own work and research, I believe that retail sales of soyfood products will hit $500 million by 1990 and will easily top $1,000 million within a decade.'"

"Peter Golbitz and Sharyn Kingma, principals of Soyatech, founded Island Tofu Works in 1979. A regional manufacturer and distributor of tofu and tofu products, within 3 years, the company had become the largest producer and distributor of tofu and tofu-related products in northern New England. 'We stopped producing tofu in 1984,' said Kingma, 'because ITW's growth required that we move our operations out of Maine'... Over the past years, Soyatech has developed a number of new tofu products including non-dairy frozen desserts, puddings and milk drinks, and tofu-based salad dressings, cheese and meat substitutes."

Note 1. Concerning the date that Island Tofu Works was founded: In a 1986 leaflet titled "Market Research and Product Development Specialists for the Soyfoods and Health Foods Industry," Island Tofu Works gave its founding date as 1980.

Note 2. The term "northern New England" apparently refers to Maine, New Hampshire, and Vermont. It must exclude Massachusetts, where two much larger tofu manufacturers (Tomsun and Nasoya) are located.

Note 3. According to *Soyfoods Industry and Market* (4th ed., 1984) retail sales of soyfoods in the USA were valued at $465.2 million in 1983 and growing at about 10% a year. Thus the prediction that they will reach $500 million by 1990 is puzzling. Address: Bar Harbor, Maine. Phone: 207-288-4969.

5070. **Product Name:** SoYummy (Soy Ice Cream) [Pineapple, Lychee, Passion Orange, Hauupia (Coconut), Chocolate Macadamia Nut, or Guava].
Manufacturer's Name: Soyworld, Inc.
Manufacturer's Address: 819 Cedar St., Honolulu, Oahu, HI 96814. Phone: 808-537-9988.
Date of Introduction: 1987. March.
How Stored: Frozen.
New Product–Documentation: Berglund. 1987. Star-Bulletin (Honolulu, HI). March 1. "Hawaii's first homegrown, non-dairy, premium frozen dessert." They use distinctly Hawaiian flavors.

5071. STS–Soya Technology Systems Ltd. 1987. Soymilk in brief: A case that makes sense. 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 53 p. March. Illust. 21 cm. [9 ref]
• ***Summary:*** A revised edition of their "Soymilk" (1982). A Chinese edition was published at the same time. Contains some material reprinted from other sources without permission.

Contents: The soybean–a few facts. History of the soybean. Uses of soybean. History of soymilk. Varieties of soymilk. Flavor of soymilk. Basic soymilk production methods. Principles of soymilk production. Nutritional aspects of soymilk. Flowchart of soymilk plant. Soymilk today. Soymilk tomorrow. Food for thought. Soymilk glossary. Structure of soybean. Conversion table. Major foods from soybean. References. Address: Singapore.

5072. STS–Soya Technology Systems Ltd. 1987. Membrane filtration for soymilk products. 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 8 p. March.
• ***Summary:*** Contents: Membrane filtration. Ultrafiltration. Reverse osmosis. Membrane structure/membrane material. Membrane filtration in the food industry. Application of ultrafiltration to soymilk base. Why use ultrafiltration? Products. Concentration of soymilk. Concentration of acidified and coagulated soymilk. Yields. Spreads. Processed tofu/soy paneer. Soy cheese. Production processes for soy spreads, processed tofu, and soy cheese. Processing plant for UF processed tofu. Example of material balance for processed tofu. Address: Singapore.

5073. Vitasoy (USA) Inc. 1987. Vitasoy brings you a new exciting flavor (Ad). *Vegetarian Times.* March. Inside front cover. No. 115.
• ***Summary:*** This full-page color ad shows a large carton of Vanilla Delite–the new flavor. Existing flavors are Creamy Original, Rich Chocolate, and Carob Supreme. Address: San Francisco, California 94107.

5074. *Vitasoy Vitabrations.* 1987. Vitasoy celebrates 50 years of soymilk pioneering. 1(1):1. March.
• ***Summary:*** "From its conception in 1937, Vitasoy became the world's pioneer in soymilk manufacturing and marketing... To celebrate its 50th anniversary of soymilk pioneering in March 1987, Vitasoy is proud to inaugurate its fifth manufacturing facility in Hong Kong's New Territories. The $20 million plant, occupying 370,000 square feet and equipped with state of the art soymilk processing equipment, has a daily capacity of 1.2 million Tetra Pak units." An illustration (line drawing) shows the new plant.

Note: This article is inaccurate and misleading. First, Vitasoy was not the "world's first pioneer in soymilk manufacturing and marketing." Dr. Harry W. Miller, for example, had a thriving and very innovative soy dairy in Shanghai in 1936, and in Mt. Vernon, Ohio, in 1939. Second, Vitasoy was not founded until 1939, and production began in 1940. The 50th anniversary should be celebrated in 1989 or 1990. Third, less than half of the 1.2 million units capacity of the new plant is used for soymilk. Address: P.O. Box 77321, San Francisco, California 94005.

5075. *Vitasoy Vitabrations.* 1987--. Serial/Periodical. San Francisco, California: Vitasoy (U.S.A.) Inc. Vol. 1, No. 1. March 1987. Frequency: Quarterly.
• ***Summary:*** A three-color newsletter (red, black, and blue). The first issue is 8 pages. The third (and last?) issue (fall 1988) is 4 pages. Address: 435 Brannan St., San Francisco, California 94107.

5076. Sugimoto, Naotsugu; Torii, K.; Tanahashi, Y.; Morita, H.; Watanabe, Y.; Yamamoto, K.; Kainuma, T. Assignors to Takara Shuzo Company, Ltd. (Kyoto, Japan). 1987. Soybean milk-containing alcoholic beverages. *U.S. Patent* 4,656,044. April 7. 4 p. Application filed 1 Aug. 1985. See also Japanese Patent 84-165741 (FSTA 84-08-09). [7 ref]
• ***Summary:*** These alcoholic beverages may contain fermented soymilk, acid soymilk, or a mixture of the two, plus alcohol and high methoxylpectin. This beverage does not result in the formation of precipitates. Address: 1&7. Kyoto; 2-4. Ootsu; 5. Muko; 6. Osaka. All: Japan.

5077. *Soybean Update.* 1987. ASA's Human Nutrition Center in Mexico reports that Nutrimex is increasing its use of full-fat soy flour in foods and beverages. April 27.
• ***Summary:*** It introduced "nutrillas"–wheat tortillas made with 10% full-fat soy flour. "Other Nutrimex products made with full-fat soy flour include baby food, rice cereal, beans and beverages." They are available in 16,000 government-managed CONASUPO grocery stores. CONASUPO is the Mexican government's purchasing agent.

5078. Alfa-Laval South-East-Asia Pte. Ltd. 1987. Food Processing Research & Development Centre (Leaflet). Singapore. 2 panels each side. Each panel: 30 x 21 cm. April.
• ***Summary:*** A glossy color leaflet. Within the centre is a complete Soy Pilot Plant which includes grinding, fiber separation, deaeration and deodorization. "Starting from dry or soaked [soy] beans a soybase product can be produced. The base can then be further processed to soymilk, soy yoghurt, tofu, etc. Also other types of raw materials than soybeans can be used." A moderate fee is charged to use the 600 square meter centre. Contains many color photos of the equipment, soymilk, and several packages.

Note 1. Letter from Monica Kjellker Gimre, R&D manager, Alfa-Laval, Singapore. 1990. Sept. 3. This undated leaflet was first published in April 1987.

Note 2. This is the earliest English-language document seen (Aug. 2013) that uses the word "soybase" to refer to a concentrated form of soymilk, containing 9-12% total solids / dry matter, from which regular soymilk or soymilk products can be made by adding water, flavors, sweetener, etc. Prior to this time, Alfa-Laval used the term "soybean extract" instead of soy base. Address: R&D manager, Alfa-Laval South East Asia Pte. Ltd., 11 Joo Koon Circle, Singapore 2262. Phone: 86 22 711.

5079. Australian College of Paediatrics. 1987. Policy statement: Soy protein formula. *Australian Paediatric Journal* 23(2):83-84. April. [6 ref]
• ***Summary:*** "There are some well characterized disorders caused by cow's milk protein intolerance (CMPI), but there is also a range of vague signs and symptoms... The rationale for the use of soy formulae is the assumption that soy protein is less antigenic than cow's milk protein and thus should be used in the treatment of CMPI or prophylactically in patients at high-risk for developing CMPI... It seems that soy formula is inappropriate even in cases of proven CMPI because of its ability to cause allergic reactions. In cases of true gastro-intestinal CMPI, use of protein which has been hydrolysed to the point that it is no longer antigenic, is preferred. When all the clinical manifestations of CMPI have resolved, a soy formula may be introduced to test the child's sensitivity to it. If tolerated, it could replace the protein hydrolysate.

"It should not be assumed that all soy formulae are similar. The carbohydrate content differs in each of the 3 commonly available preparations (Isomil: sucrose 44%, corn syrup solids 56%; Prosobee: corn syrup solids 100%; Infasoy: sucrose 25%, corn syrup solids 75%). Sucrose is not the preferred carbohydrate in infancy because of its effect on teeth, development of eating habits and the fact that sucrose malabsorption can occur after gastroenteritis. Thus, if soy formulae are used, preference should be given to those low in sucrose." Address: Australia.

5080. Business Communications Co., Inc. 1987. Mass merchandised "healthy" foods. 25 Van Zant St., Norwalk, CT 06855-1781. 162 p. April. Price: $1,500.
• ***Summary:*** In this expensive ($1,500) market study, there is a chapter titled "The Soyfoods Market," which has the following segments: Summary of market segment. The tofu market. Soy-based frozen desserts. Soy-based beverages. Soy-based yogurt-like products. Other soy-based prepared foods. Fermented soy products. "A move toward the consumption of convenient, good-tasting foods with a healthful image is the food trend of the eighties. There is a strong relationship between healthful foods and the consumer's need for convenience. In the future, food manufacturers can expect the growth of 'healthy' foods to outpace that of the total food market, as more consumers pursue a healthful lifestyle...

"BCC defines the 'healthy' food market as those segments of food categories that are generally accepted by the consumer as having a healthful image. Total retail sales of all product segments included in this analysis were estimated to have reached $88 billion in 1986." Address: Norwalk, Connecticut. Phone: 203-853-4266.

5081. Golbitz, Peter. 1987. Aseptic and retort soymilk

enters new era. Sales flat in '86. Forecast up for '87. *Soya Newsletter* (*Bar Harbor, Maine*). March/April. p. 1, 8-9.
• ***Summary:*** An important update on the U.S. soymilk industry and market. Estimated U.S. aseptic and retort soymilk sales for 1983-87 (in gallons) are 1983 250,000; 1984 600,000; 1985 750,000; 1986 650,000; 1987 1,800,000 (projected). Average retail prices per gallon rose steadily from $12.50 in 1983 to $18.00 in 1986, but are projected to have dropped to $8.00 in 1987. The jump in production combined with the drop in prices may lead to little or no increase in income. Companies and brands discussed are Eden Foods' Edensoy, Vitasoy, Great Eastern Sun's Ah-Soy, Westbrae Natural Foods' Malteds and West Soy, Health Valley's Soy Moo, Mitoku's Supersoy. No sales or production figures are given for individual companies. Address: Soyatech, Bar Harbor, Maine.

5082. *INTSOY Newsletter* (*Urbana, Illinois*). 1987. INTSOY to focus on processing and utilization. No. 35. p. 2. April.
• ***Summary:*** INTSOY has recently begun working under a new 5-year collaborative agreement with USAID to continue improving human nutrition around the world through increased use of soybeans. [Pressure from the American Soybean Association (ASA) has forced INTSOY to discontinue its soybean variety development (ISVEX) work.] "The new program will have three phases. The first is research on new methods to process whole soybeans and make new products. The second phase will be to develop simple how-to manuals and equipment lists for entrepreneurs wanting to invest in the production of soy products. The third phase will include limited on-site technical assistance for governments and private firms in less developed countries.

"INTSOY's current research efforts are concentrated on extrusion cooking, low-cost oil extraction by combining extrusion cooking with mechanical expellers, new soy milk processing techniques, development of immature green soybeans as a commercial product, improved home-level procedures for preparing soybean foods, and new processes for converting soybean residues into animal feed.

"The research program is under the overall direction of emeritus food science professor Alvin I. Nelson. Individual project coordinators are Wilmot Wijeratne for extrusion and oil expelling, Sing-Wood Yeh for soy milk processing... The state of Illinois has recently provided the university with almost $500,000 to completely remodel the current pilot plant and laboratories. When the remodeling is finished in 1988, INTSOY and the University of Illinois will undoubtedly have the best facilities in the world for conducting research on the processing of whole soybeans."

5083. *INTSOY Newsletter* (*Urbana, Illinois*). 1987. Visit prompts commercial Caribbean soyfoods venture [Hope Lopez of Nature Treats in Kingston, Jamaica]. No. 35. p. 3. April.
• ***Summary:*** Actual marketing of soyfood products is scheduled to begin by the spring of 1987. Ms. Lopez, who runs a food store, is especially interested in soy milk and in ways to increase the use of soy flour obtained from extrusion cooking.

5084. *Missions Impact* (*Huntington, Indiana*). 1987. Dr. Y.T. Chiu reaches 97th birthday. April. p. 1.
• ***Summary:*** A concise biography of Y.T. Chiu, whose birthday is April 14, and who now lives at 510 N. Sunset Canyon Dr., Burbank, California 91501. He received his doctorate at Cornell University [Ithaca, New York] "for his work associated with finding a process for making milk substitute from soybeans." A photo shows him in 1960. Address: United Brethren Dep. of Missions, 302 Lake St.

5085. Rahman, Majeedah. 1987. Belize nutrition education project. Project Coordinator, 526 44th St., Oakland, CA 94609. 5 p. April. Unpublished manuscript.
• ***Summary:*** The most complete report on this proposed project and its origins. Dr. B.K. Rai of the Caribbean Agricultural Research and Development Institute (CARDI, a non-profit, non-governmental organization working to promote agriculture in the Caribbean), has done research on soybeans and is enthusiastic about the nutritional benefits of soyfoods. He is based in Belmopan. Address: Project Coordinator, Oakland, California.

5086. Robeznieks, Andis. 1987. The perfect food? Not everyone agrees. *Vegetarian Times*. April. p. 37-39, 44, 54. [5 ref]
• ***Summary:*** Overview of the problems with animal milks. Calcium absorption is impaired by "excessive dietary fat" and large amounts of animal protein. 49% of whole milk's and 31% of low-fat milk's calories come from fat. The best ratio of calcium to phosphorus is 2:1 but milk's is 1:1. Pasteurization destroys 25% of the vitamin B and makes calcium difficult to absorb. 1987's milk surplus cost $6,400 million.

5087. **Product Name:** Sanitarium Health Foods So Good: The Non-Dairy Soy Drink (Soymilk).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.
Date of Introduction: 1987. April.
Ingredients: Soya isolate, vegetable oil, maltodextrin, sugar, mineral salts [incl. calcium] (332, 229, 340, 504, 509), vitamins (101, 301), water added.
Wt/Vol., Packaging, Price: 250, 500, or 1,000 ml in Combibloc Aseptic carton.
How Stored: Shelf stable.
Nutrition: Water 86.4%, soya extracts 4.1%, vegetable oil 3.5%, maltodextrine 3.3%, sugar syrup 1.7%, mineral

salts and vitamins. Percentage of RDA per 600 ml: Calcium 700 mg/100%, vitamin B-12 1.8 mcg/90%, riboflavin 1.0 mg/65%, iron 3 mg/30%.

New Product–Documentation: Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. This company makes its own brand, which is economically priced. Label (photocopy). 1987, undated. "The non-dairy soy drink. Cholesterol free. Lactose free. Long lasting." Manufacturer's catalog. 1989. "Juices and Drinks: The newest introduction into this drink category is So Good, a soy-based drink which is designed as an alternative to milk. This is particularly popular with those who have a lactose sensitivity and a need to reduce the cholesterol intake. It is made to a Sanitarium-inspired formula from soy isolate (the protein component in the soya bean) and has the distinct advantage of having a calcium level equivalent to that of cow's milk."

The Supermarket Circle. 1988. "So Good was awarded a 'Golden Sial' award or 'Food Oscar' at the AIDA-SIAL '88 International Oscars, judged in Paris on June 10. The Oscars is a bi-annual competition between 16 nations, including Canada, Great Britain, Italy and the USA. Each country presents products in 7 food and beverage categories: Grocery, alcoholic drinks, non-alcoholic drinks, dairy, deep-frozen, meat/poultry and delicatessen.

"The retail trade in each country nominates the representative products. With outstanding sales success since its launch by Sanitarium in 1987, Australia's retailers nominated So Good to represent the country in the 'non-alcoholic drinks' category."

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. A color illustration on the front of the package shows a glass of soymilk by a bowl or cereal on a table in front of a window facing a stylized rural landscape with the sun rising behind rolling hills. Green. blue, brown, and white. Subtitle: "The non-dairy soy drink. Cholesterol-free. Lactose-free. Long lasting."

Technique Laitiere & Marketing. 1988. No. 1034. Nov. p. 61. Gives nutritional composition. p. 65 So Good is an Australian soymilk product which won the 1988 SIAL gold medal (SIAL d'Or 88). SIAL is the International Food and Dairy Exhibition in Paris.

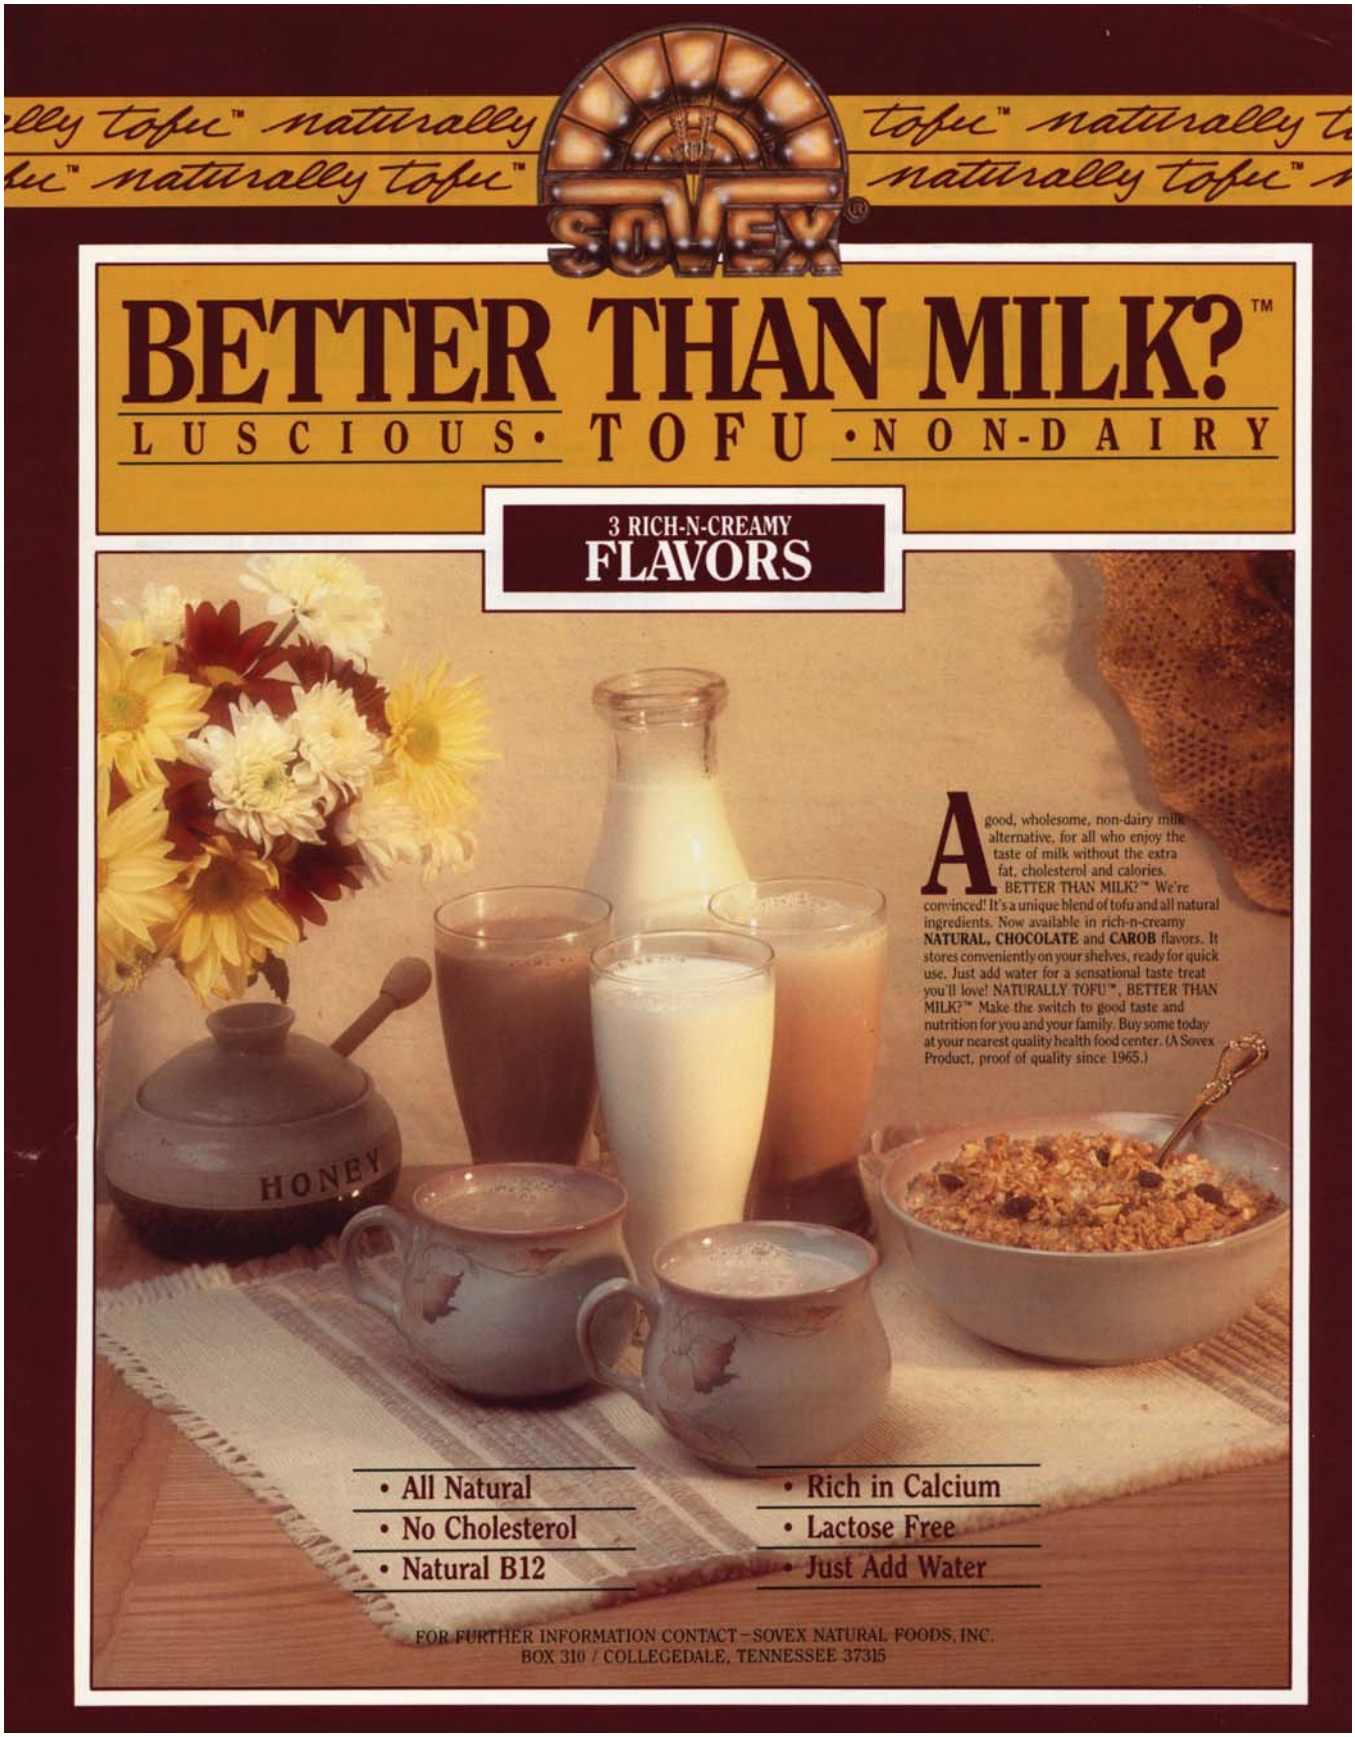
Sanco News. 1988. Dec. "Now the world thinks we're as good as gold: The Gold Food Oscar for So Good."

Talk with Eric C. Fehlberg, director International Health Food Assoc. 1990. March 7. So Good has had remarkable success in the past few years. Sanitarium Food Co. was the first to make soymilk in Australia. It caught on rapidly, and soon prompted 4-5 competing brands to be launched, but none of them have sales nearly as large as So Good. The main problem has been the company's inability to produce enough to keep up with demand. It was launched in April 1987. In Oct. 1989 they sold 1,738 long tons (2,240 lb/ton). The equipment used to produce the soymilk is Adventist technology, not that purchased from Alfa-Laval, STS, etc. Originally the product was packed under contract by a nearby dairy company in Combibloc cartons. After a year or so they purchased their own Combibloc packaging machine. Sanitarium Foods has a very strong research lab.

Sanitarium Nutrition Education Service. 1990. April. "So Good." This 4-page leaflet gives a clear explanation of each ingredient used, plus nutritional and other information.

According to competitors, in 1991 Sanitarium's So Good was Australia's leading soymilk product. But the fact that it is made from soy protein isolates rather than whole soybeans is considered a drawback by the natural foods market. Sun Gold is another major soymilk product.

5088. **Product Name:** Better Than Milk? (Powdered Tofu-Soymilk Blend) [Natural, Chocolate, or Carob].
Manufacturer's Name: Sovex Natural Foods, Inc. (Marketer-Distributor).
Manufacturer's Address: 9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320.
Date of Introduction: 1987. April.
Ingredients: Natural: Maltodextrin, soy oil, calcium carbonate, dehydrated tofu, sodium caseinate [from cow's milk], sea salt, natural flavor, cyanocobalamin (vitamin B-12).
Wt/Vol., Packaging, Price: 27 or 21 oz can with reusable plastic lid.
How Stored: Shelf stable.
Nutrition: Per 8 fl. oz (liquid): Calories 90, protein 2 gm, carbohydrates 10 gm, fat 5 gm, cholesterol 0 mg, sodium 120 mg, lactose 0 mg.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1987. June. p. 20. "Better than milk?" Ad in Bestways. 1987. July. p. 9; Sept. p. 12. 8½ by 11 inches. Color. "Tofu naturally. Luscious tofu non-dairy. 3 rich-n-creamy flavors. Rich in calcium. Just add water."



Ad in Natural Foods Merchandiser. 1989. Sept. p. 50. "Better than milk?"

Label sent by Maryann Brkich of Walnut Creek, California. 1992. Oct. 14. 6.75 by 13 inches. Brown, yellow, white, and black. Photo of a glass of milk and a small bottle of milk on a breakfast table next to a bowl of cereal. "Naturally Tofu. Delicious Tofu Non-Dairy. Rich-n-Creamy Natural. Makes 8 quarts. All natural. No cholesterol. Natural B-12. Rich in calcium. Lactose free. Just add water. Scoop inside." The 21 oz can now retails for $8.95. Sovex is now at Box 2178, Collegedale, Tennessee 37315.

5089. *Soya Newsletter* (*Bar Harbor, Maine*). 1987. Vitasoy Vitabrations debuts. March/April. p. 4.
• ***Summary:*** The company published the first edition of its quarterly newsletter in March 1987.

5090. **Product Name:** [Soyastern Soya Drink].
Foreign Name: Soyastern Soya Drink.
Manufacturer's Name: Soyastern Naturkost GmbH.
Manufacturer's Address: Osteratherstr. 26, 5000 Koeln 60, West Germany.
Date of Introduction: 1987. April.
Ingredients: Wasser, Sojabohnen aus kontrolliert biologischem Anbau.
Wt/Vol., Packaging, Price: 500 ml.
New Product–Documentation: Label. 1987, undated. 7 by 3 inches. Black on white and blue. "A natural soy protein drink, cholesterol-free, unsweetened. Produced traditionally, not deodorized or sterilized, no artificial flavors. As with all high-quality natural foods, this fresh product must be refrigerated." Letter from Thomas Karas. 1989. April 21. "We started to produce this Soy Drink in April 1987 as a fresh product, but stopped soon because of sanitation problems. Nevertheless we will try again soon, because now we have a new production plant on a higher standard."

5091. *Soyfoods* (*ESFA*). 1987. News from the world: Australia. 1(2):26. April. [Eng]
• ***Summary:*** "The word 'milk' associated with soya proteins is not in accordance with the rules of the Codex Alimentarius according to which milk is from bovine origin. Arguing from it, The Australian Dairy Farmers Federation has won its case with the Australian authorities for banning the word 'soybean milk' on packages and advertising. The only concession (?) made to the soyfood producers consists in the utilisation of the expression 'milk imitation'."

5092. *Tetra Pak Age*. 1987. Ah Soy quenches thirst for American soy beverage drinkers. 5(1):4. Spring.
• ***Summary:*** In Feb. 1987, after 16 months of product development and packaging research, the new Ah Soy in a Tetra Brik carton hit the shelves. There are 3 new flavors: American Original, French Vanilla, and Dutch Cocoa. The quart size retails for just under $2 each and the 8 oz size for about $0.69. Advantages over foil pouches: the latter can't be stacked on the shelf. Freestanding retail displays are all but impossible. Once opened, the pouches tend to slump and spill.

5093. Vandemoortele, Philippe. 1987. Editorial. *Soyfoods* (*ESFA*) 1(2):2. April. [Eng]
• ***Summary:*** "Since Alpro Belgium pioneered a new soymilk six years ago, many things have changed. The new soya milk with a nice taste and a high nutritional value of 3.6% protein attracted a lot of consumers. In a few years, the total European market increased from 500,000 litres to the today's estimation of 15 million litres. But also the number of producers grew and companies such as Celnat (France), Sapov (France), Soya Health Food (England), Soyana (Switzerland), DE-VAU-GE (Germany) and recently Cacoja (France) started to produce soya milk. The total capacity of the 4 largest producers amounts to 60 million litres which is 4 times more than the market volume...

"We are on the verge of a boom for soyfoods. Manufacturers will need the technology to make quality soymilk, tofu and other soyfoods... But this will not be enough; marketing is essential to make sure that our products fill a need and please the consumer."

5094. Chaware, Dilip. 1987. The soya substitute [Great Shake from Noble Soya House]. *Evening News* (*Bombay*). May 1.
• ***Summary:*** "The flavoured soya milk introduced by the Noble Soya House in the city this week will be followed by various soya products in due course, according to company chairman Adi Godrej." Great Shake has been marketed in Delhi, Hyderabad, Pune, Bhopal, and Indore. Noble House is a private limited company; Godrej and the Great Eastern Group each own 25%, the rest is publicly owned. Address: India.

5095. Lo, K.S. 1987. Re: Congratulations on birth of your first child. Yixing teapot. Letter to William Shurtleff at Soyfoods Center, May 1. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "I am in receipt of your card announcing the birth of your first child in February this year. Elizabeth and I would like to extend to you and Akiko our heartiest congratulations! With a birth weight of 8 lbs., it is certainly a big and husky baby which proves that a mother of vegetarian diet is at least equal if not superior to the average American diet of meat and vegetables. I presume he will be brought up on a vegetarian diet as well.

"I am interested to know how your Soya Bean Data Base Centre is progressing. Recently I have been receiving a Newsletter called *Soya* which is entirely devoted to reporting new related to soya products now marketed in the States. I

find it to be very informative...

"Yvonne is right now in Hong Kong. She came here for our annual meeting and discussion concerning our marketing activities in the States... I have asked her to bring you a Yixing teapot as a gift for the baby, as I hope he will grow up to be a tea drinker..."

"With best wishes to you and Akiko!

"Sincerely yours, K.S. Lo." Address: HKSBPC Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong.

5096. **Product Name:** [Bio Mets Athanor Vegetable Blanquette (Tempeh Stewed in White Sauce)].
Foreign Name: Bio Mets Athanor Blanquete Végétal.
Manufacturer's Name: Athanor SARL.
Manufacturer's Address: ZAE La Biste "Atelier 9," 34670 Baillargues, France. Phone: 67 87 0608.
Date of Introduction: 1987. May.
Ingredients: Tempeh, carrots, onions or leeks, mushrooms, soymilk, apple cider, arrowroot, sunflowerseed oil, aromas, unrefined seasalt.
Wt/Vol., Packaging, Price: 250 gm plastic tray in a paperboard box. FOB price 12.95 FF.
How Stored: Refrigerated.
Nutrition: Per 100 gm: Calories 171, lipids 15.9 gm, protein 4.2 gm, carbohydrates 2.7 gm.
New Product–Documentation: Label. Received 1988. May. Paper box, 5.5 by 4 by 1 inches. Multi-colored illustration of blanquette on front panel with sun logo. "100% Plant Protein. Preparation based on tempeh and vegetables. Ready in several minutes."

5097. Chan, G.M.; Leeper, Linda; Book, L.S. 1987. Effects of soy formulas on mineral metabolism in term infants. *American J. of Diseases of Children* 141(5):527-30. May. [19 ref]
Address: Div. of Neonatology, Univ. of Utah, Salt Lake City.

5098. Chikaarashi, Shigeru. 1987. Tônyû seizô ni kôteki na shokuhin no seihô to seizô sôchi [The process and equipment used for making an ideal foodstuff for use in producing tofu]. *Japanese Patent* 61-48900. 1,378,742. 3 p. [Jap]
• ***Summary:*** A patent for making whole (non-defatted) soy flakes, which can then be used in making soymilk or tofu. The last page contains a detailed diagram of the equipment. Address: Shin-Kotoni 6-jô, 2-6-17, Kita-ku, Sapporo, Japan.

5099. Derman, D.P.; Ballot, D.; Bothwell, T.H.; MacFarlane, B.J.; Baynes, R.D.; MacPhail, A.P.; et al. 1987. Factors influencing the absorption of iron from soya-bean protein products. *British J. of Nutrition* 57(3):345-53. May. [32 ref]
• ***Summary:*** Iron absorption was significantly greater from a milk formula (1.5 gm protein) that it was from a soy-based formula made with isolated soy protein (2.3 gm protein), with geometric mean values of 0.083 and 0.044 respectively. When ascorbic was added at a level such that the ascorbic acid to iron ration was 20 to 1, the absorption of iron from the soy-based formula was increased 2-3 fold. Address: Joint Univ./South African MRC Iron and Red Cell Metabolism Unit, Dep. of Medicine, Univ. of Witwatersrand Medical School, 7 York Rd., Parktown, Johannesburg 2193, South Africa.

5100. *Florida Restauranteur* (*Hollywood, Florida*). 1987. David Mintz. The Prince of Tofu. May.
• ***Summary:*** "In 1972, while searching for a milk substitute for kosher desserts, pastries, pies, and sauces, David Mintz discovered this soy bean product... For nine years, Mintz worked in the back kitchen of his store creating tofu recipes. After developing a cookbook full of dishes using tofu... Mintz invented Tofutti, which he introduced to the public in 1981."

5101. Fuerst, Judith. 1987. Bernie and the beanstalk. From a simple start in soybeans, Bernie Souphanavong's Northland Soy has grown into a multi-product manufacturer and distributor. *Alaska Business Monthly.* May. p. 16-17.
• ***Summary:*** Bernie began producing tofu in 1980. Now he also makes soy sprouts and soymilk. Born in Laos, he was named the 1986 Alaskan Minority Small Business Person of the Year. Address: Alaska.

5102. Gupta, S.K.; Patil, G.R.; Patel, A.A. 1987. Fabricated dairy products. *Indian Dairyman* 39(5):199-208. May. Paper presented at the IDA (North Zone) Seminar, Varanasi, Aug. 23-24, 1986. [23 ref]
• ***Summary:*** Contents: Introduction. Ingredients. Margarine. Spreads (a flowchart for a spread using a soy protein-lipid concentrate is given). Imitation cheese. Coffee/tea whiteners. Coffee complete and tea complete. Milk-like products: Filled milk, imitation or artificial milks, protein concentrate beverages (Miltone, developed by CFTRI and made at Bangalore based on whole buffalo milk extended or "toned" with groundnut (peanut) protein isolate, and Sipso, marketed in northern India, are both sold commercially. A soy-whey beverage with 4% protein has been developed by the National Dairy Research Inst. at Karnal). Soya yoghurt and lassi. Baby foods. Weaning foods. Ice cream analogues. Miscellaneous: Mango milk powder, banana milk powder, simulated sour cream and whipped toppings. The main advantage of these products is low cost due to the use of inexpensive ingredients, such as vegetable proteins and oils, emulsifiers and stabilizers. Dried milk and caseinates are also commonly used in these products.

Concerning weaning foods: "Recently, two low-cost nutritious weaning food formulations were developed at NDRI [National Dairy Research Inst.] Karnal, using soybean, dairy byproducts and cereal combinations. A spray dried soy-whey weaning food (SWWF) has been made (Fig.

6) from cheddar cheese whey (65 parts, on solid basis) and blanched soybean cotyledons (35 parts). A jowar-soybean-skim milk (JSM) weaning food includes 60 parts jowar (sorghum) flour, 30 parts soybean solids and 10 parts skim milk solids (Fig. 7). This has been specifically formulated to meet the need of jowar-growing areas where, incidentally, the problem of malnourishment is more prevalent than in the other areas of the country. The SWWF and JSM conform to the guidelines laid down by the Protein Advisory Group of the United Nations. Their respective protein efficiency ratios (PER) are 3.2 and 2.6 as compared to 2.5 for casein. Both these formulations are commendably low-cost ones (approximately Rs. 8.00 per kg, exclusive of packaging). Thus these products show great promise of becoming instrumental in combating malnutrition among children...

"An acceptable soft serve ice cream based on soybean and buttermilk (6.8 parts soy SNF [solids nonfat]–5.2 parts buttermilk SNF) has been developed at National Dairy Research Institute, Karnal. This product contains 9% fat, 12% SNF and 15% sugar. Its manufacture does not require the use of a stabilizer, thus saving on the cost of stabilizer." Address: National Dairy Research Inst., Karnal 132001, India.

5103. **Product Name:** Soy Moo (Soymilk) [Fat Free].
Manufacturer's Name: Health Valley Natural Foods.
Manufacturer's Address: 700 Union St., Montebello, CA 90640.
Date of Introduction: 1987. May.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Pat Carey, marketing manager for Pacific Foods of Oregon. 1997. May 5. To the best of Pat's knowledge, the first fat-free or nonfat soymilk in America was Health Valley's Soy Moo. It was introduced about 5 years ago, at about the time that Health Valley was converting their entire line to non-fat.

5104. Jacobs, Barbara; Jacobs, Leonard. 1987. Cooking with seitan: Delicious natural foods from whole grains. New York, NY: Japan Publications. 256 p. Foreword by Aveline Kushi. Index. 26 cm. [16 ref]
• ***Summary:*** "Seitan is cooked and flavored gluten that has been extracted from [high-gluten] wheat flour. It is very rich in protein, while being extremely low in fat and calories... The traditional Japanese way of seasoning seitan is to cook it in a broth using kombu sea vegetable, natural soy sauce, and fresh ginger root. This... is the one taken for granted as the 'standard seitan flavor' by commercial seitan makers and most people who are familiar with seitan. Many other mixtures of seasonings can be added to the basic seitan broth. Several earlier books on wheat gluten have been written, generally by Mormons.

This book offers you the history, nutritional information, a variety of preparation techniques, and hundreds of recipes that will allow you to convert wheat into a delicious and nutritious food. Especially suited for vegetarians who are interested in high-protein substitutes for animal foods.

Contents: Acknowledgments. Introduction: About wheat gluten, gluten, commonly asked questions about seitan. Getting started. Creating seitan from wheat flour (at home in 30-40 minutes). Using the seasonings. Additional methods of cooking. Appetizers. Soups. Main dishes and casseroles. Side dishes. Salads. Sauces, dressings and marinades. Condiments. Sandwiches. Desserts. From the pantry. Sample lunch and dinner menus. Appendix: 1. All about saving and using wheat starch. 2. Storing uncooked seitan. Storing cooked seitan. 4. Commonly encountered problems and some solutions. Nutritional information. Questionnaire for readers. About our ingredients (discusses natural soy sauce, and soymilk). Glossary (includes fu [dried gluten], miso, natural soy sauce or shoyu, soymilk, tamari, tofu). Bibliography.

Recipes containing soyfoods include: Miso soup with fu and wakame (p. 79). Miso-lemon dressing (p. 171). Tangy miso-tahini sauce (p. 180). Tofu spread with variations (p. 181). Seitan-tofu paté (p. 181-82). Tofu "feta cheese" (p. 192-93). Miso-tahini sauce or spread (p. 209).

When Michio and Aveline Kushi started the Seventh Inn Restaurant in Boston in 1971, they introduced seitan, a food that George Ohsawa had popularized in Japan, especially among macrobiotic people. Yumie Kono taught the chefs, one of whom was Lenny Jacobs, how to make seitan (p. 5).

The Introduction (p. 17-18) states: "Seitan is a food with a long history. Although not widely known in the West, it was traditionally eaten in China, Korea, Japan, Russia, the Middle East, and probably many other countries that grew wheat. In America, the Mormons and the Seventh Day Adventists made gluten and used it on a regular basis... The name *seitan* comes to us from the Japanese, who have prepared cooked wheat gluten for hundreds of years... Some natural foods industry insiders think seitan will become the 'tofu of the '80s.'

"Seitan was introduced to the U.S. natural foods industry about sixteen years ago [1970] when a Japanese variety, shrink-wrapped and quite dry and salty, was first imported. There had been several other varieties available from vegetarian groups, primarily the Seventh Day Adventists and the Mormons. Chinese restaurants have also been preparing wheat gluten for many years. The Chinese call it *mien ching,* or *yu mien ching.* Chinese restaurants often refer to it as 'Buddha Food,' claiming that it was developed by Buddhist monks as a meat substitute. There is also a dried wheat gluten available in Oriental food markets called *fu* by the Japanese and *k'ao fu* or *kofu* by the Chinese."

In the USA, about 130,000 pounds of seitan are made each year. The market is growing rapidly. Current U.S. seitan manufacturers are: 1. Upcountry Seitan in Lenox, Massachusetts, the largest known producer in America, which makes about 600 lb/week and distributes it in 6

states. The company, started about 3½ years ago (counting from Jan. 1987, i.e. founded in about mid-1983) by Win Donovan, is now owned and operated by Wendy Rowe and Sandy Chianfoni. They get a yield of 1.33 (i.e. 90 pounds of flour result in 120 pounds of seitan). 2. Rising Tide Natural Market in Long Island, New York. Michael Vitti has been making seitan for 6 years. About 1/3 of his production is bought by another company for use in making sandwiches. 3. Grain Dance in San Francisco, California. Ron Harris has been making seitan for 8 years and is currently selling 250 lb/week in 8 oz. packages. 4. Creative Kitchens in Miami, Florida. Yaron Yemini has been making seitan for 3 years. and has seen a 5-fold increase during this time. He now makes 120 lb/week. His yield is 0.7. 5. The Bridge in Middletown, Massachusetts. The company was founded in March 1981 by Roberto Marrocchesi and Bill Spear. They were making seitan by Oct. 1982. Steve Lepenta now makes 400 lb of cooked seitan each week and claims that sales have doubled in the past two years. 6. Maritime Foods in Portland, Maine. Rosemary Whittaker makes 50 lb/week of seitan. 7. Real Foods of Towson, Maryland. Sharon Warren has been making seitan for 6 years and now makes 150 lb/week.

Reviewed by Linda Elliot in East West. June 1987, p. 94. Note: Talk with Lenny Jacobs. 1990. Sept. 10. There has been little growth in the U.S. seitan industry since the book was published in May 1987. Problems with price and quality. If seitan is frozen, after defrosting it can become spongy and soggy. Address: Massachusetts. Phone: 617-232-1000.

5105. Leinhas, Judith L.; McCaskill, C.C.; Sampson, H.A. 1987. Food allergy challenges: Guidelines and implications. *J. of the American Dietetic Association* 87(5):604-08. May. [16 ref]

• ***Summary:*** "Double-blind placebo-controlled food challenges were used to determine the presence or absence of food hypersensitivity in 120 children with atopic dermatitis. The foods most likely to elicit positive challenges were egg (64 of the 133 positive challenges), peanuts (31/133), milk (11/133), wheat (10/133), fish (10/133), and soy (6/133)." Note that all are protein foods. Address: Clinical Research Unit, Dep. of Pediatrics, Duke Univ. Medical Center, Durham, North Carolina.

5106. **Product Name:** [SoftShakes. Natural Non-Dairy Soy Beverage (Vanilla, or Light Chocolate)].
Foreign Name: Boisson Naturelle au Soya.
Manufacturer's Name: Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.).
Manufacturer's Address: 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.
Date of Introduction: 1987. May.
Ingredients: Incl. soymilk, corn syrup solids instead of cane or beet sugar.
Wt/Vol., Packaging, Price: 250 ml Pure-Pak carton. Retails for $1.19.
How Stored: Refrigerated.
New Product–Documentation: Spot in Food in Canada (Toronto, ONT). 1987. May.

Talk with Ian Walker of Canada. 1995. May 15. The name of this company is now Les Aliments Tarasoy, run by Helen Wan, who speaks good English and broken French. Address: 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586. Fax: 514-659-6578. They now make soymilk, tofu, and soy cheese.

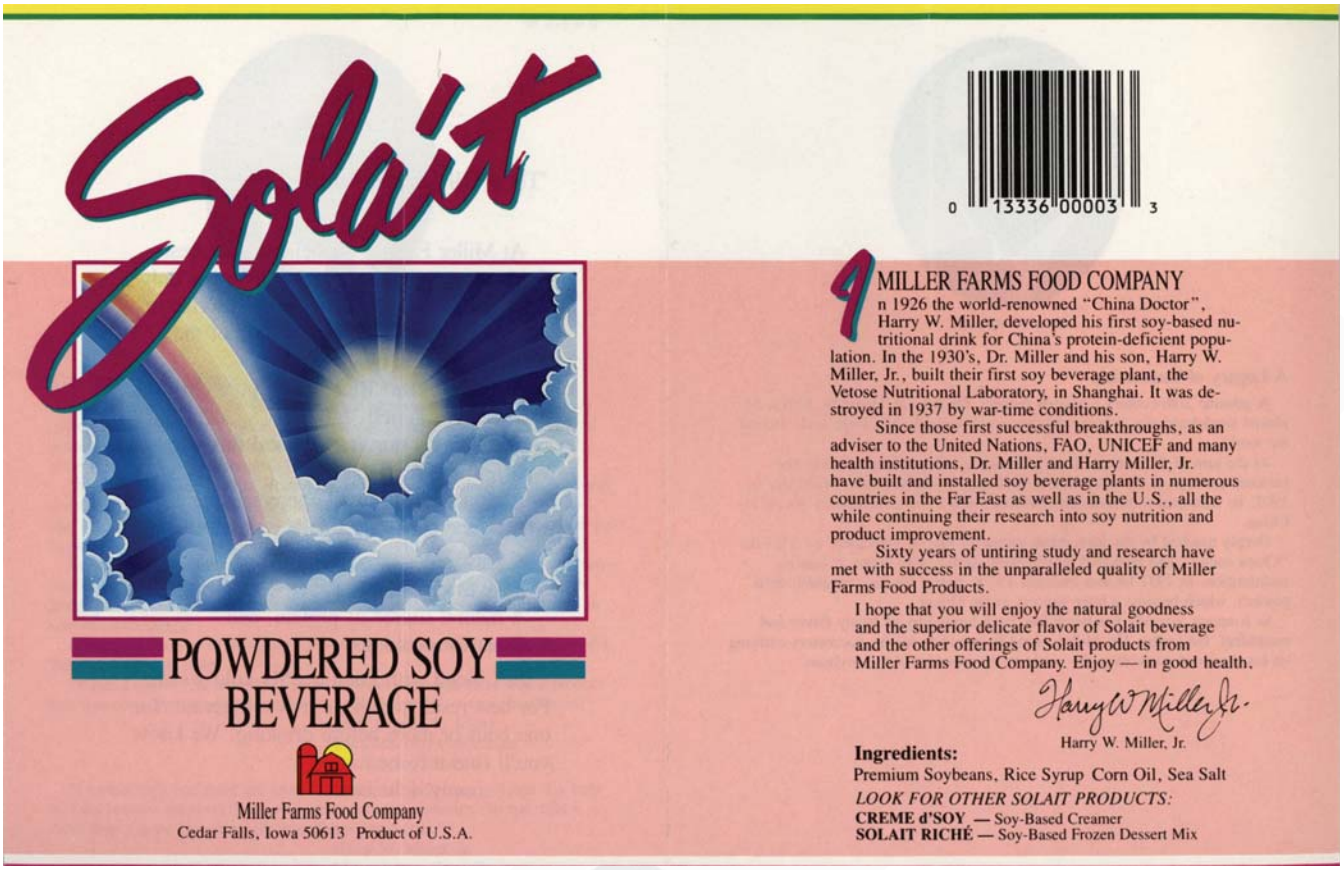
Talk with Helen Wan, sales manager. 1995. May 26. This company was founded in Dec. 1986 by a number of Chinese-Canadians, who own shares. Her brother, Billy Chin, is the president and one of the main founders. Softshake was one of their first products, introduced in the spring of 1987.

5107. *Marine Colloids Application Bulletin* (*FMC Corp., Philadelphia*). 1987. Fresh prepared soy dessert (using SeaGel Carrageenan). No. D-48. May. Summarized in Soya Newsletter. 1987. March/April. p. 11.

• ***Summary:*** Soymilk is gelled to prepare lactose-free desserts. Use SeaGel GP 713 for a sliceable flan-type dessert, or SeaGel FL 644L or FL 610 for a creamy pudding type dessert. Address: FMC Corp., Marine Colloids Div., Crockets Point, P.O. Box 308, Rockland, Maine 04841. Phone: 215-299-6000.

5108. **Product Name:** Solait (Powdered Soy Beverage). Renamed Soylait Soy Beverage by Dec. 1988.
Manufacturer's Name: Miller Farms Food Co., Inc.
Manufacturer's Address: 314 Main St., Cedar Falls, IA 50613. Phone: 319-277-8600.
Date of Introduction: 1987. May.
Ingredients: Soybeans, rice syrup, corn oil, sea salt.
Wt/Vol., Packaging, Price: 26 oz can makes 6 quarts. Or 60 lb nitrogen flush bag.
How Stored: Shelf stable.
Nutrition: Per 1 oz. powder or 8 oz. liquid: Calories 135, protein 6 gm, carbohydrates 13 gm, fat 7 gm, sodium 145 mg, calcium 50 mg.
New Product–Documentation: Talk with Harry W. Miller, Jr. 1987. Oct. 21. Label and leaflet (Printed on back of label). 1987. "Solait. Powdered Soy Beverage." Miller Farms Food Co. 1987. Sumptuous Solait Recipes from Miller Farms. Letter from R.W. Fischer. 1987. Oct. 30. "We started selling the product in May. Market response is outstanding." Soya Bluebook. 1987. p. 89. New Product News. 1988. Dec. 9. This powdered soy beverage is now named Soylait. The same ingredients are still used. Product Alert. 1989. Jan. 23. The product is now called Soylait. It comes in a 24 oz can. Ad in Vegetarian Times. 1989. May. p. 20.

Talk with Miller Farms. 1991. Dec. 3. Solait and Creme d'Soy are still on the market.



Leaflet (8.5 x 11 inches, full color) from the Natural Foods Expo at Anaheim, California. 1992. April. "Solait: Powdered Soy Beverage." The company name is now given as Solait International Ltd., P.O. Box 885, Carroll, Iowa 51401. "Solait is made from only four ingredients–Premium grade soybeans, rice syrup, corn oil, and sea salt. No chemicals or additives." Solait is high in fiber. A nutritional analysis is given. The product is sold in 24-oz reusable containers or 60-lb bulk packs.

Leaflet (8 panels). 1992. April. "Cooking with Solait–Helpful hints and delicious recipes."

Soya Bluebook. 1993. Sept. The company name is now given as Devansoy, Inc. located at 202 West 7th St., P.O. Box 885, Carroll, Iowa 51401. Phone: 1-800-747-8605. Elmer Suttler is president. Talk with Bev Tierney of Devansoy. The company changed its name from Solait International Inc. to Devansoy, Inc. in Jan. 1993. It makes only one product–Solait Powdered Soy Beverage–however in mid-1993 it started selling soy flour, tofu powder, and textured soy flour made by other companies.

5112. Rahman, Majeedah. 1987. Belize nutrition education project. *Plenty Bulletin* (*Summertown, Tennessee*) 3(1):3. May.
• ***Summary:*** Named British Honduras until about 1975, Belize was granted full independence in 1981 but is still a member of the British Commonwealth. To combat malnutrition among children, soyfoods preparation and nutrition will be taught in workshops. Soymilk and soy ice cream will be provided to primary school students in selected areas. The project, with a budget of $14,700, will run from June 1987 to June 1988. The Univ. of California has agreed to provide educational and training materials. Address: Project Director (nutritionist), 526 44th St., Oakland, California 94609.

5113. Schatz, Betty. 1987. Los Companeros [Soyfoods nutrition program in Mexicali, Mexico]. *Plenty Bulletin* (*Summertown, Tennessee*) 3(1):3-4. May.
• ***Summary:*** The program is trying to reduce hunger, malnutrition, and sickness in the suburban barrio of Lazaro Cardenas, Mexicali. The program has two parts: (1) School Nutrition: 30 school children are being served an 8 oz glass of soymilk and a package of soynuts each day, at a cost of $0.10/child. (2) Community Education. Mothers are taught how to make soymilk, tofu, and soy nuts. Each family attending a demo is given a soyfoods starter kit consisting of a 50 lb bag of soybeans ($10), a hand food grinder ($10), a book of Spanish soy recipes and a few necessary ingredients. Betty is a retired Hayward school teacher. Address: Project Director, 2800 Sparks Way, Hayward, California 94541. Phone: 415-537-3713.

5114. Steichen, Jean J.; Tsang, Reginald C. 1987. Bone mineralization and growth in term infants fed soy-based or cow milk-based formula. *J. of Pediatrics* 110(5):687-92. May. [30 ref]
Address: Div. of Neonatology, Depts, of Pediatrics and Obstetrics, Univ. of Cincinnati College of Medicine, and The Children's Hospital Research Foundation, Cincinnati, Ohio.

5115. STS–Soya Technology Systems. 1987. Soymilk versus EEC legislation. Singapore. 34 p. [4 ref]
• ***Summary:*** This book is a compilation of four documents: 1. "Explanatory Memorandum on the Designations Used in the Marketing of Milk and Milk Products," issued by the EEC Commission, 20 May 1988 (4 p.). 2. "EEC Report on Imitation Milk and Milk Products (Commission Report to

the Council).” (March 1986. 22 p.). Defines imitation and substitute products. 3. “Proposal for a Council Regulation (EEC) on the Designations Used in the Marketing of Milk and Milk Products” 29 March 1984, including the proposed amendments of 1986 (4 p.). 4. Annexes. Designations and definitions of dairy-related products (4 p.).

Anders Lindner of STS notes in a memo sent out with the booklet on 4 March 1987 that “Although soymilk and soymilk products are currently no real threat to the dairy industry in the EEC, there are forces in motion in Brussels to give soymilk a hard time. The assumption is, that what margarine did to butter–soymilk can do to milk.”

5116. *Technocrat* (*India*). 1987. Great Shake: Soya milk success. May. *
• ***Summary:*** “On the 27th of April, Noble Soya, a company promoted by Godrej, launched its premium Milk Shake–Great Shake, in Bombay. After promising feedback from both Delhi and Pune markets, Dr. A.S. Alyar, the brain behind the concept, is very hopeful that it will be a hit in this market, too.” Great Shake is soya milk that is flavoured. The soyamilk is processed using Kibun’s special deodorizing process. Soymilk can be used whenever dairy milk is used and has a wide range of applications. It can also be processed into products such as tofu, a soft cheese. Tofu provides a base for a variety of snack foods such as tofu burger, tofu scramble, tofu ice-cream and others. Soyamilk can be used to make desserts and puddings.

5117. Grande, Judy. 1987. Formula handicaps youths. Study confirms what moms have claimed for 8 years [about Neo Mull Soy and Syntex]. *Plain Dealer* (*Cleveland, Ohio*). June 4.
• ***Summary:*** Thousands of babies fed Neo Mull Soy or Cho-Free, made by Syntex of Palo Alto, California, and lacking chloride face an uncertain future of developmental problems. The longer children used these products, which were pulled off the market in 1979, the lower they scored on intelligence scores. A poll by parents of 800 other parents showed (with 55% of the returns in) that 15% of the respondents children had already repeated a grade, 25% have been diagnosed as learning disabled, 35% have been enrolled in special education classes, and 31% have been in speech or language therapy. Chloride was listed as an ingredient on the formula cans though none was present. For more information write FORMULA, P.O. Box 39051, Washington, DC 20016.

5118. Muir, A.; Kalnins, D. 1987. False advertising resulting in infant malnutrition. *Canadian Medical Association Journal* 136:1274. June 15. [5 ref]
• ***Summary:*** Documents the case of an infant who, at 6 weeks of age, was put on a soybean-based product called Eden-soy. “The health food retailer had supplied the parents with a ‘professional looking’, colorful monograph that advertised the drink as ‘good for babies’ and a ‘quality substitute’ for breast milk. Their family physician had endorsed the product after a cursory inspection of the brochure, and the infant was exclusively fed Eden-Soy, without vitamin supplementation.” Four months later he had become wasted because the formula did not contain enough calories. He also had developed night blindness and rickets because the supplement did not contain sufficient quantities of vitamins A and D. Address: Div. of General Pediatrics, Dep. of Pediatrics, and Dep. of Food Services, Hospital for Sick Children, Toronto, ONT, Canada.

5119. *Hindu* (*The*) (*India*). 1987. Biggest soyamilk plant in Ghaziabad [for Amrit Soya]. June 18. [Eng]
• ***Summary:*** India’s second, and largest to date, soyamilk plant will be located at Ghaziabad in Uttar Pradesh. It is being installed by Larsen & Toubro Ltd. (Bombay) in collaboration with Soya Technology Systems (STS). The Rs 16 crore project, with a capacity of 6,000 liters/hour of soyamilk is being set up by Amrit Soya and Protein Foods Ltd. Address: India.

5120. Kennedy, Shawn G. 1987. A soy-based business flourishes in Brooklyn [Appropriate Foods]. *New York Times.* June 24. p. C6.
• ***Summary:*** Robert Werz, a carpenter, started making tempeh patties in a corner of the kitchen of a friend’s catering business. After 6 months he set up in Nassau County. Today, with 6 employees, he produces about 10,000 lb/month of tempeh. Half is sold to health food distributors and half delivered to 100 stores in Metro New York. The company also makes soymilk and tofu products (quiches, tortellini, and salads). In March the company moved from Franklin Square, Long Island, to an East Brooklyn Industrial Park; there was more space at lower rent.

When Mr. Wertz became a vegetarian more than 14 years ago [i.e., before 1970], the only place he could buy tofu was in Chinatown. Appropriate Foods is owned by Robert Werz and Shelley Martin.

5121. Associate Director, Import Operations Unit, (HFC-131). 1987. Revision to Import Alert #40-01–”Soy drinks, milk substitute drinks and other drinks that may serve as infant formulas.” *Import Alert.* June 30.
• ***Summary:*** Discusses: Eden Foods’ Edensoy, Soy Moo, Sun Soy, Ah Soy, Westsoy, Vitasoy, Westbrae Malteds. Summarized in Soya Newsletter. 1987. 1(4):7. Recommends continued surveillance. Address: Washington, DC.

5122. **Product Name:** SweetSoy (Soymilk) [Absolutely Plain, Honey-Vanilla, Simply Carob, Cha-Cha Cherry, or Oriental Almond].
Manufacturer’s Name: Ambrosia Soy Co.
Manufacturer’s Address: 199 Saltonstall Parkway, East

Haven, CT 06512. Phone: 203-467-8821.
Date of Introduction: 1987. June.
Ingredients: Water, organic soybeans, soy lecithin, flavor.
Wt/Vol., Packaging, Price: 1 pint plastic bottle with cap retails for $0.89, or 1 quart retails for $1.59.
How Stored: Refrigerated, 19 day shelf life.
New Product–Documentation: Olivero. 1987. New York Times (Connecticut Ed.). Aug. 9. Interview with Liz Appel. 1987. Oct. 7. She started June 1987. Uses a Takai pressure cooker system bought through Bean Machines. Uses hot grind to reduce beany flavor, hot fill to extend shelf life. Distributed by Country Barn to health food stores in New England.

Ad (2¼ by 5 inches, black and white) in Natural Foods Merchandiser. 1989. Feb. p. 12. "People say, ours is better! Soymilk, pies, puddings, dips, and yogurt. The Ambrosia Soy Company of East Haven, Connecticut. Fresh, organic, and pure. We're the new kid on the block." An illustration (line drawing) shows a bottle of soymilk against a bed of soybeans.

Soya Newsletter. 1989. Jan/April. p. 12. "Ambrosia Soy's fresh soymilk in supermarket dairy case." At Waldbaum's Foodmart.

Talk with Liz Appel. 1989. Nov. 9. Fresh soymilk is a hard product to sell in America. Soy yogurt is much easier.

5123. Bennett, Gordon. 1987. What people drink [Westbrae Malteds]. *East West.* June. p. 8-9.
• ***Summary:*** Starting in January 1987, Malteds were made from the first time in America, in California. Malteds' prices dropped about 20%, calories dropped 15%, and they now contain organic soybeans and brown rice syrup. "We have an exclusive manufacturing agreement with a U.S. soymilk producer that has access to the most sophisticated equipment and know-how available in Japan today." Address: President, Westbrae Natural Foods, Emeryville, California.

5124. Bhatnagar, P.S. 1987. All India Coordinated Research Project on Soybean (Indian Council of Agricultural Research). Project coordinator's report & summary tables of experiments 1986-87. National Research Centre for Soybean, Khandwa Rd., Indore 452 001, India. xxii + 336 p. 27 cm.
• ***Summary:*** Contents: Project coordinator's report: Desired production of soybean is within our reach, by Dr. P.S. Bhatnagar (p. i-xxii). Summary tables of varietal trials (breeding and genetics, p. 1-144). Station trials. Agronomy. Seed physiology. Soil microbiology. Plant pathology. Entomology. Agricultural economics. Quality aspects and utilization. Appendixes. Summary reports. Breeding trials: Northern hill zone, northern plain zone, central zone, southern zone. Agronomy trials: Northern hill zone, northern plain zone, southern zone. Soil microbiology. Plant pathology. Entomology. Preliminary performance of some germplasm lines. Pest complex of soybean crop at Indore. Uniform method of disease rating. Statement showing staff position in the project. Budget allotment, expenditure and percent utilization in the project.

The National Research Centre for Soybean, Indore, has under it five main centers: 1. G.B. Pant University of Agriculture and Technology, Pantnagar, UP. 2. J.N. Krishi Vishwa Vidyalaya-Regional Research Station, Sehore, MP. 3. University of Agricultural Sciences, Bangalore, Karnataka. 4. Indian Agricultural Research Institute, New Delhi. 5. Marathwada Agricultural University, Parbhani, Maharashtra. In addition, there are 10 Sub Centres and 5 Voluntary Centres.

This report is largely about soybean breeding, variety development, and agronomy, with almost nothing about utilization. The utilization chapter contains 3 reports, only the last of which has any conclusions! (1) "Studies on feeding of tempeh to determine its effect on growth and blood picture of pre-school children." The tempeh was made with 55 parts sunflower seeds and 45 parts soybeans. It was most acceptable to children when coated with sugar syrup. (2) "Studies on the partial substitution of ground meat preparations with edible grade defatted soybean meal." (3) "Studies on the acceptability of soymilk blended dahi." 60 parts soymilk were blended with 40 parts cow's milk and made into yogurt using various pure cultures. Address: Indore, India.

5125. Elliott, James G. 1987. Lactose intolerance. *Nutrition Overview* 2(2):1-3. June. [23 ref]
• ***Summary:*** A good overview of the subject. "Lactose intolerance is a partial to complete inability of the body's enzymes to digest milk sugar often resulting in diarrhea and possibly accompanied by abdominal bloating, vomiting and cramps. Human milk contains 7.5 gm of lactose per 100 ml whereas cow's milk contains only 4.5 gm. The activity of lactase in the intestine reaches a maximum immediately after birth and begins to decline thereafter until adulthood. There are three types of lactose intolerance: Congenital, primary acquired, and secondary." Address: Manager, Nutritional Science Dep., R&D Group, Protein Technologies International (Ralston Purina).

5126. Gleason, Jane. 1987. Ceylon Oils and Fats Corporation. Rajasoya soy flour. Marketing soyfoods in Sri Lanka. *Soybean Marketing in Sri Lanka, Monthly Report.* June. p. 1-8.
• ***Summary:*** Note: This is the first monthly report.

I. Interview with Mr. Amaratunge, Marketing Manager, Ceylon Oils and Fats Corporation (COFC). Mr. Amaratunge says his organization imports soybeans and meal from India. They would purchase it domestically if it were available. A table shows COFC's imports (increasing) and domestic procurements (decreasing) of soybeans (in metric tons) from 1984 to 1987.

COFC presently imports from India approximately 12,000 metric tons / year of soybean meal at a price below the official Rs. 7/kg floor price paid to Sri Lankan farmers.

II. Interview with Mr. Lalith de Silva, Plant Manager, and Mr. Upali Madawala, Marketing Manager, Rajasoya. Rajasoya makes full fat soy flour for use as a coconut milk substitute in curries. The processing equipment, most of which was imported, was fairly sophisticated. Organizations within the Government of Sri Lanka own 53% of Rajasoya's stock. Discusses: Procurement of soybeans (through the Paddy Marketing Board at Rs. 8.75 per kilo), production details (monthly production of Rajasoya has been erratic, averaging 14-19 metric tons per month. Questions about plant capacity). A table shows monthly production of Rajasoya soy flour, which averages about 200 tonnes a year for 1984-86. "When Rajasoya began operation in September 1983, soy flour was heavily promoted in television, newspaper and radio as a coconut milk substitute. At that time, coconut prices were high and sales of soy flour were therefore fairly good. When coconut prices decreased to a more normal level, sales of soy flour dropped substantially [from 67.50 tonnes in Jan. 1984 to 3.18 tonnes in May 1984], which led to a shift in promotion strategy. This shift highlighted the nutritional aspects of the product. Mr. Madawala emphasized that the decrease in sales was not entirely due to normalization of coconut prices. Rather, he feels that many consumers who tried Rajasoya's product did not like it." All of the product is sold to the State Tea Plantations. Bakeries and biscuit companies are interested in fortifying their products with soy flour, but Rajasoya's flour at Rs. 40/kg is too expensive.

Discusses: Future plans for Rajasoya. Comment on discussion with Mr. Madawala. Comment on discussion with Mr. de Silva ("SFRC produces soy flour at less than one-half Rajasoya's cost using an extruder and mill").

III. Market activities in Kandy and Colombo. IV. Interviews with 3 commission agents and 1 wholesale trader who deal in soybean. V. Development of consumer and farmer surveys. VI. Bread making and discussion with Dhanasiri Supermarket in Kandy. VII. Soy snacks in Cornel's Supermarket in Colombo. VIII. Peradeniya Pola Market (For this market experiment, products made by SFRC will be sold at a profit. SFRC's production manager, Mrs. Ariyaratne, agreed willingly to provide products for this market. This experiment will continue for several months). Address: Sri Lanka.

5127. *Industries Agro-Alimentaires* (*IAA*). 1987. Soja + Coopérative agricole de céréales de Colmar + Alfa Laval = Jus de Soja [Soya + Agricultural Cereals Cooperative of Colmar (CAC) + Alfa Laval = Soymilk]. June. p. 555-57. [Fre]

• ***Summary:*** Discusses the new automated soymilk plant built by CAC and Alfa Laval Industries at Issenheim near Colmar in France. A photo shows 5 products in the Bioforme line, plus the new soymilk production system. The concept was born when CAC met Alfa Laval specialists at the Third National Soya Congress at Albi in Sept. 1985. In 1970 Alfa Laval developed a soymilk process based on the Cornell method for making soymilk. In 1982 Alfa Laval introduced a greatly improved process for making soymilk incorporating all scientific discoveries to date. They installed their first modern soymilk plant in China in 1984 at the Guangdong Cannery. It now produces some 20,000 liters/day of high quality soymilk. The CAC plant is Alfa Laval's 10th completely automated soymilk plant. Support funding for the project (600,000 French francs) came from the Ministry of Industry through its Directionale de l'Industrie et de la Rec- d'Alsace. The process for making soymilk is described, together with a schematic diagram of the Alfa Laval plant. Address: France.

5128. Johnson, Kirk. 1987. Hidden fats in whole foods diets. *East West.* June. p. 62-68.

• ***Summary:*** A full-page table (p. 65) titled "How the substitutes stack up" shows total fat and serving size for the following categories: Dairy products. Substitute dairy products. Meat. Substitute meat products. Frozen dinners. Miscellaneous. The substitute dairy products include: Tofu Cream Chie (21st Century). Soya Kaas (soy cheese from American Natural Snacks). Tofutti (Tofu Time). Le Tofu (Brightsong Foods). Ice Bean (Farm Foods). Tofu, silken (Nasoya). Tofu, soft (Nasoya). Tofu, firm (Nasoya). Soybean margarine (Willow Run). Soymilk (Edensoy). Soymilk (Health Valley). Soymilk (Vitasoy).

Substitute meat products include: Fakin' Bacon (Tempehworks). Tofu Wieners (Yves). Tofu Pups (Tempehworks). Vegie Burger (Bud, Inc.). Tofu Burger (Bud, Inc.). Gardenburger (Wholesome & Hearty). Tofu Sausage (Vegetable Protein Co.). Tempeh, 3-grain (Tempehworks). Seitan ("wheat meat").

Meatless frozen dinners include: Tofu Lasagna (Legume). Meatless Pepper Steak with Kofu & Noodles (Legume). Sweet and Sour Tofu (Legume).

Miscellaneous products include: Nasoyannaise (Nasoya Foods). Salad dressing, Creamy Tofu (Nasoya). Miso.

5129. Lindner, Anders. 1987. An introduction to soybean uses. *North European Food and Dairy Journal* No. 6/87. p. 210-15. June. [Eng; Ger; Dan]

• ***Summary:*** Of the 95 million tons of soybeans produced worldwide in 1986, an estimated 75 million tons were crushed, 15 million tons were stock, and 5 million tons were processed without crushing to make human foods. Of the soybeans crushed, 54 million tons became meal and flour, while 13 million tons became oil. Oriental soyfoods can be divided into those originating from traditional soymilk (tofu, yuba, soybean drinks, okara) and fermented

products (soysauce, tempeh, miso). Modern soymilk can be formulated to make dairylike products or concentrated by ultrafiltration to make a host of new products. Lists German and Danish names for all basic soyfoods. Each is described briefly. Advantages of using soybeans as a basis for products are discussed with emphasis on biotechnological advances. Address: Soya Technology Systems (STS), Ltd., Singapore.

5130. **Product Name:** Solait Riche (Powdered Soy-Based Frozen Dessert Mix).
Manufacturer's Name: Miller Farms Food Co., Inc.
Manufacturer's Address: 314 Main St., Cedar Falls, IA 50613. Phone: 319-277-8600.
Date of Introduction: 1987. June.
Ingredients: Premium soybeans, sugar, corn oil, coconut oil, corn syrup, sea salt, microcrystalline cellulose (cellulose gel), cellulose gum, mono- and diglycerides, carrageenan, standardized with dextrose and salt.
Wt/Vol., Packaging, Price: 28 oz (794 gm).
How Stored: Shelf stable.
Nutrition: Per 0.75 oz. powder or 3 oz. frozen dessert: Calories 120, protein 3 gm, carbohydrates 9 gm, fat 8 gm, sodium 65 mg.
New Product–Documentation: Talk with Harry W. Miller, Jr. 1987. Oct. 21. Leaflet. 1987. "Solait. Powdered Soy Beverage." Product is not yet available. Label. 1987. Oct. 14.5 by 6.5 inches. Purple, green, red, yellow, and blue on white. Illustration of sun and rainbow above clouds. "No cholesterol. No lactose. No animal fat." Talk with Bob Fischer. 1987. Nov. Says product was introduced in June.

5131. Miller Farms Food Co., Inc. 1987. Solait. Powdered Soy Beverage (Leaflet). Cedar Falls, Iowa. 1 p.
• ***Summary:*** "In 1926 the world-renowned 'China Doctor,' Harry W. Miller, developed his first soy-based nutritional drink for China's protein-deficient population. In the 1930s, Dr. Miller and his son, Harry W. Miller, Jr., built their first soy beverage plant, the Vetose Nutritional Laboratory, in Shanghai. It was destroyed in 1937 by war-time conditions." Address: 314 Main St., Cedar Falls, Iowa 50613.

5132. **Product Name:** Spray Dried Soymilk (Sold to Food Processors).
Manufacturer's Name: Nasoya Foods, Inc.
Manufacturer's Address: 23 Jytek Park (P.O. Box 841), Leominster, MA 01453.
Date of Introduction: 1987. June.
Wt/Vol., Packaging, Price: 50 lb bags.
New Product–Documentation: Soya Bluebook. 1987. p. 98. Talk with John Paino. 1988. Feb. 15. This is a different product from their two types of spray-dried tofu. It is sold in 50-lb bags.

5133. **Product Name:** [Neo-Soya Powder {Finely Pulverized Whole Soy Flour from Dehulled Soybeans for Making Tofu}].
Manufacturer's Name: Nihon Soya Bean Powder Co. Ltd.
Manufacturer's Address: Kyoto, Japan.
Date of Introduction: 1987. June.
New Product–Documentation: Soya Newsletter. 1987. 1(3):6-7. This powder is used in the Showa Boeki Mini Tofu Plant.

5134. **Product Name:** Neo-Soya Powder (for making tofu) and Mini Tofu Plant.
Manufacturer's Name: Showa Boeki Co. Ltd.
Manufacturer's Address: 18-27, Edobori 1-chome, Nishi-ku, Osaka 550, Japan.
Date of Introduction: 1987. June.
New Product–Documentation: Manufacturer's Catalog. 1987. 4 p. With 3 p. of inserts. This small, automatic plant uses a patented soya powder that avoids production of okara. The 15-20 minute cycle consists of mixing, boiling, coagulating, cutting the tofu, and cooling. Capacity: 1408 cakes (300 gm each) every 8 hours.

5135. *Soya Newsletter* (*Bar Harbor, Maine*). 1987. [Who made America's first spray-dried tofu?]. May/June. p. 2. Letters to the Editor.
• ***Summary:*** "Clofine Dairy & Food Products, Linwood, New Jersey, began their first production run of tofu powder in October, 1983, and shipped their product soon thereafter. St. Peter Creamery first began spray-drying soymilk powder in late 1984, and began producing their spray-dried tofu powder during the summer of 1985. It appears that Clofine was first with the tofu powder by almost two years."

5136. STS–Soya Technology Systems Ltd. 1987. Storage, cleaning, screening & dehulling of soybeans. The quality of a soymilk depends on the quality of the raw material used (Leaflet). 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 2 panels each side. Each panel: 30 x 21 cm. Also published in Chinese. [Eng; Chi]
• ***Summary:*** Contains 11 color photos with descriptions showing soybeans during the cleaning process. STS is a member of the DTD group.

5137. Méhu, Jean. 1987. Soja: une réalité française [Soja: A French reality]. *RIA–Revue des Industries Agro-Alimentaires* No. 388. p. 12-14. June 15–July 6. [Fre]
• ***Summary:*** About the new Bioforme line of aseptically packaged soymilks from CAC (*Coopérative Agricole de céréales de Colmar*). Photos (p. 1) show: (1) Five aseptically packed products in this new Bioforme soymilk line. (2) M. Rochet, director of CAC. "Tofu and soymilk (*lait de soja*) are still essentially typical products of the network of dietary stores (*magasins diététiques*). However, here and there, in large-scale classic distribution, soy beverages and desserts

are now appearing. And this is not the end, would seem to say the directors of CAC, which is going to invest in an ultramodern unit for producing "soy juice" (*jus de soja*).

Note. This is the earliest French-language document seen (Aug. 2013) that uses the term *jus de soja* to refer to soymilk.

Despite the appearance of the Bioforme line, it is more than industrial clients that the cooperative is eyeing. And they are not alone. Alfa-Laval now makes soymilk plants, and has already installed a dozen worldwide. One at the Guangdong Cannery, Canton province, China, now produces about 20,000 liters/day of natural, bland high-quality soymilk. A similar unit is installed in Alsace by CAC, which had a total turnover of 750 million French francs in 1986 with its various operations, is basically in cereal grains. As part of a diversification campaign they have become involved with soya. Several factors led to this choice. Soybeans are grown in Alsace and production has expanded from only a dozen ha in 1985 to 250 ha in 1986 and an expected 3,000 ha in 1987. The plant is important in crop rotations, enriching the soil with nitrogen. It is a major crop worldwide, and though extensively researched is not well known by most. Finally, for marketing, its nutritional characteristics make it "the new food for the year 2000."

The new Alfa-Laval plant is completely automated from grinding the grains to cleaning the line; one person can operate it. It cost 11 million francs. The Bioforme line includes aseptically packaged soymilk (in chocolate and natural flavors) and desserts (in vanilla and chocolate flavors). In Jan. 1987 the unit was capable of producing 1,500 liters/hour of soymilk containing 4% protein. In the last 4 months the plant has produced some 200,000 liters of finished products, which may be about 10% of the French market.

A sidebar discusses tofu and Société Soy which makes Croq-tofou, Cacoja, and Sojadoc S.A. The shares of Sojadoc are owned as follows: Cooperative Occitane 51%, Sanofi 15%, Sofiproteol (Sofiprotéol) 15%, les Charbonages de France, the two founders, and some private investors 29%. A photo (p. 14) shows the soymilk equipment used at Issenheim. The products are sold in Tetra Briks (packed by a neighboring dairy), and in Doypack (the company is going to acquire a Thimmonier machine). "Well, is soya the new food for the year 2,000?" Address: France.

5138. Shrikhande, Fiona. 1987. Soya milk. Only tentative sips [Noble Soya in India]. *BusinessIndia.* June 29/July 12. p. 32.

• ***Summary:*** When Noble Soya had its first public stock offering in 1986, it was over-subscribed 20 times, largely because of the backing of the powerful and respected Godrej (pronounced go-DRAY) and Bhiwandiwalla groups, but also because of the bullish market sentiment and the great success of Frooti, a new beverage sold in Tetra Pak cartons. Noble Soya's product called Great Shake, was test marketed in Hyderabad in Feb. 1987 and launched there and in Pune in March. Initial sales were slow, behind other beverages in Tetra Pak cartons such as Frooti (3,000 crates/day in Bombay), Amul milk (2,000), Volfruit (600), and Great Shake (570 or less). Factors that hurt the product's launch were late entry into the market (initially scheduled for late 1986), lack of public awareness of soya (those who know it perceive it as "a low food value and a source of poor quality oil"), the product's initial slightly chalky taste (now said to be rectified), and the poor image of Sipso, an earlier soymilk launch.

Noble Soya also has plans to introduce other soyfood products by year end: tofu and several extruded foods such as soups and breakfast cereals. The company is taking a long-term perspective and it is strong financially. "Considering that a number of other companies like Britannia, Amrit Soya, Kalyan Solvents, and Kothari General Foods have plans to enter the soya-based processed food market, it looks like soya does have a future." Address: India.

5139. Indo Prosoya Foods Ltd. 1987. Display ad: Soya paneer (tofu) & milk. *Times of India* (*The*) (*Bombay*). July 14. p. 12.

• ***Summary:*** "Technology, training & plants available–for small entrepreneurs. Project cost: Ranging from 5 to 30 lacs [lakhs].

"Profitability: 30%–50% of the project cost P.A. [Per Annum].

Apply giving full particulars to: Indo ProSoya Foods Ltd."

Note 1. "Agrawal" (also spelled "Agarwal") refers to a large and influential community in India. Traditionally, the Agrawals have been a trading community in northern India, although in modern times they follow other professions as well. People from the Agrawal community are very successful entrepreneurs and said to control a large portion of India's private sector and have a major influence on India's economy. Being a trader community traditionally, the Agrawals have produced many of the most successful entrepreneurs in India.

Note 2. The word "milk" here refers to soyamilk.

Note 3. Letter (e-mail) from Raj Gupta of ProSoya Inc., Ottawa, Ontario, Canada. 2010. Aug. 29. Raj has never seen or heard of this ad, and neither he nor ProSoya in Canada designed or paid for it; it might have been placed to sell the Takai plant that the company owned. That Takai plant was located at Panki, Kanpur. The equipment was later liquidated and sold to a company in south India who has been using it for tofu production. Raj does not know which company used it and where. Indo ProSoya Foods went out of business in 1987. Address: Net House, Uptron Estate, Panki, Kanpur [Uttar Pradesh] 288-822 (Agrawal).

5140. Ferrara, Patricia. 1987. Fancy foods turn light. *Home News* (*New Brunswick, New Jersey*). July 19. p. G1-G2.
• ***Summary:*** The trend that yuppies of the world have been spearheading, lighter foods, expensive top quality takeout items, is on the move to mainstream America. Legume of New Jersey has introduced four selections of their world class Tofu Chocolate. Tofu replaces the milk in the milk chocolate. Quinoa is the most nutritious of all grains, containing 16.2% protein.

5141. *Toyo Shinpo* (*Soyfoods News*). 1987. Pari de mitsuketa honmono no tôfu. Munôyaku daizu tsukai parikko ni apiiru [Real tofu made in Paris with organically-grown soybeans and it appeals to the Parisians]. July 31. p. 13. [Jap; eng+]
• ***Summary:*** Mr. Noboru Sakaguchi, age 59, has a tofu shop located in Champaigny–only 20 minutes away from Paris. The shop opened 3 years ago and is called Daizou. The majority of the employees are French. Sakaguchi employs a Japanese plant manager, Mr. Takatashi Hiroyama, age 39. Mr. Sakaguchi also has a health foods store and restaurant, Le Bal en Bois. This is the parent company of Daizou. They produce about 1,000 cakes of tofu (1 cake = 380 gm) a day. Of these, 200 are made with organically grown soybeans and are vacuum packed. The company also uses regular soybeans from Canada and organically grown ones from the U.S. They use nigari in their tofu manufacturing process. They have been experimenting with silken tofu (kinugoshi) and have done market studies with some newly developed soymilk mayonnaise. Their tofu sells for 7 French francs per cake wholesale, and 9-12 francs retail. They sell their organic tofu for the same price as the regular cakes as a method of introducing it into the market. Right now, their big enemy is water that is too alkaline.

5142. *APV Baker News* (*UK*). 1987. APV Baker to acquire Danish company for £15.8 million. July.
• ***Summary:*** APV Baker will buy Pasilac-Danish Turnkey Dairies from the Danish Sugar Corporation. This company is principally engaged in the design, manufacture, and sale of specialized process plants to the dairy, brewing, and animal feed industries. Sales for 1986 were about 130 million pounds; profits were 2.7 million pounds. DTD was formed in 1969 by Jorn B. Jensen. Note: An ad in *Food Engineering International* (March 1988. p. 5) states that "APV is now the undisputed leader in supplying production line machinery and equipment to the food and drink industries–worldwide."

Note: This is the first edition of APV Baker News, a company newsletter published 6 times a year. Address: APV Baker, Westfield Rd., Peterborough, PE3 6TA, England. Phone: 0733-26-2000.

5143. Del Valle, Amado. 1987. Update on the Plenty Soy Project in Guatemala. San Bartolo, Solola, Guatemala. 2 p. Unpublished manuscript. [Eng]
• ***Summary:*** Thanks to the interest of the executive director of Plenty, Canada, the project reinitiated its activities in the middle of 1985. The three objectives are: 1. Agricultural, to develop and teach Guatemalan farmers to grow suitable soybean varieties. 2. Educational, to teach families and organizations soyfoods nutrition and recipe preparation. 3. Industrial, running the soy dairy in the community of San Bartolo, and making soymilk, tofu, soy ice cream, soy flour and soy coffee. From Jan. 1 to July 22, 1987 the soy dairy has produced 3,777 gallons of soymilk, 3,308 pounds of tofu, 865 gallons of soy ice cream, and 5,600 paletas (ice cream sticks), that have been sold in 4 areas of Guatemala. Address: Solola, San Bartolo, Guatemala.

5144. Fomon, S.J. 1987. Reflections on infant feeding in the 1970s and 1980s. *American J. of Clinical Nutrition* 46(1):171-82. July. [108 ref]
• ***Summary:*** Summarizes the many changes in infant feeding practices during this period. The Infant Formula Act passed in 1980 imposed new quality control and labeling requirements for infant formulas. The most popular milk-free formulas are based on isolated soy proteins. At typical protein concentrations (1.8-2.0g/67 kcal) the author believes that methionine fortification is unnecessary. Soy-based infant formulas were initially marketed for the management of milk protein allergy and/or lactose intolerance. In addition to this they are now also used to a greater extent due to the belief of some physicians that they are less commonly associated with fussiness and regurgitation. Most infants now consume iron-fortified formulas, but there is doubt about the bioavailability of electrolytic iron used to fortify most dry infant cereals. In 1985 35% of U.S. infants were breast fed until at least age 4 months, whereas in 1971 the corresponding figure was only 10%. Breast feeding is more common among higher income groups. Beikost is foods other than milk or formula fed to infants. Address: Dep. of Pediatrics, Univ. of Iowa, Iowa City, IA 52242.

5145. Gleason, Jane. 1987. Survey of consumers and extension personnel who have been trained in home-level soy processing. *Soybean Marketing in Sri Lanka, Monthly Report.* July. p. 1.
• ***Summary:*** Soyfoods are desired by many vegetarians and because they are less expensive than fish, eggs, and meat, for which they are seen as an alternative. They are not seen as a substitute for other legumes. Every person interviewed purchases TVP (or Soya Meat) on a regular basis. Those with low incomes purchase it for its economy and taste, and even those with more money who can afford fish and meat buy it for its taste. "This product has become very well integrated into Sri Lankan diets." The soyfoods taught at the SFRC training program are not as often consumed on a regular basis. The soyfoods most often prepared at home by extension workers are pittu, roti, and the soy mixture; tofu,

tempeh, and soymilk are less likely to be prepared. Regular consumers are less likely to prepare soyfoods at home. For rural people the major constraint on soyfood preparation is inaccessibility of ingredients. Soy flour and soy splits are not available anywhere outside of Gannoruwa. Products in which there is the most interest if they were available are soy-fortified kola kanda (an indigenous drink made of rice flour, green leaves, and coconut), soy dhal, and snack foods. Soy flour is liked in roti and string hoppers.

5146. *INTSOY Newsletter* (*Urbana, Illinois*). 1987. INTSOY develops new techniques for commercial soymilk processing. No. 36. July. p. 1-2.
• ***Summary:*** Program leader is Alvin I. Nelson. Research associate is Sing-Wood Yeh. The technique is basically the Illinois Process with the okara filtered out using a continuous roller extractor, and no homogenization step. Whole dry soybeans are cleaned, sized, dried in a forced air oven and split while still hot in a dehuller roller. The hulls are removed using an air blower. The cotyledons are then blanched in boiling water containing a little sodium bicarbonate, drained, ground in a mill with boiling water. The slurry is filtered in the roller extractor and cooked. Problems with the original Illinois Process were "chalky mouth feel," "throat drying effect" (from the okara), and expensive homogenizers. The resulting soymilk can be used to make a cultured soy yogurt, soy ice cream, and other dairy analogs. Address: Illinois.

5147. *INTSOY Newsletter* (*Urbana, Illinois*). 1987. INTSOY hosts visiting Chinese scientists. No. 36. July. p. 4.
• ***Summary:*** Engineer Jai-Kun Dai and asst. engineer Yuhong Wu from the Inst. of Food and Fermentation Industries, Ministry of Light Industry, Beijing, are spending 1 year at the Univ. of Illinois. They are especially interested in introducing new soymilk technology to China.

5148. Mann, Ernest J. 1987. Ice cream: Part 2. *Dairy Industries International* 52(7):19-20. July. [38 ref]
• ***Summary:*** This continuation of the review of the literature on ice cream includes a summary of 3 reports from India on ice creams made from soymilk. Address: Lane End House, Shinfield, Reading, RG2 9BB, Berkshire, UK.

5149. Moore, Waveney Ann. 1987. Tofu, the food people love to hate. Plain tofu is now being dressed for success, making appearances in hot dogs, sausages, lasagne and frozen desserts. *Food Distributors Magazine.* July. p. 52, 54, 56, 58. [1 ref]
• ***Summary:*** Largely an interview with Peter Golbitz, based on information published in *Soya Newsletter.* Sales of tofu prepared foods totalled about $4-5 million retail. Soymilk retail sales grew from $3 million in 1983 to $12 million in 1985. "From 1983 to 1986 about 80% of the soymilk was imported from Japan. The other 20% came from Belgium and Hong Kong." The price was about $18 a gallon, expected to fall to $3 a gallon.

5150. *Natural Foods Merchandiser.* 1987. 8th Annual Natural Foods Merchandiser merchandising awards [Gold: Eden Foods' Edensoy, and Fantastic Foods' Fantastic Noodles (Miso Vegetable)]. July. p. 28-29.
• ***Summary:*** The Edensoy package design was developed by Group 243 in Ann Arbor. "The look is inviting yet sophisticated, with both sizes of Tetra-pak boxes bearing loosely impressionistic illustrations of landscapes in tranquil colors. Design criteria included warm, energetic food that was natural, refreshing, and healthful."

5151. **Product Name:** [PHAG Soya Drink (Without Sugar, Strawberry, Sweetened)].
Foreign Name: PHAG Soja-Drink (Sans Sucre, Fraise, Avec Sucre).
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1987. July.
Ingredients: Without sugar: Water, soybeans, lecithin (as emulsifier).
Wt/Vol., Packaging, Price: 0.5 liter and 1.0 liter Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.6 gm, fat 2.8 gm, carbohydrate 1.7 gm, calories (kcal) 46 (196 kJoules).
New Product–Documentation: Letter from Remy Mayer of PHAG. 1990. Oct. 2. The 2 sugarless products were introduced in July 1987 in 0.5 liter and 1.0 liter cartons. The strawberry soymilk was introduced in Sept. 1987 in a 0.5 liter carton. It is no longer on the market. The sweetened soymilk was introduced in Dec. 1987 in a 0.5 liter carton. His company distributes the product, which is made by their sister company DE-VAU-GE in Lueneburg, Germany.

Labels sent by Mayer. 1991. Jan. 24. Unsweetened 0.5 liter and 1 liter Tetra Brik cartons. Red and orange on white. "Pure and made from plants (Purement végétal–Rein pflanzlich). Contains magnesium. Rich in vitamin E. Linoleic acid 51% (of lipids), linolenic acid 7%." All text is in French and German. These labels are similar in design to the DE-VAU-GE labels.

Leaflet (6 by 8.25 inches, color) sent by Mayer. 1991. Jan. 24. "The vegetarian alternative" (l'alternative végétale; die pflanzliche Alternative). PHAG soya-drink. The front shows 3 milk shake-like glasses with fresh fruits and yogurt. The back shows 7 of the company's soy drinks and desserts.

Pamphlet (6 by 8.25 inches, green and red on white, 4 pages) sent by Mayer. 1991. Jan. 24. "PHAG Soja Drink." 2 pages are in French and 2 in German. Describes the product

by answering questions: Who uses it? Is it pure and natural? Is it a fresh product? Can it be used in cooking? Why is it packaged like it is? The ingredients for the sweetened (incl. 3% non-refined cane sugar) product are listed, then the nutritional composition.

5152. **Product Name:** [Soya Drink {For Adults, Calcium Fortified} (Natural/Neutral, or Chocolate)].
Foreign Name: Soja Dryck (Naturell, Choklad).
Manufacturer's Name: Semper AB.
Manufacturer's Address: Sektor Industri, Sveavagen 166, Box 231 42, 104 35 Stockholm, Sweden. Phone: 08-7299700.
Date of Introduction: 1987. July.
Ingredients: Natural: Soy protein isolate (3.5 gm/100 ml), hydrolyzed corn starch, sugar, soy oil, mineral salts (calcium, potassium), lecithin, ascorbic acid, vitamins A, D, B-12, and riboflavin.
Wt/Vol., Packaging, Price: 225 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Natural, Per 100 ml: Calories 45, protein 3 gm, fat 1.5 gm (polyunsaturated 0.9 gm, saturated 0.3 gm), carbohydrate 5 gm, calcium 75 mg, phosphorus 50 mg, sodium 40 mg, vitamin A, retinol 0.045 mg, vitamin D 0.38 mcg, riboflavin 0.20 mg, vitamin B-12 0.50 mcg.
New Product–Documentation: Labels. 1988, dated. Tetra Brik cartons. Natural is chocolate brown letters on white. Chocolate is the reverse. Both have two prominent soybean pods on front panel. "Use like milk." Note: This was the first ready-to-drink soymilk made in Europe for adults that was fortified with calcium. Talk with Lief Christensen. 1990. July 6. Followed by letter (fax) of July 10. These are adult drinks, not infant formulas, that were introduced in June 1987. Based on soy isolate, in neutral and chocolate flavors, they were UHT-sterilized in 225 ml Tetra Brik cartons. The products were withdrawn in 1988. They never sold well.

5153. STS–Soya Technology Systems Ltd. 1987. Soymilk makes sense (Ad). 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 1 p.
• ***Summary:*** Shows two milk bottles, one filled with soymilk, one filled with soybeans, set atop soybeans, with a green field of soybeans in the background. Address: Singapore.

5154. STS–Soya Technology Systems. 1987. Soymilk processes/products (Leaflet). Singapore. 1 p. Single sided. 28 cm.
• ***Summary:*** Roughly half of the products are made using ultrafiltration (UF), which can be used to remove water or selectively remove food components (such as oligosaccharides). A "cast tofu or paneer" is made using a 2-stage UF concentration. Address: 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922.

5155. *Technocrate Magazine*. 1987. Collaboration: New soymilk plant at Ghaziabad. July.
• ***Summary:*** India's second and largest to date soymilk plant is being set up at Ghaziabad, Uttar Pradesh, India. It is being supplied by Soya Technology Systems Ltd. (Singapore), in collaboration with the Indian firm Larsen & Toubro Limited (L&T). The 160-million-rupee project, with a capacity of 6,000 liters/hour of soymilk based drinks, is being set up by Amrit Soya and Protein Foods Ltd. Address: India.

5156. **Product Name:** Vitasoy Natural Soy Drink (Liter Size Organic) [Creamy Original, and Vanilla].
Manufacturer's Name: Vitasoy (USA) Inc. (Importer). Made in Hong Kong.
Manufacturer's Address: San Francisco, CA 94107.
Date of Introduction: 1987. July.
Ingredients: Creamy Original: Filtered water, organic soybeans, barley malt, pearl barley, sunflower oil, seaweed (Japanese kelp), sea salt.
Wt/Vol., Packaging, Price: 8.4 fluid oz (250 ml), 1 liter Tetra Brik Aseptic carton. $1.89 retail.
How Stored: Shelf stable.
Nutrition: Per 6 fl oz.: Original: Calories 110, protein 7 gm, carbohydrate 10 gm, fat 5 gm. Carob: Calories 150, protein 6 gm, carbohydrate 22 gm, fat 4 gm. Chocolate: Calories 160, protein 6 gm, carbohydrate 24 gm, fat, 4 gm.
New Product–Documentation: Labels. 1986. 8.4 fl oz: 2.5 by 4.25 inches by 1.5 wide. Paper carton. Original: Orange, green, white on tan with blue band and little soy beans. Chocolate: Dark brown band with chocolate pieces. Carob: Orange band with carob pieces. All illustrated with glass of soy drink with straw. "Natural soy drink. Truly a non-dairy delight!"

Ad in East West. 1987. Aug. Inside front cover. Full-page color. "Introducing New Liter Size Vitasoy. Great-tasting soymilk made with organic soybeans. Vitasoy also comes in 4 flavors of individual serving size... Creamy Original, Rich Chocolate, Carob Supreme and Vanilla Delite." Also in Vegetarian Times. 1987. Aug. p. 47, Nov. inside front cover. Ad in East West. 1987. Oct. Inside rear cover. Full page color. "Our family size is here. Good news for Vitasoy fans. Great-tasting soymilk made with organic soybeans." Same ad in New Age. 1987. Sept/Oct. inside from cover, and 1988. March/April. p. 8. Talk with Grace at Vitasoy. 1988. Sept. 7. The liter size original and vanilla were launched in July 1987.

Ad in Vegetarian Times. 1988. Nov. Rear cover. "Soymilk users love Vitasoy. Here's why..." Four quotes from satisfied users. Also in April 1989. p. 3. Leaflet. 1988. April. "We've got what you've been looking for... Great tasting. Wholesome ingredients. High in protein, rich in vitamins. Low sodium, low fat and fewer calories. 100% cholesterol free. Totally no-dairy. Long shelf life. Versatile in

usage. Great value for the price."

5157. Lo, K.S. 1987. Re: Moving into new soymilk plant in New Territories. Updated sales statistics, 1985-1987. Letter to William Shurtleff at Soyfoods Center, Aug. 4. 2 p. Typed, with signature on letterhead.
• ***Summary:*** Hong Kong Soya Bean Products Company's move from Kwun Ton to Tuen Men in the New Territories started in December 1986 and was completed by 31 March 1987. The new building is 15 stories high with 500,000 square feet. In 1987 the company had paid up capital of HK$47.7 million. Projected sales were 126 million packs/bottles of Vitasoy and 199.3 million bottles/packs of other Vita products, worth a total of HK$482.2 million.

Corresponding figures for 1985 were: Paid up capital: same. Sales: 114.1 million packs/bottles of Vitasoy and 162.2 million bottles/packs of other Vita products, worth a total of HK$391.4 million.

Corresponding figures for 1980 were: Paid up capital: HK$26.5 million. Sales: 111.6 million packs/bottles of Vitasoy and 113.8 million bottles/packs of other Vita products, worth a total of HK$210 million.

Corresponding figures for 1970 were: Paid up capital: HK$5.3 million. Sales: 100.8 million packs/bottles of Vitasoy, worth a total of HK$25 million.

Corresponding figures for 1960 were: Paid up capital: HK$2.65 million. Sales: 42 million packs/bottles of Vitasoy, worth a total of HK$5.8 million.

Production of Vitasoy grew slowly from 1940 to 1953, then rapidly until 1972. They fell each year in 1973-75 because of the Arab oil embargo, the U.S. soybean embargo, sky-high sugar prices, and a general economic recession. From 1976 to 1982 production grew at its fastest historical rates. Address: HKSBPC Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong.

5158. Olivero, Magaly. 1987. Milking the soybean for Cha-Cha Cherry [Elizabeth Appel and Ambrosia Soy Co. of East Haven, CT]. *New York Times.* Aug. 9. p. CN23. (Connecticut ed.).
• ***Summary:*** In June the company began production of a new soymilk named SweetSoy. Plans for the future include soy pudding and vegetarian entrees later this year.

Note: Liz Appel and Ambrosia Soy went out of business in about Feb. 1991.

5159. Richard, Lou. 1987. Solait from Miller Farms, and Sale of Fearn Natural Foods to Modern Products, Inc. (Interview). *SoyaScan Notes.* Aug. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Solait, a dry soymilk powder from Miller Farms Food Co., is on the market in a few areas. It is bulk packed in a nitrogen flush 26 oz can that makes 6 quarts, or in a 60 lb nitrogen flush bag. On 30 September 1985 Lou sold Fearn Natural Foods to Modern Products, Inc., whose headquarters are in Milwaukee. Fearn is now a division of that company. Lou is now working with Miller Farms.

5160. Haren, Chuck. 1987. Small, village-scale equipment for making soyfoods (Interview). *SoyaScan Notes.* Aug. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** A company originally named Laredo sells a very nice, compact, table-sized unit. He thinks they have sold some of their machines in Costa Rica and in perhaps Cuba. He has no idea how many machines they have sold in total; he hasn't been in touch with them for about 18 months.

Note: Roberto H. Moretti, the man who invented the first Mechanical Cow, is a rather famous food science professor in Brazil.

Shurtleff: What have been some of your and Plenty's most successful soyfoods projects in the Caribbean?

Haren: Plenty's emphasis is on small, village-type systems. Transferring technology that will work for individuals or small groups in a kitchen or slightly larger scale. They have projects on St. Lucia, Dominica, and Jamaica. Dominica, which has the 2nd to lowest per capita income in the region after Haiti, has an excellent project. Chuck has been able to stay there for 3 years, which provides continuity, and many other expatriates have also worked there. The program is an education program, a "soyfoods training center." The local people develop products and some of these products are sold to support the program and also to test the marketability of each product. They are working in the public education system, teaching in an adult education program, and some in the primary schools. They do field demonstrations for groups of farmers who are starting to grow soybeans. Four years ago they started an agriculture program by doing the INTSOY variety tests. The chose several varieties that worked well and are working to maintain seed strains of those. They started in Roseau, the capital city in Dominica, then after several years farmers took over the program and formed a cooperative as a business. It is a marginal business but it is providing all of them with income. They work with people who have relatively little education and come from a low socioeconomic class. Most of the foods are sold directly from a kitchen rather than being distributed. One good product is called an Akra, which simulates a product made with imported, dried codfish. It is a mixture of flour and "tokara"–which is tofu and okara curded together. It uses all the pulp when making tofu; no okara is separated out or unused. It is whole bean tofu without the okara removed. The finished product is somewhat like a fried croquette but it is in the form of balls. They have also developed smoked tempeh, which simulates smoked fish. They do a fish spread with tokara. Its amazing to see the different products these people come up with and like.

In Guyana, when people were experimenting with

soyfoods in the 1960s and 1970s, they developed tokara. Many talented people left during the rough political period and became part of CARDI, Caribbean Agriculture Research & Development, which is on each of the islands. Plenty is presently working with 5 groups in Dominica. Plenty calls them "food processing kitchens" and they operate on a small commercial basis with about 2-5 people each; they provide paying jobs and good food for people.

The biggest commercial success has been on St. Lucia, where they are selling 800 EC a day in Castries.

Plenty started out in 1983/04 and was receiving only a year of funding at a time–mainly from CIDA (Canadian International Development Agency). Plenty has to find 1 dollar of matching funding for every 3 dollars they get from CIDA. It has been geared toward education, agriculture, and food processing on Dominica, Jamaica, and St. Lucia. Its about helping people to become more independent in many ways. Plenty's programs are, of course, all vegetarian. We need to develop more small-scale technology that is geared to the needs of developing countries. Big projects often knock hundreds of people out of work.

Plenty has an "education center" (called Plenty Soya Center) with a tofu and soymilk plant on Dominica. They have a small stone grinder obtained from Okita. Stainless-steel pots and tile bathrooms. Its in a bigger building, 40 x 60 feet. They teach home processing (for classes), village-level processing (the most popular), and small industrial processing. Programs can range from a few days to 3 months in length. About 150 people have participated in programs at the Plenty Soya Center on Dominica over the past 3 years. In the government adult education program, 200-300 people have taken an 8 week course (1 day a week for 2 hours). People learn how to make soymilk, tofu, and tempeh at home. They Plenty develops recipes with them, and finally they develop recipes on their own. All the classes have 15-20 people in them, and a lot of them have to pay. Finances is the major problem that prevents people from going on to start a business. They are dealing with a lot of very low income people. But interest in small commercial companies owned by Caribbean people is growing. The programs are still in the infant stage, but Chuck can see the day that soyfoods will become important in the Caribbean. Plenty's work in Dominica began in the spring of 1983–say April or May. On each island, it started with the INTSOY's soybean variety tests. In the fall of 1983, about October, Plenty did INTSOY soybean trials on Jamaica, St. Lucia, and Dominica. At the same time they were planting their soybean trials, they began to do village soymilk classes in making foods. They would hand out ½-lb or 1-lb packets of soybeans and instructions to people who showed interest and came forward to talk about it–which was considerable. A lot of people have tried growing soybeans on a small scale. The challenge is to make soybean cultivation more commercially viable for the farmers. Making the soybeans into soyfoods for sale helps to make the soybean cultivation more viable. In the Caribbean, agricultural laborers are paid $1.00 to $1.25 an hour. Plenty usually pays a little bit above the going rate.

Chuck was in Lesotho at the end of 1984. He received a letter from a person at Ibadan inviting him to come to Nigeria to teach soyfoods. In Zambia, the government is publishing a soy agriculture newsletter is being published monthly. One of Plenty's best agriculturists, Darryl Jordan, is now in Ethiopia, where he has been for 3 years; he formerly worked in Guatemala with Alan Praskin. Darryl got a job with the Catholic Relief Services–the official international humanitarian agency of the Catholic community in the United States–coordinating their big agricultural program in Ethiopia.

The marriage of Farm Foods with Barricini seems to have worked out very well. It was a great idea to put those two companies together. Farm Foods knows how to make the foods and Barricini's got the money and knows how to market them. They haven't compromised their quality. Robert Tepper is doing an excellent job–taking soy ice cream mainstream in America. Like Tofutti. Chuck is going to Canada after he spots at several other places in the USA. Norman Ayerst and group in Toronto is developing a tofu wiener and they have go the price down almost to the price of meat wieners.

INTSOY will be holding a conference next summer on soybean processing for developing countries. INTSOY has been forced to discontinue their program of teaching farmers overseas how to grow soybeans–which end up competing with American soybeans.

There is a lot of politics in the Caribbean too. Jamaica had this whole program set up to grow their own soybeans because they had a soybean crushing plant which used soybeans imported from Mexico and the United States. The new prime Minister of Jamaica, Edward Seaga (in office from Nov. 1970 to Feb. 1989) has basically shut down the agricultural part of the program. "Once you can show people a way to support themselves and their families making soyfoods or growing soybeans, the idea will spread like wildfire." That is the crying need in developing countries.

5161. Blix, Glen. 1987. Re: Shutting down the soymilk plant in Mt. Vernon, Ohio (Interview). Conducted by William Shurtleff of Soyfoods Center, Aug. 18. 1 p. transcript.
• ***Summary:*** In mid-July 1987 the old brick soymilk plant in Mount Vernon, Ohio, which had been built by Dr. Harry Miller with his own hands, was finally shut down. It has not yet been sold. Earlier in the year the soymilk that had been made in Mt. Vernon started to be made at the Loma Linda Foods plant in Riverside, California. Address: Loma Linda Foods, 11503 Pierce St., Riverside, California 92515.

5162. Schauff, M. 1987. Imitationsprodukte fuer Milcherzeugnisse–Gefahr fuer Landwirtschaft und

Verbraucher [Imitation milk products–The danger for agriculture and the consumer]. *Deutsche Milchwirtschaft* 38(34):1169-73. Aug. 19. [Ger]
• ***Summary:*** Discusses the effects of imitation dairy products on the consumption of milk and milk products, and the response of the dairy industry in the USA, UK, and France–against the background of continuing resistance in West Germany to the introduction of such products. During the past 12 years, imitation milk products have come on the market, especially in Sweden and the USA. In recent years they have had booming sales in the UK. In Germany, margarine has stolen half of the market from butter.

Imitation milk products have made the greatest gains in the United States. Their potential in Europe is described in a report titled "Project 2002" by the American Soybean Association. Address: VDM, Bonn, Germany.

5163. Kavanagh, John. 1987. ANF [Australian Natural Foods] hopes for a soy cash-cow. *Business Review Weekly* (*Sydney, Australia*). Aug. 21.
• ***Summary:*** This publicly owned biotechnology company was launched two years ago. "Now it appears to be turning back on its high tech potential to enter the cut-throat beverage market... This week ANF launches Excel, Australia's first fresh soymilk product. ANF will produce 100,000 liters/week at its Sydney factory during the initial phase and hopes to take production up to 500,000 liters a week." United Dairies will handle distribution. David Glasheen is working on a number of new soy products including tofu, yogurt, and custard. Most of the soymilk products now available are imported. Sanitarium's So Good, aimed at the mass market, is doing well.

5164. Cole, Michael. 1987. Sordi, major Italian manufacturer of dairy equipment, to start making soymilk equipment (Interview). *SoyaScan Notes.* Aug. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sordi plans to do what Alfa-Laval and DTD/STS have already done. Michael Cole has signed a 5-year contract to work with them, and has started his own company, Soya International Ltd., a consulting firm. Cole formerly made soy ice cream, soy yogurt, and soymilk with Soya Health Foods Ltd. in England. Address: England.

5165. *Australian Dairy Foods.* 1987. Soy competition begins in earnest. Aug. p. 56-57.
• ***Summary:*** "Long expected direct competition to the liquid milk market from liquid soy foods has begun in earnest in Sydney. Australia Natural Foods Holdings Ltd., launched the 'Excel' brand of fresh, non-dairy soy drink on August 19. It is being distributed in New South Wales by United Dairies Ltd., via its 500 milk vendors and 8,000 retail outlets serviced by the company... The recommended retail price is much higher than fresh cow's milk. Both natural and flavoured 'Excel' are $2.99 for a 2-litre plastic bottle that looks like fresh cow's milk, and $1.15 for 500 ml and 66 cents for 300 ml... ANF has a soy bean processing plant at a new factory at Taren Point. It is capable of producing 20 million litres a year of liquid soy food, on a three-shift, five day a week basis. The initial sales target is 100,000 litres a week." The three men who are the prime movers behind ANF are Larry Case (Chairman), David Glasheen, and Peter Lancaster. A photo shows 5 of the products. Excel is available in natural, chocolate, and strawberry flavors. Address: P.O. Box 283, Caulfield South 3162, VIC, Australia.

5166. **Product Name:** Excel (Fresh Soymilk) [Natural, Chocolate, or Strawberry].
Manufacturer's Name: Australian Natural Foods Holdings Ltd. (ANF).
Manufacturer's Address: 80 Box Rd., Taren Point, NSW 2229, Australia. Phone: 2-526-2555 or 525-5406.
Date of Introduction: 1987. August.
Wt/Vol., Packaging, Price: 500 ml or 2 liter bottle.
How Stored: Refrigerated.
New Product–Documentation: Kavanagh. 1987. Business Review Weekly. Aug. 21. "ANF hopes for a soy cash-cow." Geoff Wilson. 1987. Australian Dairy Foods. Aug. p. 56-57. The product was launched on Aug. 19. It is being distributed in New South Wales by United Dairies Ltd. via its 500 milk vendors and 8,000 retail outlets serviced by the company. Both natural and flavored Excel are much more expensive than cow's milk, $2.99 for a 2-liter bottle, and $1.15 for 500 ml. ANF has a soybean processing plant at a new factory at Taren Point. It is capable of producing 20 million liters a year. The initial sales target is 100,000 liters/week. The company claims that its soymilk production technology was developed exclusively by ANF. The moving forces behind the company are Mr. Larry Case (Chairman), David Glasheen, and Peter Lancester. The product is promoted as being fresh, not being in Tetra Pak cartons. Taren Point is a suburb of Sydney.

5167. Bowles, Willa Vae. 1987. The soy revolution! *Total Health.* Aug. p. 24-29. See followup in Oct. issue, p. 55. [1 ref]
• ***Summary:*** Soybean exports during the last fiscal year amounted to $11,000 million. They help keep the U.S. trade deficit, almost $170,000 million in 1986, from rising even higher. Tofu mixed 50/50 with any nut butter makes a fluffy spread for added protein and reduced fat and calories.

5168. **Product Name:** Ah Soy (Soymilk) [Original, Chocolate, or Vanilla].
Manufacturer's Name: Great Eastern Sun (Marketer-Distributor). Made in Minnesota by St. Peter Creamery.
Manufacturer's Address: 92 McIntosh Rd., Asheville, NC

28806. Phone: 704-252-3090.
Date of Introduction: 1987. August.
Ingredients: Incl. Soybeans, water, cold-pressed safflower oil, carrageenan, pure Bourbon vanilla, dried cane juice.
Wt/Vol., Packaging, Price: Quart Tetra Brik Aseptic carton. Packed 12 to a case. Wholesales for $12/case.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad (full page, color) in East West Journal. 1985. Sept. p. 28. "Ah soy: Finally a really soft drink." Note: The flavors were later elaborated to American Original, Dutch Chocolate, and French Vanilla. Leaflet. 1987, undated. "Ah Soy. New Improved Flavor. Quart Size. Made in America. Popularly Priced. Sweetened with Organic Unrefined Cane Juice. The Ah Soy Story–Totally New Formula!!!" Tetra Pak Age. 1987. Summer. p. 12-13. Color photo of three quart Tetra Brik cartons. Red, blue, and yellow on white background.

5169. **Product Name:** Homestyle Tempeh "No-Chicken" Salad.
Manufacturer's Name: Homestyle Foods (Formerly Sonoma Specialty Foods).
Manufacturer's Address: 2317 Bluebell Dr., Santa Rosa, CA 95403.
Date of Introduction: 1987. August.
Ingredients: Tempeh (organic soybeans, culture), celery, soy oil, soy milk, relish, soy sauce, mustard, vinegar, garlic, parsley, spices, and honey; Improved recipe (1988). Tempeh (organic soybeans*, culture), celery, soy oil, soy milk, mustard, tamari, vinegar, sesame, relish, garlic, parsley, natural spices and honey. * Grown in accordance with CA H&S Code 26569.11.
Wt/Vol., Packaging, Price: 8 oz plastic tub.
How Stored: Refrigerated.
Nutrition: Per 2.66 oz.: Calories 155, protein 7.5 gm, carbohydrates 7.4 gm, fat 10.7 gm, fiber 2.0 gm, sodium 0.25 gm, cholesterol 0.
New Product–Documentation: Label. 1987. 4.5 inches diameter. Red and blue on white plastic lid. "Natural. Non-Dairy. Cholesterol Free. No Preservatives. Use on sandwiches, in Dips and Salads." Interview with Benjamin Hills. 1987. Sept. 7. In 8 oz plastic tubs. Label. 1988. In both 8 and 15 oz tubs. Red, black, and yellow on white. "New! Non-Dairy. Cholesterol-Free. Ready to Eat. Natural. No Preservatives. Nutritious." Spot in Health Foods Business. 1988. April.

5170. McSweeney, Daniel. 1987. Consumer survey 1987. *Whole Foods.* Aug. p. 25-29.
• ***Summary:*** Percentage of 600 natural foods consumers surveyed who purchased a certain type of soyfood product during the years 1985, 1986, 1987. NA = Not Available. Tofu: NA, 85.1%, 83.4%. Miso: 50.0%, 71.1%, 69.7%. Soymilk: NA, 40.4%, 54.4%. Nondairy Frozen Desserts: 37.6%, 44.6%, 46.0%.

5171. **Product Name:** Plamil Soyamilk Rice Pudding with Sultanas.
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1987. August.
Ingredients: Water, unpolished rice, soya protein isolate, sunflower oil, raw sugar, sultanas [seedless raisins], natural vanilla essence, sea salt, soya lecithin (emulsifier), carrageen extract [carrageenan] (stabiliser).
Wt/Vol., Packaging, Price: 439 gm (15.5 oz) can.
How Stored: Shelf stable.
New Product–Documentation: Label for a can. 1987, undated. 4 by 9.5 inches. Yellow, white and green on brown. "Organically grown unpolished rice."

5172. **Product Name:** Plamil Sugar Free Soya Milk Rice Pudding with Sultanas.
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England. Phone: (0303) 850588.
Date of Introduction: 1987. August.
Ingredients: Water, soya protein [isolate], sunflower oil, unpolished rice, sultanas, flavouring: natural vanilla essence, sea salt, emulsifier: soya lecithin, stabilizer: carrageen [carrageenan].
Wt/Vol., Packaging, Price: 439 gm (15.5 oz) can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Plamil brochure. 1990. Gives name as Plamil Soya Milk Rice Pudding. Sugar-free is in a blue, yellow, and white can. With sugar is in a Brown,

yellow, and white can.

Letter and Label sent by Arthur Ling, Managing Director of Plamil Foods. 1990. July 24. "The sugar-free version of our soya milk Rice Pudding was introduced in August 1987." Label. 9.5 by 4.25 inches. Blue, yellow, white, and brown. Color photo of a blue bowl containing the pudding and sultanas (raisins). "100% non dairy. Organically grown unpolished rice. Gluten free. Suitable for those allergic to dairy milk. Contains no animal fats or other animal ingredient. Protein is from soya protein isolate which has far higher protein content pro rata than soya flour."

Leaflet. 1989. 8½ by 11.5 inches. "Britain's No. 1. Soya Milk Rice Pudding." "Superb taste in the creamiest of soya milks. Perfect wholefood full of nourishment. Organic long grain rice. Ready meal hot or cold." With Vegan certification symbol.

5173. **Product Name:** Chocolate Milk (Soymilk).
Manufacturer's Name: Plenty Canada Soya Utilization Project.
Manufacturer's Address: 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
Date of Introduction: 1987. August.
Ingredients: Soya milk, chocolate powder, sugar, salt.
Wt/Vol., Packaging, Price: Sold fresh over the counter in a small cup at Plenty Canada Soya Food Centre for Rs. 2/-.
How Stored: Unrefrigerated and perishable.
Nutrition: 3.2–3.4% protein.
New Product–Documentation: Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre and talked with Mr. H.G. Jayatissa, project manager, and Miss Geethanjali Jayasena, soya technician.

The eleven products sold at this location were developed either by Plenty Canada or the Soya Foods Research Centre (SFRC) at Gannoruwa. In addition to these products, Plenty also sells products made by the SFRC, by Kundasale Cereal Factory, by Jane Soya Products, by C. Siriwardene, and by Kusuma Godalidde, plus soya beans (whole and split).

Since opening officially in September 1987, sales have increased by 30% a month. Commercial dried tempeh production is scheduled for May 1988 by a producer in collaboration with Plenty. Plans are underway for a Colombo Soya Food Centre and production facility as well as island-wide promotion of soya foods, and various activities to support small and medium scale soya food entrepreneurs. The soya promotion project will continue for a minimum of 4 years. Enquiries should be made to Ian Taylor, project director, Plenty, Box 95, Kandy, or the Plenty Canada head office at RR#3, Lanark, Ontario, K0G 1K0, Canada.

The company uses about 500 kg/month of soybeans (purchased from sellers / boutiques in Kandy for Rs. 9-9/50 per kg), 375 kg/month of soy flour (purchased from SFRC at Gannoruwa for Rs. 12/kg or from Kundasale for Rs. 18/kg), and 108 kg/month of soy flakes (purchased from Kundasale Cereal Factory for Rs. 22/kg). Consumers buy the products above all for their nutritional value, but also for good taste and economy.

5174. *Soya Newsletter* (*Bar Harbor, Maine*). 1987. Soyatech readies first soyfoods industry report. July/Aug. p. 5.
• ***Summary:*** Soymilk and Tofu Products: 1986-1987 Market Report is scheduled for publication in the fall of 1987. It will cost $795, or $695 if ordered before 30 Sept. 1987. Note: This report was never published. Only one prepaid order was received and the Golbitz family was about to have a baby.

5175. STS–Soya Technology Systems Ltd. 1987. Different types of soymilk plants. 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 8 p. Aug. 24.
• ***Summary:*** "Only a large capacity soymilk plant is economically viable for making non beany-tasting soymilk with a long shelf life. Non-bean tasting technology is a substantial investment." Photos show various small, medium, and large soymilk systems, each with the country of origin, capacity in liters/hour, and price range. Address: Singapore.

5176. *Tetra Pak Age.* 1987. Edensoy in a class by itself. 5(2):14. Summer.
• ***Summary:*** "From an international line for the 1986 Tetra Pak Design Competition, Edensoy Natural Soy Beverage by the U.S.-based Eden Foods, Inc. took the top prize in its class. According to the judge–Mr. Carlos Rolando, a Spanish designer–Edensoy's design makes good use of typography and color. It creates a mood. 'To be healthy is to be happy. Jogging or lying under a tree along a stream of pure water creates a feeling of happiness. This design conveys all this and more. The illustration conveys a feeling of tranquility. A highly suggestive, blurred landscape. Nobody knows where it is but everybody would like to be there.' Indeed the package speaks for the product," which contains no added fat.

5177. Vitasoy (USA) Inc. 1987. Introducing new liter size (Ad). *Vegetarian Times.* Aug. p. 19.
• ***Summary:*** This full-page color ad shows a large liter carton of Creamy Original. "Vitasoy also comes in 4 flavors of individual serving size... Creamy Original, Rich Chocolate, Carob Supreme, and Vanilla Delite... Ideal for the great outdoors and your kids' lunch boxes." A small inset photo shows smaller cartons of these four flavors. Address: San Francisco, California 94107.

5178. *Vitasoy Vitabrations.* 1987. Lo's second generation... Succession of charismatic management. 1(2):1. Summer. [2 ref]
• ***Summary:*** "Winston Lo, 46 years old, became Managing Director of Hong Kong Soya Bean Products Co. Ltd, the manufacturer of Vitasoy, in 1976, when his father, K.S. Lo–

current chairman and founder of the company–retired from that position. In 1967 he received his masters degree in food science and technology from Cornell University." In 1975 he led in installing the first Tetra Pak packaging line in Hong Kong, and has directed the company's diversification into fruit juices, teas, carbonated soft drinks, and in 1979 fresh cow's milk. In 1986 Vitasoy's total sales reached over $100 million, with annual volume of 300 million units. A portrait photo shows Winston Lo. Address: 99 Park Lane, Brisbane, California 94005.

5179. *Vitasoy Vitabrations.* 1987. The making of Vitasoy. 1(2):3-6. Summer.
• ***Summary:*** A fairly detailed description of the manufacturing process used at the new $20 million plant in Hong Kong's New Territories. It has a daily capacity of 1.2 million non-carbonated Tetra Pak units. The process uses organically grown soybeans, certified through a farm verification program by independent third party agronomy professionals. Concludes with six questions about Vitasoy soymilk.

Photos show: (1) A carton of Vitasoy Creamy Original. (2-6) Soymilk processing equipment inside the factory, incl. Winston Lo standing by a filling machine. Address: 99 Park Lane, Brisbane, California 94005.

5180. *Vitasoy Vitabrations.* 1987. How does Vitasoy compare to other soymilks? Vitasoy ranks Number 1 in calcium and vitamins B-1 and B-2. Vitasoy scores as one of the highest in protein content. 1(2):7. Summer.
• ***Summary:*** Nutritional comparison with Edensoy, Ah Soy, and Supersoy, per 6 ounce serving: 7 gm protein, 5 gm fat, 115 mg sodium. Address: 99 Park Lane, Brisbane, California 94005.

5181. Roller, Ron. 1987. Job's tears, San-J plant, Edensoy (Interview). *SoyaScan Notes.* Sept. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Edensoy contains Job's tears, the hard, pearly-white to tan seeds of an Asian grass (*Coix lacryma-jobi*), also known as "pearl barley" (easily confused with pearled barley), and called *hatomugi* in Japanese. Note: The large Kenkyusha dictionary (1954) translates *hatomugi* as "pearl barley." A Muso Shokuhin soymilk label gives the scientific name of hatomugi as *Semen coicis.* The grains are about the size of a mung bean but slightly oblong, and with a very prominent sunken tan line running from end to end, as with barley. Eden Foods has tested the growing of Job's tears in the southern USA, and now sells the grain in a 1-lb bag. San-J will be the first company to make natural shoyu in the USA. Eden has been negotiating with them for 4-5 years. Startup costs were $10-15 million. They will make both tamari and shoyu from both defatted soybean meal and whole soybeans. It is an institutional factory, no wooden vats, all stainless steel. Offices will move to the plant site. Edensoy sales are on target. Estimates are that 25-30% of people who go into health food stores have never tasted soymilk. Address: Eden Foods, Clinton, Michigan.

5182. Shurtleff, William. 1987. History of Appropriate Foods Inc. and The Soy Source. Lafayette, California: Soyfoods Center. 3 p. Unpublished manuscript, based on a interviews with Robert Werz, Sept. 9.
• ***Summary:*** "Appropriate Foods was founded by Robert Werz in the fall of 1980 as a tempeh manufacturer. Born on 29 Dec. 1952, he had been a vegetarian since about 1970. Quite early he developed an affinity for soyfoods. He had been enjoying tofu since the early 1970s, when it was only available from Chinatown. He first heard about tempeh in 1975 from a friend in California, then first tasted it in about 1977. In 1979 he began to make tempeh part time at home in Sea Cliff, New York, for himself and a few friends while working as a carpenter and a boat builder. He also sold some of this tempeh to one store, Rising Tide, as a test market.

"In 1980 Werz decided to try making tempeh as a part time business. So in October 1980 he founded Appropriate Foods, Inc. He rented a small kitchen (down 2 long flights of stairs in the Bayside Jewish Center) from a friend who was a kosher caterer in Bayside, New York. Commercial production of Tempeh Brothers Tempeh started there in Nov. 1980. When Werz first made tempeh at home and at the temple, he had a partner, David Sibek; friends called them "tempeh brothers." Hence the product name. The only other tempeh sold in the area was that made by The Tempeh Works in Greenfield, Massachusetts.

"In the spring of 1981 Werz and Sibek decided to make tempeh a full-time business. They were distributing their products to about 10 health food stores and making about 20 pounds of tempeh each batch, 200 pounds a week. So they rented an old meal packing plant, complete with tile walls and floor drains, at 137 New Hyde Park Rd., Franklin Square, Long Island, New York.

In Feb. 1982 tempeh production started at the new location, and soon the company had two small distributors in New York. But now there were 12 tempeh brands on the market. In about June the distributors dropped 'Appropriate Foods' products. So they built an insulated box in the back of a pickup truck and began to deliver their own products. From this painful experience Werz learned a key lesson: "In the food business, distribution is everything." If a company does not have control over the distribution of its products, it is extremely vulnerable.

Werz and Sibek quickly realized that they had to expand their product line, so in June 1982 they started making three new products: (1) Tempeh Brothers brand Soyfurters, a cake of tempeh sliced lengthwise into 4 sticks, marinated, and seasoned with liquid smoke, to sort of resemble hot dogs; (2) No Cow brand Soymilk (the soybeans were ground in

a motor-driven Corona mill) in plain, cinnamon-honey, and carob-honey flavors; and (3) Tempeh Brothers brand Tempehburgers.

In the summer of 1982 the company added Tempeh Brothers brand Super Tempeh and Soy-Rice-Sesame Tempeh, and dropped the Soyfurters. Dave Sibek left in early 1983."

"In Feb. 1984 Werz and a partner, Shelley Martin, started a second business, The Soy Source, to allow Appropriate Foods to start selling their products, under The Soy Source Brand, to supermarkets. Their first products were shoyu (Japanese-style soy sauce) and tamari (wheat-free soy sauce). The first new tofu product in the new line (launched in Feb. 1985) was Perfect Pasta brand Tofu Tortellini (frozen). The tofu was purchased from Nasoya and the product made by the pasta maker. In Sept. 1985 Vegetarian Gourmet Traditional Pot Pie with Tempeh and Tofu Quiche, both frozen, were added to the new line."

"On 1 Dec. 1986 Appropriate Foods completed its move to a larger building in the East Brooklyn Industrial Park at 292 Liberty Ave., Brooklyn, New York. Production began there in March 1987. In mid-March four new tempehs were launched as gourmet items, with silver and gold labels, under the Emperor's Best Brand: Garbanzo Tempeh (with no soy), Soy & Amaranth Tempeh, Rye-Caraway-Soy Tempeh, and Brown Rice Tempeh (with no soy). A nice article in the *New York Times* (24 June 1987) noted: "Today, with six employees, the company produces about 10,000 pounds of tempeh a month. About half is sold to health food distributors and the rest is delivered to about a hundred stores and restaurants in the metropolitan area.

"As of September 1987 products made under the Appropriate Foods brand include Soy Tempeh, Super Tempeh, Soy-Rice-Sesame Tempeh, Tempeh Burgers, Soymilk, and Tofu Salads. Garbanzo Tempeh and Amaranth Tempeh are sold under the Soy Source gourmet brand. Soy Source is still an independent company with its own books. The distribution arm of the company, called Appropriate Foods Distributing, is trying to broaden its line. The future seems to lie in 'crossover products,' sold in supermarkets."

The company is now one of America's largest tempeh manufacturers. They have developed many innovative tempeh and tofu second generation products. Address: Lafayette, California.

5183. Rahman, Majeedah. 1987. The Belize soyfoods and nutrition education project (Interview). *SoyaScan Notes.* Sept. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Majeedah got interested in nutrition in about 1969, when she started working with the Breakfast for Children Program run by the Black Panthers in Oakland. She then went to work for a community program called Akbar that fed breakfast, lunch, and dinner to 350 children.

Majeedah, who started the project, was first introduced to soyfoods in about 1970 by two black American twins, who had become Rastafarians. They were making and selling tofu burgers and tofu enchiladas in the San Francisco Bay area, mainly at flea markets. They went to Belize and made a little soymilk and soynuts for children at one of the primary schools. To start their program, they received a little financial help from REACH, an organization in Stancreek, south of Belmopan, Belize.

During the 1970s Majeedah became a Black Muslim. Elijah Muhammad believed that his followers should not eat soybeans because they were fit only for animals. That has changed recently. "Your Black Muslim Bakery" on San Pablo Ave. in Oakland now makes tofu burgers at its restaurant and bakery. In 1980 Majeedah transferred to U.C. Berkeley from College of Alameda and studied health and law, focusing on how law affected health. She got an undergraduate degree in social science and law. In 1981 she started an MPH program and also started to work at the U.C. Cooperative Extension, Expanded Food and Nutrition, Education Program.

In 1985 Majeedah attended the Women's Conference in Kenya. Right after that, in December 1985, she went to Belize (formerly British Honduras) to show some films. While there, because she was interested in nutrition, she noticed deficiencies of protein and vitamin A. She returned in January 1986, paying her own way, to study the nutritional situation further. She fell in love with the country, the blend of ethnic groups, the lovely scenery. She had been a vegetarian for about 15 years (partly because she is Islamic and doesn't eat pork) and began using soyfoods about 8 years ago. So she noticed that a few farmers were growing soybeans for animal feed. She met with the minister of health, the nutritionist, and got permission to do some further studies at the hospital. In February 1987, after 8 trips to Belize, the project mentioned above was finally approved by the Belize government.

The project, which will run from June 1986 to June 1987, has 3 components: 1. Nutrition education, the most important, directed at the general public and health centers. Will train 1 person from each of 7 districts to be a nutrition education assistant. They will train others. 2. Get young farmers to form a cooperative and grow soybeans on the 25 acres of land. There is a trend away from farming in Belize. Presently (she thinks) all of Belize's soybeans are grown domestically; none are imported. The Mennonites in Belize grow most of the soybeans. They came from the U.S. (during the Civil War) and from Germany, and they own a lot of farm land. 3. A breakfast and lunch program from some schools in Belmopan, the capital. They are renting a 3-bedroom house in Belmopan and they have turned it into a nutrition education center plus a soy dairy to make soymilk for two schools, 2 times a week. They hope the Minister of Education will expand the program. The soymilk will be

served to kids at school as a snack. Address: Project Director (nutritionist), 526 44th St., Oakland, California 94609.

5184. Bishnoi, A. 1987. Frooti: Great shake-up in Hyderabad [Noble Soya House in India]. *BusinessIndia.* Sept. 7-20. p. 111.
• ***Summary:*** The runaway success of the tetrapacked fruit-based beverage Frooti, launched by Parle Beverages in Bombay in late 1985, is already a legend. But as the company prepared to launch the brand in Hyderabad/ Secunderabad, Great Shake (a soymilk in Tetra Pak cartons in mango, strawberry, and chocolate flavors) was launched on the market in March by Noble Soya House Ltd., a venture in which the Bhiwandiwalla family of Great Eastern Shipping and Godrej Soaps have an equity stake of 20% each. Great Shakes was the first drink of its kind to hit the south-eastern state. Its goal was to capture at least 10% of the soft drink market.

Godrej Soaps, the marketing agents, displayed their marketing might, and within 2 weeks 1,800 retail outlets were stocking the product. But sales soon slowed. "The beany taste of soya milk met a wall of consumer resistance." Godrej used every trick in the book to keep the product alive, including large discounts and unprecedented sales on consignment or credit. Competitors (Frooti) felt that these tactics spoiled the market. Address: India.

5185. Karas, Thomas. 1987. Tofu in Germany, Soyastern, and Heuschen (Interview). *SoyaScan Notes.* Sept. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soyastern started making tofu in about December 1983, and is now the largest tofu manufacturer in West Germany. They now make 4,000 kg/week and sell it for DM 5/kg. Their other tofu products include Tofu & Herbs, Smoked Tofu, Paprika Spiced Tofu, Tofu Burgers. A Tofu Mayonnaise will be launched soon. Company is growing at 40% a year. Second largest in Germany is Yamato Tofuhaus GmbH. Heuschen in the Netherlands in the largest in Europe. They use Sermi, a new coagulant, which may be lactic acid, for their tofu is sour but inexpensive, DM2/kg. All other Dutch tofu companies except Morgenstond have quit; they can't compete with Heuschen's prices. DE-VAU-GE now makes their own soymilk. They used to buy from Alpro. But they buy tofu from Heuschen. Address: Soyastern Naturkost GmbH, Osterather Str. 26, 5000 Cologne/Koeln 60, West Germany.

5186. Ascrizzi, Lynn. 1987. The little soybean miracle [at the Kersey Children's Home in Nigeria]. *55-Plus* (*Waterville, Maine*). Sept. 30. p. 5.
• ***Summary:*** For several years the staff of the International Institute of Tropical Agriculture has worked with the Kersey Home in Ogbomosho (northeast of Ibadan) in western Nigeria, teaching women how to plant, grow, and prepare soybeans in many practical ways. Children who come to the Kersey clinic suffer from kwashiorkor and marasmus, due to protein and calorie deficiencies. They are started on soymilk and within 12-21 days show remarkable improvement. Mothers and guardians attend weekly classes on the use of soybeans in making soups, soymilk, and other dishes. According to an article in IITA research briefs, "...mothers learn to add soy flour or paste to boiling water before adding yam flour... When the women leave the clinic and return to their villages, they continue with the soy program and also teach it to other women in the villages." IITA was started by the Ford Foundation, The Rockefeller Foundation, and the Kellogg Foundation. In recent years it has been taken over by a New York organization called the International Institute of Education.

5187. Cavazzoni, V.; Adami, A.; Craveri, R. 1987. Alpha-galactosidase from the yeast *Candida javanica. Applied Microbiology and Biotechnology* 26(6):555-59. Sept. [29 ref. Eng]
• ***Summary:*** One potential application of this enzyme is for the removal of the flatulence-causing sugars raffinose and stachyose from soymilk and soy whey. Address: Dipartimento di Scienze e Tecnologie Alimentari e Microbiologia, Univ. degli Studi, I-20133 Milan, Italy.

5188. Dabaji, Michel. 1987. Une cooperative invente le soja a boire [A cooperative invents soya to drink]. *Tertiel* No. 29. p. 20-21. Sept. [Fre]
• ***Summary:*** Soya is rich in nutrients and the agricultural cooperative of cereals at Colmar (la coopérative agricole de céréales de Colmar, CAC) has made a "milk" and even a cheese from it. A photo shows Eugène Stahl, president of the cooperative, and Claude Portal. In Sept. 1985 Maurice Rochet, assistant director of CAC, assisted at a conference at Albi dedicated to soya, a crop being strongly developed in the south of France. There he met Julian Foot, an engineer from Alfa-Laval. At Albi, Rochet realized the many nutritional advantages of soymilk (*jus de soja*). In May 1986 the cooperative launched the Bioforme brand. One year later, the production unit, which had cost 11 million French francs, was making a line of soymilk and desserts. Around the factory, 3,000 ha of soybeans has been planted (the members of the cooperative are growing these but it took effort to convince them to do so). And in several months a tofu production line will begin operation. Address: France.

5189. Easter, Robert A.; Picciano, Mary Frances. 1987. Soybeans in human and animal nutrition. *Illinois Research* 29(2/3):18. Summer/Fall.
• ***Summary:*** Currently infant formulas using soy isolates as the source of protein represent 15% of the infant formula market. 7% of the total polyunsaturated fat contained in soy oil is omega-3 acids. Address: 1. Prof. of animal sciences; 2.

Prof. of nutrition. Both: Univ. of Illinois, Urbana, IL 61801.

5190. *Inoculum* (*L'*)**.** 1987. La société Sojadoc: une démarche originale et innovante [Sojadoc: An original and innovate step]. July/Sept. p. 31. [Fre]
• ***Summary:*** Sojadoc, now an affiliate of the Coopérative Occitane, has started a factory at Albi, France, for making tofu and soymilk (tonyu). Discusses the characteristics and uses of these two soyfood products. Tofu contains 12 to 16% protein, and soymilk 2.8 to 3.6%. Address: ONIDOL, France.

5191. *J. of the American Oil Chemists' Society.* 1987. Soy drinks not infant formulas. 64(9):1282, 1287. Sept.
• ***Summary:*** "The Food and Drug Administration (FDA) has extended its import alert on soy drinks and other beverages touted as infant formula substitutes.

"FDA's alert says it will automatically detain all soy-based drinks that are not registered as infant formulas if their labeling either directly or indirectly implies the product can be used as an infant formula. It also said that soy-type beverage labeling should include the statement: 'This product is not to be used as an infant formula or as the sole source of nutrition.'"

5192. Jain, Laxmi; Jain, Manoj. 1987. Indian soy cuisine: A delicious and nutritious innovation. American Soybean Assoc., 541, Orchard Road #11-03 Liat Towers, Singapore 0923. 48 p. 21 cm.
• ***Summary:*** Contents: Introduction. Basic soy preparations (soy flour, milk, soy paste, soy yogurt, tofu). Soy appetizers. Soy vegetables and pulses (many tofu recipes). Soy breads and rice. Soy raitas, chutneys and salads. Soy desserts. Soy drinks and ice cream.

Biography–"Mrs. Laxmi Jain, a native of India, has lived in the Boston area for the past 18 years. She has been actively promoting the use of soybean in the diet in India and America. She has developed original recipes, and has lectured and given demonstrations with the Oil Seed Federation in India. Her recipes have been published in local newspapers in both the U.S. and India. Note that this book was published by the American Soybean Association.

"Mr. Manoj Jain is a medical student at Boston University, and is also working on his Masters in Public Health. He has a B.S. in Biomedical Engineering. Mr. Jain also received a Smithkline Beckman Fellowship to research the possible uses of soy foods in the Indian diet. With his mother, Mrs. Laxmi Jain, Mr. Jain has developed numerous recipes and analyzed them for their nutritional content and delicious taste." Address: Boston, Massachusetts.

5193. Miyamoto, Taku; Hirata, N.; Nakae, T. 1987. Isolation from soy milk of a growth-stimulating substance for lactic acid bacteria. *Nippon Chikusan Gakkaiho* (*Japanese J. of Zootechnical Science*) 58(9):754-63. Sept. [21 ref. Eng]
• ***Summary:*** The substance, considered to be a peptide with a molecular weight of 1150 daltons, stimulated the growth of *Lactobacillus casei* and *L. acidophilus.* Address: Lab. of Animal Products Technology, Faculty of Agriculture, Okayama Univ., Okayama-shi 700, Japan.

5194. Nelson, Alvin I.; Wei, Lun Shin. 1987. Utilization of whole soybeans as human food. *Illinois Research* 29(2/3):20-21. Summer/Fall.
• ***Summary:*** In 1969, only two organizations were actively engaged in utilization research on whole soybean foods. Work at Cornell Univ. concentrated on developing liquid soy beverages, while the U.S. Dep. of Agriculture, Northern Regional Laboratory at Peoria was developing a powdered soy beverage and also working on a dry corn-soy-milk product for the Food For Peace (PL 480) program. Research on soy-based foods at the Univ. of Illinois was started in January 1970 by Lun Shin Wei, Marvin P. Steinberg, and Alvin I. Nelson in the Dep. of Food Science. The current utilization project involving the International Soybean Program (INTSOY) and the Dep. of Food Science is under the leadership of Nelson and has been in operation for about three years. Funded mainly by the U.S. Agency for International Development, this project encompasses both value-added studies and processing and product research. The work on these two complementary program areas includes: extrusion processing, extrusion and expelling of oil and cake, soymilk and analog processing, utilization in the home and village, and development of immature green soybeans as a commercial product. Address: 1. Prof. emeritus, food science, leader, INTSOY Utilization Program; 2. Prof. of food science. Both: Univ. of Illinois, Urbana, IL 61801.

5195. *Plenty Bulletin* (*Summertown, Tennessee*)**.** 1987. Business school grads help build soy dairy in the Caribbean. 3(3):1-4. Sept.
• ***Summary:*** A food processing kitchen and soy cafe was constructed on the northeast coast of Dominica on the Carib Indian Reserve by locals with help from 8 MBA volunteers from the Wharton School of Business [at the Univ. of Pennsylvania in Philadelphia]. Carib farmers are now selling soybeans to the Plenty Soy Center in Roseau, Dominica's capital. Each week the Center produces 100 lb of tofu, 25 lb of soysage, 20 lb of tempeh, 30-50 gallons of soy ice cream, and 30-40 gallons of soymilk. Most of these soyfoods are sold through two co-ops that are managed by Plenty-trained Dominican staffs: the Ebeneezer Women's Co-op in Marigot and the Kairi Soy Co-op on the outskirts of Roseau.

At the Soy Development Center in Roseau, Plenty

Canada offers 2 six-week classes each year in home, village, or small industrial scale soyfoods processing. The staff also conducts two 16-hour training courses on other parts of the island mainly for home preparation of soyfoods. Fifteen farmers are growing ¼ acre each of soybeans. In Jamaica, Country Farmhouse Lifeline, a soyfoods production center in Kingston, makes 150 lb/week of tofu.

5196. **Product Name:** Wattalappan (Soymilk Pudding).
Manufacturer's Name: Plenty Canada Soya Utilization Project.
Manufacturer's Address: 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
Date of Introduction: 1987. September.
Ingredients: Soya milk, jaggeri (unrefined sugar), vanilla, eggs, salt, spices.
Wt/Vol., Packaging, Price: Served in a small cup. Retails for Rs. 4/-.
New Product–Documentation: Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987). Adapted from a local recipe.

5197. Saegusa, Kyoko. 1987. Tônyû to amazake de tsukuru hyôka roisu kuriimu [Royce Cream frozen dessert made with soymilk and amazake]. *Gendai Nogyo* (*Modern Agriculture*). Sept. p. 106-10. [Jap]
• ***Summary:*** Kyoko and her American husband, who live in Tempe, Arizona, use soymilk, amazake (which they make from Cold Mountain koji), tofu, and various flavorings to make what they call Royce (Rice + Soy + Ice) Cream frozen dessert for use at home. She also makes yuba. One of the longest articles seen up to this time on amazake. Contains three pages with 11 color photos showing how to make amazake and soymilk. Letter from Kyoko Saegusa. 1988. March 21. Her current address: 2040 S. Forest Ave., Tempe, AZ 85282. Phone shown above. Address: 2025 S. Forest Ave. #3, Tempe, Arizona 85282. Phone: 602-966-8397.

5198. Snyder, Harry E.; Kwon, T.W. 1987. Soybean utilization. New York, NY: Van Nostrand Reinhold Co. xii + 346 p. Illust. Index. 23 cm. An AVI Book. [381 ref]
• ***Summary:*** Contents. Preface. 1. Production, marketing, and sources of information: Introduction, agricultural production, marketing, sources of information. 2. Morphology and composition: Morphology, chemical composition. 3. Processing of soybeans: Preparation, flaking, expellers, solvent extraction, oil refining, protein products. 4. Quality criteria for soy products: Protein and oil products. 5. Functional properties of soy proteins: Interactions of soy proteins with water, interactions of soy proteins with lipid, foaming, commentary on functionality. 6. Nutritional attributes of soybeans and soybean products: Inherent attributes of soybeans, changes due to processing. 7. Oriental soy food products: Traditional nonfermented soybean food products, traditional fermented soybean food products. 8. Soybean-supplemented cereal grain mixtures: Protein-rich food mixtures containing soy flours, composite flours containing soy flour, cereal blends containing soybeans. 9. Soy protein food products: Baked goods, meat products, dairy products, other foods containing soy protein. 10. Soybean oil food products: Salad and cooking oils, mayonnaise, and prepared salad dressings, shortenings, margarines and related products, soybean lecithin products. 11. Grades, standards, and specifications for soybeans and their primary products: Grades of soybeans, specifications for soybean meals and flours, trading specifications for soybean oils, specifications for lecithins, standards for the use of soy protein products in other foods. References in each chapter. Glossary.

This book is well written (though largely a repetition of previous works) in the area of modern soy protein products. It is weak and poorly researched in the area of "Oriental Soy Food Products," which comprises only 1 chapter (22 pages) of the total, making the book unbalanced. The author of this chapter seems to be almost completely unaware of the many major developments in the Western world during the past 10 years.

Note the following Korean soyfood terms: Fresh soybean = Put Kong. Toasted soy powder = Kong Ka Ru. Soy sprouts = Kong Na Moal. Soymilk = Kong Kook or Doo Yoo. Yuba (Soymilk film) = no name. Tofu (Soy curd) = Doo Bu. Tempeh (Fermented Whole Soybeans) = no name. Natto = Chung Kook Jang. Soy sauce = Kan Jang. Miso (Soy Paste) = Doen Jang. Fermented tofu (Fermented Soy Curd) = no name. Fermented okara (fermented soy pulp) = no name.

Note the following Chinese soyfood terms: Fresh soybean = Mao-Tou. Toasted soy powder = Tou-Fen. Soy sprouts = Huang-Tou-Ya. Soymilk = Tou-Chiang. Yuba (Soymilk film) = Tou-Fu-Pi. Tofu (Soy curd) = Tou-Fu. Tempeh (Fermented Whole Soybeans) = no name. Natto = no name. Soy sauce = Chiang-Yu. Miso (Soy Paste) = Chiang. Fermented tofu (Fermented Soy Curd) = Su-Fu. Fermented okara (fermented soy pulp) = no name.

Note: This is the earliest English-language document seen (Nov. 2012) that uses the term "Toasted soy powder" to refer to roasted soy flour. Address: 1. Prof., Food Science Dep., Univ. of Arkansas, Fayetteville, AR; 2. Principal Research Scientist, Div. of Biological Science & Engineering, Korea Advanced Inst. of Science and Technology, Seoul, South Korea.

5199. *Soybean Digest.* 1987. Koreans consume more soymilk. Aug/Sept. p. 40.
• ***Summary:*** "Koreans are drinking more soymilk, in part because of the American Soybean Association's programs to promote soyfoods. In 1986, 10 soymilk makers produced 7.8 million liters (2.028 million gallons) of soymilk, a $60

million (U.S.) value and a 23% volume increase compared to 3 years ago."

5200. Noble Soya House Limited. 1987. Display ad: Here are 7 startling facts about soya and soyamilk that will amaze you. Great Shake. The food drink with the goodness of soya. Now available in selected towns. *Times of India* (*The*) (*Bombay*). Oct. 4. p. 16.
• ***Summary:*** Another creative and interesting full page ad from Noble Soya. "1. Soya. The richest source of natural protein in the world. 2. The complete protein. 3. Vitamins minus pills or frills. 4. Goodbye allergies! 5. The healthy alternative. 6. Front-line food processing technology. 7. The taste grows on you."

"Manufactured by Noble Soya House Limited. Distributed by Godrej."

Accompanying each of the 7 facts is an illustration and a creative block of text.

5201. Kelly, Gerald R. 1987. Island dining: Fast needn't mean junk. *Martha's Vineyard Times* (*Vineyard Haven, Massachusetts*). Oct. 8.
• ***Summary:*** Mark Ripa is the proprietor of Vineyard Natural Foods, where over 50 different sandwiches are made every day for sale to regular customers or passers by. The standard soup is miso soup. Lynn Burkhart, who creates the gourmet part of the store, plans to serve Tofu Vegetable Pies, a kind of quiche made without eggs, and a light bean and spinach soup made with tempeh–a soybean product. The menu features Indonesian curried tofu. Ripa says "that soy milk is the natural food store's bestseller because of the number of people who cannot–or will not–tolerate milk from cows."

Photos show: (1) The Smoothie bar inside the store. (2) The menu, showing the ingredients in Indonesian curried tofu.

5202. Kline, Nancy. 1987. Lot variance sought in Columbus Grove [Ohio] for possible soybean milk plant [by SRM Seeds]. *Putnam County Sentinel* (*Ottawa, Ohio*). Oct. 14.
• ***Summary:*** SRM Seeds (manager Tim Mershman) is proposing to build a 40 by 60 foot building to make soymilk in Columbus Grove, Ohio. The milk would be trucked to Columbus for further processing and packaging. The company will be working with Ohio State University. Opposition was voiced to the proposal.

5203. Miller, Harry, Jr. 1987. Early work with soyfoods in China. Current work with Miller Farms Food Co. and Solait (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 15. 2 p. transcript. [1 ref]
• ***Summary:*** He is now writing a book on his lifelong work with soyfoods around the world. Note: Unfortunately (as of Aug. 2013), that book was never published and apparently even the location of the manuscript is unknown.

"The Shanghai company was named Vetose Nutritional Laboratories. Its main products were soymilk, called 'Vetose Soya Milk.' On the bottle the name was printed only on the tops. Glass blowers blew the milk bottles in Shanghai. The tops were a wide mouth Crown closure that went on a milk bottle. The only flavor we had was the 'Acidophilus Vetose.'

"The soymilk ice cream was only made for the staff and patients at our institutions, the Shanghai Sanitarium and Hospital, and the Shanghai Sanitarium Clinic down town. It wasn't for sale, and wasn't advertised; we just called it 'Soy Ice Cream.' We just had it for parties etc. at the hospital. The Henningsen Produce Co. in Shanghai had a big ice cream plant; they used to make it for us at that time. Now they are in White Plains, New York (Phone 914-694-1000). They have an R&D plant in Omaha, Nebraska. Their biggest business was frozen egg whites and dried eggs. Now they are affiliated with a Chinese company in Shanghai.

"At first we made some meat analogs for our missionaries all over China. We went down to the Buddhist restaurant (I spent an awful lot of time down there) and we made gluten steaks that also contained tofu. Product name was 'Min-Jing.' My mother came back to the US for a vacation. While she was at the Washington Sanitarium and Hospital, the business manager asked her if she could help them make a new meat analog. They served it at the hospital. They had a little food processing plant there, and they started to make them there and can them. She showed them how to make the tofu. This happened in 1934-35. Ed Meisler or Misler (pron. MAI-zler) came out and specialized in making meat analogs. We also had a pure gluten analog with no tofu. By adding tofu we got a better grain and elasticity and it was a better vehicle for certain flavors.

"Also we took yuba, rolled it, added flavoring (duck, chicken, 2 or 3 flavors), cooked it in HVP. We were not selling these as products. They were mostly for Sanitarium use. Diet is the biggest problem that any hospital had in East Asia. My father brought out two top chefs to develop a dietary for our hospitals. We finally had 16 hospitals in China.

"We also made Nut-Mete (Dark or Light) from peanuts and starch, adopted from Battle Creek. That's about it for Shanghai meat analogs.

"I used to know Jethro Kloss. I used to play with his boys. I am not sure whether or not he ever had a company making commercial soy products. But I think in Pennsylvania some place he did have. Not on a big scale. Maybe kitchen type. I think his products were not commercial. I know he did not have a food processing plant in Takoma. He had a couple of kids in Washington Missionary College.

"I don't like the name Willis. The kids at school used to pronounce it like 'Will Ass.' Now everybody calls me 'Harry Junior.' My son is Harry III." Willis always calls his father Dr. Miller. I promise to do it this way.

Here are 7 startling facts about soya and soyamilk that will amaze you.

1. Soya. The richest source of natural protein in the world.

That's right.
Soya is the world's richest source of natural protein. Not meat. Not fish. Not eggs. Not dal.
Every 100 gms of soya gives you 40 gms of protein. That's a lot more than any other natural food or drink can give you.

2. The complete protein.

Soya is not just packed with proteins, it's packed with proteins of the quality that your body needs for growth and muscle development. In fact, of the 22 amino acids (components of protein) found in nature, soya is one of the few foods that has 20 of these. Further, it has all the essential amino acids in good proportion. The presence of Lysine in soya helps the assimilation of proteins into the body and stimulates growth and development.

3. Vitamins minus pills or frills.

Some diets are deficient in vitamins. Soya is rich in the B Complex vitamins including Thiamin, Niacin, Riboflavin and Nicotinic Acid. These are necessary for the utilisation of nutrients by the body and for the steady release of energy from food.

Moreover, soya contains Vitamin A which is good for the eyes; and Vitamin E which retards the ageing process in body cells.

Soya is also rich in minerals such as calcium, phosphorus and magnesium. One of the most common mineral deficiencies is that of iron, leading to anemia. Soya can help correct this deficiency because it is especially rich in iron.

4. Goodbye allergies!

Research shows that many allergies are caused by the most ordinary of foods: dairy milk, eggs and wheat. That's why doctors recommend soyamilk for those who are allergic to dairy milk.

Apart from its regular formulation with fruit base, chocolate, etc., it can also be specially formulated to suit the systems of those who cannot tolerate lactose, a sugar present in all animal milk.

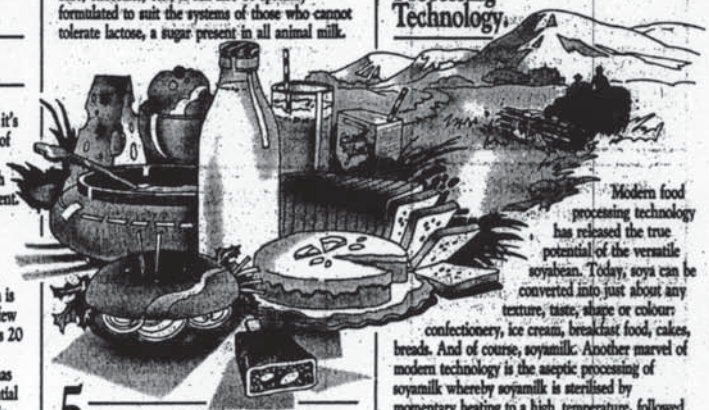
5. The healthy alternative.

Although most of us grew up on dairy milk, recent medical research has shown that soyamilk could be a healthier alternative.

To start with, dairy milk contains cholesterol. And cholesterol, we all know, has been linked to hypertension and hardening of the arteries.

On the other hand, soyamilk has absolutely no cholesterol and even the low fat content in soyamilk is almost entirely made up of polyunsaturates. The beneficial effects of polyunsaturated fatty acids in protecting against heart disease is medically recognised.

6. Front-line Food Processing Technology.



Modern food processing technology has released the true potential of the versatile soyabean. Today, soya can be converted into just about any texture, taste, shape or colour: confectionery, ice cream, breakfast food, cakes, breads. And of course, soyamilk. Another marvel of modern technology is the aseptic processing of soyamilk whereby soyamilk is sterilised by momentary heating to a high temperature, followed by rapid cooling. This ensures the retention of all the nutritional, taste and flavour characteristics of the product while ensuring total hygiene. It gives a long shelf life without the need for expensive refrigeration.

7. The taste that grows on you.

Soya has been the major source of food protein in the diets of Chinese and Japanese for over 3000 years. Today, people all over the world are discovering the goodness of soya.

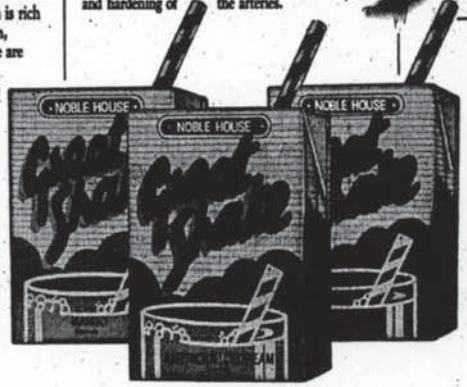
In Hong Kong soya drinks are as popular as Coca Cola.

In the U.S., they put soya into burgers.

In Britain, they spend millions of pounds on soya foods every year.

In Sri Lanka, soya flour is added to bakery flour.

All over Europe, soya yogurt is already a rage. And very soon, you will come face to face with this amazing food drink.



Great Shake.
The food drink with the goodness of soya.
Now available in selected towns.

Manufactured by Noble Soya House Limited. Distributed by Godrej

"I'm working with a woman writer. We're going to bring out a book like China Doctor. I've started to work on it. Dad and the older folks would go to restaurants, but the chefs were guarded and would not reveal their recipes. The next day I'd go down, a kid of just l2 years old. They called me *Hsiao Mi Lai* meaning 'small rice.' My father's name in Chinese meant 'Rice.'" Willis is dictating it. He has now got stuff down on paper. Ivan is doing the work. "It will probably be out early summer next year. Its mainly about my work with soy."

"You see what happened, Bill. Most of Dad's time was spent with his medical work. But he was so interested in this that when I finished my pre-medical work he said, `Son, I think you better stay on foods.` That's what I followed. I was at SDA colleges: EMC = Andrews Univ. for l year then Washington Missionary College for 1 year then La Sierra College. I finished at Atlantic Union College. All undergraduate. Did some mechanical drawing and engineering too. Dad would tell me what he wanted. I worked out the formulas, made the machinery to do it, and his work was primarily gathering information in the field. I followed up and did the detailed work.

"I have a 4-foot long box of papers of our correspondence, on all these little plants he put in. He would ask me to design it. I would, and send him the designs.

"I'm now living in Cedar Falls." Note: In an apartment? Where is the 4-foot file?

"We've had a marvelous reception for Solait. It is powdered only. Just the natural flavor. We demoed it to Worthington and Loma Linda. Sold lots at Adventist Camp Meetings. We're working on an ice cream dry mix, but it's not perfect yet. We make Solait from soybean, corn oil, rice syrup, and a touch of sea salt. No stabilizers or artificial flavors.

Willis will send Soyfoods Center Solait and a label. "Its been on the market now for about 4 months. It's a Miller Farm Foods product."

Follow-up: Call Bob Fisher. Encourage the book. Please send a label. What was the introduction date of Solait. Ask him: Where is the 4 foot file of papers? Address: c/o Miller Farms Food Co., Cedar Falls, Iowa.

5204. Shurtleff, William. 1987. The transformation of soymilk (Overview). *SoyaScan Notes.* Oct. 20.
• ***Summary:*** Soymilk is a traditional Asian low-tech soyfood / soy beverage that was transformed during the period 1966-86 into a modern high-tech dairy alternative.

The key scientific breakthroughs were made in the USA at Cornell University, but applied in Japan. The key packaging breakthrough was made by Tetra Pak. Address: Soyfoods Center, Lafayette, California 94549.

5205. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.
• ***Summary:*** This far-ranging and very interesting interview discusses new soymilk developments in India with Noble House Great Shake, Godrej, and Amrit, and in Germany with DE-VAU-GE's big plant. Ultrafiltration offers an innovative new way to automate tofu production, already being tested by Island Spring. Major competitors for soymilk equipment (especially Alfa-Laval) are discussed, and details on the four plants that STS has sold in Germany, India, France and USA (Island Spring). A step by step description of the STS soymilk process is given. STS and Danish Turnkey Dairies were recently purchased by APV Baker, a big British baking equipment company.

Concerning the four plants that STS has sold: "Our biggest and most successful plant was sold to DE-VAU-GE, a Seventh-day Adventist food company in Lueneburg (near Hamburg), Germany. They started production in August 1985 and make Granose and GranoVita brands soymilk, sold mainly in the UK and West Germany, but also in Scandinavia and France. The plant is running at full capacity, which is 3,000 liters per hour of finished soymilk (3.5% protein), or 50,000 liters a day. They currently only make two products. Labels for the UK market read Granose Soya Milk (4 flavors) and Granose Soya Dessert (3 flavors of custard puddings gelled with natural carrageenan, a seaweed extract). Both products are packed in half liter or liter aseptic Tetra Brik cartons. The plant is doing very well, selling all it can make. This is the only one of the four that has started operation.

"We have also sold a plant to Island Spring (Vashon, Washington), which may be the next to start production. The capacity is also 3,000 liters/hour of soymilk base.

"Amrit in India should be in production by mid-1988. Their plant has the same basic capacity as the plant in Germany, but since their soymilk will contain only 2.25% protein, the actual output will be 6,000 liters per hour, which is larger than Germany. They will make both beverages and foods, mainly a paneer type cheese. The beverages will contain Indian flavorings.

"Our fourth plant is in France, but I am not allowed to divulge the name of the company until the product is on the market. They plan to make only liquid soymilk.

"Alfa-Laval installed their first European plant (a small one) in France this year, billing it as the "soymilk development center of Europe, the first plant on the continent" as if our large DE-VAU-GE plant did not exist."

Note: By 1987 STS had still sold only four soymilk plants. Address: STS, Singapore.

5206. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.

• ***Summary:*** "On 21 Oct. l987 Anders Lindner, on a trip of the USA, visited the Soyfoods Center (SC). The following interview was conducted by William Shurtleff.

"SC: STS started five years ago, and in that time you have traveled the world, visiting every potential customer, and sold four soymilk plants. What major changes or trends have you seen in the world soymilk market during that time?

"STS: You must look at one region at a time. In the United States there is definitely an increased interest in and awareness of soymilk. Soyfoods are relatively well known. In Europe there has been a big increase in the number of enquiries about soymilk from all countries. The number of larger companies that have contacted us has also increased.

"Africa is still a dark continent as far as soymilk goes, with the possible exception of Nigeria, where we have a number of quotations pending, awaiting approval for foreign currency. This could take time.

"Looking at Asia, in India there was almost a frenzy of interest several years ago and we still get enquiries every week. The government gave permission to build many new soybean crushing plants. Soybean production is now over a million tons, and it is still not enough. So the price of soybeans is rising, which raises soymilk prices. But I'm not as optimistic about the future of soymilk in India today as I was 6 months ago. India's first major soymilk plant, established by the Noble Soya House group in Bhopal, has not been as successful as everyone had hoped it would be. Two of India's best known companies, the Great Eastern Shipping Company (also called the Bhiwandiwalla Group) and Godrej, backed the new company, which greatly bolstered public confidence in the project. Each owned 24% of the private limited company and the rest was publicly owned. Great Eastern provided financing and put a number of their very best people in the top management positions. Godrej, which is *the* marketing company in India par excellence, provided distribution and marketing. They specialize in soaps. Alfa-Laval supplied the plant and Kibun sold their technology know how. Production began in January 1987 and it had all the signs of being a very, very good project. Their soymilk, named Noble House Great Shake, comes in four flavors (chocolate, strawberry, mango, and American ice cream flavor, basically a vanilla) in 200 ml Tetra Brik cartons. I have heard it said that the products were not well formulated, the timing was poor, the prices were too high, and the products were marketed as a clearly Western-style of foreign product. The project got lots of big media publicity, but much of it was not favorable, we are sorry to say. Today the plant runs only about 2 hours a day.

"We have sold a plant to Amrit Soya and Protein Foods Ltd., owned by the Amrit Company, an old company. They are in Ghaziabad, Uttar Pradesh, on the outskirts of New Delhi and are expected to start production in mid-l988. This will be India's largest soymilk plant with a capacity of 6,000 liters/hour.

"Back to Asia, when we established STS we located ourselves in Southeast Asia, thinking that with the large consumption of soybean drinks there it would be quite simple to sell plants to make soybean milk as well. But that has not been the case. I find the food processing companies there extremely conservative. Our strategy now is to show the companies in East Asia that our concept works in the USA and Europe.

"China has been a disappointment. They seemed to be more interested in soymilk plants a few years ago.

"So generally speaking, the climate has gotten better, especially in Europe and the United States.

"SC: Has your strategy or basic approach for selling STS soymilk plants changed during this period?

"STS: Yes, it is changing now. We are expanding our product range by offering processes for other soymilk-based foods. Formerly we thought of ourselves as selling primarily liquid soymilk. Now we are offering process lines for tofu, ice cream, dressings, dips, spreads and other dairy analogs, plus what we call 'semi-products.' These are non-consumer, industrial food type products such as concentrated soymilk or curds for use as ingredients by food processors. We are investing in R&D on these. I think we will find new uses for our soymilk base, including new ways of making traditional products, dairy analogs, powdered products, and truly new products.

"SC: Have you made any major technological developments?

"STS: Yes. we are now offering an ultrafiltration system as part of our soymilk system. This is an important technological innovation. It allows you to concentrate soymilk by removing water without adding heat (thus preserving the good flavor of the product) or to remove certain components from the soymilk, such as oligosaccharides or perhaps trypsin inhibitors or lipoxygenase enzymes, using membranes. More important, it can help in automating tofu production. The soymilk base goes into the ultrafiltration plant, where it is concentrated. Coagulant is injected into the line and mixed. Rectangular cakes of tofu are chopped off as they come out the exit end. Luke Lukoskie at Island Spring has been a pioneer in developing these processes using a pilot plant, with an ultrafiltration unit, that we loaned him. This technology seems to have a very promising future for processing soymilk in the West, and for making soya panir (fresh curds) in India. There is not enough cow's milk in India to go around, and most of it is sold in the cities. I think soya panir will undersell dairy panir in India.

"SC: Which company do you feel is your strongest competitor?

"STS: Our main competitor everywhere is Alfa-Laval. After that, but much less, some of the Japanese companies such as Marusan-Seikensha and Mitsubishi. Given that we had just installed the largest soymilk plant in the Western

world for De-Vau-Ge in Germany, I was surprised to note that Eden Foods in America chose Marusan-Seikensha without ever contacting us at all. Marusan seems to have only one English speaking person in the entire company, Mr. Tominaga. Mitsubishi competed with us selling systems in India and Nepal. Takai never seems to be in competition with us. Vandemoortele is no longer supplying systems, though the huge plant they built in Ambatolampy, Madagascar (35 million liters/year capacity) is still in operation. The company, Lalasoa SA (Societe Anonym) is run by a woman named Regina.

"SC: Could you tell us a little about the four plants that you have sold?

"STS: Our biggest and most successful plant was sold to De-Vau-Ge, a Seventh-day Adventist food company in Lueneburg (near Hamburg), Germany. They started production in August 1985 and make Granose and Granovita brands soymilk, sold mainly in the UK and West Germany, but also in Scandinavia and France. The plant is running at full capacity, which is 3,000 liters per hour of soymilk base (4.7% protein). This is 4,000 liters per hour of finished soymilk (3.5% protein), or 50,000 liters a day. They currently only make two products. Labels for the UK market read Granose Soya Milk (4 flavors) and Granose Soya Dessert (3 flavors of custard puddings gelled with natural carrageenan, a seaweed extract). Both products are packed in half liter or liter aseptic Tetra Brik cartons. The plant is doing very well, selling all it can make. This is the only one of the four that has started operation. we have also sold a plant to Island Spring (Vashon, WA), which may be the next to start production. The capacity is also 3,000 liters/hour of soymilk base. Amrit in India should be in production by mid-1988. Their plant has the same basic capacity as the plant in Germany, but since their soymilk will contain only 2.25% protein, the actual output will be 6,000 liters per hour which is larger than Germany. They will make both beverages and foods, mainly a panir type cheese. The beverages will contain Indian flavorings." (Continued). Address: STS, Singapore.

5207. Lindner, Anders. 1987. The world soymilk market and Soya Technology Systems (STS) (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 7 p. transcript.

• ***Summary:*** Continued: Our fourth plant is in France, but I am not allowed to divulge the name of the company until the product is on the market. They plan to make only liquid soymilk.

"Alfa-Laval installed their first European plant (a small one) in France this year, billing it as the "soymilk development center of Europe, the first plant on the continent" as if our large De-Vau-Ge plant did not exist.

"SC: Do you see any innovative or low-cost packaging for soymilk on the horizon.

"STS: All of our plants use or will use aseptic Tetra Brik cartons. The Indian plant has also purchased a Prepac aseptic plastic bag machine, like that used to package Sipso soymilk, but aseptic. Thus it needs no refrigeration. (Prepac is a French firm; Sipso was India's first commercial soymilk, made by Pantnagar Soymilk Products (P) Ltd.). The big advantage of aseptic bags is that they cost about half as much as Tetra Brik cartons. Disadvantages are consumer handling, transportation, outer wrapping cost, leakage problems, and the shelf life is not as long (which is not really a problem).

"SC: What basic soymilk systems do you sell and how much does each cost? With and without building. With and without packaging.

"STS: Our basic plant is 3,000 liters/hour of soymilk base (4.7% protein content). There are many variables that each customer can choose to have or not have, which affect the price. On average this plant costs about $1.5 million (US) including the building and silos but without packaging machines. Three aseptic Tetra Brik machines to package this dairylike soymilk in 250 ml cartons will add another $1.5 million to the cost, for a total of roughly $3 million. The most expensive components are the aseptic packaging machines, the UHT plant, and the decanter/centrifuge.

"SC: Does STS have any plans to get into smaller, less expensive systems?

"STS: Not at the moment. No.

"SC: In the USA soymilk is 3.4 to 5 times as expensive as cow's milk per unit volume. How can people in Third World countries afford this?

"STS: Cow's milk is relatively much less expensive in the USA than in most other countries, and especially Third World and Asian countries. In many countries, cow's milk is simply not widely available. In Nigeria several dairy plants are now being rebuilt for making soymilk. In India, packaged soymilk and cow's milk sell for about the same price. The soymilk is less expensive to produce but the packaging raises the cost a lot. Thus there is a big interest in selling soymilk unpackaged (as from a kiosk cooler dispenser) or packaged in bulk, as in the aseptic 1-20 gallon bag-in-the box, for institutions. A school could order one or two 20-gallon packs a day at very low cost. The equipment is made in California (by Scholle) and Australia. For developed countries, aseptic packaging looks like the wave of the future.

"SC: What is the biggest problem in selling soymilk to Third World countries, acceptability or lack of capital?

"STS: The latter. For example, in Sri Lanka we did acceptability tests among 5,000 primary school children and 95% either liked it or liked it very much. In addition to lack of government funds to build the plant, there was in-fighting among several government departments as to which would be in charge of the project. The government urged us to find a private party to build the plant, and they could sell the soymilk to the government. But that is a slow process.

"SC: Could you outline the main steps in the STS

soymilk process?

"STS: Let me show you our color slide show of the De-Vau-Ge plant. This process is a continuous one with computerized monitors at all key points. Soybeans from the silos are screen, cleaned, steamed, dried, cooled, and dehulled. The hulls are removed by aspiration, and the cotyledons are destoned. In the continuous-process enzyme inactivation unit, the cotyledons are blanched for several minutes at atmospheric pressure in boiling water containing a little sodium bicarbonate. The blanch water is drained off and beans are then ground with hot water and a fresh dose of sodium bicarbonate in two sequential colloid mills (made by the Swiss firm Fryma Maschinen AG). A decanter / centrifuge (made by Siebtechnik GmbH) is used to separate the soymilk base (4.7% protein) from the okara fiber. The base is then run though the first deodorizer, which strips away volatile off-flavors using a vacuum, then thru a plate heater to inactivate trypsin inhibitor, and finally into batch formulation tanks. Premixed flavors and/or oil and nutrients are added, and the mixture is run through an homogenizer into storage tanks. Then comes the UHT (Ultra High Temperature) plant, followed by a second deodorizer, aseptic homogenization, and into an aseptic buffer tank before the final aseptic packaging.

"SC: What are the features of the STS system that you feel make it preferable to other competing systems?

"STS: First, the quality of our product. Second, the turnkey concept: we offer the whole system, from storage of soybeans to packaging of soymilk, from one source company. We are the only company that does that. Our prices seem to be about the same as our competitors.

"In terms of the process, the Alfa Laval system does not dehull the soybeans. we think dehulling makes a better quality product, but it takes additional equipment, which costs more money. For liquid soymilk, Alfa uses indirect UHT treatment with plate heat exchangers, whereas we prefer direct UHT using steam injection, which we feel gives longer production hours, less protein precipitation and scaling, and better flavor. Alfa talks of its oxygen-free, vacuum grinding; our process is similar, but we don't feature it.

"SC: What was of interest on your recent world trip?

"STS: Many things. At the World Congress on Food and Nutrition in Singapore I was amazed to see how many presentations were on soyfoods. And roughly a third of the booths at the Expo were soy-related.

"SC: Anything else?

"STS: Yes. Ownership of our company recently changed hands. As you know, Danish Turnkey Dairies, our parent, was owned by the Danish Sugar Corporation, which also owned Pasilac, a dairy equipment manufacturer. In March 1986 DTD and Pasilac were merged.

"Now APV is a huge British food engineering company, active worldwide. In February they bought Baker, a big British baking equipment company, to form APV-Baker. There is also APV-Crepaco. In May l987 Pasilac-DTD and its subsidiaries (including STS) were taken over by APV-Baker. The new firm may be called APV-Pasilac. A major purpose of this trip to the U.S. is to meet APV people involved with soy." Address: STS, Singapore.

5208. *SoyaScan Notes.* 1987. Soymilk and dairy milk prices in California, October 1987 (Overview). Oct. 23. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Lafayette, California, whole milk sells for $0.55/quart. Soymilk sells for $1.99/liter, which is the equivalent of $1.88/quart. Thus soymilk in a liter pack is 3.42 times as expensive as dairy milk per unit volume. In Dec. 1983 a comparison with pint quantities was made. Cow's milk cost $0.39. The least expensive fluid soymilk was Vitasoy, sold to the Asian market in 8.4 oz pack for $0.35; it was 1.72 times as expensive as cow's milk per pint. The average price of all 6 brands surveyed was 3.53 times as expensive as cow's milk per unit volume. Thus, soymilk prices have dropped only 3.2% in relation to cow's milk prices since Dec. 1983. The main reason that the drop has not been larger lies in the decline in the value of the U.S. dollar from late 1985 on; this led to a steady rise in the price of imported soymilks.

During 1986 two major changes took place in soymilk packaging in the USA. Both helped to reduce costs. (1) Edensoy, Westsoy, and Ah Soy switched to Tetra Brik cartons; Vitasoy had always been in Tetra Brik. (2) Liter and quart Tetra Brik cartons were introduced. This larger size was pioneered by the Alpro/Vamo Foods Sunsoy brand, followed by Edensoy, Ah Soy, Westsoy, and Vitasoy. Soymilk became the first liter-sized Tetra Brik product to succeed in the USA.

5209. Schecter, Andy. 1987. Early history of Northern Soy (Interview). *SoyaScan Notes.* Oct. 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Zen Center kitchen at Rochester, New York used to import tofu from Toronto [in Ontario, Canada]. Then in about 1975 Jay Thompson, who worked in the kitchen, saw an article by William Shurtleff in *Mother Earth News* offering a free chapter from a book in progress describing how to make tofu. When the chapter arrived, the kitchen crew started making tofu in the Zen Center kitchen. The tofu makers were Jay Thompson, Martha (last name unknown), Greg Weaver, Greg Mello, and Andy Schecter. They would make about 20 pounds of tofu once or twice a week.

After 3-4 months they moved the operation in the basement of the Zen Center, where it was more efficient. Again they made about 20 pounds of tofu a batch, at least once a week and during sesshins [sic] as often as 2-3 times a week. All of the tofu was consumed within Zen Center. None was sold commercially.

Then in late 1976 Greg Mello and Greg Weaver started

talking about starting a commercial business independent of Zen Center and outside of it. They took their tofu to Oriental food stores and the owners showed interest. So they bought a large stainless steel cooking pot and other utensils. But in late 1976 there were some arguments, so Greg Weaver suggested that Greg Mello do it alone. So they parted.

At that point Andy Schecter was planning on leaving the Zen Center staff. He got together with Greg Mello and they found a 900 square foot space at 277 North Goodman Street in Rochester. In January 1977 they established the company called The Tofu Shop and began construction of the plant. They bought an oil-fired boiler, built a platform for the cooking pot, built presses, curding barrels, etc. In May 1977 production began. Their first product was tofu, followed shortly by a generic (unbranded, unlabeled) soymilk in plain and carob-honey flavors, put up in quart canning jars.

In late 1977 Greg Mello decided to leave. So in January 1978 Andy brought in Greg Weaver. In mid-1978 Weaver and Schecter realized that tofu sales were slow since most people did not know what it was or what to do with it. So they decided to open a soy deli to introduce prepared tofu dishes to the public. Weaver took charge of the deli, which opened in November 1978 under the name "The Tofu Shop" at 686 Monroe Ave. The startup costs were about $20,000. Since the manufacturing branch of the partnership was now without a name, they decided to call it Northern Soy. And since Schecter felt that he would need more managerial help in running Northern Soy, he brought a third partner, Norman Holland, in around November 1978.

The three partners all owning two businesses didn't get along very well, so they decided to separate the two businesses. Weaver would own the deli as an independent business, while Schecter and Holland would own Northern Soy. Since the name The Tofu Shop legally belonged to Northern Soy, Weaver was asked to find another name. After briefly trying "The Tofu Gardens," he settled on "The Lotus Cafe." This deli, the fifth soy deli to open in America, was a pioneer in developing delicious tofu and tempeh recipes and marketing them in an attractive way. Featured in a cover story in the first issue of Soycraft (later Soyfoods) magazine (summer 1979), it offered both sit-down (20 seats) and take-out service, featuring hot vegetarian lunches and dinners. By 1982 it was the largest soy deli in America in terms of average weekly sales ($4,800) and maximum weekly sales ($6,500). Names of 30 of its most popular tofu and tempeh recipes are given in the books *Tofu & Soymilk Production* (1979) and *Report on Soyfoods Delis, Cafes & Restaurants,* both by Shurtleff and Aoyagi.

Tempeh production was started [in about Nov. 1977] by Earl Lepper in his home. Then at some point in 1979 or 1980 he moved the operation into a corner of The Tofu Shop. Eventually he decided to sell his tiny business to The Tofu Shop so he could move to California.

The Lotus Cafe closed in August of 1984 or 1985, in debt and after Weaver's unsuccessful attempt to sell it. Weaver went to work for a computer literacy firm. All 3 are still bachelors. Address: 30 Somerton St., Rochester, New York.

5210. Rose, Richard. 1987. Re: Personal observations on soyfoods at Natural Foods Expo in Philadelphia. Letter to William Shurtleff at Soyfoods Center, Oct. 28. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Show trends: Many new companies introducing many new soyfoods, some very high quality in concept and execution. Established soy companies now entering such as Miller Farms and Witte / White Wonder. The Soyfoods Pavilion seemed to have less both space and be more spread out. The only Legume product at the show was the tofu chocolate bar (will the Barat Bar save Legume?). Tomsun Foods did not have a booth. Ice Bean was the only soy frozen dessert there. A proliferation of soy cheeses, aseptic soymilks, glass-packed spreads, meat analogs. Nasoya will be making Simply Natural's tofu/miso spread for them; it has just been patented. Simply Natural's tofu cheese is now called Soyalite, and their pasta is Pasta Lite. Little-seen regional companies were there, including Michele's and Northern Soy. Paul Obis adds: Many at the show were lamenting the apparent failure of Jofu. They have spent all their money.

The Rose International letterhead states: EasyLink Mailbox 62978515. Telex 990027 (Rose Intl UQ). Address: President, Rose International, P.O. Box 2687, Petaluma, California 94953-2687. Phone: 707-778-7721.

5211. Bradner, Norman. 1987. Soybeans for the food market. *Seed World* (*Des Plaines, Illinois*). Oct. p. 44.
• ***Summary:*** Thailand imports nearly 100,000 tonnes/year of soybeans for food use. Japan imports 65,000 to 70,000 tonnes of small beans to make natto. Natto beans can be less than 5 mm in diameter and have a yellow cotyledon and hilum. For tofu, soymilk and miso, importers want high protein, low oil, maximum water soluble proteins, low phytate, high 11S protein fraction, large seed size and high sugar content. But a variety judged good one year can be deemed unsuitable the next. Environmental conditions during seed development play a significant role in determining the final chemical composition. Address: Pulse Breeder, King Agro, Inc., Chatham, Ontario, Canada.

5212. Cole, Michael. 1987. Soya International Limited (News release). Downs Court, 29 The Downs, Altrincham, Cheshire WA14 2QD, England. 2 p. Oct.
• ***Summary:*** Cole was the founder (in 1984) and previously managing director of Soya Health Foods Ltd. Soya International Ltd. is an international soya marketing company, with an international database containing information related to soya products. Stephen Burgess is the

company's computer consultant. "This information centre fully computerized and the first of its kind serves to support the main activities of the company whose sub-heading is "Research, Development, Marketing, and Management Consultants." S.I. Ltd. has already joined with the large Italian company Sordi S.p.A. (a supplier of dairy and juice equipment) to complete a feasibility study for the Argentine government, as well as working with both the Brazilian and New Zealand governments on far reaching long term soya projects. Cole, age 42 and born in London, is a vegetarian. He managed to bring Soya Health Foods Ltd.'s Sunrise brand products to the position of market leaders in just 2 years.

Note: In Feb. 1989 a letter sent to this company was returned. His phone was no longer in service, and the directory assistance operator in England could find no new listing in Altrincham or in the Cheshire County or Manchester areas. Address: Cheshire, England. Phone: 061-926-8019.

5213. Davies, C.S.; Nielsen, S.S.; Nielsen, N.C. 1987. Flavor improvement of soybean preparations by genetic removal of lipoxygenase-2. *J. of the American Oil Chemists' Society* 64(10):1428-33. Oct. [24 ref]

• ***Summary:*** Oxidation of fatty acids mediated by lipoxygenase has long been implicated in the production of off-flavors by soy products. This assumption was tested by the use of preparations form soybean lines nearly isogenic to the cultivar Century that lack the lipoxygenase isozyme or various isozymic combinations: L_1, L_2, L_3, L_1+L_3, or L_2+L_3. Such lines were used to ensure that any effects observed were due to elimination of lipoxygenase isozymes, and not to other unrecognized genetic differences between lines. Full-fat soy flour and unblanched soymilk preparations from the lines were evaluated by a 6-member taste panel for 8 flavor and/or aroma attributes common to soybeans. By comparison to near-isogenic controls, removal of the L_2 isozyme from soymilk preparations produced significantly lower scores for beany, rancid and oily flavor and aroma attributes, as well as higher scores for dairy and cereal flavor and aroma attributes. Similar trends were noted for soy flour flavor attributes. Thiobarbituric acid (TBA) numbers were lower in homogenized soy flour suspensions from lines lacking L_2. Removal of the L_1 and L_3 isozymes did not improve flavor scores or reduce TBA numbers. Total oil content and fatty acid profile of the near isolines did not vary appreciably. Results indicate that genetic removal of the L_2 isozyme may reduce off flavors in soy products. Address: Dep. of Agronomy, Purdue Univ., W. Lafayette, Indiana 47906.

5214. Donovan, G. Kevin; Torres-Pinedo, R. 1987. Chronic diarrhea and soy formulas. Inhibition of diarrhea by lactose. *American J. of Diseases of Children* 141(10):1069-71. Oct. [8 ref]

• ***Summary:*** "Soy protein formulas are often poorly tolerated by infants with nonspecific and postinfectious diarrhea syndrome. We found that these adverse responses may be prevented by using lactose, instead of sucrose or dextrimaltose, in soy formula. We studied 40 infants diagnosed [clinically] as soy intolerant... In the absence of lactose intolerance, a soy-lactose formula could be useful in treating chronic diarrhea and secondary protein intolerance." Address: 1. Div. of Pediatric Gastroenterology, Dep. of Pediatrics, Univ. of Oklahoma Tulsa Medical College; 2. Univ. of Oklahoma Health Sciences Center, Oklahoma City, OK.

5215. *East West.* 1987. Natural Foods: The best and worst. 2nd annual awards. Oct. p. 32-36.

• ***Summary:*** Only packaged natural foods with nationwide distribution are judged. Best soymilk: Edensoy, but the Tetra Brik package doesn't biodegrade, burn, or recycle. Best sandwich spread: Nasoyanaise by Nasoya Foods. Worst shoyu: Natural shoyu from Erewhon. So heavy it is best dispensed with an eye dropper. Best Tamari: San-J. Worst line of fake meat products: Worthington Foods. Worst beans: Honey Baked Style Vegetarian Beans with Miso from Health Valley. Best Miso: Miso Master Mellow White Miso by American Miso Co. for Great Eastern Sun.

5216. Eden Foods, Inc. 1987. Looking for a new food? The solution is amazingly delicious Edensoy (Ad). *East West.* Oct. Rear cover.

• ***Summary:*** This ad (see next page) emphasizes the product as a food rather than a beverage and stresses ingredient quality. A hand descends from heaven and angels fill the sky around a huge carton of Edensoy. "Job's tears, known as *Hato Mugi* in Japan, are the seed kernels of an annual grass long prized in the Orient for its health giving and nutritional properties." Note: The scientific name of Job's tears is (*Coix lachryma-jobi*). Address: Clinton, Michigan.

5217. *Food Manufacture* (*London*). 1987. The French soya revolution. 62(10):59-60. Oct.

• ***Summary:*** Co-opérative Agricole de Céréales, a co-operative of 3,000 French farmers has joined forces with Alfa-Laval to build what is claimed to be the world's first fully automated and continuous liquid soymilk processing plant at Colmar, France. They produce Bioforme brand non-beany flavor soy drinks in vanilla, plain, and chocolate flavors, and 2 desserts in vanilla and chocolate. The process eliminates the strong beany taste and smell associated with some similar soy products.

A photo shows 5 packages of Bioforme Soja, apparently each in a different flavor.

5218. Golbitz, Peter. 1987. Soya interview: Gordon Bennett, Westbrae Natural Foods: Soyfoods past, present and future. *Soya Newsletter* (*Bar Harbor, Maine*). Sept/Oct. p. 3, 10-11.

• ***Summary:*** Founded in 1970, Westbrae was built on the premise that healthy food makes a healthy planet. Bennett has been president since 1975. The company now has over 200 products. Soyfoods account for about 35% of sales, down from 50% 1-2 years ago. The company is reducing imports, focusing on American-made foods, and importing Westsoy soymilk from Southeast Asia [actually Vitasoy in Hong Kong] rather than Japan, including a new liter size. Address: Bar Harbor, Maine.

5219. Haumann, Barbara. 1987. Expanding soybean markets, uses. *J. of the American Oil Chemists' Society* 64(10):1369, 1372-79. Oct.
• ***Summary:*** Value-added products and soybean varieties tailored to produce specific end products are among the promising developments envisioned to expand markets for U.S. soybeans. Keith Smith, staff vice president of research for the American Soybean Association (ASA) said, "Aquaculture–raising fish such as shrimp, catfish and trout–is a growing industry in the U.S. and abroad." Smith went on to say that the switch from mainly production research to more utilization research occurred eight to nine years ago, and that 60% of ASA's total research money in the past 6 years has gone for utilization research.

Genetic research is working to improve the fatty acid content of soybean oil. Work is also under way to develop a quick, low-cost method to determine oil and protein content. Other work includes trying to lower levels of linolenic acid in the oil. At Purdue Univ. in Indiana, research geneticist Niels Nielsen of the USDA's Agricultural Research Service (ARS) is trying to develop soybean lines free of lipoxygenase enzymes. Soymilk and flours produced from the new seeds are rated significantly better in flavor and aroma. Professor Nielsen and his research group are trying to "improve the nutritional quality of the major soy storage proteins by increasing sulfur amino acid content." He noted that the methodology has resulted in doubling and tripling the methionine content. At the University of Kentucky, David Hildebrand is also working on genetic engineering of soybeans.

Brazil, the second largest producer of soybeans, has evolved as the largest exporter of soybean meal and oil. The other top producers are China, in third place; Argentina, in fourth; and India, which recently made the top five. Indonesia is in 6th. Italy's production has grown substantially in recent years to make it the most important soybean-producing area in Europe. Other European producers include France and Spain. According to Oil World Annual published by ISTA Mielke, West Germany, the top 10 soybean oil producers for 1986/87 (in tonnes) were the following: U.S. 5,430,000; Brazil 2,538,000; Argentina 780,000; Japan 715,000; China 679,000; West Germany 521,000; The Netherlands 488,000; Spain 421,000; Italy 350,000; and Mexico 336,000.

ANPA (American Newspaper Publisher's Association) began seeking alternative sources to petroleum for ink seven years ago due to problems with petroleum supplies. Four years ago, with fluctuations in supplies and price, ANPA began considering the use of soybean oil ink. ANPA has filed a soy ink patent application and has begun licensing major ink manufacturers to make it. The first ink manufacturer to produce the ink, colored and black, is General Printing Ink, a division of Sun Chemical Corp., located in Carlstadt, New Jersey. One advantage of soy oil ink is that it is environmentally nonhazardous, which could reduce waste disposal problems. It also eliminates dependence on petroleum. There is less "ruboff" and the same amount of ink will print more pages. One drawback is that black ink made from soybean oil costs more than traditional black ink. Oil content in newspaper ink averages about 70%.

In the March 4, 1987 *Federal Register,* the U.S. Federal Grain Inspection Service (FGIS) ruled that soybean and other edible oils may be used to control grain dust in elevators. A U.S. Patent, licensed to Industrial Fumigant Co., is held jointly by Harold N. Barham and Harold N. Barham Jr. of Seed Technology of Texas. The patent was filed in 1978. Kinsella, director of the Institute of Food Science at Cornell Univ. said that another research interest was in the area of omega-3 fatty acids. It may desirable to develop soybean cultivars with high omega-3 fatty acid levels. John W. Erdman Jr. of the Univ. of Illinois' Dep. of Food Science and co-worker Angela Poneros want to nail down the factors that lower zinc bioavailability. He said, "We want to find out why this happens and if we can increase it."

Meanwhile, at INTSOY, team member Sing-Wood Yeh and others are working in the field of soybean dairy analogs. Tofulicious, a non-dairy frozen dessert, was developed through research coordinated by University of Minnesota food scientist William Breene and funded by the Minnesota Soybean Research and Promotion Council. Abroad, ASA has been promoting soy-fortified foods. For instance, in Venezuela three years ago, ASA launched an education program for consumer groups and government agencies on the benefits of soy protein. As a result, soy-fortified foods are available in Venezuela's major supermarkets, and demand for soy protein has increased to more than 48,000 pounds per month.

Soybean researchers are also working on standardization of NIR (near-infrared spectroscopy) as a measure of protein and oil content in soybeans. NIR already is successfully used to measure grain and forage composition. If NIR were adopted as a standard by the industry, soybeans eventually could be purchased based on protein and oil content.

5220. *INTSOY Newsletter* (*Urbana, Illinois*). 1987. Cooperative efforts in Nigeria aim to increase soybean use across Africa. No. 37. Oct. p. 3-4.
• ***Summary:*** In Nigeria soybean production has more than

doubled in the past 5 years in response to the growing demand and the shortage of foreign exchange needed to import soybean meal. The 1987 crop is estimated to be at least 125,000 tonnes, in part because of the current high cash price. In Nigeria, much of the soybean production is concentrated in the northern states of Benue and Kaduna.

The most widely consumed soyfood in the country is soybean dawa-dawa, a fermented and dried product that is sold as a wafer. Also known as iru in Yoruba-speaking areas, it is traditionally made from the seed of the locust bean tree. According to a 1984 survey by IITA, about 60% of the dawa-dawa producers use soybeans and another 20% use a combination of soya and locust beans. Dawa-dawa is used to flavor soups, stews, and sauces.

INTSOY is working with IITA on ways to expand soybean use and processing throughout Africa. Another method of using the dawa-dawa wafer is to pound the dry wafer and add it to dishes as a powder. In the soybean marketing center of Kafanchan in southern Kaduna, soybean dawa-dawa is purchased by traders who sell it throughout Nigeria and as far away as Cameroon, Chad, and Niger.

IITA staff last year held utilization training sessions that attracted more than 180 participants in Ondo state. Other training sessions at 34 villages in Oyo state and at the Kersey Children's Home near Ogbomosho also drew strong attendance. The children's clinic at the Kersey Home started using soymilk and soy-fortified weaning foods to combat the childhood malnutrition known as kwashiorkor. The clinic now uses almost two tons of soybeans a month. By 1986, more than 3,000 farmers in Oyo State were growing soybeans on small plots totaling 1,000 hectares.

Note: This is the earliest English-language document seen (Jan. 2012) that contains the term "dawa-dawa" (hyphenated) in connection with soybeans (one of two documents); it is a close relative of natto.

Soy meal for the rapidly growing poultry industry is now the most important commercial soy product. Some companies, however, are moving into the production of soymilk, high-protein soyfoods, and edible oil. Both Food Specialties Limited and Smalltree Nigeria Limited are increasing the use of soybeans in infant and breakfast cereals. More than 30 businesses and individuals contacted IITA for technical advice on opening or expanding soybean processing operations. Extrusion cooking in particular has recently had an increased impact in Nigeria. At least four INSTA PRO extruders have allowed expanded production of poultry feed and full-fat soy flour for human consumption. The new local processing capacity has been especially important because of government restrictions on importing soy products.

Expansion of soybean use in Nigeria will require the introduction of new products, processes, and equipment adaptable to African village-level operations.

5221. Nelson, A.I.; Wei, L.S.; Weingartner, Karl E. 1987. Home and village preparation of soy products. In: S.R. Singh, K.O. Rachie, and K.E. Dashiell. eds. 1987. Soybeans for the Tropics. New York: John Wiley & Sons. xx + 230 p. See p. 179-84.

• ***Summary:*** During the early 1970s, when these techniques were developed, the focus was commercial rather than home and village use of soybeans. The principles developed were applied in Sri Lanka where INTSOY cooperated with the Farm Women's Extension Group to promote soybean use. The object is to develop a core of people who like the products, understand how to prepare them, and believe in their worth. Includes formulas for basic soy milk, weaning foods, soy nuts, and soybean dhal curry. Address: 1-2. Univ. of Illinois, Urbana-Champaign, IL 61801; 3. IITA (International Inst. of Tropical Agriculture), Ibadan, Nigeria.

5222. Ontario Ministry of Agriculture and Food. 1987. Soybean buyers mission from Japan, Hong Kong, Malaysia, Singapore, October 10-20, 1987. Toronto, Ontario, Canada: Ontario Ministry of Agriculture and Food. 23 p. 30 cm. Saddle stitched. [Eng]

• ***Summary:*** Contents: Mission members (with a photo of each). Itinerary. Japanese market for edible soybeans. General uses of edible soybeans in Hong Kong, Malaysia and Singapore. List of major importers in Asia (by country). Ontario soybean suppliers. Role of the Ontario Soya-Bean Growers Marketing Board (Chatham, Ontario).

This conference, which took place in Toronto, Chatham, and Harrow, Ontario, Canada, was sponsored by OMAF in Toronto. On the mission were 6 buyers from Japan (Takeya Miso Co., Asahi Industries [tofu maker], Takano Foods Co. [natto maker], Dah Cong Hong, Wako Shokuryo Co., and Gomei Shoji Co. [the last 3 is each an importer and wholesaler]), 2 from Hong Kong (Amoy Industries Ltd., and Chung Hing Co.), 3 from Malaysia (Sin Yong Huat Enterprises Sdn. Ltd, Yeo Hiap Seng (Malaysia) Ltd., and Chop Lee Kit Heng), and 2 buyers from Singapore (Eng Huat (S) Ltd. and Chop Hin Leong). Mike Hojo of OMAF/ Tokyo was the mission leader.

The Japanese soybean market is about 5 million tons a year. Of this: Oil crushing 4,036,000 tons. Food 849,000 tons (17% of total), and feed (not crushed) 70,000 tons. From 1982 to 1986 domestic Japanese soybean production has decreased from 168,000 tons to 147,000 tons, while imports have increased from 4,344,000 tons to 4,857,000 tons. Demand for food soybeans has increased from 803,000 tons to 849,000 tons. Tofu, miso, and natto account for more than 94% of the total utilization of edible soybeans, roughly as follows: Tofu 500,000 tons, miso 200,000 tons, natto 100,000 tons.

In 1986 some 89.9% of Japan's soybean imports came from the USA, followed by China (6.7%), and Brazil (2.65%). That year the least expensive soybeans came

from Brazil (US$219.86/ton), followed by USA ($221.36), China ($236.06), and Canada ($277.50). Note that Canadian soybeans are 25.3% more expensive than those from the USA. Chinese and Canadian soybeans are most widely used to make foods. Large Chinese soybeans are used to make tofu, medium sized for miso, and small for natto. Of the soybeans imported from the USA, 80-85% are imported from oil crushing because of their high oil content. The remaining 10-15%, or approximately 700,000 tons are food soybeans from Iowa, Ohio, or Michigan. Called "IOM" soybeans, they are used mainly to make tofu. Brazilian soybeans have a high oil content and are used for oil crushing only. The ocean freight cost for a 20-foot container shipped to Tokyo is as follows: USA west coast $1,000. Toronto, Canada $1,800. USA East Coast $2,000. Brazil $2,100. Argentina $2,500. But a large percentage of regular soybeans are loaded directly into ships, and travel at lower freight rates. Exports of food soybeans from Canada to Japan rose from 10,000 tons in 1979 to 26,000 tons in 1986, while those from China rose from 267,000 tons in 1979 to 323,000 tons in 1986.

Very detailed preferred characteristics are given for soybeans to make miso (6 characteristics), natto (5), and tofu (5). Canadian soybeans are recognized as superior to Chinese and American soybeans for food use. This is one reason they command a relatively higher price.

Hong Kong imports 28,100 tons/year of soybeans, and 63% of these come from Canada, followed by China (35%), and the USA (1.8%). Malaysia and Singapore import 124,800 tons/year, and 53% of these come from the USA, followed by Canada (31.7%), and China (8.2%). Most of the food soybeans in Malaysia and Singapore are used to make soymilk and tofu.

Soymilk: Vitasoy dominates the market in Hong Kong, whereas in Malaysia and Singapore the leading manufacturers are Yeo Hiap Seng, Cold Storage, Lam Soon, and Nestle. Soymilk consumption is increasing in these 3 countries, and in neighboring countries. Soymilk makers believe there are four requirements for their products' success: It must taste good, must be priced competitively with soft drinks, must be perceived as a health food, and must be marketed properly.

Bean curd sheets and sticks [yuba] are very common snacks and dishes in Hong Kong, Malaysia, and Singapore. Manufacturers consider only Chinese and Canadian soybeans for these products. Canadian soybeans produce whiter soymilk and thus whiter yuba. However the larger size of Chinese soybeans results in a larger yield. Manufacturers normally blend 60% of Canadian soybeans with 40% of Chinese soybeans to obtain a higher output of whiter sheets.

Major Japanese soybean importers include: Da Chong Hong (Japan) Ltd., Gomei Shoji Co. Ltd., C. Itoh & Co. Ltd., Mitsubishi Corp., Kanematsu-Gosho Ltd., Nichimen Corp., Marubeni Corp., Mitsui & Co. Ltd., Nissho Iwai Corp., Okura & Co. Ltd., Toyo Menka Kaisha Ltd., Wako Shokuryo Co. Ltd. Address: Ontario, Canada.

5223. Shurtleff, William. 1987. History of White Wave, Inc. Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• ***Summary:*** A detailed history of this pioneering, very creative, and rapidly growing company. Contains production and sales statistics at each major phase of growth. Early days: White Wave was founded and started making tofu in September 1977 by Steve Demos in Boulder, Colorado.

Born on 24 April 1949 in Philadelphia, Pennsylvania, Demos attended Bowling Green State University in Bowling Green, Ohio, majoring in political science and philosophy and graduating in the fall of 1970. He was introduced to tofu in the summer of 1970, when he was traveling in a van in northern California with a friend, who bought some at an Oriental food store. Demos found it to be a good source of protein, and liked the flavor.

Right after graduation Demos took two trips to India. During the first in 1971, with Pat Calhoun, he became a vegetarian after witnessing the meat bazaar in Afghanistan. In early 1972 he took a longer trip to India, again with Pat Calhoun. It included 10-day Buddhist meditation course with a teacher from Burma, Goenka, who became his spiritual teacher. He also lived for 1-3 months in a cave near Rishikesh (in the foothills of the Himalayas in northern India), doing Hatha Yoga and meditation. There were monkeys in the forest trees, tame peacocks, a stream 10 yards in front of the cave that dropped into a bathing pool, and many sadhus (Indian holy men) practicing in other caves nearby. Then in 1974 he started a health food store [named Touch the Earth] in La Haska, Pennsylvania, where he grew acquainted with many new foods such as miso, sea vegetables, and *gomashio* (sesame salt). After 9 months he sold the store and returned to India again. He was now actively involved in meditation.

After that trip, Demos started living on the East Coast in New Hampshire. By 1974 he began buying tofu in Boston, Massachusetts, then made it a few times in the kitchen and used it in cooking for a yoga studies group, which had purchased a farm. He was in charge of food and he had learned how to make tofu from the *Ten Talents* cookbook. In March 1976, after a trip to India, he was in Santa Barbara, California, at a 76-day meditation retreat with teacher Robert Hover. He made tofu, starting at 4:00 each morning in a commercial kitchen, for 100-150 people, using *The Book of Tofu.* During this retreat Demos conceived of and developed the idea of starting a tofu company, including the name and logo. Three months later he found himself, a hippie with long hair, in Boulder, Colorado. He had an idea but no capital, and was living on food stamps. By good fortune he met a man named Anton Rogers (a talented architect and builder), who loaned him $2,000 startup capital, after having known

him less than a month. So in the summer of 1977 Steve began buying equipment for making tofu. His new company was not yet officially established or registered–though he probably opened a checking account at a local bank.

Demos started making tofu at White Wave on 27 September 1977. "At 11:30 a.m. I sold my first block. I'm staring at the astrological chart which sits next to my desk. That was when I translated the effort to a dollar." The company began as a sole proprietorship, located in very small (300 square foot) rented quarters at 1738 Pearl Street in Boulder, Colorado. The front one-third of the shop was used for a retail deli and the back two-thirds for food production. From day one, the tofu was made from organically-grown soybeans. Each 14-ounce block of tofu was sold, floating in water, in Chinese food take-out cartons. For details on White Wave's early use of organically grown soybeans, see SoyaScan interview with Steve Demos (Aug. 1998). The first batch of tofu was used to feed the participants in a ten-day meditation retreat in Boulder.

One direct competitor was the Spinning Kitchen, which had started 9 months earlier, in about January 1977. They had the Boulder market locked up when White Wave started.

White Wave had three products from the opening day: Nigari Tofu, Black Walnut Mushroom tofu, and Lemon Herb tofu. The latter two innovative flavored tofus were made by mixing the natural flavorings into curds at a specific point before pressing. Shortly White Wave expanded into making sandwiches, which led to salads, drinks, pies, cakes, and muffins. One of the first stores in Boulder to sell Steve's tofu was Green Mountain Grainery, owned and run by Bruce Macdonald. Pat Calhoun (formerly Demo's wife), arrived in December from the Pacific Coast Bakery in California, bringing all their recipes. Recipes for baked goods (such as cinnamon rolls and cookies) were adapted.

By early 1978 soymilk (plain, honey-sweetened, or carob-maple) was introduced, sold out of a jet spray juice cooler or in quarts, and also used to make Coconut Cream Pie and Tofu-Agar Pies filled with various fruits (apples or whole strawberries, peaches, or blueberries). At about the same time the okara from the tofu started to be used to make one of America's earliest brands of Soysage. This spicy Vegetarian Soysage (shaped like a sausage) was distributed with the tofu. Before long White Wave was making a host of delicious and innovative tofu deli products which were sold only at the Pearl Street deli. These included Macro Pizza with Tofu, Mexican Entrees, Okara Granola, and Tofu Dogs and Sauerkraut (very firm tofu cut into long rectangles and marinated broth). Soy Sannies (Miso-tahini Sandwiches) were also sold at nearby health food stores.

To help attract customers, the deli also sold an assortment of then largely unknown food products: 10-15 varieties of Japanese and American miso, many sea vegetables, shoyu, kudzu, umeboshi plums, and the like, many of the same products Demos had sold 4 years earlier at his health food store in Pennsylvania. Most of these were of great interest to macrobiotic devotees, though Steve had little personal interest in that subject.

Tofu was quickly recognized as a tremendously versatile, all-American ingredient. Now new people started coming into the company. Some were cooks and they helped to develop new products. In 1978 White Wave began to distribute a number of its most popular deli-type products to other retailers. These were among America's earliest commercial second generation tofu products: Missing Egg Salad (America's first, named by Trudy Stuart), Tofuna Salad (Vegetarian Tuna Salad), and Tofu Turnovers (with spinach and feta cheese filling). Other innovative second generation products sold or used only at the Pearl Street deli included Tofu Treats or Creamies (in banana-coconut, peanut-carob, or carob mint flavors), Miso Salad Dressings (hearty or mellow), and Tofu Mayo (eggless mayonnaise used in the Missing Egg Salad). Address: Lafayette, California.

5224. Shurtleff, William. 1987. History of White Wave, Inc. (Continued–Document part II). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.
• ***Summary:*** Continued: At the same time White Wave started making nut and seed products in the same little shop, starting with gomashio (sesame salt), tamari-coated sunflower seeds and almonds, and nut butters.

Just a year after opening, White Wave was forced to expand out of the tiny Pearl Street shop by the demand for its deli products from outside retailers, such as Arati and other natural food stores in Boulder. Demos recalls:

"We acted with very little foresight. It was more like 'What do you want to do today? Let's make something new.' Finally we couldn't get out the front door. We had to step over the top of buckets of tofu, presses, and boxes used to deliver our little Chinese fish cartons of tofu, stacked up so high we couldn't see out the window. It was chaotic. We were making money and business was booming, but we were only paying ourselves $1.42 and hour."

On 28-30 July 1978 a meeting of tofu manufacturers from across the USA was held in Ann Arbor, Michigan. The meeting was organized by Steve Fiering, Jerry MacKinnon (plus coworkers at The Soy Plant) and Bill Shurtleff, and hosted by The Soy Plant. Steve attended this historic meeting, and ended up rooming with Tom Timmins, head of the New England Soy Dairy. "I thought I was rooming with one of the idols of the industry. Just by virtue of association, I was going to do well." At this meeting the Soycrafters Association of North America (SANA) was established, with Larry Needleman as executive director of the new trade association. Steve was elected to be one of six members of SANA's steering committee. Various photos of the meeting show Steve, with long hair and mustache, leading and participating in the discussions. A yellow lined sheet titled

"Tofu Sales" was circulated to all attendees; Steve wrote that White Wave was making medium-firm bulk and packaged tofu, which wholesaled for $0.65 and $0.74 per pound, f.o.b. plant. Several days after the Ann Arbor meeting, William Shurtleff and Wataru Takai visited Demos, and saw how he made tofu at his tiny shop on Pearl St. in Boulder. They sampled and enjoyed the various creative offerings in the deli, and Shurtleff took home a label from each product.

At Walnut Street: In September 1978, after just a year at Pearl Street, the tofu company had long since outgrown its minuscule 'back room' space. So manufacturing operations were moved to a 3,000 square feet converted warehouse at 3869 Walnut Street. It felt like they had moved into a castle, with ten times as much space. Now there was great pressure to expand the business to use up the extra space. The company began to make new products (such as tempeh, ice cream, and new deli foods) and look for new markets.

The deli remained at Pearl Street, and was given a new name, The Cow of China (a term from *The Book of Tofu*). The name "White Wave" was reserved for the tofu manufacturing company. But there was only one set of books, under White Wave. The company now changed to a partnership, with seven equal partners, all active. Demos was president and Pat Calhoun did the bookkeeping, and only these two were interested in meditation.

Right after the move, to announce The Cow of China as a retail outlet and its vegetarian deli products, Demos did his first real advertising, using three charming posters. The first read: "White Wave Through the Cow of China Offers Food from The Kingdom of Plants. We make it all here in Boulder. 100% Dairyless." It then listed 14 soyfoods plus some non-soy desserts, almond-, cashew-, and peanut butters, and tahini. A second poster showed a soybean, with head, tail, and legs like a cow and dotted lines to delineate the choice butcher cuts. But instead of rump roasts and flank steaks were Soysage, Miso Dressings and the like. A third showed Jack, standing under a giant beanstalk, about to trade in his cow for the magical beans at which he is gazing in wonder. The caption: "We've got an alternative. White Wave Soy Dairy." The latter two posters were used as catalog advertisements with a growing number of natural food distributors.

The tofu plant now consisted of an open kettle, VCM grinder, and hand press for the curds on the end of a swinging levered bar. White Wave started to deliver product to some Denver health food stores and in late 1978, not long after the move to Walnut Street, they landed their first supermarket chain, King Soopers supermarket chains, which began to order 100 cases. As business expanded, so did the need to improve packaging and marketing, and to control costs.

New packaging: White Wave couldn't get its tofu into supermarkets unless it was sold in water-packed film-sealed plastic tubs (trays); the Chinese carry-out food/fish cartons were not acceptable. So Demos bought a little hand-packing machine that allowed one person to pack one block of tofu at a time in water in a plastic tray, then seal the tray with a film lid. Steve remembers first using this machine at the Walnut St. plant. Initially, he would seal the tofu tray with clear, unprinted film, then run one of their oval labels (the one with a hint of green color in it, used previously on the Chinese cartons) through a gluing machine (which was less expensive than buying pre-glued labels), and slap the label on the clear plastic film. This was White Wave's "first true commercial mass market package." The new marketable package led to many new accounts. After King Soopers the company got into the City Markets chain, then about a year later into Safeway, followed by a host of other chains in outlying areas. As business expanded, White Wave could afford pre-printed film labels for its tofu in plastic trays. The label design, though rectangular, was basically the same as the old oval. The ingredients new read: "High protein soybean cake contains: Soybeans grown without the use of herbicides or pesticides, filtered water, and nigari (salt bitterns). No more no less!" Soon a variety of textures were available: Extra firm press, firm organic, extra firm, and sift.

New sources of soybeans: White Wave had made its tofu from organic soybeans from day one. When the company first moved into Walnut Street, they were still buying these soybeans from Green Mountain Grainery in Boulder. But in the fall of 1978 Steve drove to a meeting of the Organic Growers Association in Iowa. He spoke about the demand for organic soybeans and met Marvin Kurpkeweight, who was already growing soybeans organically in eastern Nebraska. Steve visited Marvin's farm and contracted with him to buy organic soybeans direct from the farmer. Address: Lafayette, California.

• ***Summary:*** The most comprehensive bibliography ever published on this subject. 636 of the references contain abstracts. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

5226. Shurtleff, William. 1987. History of White Wave, Inc. (Continued–Document part III). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.
• ***Summary:*** Continued: White Wave's tofu production was growing nicely. It rose from 120,000 lb. in 1978 (2,308 lb/week), to 179,000 lb. in 1979 (3,442 lb/week, up 49%), to 279,000 lb. in 1980 (5,365 lb/week, up 56% over 1979).

In February 1979 a major new product line was started: tempeh. Chip McIntosh was the first tempeh maker, followed by Chris O'Riley. An old kitchen refrigerator, warmed by

light bulbs, was used as the incubator. The first two products were Soy Tempeh and Soya Rice Tempeh, the latter being America's first multi-ingredient, soy-and-grain tempeh.

At about the same time, a third new product was launched: Polar Bean. It was a soymilk based non-dairy frozen dessert, made in a soft serve machine but sold in hard-pack pints. The first flavor was Banana-carob. Later strawberry, chocolate, carob mint, and orange flavors were added. In about 1984 a soft serve version called Polar Softie was introduced but did not prove successful.

Also in 1979 Richard Leviton visited White wave and the Cow of China, and did an in-depth study of their operations and products, published in the 1979 issue of *Soycraft* magazine. Soyfoods sold both at "The Cow" and for wholesale distribution to other retailers included: Organic Nigari Tofu, Soymilk (Honey-Vanilla or Carob-Maple), Soysage, Tempeh, Missing Egg Salad, Tofu Mayo, Baked Savory Tofu Cutlets, Sweet Bean Tofu Pie, Miso Salad Dressings (Mellow or Hearty), and Tofu Treats or Creamies (Banana-Coconut, Peanut Carob, or Carob-Mint; squares of creamy baked tofu blend on a healthful oats-coconut-flour crust).

Other ready-to-eat items sold only at "The Cow" included Soysage Pate, "Macro" Pizza (with tofu), Tofu Spinach Dill Turnovers, Tofu Cinnamon Rolls, Hot Tofu Meatballs and Meatball Sandwiches, Sloppy Joe Sandwich (made with TVP), Tofu Cream Cheese & Black Olive Sandwich, Tofuna Sandwich (like tunafish), Strawberry Tofu Pie, Soy Sesame Bars, and Tofu Butternut Squash Pie. In mid-1979 bulk recipes for about ten of these products were published, with permission, in *Tofu & Soymilk Production* by Shurtleff and Aoyagi.

Leviton noted: "The Cow of China is surely one of the nation's most ambitious and energetic soyfoods companies." It was just about breaking even with weekly gross retail sales of $1,000, three-fourths of which came from soyfoods. Concerning the growth of the still totally unmechanized little company Demos, now the self-styled "beneficent dictator," always frank and candid, added:

"It was a hell of a struggle, especially for an undercapitalized small business. But I certainly wouldn't discourage anybody because we started with nothing, and we've been going since then, and we've been able to make it all meet. We've just rigged, we've improvised, we've done everything imaginable, as I'm sure many other people in this industry have. We cut our salaries back, we did without a lot, but its own momentum kicked in. I suppose we consider ourselves alchemists in turning sweat into money. So, let me express my gratitude to everybody and everything, seen and unseen, who have helped us pull this together."

In August 1979 Gary and Chandri Barat arrived in Boulder and spent several days studying the Cow of China. They had met Demos at the Second Annual Soyfoods Conference in Amherst, Massachusetts (July 26-29, 1979). They were driving around the country, studying tofu and developing a business plan in preparation for starting a soyfoods company, which later became Nature's Inn, then Legume. As they studied The Cow of China and Demos invited them for dinner several times. He and his wife, Ginny, served a tofu spinach feta pie and mushroom caps stuffed with tofu. Later Barat told Demos more than once how much this visit has influenced him in starting a company based on tofu entrees. The lineage of Legume's early products (Tofu Cream Pies, Tofu Spinach Pies) can be traced back to The Cow of China.

Barat encouraged White Wave to do a feasibility study on converting The Cow of China into a fast food restaurant named The Family Diner and moving into a vacated A & W root beer stand three blocks from The Cow in a very attractive location. The study was done, a potential menu was developed, bu financial backing did not come through.

A White Wave catalog published in December 1979 included several new products: Doufu (extra firm Chinese style tofu), Savory Baked Tofu, and Tamaried Nuts and Seeds (Almonds, Cashews, Spanish Peanuts, Sunflower Seeds, Nut Mix).

The Cow of China deli was doing well. By February 1980 sales were $1,700 to $2,000 a week and there were often lines out the door. By the summer of 1980, according to *Soyfoods* magazine, the Cow of China had been renamed the Good Belly Deli, with the slogan "Real Food, Real Fast" and White Wave was producing 7,500 pounds of tofu and tofu products a week. The new deli, an expanded and Americanized version of "The Cow," continued to serve as an excellent showcase for the White Wave's innovative ready-to-eat soyfood products. Working with a friend who was an advertising agent, Demos had dropped the line of assorted health foods (miso, sea vegetables, etc.), expanded the deli items, and installed a stand-up counter bar to eat at and a few tables and chairs. Formerly it had been all takeout. Hot and cold fast food was served. The deli attracted lots of business (there was still usually a line out the door), the products were very innovative and they were praised by the natural foods community in Boulder. Address: Lafayette, California.

5227. Shurtleff, William. 1987. History of White Wave, Inc. (Continued–Document part IV). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• ***Summary:*** Continued: But White Wave was growing by leaps and bounds, as were sales of tempeh and Polar Bean soy ice cream. White Wave was doing all its own delivery in its own trucks to Boulder and Denver. And the business had not been capitalized, except for one new $3,000 loan that brought in a silent partner. A loan of $4-5,000 was outstanding from the IRS, in unpaid taxes

The Good Belly Deli lasted only 5-6 months. Though

it was doing well and was probably making money (though the financial records were poor), it increasingly became a thorn in Demos' side, for it was getting out of control. It was a drain on his time and energy, more than he could handle, and it seemed to be less important than the manufacturing end of things. So one day in the spring of 1981 he walked in and announced that he was closing a business that had lines around the corner. He wanted to focus on his main goal: to become the largest tofu manufacturer in his region. In retrospect it was a good decision, but he adds, "We were operating on a lot of idealism in those days, and not much practical business sense." In October 1980 White Wave changed from a partnership to a corporation, with 5 active and one silent stockholders.

After closing the deli, the first real money came into the company. With a bank loan, they paid off the IRS, then soon paid back that loan. Then in the fall of 1981 Demos landed a $69,900 SBA loan (SBA approved a bank loan) to buy new equipment and $100,000 worth of equipment from Mountain High, a public company which made ice cream and yogurt, and needed to get out of their Boulder ice cream plant at North 57th Court.

At North 57th Court: In September 1981 White Wave moved again, this time to Mountain High's former ice cream plant in an industrial park at 1990 North 57th Court. *Soyfoods* magazine reported that Demos threw a huge "factory-warming" party for several hundred friends and customers, serving Polar Bean and many favorite tofu and tempeh recipes. This represented a huge, key expansion. The square footage increased six to seven-fold, initially to 6,000 square feet including 22,000 cubic feet of walk-in cold storage space. Big new equipment was purchased with the SBA Loan. The number of stockholders was now reduced to three: Demos, Pat Calhoun, and Chip McIntosh. The business was able to survive because of loans. Demos cut his hair.

The percentage of sales generated by the various product lines was tofu 50% or more, ice cream 10-15%, tempeh 20-25%, and nut butters 10-15%.

For several years Demos had been urging King Soopers to move his product out of the produce section into the dairy section. In mid-1982, after studying a report on "The Tofu Market: Overview of a High-Potential Industry," published in May 1981, King Soopers made the move, in part due to customer demand. Initially sales were unchanged, since customers couldn't find the product. But there was a big advantage to King Soopers: no shrinkage from spoilage because of the lower temperature. The margin initially went down to 15%, the same as for dairy products. This brought the price down. Later they got smart and raised the margins for tofu. Not it's higher than milk but still less than produce. "I'm glad to see them making lots of money on our products," noted Demos.

In May 1983 White Wave made a major decision: to vacuum package their firm tofu. They bought a used Tiromat vacuum packager from a beef-jerky company in Los Angeles. Thereafter everything went wrong, so much that that one machine "almost broke the company's back." Demos later called it "the curse of the devil," and his production manager would often ask only half in jest, "Do you think we are sitting in vacuum packaging hell?" They found that tofu is a very difficult product to vacuum pack, though firm tofu is easier than soft. They concluded that 30% of the problems were caused by the machine, 30% by the product, and 30% by the operator, "and the rest was absolute karma." The process was very unforgiving, as was the machine's maker, which gave White Wave almost no support. They tried to disown the fact that Demos got stuck with a lemon. So White Wave had to solve all the problems by themselves.

Tempeh was now doing very well. In about 1982 White Wave began to make its own starter culture in order to get better quality control and save money: Alexander Lyon, who happened to be in town, spent a week teaching them the intricate process for $100. They also began to sell all tempeh frozen, after steaming. The product line was steadily expanded. By 1983 the company had introduced a Tempeh Burger and 5 Grain Tempeh (with soybeans, millet, wheat, oats, and barley). By 1984 the burgers were the company's best-selling tempeh product (48% of tempeh sales), followed by frozen soy tempeh (28%), soy & rice tempeh, then 5-grain tempeh. Accounting for one-fourth of White Wave's sales in 1984, tempeh was now the company's most profitable line of products. Making 5,850 pounds a week, White Wave had become America's second largest tempeh producer (after Quong Hop & Co.) and distribution had reached California. In fact, tempeh had now passed tofu as White Wave's most important product.

Polar Bean was also doing well. In 1984 it won a silver award in the annual Natural Foods Merchandiser contest, and that summer a Polar Pal ice cream sandwich was introduced.

"By 1983-84 White Wave broke the 10,000 pounds-of-tofu a week barrier and became a regional company, shipping tofu via many distributors throughout the midwest: Chicago [Illinois], Detroit [Michigan], Dallas [Texas], Salt Lake City [Utah], and Phoenix [Arizona].

Financial Crisis and Recovery: For most of its history, White Wave had been profitable, with plenty of cash and good financial records. Though the move to North 57th Court quadrupled their overhead, the company continued to make money for the first 2 years there, running a very tight ship. Then they started to encounter major equipment problems: a compressor breakdown and major non-stop vacuum packager nightmares. A maintenance team had to be hired. White Wave was growing into a company that needed management, but the sales volume could not support that. Sales were good, profits were small, and overhead was skyrocketing. This led to a slow tailspin, losing $1,000 a month during 1983-84.

These were not considered major losses but the upward trend had been reversed.

By August 1984 White Wave was $40,000 in debt and people were burned out. Decisive action was needed. In September Demos hired Lester Karplus to take charge of daily operations while he started to do a business plan to raise equity. But in the following months losses increased dramatically, to $10-$15,000 a month. White Wave lost a total of $60,000 during the next 6 months. Finally in February 1985, amidst his first real crisis, Demos fired Karplus and McIntosh, and took over the whole company himself. His four-part strategy was cut overhead to the bone, bring in new cash quickly, hold creditors at bay as long as possible, and implement a system of data collection (which Karplus had helped develop) to generate better production and financial reports. Address: Lafayette, California.

5228. Shurtleff, William. 1987. History of White Wave, Inc. (Continued–Document part V). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.
• ***Summary:*** Continued: First, he laid off all managers (who were not producing day-to-day results). Future plans were put on hold.

In October 1984 Jason Bois, who had been around the health food business for many years, approached White Wave to discuss having White Wave make him a soft serve soy ice cream. Demos advised against soft serve, but when Bois persisted, Demos developed a new soft serve formula for him, containing tofu and spray dried soymilk. Launched in January 1985 and marketed under the name Tofruzen, they failed within four months, for lack of a market. Bois quickly returned to Demos and beseeched him to develop Tofruzen in hard pack pints so that Bois could use these products to raise equity capital in a public stock offering. Demos had all the hard-pack formulas for Tofruzen developed in 30 days, using an improved version of his Polar Bean as the base mix but with totally new flavors (chocolate, strawberry, vanilla-almond). After Tofruzen launched the new products mid-1985, they realized that they didn't really own anything. So Demos, with some unexpected luck and seeing a way to bring in new cash quickly, proposed Tofruzen buy the title to the formulas for $25,000 cash, plus $25,000 in 6 months, plus interest. And White Wave would have an extensive supply contract. Tofruzen agreed.

In December 1985 Tofruzen, Inc. raised $1.6 million net in a public stock offering, and at that time paid White Wave its first cash. Tofruzen Bars followed in May 1987 and low-calorie Tofruzen Light in August. Once Demos saw that Tofruzen would be a successful product, he downplayed marketing of his Polar Bean. Tofruzen sales rose from $91,000 in fiscal 1986 to $158,000 in 1987.

Shortly after Karplus left, White Wave started selling its tofu in a colorful box. Karplus served as an agent to negotiate with advertisers and designers. The new package helped sales.

In mid-1985, to consolidate its business focus and bring in more cash, Demos sold White Wave's nut butter business to an employee for $35,000. White Wave retained 5% interest in the company, which is now called Naturally Nuts.

To turn the tide of losing money and get some badly needed breathing space, Pat Calhoun came up with a plan where she and Demos would call all the creditors and say, "Either we file bankruptcy or you allow us to pay off our debts to you over a one year period." All creditors agreed to this plan.

In July 1985, the moment of truth, the turning point, arrived. The company was $100,000 overextended (60 days behind in payments) and could not borrow money. Everyone was disheartened. Demos and Calhoun started regular sitting meditation again, recommitting himself to spiritual practice as central and profitability as essential. He recalls, "Once I got my priorities straight, things started to go well." Within 90 days White Wave had started to generate a positive cash flow. By mid-1986 the $100,000 debt had been paid off, and White Wave was once again accumulating cash and savings.

Demos decided to try his approach on another company, Soyfoods Unlimited Inc., a major tempeh manufacturer, which he had been offered an opportunity to buy. Having started tempeh production in February 1981 in San Leandro, California, Soyfoods Unlimited had grown to be America's third largest tempeh manufacturer by 1984, Soyfoods Unlimited was now heavily in debt. White Wave didn't have any extra money, but the offer made sense as a way to get distribution for White Wave products in California and the West Coast, and to increase production volume. So on 1 December 1986 White Wave made its first acquisition. The buyout took place over a period of time, with some cash down. By mid-1987 Soyfoods Unlimited had been turned around and was a profitable, wholly owned subsidiary. White Wave owned all the stock and had signed a supply agreement with Soyfoods Unlimited to supply them with everything. This acquisition, with all tempeh production for both brands done at White Wave in Boulder, helped boost weekly output to 17,000 lbs. a week by the fall of 1987, making White Wave the biggest tempeh manufacturer in the USA. Growth of tempeh was strong and its future looked very promising.

White Wave has long been one of America's most innovative tempeh companies, in part because of its faith in the potential and future of tempeh. Tempeh continued to be the company's most profitable product. During 1985-88 the tempeh line was expanded with a number of original and delicious varieties: Quinoa (6/85), Lemon Broil (10/86), Amaranth and Sea Veggie (both 3/87), Peanut Sesame (3/88), and Teriyaki Burger (8/88). These also gave his product line more shelf space, a key consideration.

At King Soopers and Safeway, White Wave now had three shelves with tofu and tempeh right in the middle of the

dairy section.

Tofu production was also strong, averaging 15,000 lbs. a week in mid-1987. A future high priority was the plan to pasteurize their tofu to give longer shelf life. After several years of selling tofu vacuum packed in a box, White Wave introduced a water pack without the box for the Asian-American market and some Caucasians since they are not used to the vacuum pack, and they prefer softer tofu, which cannot be vacuum packed.

By mid-1987 White Wave was back into high gear and growing nicely. Their space grew from 6,000 to 20,000 square feet. White Wave was one of the few Caucasian-run soyfoods companies that has been able to grow without selling most of the company. Demos' family has supported him to a large degree. He had borrowed roughly $25,000 from friends and family. The company still owed one-third on its SBA and Mountain High loans, and some to family. Assets were now about $300,000 and liabilities are $200,000. Since May 1987 White Wave had money in the bank and a growth rate above 30%. The 1987 sales projection was $2 million, of which 8-14% was expected to be profit.

In December, projected revenues for 1988 were $3 million. The company was in the midst of a private placement offering for $500,000 and the banks had approved equipment loans for $600,000. They have put in a bid to purchase an old (built in 1978) meat processing house on 2.4 acres in Boulder.

The Future: New products to be launched in 1989 include several meat analogs (tofu hot dogs/franks, due in March, aimed at the mainstream market concerned with cholesterol) and a soy yogurt.

Demos has set a number of goals for White Wave. First, to become the major primary soyfoods ingredient manufacturer in the region, and to maintain a profit margin of at least 10%.

Second, to make the concept of a clearly delineated and identified "Soyfoods Section" in the dairy case, succeed at King Soopers and Safeway. Set off with plastic dividers between yogurt and milk products, the section would be filled out with second generation soy products. This new concept would allow him to compete with larger tofu manufacturers (such as Azumaya and Hinode) who are lower priced but sold in the produce section. Address: Lafayette, California.

5229. Shurtleff, William. 1987. History of White Wave, Inc. (Continued–Document part VI). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.
• ***Summary:*** Continued: Third, after (and only after) the Soyfoods Section concept does succeed, to approach other chains with the same idea and ultimately to get into the whole Kroger chain of 400 stores in the Midwest.

Fourth, to develop new tofu-dairy blends to reach the mainstream. For example, a vacuum packed tofu sold next to cheese, that tastes like cheese (it doesn't have to melt); it could be mixed with cheese or flavored like cheese. Or a tofu cheesecake made of half tofu (or tofu cream cheese) and half cream cheese, that was virtually identical in flavor and texture to all-dairy cheesecake but was lower in cholesterol, saturated fats, and calories.

Fifth, to give major attention to tempeh product development. Demos thinks that tempeh represents a vast future potential because Americans like it better than tofu (though it is largely unknown), it offers good profitability, and the competition is not as severe as with tofu. Address: Lafayette, California.

• ***Summary:*** Consists of bibliographic records printed on a dot-matrix printer. Some of the records have a summary or abstract. There is a comprehensive index. Note: This was probably made as a gift for K.S. Lo of Vitasoy (Hong Kong). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

5231. Singh, B.B. 1987. Soybean research and development in India. In: S.R. Singh, K.O. Rachie, and K.E. Dashiell. eds. 1987. Soybeans for the Tropics. New York: John Wiley & Sons. xx + 230 p. See p. 111-118. Chap. 11.
• ***Summary:*** Dr. Singh formerly coordinated the All India Co-ordinated Soybean Research Project at Pantnagar Univ., India. This is one of the best summaries seen of the history of the soybean and the early days of its utilization in India. The history is divided into pre-1965 and "from 1965 to 1985."

Developing a market: "More than 85 solvent extraction plants existed in India in 1970, and most were running well below their planned capacity. Four scientists from Pantnagar University including myself went to M/S Prag Oil and Ice Mills, Aligarh" and convinced the owner to try solvent extraction of soybeans. "At the same time we at Pantnagar University collaborated with the missionaries running Knave Technical Institute to establish an extruder cooking plant at Bereilly. The plant was to use the defatted soybean meal from Aligarh and convert it into textured soybean protein (TSP), a substitute for meat, that would have a vast market for the vegetarians in India. The two products–soybean oil and TSP named 'Nutri Nugget'–immediately became popular. Thus almost the entire soybean was being used as human food.

"This marked the beginning of soy-based industries in India. In the first year, both operations were so successful that the managers came to Pantnagar and hired four agricultural graduates each to promote soybean cultivation on contract around Aligarh and Bareilly... Working in

collaboration with University of Illinois, we also developed a factory to produce soybean milk...

Present production and future potential: Among the states the most significant development in soybean production has occurred in Madhya Pradesh because of the state government's active interest. Soybean cultivation, utilization and marketing are being promoted by the M.P. State Co-operative Oil Seed Growers' Federation. This federation provides incentives, including on-farm demonstrations, arranging availability of improved seeds, *Rhizobium* culture, insecticides, fungicides, fertilizers, etc. and assisting in the marketing of the produce by liaising with the processors.

In Madhya Pradesh, solvent-extraction capacity is 830,000 tonnes/year of soybean but is expected to soon reach 1.29 million tonnes. Considering the rapid growth in soybean production and utilization, Madhya Pradesh is often called the "soybean state" of India.

Tables show: (1) Performance of three varieties (Hardee, Bragg, and Semmes) at Pantnagar, 1967-1971. (2) Soybeans lines resistant to yellow mosaic and rust. (3) List of improved soybean varieties released in India. For each is given the variety name, area of adaptation, maturation time (days), and yield potential (tonnes/ha). The varieties are: Ankur, Alankar, Shilajeet, PK-262, PK-327, PK-308, PK-416. (4) Soybean area and production of six different states of India, 1983-83. The states, in descending order of production (in million metric tons) are: Madhya Pradesh (600), Uttar Pradesh (105), Rajasthan (10), Himchal Pradesh (5), Bihar (5), Gujarat (5). Address: International Inst. of Tropical Agriculture, Ibadan, Nigeria.

• ***Summary:*** This full-page color ad shows a 1-liter carton of Vitasoy Creamy Original, made from Organic whole soybeans. As inset shows all four flavors.

5234. Weingartner, Karl E. 1987. Processing, nutrition and utilization of soybeans. In: S.R. Singh, K.O. Rachie, and K.E. Dashiell. eds. 1987. Soybeans for the Tropics. New York: John Wiley & Sons. xx + 230 p. See p. 149-78.
• ***Summary:*** An excellent, easy-to-understand condensation of the basics. Contents: Introduction. Oil extraction, Processing (and refining) the oil. Soy flours and grits. Soy protein concentrate and isolate. Nutritional components. Antinutritional components. Soybean use in Africa: Zimbabwe, Zambia, Nigeria, IITA's strategy.

Currently more than 10 countries are involved in manufacturing or processing soybean foods in Africa. In 1985-86 the major producers of soybeans in subsaharan Africa were Zimbabwe (80,000 tonnes), Nigeria (65,000 tonnes), and Zambia (36,000 tonnes), and these three countries are at the forefront in processing and utilization. In Zimbabwe, a company named Nutresco makes Mahewu, a bestselling beverage made from soybeans and maize, and a breakfast cereal named Nutri-Plus containing soybeans. In Nigeria, Nestlé makes Nutrend, an infant cereal, and another company makes Nutrimax-10, an instant cereal for the whole family. In Zaire, Cerevap, an instant cereal is sold.

In 1985 IITA in Nigeria began a program to promote processing and utilization of soybeans, in collaboration with INTSOY. One focus has been the use of expellers for small-scale expression of soy oil. Research is also being done on soymilk and extrusion cooking.

Tables: (1) Composition (% dry weight) of soybeans and the seed parts (from Kawamura and Tada, 1967). Includes whole soybeans, cotyledon, hull, and hypocotyl.

(2) Soybean grades, according to U.S. standards (from USDA, 1970). Grades are 1 to 4. (3) Composition of crude and refined soybean oil (from Pryde, 1980). (4) Specifications for crude, degummed and once-refined soybean oil to be traded. (from Brekke, 1980). (5) Conditions for degumming (from Wiedermann, 1981). (6) Comparison of some activated bleaching clays (from Wiedermann, 1981). (7) Selective hydrogenation of soybean oil (from Hastert, 1981). (8) Composition (% dry weight) of soybean flour, soy protein concentrate and isolate (from Bressani, 1981).

(9) Comparison (% dry weight) of three flours made from soybeans (from Smith and Circle, 1972).

(10) Composition (% dry weight) of soybean concentrates (Meyer, 1967). Made by alcohol leach, acid leach, or moist heat (water).

(11) Estimate (mg/kg body weight) of humans' daily requirements of amino acids (FAO / WHO, 1983).

(12) Essential amino acids contained in whole soybeans (FAO, 1971), soybean flour, soy protein concentrate (Central Soya, 1979) and soy protein isolate (Ralston Purina, 1978). "Worldwide, lysine is the amino acid that is limiting in most low-cost diets." Tryptophan is limiting in some diets, while threonine is often present in less than recommended amounts. The sulphur amino acids are slightly low in relatively few diets. "Since soy protein is a good source of lysine, tryptophan and threonine, its addition to a mixed diet greatly improves quality of the diet's protein."

(13) WHO suggested requirements (gm of amino acid per 100 gm of protein) of four critical amino acids (lysine, tryptophan, threonine, sulphur amino acids {methionine and cystine}) for preschool- and school-aged children, and adults (Anonymous 1986).

(14) Effect of soybean flour as a protein supplement to cereal grains (Bressani, 1981).

(15) Fatty acids (%) in soybean oil–divided into saturated and unsaturated (Nwar, 1985).

(16) Mineral content of whole soybeans (FAO, 1971), defatted flour, concentrate (Central Soya, 1979) and isolate (Ralston Purina, 1978).

(17) Sugar analysis (%) of hydrolyzed carbohydrates from soybean products (Eldridge et al., 1979).

(18) Effect of raffinose plus stachyose in the diet of humans; production of flatus (van Stratum and Rudrum, 1979).

(19) Evaluation of soybean line PI157440, which lacks the Kunitz trypsin inhibitor, compared with regular soybeans, raw or heated, in terms of trypsin inhibitor activity, rat PER, and chick gain per unit of feed. It was found to be better than regular raw soybeans but poorer than heated regular soybeans.

(20) Nutrient content of 1 cup (237 ml) soy milk, cow's milk and human milk (Pennington and Church, 1985). Address: IITA (International Inst. of Tropical Agriculture), Ibadan, Nigeria.

5235. **Product Name:** WestSoy Natural (Soymilk).
Manufacturer's Name: Westbrae Natural Foods (Importer). Made in East or Southeast Asia.
Manufacturer's Address: 4240 Hollis St., Emeryville, CA 94608. Phone: (415) 658-7521.
Date of Introduction: 1987. October.
Ingredients: Incl. soybeans, rice, and barley malt (made from sprouted barley), oil, salt.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic cartons. 250 ml retails for $0.69; 1 liter retails for $1.99.
How Stored: Shelf stable.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1987. Oct. p. 62. "A Great Tasting Source of Nourishment. Made from Organic Soybeans and Rice." This product has a new package (yellow, white, blue, and brown), new ingredient (rice), new size (liter), and new maker (somewhere in Southeast Asia; Bob Gerner 1/88 says Hong Kong).

Talk with Gordon Bennett of Westbrae. 1986. Nov. 15. Even after the end of the year, he will not disclose where and by which company his soymilk is made.

Bennett. 1987. Soya Newsletter. Sept/Oct. p. 10. Ad in Vegetarian Times. 1987. Nov. Rear cover. Leaflet. 1987. WestSoy. What is the shelf life of WestSoy? How can WestSoy be used? Why don't local soydrinks taste as good as WestSoy? Ad in Vegetarian Times. 1988. April. p. 14. "A Great Tasting Source of Nourishment." Price change. Effective Nov. 14. Case of 27 x 8.45 oz is $8.60 FOB West Coast.

5236. Thompson, Keith. 1987. Jacob Hartz Seed Co. (Interview). *SoyaScan Notes.* Nov. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Hartz was purchased by Monsanto in April 1983. They have been doing research on soybeans suited for soyfoods for 10 years. The director of research Curtis Williams (formerly at Louisiana State Univ. for 6 years) began in the mid-1970s to develop a very popular natto variety, that was released in 1980. Proprietary varieties for seed were first released in 1984. Univ. of Illinois and Iowa State are also doing food bean research. Soybean production in the South has shrunk 46% in the last 6 years, to 12 million acres from 22 million. A soybean containing no trypsin inhibitor was developed 2-3 years ago but there has not been much interest in it.

There are three lipoxygenase enzymes: L1, L2, and L3. There is a Japanese patented process for removing both L2 and L3, using backcrossing. Hartz has lines that are free of L1 or L2 or L3 or L1 + L3. Lipoxygenase removal seems to offer big promise for improved soymilk and tofu beans. Hartz is the only commercial seed breeder in the U.S. doing work on maturity group IX and X, now that Hinson has closed down his tropical variety development in Florida. Hartz has a global outlook. He is sorry that INTSOY is no longer doing varietal development; they were a great source of information. Daylight insensitive is also called "juvenile characteristic." It takes 1 bushel of seed to plant an acre of soybeans. Address: Food and Export Manager, P.O. Box 946, Stuttgart, Arkansas 72160.

5237. LeBailly, Cecile. 1987. Lait: Attention, voila l'ersatz. L'invasion des matières grasses végétales menace les produits laitiers européens [Milk: Watch out for substitutes. The invasion of vegetable oils threatens European dairy products]. *Nouvel Economiste* (*Le*) No. 616. p. 100. Nov. 6. [Fre]
• ***Summary:*** There are 3 major soymilk producers in Europe: (1) In Belgium, Alpro, an affiliate of the Vandemoortele Group, has a plant that produces 10,000 tonnes/year of "soy juice" (*jus de soja*). Alpro's head, Philippe Vandemoortele, is head of the European Soyfoods Association. (2) In France, Cacoja, affiliate of the agricultural cooperative of Colmar, has recently had an ultramodern plant constructed at Issenheim in Bas-Rhin. A good photo shows the soymilk production system. (3) In West Germany, DE-VAU-GE is expected to soon produce as much soymilk as Alpro.

Also discusses the Edensoy venture in the USA. Most of these companies are run by young men, average age 35. Address: France.

5238. *El Nuevo Diario.* 1987. Proyecto industrial para leche de soya [Industrial soymilk project]. Nov. 7. [Spa]*
• ***Summary:*** A group of students in their fourth year of Industrial Administration at the University of Central America recently won first prize for their soymilk project at

the University Conference on Scientific Development. The project seeks to increase the production and consumption of soymilk in Nicaragua. Plutarco Gonzalez, head of the student investigative collective, said that one principle objective of the project would be to popularize the use of soy. The project consists of installing a grain processing machine to make soymilk, with a subproject being the production of soy flour. The machine will be located in Ciudad Sandino (barrio of 60,000 residents outside of Managua). The "Mechanical Cow" (Vaca Mecanica), as the processing machine is called, would be able to make 9,000 liters of soymilk daily, using only 1,000 kilos of soybeans. The machine will cost $60,000. Presently there is firm commitment for funding from private groups in West Germany and Belgium. Marlene Salguera discussed the increasing use of soy in Nicaragua since 1980, at which time a national program was initiated to popularize the small-scale production of soymilk as a nutritional supplement. Use of soy has grown steadily since that time. Nubia Alvarez added that once completed, the project would also serve as a laboratory for students in the Industrial Administration program.

5239. *Toyo Shinpo* (*Soyfoods News*). 1987. Tônyû inryô nado hanbai. Marusan Herusu Saabisu eiyô hojo shokuhin 5 shu o [Selling soymilk etc. Marusan Health Service sells 5 nutritional aids]. Nov. 11. p. 2. [Jap; eng+]
• ***Summary:*** Marusan Herusu Sabisu (health service), the daughter company of the large miso and soymilk producer, Marusan Ai, has started to market 5 nutritional aids collectively called the "Doctor Series". One of these 5 foods is the "Soymilk Doctor Big Beans" (500 ml of soymilk for 200 yen). The other 4 aids are not soyfoods.

5240. Praskin, Laurie. 1987. Recent developments with soyfoods in Guatemala (Interview). *SoyaScan Notes.* Nov. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** El Centro de Soya, the soy dairy at Solola, is up and running as a commercial enterprise. They are making tofu, most of which is sold to Seventh-day Adventist vegetarian restaurants that cater to tourists in Panajachel, Guatemala City and Antigua (a big tourist center and the former capital of Guatemala). In the community of Solola, they spend a lot of time teaching people how to cook with the products, which they offer at a discount to community members. This has spurred a big increase in sales of tofu and soymilk to the community. A new product in 1987 is Paletas de Soya (Soy Sticks or soymilk popsicles) made with their own popsicle machine. The only flavor is chocolate. Two employees and one independent broker with carts sell them. Agostine Xoquic is manager of the dairy. Amado Del Valle is project coordinator of the whole program, including the agricultural parts, the demos, and the dairy. They make soymilk but only for those who bring a container to the dairy.

Amado and his partner Felipe are making tempeh, which is sold to restaurants. The business is still subsidized; Plenty pays the salaries of Amado and Augustine, and also buys new equipment. But profit from the sale of soy products pays dairy employees' salaries and operating expenses. And they do make a little "profit." They are also now running a soyfoods training center/demo program. In Quiche they have a home demo program, and women grow soybeans and make soymilk and tofu at home. The main thing is adding ground soybeans to corn to make tortillas.

After Plenty had to leave Guatemala in 1980, the Soy Dairy continued making tofu and soy ice cream, without outside funding, until 1983. Larry McDermott visited in April 1985 and production started again in mid-1985. Address: 17969 Oak Dr., Los Gatos, California 95030. Phone: 408-353-2649.

5241. Akiyama, Yoshinobu; Saio, Kyoko; Iwamoto, Matsuo. 1987. Rapid method of analysis of commercial soy milk using near infrared spectroscopy. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 51. p. 76-78. Nov. [3 ref. Eng; jap]
• ***Summary:*** "Near infrared reflectance spectroscopy (NIRS) is a technique which is a technique which is being increasingly used for rapid compositional analysis of foods. The method was developed to replace slow, tedious, conventional methods such as the Kjeldahl method for protein analysis." Address: National Food Research Inst., 2-1-2 Kannondai, Yatabe, Tsukuba, Ibaraki, Japan 305.

5242. Barrett, Mariclare. 1987. Soyfoods almanac. *Vegetarian Times.* Nov. p. 35-38, 40. [3 ref]
• ***Summary:*** An overview and introduction to tofu, tempeh, miso, soy sauce, etc. with summary of some new developments. Photos show Betsey Shipley & Gunter Pfaff, Jan Belleme, Henry Ford wielding axe against trunk of car made of soybeans.

5243. Eden Foods, Inc. 1987. Product description: Eden Foods quality natural foods. 701 Tecumseh Rd., Clinton, MI 49236. 21 p. Plus 6 pages of inserts. Catalog.
• ***Summary:*** The catalog lists the following soyfoods: Edensoy (Original, Vanilla, Carob; shown on page 1. "Edensoy is the best tasting, best selling, best made natural soymilk on the market"), black soybeans (they "have a hearty yet sweet taste. In Japan, black soybeans are always prepared for the New Year's celebration as they are a symbol of health."), organically grown soybeans (usually Corsoy or Amsoy), Eden tekka ("a hearty, nutritious condiment made from hacho miso, carrots, burdock, ginger root, and unrefined sesame oil; 2.8 oz), dried tofu (actually dried-frozen; 5.8 oz), barley (mugi) miso, brown rice (genmai) miso, buckwheat (soba) miso, light (shiro) miso, rice (kome) miso, hacho (100% soybean) miso, natto miso "Kinzanji," shoyu, organic shoyu, low-sodium shoyu, wheat-free tamari,

tamari-roasted nuts and seeds wheat free (pumpkin seeds, sunnies [sunflower seeds], almonds, cashews, mixed nuts), and Lima Tempeh.

Some interesting non-soy foods listed in the catalog include quinoa (16.2% protein), kudzu-kiri, kudzu root starch, adzuki beans, mochi (100% brown rice, with mugwort, or with millet), sea vegetables, organic amazake, barley malt syrup, and Lima seitan.

In the spring of 1986, Eden Foods became General Agent for North America for the Lima Company of Belgium. Lima soyfood products include Lima Tempeh. Note: This catalog was still in use in Jan. 1989. Address: Clinton, Michigan. Phone: 517/456-7424 or 800/248-0301.

5244. Gleason, Jane; Weliwita, S.M.A. 1987. Home and village level soyabean utilization training in Sri Lanka: Accomplishments, constraints and potential. INTSOY/DARP/SFRC, Sri Lanka. 14 p. Unpublished manuscript.
• ***Summary:*** A detailed analysis with many summary statistics. This paper argues that because of the large amount of time and fuel required, and general difficulties of making foods at home from whole soybeans, they will not be widely made there. From 1978 to Nov. 1987 SFRC trainers have directly trained over 30,000 people in soya utilization. Of these, almost 27,000 were trained at outstation demonstrations, while over 4,000 were trained at SFRC.

However, because of processing difficulties and time requirements, it questions the premise that widespread home level utilization of whole soyabean will occur.

The instructors were asked what types of soyafoods are most likely to be integrated into Sri Lankan diets. Soya-fortified kola kenda, a traditional drink made from coconut, rice flour, and leaves of a variety of herbs was most often mentioned as 21 of 48 respondents placed kola kenda in their top three choices. After kenda, the instructors ranked soya-fortified pittu (18), roti (13), snacks (13), waddhi (12), and curry (11) as foods most apt to be part of Sri Lankan diets. Ten respondents stated that soymilk could easily become popular.

The responses of the instructors show that soya will most likely be integrated into local diets through fortification of already popular foods. Many commented that soya flour should be made available for this purpose. Traditional soyafoods from other parts of Asia, for example, tofu in East Asia and tempeh in Indonesia, were not highly ranked as foods easily accepted by Sri Lankans. Only four respondents thought that tofu and none of the respondents thought that tempeh could become important in Sri Lanka.

Table 6 indicates "What characteristic makes soya appropriate for villagers'–Nutrition, 42 respondents; Low cost, 20 respondents; Taste, 5 respondents. Table 7 indicates "Price per unit protein of common foods in Sri Lanka"–Soyabean, 0.04; Chicken, 0.21; Dried fish (fat poor), 0.11; TVP, 0.16. Table 7 also indicates "What constrains soya consumption"–Unreliable supply of soya, 23 respondents; Odd flavour, 22 respondents; Lack of preparation knowledge, 18 respondents; Difficult to prepare, 14 respondents.

Interpretation of the evidence–Three important points can be gleaned from the information provided by the extension workers and the villagers: 1. Thousands of Sri Lankans are aware of the benefits of soya. For the average consumer, the most important consideration when purchasing food is taste, not nutrition. 2. Therefore, soya will most likely be consumed in a form that is already familiar to villagers. 3. It is significant that more instructors consumed TVP than all other types of soya products. Conclusion–The best method of making soya products available to consumers is to work towards greater commercial application of soya utilization technologies.

Training should, therefore, emphasize extension to entrepreneurs. Address: Sri Lanka.

5245. Goldbeck, Nikki; Goldbeck, David. 1987. The Goldbeck's guide to good food. New York, NY: New American Library. xi + 563 p. Illust. Index. 24 cm.
• ***Summary:*** The all-new version of their *Supermarket Handbook,* which originally sold 850,000 copies. Chapter 12 (p. 143-51), titled "Soyfoods: World Class Protein," discusses tofu, frozen tofu, tempeh, soy flour and grits, high-tech soy (soy concentrates and isolates), textured soy protein products. There is also considerable information on soyfoods in other chapters throughout the book: Soy flour (p. 79). Soy nuts (p. 159, 163). Soy milk (p. 184-85). Soy yogurt (p. 190-91, 195). Soy cheese (212, 217-18). Soy protein concentrates or isolates (p. 233, 451, 483, 527). Soy oil (p. 144, 264, 288, 292-93). Meatless burgers and soy sausages (p. 394). Soy ice cream (p. 452-53, 455). Soy sauce (510-11, 515). Miso (p. 511-12, 515). Worcestershire sauce (p. 512).

The section titled "Soy Yogurt" gives a nutritional analysis of cultured Soygurt, made by Cream of the Bean; per 8 oz. it contains 255 calories, 6.7 gm protein, 45.2 gm carbohydrates, 5.3 gm fat, no cholesterol, 20 mg sodium, and 7% of the US RDA for calcium. The text reads: "Those who must avoid milk will be interested in nondairy soy yogurt. A new arrival in natural food stores, this yogurt is made from soymilk and bacterial cultures. Gelatin is added to some brands to maintain the typical yogurt consistency. There is no need, however, for the quality to be compromised by the addition of high fructose corn syrup, isolated soy protein, salt, and several thickening agents, as has been done in at least one brand we have encountered."

The section titled "Soy Cheese" states: "Cheese based on soy milk has recently added a new category of cheese products to the market. In terms of calories, protein, and overall fat content soy cheese competes quite favorably with animal cheeses... It is both lactose- and cholesterol-free and the sodium content is about average for cheese. Note, however, that soy cheese is held together with vegetable

gums and will contain either the milk derivative calcium caseinate (in which case it is not dairy free) or isolated soy protein." Page 218 gives a nutritional analysis of Soya Kaas (soy cheese). Per 1 oz. it contains 78 calories, 6.7 gm protein, 5.6 gm fat, no cholesterol, and 168 mg sodium. Address: R.D. 1, Box 495, Woodstock, New York 12498 914-679-8561.

5246. Hasegawa, Kiyozo; Mukai, K.; Gotoh, M.; Honjo, S.; Matoba, T. 1987. Determination of the lysinoalanine content in commercial foods by gas chromatography-selected ion monitoring. *Agricultural and Biological Chemistry* 51(11):2889-94. Nov. [21 ref]

• ***Summary:*** Table 1 (p. 2892), titled "Lysinoalanine content in foods," includes values for various soybean products: The lysinoalanine (LAL) content (in mg per 16 gm of nitrogen) was measured by two methods: GC-SIM (gas chromatography–selected ion monitoring) and HPLC (high performance liquid chromatography). The two values for the soy products are: Soy milk A (0/0), soy milk B (6/14), soy milk C (6/18), wet soybean film (fresh / nama yuba) A (0/0), fresh yuba B (13/16), dry yuba (18/11), fried soybean curd (abura-age = tofu pouches) A (8/6), fried soybean curd B (9/trace).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "soybean film" or the term "wet soybean film" to refer to yuba.

Of the samples analyzed, the lysinoalanine content was highest in pidan (fermented egg). Wheat flour-based products (Chinese noodles, pretzels and crackers) and milk products (condensed milk and lactic acid beverages) also contained a significant amount of LAL. Cow's milk, soy milk, soy protein isolate and meat products (ham and Hamburg steak) contained a low amount of LAL. Results confirmed that the low-level LAL formation was possible in foods cooked at home without any alkaline treatment.

Note: The three types of soymilk were purchased from retail stores in Nara, Japan. Address: Dep. of Food Science & Nutrition, Nara Women's Univ., Nara 630, Japan.

5247. Johnson, Fred. 1987. Aseptic potentials: A number of products aseptically packaged in other countries could offer sound Canadian opportunities. *Food in Canada* 46(10):24-25. Nov.

• ***Summary:*** Morinaga Nutritional Foods Inc. of Los Angeles, California, reports skyrocketing sales of its tofu products in Tetra Brik cartons. From October 1984 to September 1985 it sold 1.9 million packages. From October 1985 to September 1986, sales almost tripled. Aseptic packaging of soups, sauces, puddings, vegetable oils and dressings, soybean milk, and tofu is detailed. Address: Toronto.

5248. **Product Name:** Solait Creme d'Soy (Powdered Soy-Based Creamer).
Manufacturer's Name: Miller Farms Food Co.
Manufacturer's Address: 314 Main St., Cedar Falls, IA 50613. Phone: 319-277-8600.
Date of Introduction: 1987. November.
Ingredients: Premium soybeans, corn oil, rice syrup, sea salt.
Wt/Vol., Packaging, Price: 24 oz (680 gm).
How Stored: Shelf stable.
Nutrition: Per 1 oz. powder or 4 oz. liquid: Calories 220, protein 4 gm, carbohydrates 8 gm, fat 15 gm, sodium 70 mg, calcium 25 mg.
New Product–Documentation: Talk with Harry W. Miller, Jr. 1987. Oct. 21. Leaflet. 1987. "Solait. Powdered Soy Beverage." Product is not yet available. Label. 1987. Oct. 14.5 by 6.5 inches. Purple, green, red, yellow, and blue on white. Illustration of sun and rainbow above clouds. "No cholesterol. No lactose. No animal fat." New Product News. 1988. Dec. 9. A shelf-stable creamer.

Talk with Miller Farms. 1991. Dec. 3. Solait and Creme d'Soy are still on the market.

5249. *Plenty Bulletin* (*Summertown, Tennessee*). 1987. Belize nutrition education. 3(4):3. Nov.

• ***Summary:*** Over the summer Majeedah Rahman, project director, trained representatives from every district of the country in basic nutrition and techniques for preparing tasty, high-protein soyfoods, including tofu and soymilk.

5250. Protein Technologies International. 1987. PP-series proteins and beverages: Products designed to meet the needs of a changing market. St. Louis, Missouri. 8 p. + 5 inserts. Manufacturer's catalog.

• ***Summary:*** PP-series isolated soy proteins (PP660, PP670, and PP710) contain over 90% protein. They offer a high quality source of protein for beverage formulations. Major markets include: 1. Sports nutrition market. 2. Calorie-conscious market. Today an estimated 44.4 million Americans are on a diet; 62% are women. 3. Health-conscious market, concerned with saturated fat and cholesterol. 4. The mature market. Today 27 million Americans (16% of the population) are age 65 or older. That figure was 12.3 million in 1950 and is projected to be 35 million by the year 2000. Individuals in this market segment are more likely than the population as a whole to be adhering to a low fat, low cholesterol diet. They are also more likely to be among the 13 million Americans who are lactose intolerant.

Inserts give a formulation and nutritional analysis for Nutritional Weight Loss Beverage, Protein Supplement Beverage, Low Calorie Nutritional Shake, Weight Gain, and Adult Nutritional Beverage. Address: St. Louis, Missouri.

5251. **Product Name:** Tofreezi (New Name for Frozen

Buddha Soy Ice Cream) [Mocha Royalle, Berry Banana, Amaretto, Pineapple Coconut, Chocolate Mint, or Maple Walnut].
Manufacturer's Name: Sunrise Market Ltd.
Manufacturer's Address: 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
Date of Introduction: 1987. November.
How Stored: Frozen.
New Product–Documentation: Talk with Michael Weiner. 1987. Dec. 16. Sunrise bought this line of soy ice creams in November 1987 from Ray Lipovsky of Metta Tofu Products Ltd. on Denman Island. Ray is now consulting for Sunrise.

5252. *Vegetarian Times.* 1987. Brother Ron's friendly foods. Nov. p. 42-44, 46, 48-50, 52. [1 ref]
• ***Summary:*** Brother Ron Pickarski, a Franciscan friar and a world class vegetarian chef, won bronze medals in both the 1980 and 1984 Culinary Olympics. Now he is testing recipes to enter in the 1988 Olympics, and writing his first cookbook titled "Brother Ron's Friendly Foods." Brother Ron is believed to be the only vegan who is also a certified executive chef, a title shared by 1,400 other American chefs. Most of his favorite recipes included in this article feature soyfoods: Alsatian onion pie (with soymilk and tofu). Primavera of vegetables (with tofu). Tofu bonne femme (with soymilk). Sweet & sour tempeh. Color photos show Brother Ron and several of his preparations.

5253. *Vitasoy Vitabrations.* 1987. The key to Vitasoy's success... Teamwork. 1(3):1. Fall.
• ***Summary:*** Gives brief biographies of each of the company's officers. A photo shows them all seated around a table (left to right): Grace Gose, Steve Snyder, Yvonne Lo, Hilton Tsui, Christine Chen. Address: 99 Park Lane, Brisbane, California 94005.

5254. *Vitasoy Vitabrations.* 1987. The Vitasoy broker/distributor network. 1(3):2. Fall.
• ***Summary:*** The brokers and distributors are divided into 9 regions. The name, address, and phone number of each is given. Address: 99 Park Lane, Brisbane, California 94005.

5255. *Whole Foods.* 1987. Sensational soyfoods. Nov. p. 62. [5 ref]
• ***Summary:*** This basic introduction is designed to be photocopied by natural food retailers for distribution to their customers.

5256. *Toyo Shinpo* (*Soyfoods News*). 1987. Seidai ni Pari de kenkô shokuhin ten. Oshu de nobiru tônyû [Successful health food exposition in Paris helps to introduce Europe to soymilk]. Dec. 1. p. 1. [Jap; eng+]
• ***Summary:*** Soymilk, tempeh, and tofu are becoming more popular in Europe thanks to a recent soyfoods exposition in Paris. There were soymilk desserts, vanilla and chocolate, and Cacoja's soymilk, Soja, received a lot of attention at the event.

5257. *Toyo Shinpo* (*Soyfoods News*). 1987. Ooshû demo tôfu buumu. Pari no kenkô shokuhin ten o mite [After a health foods exposition in Paris, will there be a tofu boom in Europe?]. Dec. 1. p. 5. [Jap; eng+]
• ***Summary:*** The expo was held in Paris from Nov. 7-9. Tofu and second generation tofu products were creating a lot of interest among people who came to the expo. Two French companies producing soymilk are Cacoja and Lima Foods. Their products are labelled Soja and Soya, respectively. Both companies plan to start marketing soymilk ice creams before summer, 1988. Lima Foods is making an effort to produce other soyfoods besides their soymilk such as soy hamburgers, desserts, salads, paté, and terine.

5258. UNI. 1987. Cheap soya is protein-rich. *Times of India* (*The*) (*Bombay*). Dec. 2. p. 19.
• ***Summary:*** For centuries soyabean has been used as an important source of protein in China and Japan. Many noted agronomists now agree that India, and other third world countries, can help to solve their food problems by taking up production of soyabeans in a big way.

Mr. Singhal, technical director of the American Soybean Association in New Delhi says that because of heavy population pressure, India cannot expect to get more than a small fraction of its total requirements from animal sources, such as fish, meat, eggs, or milk. He believes that the only answer is the soyabean, which is the best, least expensive source of proteins and fats, with a huge array of uses.

The soyabean, first domesticated in China about 3,000 years ago, "can be indigenously transformed into many protein-rich foods such as soya milk, soya paneer or 'tofu,' soya flour, soya snacks, soya dal analogues, soya meat analogues and soya sauce." Not to mention soy "ice cream."

5259. Fong, Tillie. 1987. National peace group [Beyond War] honors Colorado Peace Corps alums. *Rocky Mountain News* (*Denver, Colorado*). Dec. 7.
• ***Summary:*** Sue Spaulding, 38, of Denver, worked as a nutritionist in Honduras from 1975 to 1978. She helped mothers there to feed their children proper foods and convinced ten villages to grow soybeans as a protein supplement. "My greatest accomplishment was seeing a child drink soybean milk from a bottle instead of Coca-Cola." Since her return she has worked with the U.S. Dept. of Health and Human Services.

5260. Tsuchiya, Kanji. 1987. [Re: Lectures on soymilk in China]. Letter to William Shurtleff at Soyfoods Center, Dec. 17. 1 p. [Jap; eng+]
• ***Summary:*** Mr. Tsuchiya went to China at the invitation

of the Chinese government for 20 days to give lectures on soymilk production and technology at a convention held by the Chinese Food Industry Assoc. Forty people attended, and they were considered the top people in the field in China, but Mr. Tsuchiya felt that their knowledge of the subject was 20-30 years behind the times. Address: Kamiogi 3-1-1, Suginami-ku, Tokyo 167, Japan. Phone: 03-312-0775.

5261. Rose, Richard. 1987. The U.S. soyfoods industry and market: Where we are and where we're going (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 29. 4 p. transcript.

• ***Summary:*** Major developments: The growth and marketing of Jofu, inability of soy yogurts to take hold, continued domestic growth in production of soymilk, decline of Tofutti, increase and proliferation of soy cheeses, increased legitimization of soyfoods in the mass market. The future: Growth in use of aseptic tofu like Morinaga's, increased use and recommendation of soyfoods in special diets, use of tofu in new products such as baked goods, Big Foods getting into soyfoods, more use of tofu in foodservice. Then discussion of what he would do if he was hired by a major American food company and given a $50 million budget and a research staff. Address: President, Rose International, P.O. Box 2687, Petaluma, California 94953-2687. Phone: 707-778-7721.

5262. *SoyaScan Notes.* 1987. Chronology of soybeans, soyfoods and natural foods in the United States 1987 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. Westbrae moves the production of Malteds to California from Japan.

Jan. The Soy Plant, a tofu cooperative in Ann Arbor, Michigan, files for Chapter 7 bankruptcy. It is soon purchased by Bruce Rose of Rosewood Products, Inc.

Feb. *Soya Newsletter,* a 12-page, bimonthly publication costing $96/year, is launched by Soyatech of Bar Harbor, Maine. Publishers are Peter Golbitz and Sharyn Kingma, former owners of Island Tofu Works. The publication quickly proves itself to be the world's best English-language publication on soyfoods. By October, paid circulation tops 900 in 20 countries.

Feb. American Soybean Association petitions the U.S. Food and Drug Administration to require food manufacturers to be more specific in labeling food products that contain highly saturated imported tropical fats (palm, palm kernel, and coconut oils). The petition includes results of a supermarket survey of 1,555 foods containing vegetable oils. 43% of the labels list multiple choice or generic vegetable oil ingredients which hides from the consumer the fact that the products contain highly saturated tropical fats. Imported tropical fats displace the equivalent of oil derived from 171 million bushels of soybeans. Herewith begin the great "Fat Wars" of 1987-88.

Feb. Lite Lite Tofutti introduced by Tofutti Brands, Inc. This non-dairy frozen dessert contains only 90 calories per 4-ounce serving. It soon becomes a big hit.

Feb. Ah Soy in Tetra Brik cartons launched by great Eastern Sun.

Feb. Options trading on futures for soybean oil and meal opened on Chicago Board of Trade.

March 4. The Federal Grain Inspection Service rules that soybean oil may be used to control grain dust in elevators. This voids the Barnham patent and opens up a large potential new market for soy oil, which is in surplus.

March. Great Shake soymilk launched by Noble Soya in India. Sold in Tetra Brik cartons in mango, strawberry, and chocolate favors, it is the country's most heavily promoted soymilk to date, but gets off to a slow start.

March 16-18. First International Congress on Vegetarian Nutrition held in Washington, D.C., sponsored by eight Seventh-day Adventist universities and health care organizations, and three SDA food companies, plus S.E. Rykoff/Sexton.

March. *Vitasoy Vitabrations,* a newsletter, starts being published by Vitasoy USA.

March 31. Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy, move into a large new plant (370,000 square feet costing $20 million) in the New Territories. Sales of Vitasoy in 1987 is projected to be 126 million packs.

April 1. Tempehworks, Inc., America's first major tempeh producer from Greenfield, Massachusetts, changes its name to Lightlife Foods, Inc. In recent years, Tofu Pups have become the company's bestselling product.

April. Stir Fruity, a non-dairy, nonfermented, soy-based yogurt, is introduced by Azumaya Inc. of San Francisco. Shelf life problems cause the product to be withdrawn, causing Azumaya to set aside plans for an $800,000 radio ad campaign in northern California. The product is soon back on the market, but in limited distribution and with little promotion. Yet during this year, Azumaya probably passed House Foods & Yamauchi to become America's largest tofu producer.

April. *Healthy Times,* a bimonthly newsletter, starts being published by Morinaga Nutritional Foods of Los Angeles, makers of Mori-Nu long-life silken tofu, for members of the Mori-Nu Health for Life Club. By Aug. 1988 circulation is up to 10,000; A subscription costs $3 a year.

May 26. Tofutti Brands Inc. and Coca-Cola launch Cheater's Delite, a major joint promotion featuring a 90-calorie scoop of Lite Lite Tofutti and a 1-calorie glass of Diet Coke, special labeling and couponing on 3 million bottles of Diet Coke, 5 weeks of heavy advertising in New York, New Jersey and Connecticut, and a Caribbean cruise sweepstakes.

June. Dr. Jane Gleason of the University of Illinois goes to Sri Lanka to spend a year studying its soybean and soyfoods industries.

July 1. Ralston Purina Co. of St. Louis, Missouri, establishes Protein Technologies International as a wholly-owned subsidiary to focus on sales of soy protein for food uses. The company's sales of soy protein products were $139.8 million in 1986.

July. Victor Food Products in Toronto, Canada's largest tofu manufacturer, declares bankruptcy. The main cause: Overexpansion, trying to grow too fast.

Aug. The Barat Bar, an upscale chocolate bar containing spray-dried tofu instead of dairy products, is launched by Legume Inc. and extensively promoted. It soon becomes a big hit.

Aug. Brightsong Foods of Petaluma, California, ceases operations. Richard and Sharon Rose resign to found a new company, Rose International, which will be a tofu development, marketing, and consulting company, rather than a manufacturer.

Sept. 24. San-J International of Richmond, Virginia, dedicates the first tamari brewery ever built outside of Japan. The 40,000 square foot facility with a capacity of 1 million gallons a year is located in Varina, Virginia. San-J tamari was first imported to America in 1979.

Sept. 28. Plenty Soya Centre, run by Plenty Canada, opens in Kandy, Sri Lanka. They will sell as many soyfood products as possible at a reasonable cost.

Oct. 6. Anti-cholesterol campaign starts. The U.S. Federal Government and more than 20 health organizations issue the nation's first detailed guidelines for identifying and treating people whose blood cholesterol levels are more than 200 mg per deciliter. The guidelines signal the beginning of a nationwide health promotion campaign designed to reduce blood cholesterol to safer levels. This signals exciting new opportunities to market cholesterol-free soy-based alternatives to meat.

Nov. *Kikkoman Taste,* a stylish full-color "quarterly intercultural forum for the exchange of ideas on food," published by Kikkoman Corp. in Tokyo. Its focus is on shoyu in international cuisine.

* During this year of the great vegetable oil wars, the ASA launched an all-out no-holds-barred campaign to educate Americans of the health dangers of tropical fats (palm and coconut oil; which succeeded) and to require such products to be clearly labeled (which failed).

* This year the world's population passed 5 billion. It is increasing by a record 80 million people a year, so that every 3 years the equivalent of one United States' full of people is added to the population of planet Earth. Continued.

5263. *SoyaScan Notes.* 1987. Chronology of soybeans, soyfoods and natural foods in the United States 1987 (Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. 1987 New Trends:

Rapid Rise in the Number of New Products in America. During 1987 more than 735 new soyfood products were launched worldwide, including at least 380 in the USA. Many of the most successful products are all-American and fun to eat: Ice creams, burgers, hot dogs, salad dressings, chocolate bars. This is part of the larger trend of the Americanization of soyfoods. Most of the growth has been in the traditional low-tech sector, including tofu, tempeh, soymilk, miso, soy sauce, soynuts, plus modern dairylike products such as soy ice creams, yogurts, and cheeses, all developed by the soyfoods movement. A growing percentage of these products are second generation products, which could also be called convenience prepared or value added products.

Growth of Consumer Awareness of Soyfoods in America. Ten years ago, perhaps 1% of Americans had heard of tofu, soymilk, tempeh, or miso. Today, probably 50% of Americans are aware of these foods. In 1987, for example, the Soyfoods Assoc. clipping service received a total of 1,587 clips on soyfoods. That is 132 articles a month, way up from 5 years ago.

Increasingly Positive Image of Soyfoods in the Western World. Generally speaking, from about 1945 through the 1960s, soy had a negative image in foods. The became neutral during the early 1970s. During the late 1970s and early 1980s, with the rise of the soyfoods movement and the growing sophistication of modern soy protein products (isolates, concentrates) soyfoods gradually developed a positive image. The Gallup Poll of 1977 was an early indicator of this. By the mid-1980s tofu had become a "hot ingredient." Companies deliberately added it to a product (or at least to the label) to help sell the product. Yet the Roper poll of late 1986, which found tofu to be America's most hated food, may indicate a tarnishing of this image.

Growing Interest of Larger Food Companies in Soyfoods. One indication of this trend is that *Soya Newsletter,* targeted at these companies and selling for $96/year, has over 900 paid subscribers.

Continued Decline of Red Meat. This year consumption of poultry in America passed that of beef for the first time in history. Beef had been king for 3 decades. Before that, pork was king. A pound of chicken has one-fourth as much saturated fat as beef and takes much less grain, water, and energy to produce.

INTSOY Becomes a Major Force Worldwide Developing and Promoting Soyfoods. Working with other international (IITA, AVRDC) and national soybean programs, and doing pioneering research on fresh green soybeans, extrusion cooking, and use of expellers for small-scale oil expression etc., INTSOY has become as effective in its new role (since 1985) of focusing on soybean utilization as it was before that when its major emphasis was on variety development and production.

The Competitive Position of the U.S. Soybean Industry is Slipping. Farmers in Brazil and Argentina can now

produce soybeans at much lower cost than their American counterparts. This plus extensive subsidies have led to a dramatic drop in U.S. exports of soybeans and products since their peak in 1981. A major part of the problem is linked to the Latin American debt crisis, which surfaced in the early 1980s and forced debtor nations to export at all costs. This debt crisis (especially by Brazil, Argentina, Mexico, and Venezuela) is now being called the most serious problem facing U.S. agriculture.

Soybean Research Increasingly Shifts from Production to Utilization. Traditionally research focused on increasing production and yields. New efforts are designed to develop new markets instead of larger surpluses.

Big Increase in Breeding Soybeans for Food Uses. This is part of a larger trend toward value added products and toward finding new market niches for American soybeans, especially for foods in Japan.

Revival of Interest in Industrial Uses of Soybeans. The main interest is in new ways to use soy oil, of which there is a large surplus that depresses soybean prices. Promising applications include soy oil for printing inks, dust suppressants, and diesel fuels. The largest interest in industrial uses occurred during 1932-42, when the Chemurgic movement and Henry Ford sought to find industrial uses for all farm crops. Hence, there is a rebirth of interest in Henry Ford's work with soy.

Major Growth of Interest in Soybeans and Soyfoods in Africa. Excellent work by IITA in Nigeria and various national soybean programs (as in Egypt, Zimbabwe, and Zambia) have allowed this relatively new crop to reach the takeoff stage. Decreasing per capita food supplies and growing understanding of the nutritional benefits of soyfoods are sparking new interest.

Continued Rise of Soybean Production in Europe. The largest producer, Italy, which produced almost no soybeans as recently as 1983, harvested a record 1.3 million tons in 1987. France is second largest. All production is heavily subsidized.

Omega-3 Fatty Acids Hit the Headlines. Soy oil is a rich vegetable source of these fatty acids which are thought to have a beneficial effect on the cardiovascular system.

Nutritional Spotlight Increasingly Shifted onto Fats, Away from Proteins. During the past few years fats (and especially cholesterol and saturated fats) have come to be seen as the leading problem nutrient, the bad guy, in the American diet. There is a new respect for complex carbohydrates (especially whole grains), which used to be called "starches" and were considered fattening.

New, More Complex View of Oils and Fats Becomes Popular. High cholesterol levels are considered more dangerous than ever, but equally important are the various cholesterol-carrying proteins in the blood. Two kinds (low and very low density lipoproteins) promote cholesterol deposits in the blood, while high density lipoproteins (HDLs) cleanse the blood vessels of fatty deposits. Moreover, saturated fats are considered at least as much of a problem as cholesterol.

So-Called Antinutritional Factors in Soybeans are Increasingly Seen as Having Benefits as Well. Trypsin has been shown to help prevent cancer. Saponins help reduce serum cholesterol. Isoflavones have antioxidant activity that may suppress breast cancer. This indicates that we may need a new term to categorize these substances that offer both benefits and disadvantages.

The Link Between Diet and Health Continues to Grow Stronger, among both scientists and the general public.

Interest in Exercise and Health Still Strong. Several years ago some experts saw this trend waning, but it now seems to be rebounding. For example, there were 21,244 finishers in the New York Marathon (including 3,689 women). Compare this with 12,512 finishers (1,621 women) in 1980 and 55 finishers (no women) in 1970.

Books on Tofu. Since 1974, at least 60 books on tofu (having the term "tofu" in the title) have been published in North America and Europe. Peak publication years were 1981 and 1982. By language, 46 of the books were in English, 7 in French, 4 in German, and 1 each in Italian, Portuguese, and Swedish.

Inactivity of the Soyfoods Association of America now becoming a major constraint on growth of soyfoods in the USA, at a time when interest is at an all-time high. Leadership is needed.

Rise of Canola (Rapeseed) Oil. It looks as if soy oil may have another serious competitor (in addition to palm oil) in future years. Canola contains less saturated fat than any other popular vegetable oil. Only 6%, versus 9% for safflower oil and 15% for soy oil. Lard has 41%, palm oil 51%, and butterfat 66%.

5264. Annunziato, M.E.; Mahoney, R.R. 1987. Partial purification and characterization of alpha-galactosidase from *Aspergillus oryzae*. *J. of Food Biochemistry* 11(4):263-77. Dec. [26 ref]

• ***Summary:*** A crude extract of alpha-galactosidase was obtained by fermenting *Aspergillus oryzae* on wheat bran. It was purified 35 times by ethanol precipitation, gel filtration, and ion-exchange chromatography. The final preparation was free of protease activity but contained invertase activity. The pH and temperature optima were 4.0 and 60ºC respectively. Using this enzyme, more than 80% of the oligosaccharides in soymilk were hydrolyzed after 3 hours at 50ºC using 0.113 PNPG (p-nitrophenyl alpha-D-galactopyranoside) units per milliliter of soymilk. Address: Dep. of Food Science & Nutrition, Massachusetts Agric. Exp. Station, Univ. of Massachusetts, Amherst, MA 01003.

5265. *Dairy Foods.* 1987. Something new from the soybean: Tofu maker [Azumaya] hopes Stir Fruity will be the 'yogurt

of the future.' 88(13):27. Dec.
• ***Summary:*** Stir Fruity, a "tofu-based yogurt-like product," is made from a soymilk base in a proprietary process that Azumaya spent 4 years and $500,000 perfecting, explained marketing director Jill Mizono. Azumaya introduced Stir Fruity in February 1987 and quickly gained distribution in Safeway and Lucky supermarkets in northern California. Soon after introduction, however, shelflife problems forced Azumaya to pull the product from both chains. The problem was traced to Azumaya's recently installed clean room, and fixed. The product now is back to a 40-day shelflife. Production was never completely discontinued.

Azumaya is now selling Stir Fruity to foodservice operators in and outside of California and test marketing it at grocery stores throughout the USA. Customers give Stir Fruity high marks for its custard-like texture and non-beany taste; 75% of San Francisco area consumers who sampled Stir Fruity said they would buy it. Most soy-based yogurts, except Stir Fruity and Jofu, are targeted to the health-food market. Photos show Stir Fruity in packages (cups) and a parfait glass, surrounded by fruits. Address: Chicago, Illinois.

5266. deMan, L.; deMan, J.M.; Buzzell, R.I. 1987. Composition and properties of soymilk and tofu made from Ontario light hilum soybeans. *Canadian Institute of Food Science and Technology Journal* 20(5):363-67. Dec. [16 ref. Eng; fre]
• ***Summary:*** Soymilks made from 17 soybean cultivars grown in Ontario were analyzed for protein, oil, fiber, sugars and mineral content. Bean curd (tofu) was made from the soymilk using calcium sulfate as a coagulant. Hardness of the beans, soaked beans and tofu was measured by use of an Instron Universal Testing machine. All soybeans produced tofu of good texture. Address: 1. DeMan Food Technology Services Inc., Guelph, ONT, N1H 6B5, Canada; 2. Dep. of Food Science, Univ. of Guelph, Guelph, ONT, N1G 2W1; 3. Agriculture Canada, Research Station, Harrow, ONT, N0R 1G0, Canada.

5267. Golbitz, Peter. 1987. 1987 new product count: At least 217 new soyfood products for retail sale. *Soya Newsletter* (*Bar Harbor, Maine*). Nov/Dec. p. 3.
• ***Summary:*** Of the 217 new products, the leaders in the 8 product categories were Nondairy Frozen Desserts (50), Entrees (44), Beverages (35), Snacks/Desserts (35), Cheese Alternatives (19), Frozen Entrees (17), and Condiments (16). The leaders among the 8 primary soy ingredients were tofu (133), soymilk (32), textured soy protein (19), isolated soy protein (12), soynuts (10), tempeh (6) and miso (1). Tofu was the only primary soy ingredient used to make at least one product in all categories. A complete listing of these products broken down by primary soy ingredient and by category, and which also lists flavors, company name, city, and state, is available from Soya Newsletter for $25 (or $35 in Canada). Address: Soyatech, Bar Harbor, Maine.

5268. Hill, D. 1987. Australian College of Paediatrics policy statement on soy protein formula (letter). *Australian Paediatric Journal* 23(6):367-68. Dec. [4 ref]
• ***Summary:*** Contrary to the general impression conveyed by the Policy Statement, there is good evidence that casein hydrolysate preparations are also antigenic and allergenic. "Indeed data quoted from this laboratory by the Committee showed that 20% of the children with cow's milk allergy who were tried on casein hydrolysate preparations were intolerant to them, compared with nearly 50% of the children tried on soy formula with cow's milk allergy who became intolerant of the soy products." Address: Head, Allergy-Clinical Immunology Unit, Royal Children's Hospital, Parkville, Victoria 3052, Australia.

5269. Miskovsky, Anna; Stone, Martha B. 1987. Effects of processing on curd yield and nutrient composition of rapid hydration hydrothermal cooking and traditionally processed soymilk and soybean curd. *J. of Food Science* 52(6):1542-44. Nov/Dec. [20 ref]
• ***Summary:*** Soymilk processed by a modified "rapid hydration hydrothermal cooking" (RHHTC) method (developed by J.J. Hung, 1984) had higher thiamin and protein concentration than traditionally extracted soymilk. Traditional tofu had higher protein and fat and lower carbohydrate and ash concentration than RHHTC curd. Variation in amino acid composition occurred in soymilk and tofu varieties. RHHTC tofu had lower yields than traditional tofu. Address: 1. Henningsen Foods Inc., Omaha, Nebraska 68144; 2. Dep. of Foods & Nutrition, Kansas State Univ., Manhattan, Kansas 66506.

5270. Ralston Purina Company. 1987. Annual report to shareholders. St. Louis, Missouri. 32 p. 28 cm.
• ***Summary:*** Ralston Purina Company, founded in 1894, is the world's largest producer of dry dog and soft-moist cat foods. The company is the largest wholesale baker of fresh bakery products in the U.S. Sales for the year ended Sept. 30, 1987, totaled $5,868,000,000 compared to 1986 sales of $5,514,600,000. Net earnings for the year were $523,100,000 compared to 1986 earnings of $388,700,000. The sale of Purina Mills, Inc. in October 1986 resulting in an after-tax gain of $209.3 million. At Continental Baking Company, both bread and snack cake volume improved in fiscal 1987. Protein Technologies International achieved record volume sales in the U.S. and in most of its foreign markets.

Paul H. Hatfield, Corporate Vice President [Ralston Purina] and President, Protein Technologies International (PTI), reports that PTI achieved record sales and earnings in fiscal 1987 on solid volume gains in both U.S. and most foreign markets. Protein Technologies continued its

emphasis on the testing and development of new isolated soy protein product applications during the year, focusing primarily on new products for key food industry segments. The new Market Development Unit located in Memphis was fully utilized during the year. Capitalizing on the increased interest in reduced-calorie and high fiber products, Fibrim's use in bakery goods and packaged foods is expanding. One successful example of Fibrim's use is by Ralston's Continental Baking Company in its new Wonder Light reduced-calorie bread.

Divisions of the company include: Grocery Products, Branded Foods, Continental Baking Company, Eveready Battery Company, and Protein Technologies International. PTI is further divided into Dietary Protein Food Ingredients (PP-Series Isolated Soy Proteins, Dari-Pro Milk Replacers), Dietary Fiber Food Ingredients (Fibrim Soy Fiber), Dairy Food Systems Products (Specialty Animal Ingredients), Paper and Paperboard Coating Ingredients (Pro-Cote and Sp-Series Soy Polymers).

In October 1986, the company sold its domestic agricultural products business (Purina Mills). In Jan. 1985, the company sold its low-margin soybean processing operations. In October 1984, the company acquired Continental Baking Company for $475.0 million in cash. Sales of soy protein products in 1987 were $157.1 million, in 1986, $139.8 million, and in 1985, $126.4 million. Sales of soybean meal and oil in 1986 were $2.4 million and in 1985, $101.1 million.

Incorporation occurred on January 8, 1894 in Missouri. The current number of shareholders is 33,458, the number of employees in the U.S. is 37,366, and the number outside the U.S. is 20,932. Address: St. Louis, Missouri.

5271. *SoyaScan Notes.* 1987. New Trend: Growing legitimate concern over contaminated cow's milk and chicken. Salmonella and Listeria bacteria have caused food poisoning and many deaths (Overview). Dec. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** A database search conducted by Richard Rose on the contamination of milk and milk products reveals how widespread this problem is, and suggests how it could potentially have a major effect on the storage of fresh and pasteurized tofu. The following abbreviated bibliographies, first for Salmonella then for Listeria, lists title or title paraphrase, serial name, date, and pages for major publications

Salmonellosis caused by Salmonella bacteria. Science. 1984. Aug. 24. p. 833.

Linking drugs to the dinner table. Farm animals fed antibiotics may effect human meat consumers. Supermarket News. 1985. April 22. p. 12.

First death is tied directly to milk case (Salmonella in Jewel Food Stores dairy operation). American Medical News. 1985. June 7.

Families file suit over Salmonella outbreak; class action suit against Jewel Food Stores (Hillfarm Dairy) milk a possibility. Food Processing. 1985. June. p. 22.

The salmonella puzzle; largest food processing episode in U.S. history attributed to milk. Includes related articles on the salmonella bacterium and a proposed solution to contamination. FDA Consumer. 1986. Feb. p. 18.

Of microbes and milk; Probing America's worst salmonella outbreak. Science. 1986. Nov. 21. p. 964.

Drug resistant Salmonella in the United States: an epidemiologic perspective. U.S. News & World Report. 1987. March 9. p. 60.

Serving up Salmonella for dinner (increase of food poisoning). Wall Street Journal. 1987. July 20. p. 23 (West).

Chicken growers face leaner earnings as salmonella publicity takes its toll. Wall Street Journal. 1987. Sept. 17. p. 33 (West).

Stubborn bug: bid to rid chicken of salmonella proves daunting. FDA Consumer. 1987. Nov. p. 2.

Raw milk banned (for transmitting disease-causing bacteria such as Salmonella).

Listeriosis caused by the *Listeria monocytogenes* bacterium. Newsweek. 1985. June 24. p. 37.

California: a case of deadly cheese. Listeria contamination. Food Processing. 1985. Aug. p. 2. Food poisoning outbreak kills over 40 persons from listeriosis; listeria cases spotlight new hazards in dairy, deli and other refrigerated foods.

5272. **Product Name:** Fresh Soymilk [Natural, and Sweetened].
Manufacturer's Name: St. Ivel.
Manufacturer's Address: Britain.
Date of Introduction: 1987. December.
New Product–Documentation: *Journal of the American Oil Chemists' Society.* 1987. Dec. p. 1602.

5273. **Product Name:** [Soymilk with Okara Mixed In, Tofu with Okara Mixed In].
Foreign Name: Okara o mazete tônyû, Maiyuki.
Manufacturer's Name: World Foods. Affiliate of Chujitsu-ya.
Manufacturer's Address: Kabuki-cho 2-1-11, Shinjuku-ku, Tokyo, Japan. Phone: 03-209-2121.
Date of Introduction: 1987. December.
New Product–Documentation: Toyo Shinpo (Soyfoods News). Nov. 1. p. 1. Okara o mazeta tonyu [Soymilk with okara mixed in. World Foods, the affiliate company of Chujitsuya, received a patent for their production method in making health foods from raw materials]. Mr. Kichitomo Tagaki is president of Chujitsuya, and Mr. Hatsuo Suki is

president of World Foods, Hamura-cho, Tokyo, Japan. The patent is called "Shokubutsu seni shoka tonyu no seizo-ho" (Vegetable fiber enriched soymilk production method). The process works by creating high pressure (400-1000 kg per square cm) to break the soybeans into 50 micron diameter granules. They boil the soybean granules (karyu) to make soymilk. Then 100,000 volts of electricity is used force the protein in the soybeans to coagulate and to whiten the soymilk. Using this process, the manufacturer can get a milder tasting and more stable soymilk. This company already has a product, Maiyuki, which has okara in the tofu.

5274. **Product Name:** [IWA? Soy Flour (Plain, or Sweetened)].
Manufacturer's Name: Alpro Alimentos Proteinicos, S.A.
Manufacturer's Address: 16 de Septiembre #33 San Fco., Culhuacan, Coyoacan, D.F. 0420. Phone: 544-96-71.
Date of Introduction: 1987.
Ingredients: Azucar, harina de soya, cocoa.
How Stored: Shelf stable.
New Product–Documentation: Label transcriptions from Nicole Black. 198. Jan. 14. She found the products in a store in San Miguel de Allende, Guanajuato, Mexico. Label reads "Mixture of sugar, soy flour, and cocoa with flavor of chocolate."

5275. **Product Name:** [Sunsoy Soymilk Desserts].
Manufacturer's Name: Alpro N.V.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1987.
Wt/Vol., Packaging, Price: 500 cc or 1000 cc Tetra Brik Aseptic cartons.
How Stored: Shelf stable.
New Product–Documentation: Soya Bluebook. 1987. p. 98.

5276. **Product Name:** Soy Milk.
Manufacturer's Name: Associated Dairies International Ltd. Affiliate of The Dairy Farm Co., Ltd., Hong Kong.
Manufacturer's Address: 223 Wai Yip St., Kwun Tong, Kowloon, Hong Kong.
Date of Introduction: 1987.
New Product–Documentation: Soya Bluebook. 1987. p. 90.

5277. **Product Name:** Sweetened Soy Jelly Dessert.
Manufacturer's Name: Associated Dairies International Ltd. Affiliate of The Dairy Farm Co., Ltd., Hong Kong.
Manufacturer's Address: 223 Wai Yip St., Kwun Tong, Kowloon, Hong Kong.
Date of Introduction: 1987.
New Product–Documentation: Soya Bluebook. 1987. p. 100.

5278. **Product Name:** [Chocolate Soya Milk].
Manufacturer's Name: Biotrophes Ltd. (Renamed Biotrek S.A. by Dec. 1987).
Manufacturer's Address: 45 Alopekis St., Athens 10676, Greece. Phone: 301-724-9525.
Date of Introduction: 1987.
New Product–Documentation: Soya Bluebook. 1987. p. 90. Letter from John Lewis. 1987. Dec. He calls this chocolate milk with soya protein isolate. He began producing soyfoods in 1987. Soya Bluebook. 1991. p. 68. Biotrek S.A. company is now located at: 52 Pondou St., Athens 11527. Phone: 30/1/770-8625. John Lewis is president.

5279. **Product Name:** Tofu Carob Delite, and Tofu Chocolate Delite (Blended Puddings).
Manufacturer's Name: Bountiful Bean Plant.
Manufacturer's Address: 2049 1/2 Atwood Ave., Madison, WI 53704. Phone: 608-241-8700.
Date of Introduction: 1987.
Ingredients: Tofu, honey, soymilk, carob, water, vanilla, oil, lecithin, agar.
Wt/Vol., Packaging, Price: 5 oz.
How Stored: Refrigerated.
New Product–Documentation: Label. 1985. 2.75 by 1.5 inches. Self adhesive. Blue on white. "Low calorie. Non-Dairy."

Letter from Deborah Bachmann. 1991. Dec. 17. This product, a blended pudding, was made by Bountiful Bean and introduced in about 1986-87.

5280. Carter, Thomas E., Jr. 1987. Genetic alteration of seed size: Breeding strategies and market potential. In: Dolores Wilkinson, ed. 1987. Proceedings of the 17th Soybean Seed Research Conference 1987. See p. 33-45. [21 ref]
• ***Summary:*** Contents: Introduction. Soyfood market size. Soyfood market trends–short and long range. Premiums and acreage, the breeder's perspective. Breeding special varieties. Future breeding goals. Conclusions.

"The expanding soyfood markets in Japan and the U.S. have generated considerable interest among American soybean producers in recent years. More than 60% of the soybeans used in these markets are grown in the U.S."

"In survey results, 39 of 43 public breeders and 44 or 67 private breeders responded to questions regarding the breeding of specialty varieties. Twenty-four breeders reported that they are maintaining 36 separate projects for large- and small-seeded varieties (Table 3). Public and private breeders are represented equally in this effort with the majority of these projects underway in the Midwest. Eight public and eight private programs are developing varieties specifically for tofu while 13 public and 7 private programs are developing varieties for natto. One public breeder was interested in soy milk varieties but considered varieties for

tofu and soymilk as the same. One private and two public breeders are interested in large-seeded garden types for the fresh market in urban areas with large oriental populations. One public and one private breeder expressed interest in small-seeded varieties for sprouts. Soybean sprouts are primarily a Korean soyfood; and, Koreans buy U.S. soybeans for making sprouts in some years." Address: Research Geneticist, USDA-ARS, North Carolina State Univ., Raleigh, NC. Phone: 919-737-2734.

5281. **Product Name:** Western Isles Soy Milk.
Manufacturer's Name: Community Foods Ltd. (Importer). Made in Japan.
Manufacturer's Address: Micross, Brent Terrace, London NW2 1LT, England. Phone: 01-450-9411.
Date of Introduction: 1987.
Wt/Vol., Packaging, Price: 500 ml aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Simon Bailey. 1988. Natural Choice. Aug. 15. "Soya-Based Products." A photo shows the Label. Front panel contains a stylized illustration of a soybean plant. CSP form filled out by Simon Bailey. 1988. Sept. 28. Present label 20.11.87. Formerly sold under the Edensoy label.

5282. **Product Name:** [Therbal Soya (Powdered)].
Foreign Name: Therbal Soya (en polvo).
Manufacturer's Name: Empacadora Therbal.
Manufacturer's Address: Sona #70., Mexico. Phone: 530-65-89.
Date of Introduction: 1987.
Ingredients: Sugar, soy flour.
How Stored: Shelf stable.
New Product–Documentation: Label transcriptions from Nicole Black. 198. Jan. 14. She found the products in a store in San Miguel de Allende, Guanajuato, Mexico. Label reads "For preparing a drink with chocolate flavor."

5283. **Product Name:** [Soitex-E, Soitex-P, and Soitex IN60 {Soy Flour for Bakery and Meat Industries}; PTS {Textured Soy Flour}; Soitex-2095 and Soitex-2145 {Full-Fat Soy Flour for Replacing Milk and Eggs}].
Manufacturer's Name: Energe S.A. Affiliate of Nutrimental S.A.
Manufacturer's Address: BR 280, Km. 58, Guaramirim, Santa Catarina, 89258, Brazil.
Date of Introduction: 1987.
New Product–Documentation: Soya Bluebook. 1987. p. 75.

5284. **Product Name:** Tofu (Japanese Style), Firm Tofu (Chinese-Style), Atsu-Agé (Tofu Cutlets), Agé (Tofu Puffs), Soymilk, Tofu Pudding (Sweet).
Manufacturer's Name: Fuji Fresh Tofu Co.
Manufacturer's Address: 248 Jackson St., San Jose, CA 95112. Phone: 408-297-1666.
Date of Introduction: 1987.
How Stored: Refrigerated.
New Product–Documentation: Talk with Linda Lam, owner of Fuji Fresh Tofu. 1994. April 8. She purchased this company in about Oct. 1987. From the outset, she and her husband made the products shown above.

5285. **Product Name:** [Biodelis Plus {Soy Beverage}].
Foreign Name: Biodelis Plus.
Manufacturer's Name: Galactina Ltd.
Manufacturer's Address: Birkenwej 1-6, CH-3123 Belp, Switzerland.
Date of Introduction: 1987.
Ingredients: Soymilk (from whole soybeans), plus soy protein isolate.
New Product–Documentation: Letter from Peter Speck. 1988. March 11. "In 1983 we developed, in addition to the products for enteral tube feeding, flavored drinks, called Vita Drink, with a very similar composition. In 1987 this line was completed with a product line enriched with isolated soy protein: Biodelis Plus and Vita Drink Plus. In France our products are sold under the brand names Naga Sonda, Biodelis, and Biodelis Plus. The corresponding products in Switzerland are Naga Sonda, Vita Drink, and Vita Drink Plus. According to legal requirements, the vitamin and mineral composition of the French products differ slightly from those of the Swiss products."

5286. **Product Name:** [Vita Drink Plus {Soy Beverage}].
Foreign Name: Vita Drink Plus.
Manufacturer's Name: Galactina Ltd.
Manufacturer's Address: Birkenwej 1-6, CH-3123 Belp, Switzerland.
Date of Introduction: 1987.
New Product–Documentation: Letter from Peter Speck. 1988. March 11. "In 1983 we developed, in addition to the products for enteral tube feeding, flavored drinks, called Vita Drink, with a very similar composition. In 1987 this line was completed with a product line enriched with isolated soy protein: Biodelis Plus and Vita Drink Plus. According to legal requirements, the vitamin and mineral composition of the French products differ slightly from those of the Swiss products."

5287. **Product Name:** Hinoichi Soy Drink [Natural (Dairylike), Mocha, or Chocolate].
Manufacturer's Name: House Foods & Yamauchi, Inc.
Manufacturer's Address: 526 Stanford Ave., Los Angeles, CA 90013. Phone: 213-624-3615.

Date of Introduction: 1987.
Ingredients: Water, whole soybeans, barley malt, pearl barley, kombu (seaweed), sea salt.
Wt/Vol., Packaging, Price: 6 fluid oz (180 ml) foil retort pouch.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 6 fl. oz. Natural: Calories 120, protein 6 gm, carbohydrates 10 gm, fat 6 gm, sodium 100 mg, cholesterol 0. Percentages of U.S. RDA: Protein 10%, calcium 6%, iron 6%.
New Product–Documentation: Label. 1988. 4 inches by 6.25 inches. Foil pouch. Natural is blue, red, green, and white. Mocha and chocolate are brown, red, green, and white. Front panel shows a glass full of the product with a straw in it set in a bed of ice with a few green leaves behind.

5288. **Product Name:** [Soymilk].
Manufacturer's Name: Jin Jiang.
Manufacturer's Address: China.
Date of Introduction: 1987.
New Product–Documentation: Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Jin Jiang in China. It had a capacity of 2,500 liters/hour and began operation in 1987.

Letter from American Soybean Assoc., China. 1990. Sept. 13. Jin Jiang Foodstuff Factory has the third largest soymilk production capacity in China, 2,000 liters/hour.

5289. **Product Name:** [Emul {Soymilk Ice Cream} (Vanilla, Black currant [Cassis], Pineapple, Orange, Coffee, Chocolate, Kiwi Fruit, Green Tea {Matcha}, Apple, Rum Raisin, Passion Fruit, Coconut)].
Foreign Name: Emuuru.
Manufacturer's Name: K. Biological Science Laboratory Co., Ltd. (KBL).
Manufacturer's Address: 14 Sanno-cho, Shogo-in, Sakyo-ku, Kyoto, Japan. Phone: 075-751-0138.
Date of Introduction: 1987.
Ingredients: Incl. soymilk, safflower oil.
How Stored: Frozen.
Nutrition: Moisture 66.7%, non-fibrous carbohydrate 23.0%, fat 7.0%, protein 3.0%, Ash 0.3%. 160 calories per 100 gm.
New Product–Documentation: Brochure. 1987. EMUL rises from the Land of the Rising Sun. 4 p. Full color. "Not an Ice cream, Not a Sherbet. From Kyoto, the Ancient Capital of Japan, The Land of the Rising Sun, EMUL, A healthy dessert made from soya, attracts worldwide attention." The product is made using Takai soymilk equipment. This company also made Daizuetto soy ice cream announced in July 1985.

Soyfoods (ESFA). 1987. April. p. 28. The company was founded by Kyoto restaurateur, Kichizo Kaneda, who has applied for patents in Japan, the USA, and 5 other countries.

5290. **Product Name:** [Kibun Soy Milk].
Foreign Name: Kibun Tônyû.
Manufacturer's Name: Kibun Food Chemifa Co., Ltd.
Manufacturer's Address: 3-2-5 Shinbashi, Minato-ku, Tokyo 105, Japan.
Date of Introduction: 1987.
New Product–Documentation: Soya Bluebook. 1987. p. 90.

• ***Summary:*** Centrifugation procedures for olive oil production were modified to prepare soymilk and are described in detail. The dried (atomized) product contained 5% moisture, 40.9% protein and 25.4% fat. Address: Stazione Sperimentale per le Industria degli Oli e dei Grassi, Milan, Italy.

5292. Nanba, M.; Komaki, M.; Ichikawa, R.; Matsuda, N. 1987. [Growth of heat resistant sporeforming bacteria in soy milk]. *Kanzume Jiho* (*Canners' Journal*) 66(5):88-94. [14 ref. Jap]*
• ***Summary:*** These bacteria included *Bacillus* species and *Clostridium sporogenes*. Address: Japan.

5293. **Product Name:** [Nutana Soja Drink].
Foreign Name: Nutana Soja Drik.
Manufacturer's Name: Nutana (Distributor). Made in West Germany by DE-VAU-GE.
Manufacturer's Address: Ringstedvej 531, DK-4632 Bjaeverskov, Denmark.
Date of Introduction: 1987.
Ingredients: Water, soybeans, cane sugar (3%), salt (0.1%), natural aromas.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm: 53 calories, protein 3.6 gm, fat 2.1 gm, carbohydrate 4.9 gm.
New Product–Documentation: Label. 1987. Red and green on white. "Pure vegetarian."

5294. **Product Name:** [Baby Food, Rice Cereal, and Beverages with Full-Fat Soy Flour].
Manufacturer's Name: Nutrimex.
Manufacturer's Address: Mexico.
Date of Introduction: 1987.
Ingredients: Incl. wheat, soybeans.
New Product–Documentation: Soybean Update. 1987. April 27.

5295. **Product Name:** [Nuxo Soymilk (Honey & Malt, Cocoa, Unsweetened for Diabetics, Lightly Sweetened with Raw Cane Sugar)].
Foreign Name: Nuxo SojaDrink (Honig und Malz, Kakao, ungesuesst fuer Diabetiker, leicht gesuesst mit rohem Rohrzucker).
Manufacturer's Name: Nuxo-Werke Rothfritz + Co. KG. (Marketer). Made in Belgium by Alpro.
Manufacturer's Address: D-2000 Hamburg 54, West Germany.
Date of Introduction: 1987.
Ingredients: Honey & malt: Water, dehulled soybeans, honey, chicory syrup, malt, kombu (sea vegetable), sea salt, natural vanilla extract.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic cartons. Retails for DM 1.70 (1/90).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml.: Protein 3.4-3.8 gm, fat 1.9-2.3 gm (60% polyunsaturated, 14% saturated), usable carbohydrates 3.2-3.8 gm, calories 47, 50 mg sodium, 60 mg potassium, 15 mg calcium, 17 mg magnesium, 40 mg phosphorus, 0.4 mg iron.
New Product–Documentation: Color photos. Orange or blue, red, and green on white. Leaflet. 1988. Color. Nuxo SojaDrink.

Leaflet. 1989? Vitaquell Nuxo SojaDrink and SojaCrème. Green, red, and dark blue on white. In German.

Label sent by Anthony Marrese. 1990. Jan. Honey & Malt. 3.75 by 3.5 by 2.5 inches. Tetra Brik carton. Red and blue on green and white. "A protein source made purely from plants. Low in sodium. Free of cholesterol. Shake before using." Back panel states: "Nuxo SojaDrink is cholesterol free. Free of animal protein. Free of milk sugar (lactose). Low in purines." Neuform certification symbol.

Talk with Thomas Karas of Soyastern. 1990. March 14. Alpro makes this soymilk.

Letter from Bernd Drosihn. 1990. May 10. This company just markets tofu and soymilk products, they do not make any.

5296. **Product Name:** [Nuxo Soymilk Dessert (Vanilla, or Chocolate)].
Foreign Name: Nuxo SojaDessert (Vanille, or Schoko).
Manufacturer's Name: Nuxo-Werke Rothfritz + Co. KG. (Marketer).
Manufacturer's Address: D-2000 Hamburg 54, West Germany.
Date of Introduction: 1987.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet. 1988. Color. Nuxo SojaDrink.

Letter from Bernd Drosihn. 1990. May 10. This company just markets tofu and soymilk products, they do not make any.

5297. Rausing, H. Assignor to Tetra Pak International AB. 1987. A method and apparatus for the heat treatment of liquid. *UK Patent Application* GB 2,181,938 A. *
• ***Summary:*** Describes cost-effective UHT treatment equipment for use with soymilk, cow's milk, fruit juices, or mineral water. Address: Tetra Pak International, Sweden.

5298. **Product Name:** [Soy Drink].
Foreign Name: Soja-Getraenk.
Manufacturer's Name: Schwartzbrot (Importer). Made in Japan. Exported by Muso.
Manufacturer's Address: Klaus Griesbach, 2000 Hamburg 50, West Germany. Phone: 040–39 31 34.
Date of Introduction: 1987.
Ingredients: Water, soybeans*, dehulled job's tears or pearl barley (hatomugi, Semen coicis), kombu (Laminaria sp., a sea vegetable), barley malt extract. Organically grown.
Wt/Vol., Packaging, Price: 1 liter.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label. Send by Anthony Marrese. 1989. Jan. Black, green, and red on white. "Natural foods from Japan (Naturkost aus Japan). Pasteurized. Can be stored without refrigeration. A refreshing, nutritious drink of mild sweetness. Purely of plant origin. Easily digestible. Also well suited for use in soups, sauces, and desserts of all types. Write the importer or Muso for a free booklet containing recipes and a description of all our products." Marrese adds: This is Bonsoy imported to Germany.

Talk with Yuko Okada of Muso. 1992. July 16. Muso started exporting Bonsoy soymilk to this company in about 1987.

5299. **Product Name:** [Soymilk].
Foreign Name: Le Soja-Milk.
Manufacturer's Name: Sojalpe.
Manufacturer's Address: Saint Quentin sur Isère, 38210 Tullins, France. Phone: 76.93.60.21.
Date of Introduction: 1987.
Ingredients: Soybeans, water.
Wt/Vol., Packaging, Price: 500 ml sachet.
How Stored: Refrigerated. At 4ºC.
New Product–Documentation: Manufacturer's brochure. 1987? In French. "Le Soja-Milk: Un milk végétal léger, léger, léger..." Soymilk: A vegetable milk that is light, light, light. The joy of eating... without putting on the kilos. The company logo is a steepled building with 5 soy-shaped leaves growing out of the steeple, set in front of towering mountains. A photo on the front shows this soymilk served over a bowl of cereal for breakfast–not in a glass to drink. It is suggested that it can be used as is, or mixed with cow's milk. At the top is an illustration (line drawing) of a laughing

male chef in a white top hat.

5300. **Product Name:** Thick Soya Milk, Soybean Residue [Okara], Soya Cutlets (Made from Residue), Soya Curry.
Manufacturer's Name: Soya House (U.N. Gunesekara and Co.).
Manufacturer's Address: 128, Kitulwatte Road, Off Elvitigala Mawatham Colombo 8, Sri Lanka. Phone: 597759.
Date of Introduction: 1987.
Ingredients: See below.
New Product–Documentation: Form filled out by Jane Gleason. 1988. She visited the shop in Colombo on 14 March 1988. These products are sold only on by special order. Thick Soy Milk retails for Rs. 15/kg to Colombo hospital. Residue (okara) for Rs. 5/kg. Soya Cutlets (made from okara) for Rs. 2/50 each. Soya Curry for Rs. 50/- per package contains 500 gm tofu, vegetables, oil, and spices.

5301. **Product Name:** [Spraylac {Powdered Soymilk, or Okara Full-Fat Soy Flour}].
Manufacturer's Name: Spraylac S.R.L.
Manufacturer's Address: Main Office: Av. Aristobulo del Valle 7090, 3000 Santa Fe, Argentina. Plant at San Jeronimo del Sauce.
Date of Introduction: 1987.
New Product–Documentation: Soya Bluebook. 1987. p. 74, 89. This seems to be dried okara, which has been finely ground and sold as a high-fiber soy flour or beverage powder.

5302. STS–Soya Technology Systems Ltd. 1987. [Questionnaire]. 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 8 p. [Chi]
• ***Summary:*** Asks potential clients many questions to aid in developing a turnkey soymilk plant to suit their needs. Address: Singapore.

5303. Sun Youth Machinery Co., Ltd. 1987. Equipments for soymilk, bean curd, and dried bean curd. Factory: No. 6, Lane 229, Hwa Chen Rd., Hsin Juang Taipei Hsien, Taiwan. 15 p. Manufacturer's catalog. Undated. [Eng; Chi]
• ***Summary:*** The many pieces of modern equipment look quite similar to those made by Takai in Japan. This "dried bean curd" is probably the Chinese "doufugan," a very firm tofu which is not dried. Address: Taipei, Taiwan. Phone: 02-9931-1826-8.

5304. Takao, S.; Nakashima, H.S.; Tokumoto, M.; Saitoh, M.; Watanabe, M. Assignors to Terumo Corp. 1987. Treated soybean with reduced phosphorus and potassium levels, process for preparing the same, and processed soybean foods obtained therewith. *European Patent Application* 0,234,998 A1. Corresponds to Japanese Patent 86-13681. [Eng]*
• ***Summary:*** Soybean products with reduced levels of phosphorus and potassium. Suitable for use in the treatment of renal disease are described. They include soymilk, puffed foods, tofu and cake mix. The phosphorus and potassium components of the soybeans are reduced by soaking the beans in a solution at pH 3.0-6.5, and then washing them at pH 5.0-9.0. Address: Terumo, Tokyo 151, Japan.

5305. **Product Name:** [Tofu in Sauces (Bolognese Sauce, Curry Sauce, Paprika-Cream Sauce)].
Foreign Name: Tofu in Bolognese-Sosse, in Curry Sosse, in Paprika-Rahmsosse (im Becher).
Manufacturer's Name: Tofukost-Werk TKW GmbH.
Manufacturer's Address: Siemensweg 1, D-4724 Wadersloh-Diestedde, West Germany. Phone: 02520-1300.
Date of Introduction: 1987.
Ingredients: Paprika-Cream: Tofu, water, flour, soymilk, onions, vegetable oil, seasonings, corn, cucumbers.
Wt/Vol., Packaging, Price: 250 gm transparent plastic tubs with aluminum foil lid (about 150 gm tofu and 100 gm sauce). 12 tubs per 3 kg case.
How Stored: Refrigerated, 42 day shelf life at 8ºC.
Nutrition: Paprika-Cream: Protein 6.9%, water 82.8%, fat 4.8%, pH 5.4, ash 1.9%, carbohydrate 2.6%, energy 81.8 calories/100 gm.
New Product–Documentation: TKW color catalog. 1988. April. Color photo of products shows each Label. Red, black, yellow, and white.

5306. **Product Name:** [Cerevap].
Foreign Name: Cerevap.
Manufacturer's Name: Victoria Associated Products.
Manufacturer's Address: P.O. Box 472, Kinshasha 1, Zaire.
Date of Introduction: 1987.
Ingredients: Incl. wheat flour, white corn, soybeans.
Wt/Vol., Packaging, Price: Aluminum foil pouch.
How Stored: Shelf stable.
New Product–Documentation: K.E. Weingartner et al. 1987. FAO Food and Nutrition 13(2):24. Cerevap, made by Victoria Associated Products or VAP (Kinshasa, Zaire), is one of the two largest selling soy-based infant baby foods in sub-Saharan Africa. It contains an indigenous soy/maize blend to which minerals and vitamins have been added. It is well-packaged, in a foil pouch. The price is not low, because of the high cost of the container. This product is marketed as a food for middle-income Africans rather than as a second-class food suitable only for the very poor.

Weingartner. 1987. Processing, Nutrition and Utilization of Soybeans. p. 171. A photo shows the product Label, with an African mother and baby. "Baby health. Food for baby."

LEC Newsletter. 1988. July. p. 2. Victoria Associated Products in Kinshasha, Zaire, currently manufactures a weaning food named CEREVAP for young children that consists of a formula of corn, wheat, soybean plus other

minor ingredients. The cereal ingredients are mixed, forming a cookie that is baked, followed by grinding. More information can be obtained from Mr. Robert Gillyns, Director of R&D, Victoria Associated Products, BP 472, Kinshasha 1, Zaire.

5307. **Product Name:** Yaupon Soymilk.
Manufacturer's Name: Yaupon Soyfoods.
Manufacturer's Address: 226 East Austin St., Elgin, TX 78621. Phone: 512-285-3810.
Date of Introduction: 1987.
Ingredients: Water, organically grown soybeans.
Wt/Vol., Packaging, Price: 16 fluid oz.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Chico Wagner. 1989. June 20. 2 by 3.25 inches. Green, blue, and white on brown. Self adhesive. The product was launched in about 1987.

5308. Ali Sheikh, I.; Aslam, M.; Arshad, M.; Fehmida Jalil, -. 1987. Preparation of a post diarrhoeal food for infants and its biological and clinical evaluation. *Pakistan J. of Scientific and Industrial Research* 30(6):457-60. June. [11 ref. Eng]*
• ***Summary:*** A post-diarrheal food formulation based on a blend of rice, soymilk and moong pulse and fortified with essential vitamins and potassium salt was prepared. Chemical and biological evaluation showed that it is of high nutritive value. It is a good source of proteins (19.5%). Net Protein Utilization, Protein Efficiency Ratio, net dietary protein calorie % and digestibility were 57, 2.4, 11.6 and 92% respectively. Clinical evaluation showed that it is a satisfactory product for feeding babies during and after diarrhea. All babies fed on the formulation showed great improvement and recovered from diarrhea within a few days. Address: PCSIR Lab., Lahore-16, Pakistan.

5309. Dinshah, Freya. 1987. The vegan kitchen. 11th ed. Malaga, New Jersey: The American Vegan Society. 64 p. Illust. Recipe index. 28 cm. Spiral bound.
• ***Summary:*** The rear cover notes of this 11th edition: "Greatly enlarged and newly illustrated: Over 200 delightful recipes... all animal free! No flesh, fish, fowl, animal milk or dairy products, eggs, honey, gelatin, or other food of animal origin; no sugar or white flour." With this edition, an out-of-print cookbook by Freya titled *More Vegan Recipes* was inserted as an appendix in the back. This increased the size of the book by about one-third. The books advocates a raw food diet and food combining (following natural hygiene and Dr. Shelton). Contains many black and white photos.

In part I of this 11th edition, soy-related recipes are the same and on the same pages as in the 9th edition. Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey. Phone: 609-694-2887.

Co-published in 1987 by Prism Press, 2 South Street, Bridport, Dorset DT6 3NQ, England. Distributed in the USA by Avery Publishing Group. 127 p. No index. 22 cm. [21 ref]
• ***Summary:*** Contents: Introduction, Nutrition & Soyfoods, Ingredients & Techniques, Glossary, Appetizers & Dips, Marinades & Accompaniments, Soups, Soup Noodles, Main Courses, Salads & Dressings, Desserts, Bibliography. A cookbook containing very little information about soyfoods in Australia. The author was born in 1949. Address: Australia.

5311. *Food Focus* (*Alfa-Laval, Sweden*). 1987. CAC purchases Alfa-Laval soymilk plant. No. 3. p. 10-11.
• ***Summary:*** "For the first time a European cereal growers' association has ventured into soy processing and invested in its own soy plant. Cooperatives Agricoles de Céréales (CAC), a French cooperative of 3,000 farmers, has pioneered in this field by building the first automated factory for the industrial production of liquid soy base in France. For several months now, the plant, situated in Issenheim near Colmar in Eastern France, has been producing the soy base used for high-quality flavoured soy drinks and desserts. Alfa-Laval has supplied the complete processing line."

In the process, the "beans are cleaned without using water, ground with hot water, separated in a centrifugal separator to remove fibre residue, and treated for deactivation of the trypsin inhibitor.

"The capacity of the processing line is 1,500 liters/hour. The complete line, which includes cleaning-in-place, is regulated by a control system based on a microprocessor. This makes the installation the first fully automated soy production plant in the world.

"The plant produces three flavours of soy drinks, natural, vanilla and chocolate and two desserts in vanilla and chocolate flavours. The brand name of the products is 'Bioforme'."

Color photos show the soymilk equipment in the plant, and a line of 5 Bioforme Tetra Brik Aseptic products. The three drinks are called Bioforme Soja à Boire, and the two desserts are called Bioforme Soja en Dessert.

5312. Gentle World, Inc. 1987. The cookbook for people who love animals. 4th ed. P.O. Box 1418, Umatilla, FL 32784. 192 p. Introduction by Michael A. Klaper, M.D. Index. 26 cm. The first edition was copyrighted in 1981. The fifth edition (192 p.) was copyrighted in 1989.
• ***Summary:*** A good collection of over 300 vegan recipes, which are straightforward, appetizing, and nutritious. Special section includes recipes for cat and dog food. Contains 15 tofu recipes (including a non-fermented tofu yogurt, p. 13), plus several each using miso, soymilk, whole dry soybeans,

and okara. The book contains many nice quotes about vegetarianism and veganism.

The cover of the 1986 ed. and of the fifth edition (copyrighted 1989) is red, orange, and green on yellow. The top of the cover states: "Over 300 totally vegetarian recipes, from beginner to gourmet. No meat–No eggs–No dairy–No sugar or honey–No cholesterol." At the bottom is a field of red and yellow flowers.

Page 12 contains a recipe for Nut Milk using ¼ cup nut butter (peanut butter, cashew butter, almond butter, sesame tahini butter, or sunflower seed butter) and 1 cup water. Address: Umatilla, Florida.

5313. Harland, Barbara F.; Oberleas, Donald. 1987. Phytate in foods. *World Review of Nutrition and Dietetics* 52:235-59. [62* ref]
• ***Summary:*** Mature soybean seeds contain up to 2.58% wt/wt of phytic acid, whereas various soy-based compounds contain much smaller amounts. For example various meat analogs contain from 0.12% to 1.63% wt/wt, soy-based infant formula contains 0.062%, soy flour (Ralston Purina) contains 1.52%, soy protein isolate (Ralston Purina) contains 1.34%, and textured soy protein concentrate (Patti Pro, made by General Mills) contains 1.50% wt/wt of phytic acid. Address: 1. Div. of Nutrition, Food, and Drug Administration, Washington, DC; 2. Dep. of Nutrition and Food Science, Univ. of Kentucky, Lexington, KY.

5314. INTSOY. 1987. Home and village soyfood preparation (Leaflet). Champaign, Illinois. 3 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** Contents: Overcoming protein deficiencies. INTSOY basic processing concepts. A practical approach. Products and processes: Soy flour, tofu, tempeh, soy milk, roasted and fried soybeans [soynuts], curries, sweets. Record of achievement (in Sri Lanka, incl. training more than 20,000 people). Address: International Soybean Program, Univ. of Illinois at Urbana, 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, Illinois 61801. Phone: 217-333-6422.

5315. Khadka, Bed B. 1987. Coarse grains and pulses in Nepal: Role and prospects. *CGPRT* No. 6. 35 p. [47 ref]
• ***Summary:*** Production and yield of major grain legumes in Nepal in 1983 was: Grasspea (18,700 tonnes; 380 kg/ha), lentil (17,000; 382), chickpea (13,100; 381); soybean (10,100; 548), horsegram (7,900; 381). Note that soybean is by far the highest yielding.

"Soybean cultivation, formerly limited to the mid-hills, is now extending to inner and outer tarai. In the hills and valleys soybean is cultivated in association with or intercropped with maize. Mono-cropped soybean is grown only in small areas, and sometimes it is grown on paddy bunds. Soybean is a popular leguminous food in the hills, where roasted soybean is taken along with puffed maize as a morning or midday snack. Green pods are boiled and the seeds are eaten as such, or fried or made into curry. Some soybean is used for its oil, and the cakes are then used in feeds. In recent years, small industries have been set up to convert soybean into soymilk, soybean curd [tofu], and other products." Research has been carried out in collaboration with INTSOY, IITA, AVRDC and other agencies. Address: Nepal.

5316. Khokan, K.I.; Horlings, George. 1987. Soybean production and utilization in Bangladesh. Dhaka [Dacca], Bangladesh: Mennonite Central Committee. 55 p. No index. 28 cm. [36 ref]
• ***Summary:*** Contents: Part I: Production. Introduction: History, Soybeans in Bangladesh. Soybean plant parts and growth. Climatic requirements. Selecting land and soil types. Cropping pattern: Rabi season, kharif season. Cultivation procedures: Varieties (Bragg, Pb-1), planting date, land preparation, fertilizer, inoculant preparation, planting method, weed control, irrigation, harvesting, threshing and drying, storage for food purposes. Diseases. Insects. Seed production. Seed storage. Seed testing.

Part II: Utilization. Nutritional quality: Protein, oil, undesirable factors, rules for soyfood preparation. Oil expelling. Traditional foods from soybeans. Appendix I: Recipes with soybeans (Soyflour, roasted soybeans, soy satu {with rice and sugar}, soya khichuri {with rice, vegetables, and spices}, soya sweet pumpkin curry, soya potato curry, soya shak {any green leafy vegetable}, soya chatni, soya dhal, soya tok {sour} dhal, peaju, soya patora, soya halua, soya bapa pita, soya milk, soya yogurt). Appendix II: Soybean troubleshooting. Planting to emergence. Emergence to flowering. Flowering to maturity.

"Soybeans were first introduced into Bangladesh in 1942. In 1960 three varieties were selected for kharif season production. These varieties were later found to be susceptible to yellow mosaic virus In 1972-73 MCC began research and extension work on soybeans, primarily as a rabi season crop. In 1975 the Bangladesh Coordinated Soybean Research Project (BCSRP) began research on soybeans. This project involved the Bangladesh Agriculture Research Institute (BARI), Bangladesh Agricultural University (BAU), Bangladesh Council of Scientific and Industrial Research (BCSIR), several other governmental institutions, Shilpee Food Products and the Mennonite Central Committee (MCC). In 1981 the BCSRP was discontinued. The two main problems were felt to be: difficulty in producing high quality seed and the lack of oil extracting equipment. Much research has been done throughout Bangladesh which resulted in the release of Bragg and Davis varieties for extension." Address: Mennonite Central Committee, Dhaka, Bangladesh.

5317. Lundblad, Birgitta. 1987. Soy–The world's biggest protein reserve. *Food Focus* (*Alfa-Laval, Sweden*) No. 2. p.

14-15.

• ***Summary:*** Color photos show: (1) Several Tetra Brik cartons of soymilk made in China. (2) The soymilk plant in the Guangdong Cannery in Canton. Up until the 1960s there the major problem with soymilk was its unpleasant "beany" smell and taste. During the 1960s researchers at Cornell University "managed to control the enzyme activation by hot grinding of the beans. Alfa-Laval came up with a commercial solution on the basis of these findings in the 1970s. But it was found that the primary soaking stage was the cause of tangible loss of flavour.

"The next achievement in this field was made at the University of Illinois where they eliminated the presoaking of the beans and instead boiled them directly to kill the enzyme [lipoxygenase].

"The bean flavour was gone alright, but since the fibre residue was not removed, the product resembled porridge in consistency, which the market would never swallow. On the other hand this fibre problem was solved by the Japanese, who included a decanter centrifuge in the process. This was an important step forward which resulted in increased sales of soy milk in Japan by 85% a year for seven years.

"The drawback of this production method was that half of the protein was lost in the process. Evidently, it was not a solution that most of the world could afford.

"Combined the advantages: In 1982 Alfa-Laval introduced a soy milk production process that combined all the advantages of earlier achievements. The process has a simple technology and is very economical because of a high extraction efficiency.

"In the process, soybeans are cleaned without the use of water and then ground with hot water to make a slurry. After centrifugal separation of the slurry to remove fibre residue, the clarified soy base that has been extracted is passed on to deactivation of residual enzymes and trypsin inhibitor, followed by deodorization.

"Now the soy base is ready for processing into different kinds of soy products. In the blending section, sugar, fat, flavouring, colouring, etc. can be added to give the product its character and final composition. After UHT treatment, which includes homogenization, the product is finally packaged, ready for distribution. To date Alfa-Laval has signed contracts for more than ten soy base lines in Asia, Europe, Africa and South America. Most of these plants are already in operation or under construction.

"Back where it started–in China: Guangdong Cannery in Guangzhou (Canton) in the Peoples' Republic of China is a big production plant for different kinds of beverages. Their output includes ready-to-drink juices of kiwi, guava, orange and sugar cane concentrate and a chrysanthemum tea...

"Today this plant also produces approx. 20,000 liters per day of high quality, plain and flavoured soy milk. In fact, Guangdong Cannery was the first in the world to install Alfa-Laval's new soy milk line... The soy plant is now working at full speed in two shifts, normally 6 days a week."

5318. Nichterlein, Karin. 1987. Huelsenfruechte [Legumes]. Bonn, Germany: AID (Auswertungs- und Informationsdienst fuer Ernaehrung, Landwirtschaft und Forsten). 20 p. Illust. 21 cm. [10 ref. Ger]

• ***Summary:*** The section on soybeans (p. 14-16) discusses soya oil, lecithin, soybean meal, soy protein concentrates, soya bread, low-fat soy flour, Sojamark (Soya meat), TVP, soya milk, tofu, soy sauce (shoyu, tamari), miso, tempeh, sufu (fermented tofu), natto, and soy sprouts. Address: Institut fuer Pflanzenbau und Pflanzenzuechtung I, Giessen, Germany.

5319. Passmore, Jacki. 1987. Asia: The beautiful cookbook. Los Angeles, California: Knapp Press. 256 p. Illust. (color). Index. 37 cm.

• ***Summary:*** This is a stunningly beautiful, oversized book–a feast for the eyes, filled with elegant color photos (many full page), authentic recipes and many insights about Asian cookery. Each recipe is accompanied by one or more photos, Contents: Japan: Simplicity and elegance. Korea: Warm and sustaining. China: From the beginning of time. Philippines: East meets West. Thailand: Titillating, tantalizing. Laos and Kampuchea: Unforgettable foods. Vietnam: Herbaceous overtones. Singapore and Malaysia: A blending of cultures. India: Southern fire, northern serenity. Burma: Exotic offerings. Indonesia: Symphony of flavors. Sri Lanka: Gems from an enchanted isle. Glossary. Acknowledgments.

Japan: Yudofu (Simmered bean curd, with 3 cakes tofu {bean curd}, p. 31). Tofu dengaku (Grilled bean curd on skewers, with 2 lb {1 kg} momen tofu and white miso, p. 31). Ton-negu no teriyaki (Teriyaki pork rolls, p. 38). Miso-shiru (Miso-flavored soup with bean curd).

Singapore and Malaysia: Popiah (with ¼ cup (about 2 oz / 60 gm) compressed bean curd cake, shredded, p. 155, 148-49). Tempe lemak (Tempe in coconut milk, p. 166). Hokkien mie (Hokkien style noodles, with 2 cakes compressed bean curd, p. 168). Laksa ayam (Chicken with laksa noodles in coconut sauce, with 2 squares / cakes compressed bean curd, p. 169).

Indonesia: Kecap manis is a sweetish soy and chili sauce (p. 218). Babi kecap (Pork in sweet soy sauce, p. 227).

Glossary (p. 252-54) includes short definitions of: Azuki beans. Bean curd. Bean pastes and sauces. Kecap manis ("based on dark soy sauce, sugar and spices"). Kombu. Nori. Paneer (India). Sesam. Wakame.

5320. Popham, Peter. 1987. The insider's guide to [south] Korea. Edison, New Jersey: Hunter Publishing. 199 p. See p. 60. Illust. (color photos by Alain Evrard). Maps. Index. 23 cm. [9* ref]

• ***Summary:*** The 1988 Summer Olympics in Seoul introduced Korea to the modern world in a big, new way.

This book was written for that event.

The chapter titled "Korean cuisine" (p. 58+) explains that it is the least known of the culinary traditions of Asia, and offers strong evidence of the nation's distinctiveness, which shows clear Mongol influence. Like the Chinese and Japanese, the Koreans also eat "soy beans and bean curd" [tofu], and bean sprouts [soy sprouts are more popular than mung bean sprouts]. The undisputed mark of Korean cuisine is kimch'i [kimchi], most of which is still made by fermentation at home of a vegetable (such as cabbage), always with chili and garlic; there are many different types of kimch'i, the most popular of which are cabbage stuffed with oysters, sliced cucumbers with radish and ginger, diced daikon radish with scallions, and white radish sticks floating in brine. Other favorite Korean seasonings, besides garlic and chili, are scallions, ginger, sesame oil, sesame seeds, and soy sauce.

Pages 60-62: "There is also a whole range of fermented pastes and sauces for dipping, called *chang.* Every home and restaurant has its own recipe for *chang,* and each batch comes out differently. Based on a fermented mash of soybeans, the three most common varieties are *"kan chang,* a dark liquid, like soy sauce, *daen chang,* a thick, pungent paste, and *kochu chang,* a fiery version laced with chilies."

Note: This is the earliest English-language document seen (April 2012) that uses the term *kan jang* to refer to Korean soy sauce.

Side dishes, known as *panch'an,* accompany the main dish, rice, and add variety to the basic Korean meal. They include: *Tubu:* Soybean curd, tofu. *Manul changah-chee:* Green garlic pickled in soy sauce. *Don chun:* Beef and bean curd patties spiced with ginger.

Koreas love to make rich, thick stews, especially in winter. *"Chigae* is a special thick stew simmered in heavy clay crocks." Favorite Korean soups (*tang*) and stews include: *Maeun tang:* Rich soup of meat, fish, bean curd, zucchini and scallions. *Ten chang chigae:* Thick stew of meat, fish, bean curd, squash and chilies.

Simple "one-bowl" meals, especially popular as summer lunches, include: *Kong kookso:* Wheat noodles in fresh soy milk. *Udong* [Jap. udon]: Broad wheat noodles with onions, bean curd, egg and chili. *Kongnamul pap:* [Soy] bean sprouts, beef and cabbage served over rice.

A photo (p. 63) shows a man grinding food using a hand-turned stone mill (quern).

5321. Portrait photograph of K.S. Lo, founder of Vitasoy (Hong Kong). 1987.
• ***Summary:*** A great man and a visionary entrepreneur (see next page). Photo by Anthony Buckley and Constantine Limited, 81, Grosvenor Street, London W1X 9DE.

5322. Shurtleff, William; Aoyagi, Akiko. 1987. Soymilk industry and market: Updates from 1984 to 1987. Lafayette, California: Soyfoods Center. 17 + 59 p. Index. 28 cm. [165 ref]
• ***Summary:*** This 1987 update to the Soyfood Center's two-volume 1984 *Soymilk Industry and Market* has two parts: (1) Year in Reviewing, describing key events and trends each year from 1984 to 1986. (2) A bibliography of soymilk from January 1987 to late 1987, based on records in the SoyaScan database; at the end is a 10-page index. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

5323. Sonntag, Linda. 1987. The little tofu book. London: Judy Piatkus (Publishers) Ltd. 60 p. Illust. by Trevor Newton and Hanife Hassan. No index. 16 cm.
• ***Summary:*** Contents: What is tofu? Storing tofu. What to do with tofu. Tofu recipes. Dips and spreads. Tofu, the wonder health food. The food for the future. Tofu slimmers. Making your own tofu. The bonuses of making tofu: Go, okara, soya bean milk, yuba, whey. Tofu in Japan. Tofu in Indonesia. Tofu in China. Miso. Other titles in the series. Note: This book draws heavily on *The Book of Tofu* by Shurtleff and Aoyagi. Address: England.

5324. Toyo Plant. 1987. Tôfurui jidô seizô sôchi [Automatic production system of tofu (bean curd) products]. Toyo Plant Co. Ltd., 4-27-6 Matsue, Edogawa-ku, Tokyo 132, Japan. 4 p. English. 6 p. Japanese. Manufacturer's catalog. [Jap; Eng]
• ***Summary:*** The company was founded in 1967. This manufacturer's catalog describes the production systems for soy milk, momen tofu, abura age, filled silken tofu, silken cut tofu, and egg tofu. Address: Tokyo, Japan. Phone: 03-655-0111.

5325. Wang, Lianzheng. 1987. Soybeans–The miracle bean of China. In: Sylvan Wittwer, Yu Youtai, Sun Han, and Wang Lianzheng, eds. 1987. Feeding a Billion: Frontiers of Chinese Agriculture. East Lansing, Michigan: Michigan State University Press. 462 p. See p. 183-99. Chap. 14. [13 ref]
• ***Summary:*** A good overview of soybeans in Chinese agriculture today, and of early history in China. "World soybean acreage has doubled during the past twenty years. This represents a greater expansion than for any other major crop. Wang Jinling of the Northeastern Agricultural College at Harbin and others have studied the photoperiodic responses of wild soybeans from the northern part of the Heilongjiang Province to the southern part of Hunan Province. They found that, among the wild soybeans of the Yangzi River valley, there are typical short-day types of primitive characteristics. It was concluded that the Yangzi River valley of South China was the site of origin for the cultivated soybean. Soybeans with moderate short-day behavior, when moved from that region, were found suitable for North China. But the Yellow River valley also has a large number of wild and semi-wild soybeans of many types and

cultivars. Here the cultivated soybeans may have originated from the wild soybeans through selection. Lui Shilin has suggested that the cultivated soybean may have originated from many different places in China.

Soybeans were first called "shu," a word which appears repeatedly in the Shijing [The Book of Songs], which is one of the five Chinese classics dating from 1,100-771 B.C. The Chinese name for the soybean, dadou, first appeared in the book of Shen Nong from the third to fifth centuries B.C. In the "Xiao Ya" section of the Book of Songs it is mentioned that "... in Central China there was the soybean and farmers collected it." Another song, "Guofen" (1,000 B.C.) states that "in October, rice and soybeans are collected." A book by Zuo Zhuan (351 B.C.) reports that "the King of Zhou has a brother who was unable to tell soybeans from wheat." In the Mo Zi (400 B.C.) it is stated that, "relating to farming and forestry, if soybeans and millet were plentiful, the people had enough to eat."

Archaeological findings: In 1959, in Houma County, Shanxi Province, archaeologists unearthed soybean grains now found in the Natural Museum in Beijing. According to carbon-14 determinations, they are 2,300 years old [c.a. 300 B.C.]. The seed coats have a yellow color, and the weight of a hundred grains is about 20 gm. These are the earliest and oldest of archaeological soybean seed relics in the world.

Distribution of the cultivated soybean: During the Zhou Dynasty, the soybean was grown mainly in the Yellow River valley as a main food staple. It was reported that "people eat soybean grain and soybean leaf soup." During the Han Dynasty, in Central China, the people suffered one calamity after another. It was then that large numbers of peasants migrated to the northeast and carried soybeans with them, (see Book of Fan Senzhi, 100 B.C.). At that time, the area for soybean culture was 40% of all crops.

In Shandong, Henan and Hebei provinces, soybeans are used primarily as a staple food. Soybean flour (10-20%) is added to wheat flour and the flour of miscellaneous other crops for noodles, steamed bread and buns. In North China and the Liaoning Province, soybean flour is added to milk to produce a milk powder substitute. Heilongjiang and Jilin provinces are taking the initiative in transforming soybeans into a variety of meat analogs. In northeast and northern China, soybean oil is the most important cooking oil.

Soybeans for industrial uses: The soybean has many industrial uses in China. One of the most important is in the production of high grade industrial enamels. It is also used extensively in the manufacture of varnishes and alkyl resin paints, and in inks and stains, pharmaceuticals, oilcloth, linoleum, and synthetic rubber. Soybean protein is used in adhesives, paper coatings, water-thinned paints, plastics, printing inks, and textile fibers. The soybean is widely used in the production of lecithin, hormones, vitamins, furfural, bakelite, and monosodium glutamate.

Historically, soybeans, tea, and silk have been China's three largest agricultural exports. A moderate percentage (10-20%) of the soybeans produced in China are used directly as human food in the form of sprouts or immature beans in the pod and as many products derived directly from the beans. There has been a surplus of soybeans in recent years in China, and exports to the USSR and Japan have been increasing. Utilization of soybeans in China will vary with the province. In Heilongjiang, the leading producer with 30% of China's soybeans for 1984, 40% were exported to the USSR and Japan, 35% went for human consumption, 10% went for seed purposes, and 15% were exported to other provinces in China. In Jiangsu Province, 80% of the soybeans produced go directly for human consumption.

Note: This document contains the earliest date seen for an archaeological dating of soybeans in China or East Asia or the world.

5326. Weber, Marlis. 1987. The single vegetarian: Healthy recipes for one. Translated from the German by Linda Sonntag. Hammersmith, London, England: Thorsons–An imprint of HarperCollins Publishers. 144 p. Illust. by Juliet Breese. Index. 21 cm.

• ***Summary:*** This attractively illustrated and designed lacto-ovo-vegetarian wholefoods cookbook (first published in Germany in 1985 as *Vollwertkueche für 1 Person*) opens with a nice section on soya beans and tofu (p. 17). Contains more than 50 line drawings, used mostly to fill spaces that would otherwise be empty. Soy-related recipes include: Chicory and beansprouts in curried cream (with soya bean sprouts, p. 56). Soya bean hotpot (with cooked soya beans, p. 76). In the chapter titled "Milk, Quark and Tofu" (p. 121-24) we find recipes for: Tofu dessert. Savoury Tofu. and Tofu Burgers.

5327. Weingartner, Karl E.; Dashiell, K.E.; Nelson, A.I. 1987. Soybean utilization in Africa: making place for a new food. *Food and Nutrition* (*FAO*) 13(2):21-28.

• ***Summary:*** Contents: Introduction. Research into utilization. African governmental support. Commercial soy foods. Utilization in village homes. Soybean oil and animal feed.

"For the most part, the lack of attention to possible uses for soybeans has stemmed success of promotional efforts on the production side... Two international institutions are involved with soybean utilization in sub-Saharan Africa: the International Institute of Tropical Agriculture (IITA) at Ibadan, Nigeria, and the International Soybean Program (INTSOY) of the University of Illinois, Urbana, Illinois, USA. Research has focused particularly on problems at the small-holder and community level... In 1985, IITA started a programme to promote processing and utilization of soybeans. It has collaborated with INTSOY in the development of intermediate and home-level technology in the areas of oil technology, soy milk production and extrusion cooking." IITA has installed a dry extruder made

by Insta-Pro International (Des Moines, Iowa) and is testing it.

The major soybean producers in sub-Saharan Africa are Zimbabwe (80,000 tonnes/year in 1986/87), Nigeria (75,000), Zambia (35,000), and Zaire (30,000). "In Zaire, soybeans are mostly used at the home level. In Zambia and Zimbabwe, soybeans are processed into oil and animal feed. In Nigeria, they are used in home consumption and to a lesser extent as animal feed."

Some governments are actively supporting soybeans. Burkina Faso encourages soybean growing by buying them directly from farmers. Zimbabwe sets a preplanting price. Nigeria has developed a nationally coordinated approach to soybean research and production involving farm research institutions. The planning section in the Kenya Department of Agriculture has recommended that 128,000 hectares in Kenya are suitable for growing soybean as a second crop after maize.

"There are still very few networks on soybean utilization in sub-saharan Africa. In 1987, the Nigerian Soybean Association was founded. In 1986 the National Oilseed Development Company (Zambia) Ltd. was formed to assist small-scale production of soybean. The Commercial Oil Seed Producers Association is promoting utilization in Zimbabwe. The Catholic community in Zaire has set up a loose network of cottage industries.

In Africa, soymilk has great potential as a consumer product, although there are presently only a few soymilk factories in Africa: Vitalait is made in Burkina Faso and Soyapro in Kinshasa, Zaire. "Possibly the most popular soy food in sub-Saharan Africa is a beverage called Mahewu which is manufactured by Nutresco in Harare, Zimbabwe." It is made from soy and maize. Popular soy-based infant baby foods are Nutrend (made by Nestlé in Lagos, Nigeria) and Cerevap (made by Victoria Associated Products [VAP] in Kinshasa, Zaire). "There are several soy/maize breakfast cereals available but they are less popular than the soy-based infant food. They include Nutri-Plus Soy made by Nutresco, Nutrima-10 [Nutrimax-10] by Smallette Foods (Ilorin, Nigeria), and Country Morning by Nestlé (Lagos, Nigeria).

"Soy flour, biscuits and cookies are also popular. In Zaire, several cottage industries including the Bisoka Company (Kananga, Kasai Occidental) use different proportions of soy, wheat and sorghum flour to produce sweet cookies which are especially popular with school children. Soy flour also is a popular commercial item in Zaire. The Centre de Développement Intégral grows soybeans in Bwamanda and processes them in Kinshasa. In 1986 it produced about 450 tonnes of soybeans. Of this, about 50 per cent was made into full-fat soy flour. In Benin, the Centre Horticole et Nutritionnel makes Farine Bébé."

"The most widely consumed soy-based food at the rural level in West Africa is made using fermented whole soybean and is called 'dadawa' (in Hausa [northern Nigeria]), 'iru' (in Yoruba [southwest Nigeria]) or "soumbala' (in Dioula [also spelled Jula, Dyula and Joola, a Mande / Manding language spoken in Burkina Faso, Cote d'Ivoire & Mali]). Dadawa was traditionally made from locust bean seeds, which are becoming scarce and are being replaced by soybeans. Kafanchan, in Kaduna State of Nigeria, is the processing and marketing centre for dadawa. From there, it is transported by traders throughout Nigeria and to Cameroon, Chad, Niger, Benin and Togo. Millions of West Africans use a small amount of dadawa each day to add flavour to their stews (similar in taste to a beef concentrate or seasoning cube). Dadawa may also be prepared at home. People in remote areas of northern Ghana have been observed growing soybeans in their compound gardens specifically for dadawa production.

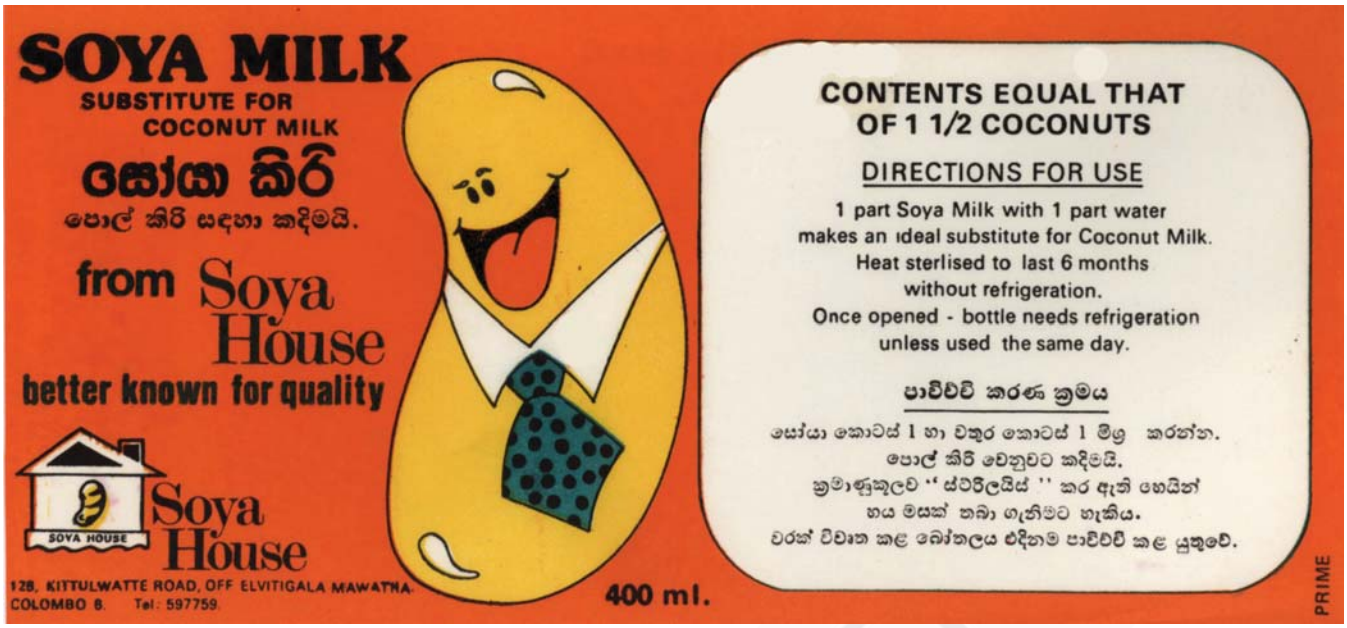
"Soybeans have been used as an aid to medicine in missionary hospitals since early in the 1960s. In Zaire, the Catholic community encourages production and utilization of soybeans. A doctor with the Presbyterian community near Kananga (Kasai Occidental, Zaire) asks mothers of malnourished children to buy soybean flour as a condition for medical treatment."

In Ghana, roasted soybeans are used in the home preparation of tuubani; they are ground, mixed with water to form a paste, then steamed inside a folded leaf. In Nigeria, dawadawa and soybean paste are added to egusi (vegetable soup), and ground soybeans are added to ogi. In Zaire, people make roasted soy flour, then add it to bouille or bidia (a thick porridge). In Zambia, soy flour is mixed with mealie meal to make *nsima*, or added to cooked green vegetables to make a relish.

"Approximately 40% of the edible oil consumed in Zimbabwe is from locally grown soybeans. The LINT Company of Zambia (LINTCO), a quasi-government group, is helping farmers with production and marketing of soybeans... A new soybean crushing plant in Makurdi, Nigeria, with a capacity of 72,000 tonnes/year is scheduled to open in early 1988." It should lead to increased demand for Nigerian-grown soybeans. Address: 1-2. IITA (International Inst. of Tropical Agriculture), PMP 5320, Ibadan, Nigeria; 3. Soybean Utilization Program Leader, INTSOY, Univ. of Illinois, Urbana, IL 61801.

5328. Weingartner, Karl E.; Dashiell, K.E.; Singh, S.R. 1987. Soybean utilization in Africa. *Tropical Grain Legume Bulletin* No. 34. p. 2-6. [5 ref]
• ***Summary:*** The content of this article is very similar to that of: Weingartner, Karl E.; Dashiell, K.E.; Nelson, A.I. 1987. "Soybean utilization in Africa: making place for a new food." *Food and Nutrition* (FAO) 13(2):21-28. Address: International Inst. of Tropical Agriculture (IITA), PMB 5320, Ibadan, Nigeria.

5329. Wynne, Dave; Javaheri, Fereidoon. comp. and ed.



1987. Soyabean cooking in Zambia. Republic of Zambia, Dept. of Agriculture. 48 p. 22 cm. 1st ed. 1985.
• ***Summary:*** Contents: Acknowledgements. Foreword. Nutritional information. 1. Basic recipes. 2. General use. 3. Urban use. 4. Specialty recipes. Publication of this book was fully by the Lint Company of Zambia (LINTCO). The Mennonite Central Committee and ZAMARE gave support. Many recipes were developed by Mrs. Barbara Wynne, Mr. Lee Holland, or Miss Mabuya; most of the rest came from the *More-with-Less Cookbook,* by Doris Janzen Longacre, and Favorite Recipes by the American Women's Club in Lusaka. Surveys carried out by the National Food and Nutrition Commission (NFNC) and published in Dec. 1980 found a high incidence of malnutrition in Zambia, particularly in children aged 0-4 years. Soybeans can help greatly to alleviate this problem.

Talk with Hea-Ran Lee Ashraf. Dave Wynne was a Mennonite Missionary, and Fred Javaheri was also a missionary but working for the Zambian government. Fred, an Iranian with Canadian citizenship, has a deep, long-term dedication to soybeans with great energy, enthusiasm, and a sound knowledge of his resources. Hea-Ran believes that without these two men, the soybean program in Zambia would not exist today. Their group now also publishes a quarterly periodical titled *Soybean Newsletter.* Address: 2. Soyabean Coordinator, Mt. Makulu Central Research Station, Chilanga, Zambia.

5330. Ace Canning Corporation Sdn. Bhd. 1987? Product brochure. Selangor, Malaysia. 6 looseleaf pages in a portfolio. Undated. 27 cm. Catalog. [Eng]
• ***Summary:*** Among the company's many products, the only soy product is Drinho Soya Bean Drink (soymilk), sold in a 250 ml aseptic carton. The company is a member of the Lam Soon Group. Address: P.O. Box 8, Jalan 205, 46050 Petaling Jaya, Selangor, Malaysia. Phone: 03-757-2755.

5331. Lam Soon. 1987? Lam Soon in Malaysia. Petaling Jaya, Malaysia. 31 p. Undated. 26 x 23 cm. Catalog. [Eng]
• ***Summary:*** This attractive color catalog presents Lam Soon, which has its headquarters and a huge factory complex in Petaling Jaya, just north of Kuala Lumpur, Malaysia. Lam Soon began in 1958 as Lam Soon Oil & Soap Manufacturing (M) Sdn. Bhd. with about 100 people, processing and selling vegetable oils for use in the local market. Today Lam Soon is a household name in consumer items, with advanced technology for making oil-based products plus Drinho Soya Bean Drink (*Minuman Kacang Soya*). The main oil processed is palm oil, but corn and soybeans oils are also used. Address: Petaling Jaya, Selangor, Malaysia.

5332. **Product Name:** Soya Milk.
Manufacturer's Name: Soya House (U.N. Gunesekara and Co.).
Manufacturer's Address: 128, Kitulwatte Road, Off Elvitigala Mawatham Colombo 8, Sri Lanka. Phone: 597759.
Date of Introduction: 1987?
Ingredients: Soybeans, water.
Wt/Vol., Packaging, Price: 400 ml bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label. 1988. 7.5 by 3.5 inches. Orange, yellow, black, green, and white. Cartoon of a big soybean with a necktie on looking at a soybean in a house. "Substitute for coconut milk. From Soya House better known for quality. Contents equals that of 1½ coconuts. Directions for use. 1 part Soy Milk with 1 part water makes an ideal substitute for coconut milk. Heat sterilised to last

6 months without refrigeration. Once opened–bottle needs refrigeration unless used same day." Letter from Jane Gleason who visited the shop on 14 March 1988: Production was stopped due to loss of access to bottle washing machine.

5333. **Product Name:** Vitalait (Soymilk).
Manufacturer's Name: Unknown.
Manufacturer's Address: Burkina Faso.
Date of Introduction: 1987?
Wt/Vol., Packaging, Price: Plastic bag.
How Stored: Refrigerated.
New Product–Documentation: K.E. Weingartner et al. 1987. FAO Food and Nutrition 13(2):24. "Vitalait, produced in Burkina Faso, is pasteurized, packed in a flexible plastic bag and requires refrigeration."

Note: This is the earliest known commercial soy product made in Burkina Faso.

5334. **Product Name:** Soyapro (Soymilk).
Manufacturer's Name: Unknown.
Manufacturer's Address: Kinshasa, Zaire.
Date of Introduction: 1987?
Wt/Vol., Packaging, Price: Glass bottle.
How Stored: Refrigerated.
New Product–Documentation: K.E. Weingartner et al. 1987. FAO Food and Nutrition 13(2):24. "Soyapro in Kinshasa, Zaire, makes a sterilized soy milk which is packaged in a glass bottle and sold by street-vendors and in the city's main department store. Market response has been favorable and the company is installing new equipment which will increase its product capacity to 2,000 liters/day by 1988."

5335. *World Neighbors in Action* (*Oklahoma City*). 1987?. Soybeans–The meat that grows on plants. 9(3E):1-8. Undated.
• ***Summary:*** This is a "Newsletter for Overseas Project Personnel." The topic of this entire newsletter is "Growing and cooking soybeans." Contents: Growing and cooking soybeans at home: Soybeans can provide protein for family, 1. Preparing the soil and planting seed (soil, seed inoculation, planting, alternate method of seed inoculation), 2. Cultivation (flowering and setting of pods, planting soybeans and maize together). 3. Harvesting and drying soybeans (threshing, preparing beans for storage). Cooking with soybeans: Making soy flour, making unleavened bread, preparing nutritious snacks. Corn or wheat porridge. Making soybean sprouts. Simple soy milk. Cooked dry beans. Address: 5116 North Portland Ave., Oklahoma City, OK 73112-2098.

5336. Brunthaler, Norbert. 1988. Re: Soyfoods made and sold by Sojvita. Letter to William Shurtleff at Soyfoods Center, Jan. 4. 1 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "Thank you for your letter of Dec. 10." He gives the year and month that his company started to make and sell the following products: Tofu, Tofu marinated and baked, Tempeh, Sojanaise, Tofuburger, Tempeh vacuum packed and stable, Tofu spread (4 kinds), Sojella (enriched soymilk), Soyoghurt with fruits, Natto.

"These are only our soy-products which we sell by ourselves or through distributors in Austria. (Furthermore we produce rice-wafers, seitan, gomasio {sic, gomashio, sesame salt}, mochi.) We cannot say, which company is the largest in Austria, but we have the most different kinds of soyproducts. Our next competitor is: Sojarei in Baden and a smaller one is Tofurei in Wels. Furthermore there is only one Tempeh-producer in Vienna who sells tempeh and different cookies. These are all soy-producers in Austria. We hope we could help you with this information. With best regards. N.S.: Red miso and barley miso is in development since 1984." Address: Sojvita Produktions GmbH, Hauptplatz 1, Lichtenwoerth, Austria. Phone: 02622 / 75494.

5337. Rose, Richard. 1988. The U.S. soyfoods industry and market today and tomorrow (Interview). Conducted by William Shurtleff of Soyfoods Center, Jan. 6. 4 p.
• ***Summary:*** "President of Rose International in Petaluma, California (and formerly of Brightsong Light Foods), Richard Rose began making tofu and soymilk products in 1978. His forte is product development and marketing, which is the focus of his present company. He has been responsible for the development of over 75 commercial soyfood products.

"Shurtleff: What do you see a the most important events and trends in the soyfoods market during 1987?

"Rose: First, the growth and marketing of Jofu, then the subsequent apparent leveling off or decline of sales or profits, although I am not sure of that. One source says that they have more demand for the product than they can handle. My understanding is that they were going to do a natural food Jofu and introduce it at the Natural Foods Expo at Philadelphia in October. Apparently it never happened; Tomsun didn't even have a booth at the Expo.

"That ties into the inability that I see of soy yogurts to take hold in both the mass market and the natural foods market. I think there are good reasons for that. The difference between ice creams and non-dairy frozen desserts is substantial. There's a large benefit for the consumer of non-dairy products. But that same range of difference does not exist between dairy and non-dairy yogurts. In fact, dairy yogurt is seen as a healthful food, low in cholesterol, fat, and often calories. So there is not as much benefit from eating the non-dairy product.

"Second, the continued domestication of production of aseptic soymilks by Westbrae, Great Eastern Sun, and Vitasoy.

"Third, the decline of sales and fortunes of Tofutti,

linked to the decline in sales of non-dairy soy frozen desserts in general. I think Bob Tepper leaving Farm Foods was important. He'd been with them for a long time and has had a lot to do with the great progress they have made over the past eight years. That is quite a story. Farm Foods did things right and they had good luck as well. I'm really happy for them.

"Fourth, the increase and proliferation of soy cheeses. Last year Cemac and Galaxy got into the market in a big way. Soymage was the first truly non-dairy soy-based cheese containing no casein. I think what is more significant is large companies that have no other interest in soyfoods or natural foods are entering the industry. Galaxy went public in about August of 1987. I think their stock started at 5 and last I saw it was 1O.25. They are very good at hype. They are to cheeses what Tofutti is to ice cream. I was watching some late night show on TV and their spokesperson Don King came out and began hyping Galaxy products (he had samples with him) against the insistence of the host! These larger companies see a new market and they go after it. But they really have no interest in or history with natural food or soyfoods. Its a problem for the industry and a potentially dangerous trend. If people are going to make money in this industry we need to make sure they do it fairly, without consumer deception, etc.

"Fifth, the increased legitimization of soyfoods in the mass market and in general. There is definitely growing interest. A few years tofu was snickered upon whereas now it's more likely to stimulate enquiry and interest. That probably has a lot to do with Tofutti and tofu being recognized for special diets. Likewise, a similar growth of interest in soyfoods internationally, especially in Europe and Australia.

"Shurtleff: What do you think when you read that in a poll of the most hated foods in the USA, tofu was at the top of the list.

"Rose: I suspect they are right. I think that 95% of the Caucasian population does not buy tofu even occasionally.

"Shurtleff: Which products launched during 1987 did you feel were the best quality?

"Rose: The Barat Bar is very good. In fact, I buy those, even though they are so darned expensive. You don't get a sugar rush, there is no dairy, and they taste good.

"The ToChip, those corn chips, were good but I don't think much has happened with it.

"There are more salad dressings out and they are getting better, and have better shelf life and packaging. Golden Soy and Nasoya come to mind first.

"Of the soy cheeses, I think they are all about the same in quality. I frankly consider them all a wash. I think the Soyco and the Cemac product are slightly better than the Soya Kaas. They all have casein. Our product FREE has no casein.

"Shurtleff: What major changes have taken place in our industry and market during the past ten years?

"Rose: I think we have begun to develop our own individual identity, separate from the earlier Asian influence. That includes American equipment, American products, supplies, and suppliers. Instead of silken tofu, doufu-gan, and age, we have developed non-dairy frozen desserts, puddings, and salads. There is a great breadth of uniquely American products. In fact, an Americanization of all aspects of the industry.

"Development of domestic processing equipment, such as Bean Machines has done, is an important trend.

"Shurtleff: What predictions would you make for the future.

"Rose: Growth in the use of aseptic tofu by consumers. Morinaga has a U.S. patent on the process of making tofu aseptically.

"More and better U.S. equipment, and the development of better processing methods.

"The use and recommendation of soyfoods in special diets by traditional groups like the AMA, dietitians, and perhaps even the government. I think eventually soyfoods (other than TVP) will be able to be used in government programs, such as school lunch programs. But that may take a while.

"I still see a breadth and depth of new products. In breadth, I think we'll see it in baked goods (brownies, cookies, muffins, breads) and confections (candies). Also refinement of current products. Many of the products that have been out for a while aren't that great; they still need more improvement. But because they have been around for a while, people are less likely to improve them. But I think we will see, because of competition, improvement in current products. New products will tend to be more fully developed.

"Big Food will be getting into soyfoods more, probably to use tofu's functionality. For example, replacing ricotta with tofu for nutrition and cost reasons. But up until now, I think its been too weird for them, and they are not sure how it relates to them and their mission. They are conservative and slow by nature. The market for tofu (not including second generation products) in 1987 is probably only $70-90 million, which is still pretty small. They would probably want to see it 4-6 times that size before they make a big move. They are reluctant to do 'missionary marketing.' Then there is the perishability aspect of the product. I think Big Food will enter the industry with a product where perishability is less of a problem.

"At some point I think it will make a lot of sense to give tofu a national marketing identity, with regional manufacturers getting together and marketing the same brand and jointly funding national marketing efforts. The dairy companies do that with co-ops and with regional licensing, such as for making Popsicles or bottling soft drinks.

"I also think we'll see an influx of new types of people into the industry, bringing with them sharp new ideas.

Technical people and marketing people. Perhaps some great new processes or patents. Marketing ideas and product development.

"I think we'll see a lot more use of soyfoods, such as tofu, in foodservice applications. That is really a great, untapped, fertile ground for soyfoods. The problem is, most of the people just don't know what to do with it.

"Shurtleff: Imagine that you have just been hired by a major American food company and given a $50 million budget and a research staff. They ask you to develop and market a line of at least three products. What would you do?

"Rose; I would probably do a line of salad dressings, a line of creamy soups, and a line of frozen entrees (such as lasagna), each using tofu and having no cholesterol. The tofu curds would replace ricotta or cheese. I might also do a line of baked goods (such as brownies and muffins), using tofu to replace eggs and milk. I'd also look seriously at a line of cholesterol-free foodservice items, something they could pop into a steam table or microwave and serve without any other preparations. Perhaps some nouvelle cuisine, or an Italian or Mexican dish, or a tofu-based imitation cheese or tofu sour cream or cream cheese. Anything that could replace a product that is currently high in fats and cholesterol so that the tofu product provided a clear alternative." Address: President, Rose International, P.O. Box 2687, Petaluma, California 94953-2687. Phone: 707-778-7721.

5338. Shurtleff, William. 1988. New soyfood product introductions skyrocket during 1980s. Tofu, tempeh, soymilk, soy ice creams are most popular (News release). Soyfoods Center, P.O. Box 234. Lafayette, CA 94549. 4 p. Jan. 11.

• ***Summary:*** "The 'lighter eating' revolution has catapulted soyfoods into one of America's fastest growing food categories. A record number 330 new soyfood products were introduced in the United States during 1987, an increase of over 635% since 1977... These latest figures, part of a 30-year-long food industry trend, are tracked by SoyaScan, the Center's computerized database. It lists more than 4,630 soyfood products from 1546 A.D. to the present.

"During the 1950s, an average of 11 new soyfood products were launched each year in the U.S. This number increased to 16 during the 1960s, and 26 during the period 1970-75. Most of these new introductions were based on modern, high-tech soy protein products, such as soy protein isolates and concentrates, or textured soy flour.

"Then in the late 1970s the number of new products began to rise rapidly with the advent of the soyfoods movement. It reached 78 in 1976, 162 in 1979, 224 in 1982, 296 in 1985, and an all-time high of 330 in 1987." A graph shows "Number of New Soyfood Products Introduced, 1950-1987."

This release was carried by the Associated Press Financial Wire (Jan. 12 as "Soy-Based Foods Gain from Lighter Eating" and widely syndicated*), World Food & Drink Report (Jan. 21), Investor's Daily (Los Angeles, Jan. 12), San Francisco Examiner (Jan. 12), Oakland Tribune (Feb. 1), Natural Foods Merchandiser (Feb.). Address: Lafayette, California.

5339. Simonds, Nina. 1988. A scholar guides China's food policy. *New York Times.* Jan. 13. p. 15-16.

• ***Summary:*** Wang Qing is the 37-year old director of the Beijing Food Research Institute, China's principal food-policy organization. In 1967, after her family was arrested during the Cultural Revolution, she was sent to a farm in Shandong Province. Just a high school graduate, she was given the job of making soy sauce and tofu. She was taught a method of making soy sauce that originated at the time of the building of the Great Wall [220 B.C.?] All the utensils were made of wood and the process was ancient, but it was very sophisticated. After 6 years she returned to her family in Beijing, worked briefly assisting writers at the Beijing Food Research Inst., then went to Hunter College in New York City, where she completed undergraduate and master's degrees in 3½ years. Then she went to Columbia University for a doctorate in nutrition education; she expects to receive her PhD this year. At age 37 she returned to Beijing to become director of the institute, which publishes China's first food magazine, China Food. It has a paid circulation of over 400,000 and claims a readership of millions.

"Miss Wang has already begun to influence China's food policy. Last year she successfully redirected the Chinese from developing their dairy industry and toward the rebuilding of the soybean-milk industry." In 1984 the United Nations had given money to China to develop cow's milk. But 90% of the Chinese population is lactose intolerant and "it is simply too costly for us to raise cattle. They would have to compete with humans for the land." As part of her work on her dissertation, Miss Wang found that there had been a huge decline in China in soybean culture and the manufacture of its by-products. She is now working to recover what was lost. Accordingly, her Institute has developed liquid soymilk in plastic pouches to be test marketed for mass consumption starting next month. 160,000 pouches/day are to be distributed in Beijing.

5340. Barrett, Mariclare. 1988. Substitutes: Cooking without dairy products and eggs. *Vegetarian Times.* Jan. p. 40.

• ***Summary:*** Topics include: Replacing milk, yogurt, cheese,

butter, sour cream, and eggs.

5341. *International Agriculture Newsletter* (*Univ. of Illinois*). 1988. Wilmot Wijeratne and Tsao-Ming Wei, INTSOY, will organize and lecture at the INTSOY short course, "Processing Soybeans for Food Uses," in Peradeniya, Sri Lanka. Jan.
• ***Summary:*** "Dr. Wijeratne will participate from Jan. 31 to Feb. 21 and Dr. Wei will participate from Jan. 9 to Feb. 6. L.S. Wei, Food Science, will also conduct part of the INTSOY short course from Jan. 16 to Feb. 12. Prior to the short course, Dr. Wijeratne will spend a couple days visiting a manufacturer of soymilk in Singapore."

5342. Niola, Immacolata. 1988. Il latte di soia nell'alimentazione della prima infanzia [Soy-based formulas in infant feeding]. *Industrie Alimentari* 27(256):1-5. Jan. [10 ref. Ita; eng]
• ***Summary:*** This review on the nutritional properties and clinical effects of soy-based infant foods includes tabulated data on the contents of various vitamins in soy milk, amino acids in soy flour and protein isolate, chemical composition of 2 commercial formulas, and vitamins and minerals in soy-oat formulas. Address: Istituto di Merceologia–Università, Via Partenope, 36–80121, Naples, Italy.

5343. Shurtleff, William; Aoyagi, Akiko. comps. 1988. Marketing soyfoods–Labels, ads, posters, and other graphics: Soymilk and soymilk products. Lafayette, California: Soyfoods Center. 174 leaves. Illust. No index. 28 cm. Series: Marketing soyfoods.
• ***Summary:*** This book is a collection of black-and-white photocopies of materials ranging in date from 1976 to 1987. The books in this series, each a unique collection of graphic materials, are designed for a number of purposes: (1) To serve as a source of ideas, ingredients, inspiration, legal specifications, and basic guidelines for companies in the process of developing their own products, designing their own graphic materials, and conceiving their own marketing strategies. (2) To document the tremendous diversity of soyfoods products and the way that each is presented and marketed. (3) By arranging the materials in chronological sequence, to help document the development and history of new product categories and soyfood types, and with them the rise of the soyfoods industry and market in the Western World. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

5344. Wormsley, K.G. 1988. Trypsin inhibitors: Potential concerns for humans? (Letter to the editor). *J. of Nutrition* 118(1):134-36. Jan. [12 ref]
• ***Summary:*** This letter, in reply to comments by Dr. B.D. Roebuck (in this journal, July 15, p. 398-400), expresses concern that some soy milk preparations contain quantities of residual heat-stable trypsin inhibitory activity that are sufficient to inhibit most of the trypsin secreted by normal infants in response to a meal.

There follows a "Reply to the Letter of Dr. Wormsley" by Dr. Roebuck (with 6 references). Address: Ninewells Hospital, Dundee DD2 1UB, Scotland.

5345. *Soybean Update.* 1988. Mexico explores soy milk production. Feb. 1. Also in Soybean Digest, April. p. 68.
• ***Summary:*** LICONSA, Mexico's largest government milk plant, announced it is exploring the production and distribution of soy milk to supplement the country's milk supply. The manufacturing of soy milk, aimed at Mexico's low-income population, represents a potential market for 200,000 tonnes of soybeans a year. 60 professionals from Mexico's dairy industry, government food programs and nutrition programs attended a 10-hour seminar in Mexico City on the uses of soy in dairy-like products recently.

5346. Sturgeon, Bruce. 1988. Great Eastern Sun and the U.S. soymilk industry (Interview). *SoyaScan Notes.* Feb. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "Both Great Eastern Sun and Mitoku still import soymilk from Japan. Barry Evans (president) okayed my releasing our sales in terms of gallons of soymilk. Each of the following is our fiscal year from September 1 to August 31 the next year."

Year Gallons sold Percent Increase
1985-86 100,000 -
1986-87 106,000 6% New quart introduced
1987-88 148,000 40% Based on 5 months, annualized

The big increase in the current year is due almost entirely to the American soymilk. In the first 5 months of this year we've sold as much American-made soymilk as we sold in all of last year. We only make quarts in America. In New England, the low-price area, it retails for $1.59/quart average. A lot is sold in truckload quantities. During some sales, it goes for as little as $1.29/qt. On the West Coast it is typically $1.99 to $2.19. By comparison, the imported 6 oz product retails for $1.09 to $1.19, which is 3.8 times as much per fluid ounce, and this is not even a full margin. The product is made in Minnesota at St. Peter Creamery (which also makes spray-dried soymilk) then shipped in a stainless steel dairy tanker to Borden's in Pennsylvania. If that freight could be eliminated, it would allow significant reduction of the retail price. They are actively talking with St. Peter about getting a Tetra Pak machine there and sharing it. Edensoy's price is also high because of depreciation, and Sunsoy's because of exchange rate. There is considerable pressure on Vitasoy to float their currency. It will be interesting to see what happens to Vitasoy prices if that happens. Vitasoy has low overhead and plenty of excess capacity. Tetra Pak's sales of all products are way below their expectations; the main activity is in juices. Soymilk is doing well for them.

Milk has not gotten off the ground, but it could with *Lysteria* scares and deaths. GES holds 1% of their product run for quality control. There are three routes of possible bacterial contamination in Tetra Pak cartons. 1. The spores that are not killed by the temperature/time combination. 2. Bacteria entering through a poorly sealed seam. 3. Bacteria entering through a failed steam seal in the 40-foot pipe from the UHT unit and the packaging machine. The packages explode. Address: Director of Marketing, Great Eastern Sun, 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730.

5347. *Times of India* (*The*) (*Bombay*). 1988. Company news: Noble Soya. Feb. 7. p. 11.
• ***Summary:*** The chairman of Noble Soya, Mr. Adi Godrej, told his shareholders that the company's soya milk is rising in popularity among health-conscious Indian consumers; a new coffee flavour was recently introduced.

In Jan. 1988 and extruder plant with an installed capacity of 900 tonnes per year was commissioned [started], and the company plans to set up another one with a capacity of 2,300 tonnes per year later. Noble Soya has already started test marketing inexpensive protein-rich extruded foods in Bhopal. The company has plans to make spray dried soya milk powder, as well as dietetic and weaning foods.

The company plans to makes a rights issue of Rs. 1.75 crores [17,500,000 rupees] to existing shareholders in the ratio of 35 new shares for every 100 shares held. The proceeds of the issue will be used for additional finance requirements to strengthen overall operations.

Note: Only 280,363 shares were taken up. The remaining 82,400 shares (29.4% of the total) were allowed to lapse.

5348. Schecter, Andy. 1988. New developments at Northern Soy (Interview). *SoyaScan Notes.* Feb. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This spring the company will be buying and moving into a 16,000 square foot building at 545 West Ave. in Rochester. They now have 3,000 square feet and are very crowded. The payments will be considerably larger than their present rent payments. They decided to drop the idea of making soymilk on a large scale that they were investigating last year. Four years ago they introduced a new line of packaged tofu under the Harvest Light brand. Before that they sold only fresh unpackaged tofu in bulk. Address: 30 Somerton St., Rochester, New York.

5349. Mitchell, Cheryl; Mitchell, Pat. 1988. California Natural Products and the outlook for amazake and amazake products (Interview). *SoyaScan Notes.* Feb. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** CNP manufactures the rice base for Robert Nissenbaum's Rice Dream, non-dairy frozen dessert. Dr. Cheryl Mitchell is a food chemist, head of the company's R&D, and an expert in the use of enzymes on whole grains. Pat is head of marketing. Both have a strong personal and business interest in and commitment to natural foods.

Pat: "This fall two major natural foods companies are coming out with amazake that will be made by CNP. One of these will be packaged in Tetra Brik cartons and one will be fresh. Neither of these companies is presently involved with amazake. The whole challenge is to make a product that is superior in taste to analogous soy products. If you accomplish that, you have a good market potential."

It is very difficult to get a good amazake flavor in Tetra Pak; it's got a lot to do with technique. It is presently difficult and expensive to develop low-acid Tetra Brik products. The tests cost about $8,000 for 2 hours. Another problem is the loss of the fresh taste that many prefer for a cooked taste. Many people don't like the beany taste in soymilk and some have soy allergies. These are good amazake customers. Rice syrup is used as a sweetener in 2-3 U.S. soymilks. He thinks the market potential depends on how good a job each companies does in developing quality products. "We did not want to come out with another Grainaissance type product. We wanted a really fine tasting product. Grainaissance has what we consider a lot of negative characteristics, such as a glucose bight. Apparently he [Tony Plotkin] is using some type of glucose enzyme. Some people like things very sweet."

Cheryl: "Amazake has a tremendous potential in the United States. Dairy products are not the only way to get protein. The nutritional composition of rice is very good and the hypoallergenic nature offers a lot of new potential products and alternatives to dairy products. Adding enzymes to milk does solve the problem for the many people who are allergic to milk." Many of America's biggest food companies are now quietly focusing their research efforts on rice. They feel that rice is where the future is. Everyone is keeping this under their hats.

CNP definitely does not add hydrochloric acid to lower the pH. It wouldn't work. The natural buffers in the whole grain would neutralize the hydrochloric acid. Use of acid would also cause off flavors and souring from random hydrolysis. Miles knows refined corn starch hydrolysis but doesn't know anything about using commercial enzymes with whole grains, which is where CNP has its patents: enzymatic hydrolysis of whole grains. The pH of CNP's amazake stays right around 6.7 throughout the process. They do not adjust the natural pH at all. Calcium ions from any source are needed as a co-factor for the alpha amylase. They inactivate the enzymes with heat, not with pH adjustment. Robert Nissenbaum knew what he wanted and he trained us as to how to get it. It was a whole new area for us. They now have a spray dried rice sweetener. The koji mold is a good producer of alpha amylase but it is heat sensitive. Enzymes will not work on raw starch; moist heat has to be applied

to gelatinize the starch. Malted barley (commonly called "malt") is still the best known producer of beta amylase. Each source produces enzymes that give subtly different end flavors. *Aspergillus niger* is a widely used source of alpha amylase.

Concerning sweeteners, she was shocked to find that very few feeding studies have been run on fructose, since it is a natural product found it fruits, but in small quantities, balanced with glucose. There are now toxicity studies on fructose. The sweeteners in rice syrups are glucose and maltose balanced and buffered by complex carbohydrates. She thinks NutraSweet [made by Monsanto] should never have been allowed on the market. Many food chemists are appalled at it. The worst thing is that it is educating our children's tastes to a very sweet taste. One problem with rice syrup is that it imparts a distinct rice flavor. They are seeing to what extent it can be reduced naturally. They now have 22 different rice syrups, each custom tailored to an application. Address: California Natural Products, P.O. Box 139, Manteca, CA 95336 (Near Stockton). Plant: 1250 E. Lathrop, Lathrop, CA 95330. Phone: 209-239-3966.

5350. Belleme, John. 1988. Update on miso in America. How about amazake as a soymilk sweetener? (Interview). *SoyaScan Notes.* Feb. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Mitoku (Mr. Kazama and Chris Dawson) is considering a joint venture with Sendai Miso Shoyu of a miso plant on the West Coast of the USA. This is still very tentative. They are also considering making amazake. But about 2 years ago Miyako Oriental Foods increased their miso production capacity. They can probably make over 1 million pounds a year now. It was about 600,000 lb/year. Fujiwara Brewing Co. in Okayama, which makes equipment for miso and soy sauce companies, supplied the equipment to Miyako. The company San-J finally used to build their tamari plant and supply the equipment was Fujiwara's competitor, Nagata. Steve Earle said this was the same company that had just helped expand the Miyako plant. According to the people at Ohsawa-America, Mr. Kitani, the Japanese man who makes Yamaki Shoyu, and Bob Kennedy, formerly of Chico-San are planning a miso plant in the USA, probably with automatic koji equipment.

John feels that sales of miso in America have slowed down and that if new companies enter the market, it will be oversupplied. At American Miso Co. his maximum capacity was about 400,000 lb/year. The volume hasn't changed much in the past few years. Christian Elwell at South River Miso Co. has a capacity for about 60,000 lb/year, which he hasn't reached. Both these are more expensive than Miyako ($4.49 for American Miso white miso, Christian's is more, and Miyako's is about $2.85/lb, or only 63% as much). He suggests: How about amazake as a sweetener for soymilk? It would replace barley malt and give the soymilk more body, kind of like a shake. Then you can put rice on the label. Great idea! Address: Route 5, Box 258, Rutherfordton, North Carolina 28139. Phone: 704-749-9537.

5351. Milbury, Peter. 1988. Chico-San, amazake, and rice syrup (Interview). *SoyaScan Notes.* Feb. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Peter believes that the earliest recipe for amazake in a U.S. cookbook was in Cornellia Aihara's *The Chico-San Cookbook.* This was later reprinted as *The Macrobiotic Kitchen* by Japan Publications. The original book was a labor of love by Cornellia for Chico-San, edited by Peter Milbury and Dave Schleiger. Cornellia has always taught using amazake as a sweetener, and she prefers it to rice syrup. She has a wonderful cake, sweetened with amazake and with an amazake frosting. She was a pioneer in introducing amazake to America.

Junsei Yamazaki is now selling his own miso. He is at Route 1, Box 1333, Orland, CA 95963. Phone: 916-865-5979. The product name is Junsei Amazake Miso.

Concerning the future of amazake: "I think it's hot. It's just got nowhere to go but explode. It's such a wonderful product, with so many variations. All the beverages are now dessert drinks. Someone should make an amazake counterpart to soymilk, sold in larger quantities, with a smoother consistency, less solids, and less sweetness. Chico-San is now working on an amazake powder with California Natural Products (CNP); mix with warm water and serve as a drink. Rice syrup also has great potential as a sweetener. Chico San's Yinnies, a malted sweetener, were the first product of their type in America. Sjon Welters of Nasoya is at least thinking about using amazake as a sweetener for soymilk. Sjon spent a week in the Chico-San rice syrup operation before it was shut down and moved to CNP. The amazake used for Rice Dream is much sweeter than a typical amazake. "I think Rice Dream is one of the most fantastic products I've ever tasted. Originally Chico-San was going to make the product for him. Then we shifted down to CNP. One company that might have interest in amazake is JGR Resources, Inc. Dr. Adam Lambert is Technical Director. P.O. Box 97, Haskell, New Jersey 07420. Phone: 201-835-7644. Their product is Koji-Converted Rice-O-Sweet Brown Rice Syrup. They are a wholly owned minority corporation, that took over a brewery.

The first attempt Peter ever heard of to package amazake in Tetra Pak was in Jan. 1985, just after Heinz took over Chico-San. Bob Kennedy and he set up a run with Real Fresh in Visalia. Real Fresh botched the homogenization. By this time Chico-San had a lock-tight exclusive contract with CNP to make rice syrup and amazake just for them, using their rice. Chico-San set up CNP in the rice syrup and amazake business and spent enormous amounts of time showing them how to do it. Before that, starting in 1972, Chico-San made its own rice syrup in Chico using not koji but a combination

of malted brewer's barley and commercial enzymes from Miles Laboratories. At that time CNP would make the amazake for Robert Nissenbaum, but Chico-San would do the billing. This changed after Heinz took over and couldn't meet their commitment to the contract with CNP. So CNP got out of the contract and dealt directly with Nissenbaum.

Milbury and Belleme say Macromuse (Peggy Rosoff; 301-656-4313, Bethesda, Maryland Circ. 12,000) is much better for long in-depth articles than East West. Address: Lundberg Farm, Box 369, Richvale, California 95974. Phone: 916-882-4551.

5352. Roller, Ron. 1988. Edensoy and the U.S. soymilk market (Interview). *SoyaScan Notes.* Feb. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ron estimates the size of the U.S. soymilk market to be about 2.1 million gallons a year (not including infant formulas, or small fresh local manufacturers). The largest companies, in descending order of size, are: American Soy Products (Eden Foods; 55-65% market share), Vitasoy, Sunsoy, Westbrae, and Great Eastern Sun. The trend is definitely up. Vitasoy's aggressiveness in the marketplace from early 1987 slowed down Edensoy's progress. Then Vitasoy had big programs and in the last 4 months they seem to have cooled out quite a bit. A Dun & Bradstreet report shows that they lost $700,000 last year selling soymilk.

All is going very well in the joint venture with the various Japanese companies. The relationships are generally harmonious, and they are on target in terms of their volume goals and expectations. They hope to increase volume to cut down overhead expenses. The plant can make 65-70,000 cases/month. During the last 2 months there have been 15 enquiries for export, some of which will soon be signed agreements with France, New Zealand, Australia, etc. They have approval for 190 Kroger stores and are cautiously optimistic on this. Mr. Iwazuki from Marusan runs the ASP plant. They now have 6 soymilk products which are Eden Foods' top six best-sellers: three flavors (carob, vanilla, original) in two sizes (liter and 250 ml). By volume, the liter outsells the 250 ml by more than 3 to 1. Next: an organic soymilk (They now use non-organic Beeson soybeans. The organic market now seems to be growing rapidly), some new flavors, and some totally new soy products, such as tofu. Eden no longer imports soymilk. Soymilk is pretty price sensitive; whenever they put it on sale, it moves. They just started a case-stack program that Sunsoy has had for years. When they started the plant they stopped wholesaling, and dropped over $1 million of wholesale business. But they made that up this past year, plus some.

Concerning oil in soymilk: The label on their Japanese imported product was not correct. Oil was added in Japan but Eden was not told. It was not listed on the label. When their U.S. product was launched, it contained less than 1% added oil. Eden got so many complaints about this small amount that they now no longer add oil, except to the carob, and that will be discontinued as soon as their present labels are reprinted.

Concerning other grains, they are importing Job's tears, which is now recommended by macro teachers for cancer patients. They brought the price from $8.50 down to $2.00/lb and sell lots. Also involved with quinoa, they used to be the master distributor for Quinoa Corp. but are now importing lots from Andean countries; expect to reduce the retail price by 40%. They are thinking of using quinoa in soymilk. Their present sweetener is "malted cereal sweetener" which is made by mixing sprouted barley with corn grits, the adjunct. Rice is too expensive. You can get a higher sugar content with corn than with barley. Rice is still higher in sugar. Corn converts the fastest; rice is slow. It is specially made by a malting house, and they use almost a tanker load every 10 days. They helped develop the product and intend to come out with a line of malted grain sweeteners using malted barley plus different grains. "There is a lot of funny business in the malting arena." They did not like the use of commercial enzymes by California Natural Products. He thinks most people do not realize how their rice syrup is made. Address: Director of Purchasing, Eden Foods, Clinton, Michigan.

5353. Brandon, David L.; Bates, Anne H.; Friedman, Mendel. 1988. Enzyme-linked immunoassay of soybean Kunitz trypsin inhibitor using monoclonal antibodies. *J. of Food Science* 53(1):102-06. Jan/Feb. [37 ref]

• ***Summary:*** An enzyme-linked immunoassay (ELISA) for the Kunitz trypsin inhibitor (KTI) of soybeans was developed using monoclonal antibodies derived from mice. The new immunoassay should have widespread utility in monitoring residual levels of KTI in processed soy products such as infant formulas and in plant breeding studies. Soybeans contain two major classes of protease inhibitors, Kunitz trypsin inhibitor (KTI) and the double-headed Bowman-Birk trypsin and chymotrypsin inhibitor (BBI), and both KTI and BBI exist as several isoforms, which are derived from different genes or are produced by proteolysis. Address: USDA-ARS, Western Regional Research Center, 800 Buchanan St., Albanay, California 94710.

5354. Chung, Je-Bong; Lee, K.H.; Sohn, H.S.; Kim, S.M. 1988. Studies on thermophilic flat-sour bacteria in soymilk: Isolation, identification and determination of heat resistance. *Hanguk Sikp'um Kwahakhoe Chi* (*Korean J. of Food Science and Technology*) 20(2):218-24. [16 ref. Eng; kor]

• ***Summary:*** To optimize thermal processing of soymilk, 4 strains of thermoresistant flat-sour bacteria were isolated from soymilk. The isolates were aerobic spore-forming rods and grew at 65ºC. Based on morphological and physiological properties, all isolated strains were identified as *Bacillus stearothermophilus.* The average D values for the 4 strains

were 77.27, 20.20, and 2.76 and 1.39 minutes at 110, 115, 121 and 125ºC, respectively, and the average Z value was 8.36ºC. Address: Central Research Inst., Dr. Chung's Foods Co. Ltd., 1-25 Songjung-dong, Chungju, Choongbuk-do 360-290, South Korea.

5355. Dashiell, Gregory L. 1988. Characterization and use of soybean lecithin. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 355-66. [21 ref]
• ***Summary:*** Discusses: Composition of commercial lecithin. Heterogeneous nature of soy lecithin. Physical properties of lecithin. Techniques to modify lecithin functionality. General functionality of soy lecithin. Emulsification. Pigment dispersion. Release. Mixing and Blending. Instantizing. Future uses of lecithin and derivatives: Baking. Animal health and nutrition: Human health and nutrition. Aquaculture. By far, the largest use of lecithin is as a fat emulsifier in milk replacers.

The nutritional and therapeutic effects of phospholipids are being extensively studied. Beyond being a rich source of essential fatty acids, phospholipids from soy lecithin have been identified as being active in the stimulation of the immune system. The use of phospholipid analogs is being extensively investigated for their effects against cancerous cells. The status of this research is the subject of a research conference the proceedings of which have been published. Address: Central Soya Company, Inc.

5356. Elliott, James G. 1988. Consumer attitudes regarding soy products. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 381-91. [3 ref]
• ***Summary:*** Discusses: Consumer awareness of soy foods. Consumers' awareness of manufacturers' use of soy protein. Consumer willingness to purchase meat products containing soy protein. People were asked, when you think of foods which are made from soybeans, what products come to mind? Unaided awareness of soyfoods among consumers was low, only 4 in 10 were able to name a specific soyfood on a top-of-the-mind basis. However, aided awareness was significantly higher. Soy sauce and soybean oil had the highest levels of aided awareness among consumers at 94% and 77% respectively. Tofu, soymilk, margarine, and soy nuts registered moderate levels of aided awareness at 45%, 38%, 38%, and 31% respectively. Tofutti came in next at 21% and miso came in last at 10%.

When asked if they had "ever tried" these products, of the eight soyfoods mentioned, soy sauce demonstrated the highest trial level at 75%. All other products "ever tried" were 20% or less. Respondents who had not tried a particular food product made from soybeans were asked if they would be willing to do so. Expressed willingness to try was in the 60% to 70% range. It was the highest for soybean oil, soy nuts, margarine, tofu and Tofutti.

65% of those surveyed responded positively when asked, "have you heard of soy protein being included in certain food products?" 35% were unaware. Among consumers who were aware that manufacturers use soy protein, 60% said that they were definitely using foods that contain soy protein, or believed that they were; 29% said they were not using them; and 11% didn't know. When asked, "Does the fact that a food manufacturer uses soy protein in its products change your feeling about the company?," 80% stated no difference; 8% stated that they felt better; and 12% said that they felt worse. Address: Manager of scientific communications, Protein Technologies International, St. Louis, Missouri.

5357. Golbitz, Peter. 1988. Whole bean soy products. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 325-31.
• ***Summary:*** Discusses: Tofu. Soymilk. Yuba or soymilk film. Fresh green soybeans. Whole dry soybeans. Soynuts. Soy sprouts. Tempeh. Soy sauce. Miso. Address: Soyatech, Bar Harbor, Maine.

5358. Henry Ford Estate. 1988. Menu of dinner served at Ford Exhibit, Century of Progress. August 17, 1934. Dearborn, Michigan. 1 p.
• ***Summary:*** This meal was served again by chef Jan Willemse on 29 Feb. 1988.–Tomato Juice Seasoned with Soy Bean Sauce–Salted Soy Beans–Celery Stuffed with Soy Bean Cheese–Puree of Soy Bean–Soy Bean Cracker–Soy Bean Croquettes with Tomato Sauce–Buttered Green Soy Beans–Pineapple Ring with Soy Bean Cheese and Soy Bean Dressing–Soy Bean Bread with Soy Bean Relish–Soy Bean Macaroons–Apple Pie (Soy Bean Crust)–Cocoa with Soy Bean Milk–Soy Bean Coffee–Assorted Soy Bean Cookies–Soy Bean Cakes–Assorted Soy Bean Candy–Chef Jan Willemse, food items and preparation, courtesy of the Miesel/Sysco Food Service Company of Canton, Michigan.

Note: This menu seems to differ slightly from the original 1934 menu in that it omits one dish (Soy Bean Biscuit with Soy Bean Butter) and replaces it with another (Soy Bean Macaroons). Address: Dearborn, Michigan.

5359. **Product Name:** Homestyle Cottage Tofu Salad: A Cottage Cheese Substitute.
Manufacturer's Name: Homestyle Foods (Formerly Sonoma Specialty Foods).
Manufacturer's Address: 2317 Bluebell Dr., Santa Rosa, CA 95403. Phone: 707-525-8822.
Date of Introduction: 1988. February.
Ingredients: Tofu (organic soybeans*, water, nigari), soy

oil, soy milk, vinegar, chives, dill, parsley, scallions, natural spices, sea salt, and honey. * Grown in accordance with CA H&S Code 26569.11.
Wt/Vol., Packaging, Price: 8 oz or 15 oz plastic tub.
How Stored: Refrigerated.
Nutrition: Per 2.66 oz.: Calories 137, protein 7.5 gm, carbohydrates 4.4 gm, fat 10 gm, fiber 1.5 gm, sodium 0.21 gm, cholesterol 0.
New Product–Documentation: Label. 1987 and 1988. 4.5 inches diameter. Black, green and blue on white plastic lid. "Improved! Non-Dairy. Cholesterol Free. Ready to Eat on Sandwiches, as a Dip & in Salads. Natural. No Preservatives. Nutritious. Delicious. Kosher."

5360. **Product Name:** [Moca Soy (Soymilk with Yannoh)].
Foreign Name: Moca Soy.
Manufacturer's Name: Lima Foods (Belgium. Distributor).
Manufacturer's Address: Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.
Date of Introduction: 1988. February.
Ingredients: Water, soya*, barley malt*, whole dried cane juice, barley*, rye*, malted barley*, chicory, acorns. * = Organically grown.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label. 1988. 3.75 inches wide by 3.5 inches high by 2.75 inches from front to back. Brown and white on yellow. An illustration (line drawing) shows soymilk being poured into a glass. "Filtrate of organically grown soya with mocha flavor" written in 9 languages. Ingredients also written in 9 languages.

Lima catalogue, price list, and color product brochure. 1989. Shows the Tetra Brik Carton. "Moca soy, a mixture of Lima Soy and Yannoh, is equivalent to barley malt as a sweetener or in desserts. This drink pleases both adults and infants."

Label sent by Anthony Marrese of Bremen, Germany. 1991. Oct. 7. The ½-liter product now retails for DM 3.40 in Bremen. Nature et Progres organic certification symbol. "Biogarantie."

5361. Linder, Anders B.J. 1988. STS moves head office from Singapore to Denmark (News release). Soya Technology Systems, Ltd., 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 1 p. Feb.
• ***Summary:*** From the day STS was established by Danish Turnkey Dairies Ltd. in 1982, soymilk activities have been headed from offices in Singapore. In June, 1987, STS' parent company, Danish Turnkey Dairies Ltd. was purchased by APV, a leading multinational maker of processing machinery for the food and beverage industries. From an organization with over 200 companies, the APV group last month was restructured into nine primary subsidiaries of which APV Pasilac A/S is the one to which Danish Turnkey Dairies Ltd. and STS now belong. As a consequence of this large organizational restructuring, STS (Singapore) will move offices to its parent company's, Danish Turnkey Dairies Ltd. premises in Aarhus, Denmark with effect from April 1, 1988. Address: Singapore.

5362. Matthiesen, Livia C. 1988. Soja? So ja! Das grosse Soja-Kochbuch fuer Feinschmecker [Soya? Well yes! The big soy cookbook for epicures]. Bern, Switzerland: Humata Verlag Harold S. Blume. 128 p. Illust. Recipe index. 24 cm. [Ger]
• ***Summary:*** At the top of the cover: "Wholefoods recipes with soya, the giver of super protein. 132 recipes with tofu, okara, tempeh, soybeans, and soybean grits." Plus 16 color photos of prepared dishes. Tofu is used in many of these German-style recipes. Contains instructions for making tofu, okara, and tempeh at home.

5363. McGowan, Christina. 1988. An analysis of the market for soya-based products. Dublin, Ireland: Centre for Marketing Studies, University College Dublin. 37 p. Feb. 28. Unpublished typescript. 30 cm.
• ***Summary:*** This is the earliest survey seen of the soyfoods market in Ireland. It is full of interesting statistics. The summary states that the market for soya-based products in the Dublin area is miniscule [minuscule]. These products account for only 1-5% of total health food sales. Annual sales of such products are roughly £200,000–£240,000 according to Kelkin, Ireland's leading wholesaler. However if general trends in the health food industry can be relied on, there will be a steady increase in demand for soya products. The two main types of consumers are those suffering from lactose intolerance, and vegetarians. The most popular product is soya milk due to increased publicity and frequent references by doctors. Possible new products would be soy cheese, ice cream, or yogurt. A total of 23 retailers were interviewed and only 23 stock soya products.

A survey was conducted on 103 respondents outside health food stores. Of those who had tasted soya-based products (only 15% of the total): 71% buy for health reasons. 81% buy in health stores. 94% buy for themselves.

51% of the respondents became aware of soya products through word of mouth, 23% through in-store displays, and 23% through magazines/print. The most popular product quoted by respondents was soya milk (62.5% indicated they purchased it). Approximately 50% said they bought soy-based desserts, 20.2% bought tofu, 11.5% purchased soy cheese, 5.4% purchased tempeh, and 2.7% bought soy yogurts.

Companies involved with soya are Sunrise (under license here), Spiral Foods of Cork (Tempeh), and Irish Sea Greens (Tempeh). Some people are making tofu in the Swords area and an Asian man was making tofu

locally. Wholesalers that handle soya foods are Wholefood Wholesale (import 20 tonnes a year of soya milk worth £15,000 [Irish pounds] wholesale value), LifeForce (import £30,000 to £40,000 of soya milk), Paragon Distributors (imports 3-4 tons of soya foods worth £10,000), Perrans (sells £12,000 worth of soya milk per year), and Kelkin Naturproducts (sells £150,000/year of soya milk and £50,000 desserts/year). Address: Dublin, Ireland.

5364. Muth, Linda. 1988. Corporate donations being sought for Kersey Children's Home. Maine artist paints Nigerian soy project–Donates work to raise money. *Soya Newsletter* (*Bar Harbor, Maine*). Jan/Feb. p. 11.
• ***Summary:*** Maine artist Dorothy B. Hayes has done a series of 18 beautiful paintings of women and children at the Kersey Children's Home in Ogbomoso, Nigeria, which were then used to print posters and cards. The International Institute of Tropical Agriculture contributed the other half of the printing costs. Later, UNICEF contributed the money for postcards to be printed. At the Kersey home, the most malnourished cases are put on a diet containing soymilk, and within a few weeks, the swelling caused by malnutrition and other diseases goes down. They once again become healthy and regain their energy.

At Kersey, the women, who are, for the most part, the farmers in Nigeria–learn how to use soybeans in their traditional foods as well as in new recipes. After learning how to plant and harvest soybeans, they learn how to make a kind of hardtack out of the boiled-down beans and how to pasteurize soymilk. Every part of the soybean is used. Recently, the British High Commission donated a van which will be used to go out into the further regions of Nigeria with the purpose of staying for a week or two to teach women, who cannot reach Kersey, how to grow and use soybeans for their families and villages. To date, Dorothy's efforts have raised about $5000 in the U.S. Address: (Kersey): The Last Word, P.O. Box 178, Blue Hill, ME 04614. Phone: 207-374-9913.

5365. *Natural Foods Merchandiser.* 1988. Soyfoods import costs rise as dollar declines. Feb. p. 32.
• ***Summary:*** Discusses techniques used by Westbrae, Edward and Sons Trading Co., Eden Foods, and San-J International to try to deal with the falling value of the dollar against the yen. The dollar began its fall in September 1985. In the past 18 months, the dollar has been devalued almost 40% against the yen, making Japanese imports about 40% more expensive. To try to keep consumer prices as low as possible, some companies try to absorb the cost increases themselves, some ask Japanese manufacturers to help, and some (such as Eden Foods, Westbrae, and San-J) start to make products in the USA.

5366. Nomura, Yukihiro; Sugisawa, K.; Adachi, O.; Ameyama, M. 1988. Kotei-ka sakusan-kin o riyô shita ekijô no fukai-shû no teigen hôhô [Reduction of off-flavor in liquid foods using immobilized acetic acid bacteria]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 62(2):143-48. Feb. [6 ref. Jap; eng]
• ***Summary:*** Off-flavors caused by aliphatic aldehydes (e.g. hexanal) in defatted soy milk were reduced by acetic acid bacteria immobilized onto KAPPA–carrageenan. Optimum pH and temperature were 5 and 50ºC, respectively. Address: 1-2. The Research Inst., House Food Industrial Co., Higashi-Osaka 577, Japan; 3-4. Dep. of Agricultural Chemistry, Yamaguchi Univ., Yamaguchi 753, Japan.

5367. **Product Name:** PP670 Isolated Soy Protein (for Beverage Powders).
Manufacturer's Name: Protein Technologies International.
Manufacturer's Address: Checkerboard Square, St. Louis, MO 63164. Phone: 800-325-7108.
Date of Introduction: 1988. February.
Wt/Vol., Packaging, Price: Bulk.
How Stored: Shelf stable.
Nutrition: 90% + soy protein.
New Product–Documentation: Soya Newsletter. 1988. Jan/Feb. p. 8. Designed for beverage powders and other products that require superior flavor/odor and mouthfeel characteristics, PP670 comes in powdered form and has excellent suspension and dispersibility properties. It can be used for partial or complete replacement of caseinate in new or existing product formulations.

5368. Shurtleff, William; Aoyagi, Akiko. 1988. Amazake and amazake frozen desserts: Industry and market in North America. 1st ed. Lafayette, California: Soyfoods Center. 10 + 28 + 17 + 17 p. Feb. 21. 28 cm. [82 ref]
• ***Summary:*** Contents: 1. Amazake industry and market analysis: Introduction and overview. History. Market size and growth rate. Comparison with the soymilk market. Largest manufacturers of amazake and amazake products in North America. Market segments (who buys, outlets where sold, geographical). Product types. Prices. Packaging. Imports. Market outlook and forecast. 2. Forty-three commercial amazake products and product/company histories, with index. 3. Bibliography on amazake and amazake frozen desserts (17 references with index). 4. Early documents and labels. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

5369. Sipos, Endre F. 1988. Edible uses of soybean protein. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 57-93. [107 ref]
• ***Summary:*** Discusses: Definitions and methods of preparation. Nutritional and health aspects of soy proteins: Nutritional value of soy protein ingredients, amino acid

profile, digestibility, amino acid requirements, nutritional value of soy proteins in food systems, meat, poultry, and fish, dairy products, cereal grains, health and soy protein products. Functionality: General properties, functionality of soy protein ingredients, soy flours/grits (untextured), soy protein concentrates (untextured), soy protein isolates, soy albumens, textured/structured soy protein products, flavor and texture. Uses in food systems: Meat food products, emulsified meats, coarsely-chopped meats, canned meats, whole muscle meats, poultry products, seafood products, analogs, pet foods, dairy-type products, bakery products–cereals–pastas, bread and rolls, specialty breads, cakes and cake mixes, doughnuts, breakfast cereals, pasta products, misc. baking applications, misc. foods. Consumption trends. Future considerations. Summary.

Soy protein concentrates are preferred in milk replacers for baby animals such as calves, lambs, and pigs because of their low soluble carbohydrate content (i.e. less gastrointestinal disturbance problems) and lower immunogenicity. The industry producing edible soy protein products for human consumption has grown enormously since the late 1950's. Yearly world production is estimated to be approximately 1,500,000 tonnes (metric tons or 3,300 million lb; Note: Text figure of 1,500 tonnes is an error) of soy flour, 90,000 tonnes (200 million lb) of soy protein concentrate, and 70,000 tonnes (170 million lb) of soy protein isolate, which amounts to about 3,700 million pounds/year of edible protein for human consumption. Since soy flour is used in many developing countries where statistical records are incomplete, the figure for this ingredient could be higher than given here. The demand for soy protein concentrates appears to be growing at the fastest rate.

Note: Dr. Dale Johnson, in a personal communication to Dr. Walter Wolf at the USDA Northern Regional Research Center in Peoria, Illinois, estimated the 1985 production of isolated soy proteins in the USA to be 70,000 tonnes. Sipos here gives that same figure as the world total. Yet isolate production has increased worldwide since 1985 and it is produced outside the USA in Japan, in Belgium (by Ralston Purina), and in China. Address: Sipos & Associates, Inc. Fort Wayne, Indiana.

5370. *Soya Newsletter* (*Bar Harbor, Maine*). 1988. New process and equipment for making non-beany soymilk unveiled. Cold-grind method suitable for small and large plant applications. Jan/Feb. p. 13.

• ***Summary:*** The key to the process is grinding the beans in unheated water under a vacuum to eliminate oxygen. ProSoya Foods International Inc., Ottawa, Canada recently announced that patents for a new process and equipment are pending in several countries and that a patent has recently been allowed in the U.S. for equipment to produce a non-beany tasting soymilk. To reduce oxygen to a few parts per million, a special air/water tight vessel was designed with a small hammermill grinder built into the bottom. The new cold-grind method produces soymilk and tofu as wholesome as the traditional cold-grind method, but without the beany flavor. Crown Iron Works Corp. of Minneapolis, Minnesota, in association with ProSoya, is developing equipment which will use the new process to produce non-beany tasting soy flakes.

For more information contact Raj Gupta, ProSoya Foods International Inc., 627 Gaines Dr., Ottawa, ONT, K1J 7W7, Canada. Phone: 612-745-9115.

5371. *Soybean Digest.* 1988. Soy milk solves dairy shortage. Feb. p. 44.

• ***Summary:*** Professionals from Mexico's dairy industry and government food and nutrition programs attended a 10-hour seminar in Mexico City on how soy can help alleviate Mexico's shortage of dairy products. Two U.S. technicians, Emil Huang of Land O'Lakes and Allan Routh of St. Peter's Creamery, were among the seminar speakers. A program highlight was Huang's demonstration on tofu and soy milk manufacturing.

Note: This is the earliest document seen (Jan. 2010) concerning Allan Routh–later of SunRich.

5372. Weisenthal, Debra Blake. 1988. Diabetes: Out of the medicine closet... and into the kitchen cabinet. *Vegetarian Times.* Feb. p. 16-18, 20-23, 53. [9 ref]

• ***Summary:*** Diabetes is the third leading cause of death by disease in the United States. About 5.8 million Americans have been diagnosed as having the disease and 4-5 million more may have it without knowing it. A new theory states that a low-fat, high-carbohydrate diet is best. Soymilk is used in the milk exchange. Diabetes mellitus is a chronic disease characterized by the inability to utilize carbohydrates, and by excess sugar in the blood and urine. Dr. Julian Whitaker, author of *Reversing Diabetes,* loathes his colleagues' continued reliance on drugs. His program at the Whitaker Wellness Institute in Huntington Beach, California, relies on a strictly vegetarian diet for diabetic management. His book details the diet and its success.

People with diabetes cannot effectively utilize glucose, the body's basic fuel. The disorder can occur when there is either an insufficient amount of insulin or insulin is not properly used. Insulin, made in the pancreas, is a hormone that regulates the amount of glucose in the bloodstream by helping it pass through cell membranes. When the process goes awry, the glucose remains in the blood, and the body's cells consequently become starved for energy. There are 2 types of diabetes. Type I occurs when the body does not produce sufficient insulin. About 5% of diabetics are type I. Type II diabetics have bodies which are insensitive to insulin and it goes unused, even though they produce enough of it.

Most professionals in the field now believe that

Carbohydrates are a good thing for diabetics, and fats exacerbate an already bad situation. Before insulin was discovered in 1921, diabetics were told to cut out carbohydrates entirely because there was no way to move the sugar out of the blood. Once insulin was discovered, doctors still told patients to avoid carbohydrates, although there was no evidence that approach was effective. In the 1930s, researchers began to find that the typical diet eaten by diabetics–14% carbohydrate calories, 7% protein calories and 79% fat calories–actually brought on diabetes, even in people with normal metabolism. At the Whitaker Institute, the diet for diabetic patients contains a minimum of 65% complex carbohydrates.

Not everyone agrees with the low-fat, high-carbohydrate theory. Anne Coulston, research dietician at Stanford University, believes that any success researcher find with a low-fat diet is a result of their patients losing weight on the diet, nothing more. Coulston agrees with most diabetes professionals that weight loss overrides any dietary manipulation or composition. Address: Staff.

5373. **Product Name:** Winco Soya Milk.
Manufacturer's Name: Windmill Food Co.
Manufacturer's Address: Ettukala, Negombo, Sri Lanka. Phone: 031-2572.
Date of Introduction: 1988. February.
Ingredients: Soya, powdered milk, sugar.
Wt/Vol., Packaging, Price: 190 ml glass bottle retails for Rs. 4/-.
How Stored: Shelf stable, 6 month shelf life.
New Product–Documentation: Label. 1988. 3.25 by 3.5 inches. Brown, yellow, and white. Drawing of a happy face drinking soymilk through a straw from a tall glass. "A quality Winco product." Form filled out by Jane Gleason. She visited the shop in Colombo on 14 March 1988. Discussion with Mr. J.P.D. Pieris, Managing Director, Windmill Enterprises. The company began producing soyfood products in 1984, as a business and to help promote soy in Sri Lanka. Initial products included tofu, soymilk beverages, snacks, and soy wuddies (a type of burger). This production was scaled back to the current soymilk because a grinder, on loan from SFRC, was taken back, and because of marketing difficulties. The feasibility of expansion is currently being assessed. The key to this will be an advertising campaign. Marketing, through sales reps in Colombo, is about 1,000 bottles/month. The company presently uses 50 kg/month of soybeans which they buy for 10 Rs/kg at Colombo line markets (Ja Ella area). Production is increasing although the product has only been out for 6 weeks. Most consumers buy the product for its good taste, only about 5% because of nutritional value.

5374. Herry, Yvon. 1988. Coopérative agricole de Colmar: Le soja sous toutes ses formes [The agricultural cooperative of Colmar: Soya in all its forms]. *France Agricole* (*La*) No. 2227. p. 42. March 4. [Fre]
• ***Summary:*** About Maurice Rochet (whose photo is shown) and his work with soyfoods, Cacoja, and C.A.C.

5375. Westbrae Natural Foods. 1988. Westbrae Soy-O, Vestro Foods (new owner), and Eastern Gates Native Soy Products in Hong Kong (Interview). *SoyaScan Notes.* March 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soy-O was a soymilk with "no oils added" that was sort of debuted in Nov. 1986 in 20 white unprinted Tetra Brik cartons in 3 flavors, with a flyer, but was never really launched. That was just when they decided to switch their manufacturing out of Japan and wanted to focus on WestSoy and malted. Also things did not go well with the manufacturer. Lehmann wrote in Nov. 1986: "Westbrae O-Soy. The Honorable Soy Drink. Pliable foil packs. 6 oz. Organic soybeans, no oil added. Plain, carob, and vanilla flavors."

In February 1988 Westbrae merged with Vestro Foods, a company in southern California which is not in the natural foods industry. A publicly held company traded over the counter (NASDAQ symbol: VEST), Vestro is bigger than Westbrae; though they do not have a lot of employees they do have a lot of money and marketing experience. The company that never sold out just sold out. Gordon is still president. They have specialized in finding niche food companies and helping them develop in their marketing. Westbrae will be looking for more growth by acquiring other natural foods companies or products that meet their quality standards, and by launching some new products of their own. Everyone is very pleased.

Their WestSoy soymilk in Tetra Brik cartons is made in Hong Kong [by Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy] and selling very well. Sales of liters especially are up. Westbrae gets their soymilk through Eastern Gates Native Soy Products; Westbrae is not sure if they are the manufacturer or distributor. The Malteds are made domestically. The source is a secret. Sales are picking up after a recent price drop. Address: Emeryville, California.

5376. Abersold, Vance. 1988. New developments in soymilk, Stephen Story, and Great American Foods in Salt Lake City (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His soymilk was launched in Feb. 1987. It is selling very well to the people who are allergic to dairy products and to vegetarians. Its features are the best taste (because of a new process, and the lowest price, since it is sold dry primarily by direct mail). He got interested in 1981 when he was involved with Roy Brogue at the company Meadowfresh Farms (no longer in existence) in Salt Lake City, Utah, developing whey-based milks. The company was Mormon and the products used in food storage programs because they last far longer than powdered milk. But he

grew interested in soymilks because whey-based milks are high in lactose and because of a big breakthrough in tofu and soymilk development made by Steven Story, a student of Dr. Clayton Huber at Brigham Young University, Dept. of Food Science and Nutrition. Huber was the head food nutritionist on the NASA Space Program. Huber fought the dairy industry when Meadowfresh was launched, and prevailed in every suit in every state. Story also made breakthroughs on whey-based milks. He is a genius at food development, and is now a consultant in Salt Lake City (Tel. 801-298-0188) doing developmental work for food companies. Vance got into this because of long-time undiagnosed serious allergies to milk products.

Story was a one-third owner of Great American Foods which started in about 1986 in Salt Lake City, as a division of Magic Mill (which makes stone mills), which is in turn a part of the SSI corporation. They produce the product (plus many other products, such as whey-based diet drinks/liquid meals), and presently sell it to Abersold and to Sovex. Sovex retails it for about twice as much as Abersold under the brand "Better than Milk." Magic Mill also sells its own Magic Mill Soy Milk. Steve is presently dissolving his partnership. He does not know of anything that Story has published. His product Sno-e contains a small amount (about 1%) of sodium caseinate, but in the extraction process all of the allergens are removed so it can be called "non-dairy." One of his goals is to develop a second product that does not contain any sodium caseinate. Yet the sodium caseinate in the present product is a key to the flavor. Address: 2730 Morley Way, Sacramento, California 95864.

5377. Ballard, Bob. 1988. History of Great Eastern Sun (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The company was founded in March 1982 by Barry Evans (who is now the sole owner and lives in Los Angeles). He may have been joined by Martin Roth and John Belleme. The original purpose was to be a distributor for the miso made by American Miso Company. But it soon decided to import Japanese macrobiotic products from Mitoku (the first order was placed in Jan. 1982) and later became a manufacturer. Address: 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730 or 704 252-3090.

5378. Kerrigan, Stuart. 1988. "Modern amazake," Price Rice, and future plans to make seitan (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Stuart uses the term "modern amazake" to refer to that made with purified commercial enzymes. After the sale of Price Rice, which was a financial disaster, Mary Lee worked with a dessert company in Florida making pies with modern amazake out of her home. Then she moved to California. Stuart has just signed a contract to work with Daniel's of Boston, Massachusetts, making seitan and amazake.

Note 1. In Sept. 1979 Stewart Kerrigan (1850 South Lake Lotela Dr., Avon Park, Florida 33825) ordered the books *Tofu and Soymilk Production,* and *The Book of Tempeh,* by Shurtleff and Aoyagi from New-Age Foods Study Center in California.

Note 2. According to Lenny Jacobs (3 July 1992) Daniel's of Boston is not yet open and may never open. The owners of the restaurant building in Brookline have been paying rent on it for years. Brother Ron Pickarski helped to develop the menu. Address: Florida.

5379. *Deccan Herald* (*India*). 1988. Company notes: Noble Soya. March 11.
• ***Summary:*** "Noble Soya House achieved net sales of Rs. 136.47 lakh during the first 6 months ended December 1987, against Rs. 83.69 lakh in the previous period. [Note: Monthly sales were up about 22% during the second period.] Due to the company starting production only on Feb. 12, 1987, there are no corresponding figures available.

The company suffered a gross loss of Rs. 72.55 lakh (Rs. 47.08 lakh). After depreciation of Rs. 16.62 lakh (Rs. 41.79 lakh) net loss stands at Rs. 89.17 lakh (Rs. 88.87 lakh).

5380. Speck, Peter. 1988. Re: History of soymilk and tofu products at Galactina Ltd. Letter to William Shurtleff at Soyfoods Center, March 11. 1 p. Typed, with initials on letterhead.
• ***Summary:*** Galactina S.A. makes dietetical and pharmaceutical products. Their first soy product, Naga Sonda, was launched in 1969 [actually in 1964 by Nago, Naehrmittel AG] in dry form. In 1981 the same product was introduced in liquid form in Tetra Pak. These were followed by Biodelis, Biodelis Plus, Vita Drink, and Vita Drink Plus.

The company introduced 4 tofu varieties in early 1985. Others followed. Address: Galactina Ltd., CH-3123, Belp, Switzerland. Phone: (031) 81 11 11.

5381. Tsui, Hilton. 1988. Soymilk in Hong Kong. New developments with Vitasoy (Interview). *SoyaScan Notes.* March 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soymilk manufacturers in Hong Kong include: 1. Hong Kong Soya Bean Products Co. Ltd., makers of Vitasoy; they had 92% of the soymilk market in 1987, down from 94% in 1986. 2. Coca Cola Co., makers of Hi-C; 8% of the market, up from 5.5% in 1986. When Hi-C was first launched in 1981 it was a total flop. But the new Hi-C is much improved, with very good taste. The five flavors include Honey-Dew Melon and Peanut. This is now Vitasoy's biggest competitor. 3. President Enterprises Corp. of Taiwan has a branch in Hong Kong. 4. Winner, which was purchased by Beatrice in about 1985. They used to make

Doll brand soymilk, which was also sold in 1987 New York and San Francisco Chinatowns. But Doll is no longer found in the U.S. or Hong Kong. 5. Dairy Lane, Hong Kong's biggest producer of cow's milk, launched Delite soy ice cream in 1987, in 3 flavors (wildberry, rocky road, mocha chip). The packaging and flavor are almost identical to Tofutti; it could be licensed. They could be making soymilk. Hilton has never heard of Eastern Gates Native Soy Products in Hong Kong.

Vitasoy USA did NOT (as a competitor alleged) loose $700,000 on soymilk in 1987. They do cooperate with Dun & Bradstreet but do not break out financial information by product line. Last year Vitasoy USA was profitable as a company.

The company's goal for 1987 is to pass Westbrae to become number 2 in the U.S. soymilk market, by penetrating the areas where distribution is now nonexistent or weak: Texas, the Pacific Northwest, the Sun Belt, and the Midwest. But they may be number 1 in northern California, and number 2 in California as a whole, the northeast and perhaps the southeast. Nationwide he thinks they are now number three. Address: Vitasoy USA, Brisbane, California.

5382. Little, Sybil. 1988. Soybeans: A food for our times. *Oakland Press* (*Pontiac, Michigan*). March 16. See also p. D-3. "Soybeans bring variety and good health to the table."
• ***Summary:*** Recently, a soybean buffet was held, re-creating the soybean menu served at the Ford Exhibit of the Century of Progress on Aug. 17, 1934. It was part of a celebration of the 125th anniversary of Henry Ford's birth. Included on the menu were soybean products–cheese, crackers, croquettes, buttered green soybeans, pineapple ring with soybean cheese and dressing; bread, biscuits, soybean butter, soybean crust on an apple pie, soybean milk, soybean coffee, assorted cookies and cakes and candy. Ford's personal baker, Jan Willemse, now in his 80s, supervised the affair.

Ford had an intense interest in agriculture; some say he did more for agriculture than he did for the automobile business. his roots were in farming and his unwritten mission was to ease the burden of the farmer's life. His Fordson tractor revolutionized agriculture as the Model T had done for transportation. In 1932, Ford issued orders to concentrate on soybean research. George Washington Carver began studying the soybean in 1904 at the Tuskegee Institute in Tuskegee, Alabama.

5383. *Oakland Press* (*Pontiac, Michigan*). 1988. Soybeans bring variety and good health to the table: Bean pops up in everything from soup to nuts. March 16. p. D-3.
• ***Summary:*** Contains 5 recipes from INARI and 2 from Eden Foods (using Edensoy soymilk): Pea and soynut salad. Dandy soynut salad. Super Soy energy bar. Soynut butter. Soynut butter soup. Banana bread. Basic creamy white sauce.

5384. Nordquist, Ted. 1988. New developments with tofu and soymilk in Sweden (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ted is working with three of Sweden's largest food companies: (1) Semper AB, the country's largest milk company, used to be an independent milk research company. Semper now makes an infant formula, and two flavors of soy drink for adults, both from soy protein isolates. The later is poor tasting. Semper is now wholly owned by Arla, the Swedish milk company. (2) Karlshamn Oliefabrik, Sweden's largest oils and fats company, that is also the largest manufacturer of ice cream and margarine. They used to be a soybean crusher, but now they import their oil. Karlshamn has the Swedish franchise for Ralston Purina. They have a newsletter The Soybean Magazine that they use to market Ralston's products. They import isolates, which Semper buys for use in their infant formula (Soja Semp) and adult soymilks. (3) Trensums Musteri, a juice company owned by Mark Jungstrum, who owns the only 3 Combibloc machines in Sweden. He packages Knorr soups in them. The resources are unlimited. The present focus is on developing a natural soy base free of beany flavor and evaluation the economics of the product. From this base they will make a line of products, including dairylike products and non-beany tofu. Ted has a contract with Trensums to receive a 2% commission on all soy products made in the new plant, since he basically developed the plant, which is inside the Trensums Musteri juice factory located in the south of Sweden, near Karlshamn. He also has a contract with Semper. Semper supplies Karlshamn with all their milk products. Roughly 12 million crowns ($2-3 million) has already been invested in soy equipment and R&D at this plant in Tingsryd, which produces about 4,000 liters/hour of soymilk.

This project began in 1983, when Luke Lukoskie came to Ted with a proposal to cooperate with Alfa-Laval, since Ted was the only tofu maker in Sweden, where Alfa-Laval is located (in Lund). Luke had a contract with Alfa-Laval to develop tofu and other soy products. He wanted a continuous tofu making process. Alfa-Laval had a plant installed in his former factory, which burned down. At one point Lukoskie was considering a lawsuit against Alfa-Laval. In 1984 Alfa-Laval began moving the soy development operations from Lund to Singapore. At the time they had sold one plant to China, with plans to sell 2 more if the first proved successful.

Ted met with the people from Talmo Gordon, who were planning to build a soymilk plant in Ludvika, funded with government money, but dropped the idea after Semper and Ted showed them that their concept was not feasible. The owner of the plant in Tingsryd is an expert at product development, including foods such as mushroom soups in German Combibloc that cannot be done in Tetra Pak. So Ted left his cooperation with Alfa-Laval and started developing with him in Tingsryd. They signed a contract. Ted goes there

for 3 days a week. The sales of Aros grew 70% last year, in part because of new labels. All products are doing well. He makes an average of 2,000 kg (4,400 lb) of tofu per week. By vacuum packing his tofu then pasteurizing it at 95ºC for 45 minutes, then quick cooling it in water at 4-6ºC, he gets a shelf life of 85 days at 4ºC under ideal conditions vs. 30 days shelf life if it is not vacuum packed. None of Sweden's three big supermarket distributors carry his tofu, so he distributes to supers himself. The three distributors that serve the country's 65 health food stores do not have refrigeration. There are no tofu companies yet in Norway, Denmark, or Finland. Of all of Aros sales, 55% is regular tofu, followed by marinated tofu (*Tofu Marinerad*) 15%, then three other products. Nutana makes a canned tofu (made entirely from isolates) in cubes in a sauce. Lima Foods sells a bottled tofu. There are 8 million people in Sweden.

Tomsun is trying to register the trademark Jofu (their nonfermented soy yogurt) in Sweden. This may upstage Ted's attempt to trademark Sofu for soymilk and wipe out his trademark on the term "Tofu."

Semper is interested in having the new soy base be low in oligosaccharides so that their infant formula does not cause flatulence. The following oligosaccharide levels have been found in European soymilks: Alfa-Laval's plant in Colmar, France, that uses ultrafiltration 0.02 gm/liter; Alpro in Belgium 0.28 gm/liter; Alfa-Laval's pilot plant in Sweden 0.43 gm/liter; the STS plant built for DE-VAU-GE in Germany 0.58 gm/liter. By using ultrafiltration to make tofu you can both remove the oligosaccharides and reduce the water content. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

5385. Nordquist, Ted. 1988. New developments with tofu and soymilk in Sweden. Alfa-Laval in China (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** One of Ted's next major projects is a Tetra Pak tofu; Morinaga does not have a patent in Europe. Also, Ted skips two of steps in Morinaga's patent. He intends to flood Europe with an aseptic tofu. His firm tofu will use ultrafiltration instead of isolates to get the firm texture. No that isolates can also be made using ultrafiltration, without hexane solvent. He has used calcium sulfate, which gives a better flavor, but it is difficult because it is not water soluble. This is where the Combibloc carton comes in. He can made Jofu-style soy yogurt with whole berries in it in an aseptic Combibloc carton.

Alfa-Laval is talking with the Chinese about selling them a plant to make continuous process tofu using ultrafiltration. A man who works for Alfa-Laval and works with Ted at Trensums has told him this, in confidence. He was in China for 6 months setting up Alfa-Laval's first plant there. The idea was that when this plant was proved successful, two additional plants would be installed. Ted does not think the latter two have been installed yet. He told Ted about all of the problems that Alfa-Laval has been having there in scaling up pilot plants. This is very confidential. If it is true, it could be grounds for a lawsuit.

Ted's idea for using ultrafiltration to make an aseptic tofu is partially Luke's idea. But it also an idea that is tied in with using a bland soy base. For the last 5 years 90% of Ted's research energy has gone into getting a bland soy base. When that is ready he will make an aseptic tofu. Ted could possibly have an aseptic tofu packaged in Combibloc on the market by mid-1989 that would use a combination of GDL and calcium sulfate coagulants, and use ultrafiltration to concentrate it. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

5386. Cilensek, Cynthia. 1988. Soybeans and soldiers. Davis' Souter working in war-torn Nicaragua. *Daily Democrat* (*Chico, California*). March 27.

• ***Summary:*** To help alleviate malnutrition, Souter initiated a soybean project. "We bought $800 worth of soybeans, an economical source of protein. We then taught the students how to plant them and how to cook them." The students were mostly men who generally didn't know how to cook. They learned how to prepare soybean milk, soybean enchiladas, and soybean burgers. Campesinos for the month already trained in the use of soybeans were scheduled to train other campesinos in the war zone. To update the training of the graduates, Souter and others in her project gathered at a cooperative near Matagalpa. They practice cooking soybean burgers on a traditional Nicaraguan wood burning rock stove.

5387. Nordquist, Ted. 1988. Comparing Tetra Pak and Combibloc as aseptic packaging systems. The Morinaga aseptic tofu patent (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In the Tetra Pak system, the laminated packaging film that comes on a roll, is run through hydrogen peroxide to sterilize the surface then folded into the shape of a tube around a stainless steel tube filled with UHT sterilized soymilk, inside a sterile chamber. The packaging material is seamed longitudinally. The packaging tube, which is always filled with soymilk, is crimped, sealed and cut below the soymilk level, so that they contain no air.

In the Combibloc system, the laminated packaging material comes in the form of individual flattened sections of a tube. These are fed into an chamber made aseptic by either nitrogen or steam, containing no air. The flat sheets are fed in two at a time and the bottom of each is sealed to form a box. These are then filled with food material, which may contain particles or chunks, such as diced vegetables; Tetra Pak cannot handle such pieces which interfere with sealing of the tube. Finally the top is sealed; some nitrogen gas remains

atop the food. A Combibloc machine can be 4 times the size of a Tetra Pak machine, but it can handle various length cartons having the same bottom size (200-500 ml, or 1 liter), whereas Tetra Pak needs one machine for each package size. The Combibloc unit can seal at a much higher temperature than Tetra Pak.

A sterile/aseptic filter, which is very expensive, is used to feed in things (such as volatile flavors) which are heat sensitive and thus should not be run through the UHT unit. The filter eliminates bacteria. Morinaga's 4-step process (1) sterilizes the soymilk with a UHT unit, (2) cools it to 20-25ºC, (3) introduces GDL and calcium chloride coagulants through an aseptic filter, then runs the mixture into Tetra Pak cartons, which are sealed and (4) reheated by immersion in a hot water bath to cause coagulation, which is finally cooled. Morinaga does not have a patent on their Tetra Pak tofu process in Europe. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

5388. **Product Name:** [Tofu with Cheese-Sauce].
Foreign Name: Tofulette met Kaassaus; Sauce Fromage; Kaesesosse.
Manufacturer's Name: Jonathan P.V.B.A.
Manufacturer's Address: Antwerpsesteenweg 336, B-2080 Kapellen, Belgium. Phone: 03/664 58 48.
Date of Introduction: 1988. March.
Ingredients: Tofu (soy-proteins)*, peppers, onions*, sesame seeds, sea-salt, vegetable extract, herbs. Sauce: Cheese*, soymilk*, sunflower oil*, wheat flour*, sea-salt, vegetable extract, spices. * = Organically grown.
Wt/Vol., Packaging, Price: 300 gm.
Nutrition: Minerals 1.97%, protein 13.4%, fat 13.9%, carbohydrates 7.13%. 207 calories (Kcal) per 100 gm.
New Product–Documentation: Label. Received 1988. 6.25 by 5.25 inches. Card stock. Color photo of two tofu patties in sauce with item name in white on orange. "Vegetable product." Form filled out by Jos van de Ponseele. 1989. Jan. 11. This product was introduced in March 1988.

5389. **Product Name:** [Oriental Rice].
Foreign Name: Oriental Rice.
Manufacturer's Name: Jonathan P.V.B.A.
Manufacturer's Address: Antwerpsesteenweg 336, B-2080 Kapellen, Belgium. Phone: 03/664 58 48.
Date of Introduction: 1988. March.
Ingredients: Brown rice*, soy sprouts*, onions*, carrots*, mushrooms*, sunflower oil*, wheat flour*, soymilk*, vegetable extract, curry, sea-salt, spices. * = Organically grown.
Wt/Vol., Packaging, Price: 300 gm.
Nutrition: Minerals 0.69%, protein 2.1%, fat 0.48%, carbohydrates 13.2%. 65.5 calories (Kcal) per 100 gm.
New Product–Documentation: Label. Received 1988. 6.25 by 5.25 inches. Card stock. Color photo of rice with various vegetables with item name in white on orange. "Vegetable product." Form filled out by Jos van de Ponseele. 1989. Jan. 11. This product was introduced in March 1988.

In the list of ingredients in four languages, soy sprouts are called *sojascheuten* in Belgian-Dutch, *pousses de soya* in French, *Sojakeime* in German, and "soy sprouts" in English.

5390. Kakiwara, Kenjiro. 1988. Tônyû gyôkai no genjô [Present status of the soymilk industry in Japan]. *Daizu Geppo* (*Soybean Monthly News*). March. p. 18-24. [Jap]
• ***Summary:*** In Japan, 1977 was the first year that a significant amount of soymilk was produced, according to statistics from the Nosuisho Shokuhin Yushi-ka. Production then rose steadily and rapidly each year to a peak of 116,724 tonnes in 1983. Thereafter it fell for the next three years, dropping to 84,103 tonnes in 1984, 55,354 tonnes in 1985 and 43,392 tonnes in 1986 (only 37% of the peak 1983 figure). About 99% of the products are packed in paper cartons and most are long-life (aseptic).

During the peak years of 1983 about 50 companies made soymilk in Japan; that number has now shrunk to ten. The top three manufacturers (Kibun, Mitsubishi, and Marusan-Ai) had 71% of the market in 1983 and 76% in 1987. The top five companies (including Meiji Nyugyo and Nisshin Seiyu) now have 85% of the market. Production (in 1,000 tonnes) and market shares (in parentheses), estimated by the author, for the top 5 manufacturers in 1983/1987 are as follows: Kibun 41/14 (35%/37%); Mitsubishi Kasei 20/10 (17%/26%); Marusan-Ai 20/5 (17%/13%); Meiji Nyugyo 10/2 (9%/5%); Nisshin Seiyu 7/1 (6%/3%); Other 19/5 (16%/16%).

According to the Japanese Agricultural Standards (JAS) there are 4 types of soymilk. (1) "Soymilk" (*Tonyu*), must be made from whole soybeans, and contain 8% or more solids and 3.8% soy protein; It has a 3% market share. (2) "Adjusted soymilk (*chosei tonyu*), made from whole or defatted soybeans plus added vegetable oil and sweeteners, with 6%+ solids and 3%+ soy protein has a 52% market share. (3) "Soymilk drinks" (*tonyu inryo*), similar to (2) but with 4-6% solids and 1.8%+ soy protein, have a 44% market share. (4) "Soy protein drinks" (*daizu tanpaku inryo*), made with isolated soy proteins, must have 1.8% protein. It has only a 1% market share.

The author then gives three reasons for the boom and bust, shows graphs of who is buying, how often, and at what age. Those over age 40 buy more soymilk that those in their teens. Still, many Japanese have never tried soymilk. Education is necessary to re-popularize it. Address: Mitsubishi Kasei Shokuhin K.K., Tonyu Hanbai Honbu.

5391. Lubbe, James. comp. 1988. Abbreviated history of the Bountiful Bean Plant, Madison, Wisconsin. Bountiful Bean, 2049½ Atwood Ave., Madison, WI 53704. 23 p. Unpublished

manuscript. [4 ref]
• ***Summary:*** The company was founded in 1978. 1. History table by year showing accounts, products, equipment, number of people, wages, other. 2. Newsletter and newspaper ads and articles. 3. Brochures, product announcements & job application descriptions. 4. Product labels.

Ad. circa 1983-84. Bountiful Bean Soyfood Deli. Macrobiotic dietary principles. Offers: fresh tofu, tofu pies, tabooli, toasted tofu, nori rolls, 4 soymilk flavors, 4 varieties of bulk miso, millet / tofu pudding, nutburger sandwiches, tempeh books, mini-tours of plant, spicy tofu, more! And: lowest soyfood prices in town, free samples and recipe sheets, managed by the workers. low-cost carry-out foods. 903 Williamson St. 251-0595. from: 7-6 Sun-Fri.; 7-4 Mon.; 10-4 Sat.

Update talk with Deborah Bachmann and Elizabeth Hanson. 1991. Nov. 1 and 11. In March 1990 Bountiful Bean Soyfoods moved from Madison, Wisconsin, to 620 Main St., Ridgeway, Wisconsin. Richard Kraemer and Elizabeth Hanson began to produce soyfoods during the last week in June, renting from the cooperative, then they purchased the business on 21 Aug. 1991. Richard and Elizabeth are married with a son, are in their late 40s, and come from Oseola, Wisconsin; he is a carpenter (and was a pastor) and she a nutritionist. They are both very enthusiastic about tofu and the business. The co-op has now been changed to a private business. They work full time and they have three employees–1 full time and 2 part time. They are thinking of re-launching tempeh and soy yogurt. The cooperative got what they felt was a good price for the business. People who worked more than 6,000 hours (Chris Burant [8 years], Deborah [almost 10 years], and a woman named Solie) each got a large chunk. Another 11 people who had worked in the past were also given part of the money. The smallest amount of money distributed was $250.00. Deborah and James Lubbe are no longer with the company. Bountiful Bean Soyfoods now makes tofu, Herb Tofu, plain or vanilla soy milk, Tasty Tofu, Hummus with Tofu (and garbanzo beans), and Taboolie with Tofu (salad, which also contains bulgar). They have discontinued tempeh and soy yogurt.

Update: Talk with Roger Bindl. 1993. April 15. Richard Kraemer would like to sell Bountiful Bean in Ridgeway and Roger is considering buying it. 85% of the company's sales are in Madison, Wisconsin. Address: Madison, Wisconsin.

5392. Wood, Rebecca. 1988. Savor scrumptious soymilk. *Bestways.* March. p. 12, 15.
• ***Summary:*** There are two types of ready-made soymilk available. The most common comes in aseptic packaging which, unopened, has a shelf-life of one year. It costs around $2.50 a quart. The second type is fresh soymilk at $1.30 a quart. Homemade soymilk is the most economical. It costs around $.22 per quart and takes about 30 minutes to make from scratch. A major problem with homemade soymilk is its bean-like flavor. At this time, there are seven nationally marketed soymilks. Address: Carson City, Nevada.

5393. Nordquist, Ted. 1988. Island Spring, Alfa-Laval, and continuous tofu production using ultrafiltration (Interview). *SoyaScan Notes.* April 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1983-84 Alfa-Laval lost huge amounts of money as the dairy industry in Europe continued its steady downhill slide. They had to cut back on expenses and increase income. So they dropped many long-term research projects and required that those which were not dropped become profitable. They have always charged high prices for equipment and high labor rates for repair and maintenance. They had a little soymilk plant in Lund which they used to show to anyone who was interested. Now they started to charge for tours and demos. At that point Ted discontinued his work with Alfa-Laval and went to work with a juice company. Within a year Alfa-Laval had turned things around. A little later they moved John Wilson and their soymilk operations to Singapore.

Island Spring's work with Alfa-Laval started out well. They installed an ultrafiltration unit at Luke's plant so that he could do R&D work on continuous processing of tofu, and they sent many high-level people over to work with him. But when the crunch came, they dropped him. The ultrafiltration unit may have burned in his fire. Then Luke began to work with STS.

Luke has a contract with Alfa-Laval stating that continuous process production of tofu using ultrafiltration is his idea. He has a right to 6% of the sale value of all equipment that Alfa-Laval sells using ultrafiltration to make tofu. Ted is not aware that Alfa has sold any such equipment so far, but for some reason Luke is not happy with his relationship with Alfa and may be considering a lawsuit. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

5394. Vansickle, Janice. 1988. Soys take root in organic market. *Windsor Star* (*Essex County, Ontario, Canada*). April 9.
• ***Summary:*** Jon Cloud is a transplanted "dirt farmer" from mountainous Vermont and now the production manager for Soy City Foods. Their products include soymilk, tofu, tempeh, falafels, burgers, and granola. Cloud became a [Vietnam] war protestor while in college, and opted into being a 60's back-to-the-land disciple after burning out in the urban jungle. The Organic Crop Improvement Association in Ontario has attracted 300 members during its five years of existence and 50 now have their farms certified as organic. A photo shows Jon Cloud with company products such as Soyettes, Grain Tempeh, and Falafels. Address: Star Agricultural Reporter, Ontario, Canada.

5395. Rose, Richard. 1988. Re: Personal observations on soyfoods at Natural Foods Expo West in Anaheim. Letter to William Shurtleff at Soyfoods Center, April 12. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "Enclosed is all the information on soyfoods and amazake I could find at the 1988 Expo West natural foods show.

"Notable trends:

"(1) Only 1 soy frozen dessert present, Ice Bean.

"(2) Rice Dream has expanded into frozen, coated bananas.

"(3) The Soyfoods Pavilion was not delineated in any way. The banner was not present, nor were signs. No sufficient answer as to why this was so was available.

"(4) Only 2 tempehs present, Tempehworks and White Wave.

"(5) Only 1 tofu present, White Wave.

"(6) Kawanishi and Airtight had a double-wide booth to show tofu making equipment and supplies.

"(7) Only 2 soymilks present, Vitasoy and Westbrae.

"(8) Soya Kaas was not displayed in the Tree of Life booth.

"(9) As many soyfoods companies were out of the Pavilion as in it. It looks like they did not sell out all the space in the Pavilion.

"(11) Gary Barat has gone off the deep end. Ask me how on the phone.

"(12) Mori-Nu had a disorganized booth that was obviously conceived by someone who thought this would be what natural fooders would want to see. It was dumb... a walking Mori-Nu Tofu box?

"Depending on who you talk to, the S.A. [Soyfoods Association] meetings were either incredibly wonderful or absolutely disgusting. I was not present at them.

"Notable events: Gary Barat is only a board member, Gordon Bennett is Pres., Yvonne is Treasurer, and Peter Golbitz is VP. Danielle [of Morinaga] and Jack Mizono [of Azumaya] were elected to the board. The single big program for the S.A. is Soyfoods Month in April 1989. Budget is $200/month to keep the lights on. Gary was talking about stiffing Smith Bucklin and Steve McNamara. There was no discussion with me or at the meetings about my proposal. Danielle threw a snit to get on the board, as did Yvonne.– Richard."

The Rose International letterhead states: EasyLink Mailbox 62978515. Telex 990027 (Rose Intl UQ). Address: President, Rose International, P.O. Box 2687, Petaluma, California 94953-2687. Phone: 707-778-7721.

5396. Astin, Paul. 1988. Soy Nicaragua. *Plenty Bulletin* (*Davis, California*) 4(1):1-2. April.

• ***Summary:*** "I spent a total of ten days in Nicaragua. I went to the University of Central America to see if I could find any students. I found myself in the offices of the Department of Agricultural Administration. We went to visit Ciudad Sandino. We saw two soy posts there, both of which unfortunately had already sold all of the day's soy milk. They were very excited about the possibility of establishing a successful, cooperatively-run soy bean growing and soy milk producing operation."

Note: For many years, Plenty had two offices: One in Summertown and one in Oakland, then Davis California. In 1987 the offices were consolidated in California, and in the spring of 1988 publication of the Bulletin started in Davis. Address: Tennessee.

5397. Golbitz, Peter. 1988. Soya interview: Reformulations + staying power = success for Vitasoy USA [Yvonne Lo]. *Soya Newsletter* (*Bar Harbor, Maine*). March/April. p. 4-5.

• ***Summary:*** Vitasoy USA distributed nearly 1,25 million gallons of soymilk to the Oriental and health food markets in 1987. It is producing 20.8 million gallons annually, with total exports to 20 countries exceeding 2.7 million gallons. Vitasoy now employs over 1,000 people and sales have reached over $105 million. Their maple-sweetened soymilk drink missed its mark in 1984. In August of 198, the company released its new Creamy Original, Rich Chocolate and Carob Supreme soymilks. In early 1987, Vanilla Delite was added to the line. Vitasoy USA reports that the new products are doing very well, with sales growing 50-60% a year, and that they now represent 25% of the company's total soymilk sales.

Vitasoy USA's Yvonne Lo discusses success for Vitasoy USA. "Our bread and butter comes from the Asian-American marketplace. Our traditional line has a more pronounced beany flavor, and we do that intentionally because it's how most Asian palates prefer the taste of soymilk. It tastes a lot sweeter than our health food line. Back in '82 the company in Hong Kong was faced with a decision because of the unstable political situation. At first, we decided to build a plant here in the U.S., but then a year later the situation in Hong Kong stabilized. We did our numbers again, and in '84, we decided that building a plant in the U.S. at that time would be like putting the cart in front of the horse. If we increase our soymilk sales by another 50%, we would be in a position to sustain a new plant."

Q: What will it take to move soymilk beyond specialty markets and into the mainstream? Lo: "I think if I were to rank them in order of priorities, I would rank consumer education as number one. Number two would be positioning soymilk in the dairy case. And, number three would be a lot of advertising dollars."

Q: Where does taste fit in? Lo: "I think most manufacturers have come very close to producing a fairly good tasting soy-milk."

Q: What happened with the first health food line in 1984? Lo: "Well, I think the first time around we missed the mark on taste and formulation. We've always believed

there is a fine line between success and failure." Address: Soyatech, Bar Harbor, Maine.

5398. *INTSOY Newsletter* (*Urbana, Illinois*). 1988. Processing short course in Sri Lanka draws participants from nine countries. No. 39. p. 1-2. April.
• ***Summary:*** A total of 21 people from nine countries attended the course. The course, which covered all major aspects of soybean processing for food uses, was held from Jan. 11 to Feb. 11, 1988, at the Soyabean Foods Research Centre in Peradeniya. INTSOY Research Associate Wilmot B. Wijeratne acted as course coordinator. Cecil Dharmasena, the Sri Lankan national soybean coordinator, handled local arrangements for the course. Ellen Jayawardena and Fauzia Hewavitharana served as the principal instructors from the staff of the research center.

Epafuladito M. Kiwanuka operates Ken-Soya Foods Limited in Nairobi, Kenya. The company makes full-fat soy flour by milling dry-roasted soybeans. The FAFFA Foods Plant in Addis-Ababa, Ethiopia, was represented by Yehualashe T. Demissies and Kassech Abegaz Mersha. The food plant is an independent company sponsored by the Ethiopian government and the Swedish International Development Authority. In collaboration with the Ethiopian Nutrition Institute, it produces a low-cost, protein-rich supplementary food product that is used primarily for infants and young children. The product contains 18% defatted soy flour. Sales have recently reached 2,000 tonnes/year.

Somendra Thapa from Indreni Soyabean Industries in Kathmandu, Nepal, came to the course with a special interest in the manufacture of soymilk and dairy analogs. His company is establishing a large-scale soymilk facility based on technology developed by Alfa-Laval. The Institute of Agricultural Research and Training (IART) in Nigeria was represented by Siddi (Sidi) Osho, a food technologist, and Margaret Ogundipe, a home economist. IART has developed a collaborative program with the International Institute of Tropical Agriculture to promote increased home and community use of soybeans as food. Judith Edmister, a food scientist from the Mennonite Central Committee (MCC) in Dhaka, Bangladesh, also attended the conference. MCC has worked on promoting home consumption of soybeans as a means to overcome the steady decrease in protein consumption in Bangladesh. Address: Univ. of Illinois, Urbana-Champaign, 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, Illinois 61801. Phone: 217-333-6422.

5399. Koo, Winston W.K.; Kaplan, L.A.; Krug-Wispe, S.K. 1988. Aluminum contamination of infant formulas. *J. of Parenteral & Enteral Nutrition* 12(2):170-73. April. [17 ref]
• ***Summary:*** Aluminum concentration was measured in 175 samples of infant formulas. Among these, 5 brands of liquid soy formulas were tested. The aluminum content in micrograms per liter was as follows, first the range then the median: Isomil 603-1084 (756), Isomil SF 910-1460 (1286), Prosobee 684-2346 (1427), Nursoy 557-1840 (709), and Soyalac 455 (1 sample). Thus the soy-based liquid infant formulas were found to have 455 to 2,346 micrograms/liter of aluminum; the average value was 964 micrograms per liter of aluminum.

Three powdered soy formulas were tested. The aluminum content is given in micrograms per gram: Prosobee 5.3-10.2 (6.6), Nursoy 4.19-4.24 (4.22), and Soyalac 3.5 (1 sample).

"Aluminum content was lowest in human milk (less than 50 micrograms/liter), whole cow milk,... skim milk, and cow milk with 2% fat... We speculate that raw materials such as soybean, additives such as calcium and phosphorus, manufacturing processes and storage containers are potential sources of contamination of infant formulas.

"Aluminum is the third most abundant naturally occurring element, and the most common metallic element, comprising approximately 8.8% of the earth's crust. It is therefore not surprising that aluminum is ubiquitous in nature... Plants may accumulate different amounts of aluminum depending on the aluminum content and acid-base status of the soil. It is conceivable that soybeans could be a potential source of aluminum contamination for soy-based formulas. However, the extremely high aluminum concentration of milk formulas with highly modified protein, carbohydrate or fat contents and multiple additives would support the contention that manufacturing process and the additives such as calcium and phosphorus compounds are other potential sources of aluminum contamination...

"The renal excretion of aluminum is incomplete even in infants with normal renal function. Thus, it would seem reasonable to minimize the aluminum contamination of all nutrient sources, including infant formulas." Address: Dep. of Pediatrics, Univ. of Alberta, Edmonton, ALB, Canada, and Dep. of Pathology and Lab. Medicine, Univ. of Cincinnati, Ohio.

5400. Lang, Kerri-Sue. 1988. A growth market for organic foods. *Country Guide* (*Winnipeg*). April. p. 20-22.
• ***Summary:*** In 1980, the USDA defined organic farming as "a production system that avoids, or largely excludes, the use of synthetically compounded fertilizers, pesticides, growth regulators and livestock feed additives to the maximum extent feasible. Organic farming systems rely upon crop rotations, animal manures, legumes, green manures, off-farm organic wastes, mechanical cultivation, mineral bearing rocks, and aspects of biological pest control to maintain soil productivity and tilth, to supply plant nutrients, and to control insects, weeds and other pests. The Organic Foods Production Association of North America (OFPANA) was founded in 1985. About 25 farmers contract organically-grown soybeans with Toronto-based Soy City Foods.

Organic food producers feel strongly that organic foods

are healthier and more nutritious than conventionally grown foods, but scientific data does not yet support this claim. Ontario farmers requesting organic certification must have abstained from using prohibited fertilizers for at least one year and pesticides for 3 years. Prohibited fertilizers include anhydrous ammonia, ammonium nitrate, diammonium phosphate, most sewage sludge, triple superphosphate, muriate of potash, and potassium chloride. Prohibited soil additives include quick lime and slaked or hydrated lime.

Certified organic growers are inspected annually at their own expense ($150). They also sign a licensing agreement and pay a fee to use the Ontario association's logo. The logo fee is based on gross sales. Organic soybean yields last year were about 20% below the normal provincial average. Jon Cloud, part-owner of Soy City Foods in Toronto, says most of his contract growers experience a 25% yield reduction in their first 3 years of organic production. But a premium for the beans, along with reduced input costs, brings net returns to at least the level that could be expected under conventional crop management.

Last year, about 25 farmers grew organic soybeans on about 320 acres under contract with Soy City Foods. Highest yield was 45 bushels per acre; average was 32 bushels. Right now, says Cloud, the company could use 2,000 acres of organically-grown soybeans. Premium prices for organic beans are $8.50 a bushel. The firm produces several soy-based foods for human consumption. These include soy burgers, falafel (spicy patties traditional in some parts of the Middle East), a base for soy pate, tempeh, tofu, and soy milk. Contract growers are supplied with seed because Soy City wants beans with high protein and low oil content. Organic farmers don't spend $40 an acre on herbicides. Nor do they put tonnes of commercial fertilizer on their fields. And they sell their crops at a 15% to 20% premium. Weeds, he adds, are controlled by non-chemical procedures such as crop rotation and cultivation, which cost little.

Hugh Martin, a soils and crops specialist with the Ontario Ministry of Agriculture and Food says organic farming will be a significant part of agriculture in the future. Most organic growers he works with have an ingrained stewardship ethic and are concerned about soil conservation. He says, "After about 5 years of organic farming, the organic matter content of soil increases. Improved porosity allows water to penetrate quickly. There's less runoff."

Color photos show the storefront of Soy City Foods "Soy Food Information Centre" and 3 of the company's products: Soyettes, Tempeh, and Falafels. Address: Winnipeg, Manitoba, Canada.

5401. Matsuda, Norihiko; Komaki, Masaru; Ichikawa, Ryohko. 1988. [Heat resistance of spores of *Clostridium botulinum* types A and B in soy milk]. *Shokuhin Eiseigaku Zasshi* (*J. of the Food Hygienic Society of Japan*) 29(2):151-55. April. [9 ref. Jap]

Address: Research Lab., Japan Canners Assoc., 460 Karibacho, Hodogaya-ku, Yokohama, Japan.

5402. *Parents* (*Bergenfield, New Jersey*). 1988. Anemia and soy-based formula. April.

• ***Summary:*** "Almost 15% of formula-fed American infants consume soy-based formula. Studies of adults have proven that soy products can inhibit iron absorption, possibly leading to anemia. These findings have been applied to infants as well.

"It has been found, however, that since infants absorb iron differently than adults do, they do get enough iron from soy-based formulas. So there's no need to worry about anemia." Summarized from Pediatrics.

5403. Pecjak, Marinka. 1988. Soja v kulinariki [Soybeans in the kitchen]. Ljubljana, Yugoslavia: Feniks. 138 p. Illust. Plus 16 pages of color plates showing recipes. 21 x 30 cm. [Slv]

• ***Summary:*** Features 300 recipes that use soybeans and soyfoods. Contents: Introduction: In the beginning there was the soybean, almost anything can be made from soya (a diagram shows many food and non-food products), soya is concentrated, soybeans in cuisine, how to use these recipes. Whole soybeans (p. 17): Recipes for coffee, different kinds of spreads, salads, soups, green soybeans with rice, dips with whole soybeans, soybeans with mushrooms, patties, soybean roast, sausages made of whole soybeans, stuffed duck, stuffed trout.

Soybean flakes and textured proteins (p. 40): Spread, party balls, filled bread, soups, pancakes, Australian pie, Buckwheat with flakes, flakes in mushroomy sauce, baked potatoes, stuffed cabbage leaves, chilled stuffed tomatoes, stuffed roasted peppers, stuffed eggplant.

Soymilk and dairylike products (p. 74): Various spreads, soups and salads with herbs, pancakes, baked potatoes, baked noodles, soy pudding, soymilk ice cream, avocado milk. Soy flour and semolina (p. 111): Soy noodles, pasta, pancakes, fish balls, soy bread.

Soy sprouts (p. 122): Soups, salads, sprouts with potatoes, chicken with sprouts and wine, pork with sprouts. Soy sauce and other forms of fermented soybeans (p. 128): Chart showing fermented soy products (incl. miso, tempeh, sufu, natto), salads, soups, chicken with sprouts and soy sauce, meat with fermented black soybeans, roast cutlets, Hoisin dip.

5404. Phillippy, B.Q.; Johnston, M.R.; Tsao, S.-H.; Fox, M.R.S. 1988. Inositol phosphates in processed foods. *J. of Food Science* 53(2):496-99. March/April. [35 ref]

• ***Summary:*** Myo-inositol bis-, tris-, tetrakis-, pentakis- and hexakisphosphates (IP2-6) were quantified in 9 thermally processed or fermented food products (including bran, canned [mung] bean sprouts, canned kidney beans, fried soy

burger, infant formula concentrate and powder, soy isolate, tofu and white bread). Total inositol phosphate content (millimoles/kg dry weight) ranged from 1.35 in white bread to 23.26 in tofu and 26.05 in soy isolate. In all foods analyzed, inositol hexakisphosphate (phytic acid) accounted for greater than 40% of the total inositol phosphates on a molar basis.

Note: Supro 610K soy isolate was obtained from Ralston Purina Co. (St. Louis, Missouri). Address: 1-2. Div. of Food Chemistry and Technology; 3-4. Div. of Nutrition. All: Food and Drug Administration (FDA), Washington, DC 20204. Phillippy's present address: Southern Regional Research Center, USDA, New Orleans, Louisiana 70124.

5405. Quong Hop & Co. 1988. The Soy Deli. Quality & support (Ad). *Whole Foods.* April. p. 86.
• ***Summary:*** "We educate your customers about tofu! Soy Deli has the largest variety, and best dealer support of any tofu company in America." Also in Whole Foods. 1989. Feb. p. 62. Address: South San Francisco, California. Phone: 415-761-2022.

5406. *Soya Newsletter* (*Bar Harbor, Maine*). 1988. Westbrae Natural becomes wholly-owned subsidiary of Vestro Foods. March/April. p. 10. Also in Whole Foods. May. p. 19.
• ***Summary:*** Vestro is a publicly held company traded over-the-counter (NASDAQ symbol: VEST). Westbrae will be looking for more growth through acquisition of other lines that meet their quality standards.

Note: As of Nov. 1990, Vestro Foods is located at 5701 S. Eastern Ave., Suite 330 (P.O. Box 91-1181), Commerce, California 90091. Phone: 213-772-1692.

5407. *Tetra Pak Age.* 1988. Ban the A-word [aseptic]. What's in a name? Too much and not enough. Spring. p. 13.
• ***Summary:*** The term "aseptic" is too clinical, too strange, and too unwieldy to be readily accepted by consumers. The National Food Processors Association, based in Washington, DC, announced a contest for a new generic term that will more attractively reflect the attributes and advantages of aseptic processing and packaging. February 1, 1988 was the contest's deadline. The prize for the contest winner is a $500 savings bond. A recent consumer survey found that while close to 80% of the respondents claimed they had never heard of "aseptic packaging," most had tried a boxed juice product. Address: Tetra Pak Inc., 889 Bridgeport Ave., Shelton, Connecticut 06484. Phone: 203-929-3200.

5408. Huang, Tim. 1988. The Continuous Cooker sold by Bean Machines, Inc. (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Starting 2 years ago Tim helped develop and ran the smaller prototype of this cooker at the University of California at Davis. He had it at Grainaissance while he worked there briefly. Tomsun Foods in Massachusetts ordered the first full-scale model. They never hooked it up and never paid for it. So Bean Machines got it back and Soyfoods of America got it from BMI. It is basically a very simple machine; just a pump and steam injection. It cooks at 250-275ºF. Soyfoods of America makes a private label soymilk for Mrs. Gooch's. Hopes to introduce a non-beany soymilk kefir and yogurt. Address: Soyfoods of America, Duarte, California.

5409. Eden Foods, Inc. 1988. Eden Foods reformulates two flavors of Edensoy (News release). 701 Tecumseh Rd., Clinton, MI 49236. 2 p. May 5.
• ***Summary:*** Edensoy Original and Vanilla flavors now contain no added oil. Thus an 8.45 fluid ounce serving of Edensoy Original now contains 5 gm of fat compared with 2 gm in the vanilla. Carob still has 4.5 gm of fat. The new formulation makes the products compatible with the Diabetic Food Exchanges suggested by the American Diabetic Association. An 8.45 fl. oz serving of Original Edensoy equals 1 milk exchange plus 1.5 fat exchanges.

In May the Edensoy package design won first place in the offset printing category in an international package design competition sponsored by Tetra Pak, Inc. American Soy Products is located only 30 miles from Dearborn, Michigan, where Henry Ford started his soybean research in 1932. Address: Clinton, Michigan.

5410. Rego, Norbert. 1988. Make soya a way of life. *Times of India* (*The*) (*Bombay*). May 9. p. 4.
• ***Summary:*** The key to good health is a nutritionally adequate diet. The Chinese have been consuming the soyabean (Glycine max) for 4,000 years but in India it is a recent discovery; soyabeans are grown mainly in Madhya Pradesh, Uttar Pradesh, Haryana, and Punjab.

The soyabean and the many foods made from it "have now become very popular. We have soya flour, soyaoil, soya milk, and many other products in the market under different brand names like Nutrela, Meal Maker, etc."

Discusses the nutritional benefits of the soyabean.

5411. *American-News* (*Montevideo, Minnesota*). 1988. Plant to bring in jobs. May 12.
• ***Summary:*** The plant, owned by Miller Farm Food Co., Inc., is looking for a place to relocate after losing their lease in Cedar Falls. The Iowa based company uses Pietrus Foods of Sleepy Eye, Minnesota to dry their product. The Miller Farm plant requires approximately 10,000 square feet to operate. Address: Minnesota.

5412. Lyen, Donald. 1988. Brief history of Dragon & Phoenix Ltd. (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Donald came to England from Hong Kong

during the 1950s to study electronics. He founded Dragon & Phoenix Ltd. in London about 22 years ago (in about 1965-66), in order to make tofu, because he liked it and yearned for it. The original location was at [?] Balse Street, Kings Cross, London N1. Later (when?) it was moved to 172 Pentonville Rd., London N1. He also made mung bean sprouts. In both cases, he developed equipment to mechanize the process. He used a liquidizer/blender instead of the traditional stone mill, and a centrifuge to separate the soymilk. He was a pioneer in this area, before Japanese companies did the same thing. At the time there were no other commercial tofu makers in England. However during the mid- to late 1950s there was a small Chinese-run operation in Liverpool (it had no name, and wasn't really a company) that made and sold very small amounts of very hard tofu, probably coagulated with a nigari-type coagulant, not calcium sulfate. It was very expensive, more than 2 shillings sixpence, so it didn't take off. In about 1978 Dragon & Phoenix began making soymilk and selling it mostly to Chinese restaurants. He notes that there is still not much of a market for it, perhaps because the weather in England is not warm enough for it to be served as a refreshing soft drink.

Today, he is sure that Dragon & Phoenix is still the largest tofu manufacturer in England. Yet the market is very small, and he does not advertise or promote his products. He sells only to Chinese restaurants and food stores, not to the health food trade. One reason for the small demand, he feels, is that tofu has so little flavor of its own; you have to know how to cook it to make it tasty. Dragon & Phoenix is only one of Donald Lyen's many businesses. He is still involved with electronics and is the sole agent for a Chinese word processor in the U.K. He is working to convert his tofu plant from a mechanized to an automated one. He was a founder and is presently a member of the European Soyfoods Association. He feels strongly that tofu should not be promoted as a health food but as a basic food for everyone. "Once you classify it as a health food, then you limit your market." Address: 15-18 White Lyon St., London N1 9PD, London, England. Phone: 01-837-0146.

5413. Miller, John; Ledur Brito, Luiz A. 1988. Soyfoods, Soymilk, and the Mechanical Cow in Brazil (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In the early 1980s soy came to be seen as a solution to some of Brazil's food, nutrition, and protein problems. The government tried to encourage production and consumption of soyfoods using various organizations such as ITAL and state and local governments. It was almost social and political mission. Soymilk was one of the major products to be introduced, starting in about 1984. But the quality was poor (beany flavor) so people rejected it and it is no longer available, except for Yakult.

Vanguarda Mecanica is making about 50 of their Mechanical Cows each month. They are selling like hotcakes. "I think they are going to many of the small towns in northeast Brazil (the most impoverished part of the country, where the basic staple is cassava/manioc flour) and the municipalities are into these giveaway programs, either to get votes or to help the nutrition of the people in the dry periods. So they are buying the Mechanical Cow and using it to make soymilk locally. The soymilk made by the Mechanical Cow does not taste very good. Yet it is widely used by many small towns in giveaway programs and school lunch programs. A major function of schools in Brazil is to feed the children.

ITAL's soymilk was sold in a can but is not seen much any more. Also, the government tried to get the people to use soybeans in place of black beans, but that didn't work because the soybeans take much more time and fuel to cook, and the people didn't like the flavor as well. Today, soyfood products have a negative image in Brazil, with the exception of soy sauce, which is widely available and well accepted. Unlike in the USA and Europe, you cannot sell soyfoods on their health benefits. Cholesterol is not of much concern.

There are now 300 health and vegetarian restaurants in Sao Paulo.

The Plano Crusado, which started in 1986, was a major event in modern Brazilian history. This unorthodox economic plan by the new democratic and socialist government was intended to curb inflation. It didn't work. Today Brazil's parallel economy -comprised of people who do not pay a tax on sales and whose economic activity is not recorded–is estimated to be 50% of the total economy, and thriving. The statistics (which omit the parallel economy) indicate that the economy is declining, but actually it is booming. Address: SANBRA, Centro Empresario de Sao Paulo, Av. Maria Coelho Aguiar, 215 Bloco D, 5* Andar, Sao Paulo–CEP 05804–CP60.541. Phone: 545-5459.

5414. Smith, Robert Archer. 1988. Work with Henry Ford, soymilk, and soy ice cream (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In 1931 Bob Smith began his work with Henry Ford when he was placed in charge of the Greenfield Village Experimental Greenhouse, trying to find out how waste materials from farms could be used as plant fertilizers. He grew soybeans at that time. Smith's boss was Robert Boyer, who was in charge of the Chemical Plant, later better known as the Soybean Lab. One night in about late 1931 or 1932, Henry Ford went into the library at the Chemical plant all by himself and read a book titled *The Soybean*, by Piper and Morse. The next day he met Bob Smith at the greenhouse, "Clean out everything, get rid of all the tests. I'll be back this afternoon. I want everything out of here. Serious research on the soybean started at this time.

Later William Morse of the USDA, one of the authors

of the above-mentioned book, sent Bob Smith about 500 varieties of soybeans, which Smith grew out and tested on a 25 acre experimental farm.

In early 1937 Henry Ford drove Smith over to Moir House (pronounced like "More House") and on the way told Smith about how he would like to get rid of cows. Ford asked Smith to work at Moir House to develop a milk that made no use of cows. In July 1937 Bob Smith and his wife had moved into the Square House at Henry Ford's invitation. In 1938 Bob began his work on soymilk at Moir House in Dearborn. Henry Ford had lived in Moir House when he built his honeymoon house named the Square House in 1888. Ford's father had given him 40 acres of land that had timber on it. He set up a sawmill near where Moir House and lived there while he was building the Square House. Ford had the Moir House made into a laboratory in 1937.

Bob knew Dr. Edsel Ruddiman and was aware of his work with soyfoods and soymilk; several other people were working on soymilk too. Dr. Ruddiman had a modern lab with fancy equipment and electricity. But the problem at Moir House was that there was no electricity (except for a little generated by a windmill), and therefore no grinder to grind the soybeans. So Bob decided that instead of using a mill, he would extract the protein from defatted soybean meal that had been produced using a low-temperature extraction unit at Ford's Chemical Plant in Greenfield Village. He immersed the meal in a weak solution of sodium hydroxide to extract the protein, then precipitated the protein with a mixture of hydrochloric and citric acids to make a soy protein isolate. Finally he let the solution settle and decanted off the liquid leaving the isolate solution containing about 4% protein. [Note: The soy fiber must have been removed, probably by filtration.] He neutralized the protein solution with sodium potassium phosphate (which also added key minerals found in milk), bringing the pH up to about 6.7. Then he homogenized in lightly hydrogenated soybean oil (purchased from A.E. Staley Mfg. Co. and others), plus some cane and corn sugars, and vitamins. Within several months in 1938 or 1939, using this new technique based on soy protein isolate, Smith had a soymilk that Henry Ford thought was pretty good. One day after tasting a satisfactory batch, Ford got out the little notebook he carried with him and wrote: "First good milk. No cow." He showed the note to Smith. The Ford Hospital ran nutrition tests on this soymilk using white rats.

For the next 4 years, Bob Smith made soymilk at Moir House using a small-scale batch process that produced only about 1-3 quarts (in 1-quart batches) at a time. He made a small scale soybean dryer (the size of an oil drum) at Moir House. It took a half a day to make several ounces. It was never done on a large scale.

Bob worked in the Moir House until 1942 when Henry Ford asked him to move into the new Carver Laboratory, which was formerly the Dearborn Waterworks, and to set up a continuous-process soymilk plant. It could produce about 150 gallons a day. This soymilk was served mostly at the Ford Motor Co. cafeterias and at the Henry Ford Hospital in Detroit. Most of it was served in the form of ice cream, which was called something like "Frozen Soy Custard" since they were not allowed to call it ice cream.

This ice cream was first produced after the Carver Lab was in operation. They used a typical ice cream formula except that soy cream, made at the Carver Lab by homogenizing about 15% soy oil into the soymilk, replaced the typical dairy cream. So it was a completely non-dairy product. This chilled soy cream was shipped in 10 gallon cans to an outside facility, not a commercial ice cream plant, that made the soy ice cream in batches of about 10 gallons at a time. They made various flavors of soy ice cream, including strawberry, chocolate, and vanilla. It was very popular at the Ford cafeterias and the Henry Ford Hospital.

Smith remembers: "I thought the ice cream was very good. One night in about 1944 or 1945 Henry Ford II had a dinner at the old rotunda and had the press over. Everything was made from soybeans. It was sort of a recreation of the original 1934 World's Fair meal. We had soybean ice cream, soybean coffee, soybean croquettes. Mr. Ford's chef, Paul Foster, used to prepare all these dishes. He worked at our Laboratory when he wasn't traveling with Mr. Ford. Henry Ford II was interested in the soybean. He surprised me by the depth of his knowledge on the subject."

Some soymilk was also used in cooking, as to make soy bread. Virtually none was served as a beverage. Smith recalls, "As far as I know, the only ones who drank it were Henry Ford and his friends. Ford drank it almost every day. We either delivered it to his house, or he stopped by Moir House of the Carver Lab and picked it up. Every day we also baked him two loaves of soybean bread, which contained about 75% wheat flour and 25% soybean flour, plus some soymilk."

Ford also liked soybean sandwiches, which were made using soybean bread and locally picked weeds, such as curly dock. Clem Glotzhober, a botanist who graduated from Michigan State College, collected the weeds for Mr. Ford. He is still in Dearborn and would remember the details of soybean sandwiches.

The production of soymilk and soy ice cream stopped after Mr. Ford had a stroke. Bob Smith left the company in August 1945. Clem Glotzhober took over the soymilk production from Bob Smith and may have continued it for 6-12 months until the Carver Lab closed at the end of 1945. Address: 26351 Hollywood Ave., Roseville, Michigan 48066. Phone: 313-777-5394.

5415. Smith, Robert Archer. 1988. Work with Delsoy Products (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In 1943 Bob had co-founded Delsoy Products,

Inc. (with Henry Ford's complete approval) to develop, produce, and market soy-related foods. Bob ended his career with the Ford Motor Co. in Aug. 1945, when it became apparent to him that Henry Ford would soon retire. At that time, he went to work at Delsoy Products, whose main product was Delsoy, a non-dairy whipped topping made from the soymilk that Bob Smith had developed at the Ford Motor Co. One competing product was a whipping cream made with filled milk by a company in Chicago, Illinois, on Telegraph Road and Harvard, by Michigan Ave.

Originally Delsoy Topping was sold in paper cartons. In about 1946, Delsoy Products became the first to sell a non-dairy whipped topping in pressurized cans–major innovation. The new product, named Presto Whip, was a non-dairy soy-based whipped topping very similar to Delsoy Topping except that it had a lower fat content to allow it to be used in a pressurized can. The pressure can was developed by Crown Cork and Seal to contain DDT for U.S. troops in the Pacific. Then some company developed a valve that was suitable for cream purposes. Delsoy was the first company to use the can with the valve for any food product. They couldn't put cream in the can since there was a pro-dairy law prohibiting putting anything in a can less than 3 gallons in size. So they put their soybean topping in it. Sales of the new product increased rapidly.

Presto Whip is still sold by a company in Lowell, Michigan. [Note: Whitehouse Products was purchased in 1983 by C.J. Christoff & Sons of Lowell, Michigan. The company is now called Chadalee Farms, Inc.] After Presto Whip became available, Delsoy continued to be sold to bakers who made whipped cream products, mostly in 5- and 10-gallon cans. As long as Smith was with the company, they sold both products.

Bob is not sure how much Delsoy Topping was sold. Their company would buy 500,000 pressurized cans at a time. Sometimes they produced 25,000 cans/day. Twenty people were employed in the little plant. After World War II, sales grew steadily year after year. They kept expanding their territory. The company's first real competitor was Redi-Whip, but Presto Whip had the highest sales per store. At one point Delsoy Products was negotiating with Lever Brothers, who wanted to buy the company, but the deal never worked out. At one point, Bob Rich of Rich Products Corp. in Buffalo, New York tried to hire Bob Smith.

In 1958 Harvey Whitehouse, Bob Smith's partner, bought out Bob Smith's interest in the company, and changed its name from Delsoy Products to Whitehouse Products. Later Harvey Whitehouse sold his company to the dairy in Lowell, Michigan.

Bob retired from Delsoy Products in 1963. The company was sold to the dairy in Lowell, Michigan (as described above). Delsoy is still being made as a whipped topping in a pressurized can. It still has the same label it had in 1963. Address: 26351 Hollywood Ave., Roseville, Michigan 48066. Phone: 313-777-5394.

5416. Gupta, Rajendra P.; Gupta, Rashmi R. Assignors to Prosoya Corp. (Maryland Heights, Missouri). 1988. Equipment for making no-beany flavor soymilk. *U.S. Patent* 4,744,524. May 17. 7 p. Application filed 1 April 1987. 3 drawings. [6 ref]

• ***Summary:*** "The equipment grinds soybeans totally in an aqueous medium at room temperature without trapping any air [but not in a vacuum], cooking the resulting slurry, and separating the undissolved solids to extract soymilk. The fact that no heat needs to be given to soybeans prior to or during the grinding operation yields very high percentage of solids in soybeans as dissolved solids in soymilk without rendering chalkiness found in the soymilks made employing the hot ground and blanching methods.

Talk with Raj Gupta. 1988. The bean-to-water ratio is critical to the success of the process. Aug. 10. APV-Crepaco is making the equipment for them, and selling it for about $25,000 for a 90 liter/hour system. Address: [Raj Gupta, ProSoya Foods International Inc., 801-275 Slater Ave.], Ottawa, ONT, K1P 5H9, Canada. Phone: 613-745-9115 or 613-744-4401.

5417. Mitchell, Cheryl R.; Mitchell, Pat R.; Nissenbaum, Robert. 1988. Nutritional rice milk production. *U.S. Patent* 4,744,992. May 17. 8 p. Application filed 24 April 1986. [4 ref]

• ***Summary:*** Describes an enzymatic method for producing a milk-like rice liquid for use either as a beverage (like amazake) or in a variety of food products. "The method of the invention comprises selection of whole grain rice, either white or brown rice, which is liquefied, preferably with alpha-amylase enzymes, and then treated with relatively high levels of a glucosidase enzyme and/or a beta-amylase enzyme in a saccharifying step. The total enzymatic reaction time in both the liquefaction and saccharification step is limited to prevent development of undesirable off-flavors to yield a non-allergenic rice milk product having surprising milk-like texture and functionality, the rice milk product being characterized by the absence of rice-like flavor and having a preferred composition..."

Throughout the patent the product is referred to as either "rice milk" ("because of its surprising milk-like texture and functionality") or "modified amazake." In the section titled "Background of the invention," the preparation of Japanese amazake by the traditional method using koji is discussed in some detail. Soy beverages are also sold as a milk substitute. "Disadvantages associated with these soy-based milk substitutes arise primarily because of the allergenic response which many people have toward soy products, the bean-like flavor of the products and their common need for the addition of a sweetener."

Note: Presently more than 50 different enzymes have

been found in koji. Most or all of the enzymes mentioned in this patent are inherently present in koji. Address: 1-2. 466 N. Powers, Manteca, California 95336; 3. 750 Homer Ave., Palo Alto, CA 94301.

5418. *Monitor* (*Manning, Iowa*). 1988. Development Corp. announces new industry for Manning: Summer start-up expected. May 19.
• ***Summary:*** A new industry will be coming to Manning, Iowa, following the Monday, May 16 approval of a $63,700 loan from the Iowa Lottery Funds to the Miller Farms Food Company of Cedar Falls, Iowa. Miller Farms Food Company, which produces a powdered soybean beverage, will locate in Manning in a building owned by the Manning Industrial Development Corporation. The building is currently a maintenance garage. Miller plans to employ six people initially. Projected annual sales are $1,951,397 the first year, increasing to $8,343,000 the second.

5419. *Spectator* (*Carmi, Illinois*). 1988. Californian would like to buy local soybeans. May 28.
• ***Summary:*** Jerry Ridenour, a Californian who wants White County to think about producing soybeans without chemical fertilizers or pesticides so that he can purchase the organically-grown beans for his natural foods business. While visiting Crossville, Illinois, he intends to talk with some farmers about the proposal. Ridenour's company, "Wildwood Natural Foods," makes meat-like products from tofu, soymilk, and wheat gluten, such as tofuburgers, meatless meatballs, and lactose-free soymilk. Other items made from tofu include tofu hot dogs, tofu jerky, soymilk yogurt, lactose-free tofu chocolate, etc. The business currently uses about 48-50,000 pounds of soybeans per month.

5420. Alfa-Laval Food & Dairy Engineering. 1988. Soya–The nutritious plant. Lund, Sweden. 8 p. [4 ref. Eng]
• ***Summary:*** Contents: General nutrition. Positive nutritional factors. Negative nutritional factors. Studies on Alfa-Laval soybase. "The deactivation of trypsin inhibitor in the Soyal standard process has been studied, and it is found that 80-85% of the TI is deactivated in the soy base, and about 30% in the okara...

"Ultrafiltration is an efficient method to reduce oligosaccharides. In tests with batchwise diafiltration 60% water removal decreased the oligosaccharides by 75-80% and the phytic acid by 30%. After addition of the same amount of water and re-ultrafiltration a total of 90% of the oligosaccharides and 35% of the phytic acid was removed. Continuous diafiltration gives similar results.

"Soy base composition: 9-11% dry matter, 4-5% protein, 2-2.5% fat, 1.5-2% soluble sugar, 1-1.5% others."

Note: This is information for customers based on research conducted by Alfa-Laval. The undated booklet was published in about May 1988. Address: Lund, Sweden.

5421. Dawson, D.P.; Morrill, J.L.; Reddy, P.G.; Minocha, H.C.; Ramsey, H.A. 1988. Soy protein concentrate and heated soy flours as protein sources in milk replacer for preruminant calves. *J. of Dairy Science* 71(5):1301-09. May. [19 ref]
• ***Summary:*** Growth, protein and dry matter digestibility, nitrogen retention, and morphology of the intestinal mucosa of calves on the all milk-protein die were superior to those of calves on diets containing a soy product. All soy-fed groups had a humoral but no cell-mediated immune reaction to soy proteins. Concentrate and the experimental heated soy flour were superior to the commercial heated soy flour as protein sources for milk replacer. Address: 1-4. Depts. of Animal Sciences and Industry, and Lab. Medicine, Kansas State Univ., Manhattan, Kansas 66506; 5. Dep. of Animal Science, North Carolina State Univ., Raleigh, North Carolina 27695.

5422. Keville, Kathi. 1988. Back to Eden's Jethro Kloss. *Vegetarian Times.* May. p. 67-69.
• ***Summary:*** Soyfoods are an integral part of Kloss' dietary philosophy. He was born in 1863 on a farm (called the Garden of Eden, by the way) near Manitowac, Wisconsin, one of 11 children. A typhoid epidemic spawned Kloss' career as a natural healer. He was firm in his belief that substituting soy products for dairy products is essential to good health.

Back to Eden was published when Kloss was 76 years old.

Move Over, Tofutti–Kloss "began what might have been the first natural foods fast-food stand, based largely on soyfoods. That was in the 1930s when the Kloss family was living in Washington, D.C. To reach influential Washingtonians, Kloss parked a small trailer on Pennsylvania Avenue, by the White House and Capitol buildings. There he sold vegetarian quick lunches to government employees. Soy bread sandwiches were filled with nutmeats, lettuce and sliced tomatoes. Favorite snacks were strawberry, chocolate and vanilla ice creams made directly from raw soybeans. (The beans were soaked and ground, then milk was pressed out of them.) Hot soybean coffee, with soybean cream, was served...

"Jim Taft, vice president of research for Farm Foods, an offshoot of The Farm community in Tennessee and producers of soy-based 'Ice Bean,' said he made his first batch of soy-milk 20 years ago, using the *Back to Eden* recipe. Taft said he was extremely influenced by Jethro Kloss. 'He was very popular among my friends. I read his book from cover to cover. I can't remember where I got my first soy ice cream recipe, but I think it was a combination of *Back to Eden* and *Ten Talents* (by Frank J. and Rosalie Hurd, whose recipes are also based on Seventh-day Adventist principles).'" The recipe for Soy Ice Cream that Taft remembers using is given.

It calls for 1 tablespoon agar-agar, cold water for soaking, 2 quarts soymilk, 2 lbs. barley malt sweetener (powdered form), ½ pint soy margarine, and crushed fruit, fruit juice, or vanilla (optional).

5423. Kotzsch, Ronald E. 1988. Soyfoods; A growing industry is revolutionizing the way Americans eat (Special Advertising Supplement). *East West.* May. p. 1A-11A. Also in Vegetarian Times. May. p. 49-59.
• ***Summary:*** A well-done "advertorial" as part of America's first Soyfoods Month. Sponsored by Nasoya, Morinaga, Legume, Simply Natural, Vitasoy USA, Westbrae Natural, and Farm Foods. Each company also ran an ad in this section. Henry Ford played a key role in introducing Americans to soyfoods as with his 16-course meal at the 1934 World's Fair. Interest remained strong through World War II, then dissipated quickly. By the time Ford died in 1947, soyfoods were all but forgotten. Interest was revived and advanced from the mid-1970s on by Shurtleff and Aoyagi of the Soyfoods Center in California. Today through the efforts of many growing companies, the industry is booming.

• ***Summary:*** This report was prepared by Owen Dobbyn, John Cunningham, Maurice Waddick, and Fred Brandenburg of OSGMB. Contents: Japan. The Japanese soybean market. Visits: Japan Miso Co-operative Industrial Assoc. (M. Iida, chairman), Japan Packaged Tofu Assoc. (H. Kijima, Exec. Secy.), Federation of Japan Natto Manufacturers Cooperative Society (Mr. Ohse), Takano Foods Co. Ltd. (E. Takano, president, uses 7,000 to 8,000 tonnes of soybeans annually to make natto), Home Foods Co. Ltd (Home Shokuhin, Y. Murai. managing director, has 160 employees and 3 tofu factories that use 300 tonnes of soybeans/month; owned by Wako Shokuryo, the #1 wholesaler of soybeans in Japan), Japan Oilseed Processors Assoc. (JOPA; H. Higashimori, managing director). Japan Oil and Fat Importers & Exporters Assoc. (JOFIEA; I. Shimizu, exec. director), Canadian Embassy, Tokyo.

Hong Kong. Soybean imports. Visits: The Hong Kong Soya-Bean Products Co. Ltd. (makers of Vitasoy soymilk), Amoy Industries (International) Ltd.

Malaysia. Soybean imports 1984, 1985, 1986. Visits: Ace Canning (owned by Lam Soon). Yeo Hiap Seng (Malaysia) Berhad (soymilk), Cheong Chuan (Hup Kee) Sdn. Bhd. (traditional fermented soysauce), Sin Yong Huat Enterprises Sdn. Bhd. (soybean importers), Syarikat Perniagaan Cheon Fatt (tofu manufacturer).

Singapore. Soybean imports (1983-1986). Visits: Sin Seng Lee Trading Co. (Pte.) Ltd. (claims to import 60% of soybeans to Singapore). Conclusions for each country. Recommendations for future action. Future export development missions. Accomplishments. Competition.

In Japan, 842,000 tonnes soybeans are used to make foods, as follows (in tonnes, p. 1): Tofu 456,000, miso 180,000, natto 90,000, dried-frozen tofu 30,000, boiled soybeans 23,000, soybean powder [probably kinako] 10,000, soymilk, 7,000, soysauce 5,000, other 41,000. The suppliers of these edible soybeans are (in tonnes): USA 400,000, China 280,000, Japanese domestic 280,000, Canada 24,000. Total Japanese soybean imports: 5,000,000 tonnes. Of this 4,036,000 tonnes (81%) are used for crushing, 842,000 tonnes for food, and 70,000 tonnes for feed (not crushed). The Japanese market for soybeans is very large for both crushing and food use, but is not growing. The beans for crushing come mostly from the USA and South America.

Preferred characteristics of soybeans for each type of soyfood are given. For example, for miso: Low oil, high protein, high sugar, white hilum. For tofu: High sugars (glucose, sucrose), moisture content 10-12.5%, new crop preferred to old, protein 40%, oil 19-20%, hilum color is not very important but white is preferred, varietal consistency; preferred varieties are Beeson, Amsoy, Corsoy. Natto: Most important is small size, 5.5 mm or less, clean beans free of foreign material, high sugar content (saccharose, stachyose, which bacillus needs to work), less oil, must absorb water well. Soymilk: Good flavor, low moisture (10%), low percentage of splits (too high can cause rancidity), low oil, high protein.

In Japan, vegetable oil consumption has increased 2.5 times in the past 20 years to 45.17 gm/capita/day in 1986. Soyoil and canola oil together account for 85% of production. Canola is replacing soybean oil. If the oil market is strong, the 30 Japanese crushers crush more canola, but if protein is strong they crush more soybeans. U.S. soybeans have too much foreign material; new contracts have a penalty for > 2% FM.

In Hong Kong, 6,000,000 cases of Vitasoy brand soymilk are produced annually. The company uses 2,500 tonnes/year of soybeans, 80% of which are grown in Canada. It uses 100 to 200 tonnes of organic soybeans for Vitasoy exported to U.S. health food stores. Using 15 Tetra Pak machines, production takes place 24 hours/day (3 shifts), 6 days a week. Contacts: Patrick Cheung (marketing manager), and Raymond Yuen (commercial manager).

Amoy Industries, the largest maker of soy sauce in this part of the world, produces 6,000 tonnes/year. The company was established 80 years ago in Amoy, eastern China, moved to Hong Kong in 1949; 50% was purchased by Pillsbury in 1983. Uses 2 containers of soybeans/week, 100% from Ontario for the past 5 years.

Malaysia soybean imports rose from 174,400 tonnes in 1984 to 255,200 tonnes in 1986. The main suppliers in 1986 were China (56.2% of total), Vietnam (15.8%), and

Argentina (14.3%). Ace Canning uses ton tonnes/month of soybeans (presently all from China) to make soymilk. They have 7 Tetra Pak machines. Yeo Hiap Seng (Malaysia) is the largest soymilk producer in Malaysia, making 25,000 liters/year using 9 Tetra Pak machines. They use 1,250 tonnes of soybeans (80 containers) per year, all Canadian.

In Singapore, soybean imports rose from 28,287 tonnes in 1983 to 41,571 tonnes in 1986. In 1986, some 66% came from Canada, 16.6% from China, and the rest from others.

The major competition for food quality soybeans in these four countries at present comes from China. The Chinese have improved their soybean quality and appear to be actively seeking to increase their market share. In the long run, however, China may choose to reduce its soybean exports in order to increase meat consumption in China. This could lead to new market opportunities for Canada in these four countries. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

5425. *Pediatric News* (*New York, NY*). 1988. Effects of reformulated soy-formula vs. breast milk. May.
• ***Summary:*** "A reformulated soy-based formula was as effective as breast milk in promoting growth and bone mineralization in healthy term infants, Dr. Gary M. Chan said at the Western clinical research meetings.

"This reassuring result runs counter to several reports since 1981 by investigators who reported inadequate bone mineralization rates in term infants and a high incidence of rickets in premature infants fed soy formula, said Dr. Chan, of the University of Utah School of Medicine, Salt Lake City.

"The poor bone mineralization documented in earlier studies may have been the result of reduced bioavailability of major and trace minerals of older soy formulas, Dr. Chan said. Another contributing factor might be the absence in soy formula of lactose, a carbohydrate that stimulates absorption of calcium and phosphate, he noted.

"Compared with breast milk, the reformulated soy product is slightly higher in carbohydrate and protein and lower in fat. It is also higher in calcium, phosphorus, zinc, magnesium, and aluminum."

This ad also appeared in the July issue (p. 18) and in the October issue (p. 36). Address: 161 Beacon St., South San Francisco, California 94080. Phone: 415-761-2022.

5427. Shurtleff, William; Aoyagi, Akiko. comps. 1988. Bibliography of soymilk, from 1500 to 1988: With 2195+ references. Lafayette, California: Soyfoods Center. 209 p. Subject and country index. Partially annotated. Printed May. 28 cm. [2199 ref]
• ***Summary:*** The most comprehensive bibliography on this subject. Includes all known commercial soymilk products. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

5428. Lukoskie, Luke. 1988. Recent developments at Island Spring, Inc (Interview). Conducted by William Shurtleff of Soyfoods Center, June 2. 3 p. transcript.
• ***Summary:*** In Nov. 1986 Edward Lynch Co. (ELCO) had contracted to invest $7 million in Island Spring. They had seen how french fries took off and they felt that tofu could follow the same pattern, so they wanted to be in on the ground floor. They actually paid in $4 million. Then in 1987 the relationship broke up. An agreement was reached whereby ELCO obtained possession of the STS soymilk plant. It went to their subsidiary Pacific Foods of Oregon, located in Tualatin near Portland. ELCO also owns Pacific Foods, formerly Sunny Jim, which is an established manufacturer of fruit preserves, juices, peanut butter, etc., and Crescent Foods. Pacific Foods plans to make soymilk but no one in the company knows how nor do they know the natural foods market, which is already extremely competitive. Moreover they have a 2-year non-compete agreement with Island Spring. Luke thinks it will cost them $10 million to put a soymilk product on the market.

Luke went to Sweden to buy a soymilk system from Alfa-Laval the summer after ELCO came in but the plant was too expensive. So he ended up buying a similar system from STS (Soya Technology Systems), the one that Pacific Foods now has. Luke has a lot of confidence in the future of ultrafiltration for making tofu. He was the first to develop a process for metering calcium sulfate into an aseptic tofu. Today the company's sales are up 50% over 1987. The best sellers are Traditional Firm Tofu (water pack), Delicious Steamed Tofu, Tofu Dressings, Tofu Burgers, and Extra Firm Tofu (vacuum packed). In the works are a yogurt and a tofu to be added to sausages by Oscar Meyer. Jerry Long, sales manager, has been a boon to the company. Address: P.O. Box 747, Vashon, Washington 98070. Phone: 206-622-6448.

5429. Reynaud, A. 1988. Re: Brief history of Innoval / Sojalpe, an affiliate of Coopérative Agricole Silos de Valence. Letter to William Shurtleff at Soyfoods Center, June 6–in reply to letter of March 1988. 1 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "Dear Sir, Sorry not to have answered sooner your letter of March 1988 sent to Sojalpe.

"At this time Sojalpe has been bought by Silos de Valence (cooperative enterprise). We are working to raise up production and sales. Sojalpe's new address is: les Auréats, 26014 Valence cédex.

"Now Sojalpe is specializing in organic and diet soyfoods which are selling in natural food stores.

"In November 1987, we made a new enterprise, Innoval, whose aim is to sell soyfoods not nature but diet in supermarkets.

"Answers to your questions:

"1. Soja started in December 1986.

"2. One label for each of our products is enclosed in this letter. "3. New soyfoods will first sell commercially this summer [of 1988] (drinks, desserts, etc.).

Ten leaflets (very attractive and professional) are enclosed. Each is glossy color, printed on both sides, 29.5 x 21 cm. Six of the leaflets were created by Sojalpe, have the attractive Sojalpe logo at the bottom of the front panel over a green stripe, and have an illustration of a laughing chef in a tall white chef's hat (toque) against a broad green stripe (8 cm tall). Centered against this strip (but behind the chef's hat) is written: "Les plaisirs de la table–Sans les kilos! [The pleasures of the table–without the kilos of weight gain!] in bold red capital letters against a horizontal yellow band, 1 cm tall. Below that is the name of the product in bold black letters against a whit stripe and below that a large photo of a prepared dish, ready to eat. On every photo is the word "Bio" written in bold red letters against a yellow background. On the back of each sheet (in black ink on glossy white paper) are descriptions of soya, of tofu, and of the specific product. At the bottom of the page is the Sojalpe logo and address. The address has been crossed out with blank ink (it is illegible) and its place is written: "Les Auréats 26014 Valence. None of the leaflets is dated. The various products are: (1) Les Royales: le savoir-faire des grandes chefs. (2) Les Sorbets: la gourmandise–sans la péché! [Sorbet–without the sin]. (3) Le Soja-Milk: un milk végétal léger, léger, léger [Soya Milk: A vegetal milk that is light, light, light]. The photo shows the milk in a bowl of cereal. (4) Le Tofu Nature: tous les goûts sont dans la nature [Natural Tofu: all the taste is in nature]. The photo shows many thin squares of tofu in hors d'oeuvres or in a salad. (5) Les Palets au Tofu: des plats (finement) cuisines. [Thin sheets of deep-fried tofu]. (6) Le Tofu Burger: le steak de soja–gastronomique. The photo shows two tofu burgers on a plate with a sauce.

The other four leaflets are the same size, glossy color, but have a somewhat different format. Across the top is a light blue and light green band, the two colors separated by thin wave of white. To the left is standing an all-white lovely French woman in a scanty bathing suit. Across the blue band is written (in this red letters): Cuisine saveur Cuisine minceur [Tasty slimming cuisine]. Across the green band is written the name of the product in bold red letters, above a sub-title in black. The color photos are the same size and quality as before, but in place of the word "Bio" is the word "Soja." The "logo" at the bottom, written in black on a yellow oval is: Four stars. Degustation. Basses calories (God taste but low in calories). The products are: (1) Tofu cube: menu a la carte. (2) Royales au tofu: pour varier les plaisirs. (3) Palets au Tofu: gastronomie et dietetique. (4) Tofu Burger: Pour les

connaisseurs.

One more Sojalpe leaflet is enclosed (green and red on white, 3 panels each side, each panel 21 x 10 cm). On the front panel is the same chef with his tall hat described above. The word "Tofu" is written 5 times in little clouds. On the inner three panels are descriptions of the benefits of tofu and recipe suggestions. On the back panel is the word "Sojalpe" and the address: "Saint Quentin sur Isère, 38210 Tullins. Tél. 76.93.60.21." Address: Allée Joule, ZI des Auréats, BP 1418, 26014 Valence Cedex, France.

5430. Shotts, D'Anna. 1988. A letter from Nigeria. *Reporter* (*Casey, Illinois*). June 9.

• ***Summary:*** Sharron Hawk, a fellow missionary and Director of Kersey Children's Home [at Ogbomosho], is a registered nurse. She deals with malnourished babies and their mothers, teaching the mothers to prepare soya milk to feed their babies. It's amazing to see a little feeble skeleton come in, and then a few weeks later, a healthy baby goes out. At the Nigerian Baptist Convention exhibit, we prepared many foods with soybeans and sold them at low costs to conventioneers. We sold hundreds of recipe books.

5431. Fiering, Steve. 1988. Early history of The Soy Plant and The Soy Deli in Ann Arbor, Michigan (Interview). *SoyaScan Notes.* June 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** "I was a coordinator at the 4th Avenue Food Co-op in Ann Arbor. Three of us from the Co-op began making tofu next door in the Wildflour Community Bakery (which is still there), starting in about April or May of 1977, but perhaps as early as January. Sue Kalen, Christopher Coon, and myself (plus a few others from time to time) would get up very early on Sunday mornings and make our tofu. Soon we also started making soymilk. Whatever we could make was sold immediately in the 4th Avenue Co-op next door. We had no real business name at that time. They called us "The Tofu Co-op." There was a guy named Al Dynak who worked

as a baker at a deli and restaurant called Eden's in Ann Arbor. Eden's was owned by or associated with Eden Foods, the natural foods/macrobiotic distributing company. He was also interested in developing a tofu company. We had a meeting. He was much more experienced than we were, especially in baking, food processing, and the restaurant business. He pretty well pushed us for the first 6 months.

"He got us a little room in the basement of Eden's at 330 Maynard St.; in August 1977 we turned it into a tofu shop. At that point we registered our business as The Soy Plant. We were there for about 4 months. When he saw that we were interested in running the business as a co-op rather than to make money, he bailed out. He was interested in making money. Yet without Al, we might never have made the jump out of the original co-op location. No new products were introduced while we were at Eden's.

"Then, in about January 1978, we moved to 211 East Ann St., Ann Arbor. At that time, Tim Huang of Yellow Bean began to distribute our products. Our deli opened on 1 May 1978.

"In July of 1978 we hosted the first national Soycrafters Conference, at which the Soycrafters Association of North America was founded. Seventy people from across America attended. Sue Kalen, Christopher Coon and myself generated the idea for the conference together. We were co-opers and, as such, we were interested in conferences, networking as they say. We knew there were other people out there doing what we were doing and we felt that everyone would benefit it we could all get together and share experience. We knew about New England Soy Dairy (in Greenfield, Massachusetts), The Farm (Summertown, Tennessee), and maybe Northern Soy (Rochester, New York) and Pat Aylward's Joy of Soy (Minneapolis, Minnesota). We compiled a list [Shurtleff sent in many names from Japan] and sent out letters to see how much interest there was. People were interested, so we decided to host it and set a date.

"In 1980, the production part of the business moved to 771 Airport Blvd., Suite 1 in Ann Arbor. They had lots of problems with waste water disposal and may not have started production until 1981. That was when I left, feeling completely frustrated with the co-op structure.

"Most of the workers still liked the co-op. My own personal analysis of the situation is that co-ops work well when there are about 6 people or less and everyone can make decisions, or when there are more than 25-30 people so that you set up a management structure to make decisions. We got caught in the middle with 12-15 people and everyone trying to make decisions. It didn't work. For years I was working to put a manager in the Soy Plant." Address: 30 Newell Rd., Apt. 19, Palo Alto, California 94303. Phone: 415-326-7123.

5432. *Toyo Shinpo* (*Soyfoods News*). 1988. Tôfu ga eizu ni kiku! Eizu nimo kôka ga aru tônyû no naka no saponin, Okubo Ichiro hakase ga happyô [Tofu works against AIDS! Dr. Ichiro Okubo's publication shows saponin in soymilk is even effective in treating AIDS]. June 11. p. 11. [1 ref. Jap; eng+]

• ***Summary:*** Dr. Okubo, assistant professor at Tohoku University in Japan, published an article in *Asahi Graph* (3 June 1988) stating that tofu and soymilk work against AIDS. This created a sensation in Japan. There are many types of saponins, but they can be divided into 2 types, A and B. Group, B can control growth of the HIV virus, which is also a cause of leukemia and breast cancer. Group A, which only exists in the soybean hypocotyl (sprout/germ, *haijuku*), is a cause of the soybean's bitter flavor. Thus, removing the hulls and germ from soybeans gives better tasting soymilk and tofu. Address: Asst. Prof., Tohoku Univ., Japan.

5433. Central Soya Co., Inc. 1988. Central Soya will build soy protein [concentrate] plant in Europe (News release). Fort Wayne, Indiana. 2 p. June 14.

• ***Summary:*** The plant will produce soy protein concentrates, used primarily in food systems and as milk replacers for young animals. The site selection process has begun. The plant will be similar in design to the recently announced Bellevue, Ohio plant, now under construction. The Bellevue plant contains modular extraction, solvent recovery, drying and packaging units. Address: Barry G. Collinsworth, Fort Wayne, Indiana. Phone: (219) 425-5591.

5434. Owen, Mary. 1988. Souter gets funds for a year's worth of beans. Soybeans–the difference between life and death [in Nicaragua]. *Davis Enterprise* (*Davis, California*). June 24. p. B-6.

• ***Summary:*** Ann Souter, formerly a registered nurse in the Department of Community Health at Cal, Davis, is teaching the people of Nicaragua to grow and use soybeans. She trains brigidistas, or community health workers. She has been working there three years, coming back to the U.S. from time to time. She started a soybean project last spring, getting soybeans from the lowlands where they are fairly widely planted, distributing them to her health care workers to distribute in their cooperatives for planting them in the north. That crop will be harvested this fall. She has also held workshops in how to use soybeans. Malnutrition is becoming a problem once again, especially with children. The Contras have killed a lot of the dairy cattle.

With an $8,000 grant from the Unitarian Service Committee last year, Souter purchased over $1,000 worth of soybeans and other seeds for her workshops. She says each brigidista receives five pounds of soybean seeds to take back to his or her village. These seeds will yield a 500 pound crop to supplement the diets of those suffering from malnutrition. Souter received a $5,000 grant from the Presbyterian Hunger Fund of the Social Justice and Peacemaking Committee of

the Presbyterian Church USA to further her work.

Souter will be honored as the recipient of the Davis City Council's Peace and Justice Award at a Peace and Justice Dinner sponsored by the Citizens for Inter-American Cooperation.

She can be reached c/o UNAG, Matagalpa, Nicaragua. UNAG is the national union of farmers and cattlemen. Address: Enterprise Religion Editor, California.

5435. Jaccard, Michel; Dillier, Alexandre. 1988. Re: History of production and marketing of tofu by Conserves Estavayer S.A. (a Migros company in Switzerland). Letter to William Shurtleff at Soyfoods Center, June 27. 3 p. Typed, with signature on letterhead.

• ***Summary:*** Conserves Estavayer, one of Migros' firms, also makes dairy products and canned goods. They began in November 1982 to do tests on production of soymilk and tofu, based on the results of Japanese research. By June 1983 they were making good progress in technical details. They built their own machines initially. The first commercial tofu products were launched in mid-1984. These included regular tofu products (Tofu Nature, Tofu Mix) and seasoned products (Tofu a la Provencale in a tube, Tofu Bolognaise, Tofu Snack, and Tofu Emince). The latter 3 products were canned. Of the three fresh products Conserves Estavayer has introduced to date, all three are still on the market. But of the ten seasoned products, only one (Tofu a la Provencale) is still available. Sold in a 190 gm tube, it is suitable for canapes, hors d'oeuvres, etc. Address: Sales Dep., Conserves Estavayer, Case Postal 29, CH-1470 Estavayer-le-Lac, Switzerland. Phone: 037-63 91 11.

5436. Freudenheim, Milt. 1988. A safer infant formula promised [by Carnation Co.]. *New York Times.* June 28. p. D1.

• ***Summary:*** The Carnation Company, a division of Nestlé S.A., the Swiss food giant, announced yesterday that it would introduce an infant formula that relieves symptoms of milk allergy in babies; these include intestinal disorders, skin rashes, insomnia, etc. The new product, to be called Good Start H.A. (for "hypoallergenic) will be the first infant formula sold by Carnation and the first sold by Nestlé in the USA. Last year Nestlé had overall sales of $24 billion.

In Europe (West Germany, France, Belgium, and Switzerland), Nestlé is already selling the Carnation product, which is based on whey from cow's milk; the whey has been treated with enzymes, or "predigested" as the company says. Two similar hypoallergenic products, but made from casein (the other type of milk protein) are already available: Nutramigen and Pregestimil, both made by Mead Johnson, a division of the Bristol-Myers Co.

The percentage of U.S.-born infants is unclear; authorities estimate the figure at 0.5 to 7%. One professor pediatrics says that milk allergy is probably the most overdiagnosed condition. Last year, infant formula sales in the USA amounted to $1.4 billion: Abbott Laboratories has about 56% of the market, Bristol-Myers 39%, and American Home Products 4%.

The best defense against allergic reactions in infants remains breast feeding. About 60% of American mothers now breast-feed, but the percentage is lower among lower-class and poorer mothers.

The protein in mother's milk, cow's milk, and soybean milk can cause allergic reactions in some infants. Infants who are allergic to cow's milk are often fed soybean milk [formula].

5437. Alfa-Laval Food Engineering AB. Soy Application Group. 1988. Soyfoods: Old traditions with new potentials. P.O. Box 64, S-221 00 Lund, Sweden. 12 p. [Eng]

• ***Summary:*** Contents: Soy–The miracle plant. Soy–The nutritious plant. Soy products yesterday and today. Soy processing yesterday and today: Traditional, hot grinding, blanching, the Soyal process. Soy processing with Soyal: Gives a diagram of the equipment and describes the 7 main steps in the process, starting with bean cleaning and ending with soybase, from which can be made the products described in the next section. Soy products today and tomorrow: Soy beverage, tofu, soy yoghurt, frozen desserts (ice cream)–Imagination sets the limit. On the facing right-hand page is a superb color photo showing 32 modern commercial soyfood products in colorful packages, most based on soymilk and tofu. Alfa-Laval R&D Centres at your service. Alfa-Laval in soy processing: Discusses the Guangdong Cannery in Guangzhou (Canton), China, the first company to install a complete soy beverage plant based on Soyal technology (it now runs 2 shifts to produce 20,000 liters/day of plain and flavored soy beverage), and the CAC Soyal plant in France which makes the Bioforme line. "Founded more than a century ago, Alfa-Laval has a current workforce of 16,000 and is represented in 130 countries through subsidiaries and agents. The group comprises 160 companies worldwide with 45 manufacturing plants."

Processing: Traditionally soybeans were soaked in cold water then ground in cold water, filtered, and cooked to make soymilk with a beany flavor. "Hot grinding: The undesirable taste and smell stem from ketones and aldehydes produced by the enzyme lipoxygenase which is activated by the traditional process and acts as a catalyst to oxidize fatty acids. Modern research showed that grinding in hot water instead of cold water eliminates the enzyme activation and improves the taste considerably.

"Blanching: It was subsequently found that blanching instead of pre-soaking improves the taste even further. The beans, often dehulled, are blanched and ground together with an alkali solution.

"Unfortunately, this process can affect the protein yield. Due to the harsh treatment, the protein tends to agglomerate

instead of remaining in solution. In the separation stage these protein bodies will disappear with the fibrous residue [okara], reducing the protein content of the extract.

"The SOYAL process: All of these findings are advantageously combined in Alfa-Laval's processing line SOYAL. The process has been optimized to produce a soybase with a high protein content and a high nutritional value. The soybase produced has a widely acceptable flavour and mouthfeel with no trace whatsoever of the original unpleasant taste and smell." Address: Lund, Sweden.

5440. Kay, Theodore; Kimura, M.; Nishing, K.; Itokawa, Y. 1988. Soyabean, goitre, and prevention. *J. of Tropical Pediatrics* 34(3):110-113. June. [Eng]
• ***Summary:*** Contents: Introduction. Nutritional value of soya bean Nigerian foods prepared with soya bean paste: Soya bean paste (soaked, ground soybeans without the "husk" removed), kosei (akara ball), panke (puff-puff). Nigerian foods prepared with soya bean milk: how to make the basic milk, wara (milk curd), and alele (moin-moin, made with soya milk residue [okara]). Note: "The above five recipes have been fully accepted in many parts of Nigeria. The taste and the preparation procedure of these traditional Nigerian foods made from soya beans worked out to be almost the same or very similar to the foods traditionally made from cow peas (white beans) for kosei and alele, wheat flour only for panke, and cow milk for wara."

Nigerian foods made with soya bean flour (pre-cooked): How to make the basic flour, protein enriched pap (with akamu), and protein-enriched fu-fu (with gari or cassava flour). Discussion.

"Soya bean is being successfully established in Nigeria, but it has been very difficult to cook in a traditional West African way so it has never become popular in this country. Most soya bean produced in Nigeria has been exported as cash crop except a little for animal consumption."

Kosai, alele, panke, and awara are traditional foods in Northern Nigeria, while akara ball, moin-moin and puff-puff are traditional foods in Southern Nigeria. Discussion: "Why do we need soya bean in Nigeria?" Five reasons are given. The first two are: "(1) It has higher protein content and net protein utilisation (NPU) than cowpeas, groundnut and other legumes. Moreover, soya bean is much cheaper than other legumes in Nigeria. (2) Soya bean flour and soya bean milk have little taste and can therefore be incorporated into traditional foods such as pap and fu-fu without changing the appearance, taste and texture." Address: Dep. of Hygiene, Faculty of Medicine, Kyoto Univ., Kyoto 606, Japan.

5441. Kelly, F.M.; Ramsey, H.A. 1988. Effect of alkali treatment on the value of soy flour for preruminant calves. *J. of Dairy Science* 71(Supplement 1):125 (Abst. #P19). June. American Dairy Science Association 83rd Annual Meeting.

5442. Kingma, Sharyn. 1988. New study released on consumer attitudes about soy proteins. *Soya Newsletter* (*Bar Harbor, Maine*). May/June. p. 3, 14-15.
• ***Summary:*** Protein Technologies International, a subsidiary of Ralston Purina, St. Louis, Missouri, has recently released the results of a new study which evaluates current consumer attitudes related to soy protein, nutrition, dietary habits, and knowledge of dietary fiber. The 1988 Consumer Attitudes Monitor was undertaken to determine if there had been any significant changes in consumer attitudes since their first study was done in 1985.

One of the major differences between the earlier study (see Ralston Purina 1985 and Elliott 1988) and the current one is that the 1985 study contained specific questions related to soyfoods. But the 1988 survey also probed some interesting areas. For details, see the study itself.

Copies of the 1988 Consumer Attitudes Monitor are available through Jean Kuster, Protein Technologies International, Checkerboard Square, St. Louis, Missouri, 63164 or call 800-325-7108.

5443. Peluso, Michael R. 1988. The nutritional value of soy. *Health World* (*Burlingame, California*) 2(4):26-28. May/June.
• ***Summary:*** This introductory article discusses whole soybeans, soy flour, soy protein products (isolates, spun fibers, TVP), soy milk, soy cheese (tofu), tempeh, miso, and soy sauce. Table I shows the composition of most of these is given. The author is especially interested in soy oil as a good source of vitamin E and of the essential fatty acids, linoleic and alpha linolenic acids. He is critical of the hydrogenation process. Table II gives a nutritive comparison of soy oil and selected food fats. Table III gives a nutritive comparison of soy foods and selected animal foods. Address: P.O. Box 606,

Occidental, California 95465.

5444. Shurtleff, William; Aoyagi, Akiko. 1988. Das Tofu-Buch: Herstellung, Verwendung, Ernaehrungswert, Rezepte [The book of tofu: Preparation, uses, nutritional value, recipes]. Munich, West Germany: Goldmann Verlag. 384 p. Illust. by Akiko Aoyagi Shurtleff. Index. 18 cm. [Ger]
• ***Summary:*** A pocket book edition of the original 1980 German edition of *The Book of Tofu.* Contains 300 recipes. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

5445. Soya House. 1988. Recipes from Soya House. Products of soya. *Soyanews* (*Sri Lanka*). April/June. p. 5.
• ***Summary:*** Recipes: Bean Curd (Frozen) Curry, Soya Mash Cutlets [okara], Soya Mash Pittu, and Soya Mash Rotti. The ad is for soya bean curd, soya paste (substitute for coconut milk), and soya mash (okara). Soya House is a private company that manufactures tofu and soymilk. Address: Kitulwatte Gardens, 128 Kitulwatte Rd., Off Elwitigala, Mawatha, Colombo 8, Sri Lanka. Phone: 597759.

5446. *Soya Newsletter* (*Bar Harbor, Maine*). 1988. Tofu acceptability among college students. May/June. p. 3.
• ***Summary:*** A study on the acceptability of tofu among college students was done in 1986 by the department of Animal Science/Food and Nutrition, Southern Illinois University, Carbondale, Illinois, under the direction of Helen L. Ashraf, Ph.D. and D. Luczycki, M.S. Seventy-five college students, with an average age of 23, were randomly selected to participate twice a week for six weeks and evaluate on a scale of one to seven, sixteen recipes prepared with tofu in different food categories. They determined what factors influenced the acceptability of tofu, such as: (a) food category, (b) appearance, (c) methods of preparation used, (d) serving style, (e) amount of tofu in the dish, and, (f) students previous experience with eating tofu.

The most important factor in determining the acceptance of tofu in a food product was the familiarity of the recipe. The recipes which received the highest scores were those that people were familiar with, such as coconut cream pie and carob pudding. The amount of tofu in the recipe did not influence the acceptance. Dr. Helen Ashraf plans to do studies with tofu and preschoolers and the elderly in the near future. For more detailed information contact: Dr. Helen Ashraf, Southern University of Illinois, Carbondale, IL 62901 or call 618-536-2157.

5447. SunShine Tofu House. 1988. June. New soyfoods restaurant or deli. 5091-C Buford Highway, Atlanta, GA 30340.
• ***Summary:*** Atlanta Daily World. 1988. June 21. "New Tofu Restaurant Opens." Mayor Andrew Young joined other dignitaries (incl. Japanese Consul General Takayuki Kimura) and supporters at the formal opening in northeast Atlanta. The proprietor is Seiho Tajiri, a prominent local Japanese businessman. "The restaurant, the first of its kind in the Southeast, will not only provide a full menu of tofu dishes, but also manufactures the tofu and soymilk in the restaurant." Address: Atlanta, Georgia. Phone: 404-451-2054.

5448. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: SunShine Tofu House.
Manufacturer's Address: 5091-C Buford Highway, Atlanta, GA 30340. Phone: 404-451-2054.
Date of Introduction: 1988. June.
New Product–Documentation: Atlanta Daily World. 1988. June 21. "New Tofu Restaurant Opens." The restaurant will produce its own tofu and soymilk.

Address: Protein Technologies International, Dairy Food Systems Div., St. Louis, Missouri 63164.

5450. *Toyo Shinpo* (*Soyfoods News*). 1988. Shinseihin to tônyû no dezain o kairyô, Mausan-Ai [Marusan-Ai comes out with a new product and they are also changing their soymilk packaging]. July 1. p. 3. [Jap; eng+]
• ***Summary:*** The new product is not soymilk, but green tea. However, Marusan-Ai has redesigned parts of their soymilk package so that nutritional information can be clearly read.

5451. *Toyo Shinpo* (*Soyfoods News*). 1988. Kibu, tezukuri tôfu setto. "Kangaeru Kai" to teikei, hatsubai [The Kibun company is producing a kit to make tofu at home in conjunction with Kangaeru Kai ("Thinking Society")]. July 1. p. 3. [Jap; eng+]
• ***Summary:*** The Kibun company, which makes the soymilk for the kit, is located at Ginza 7-14-13, Chuo-ku, Tokyo-to, Japan. The soymilk comes in special long-life, 1 liter bottles that has a 60-day shelf life at room temperature. They use special, domestic Hokkaido beans and water to make this soymilk. They also put natural nigari in the kit. One liter of the soymilk can produce 3 regular size kinugoshi (silken) tofu cakes. The kit, Tofu No Moto, contains 6 liters of the soymilk and costs 8100 yen.

5452. Cottingham, Mark A. 1988. Product promotion vital to Bean Boosters. *Illinois Agri-News* (*La Salle, Illinois*). July 8.
• ***Summary:*** Promoting soybeans is the major goal of the Illinois Bean Boosters, an auxiliary group to the Illinois Soybean Program Operating Board. More than 60 soybean

farmers and farm wives gathered in Decatur last week for the Bean Booster's third training session. During the session, participants were instructed on public speaking techniques, nutrition and soybean uses. As adults grow older, they sometimes become lactose-intolerant.

5453. Souter, Ann. 1988. Re: Funding for work with soybeans in Nicaragua. Letter to friends and donors, July 8. 2 p. Typed, with signature on letterhead.
• ***Summary:*** Citizens for Inter-American Cooperation (CIAC) has distributed 2,000 pounds of soybeans for planting from funds sent by the Unitarian Service Committee. In addition the CIAC medical project has distributed 2,000 pounds of soybeans for planing from funds sent by the Unitarian Service Committee. Each brigadista receives 5 pounds of soybean seeds to take back to his/her village, seeds that hopefully will yield a 3 to 400 pound crop to supplement the diets of those suffering from malnutrition, especially the children. The brigadistas show the other members of their communities how to plant and to cook with the soybeans. They learn how to make foods such as soy milk, tortillas, and soy meat supplements. Contras have consistently targeted dairy projects so there has been a tremendous shortage of dairy products throughout Nicaragua.

"In June I was notified by the Presbyterian Hunger Fund that our grant requesting $5,000.00 for the soybean project was accepted. This will ensure sufficient funds for the 400 more brigadistas we hope to train throughout 1988 and '89." Address: Registered Nurse, CIAC Volunteer, Citizens for Inter-American Cooperation, P.O. Box 2231, Davis, California 95617-2231. Phone: 916-758-6777 or 753-7298.

5454. Bulkley, Kate. 1988. Soy products' new flavor spices Denver Tofu. *Denver Business Journal***.** July 11.
• ***Summary:*** Denver Tofu Inc. started business in 1925, and by 1973, they were making 150 pieces (one-pound each) a day. "Now," says Denver Tofu Inc. owner and president, Haru Yamamoto, "we make 2,000 to 3,000 pieces a day." In fact, the company's sales doubled annually from 1982 to 1987. The King Soopers grocery store reports that in the 1970s they had tofu in the produce section, but nobody knew what it was. In the early 1980s, they moved it into the dairy case and they "sold an awful lot of it". Denver Tofu makes five different kinds, ranging from extra hard to kinugoshi, or soft, silken tofu. The company also deep-fries some tofu into something called age (pronounced ah-gay). The softer tofu has always been the best seller at the Asian markets. The harder tofu has generally been a better seller in the supermarkets.

Denver Tofu employs 11 people. In the summer, the plant churns out an average of 2,000 pounds of tofu a day. In the winter, production increases to an average 3,000 pounds a day to meet demand. The company also produces 70 gallons of soy milk for sale, as well as many pounds of agé. The production room is filled with about $300,000 worth of big, steel tofu-making machines, all of which are manufactured in Japan. Yamamoto, 49, came to Denver in 1970 from Japan where he had worked in the sales and accounting branch of Dainippon Food Co. He purchased Denver Tofu Inc. in 1973 from its previous owners for an undisclosed amount. In April, 1988, the company doubled its production space to 8,500 square feet when it moved to 3825 Blake St. form its former site on Federal Boulevard. The firm had sales of about $500,000 last year, and Yamamoto projected sales to rise to $750,000 this year. Address: Colorado. Phone: 303-295-6848.

5455. Stepanek, Marcia. 1988. Agency charges soy baby formula maker. *Detroit Free Press***.** July 15. p. 4B. Business section.
• ***Summary:*** "The U.S. Department of Justice Thursday charged a Clinton company and its president with 32 counts of falsely claiming that its soy-milk infant formula was of comparable nutritional value to mother's milk." The FDA charged Eden Foods with misbranding at least 53,682 cartons of Edensoy between July 1953 and 1985. Address: Free Press Washington DC staff.

5456. Wiernik, Julie. 1988. Firm faces criminal charges [Eden Foods]. *Ann Arbor News* (*Michigan*)**.** July 15. p. A3, A7.
• ***Summary:*** "The federal government has brought criminal charges against Clinton-based Eden Foods Inc., alleging that the company misrepresented its soy milk [Edensoy] when it described the product as a substitute for mother's milk.

"Eden and its president face possible fines of $1,000 for each incident occurring prior to 1985. Due to a change in the federal statute, the maximum fine would increase to $100,000 for incidents occurring during 1985."

"Between 1983 and 1985, the Justice Department said, Eden's literature described the product as a preferred milk substitute for children 'who cannot tolerate dairy milk or liquid or powdered formulas.' The pamphlet also said it was a 'quality substitute' for mothers' milk... Company president Michael Potter said the charges amount to a technical violation in labeling, and said the company never tried to market its soy milk as an infant formula." Jeffrey Gibbs, a Washington, DC, attorney, represented Eden Foods in the Case. "Gibbs said the advertising pamphlet in question was pulled from distribution in late 1983, and that only 'extremely small quantities' of the pamphlet were distributed after that." A large photo shows Tetra Brik packages of Edensoy.

5457. Fay, Jocelyn. 1988. Loma Linda Foods completes consolidation. *Gleaner* (*Portland, Oregon*)**.** July 18. p. 12.
• ***Summary:*** "With the expansion of its factory in Riverside, California, almost complete, Loma Linda Foods, Inc.,

plans soon to have all of its employees working under one roof. Infant formula production will move in July or August from Mount Vernon, Ohio, to the Riverside factory, which produces meat analogs. The company has enlarged its Riverside plant, leased additional warehouse space, and made a major investment in new equipment during the past 3 years in preparation for the Mount Vernon closing. 'We are using company profits to finance a good portion of the approximately $5 million our consolidation is going to cost us,' says Alejo Pizarro, Loma Linda Foods president... Most of Loma Linda Foods' $5 million investment has been for equipment."

"Pizarro ways the 82-year-old company is 'actively working on the expansion of current product lines and the introduction of new products.'... The Board may eventually decide to lease the Ohio factory but has no plans to sell it."

5458. *Times of India* (*The*) (*Bombay*). 1988. Company news: Noble Soya. July 18. p. 10.
• ***Summary:*** Noble Soya House reported encouraging financial results for the year ended June, 1988. The turnover [sales] increased sevenfold from Rs. 85 lakhs [85 million rupees] in 1986-87 to 587 lakhs [587 million rupees] in the first six months of 1988. Gross profit increased to 56.07 lakhs compared with a loss of Rs. 7.08 lakhs during the same period last year.

"During the last two months of this period, the company achieved over 90 per cent capacity utilisation and its turnover is expected to rise to Rs. 18 crores by the end of the 15-month period ending March, 1989."

5459. Bainbridge, Ronald R.; Mimouni, F.; Tsang, R.C. 1988. Bone mineral content of infants fed soy-based formula. *J. of Pediatrics* 113(1 Part 2):205-07. July. [14 ref]
• ***Summary:*** "The use of a soybean-based milk substitute was first reported in 1928. Since then, concerns have arisen about the adequacy of soy-based formulas in relation to bone growth and mineralization. These concerns were based in part on reports of a high rate of rickets in preterm infants fed SBF [soy-based-formula]. In addition, several studies in full-term infants reported a reduced growth rate in infants fed SBF, although adequate growth was documented in other studies.

"Factors that may theoretically impair growth or bone mineralization in SBF-fed infants are (1) low methionine content; (2) poor retention of calcium, phosphate, or both because of the presence of phytates acting as chelators; and (3) absence of lactose, which is a known stimulator of intestinal calcium absorption. These reports prompted manufacturers to produce an 'improved' SBF, fortified with methionine, calcium, and phosphate. The adequacy of these 'improved' SBF's for promoting normal growth and bone mineralization was not systematically studied until recently." Address: Dep. of Pediatrics, Div. of Neonatology, Perinatal Research Inst., Univ. of Cincinnati College of Medicine, Ohio.

5460. Bubny, Paul. 1988. Venerable soybean sprouts new uses. *Health Foods Business* 34(7):72, 74, 76, 108. July.
• ***Summary:*** Lonnie Stromnes, national sales manager of White Wave Soyfoods in Boulder, Colorado, reports that White Wave recently "upscaled" the packaging on its tempeh products; the new graphics depict tempeh in use, so that customers do not have to bring a thorough knowledge of the food into the store with them. Mitoku-USA, based in Albany, New York, imports some 20 varieties of miso. At least one manufacturer, the Asheville, North Carolina-based Great Eastern Sun, saw its miso sales increase by 20% last year. Bruce Sturgeon, the company's vice president, said Great Eastern Sun's volume on miso alone was $400,000 in 1987. Shoyu and tamari are frequently aimed at the gourmet market as well as the natural foods / specialty foods market. Owner Dale Kamibayshi of Alfalfa's Market in Boulder, Colorado said, "I think many people are still intimidated by (soyfood's) preparation." To help overcome the intimidation factor, Alfalfa's has scheduled a soyfood tasting fair for July 16; the first such fair which the store has devoted to soy.

Gary Barat, chairman of Legume, Inc. said, "I see the natural foods and gourmet markets coming together," said Barat. "And the smart marketers are realizing that." People who shop specialty stores have both eyes turned toward quality. Soy companies are increasingly making use of organically grown soybeans. There is also a trend toward using specific soybeans for specific products, a sign of a maturing industry. The trend is more prevalent in the U.S. than in Far East Asia. Westbrae, for example, uses Vinton beans for its Westsoy soy beverage. As the currency in Japan remains strong against the dollar, you're going to see more and more (soy) products produced in America. Also there will be greater growth in so-called "second-generation" soy products–dairy analogs with soymilk, soy cheese, soy ice cream and soy yogurt. Address: Associate Editor.

5461. **Product Name:** Pureharvest Soy Drink [Natural, or Vanilla].
Manufacturer's Name: Ceres Natural Foods Pty. Ltd. (Importer & Distributor). Made in Japan.
Manufacturer's Address: East Bentleigh, Victoria, Australia.
Date of Introduction: 1988. July.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik carton.
How Stored: Shelf stable.
New Product–Documentation: Letter (fax) from Don Lazzaro of Ceres Natural Foods. 1995. June 15. In July 1988 they introduced their first soymilk in a 1 liter Tetra Pak carton, made by and imported from Kibun in Japan, in natural and vanilla flavours.

5462. Desikachar, H.S.R. 1988. Utilization of soybean for food uses in India. In: Nawab Ali, A.P. Gandhi, and T.P. Ojha, eds. 1988. Soybean Processing & Utilization in India. Bhopal, India: Central Institute of Agricultural Engineering (CIAE). v + 431 p. See p. 289-98. Held 22-23 Nov. 1986 at CIAE, Bhopal, India.

• ***Summary:*** Discusses the development in India of soybean foods such as soymilk, soyflour, soypaneer [tofu] and soyoil–and the possibility of replacing other pulses by soybean in common Indian foods. The need for simple, low cost processing techniques with a minimum of sophistication is emphasized.

Recently texturised soy products, paneer [tofu] made from soy milk and weaning foods made using soyflour have been on the market. Solvent extracted soybean oil and imported soy oil are used in making Vanaspathi [Vanaspati]. Almost all extracted meal is being exported.

Table 1 compares the proximate composition of black soybean (Kalitur) and pigeonpea (on a dry basis). The soybean contains 44.00% protein compared with 25.2% for the pigeonpea. The soybean contains 21.5% fat [vegetable oil] compared with 1.8% for the pigeonpea.

Table 2 compares the "Sugar content of black soybean (Kalitur) and pigeonpea (percentage)."

Another point that needs to be emphasized is that soybean or soybean meal will be most widely accepted when used for making indigenous food preparations used by most Indians in their daily diet instead of soya milk, tofu, meat analogs, etc. in which for it is likely to be used by relatively few people. With this end in view, work was initiated at CFTRI, Mysore, a few years ago to process soybean for use in making common Indian foods. "Soybean was first made into dal by removing the husk. In fact, it is much easier to make dal from soybeans than from other Indian pulses. A method and machine for making dal by a dry process was standardized at CFTRI.

"The bitterish beany taste of soybean was also found to be modified by fermentation as normally practiced for *idli* and *dosa.* In fact, soybean batter was found to ferment faster and more easily than the blackgram, because of its higher sugar content (Fig. 1). It could replace blackgram by 50% in *idlis* and fully in *dosa"* (p. 291).

Table 3, "Comparative flatus [intestinal gas] production with raw, cooked and germinated pulses" (p. 293) gives values for seven raw, cooked, germinated, and cooked & germinated Indian pulses. Black soybean produced the most flatus (5.20) followed by bengalgram [chickpeas, garbanzo beans, *Cicer arietinum*] (5.18), blackgram (4.76), cowpea (4.03), pigeonpea (3.81), horsegram (2.66) and greengram (2.26).

Because of its flatus production when used in whole or split form, soybean is more difficult to digest. "The flatus effects could be minimised by addition of clove and/or cinnamon (Fig. 2) which are normally used in preparation of North Indian type dals. Germination and fermentation as normally practiced for *idli* considerably reduce galacto oligosaccharides and reduce the flatus producing properties of soybean and other pulses as well (p. 293; See Tables 4 and 5, Figs. 3, 4 and 5).

Table 4, "In vivo gas production on isolated carbohydrate fractions from black soybeans and pigeonpeas," shows that per 10 gm coming from soybeans in the diet, oligosaccharides produce the most intestinal gas (4.80), followed by hemicelluloses (1.58) and pectin (0.70).

Fig. 3 shows that germination of 7 common Indian legumes reduces the content of the raffinose family of sugars, and reduces intestinal gas. Address: Deputy Director (Retired), Central Food Technological Research Institute, Mysore. Currently Consultant, Paddy Processing Research Centre (Tamil Nadu) Society, Tiruvarur [Southeast India].

• ***Summary:*** This paper presents the results of research conducted to develop low-cost, highly nutritive soy products in combination with the byproducts of the dairy industry–such as butter milk and whey. The food products developed include three weaning food formulations, a high-protein beverage, soft serve ice cream and a table spread. The nutritive value of the products, their cost and shelf life is discussed.

Tables show: (1) Composition of the new food formulations.

Flow sheets are given for manufacture of: (1) Soy-whey weaning food (starting with whole soybeans). (2) Sorghum-soy milk weaning food (starting with whole soybeans). (3) Soy-whey beverage (starting with whole soybeans). (4)

Soy-butter milk soft-serve ice cream (starting with whole soybeans). (5) Table spread (starting with whole soybeans).

"While formulating all these products, cost has been the prime concern." All "have been observed to have good storage stability." Address: 1. PhD. All: National Dairy Research Institute, Karnal, India.

5467. Mukherjee, R.K. 1988. Soybean as food. In: Nawab Ali, A.P. Gandhi, and T.P. Ojha, eds. 1988. Soybean Processing & Utilization in India. Bhopal, India: Central Institute of Agricultural Engineering (CIAE). v + 431 p. See p. 299-309. Held 22-23 Nov. 1986 at CIAE, Bhopal, India. [8 ref]
• ***Summary:*** Soybean foods sold commercially in India include paneer, meat analogues (Nutrinugget, Nutrella, etc.), cereal-based items (biscuits, breads, chapatis, kinako), weaning foods (Protein Plus, Paustic Ahar, Nutri Ahar), and Others (Soy nuts, Protesnac, candies, shortenings, margarines, oil) (p. 300).

It would appear that protein fortification of cereals would result in better and more nutritious foods at relatively less cost. Traditional Indian foods such as *chapatis, parathas, puris, dosa, bada, idli* etc. can be made into highly nutritious foods by the incorporation of soy flour.

Studies conducted by Mishra and Mukherjee (1986) at the Post Harvest Technology Centre of the Indian Institute of Technology at Kharagpur have shown that wheat flour can be successfully fortified with full fat soy flour up to a level of 25% for chapati making without affecting adversely the flavour or overall acceptability of the chapatis. Bread, biscuits and other bakery products fortified with soy flour were found to have good consumer acceptance. Another important use of soybean would be soy dal which is a traditional" food in India. Yet it is not yet widely used because of the long cooking time (about 130-140 minutes) and the residual beany flavour. This small problem can be overcome by appropriate heat processing. 'Several other products such as soy milk, curd [tofu], 'srikhand' [sweet flavoured yogurt dessert] etc. may also be made using soybean."

Soy protein concentrates and isolates are also commercially available. "The evolution of soybean and soybean products is very timely in that more and more people are now turning to nonanimal protein" (p. 308). Address: PhD, Post Harvest Technology Centre, Indian Inst. of Technology (IIT), Kharagpur 721 302, India.

5469. Rajor, R.B.; Cheryan, Munir. 1988. Khoa like product from soybean and milk solids. In: Nawab Ali, A.P. Gandhi, and T.P. Ojha, eds. 1988. Soybean Processing & Utilization in India. Bhopal, India: Central Institute of Agricultural Engineering (CIAE). v + 431 p. See p. 364-66. Held 22-23 Nov. 1986 at CIAE, Bhopal, India.
• ***Summary:*** A simple technology for making a product resembling khoa from soybean and milk solids was developed. The product contains 13.37% protein and 14.3% fat. Sugar was added to the soybean and milk solids and water in a steam kettle to make burfi [barfi, burfee, borfee]. These products were very much liked by the consumers.

A flow sheet shows the process for making a khoa like product and a barfi like product from soybean. Table 1 gives the composition of the khoa like product.

Note: Khoa (also khoo-wah) is a milk food widely used in the Indian cuisine, made of either dried whole milk or milk thickened by heating in an open iron pan.

"It is similar to ricotta cheese, but lower in moisture and made from whole milk instead of whey.

"There are three types of khoya [khoa]–batti, chickna, and daanedaar. Batti, meaning 'rock,' has 50% moisture by weight and is the hardest of the three types; it can be grated like cheese. It can be aged for up to a year, during which it develops a unique aroma and a mouldy outer surface. Chickna ('slippery' or 'squishy') khoya has 80% moisture. For daanedaar, the milk is coagulated with an acid during the simmering; it has a moderate moisture content. Different types of khoya are used for different preparations.

"Khoa is used as the base for a wide variety of Indian sweets. About 600,000 metric tons are produced annually in India. Khoa is made from both cow and water buffalo milk" (Source: Wikipedia, at Khoa, Oct. 2012). Address: 1. PhD, Div. of Dairy Technology, National Dairy Research Institute, Karnal, India; 2. Dep. of Food Science, Univ. of Illinois,

Urbana, Illinois 61801.

5470. **Product Name:** [Sahm Yook Soymilk (Plain)].
Foreign Name: Sahm Yook Dou Ru.
Manufacturer's Name: Sahm Yook Korean Foods.
Manufacturer's Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.
Date of Introduction: 1988. July.
Ingredients: Soy milk, high fructose corn syrup, corn oil, rapeseed oil, salt.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton. Retails for 220 Won (6/90).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Eric C. Fehlberg. 1990. March 8. The Seventh-day Adventist food company in South Korea, Sahm Yook Foods, now makes soymilk (only plain, no flavors) packaged in Tetra Brik cartons and foil Doypack/Doynpack. The company was established in about 1978, and it began to make soymilk in May 1985. After launching soymilk, the company began to grow dramatically, as that product grew. Last year they built a very large, new soymilk plant (based on Adventist technology) and they are now about the 2nd or 3rd largest soymilk maker in Korea.

Label (Tetra Brik carton). Sent by Eric Fehlberg. 1990. March 12. 2.5 by 3.25 by 1.5 inches carton. Red, yellow, dark green, and light green on white. Front panel says "Soy Milk" and an illustration shows 3 yellow soybeans in a green pod.

Form filled out by C.Y. Yoon, General Manager, Sahmyook Korean Foods. 1990. June 23. Note that on the envelope the company name is printed Sahmyook Korean Foods, but the brand name is typed 4 times on the form as Sahm Yook. The address on the envelope is 320 Panjung Jiksan Chunwon Choongnam, Korea. The soy milk in a foil retort pouch was introduced in April 1985. The same product with the same ingredients was launched in a Tetra Brik carton in July 1987.

5471. Vaidehi, M.P. 1988. Home level processing and utilization of soy based food products for rural and urban people. In: Nawab Ali, A.P. Gandhi, and T.P. Ojha, eds. 1988. Soybean Processing & Utilization in India. Bhopal, India: Central Institute of Agricultural Engineering (CIAE). v + 431 p. See p. 336-54. Held 22-23 Nov. 1986 at CIAE, Bhopal, India.

• ***Summary:*** "This paper presents some of the research work in soybean processing and utilization carried out at University of Agricultural Sciences, Bangalore."

Contents: Abstract. Introduction. Physico-chemical characteristics. Varietal effects and processing application of soy products: Green soybean variety Hardee is a nutritious palatable vegetable, Davis variety of soybean is superior to Hill variety in its nutritive components, cooking and sensory quality of soybean varieties, physical characteristics (10 varieties), cooking quality of soybeans (9 varieties), fat and protein contents of soybean varieties (10 varieties), cooking quality of soydal, acceptability of soy products, varietal effect on soymilk yield and organoleptic characteristics (19 varieties), use of black soybean (LBS-11) in comparison with Hardee and pigeonpea.

Use of soy in traditional foods: Nutritional value of Indian tandoori naans, rotis and bread blended with pulses and oilseeds, home and hosteliers use of soybean products. Use of soy in fermented foods: Preparation of tempeh culture for commercialization, nutritional and sensory evaluation of tempeh products made with soybean, groundnut and sunflowerseed combinations (with flow sheet), acceptability of soybean incorporated rice *idlis.* Use of soy in baked products: High protein biscuits made with ragi flour and oilseed flour blends (16 types of flour were prepared with all purpose flour {maida}), cookies from malted cereals and oilseed flours.

Use of soy in beverage production for milk products and weaning foods: Protein and energy content of acceptable beverages prepared with blends of soy, skim milk, sesame, coconut and malts from wheat, ragi and green gram (blended malt beverages, chemical analysis), evaluation of tofu and its products prepared from soymilk in combination with sunflower seed milk and skim milk (with flow sheet for tofu). Consumer reactions to soy products: Consumer evaluation of tofu, tempeh, curd and Meal Maker in rural and urban areas, consumer evaluation of soy products in rural areas, consumer choice of fast foods from soybeans, supplementary foods (soy nuts for snacking), short term training program (3-day) for soy use in daily diet, community participation.

Table 4 "Ranking of different soy products by a panel of judges" shows (p. 341) which soybean varieties produce the highest quality recipes in which soy products are used to make dishes common to South India. For each food we will give only the top-ranking soybean variety, even though the table gives the top four. Cooked dal (KHSB-3). Mashed dal (PK-7392). Vadai (PK-7392). Idli (DS-7427). Dosai (Hardee).

Page 344: Costly chickpea or blackgram dal flour is replaced by hosteliers in part by soy flour–with good acceptance–in traditional Indian preparations like *dosa, pakodas, vade, bajjie,* and *bondas.* "The same could go to home level use by way of ready mixes with 30% soyflour incorporation." In outer coatings and batter preparations the substitution of soyflours is easily accepted by all. "Meatless meats (TVPs) and blends of soyflours in defatted form can be used in the preparation of mutton soup, cutlets, koftas, and meat loaves at 15% level substitution without any change in acceptability by consumers."

There follows a long discussion of tempeh.

Page 351: "Consumer evaluation of soy products in rural areas. One hundred rural housewives were served with several soy incorporated beverages and snacks for their

evaluation. It was found that 80% of the rural people were unaware of soy bean and its uses."

Table 10 shows the pooled percentage of rural families who scored very good or good for soy dishes (in descending order of overall acceptability, which is shown in parentheses): Soy kheer (100). Soy idli (98). Tofu burfi [barfi, burfee, borfee; a sweet confection] (97). Soy butter milk (94). Soy sambar (87). Soy pakoda (76). Tofu curry (75). Tofu pakoda (67). Soymilk curds (66). Oriental flavoured milk (59). Flavoured soymilk (57). Soy chutney (52). Soymilk (41).

Conclusion: "For home level soybean use, easy availability of soy processed products is very important. Low prices, accessibility and proper education to bring awareness and importance of soy in daily diet would undoubtedly boost the use of soy products at home level." Address: PhD, Assoc. Prof. and Head, Univ. of Agricultural Sciences, Hebbal, Bangalore–560 024, India.

5472. Vercesi, Patrick. 1988. Rhône-Alpes: Mise en service d'une nouvelle usine de traitement du soja à Valence [Rhône-Alpes: A new factory for treatment of soya to start operation at Valence]. *Les Echos.* Aug. 2. [Fre]

• ***Summary:*** The Innoval company, an affiliate of the Silos of Valence (a cooperative for the collection and commercialization of cereals, containing 5,000 producers), is going to have constructed a 2,500 square meter factory specializing in the transformation of soya for human foods. Installed in the industrial zone of Valence, this unit, which will be totally operational in September, represents an investment of nearly 20 million French francs. Lion Expansion PME, the SDR du Sud-Est, and Idianova have decided to participate in this project in the form of convertible actions and obligations. The company should have 25 salaried employees, compared with 90 salaried employees from the Silos of Valence Group and a turnover of 222 million francs. The primary raw material, soybeans, is readily available, with 100,000 ha cultivated in l'Hexagone and 18,400 in Rhône Alpes, mainly in l'Ain, as well as in Drôme, where production is expected to grow to 2,000 ha in 1988 from 1,000 ha in 1987.

5473. Bailey, Simon. 1988. Soya-based products. *Natural Choice.* Aug. 15.

• ***Summary:*** "The food of the future. The soya bean is a protein-packed food which is increasingly used as a dairy or food substitute in today's search for a healthier diet." Discusses soya milk, dairy free desserts, tofu, tofu-based foods, soya flour, soya sprouts, tempeh, soya sauce, miso, and high-tech soya foods including TVP and soya protein isolates. Address: 138 Randolph Ave., London W9 1PG, England. Phone: 01-289-7364.

5474. Keith, Hogetsu. 1988. Re: Making soymilk and tempeh at Shasta Abbey. Letter to William Shurtleff at Soyfoods Center, Aug. 16. 2 p.

• ***Summary:*** In this Soto Zen Buddhist monastery (Rev. Roshi Jiyu-Kennett, abbess), having about 50 year-round residents, they make 9-14 gallons/week of soymilk and 20-24 lb/week of tempeh. They would like to make tofu but don't have the time or labor, so they buy it from Ashland Soy Works in Oregon. They have been making soymilk for nearly 2 years. Address: Shasta Abbey, P.O. Box 199, 3612 Summit Dr., Mt. Shasta, California 96067. Phone: 916-926-4208.

5475. Erb, Gene. 1988. World's hungry may suffer from U.S. drought, policies. *Des Moines Register* (*Iowa*). Aug. 21. p. 1, 2J.

• ***Summary:*** Some relief officials said severe shortages of key commodities such as powdered milk and soy-based milk substitutes already are appearing.

Fourteen million of the estimated 18 million to 20 million people who die of hunger each year are children under 5, according to the United Nations.

5476. Lee, Ken. 1988. New developments with yuba, soymilk, and tofu at Soyfoods of America (Interview). *SoyaScan Notes.* Aug. 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soyfoods of America started production in Nov. 1981, making yuba, soymilk, and tofu. Of the yuba, 90% is fresh frozen sheets and 10% is dry sticks. This company is the only maker of fresh yuba in America and he ships it nationwide, to Houston, Dallas, Seattle, Chicago, etc. It is sold mostly to the Oriental market but also to a few health foods restaurants such as Healthys in Hawaii, and Orean. All imported yuba is dried. It takes 3 months to get here and usually contains preservatives, bleach, and dyes. His prices is 4 times the imported product but he still can't keep up with demand. He now has 4 workers, working 2 shifts. They make 240 cases/week with 200 sheets/case = 48,000 sheets/week. It is all hand-made now but he may automate. Of the company's total sales, 50% is soymilk, 30% is tofu, and 20% is yuba. The soymilk is sold mostly to Chinese, Vietnamese and other Asian-Americans. They are going to make a soymilk without beany flavor. They sell 150 cases/week of half-gallon bottles of soymilk to Price Club. Spicy Tofu and Tofu Noodles were introduced in Jan. 1984. The brand "Furama" means "fortune" as in "good fortune." Address: 1091 E. Hamilton Rd., Duarte, California 91010. Phone: 213-681-5393.

5477. Golbitz, Peter. 1988. Soymilk processing–New technologies support growing market. Modern systems remove beany flavor. *Soya Newsletter* (*Bar Harbor, Maine*). July/Aug. p. 3, 6-7.

• ***Summary:*** Discusses soymilk systems made by: 1. Alfa-Laval. A continuous system named SOYAL produced 500 to

3,000 liters/hour and costs $450,000 to $750,000 without the bean cleaning, storage tanks, UHT processing, or packaging components. The beans are not dehulled. 2. Soya Technology Systems (STS/DTD). 3. Takai Tofu & Soymilk Equipment Co. 4. Kawanishi Shoko. 5. Bean Machines, Inc. Similar information on capacity, equipment and cost is given for each company, plus an address. Address: Soyatech, Bar Harbor, Maine.

5478. Golbitz, Peter. 1988. U.S. soymilk sales reach new heights: Larger package sizes and domestic production spur on demand. Market update. *Soya Newsletter* (*Bar Harbor, Maine*). July/Aug. p. 1, 14-15. [1 ref]
• ***Summary:*** Estimates that in 1988 some 4.6 million gallons of soymilk will be sold in the USA, with a retail value of $36.1 million. This is up 40% over 1987 (3.3 million gallons worth $25.6 million). The U.S. market is composed of several distinct segments: the health food segment (whose products are formulated to resemble cow's milk) and the Asian-American market (whose products contain slightly more water and sugar). In 1988 for the first time in recent years, the health food segment (2.7 million gallons) passed the Asian-American segment (1.7 million gallons), and now appears to be growing at a much more rapid rate.

Another way of classifying market segments is by fresh soymilk (less than 8% by volume in 1988) and aseptically packaged soymilks. "The move to larger liter and quart packages has helped sales tremendously by bringing the per ounce cost of soymilk down. These larger sized packages will account for 76% of the volume in the health food market this year, as compared with 73% in 1987. Smaller sized packages make up the majority of sales in the Asian-American market." Address: Soyatech, Bar Harbor, Maine.

5479. Klaper, Michael. 1988. Vegan nutrition: Pure and simple. 2nd ed. P.O. Box 959, Felton, CA 95018-0959. Or 8563 Empire Grade, Santa Cruz, CA 95060. iii + 72 p. Illust. 27 cm. [137* ref]
• ***Summary:*** An excellent, highly readable introduction to the subject by a physician. The Acknowledgments page (p. 69) reads like a "Who's Who" of vegetarianism in the USA in 1988. Dr. Klaper gives special thanks to "Cynthia Pararo Klaper, for her indispensable editing suggestions, tireless efforts, and loving support." Soyfoods (especially tofu, soymilk, and tempeh) are mentioned and discussed throughout this book. Soy-related recipes include: Tofu yogurt. Bran muffins (with soymilk). Tofu omelette. Tofu tahini dressing. Blond miso dressing. Tofu eggless salad. Miso soup. Hot miso dressing. Tofu cutlets. Tofu loaf.

Note: Dr. Klaper is a graduate of the Univ. of Illinois College of Medicine, with post-graduate training and experience in surgery, anesthesia, obstetrics, and general practice. Since 1972 his emphasis has been on applied nutrition. Until recently his practice was in central Florida. Address: Felton, California. Phone: 408-423-6643.

5480. McSweeney, Daniel. 1988. Consumer survey 1988. *Whole Foods.* Aug. p. 27-28, 30, 32, 34.
• ***Summary:*** Natural/organic food purchases. Percentage of respondents who purchased a type of product during the past year: 1988 all/1987 all (1988 women / 1988 men). NA means "Not Available." The following are ranked in descending order of the percentage of consumers buying the product in 1988: Tofu: 63.5/83.4% (55.6/63.5%); Tamari 55.6% / NA (57.8/50.0%); Soy sauce 47.6%/NA (46.7%/50%); Miso 41.8/69.7% (42.2/38.9%); Tempeh 30.2/NA (35.6/16.7%); Soymilk 28.6%/54.5% (31.1/22.2%). Note the sharp declines between 1987 and 1988 for soymilk -47.6%, miso -40%, tofu -24%. All soyfood products for which there are statistics for both years declined, a serious trend.

Note: The "1986 and 1987 surveys statistics were generated through a reader questionnaire in East West magazine. The 1988 Consumer Survey was handed out to shoppers at 13 different retail stores throughout the country. Due to this variance in the survey base, some statistical discrepancies may have resulted."

5481. *Nutrition News* (*Riverside, California*). 1988. Soy: King of the mountain. 11(8):1-4. Aug. [1 ref]
• ***Summary:*** An overview and introduction to soyfoods nutrition, tofu, tempeh, miso, shoyu and tamari, and soymilk. Note: This magazine was formerly located in Pomona, California.

5482. **Product Name:** Plamil Carob-Coated Fruit & Nut Bar [Apricot, or Pear].
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1988. August.
Wt/Vol., Packaging, Price: 40 gm bar in foil wrapper.
How Stored: Shelf stable.
New Product–Documentation: Simon Bailey. 1988. Natural Choice. Aug. 15. "Soya-Based Products." A photo shows the Label. CSP form filled out by Simon Bailey. 1988. Sept. 28. Introduction date is okay.

Leaflet (Color, 6 by 8.25 inches). 1990. April. Plamil delectable tasting confections. Describes and shows illustrations of the 100 gm carob bars and the 40 gm carob coated fruit & nut bars.

5483. Schnell, Hannelore. 1988. Kleine Bohne, ganz gross [Small bean, very big]. *Natur* (*Munich, West Germany*). Aug. p. 75-83. [3 ref. Ger]
• ***Summary:*** Discusses soymilk, tofu, soy sauce, miso, tempeh, Soyastern, Svadesha Tofurei, Alpro, and DE-VAU-GE. Concludes with a detailed discussion of newly recognized potential dangers with HVP products. Vegetable

seasonings made by companies such as Maggi may contain carcinogenic chloropropanols, such as dichloro propanol. Maximum limits on these are now being established.

5484. *Soya Newsletter* (*Bar Harbor, Maine*). 1988. U.S. soyfoods production to use 62 million pounds of soybeans in 1988. July/Aug. p. 10.
• ***Summary:*** This figure was the result of a recently soyfoods industry survey conducted by Soyatech, Inc. The soyfoods included in this projection are tofu, soymilk, tempeh, soy sauce, miso, and soynuts. When asked how they expected their demand for soybeans to grow over the next 5 years, 4.8% of soyfoods manufacturers surveyed expected it to remain the same, 52.4% expected it to grow slowly, 42.9% expected it to grow considerably, and none expected it to decrease.

5485. **Product Name:** Unisoy Carob & Banana Organic Drink.
Manufacturer's Name: Unisoy Milk 'n' By-Products Ltd.
Manufacturer's Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.
Date of Introduction: 1988. August.
New Product–Documentation: Talk with Neil Rabheru of Unisoy. 1990. July 2. Followed by letter (fax) of July 9. This product was launched in Aug. 1988. "It was and probably still is the only organic soya drink to contain pure carob syrup; the other products on the market still use carob powder."

5486. Sturgeon, Bruce. 1988. Early history of Great Eastern Sun, Oak Feed Miso, Inc., and American Miso Co. (Interview). *SoyaScan Notes.* Sept. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bruce is looking at documents from the company archives. Great Eastern Sun was founded in March 1982 by Barry Evans. He was the only principal/owner at the time. American Miso Co. was founded in March 1979 as the Oak Feed Miso, Inc. The principals were Sandy Pukel, John Belleme, and Barry Evans, but it is not clear who owned how much stock. It started doing business in 1981 as the American Miso Co. and officially became The American Miso Co. by law in May 1982. The principals of the American Miso Co. were John Belleme and Barry Evans. Sandy Pukel was somehow bought out and left and joined Oak Feed Co.; It seems to have become his. Barry Evans may have been the original president of Oak Feed Co. It was a store, probably a restaurant, and an import and distribution company. Barry and John went on to do the miso company. Great Eastern Sun was founded as a way to market and distribute the miso. They also became an importer and distributor of Mitoku products at about that same time. Don DeBona was the first or second company president, after Marty Roth. Today Barry owns all the stock of both American Miso and GES. Barry treasures his privacy. Bob Ballard and Bruce run GES. Even they do not know Barry's address or phone number. He checks in about once a quarter to see how things are going.

Ah Soy now has about 5% of the U.S. soymilk market, and is trying desperately to hang onto that. The competition is fierce, but they have many loyal consumers. Their 6 oz size is still their best seller, even after introduction of the quart, and even with a price increase last Feb. to above $1.00. Sales are up compared with last year.

In 1984 Bruce was in Boulder, Colorado as a buyer for Pearl Street Market. They had been buying from GES at that time for about a year. Oak Feed came to Pearl Street Market with imports to sell. Address: 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730 or 704 252-3090.

5487. Cross, Kevin. 1988. Brief history of Soy Power Company, Inc. of Santa Monica (Interview). *SoyaScan Notes.* Sept. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The company started business in Santa Monica, California, in April 1981, with Tom Binder and Kevin Cross as partners. They distributed tofu and soymilk made by Wy Ky in Los Angeles. They first started distributing other people's products in about July 1982, starting with Vegetable Jerky from Maple Meadows. When Edensoy was launched in 1983, it started to hurt their sales so they decided to get in on the action. They soon became America's leading seller of Edensoy. In April 1986 they moved the company to Marina del Rey, then in September 1988 back to Santa Monica. Today they market and distribute about 11 soyfoods products under their own brand (all made by other companies), and they distribute another 350 products from other companies. Address: 1602 Stanford St., Santa Monica, California 90404. Phone: 213-829-2331.

5488. *Jewish Press* (*Brooklyn, New York*). 1988. New foods products for the health conscious [Edensoy from Eden Foods, Inc.]. Sept. 22.
• ***Summary:*** Edensoy Original and Vanilla flavors now contain no added oil. The American Soy Products facility opened in October, 1986. It is the first U.S. facility to introduce an enzyme invalidation process in the commercial manufacture of soy-milk. In May, 1987, the Edensoy package design won first place in the offset printing category in an international package design competition sponsored by Tetra Pak, Inc. American Soy Products is only 30 miles from the Dearborn, Michigan site where Henry Ford set up research facilities in 1932 to develop products from soybeans. Note: this soy product has a tan color and does not attempt to be a dairy/milk.

5489. **Product Name:** [Formoja Chocolates (With Soya Kernels, or With Soja Milk)].
Manufacturer's Name: Cacoja. Affiliate of Coopérative Agricole de Colmar (CAC).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France.
Date of Introduction: 1988. September.
New Product–Documentation: SoyaFoods (ASA, Europe). 1990. 1(1):3. These products are made with soybeans grown in Alsace. Cacoja Leaflet. 1990. April. Chocolate Tablets: Formoja is innovating by realizing a range of chocolate specialties with soja beans. The composition of the chocolate with soja kernels per 100 gm: protein 12.5 gm, fat 26.9 gm, carbohydrate 57.9 gm, calories 524. The composition of the chocolate with soja kernels per 100 gm: protein 10.3 gm, fat 34.3 gm, carbohydrate 51.4 gm, calories 556. "These new products are richer in protein as the ordinary chocolate, cholesterol free, rich in lecithin and in unsaturated fatty acids. This range of chocolate specialties will allow the consumers to treat themselves as well as profiting at the same time by the nutritional qualities of soja."

Talk with Gary Barat of Legume. 1990. June 22. He was not aware of these products and is not involved in them in any way.

Letter from Sylvain Stievenard of Sojinal (named Cacoja prior to Aug. 1990). 1990. Sept. 24. This product was launched in Sept. 1988.

5490. CDS, PAN, MINSA (Ministry of Health, and Ministry of Agriculture). 1988. Cuaderno de nuestra olla [Soya cookbook]. Managua, Nicaragua. 24 p. 28 x 19 cm. [Spa]
• ***Summary:*** This Spanish-language health comic booklet, whose title means literally "Notebook of our stewpot," is the first book on soya in Nicaragua. From a talk with Annie Souter we learn that: CDS is the Comité de Defense Salud, a health education group from the Ministry of Health found on many barrios. PAN (which also means "bread") is a department within the Ministry of Agriculture. And MINSA is the Ministry of Health (Salud). Before this edition, the book existed as small photocopied leaflets provided by the Ministry of Health. Annie Souter had 1,000 copies printed by Ross Newport in Santa Cruz, California, and sent down to Nicaragua for use on her soy project.

This is an introduction to cooking with soya in Nicaragua, filled with cartoons and the message often in comic-book style captions. The little soybean is, itself, a cartoon character. The introduction explains that, in these times of hardship during the Contra war and after the great hurricane, soy is an excellent supplement to corn and rice (used in the ratio of 1:4 soy to corn), and a good replacement for eggs, meat, and milk. Illustrated instructions show and tell how to make basic soyfoods: Soymilk, soya-meat or payana (okara), tofu (cuajada y queso de soya) coagulated with lemon juice and often seasoned with garlic, soy-fortified tortillas, whole soybeans cooked with regular beans, and soy flour. The recipe section contains 38 Nicaraguan-style recipes including soy mayonnaise, tofu guacamole, and tofu with tomatoes. The book concludes with 1 page each on kitchen sanitation, growing soybeans in Nicaragua, their potential uses as oil and fodder, and a reminder: "Combining soybeans with other popular foods will give better nutrition for all the people. And our children will grow healthy and strong. Remember that they are the future of our country. 'Let's eat better without spending any more!'" Address: Managua, Nicaragua.

5491. Eden Foods, Inc. 1988. Edensoy... A lot of pluses (Ad). *Vegetarian Times.* Sept. p. 29.
• ***Summary:*** This full-page, black-and-white ad contains 8 black-and-white photos showing Edensoy ads. "Only one bean in 20,000 makes it into Edensoy." "Next time you draw straws, choose Edensoy." "What most soymilks forget as a main ingredient... Flavor." "One more thing you can do for your family." "Draw on our experience." "The closer you look... the better we look." "Edensoy pours it on." "The competition has arrived!" (Shows a cow with football helmet standing behind cartons of Edensoy). The other text reads: "Nutritious. Delicious. Dairy free. Quality. Satisfying. Convenient. Fresh. Versatile."

This ad also appeared in Vegetarian Times (Nov. 1988, p. 13; May 1989, p. 45), Whole Foods (Jan. 1989, p. 18), Natural Foods Merchandiser (Feb. 1989, p. 14), and Solstice (March/April 1989, p. 3). Address: 701 Tecumseh Rd. Clinton, Michigan 49236.

5492. Elliot, Rose. 1988. The complete vegetarian cuisine. New York, NY: Pantheon Books. 352 p. First American edition. With many lovely full-page color photos. Index. 28 cm.
• ***Summary:*** Visually, this is a beautiful book. The author makes minimal use of soybeans or soyfoods in her vegetarian cookbooks. She has apparently not learned that very few cultures that use soya as a traditional part of their diet use either soybeans as such or soy flour. In "Learning to love the soybean" (p. 16) she notes: "Soybeans and soy flour are rich sources of nutrients, but, in my opinion, so difficult to make palatable! However sprouted soybeans are delicious and make an excellent crunchy addition to salads, stir-fries, and sandwiches... Creamy soy milk (p. 106) and tofu (p. 108), which can both be made at home, are other palatable ways to eat soy."

Pages 38-39 contain a marvelous 2-page spread color photo of 30 different leguminous seeds (including soybean and soy flour), each with a brief description, followed by a longer description on pages 40-41. The section titled "Soybean *Glycine max"* states: "Soybeans have a strong flavor and need powerful condiments, such as curry, tomato and garlic, to make them taste good. I think they're nicest

when sprouted (p. 207) and added to salads and stir-fries.

"Many products, such as miso, soy sauce, tempeh, soy milk and tofu, are made from soybeans and are described in other sections of this book.

"Soy flour is high in protein and low in starch, so it cannot be used to make a normal white sauce, although it can be stirred into savory sauces and gravies to add bulk and nutrients and is sometimes added to flour as a dough improver, in the proportion 8 parts flour to 1 part soy flour."

Pages 104-05 contain another 2-page spread color photo of dairy and nondairy ingredients, with a brief description of each, including tempeh, seitan, dried deep-fried tofu, aromatic dried tofu [probably five-spice pressed tofu = *wu-hsiang toufukan*], smoked tofu, firm tofu, soft tofu, textured vegetable protein (chunks or chopped), soy milk, and soy cream. A longer explanation is given on pages 106-06. The author does not like the strong soybean flavor or stodgy texture of tempeh. Page 108 gives a brief description of how to make tofu, and has a sidebar titled "Ideas for using tofu and vegetarian protein foods." A good but brief description of soy sauce is given on p. 184, and a poor description of "How to make soy milk" (with added vanilla, honey, and oil) is given on page 280.

Soy-related recipes include: Miso soup with bean curd (p. 133; a variation includes wakame). Vegan ice cream (uses soy milk instead of dairy milk, p. 280). Thus, only 1 recipe in the 352-page book uses tofu and none use tempeh.

"Rose Elliot, a vegetarian since the age of three, is one of England's most popular cookbook authors. Her many best-selling books include *Vegetarian Cooking from Around the World, The Festive Vegetarian,* and *The Vegetarian Mother and Baby.* An active food consultant, she has appeared often on television and radio in Britain. She lives in Hampshire, England." She was born and educated in England. Address: Hampshire, England.

5493. Hong Kong Soya Bean Products Co. Ltd. 1988. The Vitasoy story. 41 Heung Yip Rd., Aberdeen, Hong Kong. 12 p. Sept. 22 x 28 cm. [Eng; Chi]
• ***Summary:*** Contents: The beginning. Early days. Growth and expansion. A giant step forward. Diversification. Vita fresh milk products. Vita products around the world. Today. The future.

Early history: The Vitasoy story began in 1940, when K.S. Lo began to produce milk from the soybean. The drink he created was not an immediate success. On the first day of business, only nine bottles were sold at six cents each. The product was delivered fresh to the door by boys on bicycles, and it had to be sold at once or it would spoil. When World War II ended production in 1941 sales were only about 1,000 bottles a day.

Photos show: One of the original glass bottles of Wi-ta-nai. The front of the Aberdeen plant. Aseptic packages of Vitasoy (regular and malt). The line of products today. The Tuen Mun plant, with its warehouse, R&D center, sales department, production line, and raining centre. Address: Hong Kong.

5494. Krizmanic, Judy. 1988. Creaming the crop [comparison of U.S. soymilk varieties]. *Vegetarian Times.* Sept. p. 68.
• ***Summary:*** Compares the following brands: Ah Soy (Great Eastern Sun), Edensoy (Eden Foods), Sno-E Tofu (Abersold Foods), Solait (Miller Farms), Sunsoy (Vamo Foods), Supersoy (Mitoku), Vitasoy (Vitasoy U.S.A.), Westsoy and Malteds (Westbrae). Lists the available flavors for each, what type of oil is added (if any; Edensoy, Sunsoy, and Supersoy have none added), percentage of calories from fat (15-60%), and comments. Sno-E Tofu is the only product fortified with vitamins and calcium. Sunsoy strawberry gets its pink color from cochineal, the red die made from a dried insect.

Published in a hardcover edition only–6 years after the project started. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

5500. *Tetra Pak Age.* 1988. Aseptic growth remains strong. 6(2):14. Summer.
• ***Summary:*** With volume passing 562.2 million during 1987, growth of aseptically packaged beverage and food products jumped 17% in the USA last year. More than 1,700 million aseptic packages were sold in U.S. food stores in 1987 (not including institutional, wholesale, and vending).

5501. Zemel, Michael B. 1988. Calcium utilization: Effect of varying level and source of dietary protein. *American J. of Clinical Nutrition* 48(3S):880-83. Supplement. Sept. Proceedings of the First International Congress on Vegetarian Nutrition. Held 16-18 March 1987 at Washington, DC. [26 ref]
• ***Summary:*** "Dietary protein exerts a significant calciuretic effect. A twofold increase in protein at constant levels of calcium and phosphorus intakes causes a 50% increase in urinary calcium. The protein-induced hypercalciuria results primarily from decreased fractional renal tubular reabsorption of calcium..." Dietary phosphorus increases renal tubular reabsorption of calcium and thereby exerts a hypocalciuric effect. "Consequently a soy-based diet was able to maintain calcium balance at a calcium intake of 457 mg/day in spite of a protein intake of 90 gm, presumably due to the lower level of sulfur amino acids in the soy diet and to the 1,450 mg of phosphorus which accompanied the soy protein." In other words, when soyfoods (soymilk or tofu) were the primary sources of protein in the diet, calcium equilibrium was maintained, even when calcium intake was low and protein intake relatively high. Address: Dep. of Nutrition and Food Science, and the Div. of Endocrinology and Hypertension, Wayne State Univ., Detroit, Michigan 48202.

5502. *Toyo Shinpo* (*Soyfoods News*). 1988. Kankoku tônyû saisei choki e. Nihon no tônyû gyôkai wa teimei [Korean soymilk market starts to grow again. Japanese soymilk industry is in a low state]. Oct. 1. p. 14. [Jap; eng+]
• ***Summary:*** The Korean soymilk market, which rose and then fell like the Japanese soymilk market, is now re-entering a period of growth. According to a recent Korean newspaper, domestic soymilk sales from January to August, 1988 were 42,000 million won, up 20% over last year's figure. Sales are expected to increase during the winter at the end of this year, so total sales for the year are expected to reach 72,000 million won. The won is the Korean unit of currency.

5503. *SoyaScan Notes.* 1988. Microbiological specifications for tofu, powdered soymilk, and soy protein isolates (Overview). Oct. 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** According to the 8th draft of the tofu standards (Oct. 1985): None of the following should be present in fresh tofu: *Staphylococcus aureus, Salmonella, enteropathogenic Escherichia coli, Vibrio parahemolyticus, Yersinia enterocolitica.* At the plant on the day of production: Coliforms < 5/gm, Standard Plate Count (SPC) < 100, pH < 7.0. At the time the tofu is sold: Coliforms < 500, SPC < 1 million, pH 6.0 to 7.0

For St. Peter Creamery spray dried soymilk: Coliforms < 10, E. coli negative, Salmonella negative, Standard Plate Count 30,000 units/gram (Most Probable Number). For Ralston Purina isolated soy protein, ditto except that

Standard Plate Count is < 10,000 units/gram.

5504. Bolduc, Bill. 1988. The founding of Eden Food Co. (Interview). *SoyaScan Notes.* Oct. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill founded Eden Foods Inc. as a macrobiotic/natural foods retail store in Ann Arbor, Michigan, in Nov. 1969. He was the original incorporator. About 8 months later, a proposal was made to Bolduc by a woman to expand Eden in a new location at 211 South State Street. After that, Bolduc invited Tim Redmond to join him, which he did. Redmond became a 50% owner in 1970, about 9 months after the company was founded. Tim was in Boston at the time, studying with Michio Kushi and working at Sanae. He was interested in the restaurant business. Bill and Tim had been in college together at the Univ. of Michigan. Both later became interested in macrobiotics. Bill wishes now he had not sold his stock.

About 18 months ago, Tim and his wife, Patty, and Bill sat down and talked through the history for the first 2-3 years month by month. They should have tape recorded it. They will try to do it again. His older cousin is David Bolduc.

Tim Redmond is thinking of doing a consumer study on soymilk. He uses Dialog a lot, doing mostly food research now. Address: ELI Research Corp., 660 Northland Blvd., Suite 28, Cincinnati, Ohio 45240. Phone: 513-851-0330 or 751-9090.

5505. Eveno, Régine. 1988. La poussée du soja; SIAL [The soy push: SIAL]. *Usine Nouvelle* (*L'*) No. 42. p. 44. Oct. 20. [Fre]
• ***Summary:*** "Products derived from soya, rich in protein and low in fats, are seducing consumers more and more. The big dairy companies are taking an interest and starting to occupy the terrain in a face-off with the cereal grain companies." Triballat, a well known 1,200 million French franc cheese company, now markets Sojasun, which is quite similar to yogurt. To tell the truth, soyfoods (especially tofu and soymilk) are all in vogue at SIAL this year. Cacoja (under the direction of Maurice Rochet), the subsidiary of a cereal company in Alsace, is also marketing soyfoods. With its new plant constructed at Noyal-sur-Vilaine (for an undisclosed amount), Triballat can produce in its first year 4,000 tonnes of finished products. Cacoja, with a plant at Issenheim (Bas-Rhin), constructed a year ago, will be able to produce 3.5 million liters of "soy juice" (*jus de soja*) in 1988-89, at a cost of 11 millions francs. Another plant is being constructed on the same site to make soy flour for use in biscuits, sausages, etc.

5506. Black, Nicole. 1988. Re: Developments with soyfoods in Mexico. Letter to William Shurtleff at Soyfoods Center, Oct. 24. 2 p. Typed, with signature on letterhead.
• ***Summary:*** The only other producer of tofu which we know of in the country currently is a Japanese man in Mexico City who is selling to a few places in Mexico City. The DIF (Desarrollo Integral de la Familia, or Family Development Institute) is an arm of the government which teaches people about nutrition, etc. The D.I.F. has introduced soybeans to the people in several cities. "I have discovered that only about two forms of soy products exist here currently–one is the dehydrated soy milk in different flavors and the other is the dehydrated chunks of soya which also comes in several flavors imitating meat or chicken or pork, etc... It is not an easy task to introduce tofu here. But with my free recipe brochures... and lots of determination, I plan to make a go of it." Quite a few of the hospitals around seem interested in incorporating tofu into their menus. "The next time I go to Mexico City, I will hunt down a health food store and see if they really do have any other soy products than the ones I have mentioned. Frankly, I doubt it. I called several of them, whose names are SoyaMundo, SuperSoya etc. and they have almost no soy products at all. What a joke!" Address: Huertas 17, Apdo 185, San Miguel de Allende, Gto., Mexico 37700. Phone: 465-20255.

5507. Westbrae Natural Foods. 1988. Westbrae and Vestro Foods (Interview). *SoyaScan Notes.* Oct. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Westbrae will move to City of Commerce at the end of October. None of Westbrae's employees are going, not even Gordon Bennett, the president, for two reasons: They don't want to live in Los Angeles, and many are not interested in the new direction that Vestro plans to take Westbrae. Paul Repetto (formerly with Sunfield, which had the Lite-Chef tofu dry mixes) is the president of Vestro, and many of the vice presidents are from Hain. Vestro plans to "grow the company." Address: Emeryville, California.

5508. Ashraf, Hea-Ran Lee; Bwembya, P.A. 1988. Supplementation of the traditional Zambian diet with soybean products. *Nutrition Reports International* 38(4):719-27. Oct. [12 ref]
• ***Summary:*** Two traditional Zambian corn based cereal dishes, porridge and Nshima (an indigenous name for cooked corn meal), were supplemented with dried soybean curd (DSC), in order to improve the quality and quantity of proteins. In porridge products, the protein content increased 3.5 fold when DSC was added at 50% of the dry ingredients. In Nshima products, formulations were accepted only at 10% supplementation. Neither soymilk nor soymilk-papaya blend were accepted by the sensory panel.

Soybean has been recognized in Zambia as an important alternative protein source since the National Council for Scientific Research in conjunction with Zambia University Teaching Hospital and the National Food and Nutrition Commission formulated Nutrifex, a mixture of corn, soy flour and skim milk, in 1980. The product was tested on

malnourished children in the University Teaching Hospital. Its satisfactory results encouraged the National Council for Scientific Research to develop a weaning food based on this formula. Bread and cookies using soy flour are also available on the market and a soybean cookbook has been recently published.

Note 1. The cookbook is titled *Soyabean cooking in Zambia,* by Dave Wynne and Fereidoon Javaheri (1987; 48 p.). Note 2. None of these products was commercialized. Address: Dep. of Animal Science, Food & Nutrition, Southern Illinois Univ., Carbondale, IL 62901.

5509. *East West.* 1988. East West presents: Best & worst awards. 3rd annual. 100% natural. Oct. p. 65-72.
• ***Summary:*** Best Natural Soy Sauce: Lima Nama Shoyu from Ohsawa-Japan, imported by Ohsawa America of Chico, California. Twice brewed, lower in salt, and aged four years. "It is unique among shoyus, with exceptional smoothness and flavor."

Better Than It Sounds Award:" Tofu chocolate? Yes, Barat Bars by Legume Inc. of Montville, New Jersey, use tofu instead of dairy and no hydrogenated or fractionated palm kernel oil. Carob candies move over!"

Best Tasting Flavored Soy Drinks: "The Westbrae Malteds won this contest going away. Creamy, thick, and delicious, they are more of a dessert than a drink. Some devotees eat them frozen."

Least Healthful Line of Soy Drinks: "The Westbrae Malteds. The flip side of their great taste is their almost 400 calories and 15 grams of fat per 8 ounces."

Most Healthful Line of Soy Drinks: Edensoy. They are the only producers making a totally oil-free drink.

Worst Tasting Flavored Soy Drinks: "Vitasoys from San Francisco, Calif., seem to have few fans and finished last in our blind taste test."

Most Questionable Beverage Label Claim: "3 grams of fat per 6 ounces of Carob and Chocolate Ah Soy, by Great Eastern Sun of Enka, North Carolina. These soymilks are rich and creamy, yet 3 grams is a lower fat content than even Edensoys, made without oil. How is that possible guys?"

That's Progress? Award: "Mori-Nu Tofu by Morinaga Nutritional Foods of Los Angeles. Aseptic Tetrapacked tofu that has indefinite shelf life and can be shipped anywhere. Good for backpackers maybe but can't compare to fresh and local."

Best Fake Hot Dog: SoyBoy Tofu Not Dogs by Northern Soy of Rochester, N.Y. "Nice smoky flavor and smooth texture, almost as good as the real thing."

Worst Fake Hot Dog: Tofu Pups of Lightlife Foods of Greenfield, Massachusetts. "Dry and crumbly on the inside, with a lack of distinctive flavor. Won't fool anybody at the neighborhood cookout."

Best Tamari: San-J Traditionally Brewed Tamari from San-J International of Colonial Heights, Virginia. "No one else even came close. Question: Will they be able to retain their appeal when the first U.S.-brewed batch hits the shelves?"

5510. **Product Name:** [Mamina Soya Instant Baby Food Gruels {With Powdered Soymilk} (With Fruit, Vegetables, or Cereals)].
Foreign Name: Mamina Soja (Fruechte, Gemuese, Getreide).
Manufacturer's Name: Galactina Ltd.
Manufacturer's Address: Belp, Switzerland.
Date of Introduction: 1988. October.
Ingredients: Incl. spray dried soymilk.
Wt/Vol., Packaging, Price: 300 gm aluminum bags in a paperboard box.
How Stored: Shelf stable.
New Product–Documentation: Soya Bluebook. 1986. p. 111; 1989. p. 131. Talk with Peter Speck. 1990. June 2. Soya Bluebook contains a misprint. Maurina Soja (Infant formula) is actually Mamina Soya. Talk with Conrad Seewer of Galactina. 1990. May 17. Mamina Soya (pronounced ma-MEE-nah ZO-yah) was Galactina's first infant formula after Bebe Nago. product, using new technology, it replaced Bebe Nago. It has a better taste and completely fulfills the baby's nutritional needs according to modern pediatric standards. It was launched 5-6 years ago. It is made from whole soybeans that are made into soymilk, which is then spray dried and formulated. It contains no isolates, and this is part of Galactina's philosophy and history. This allows better control of the product quality and the milk is less highly processed. The processing method has solved the problem of flatulence.

Talk with Peter Speck. 1990. May 23. The market for Galactina's new line of two baby products looks very promising. There is Mamina Soya and then 2-3 different types of gruels.

Letter (fax) from Conrad Seewer of Galactina. 1990. July 13. These are instant baby foods for spoon feeding. The powder is diluted with water. Both these and the infant formulas are in powder form, sealed in aluminum foil bags that are packed in paperboard boxes. The products contain no soy isolates; rather they are made with powdered soymilk made directly from soybeans. Flatulence is prevented by a special technical manufacturing process that is confidential and that eliminates trypsin inhibitor. The first Mamina Soya product was introduced in June 1986.

5511. Hong Kong Soya Bean Products Co. Ltd. 1988. The Vitasoy story (Color videotape). 41 Heung Yip Rd., Aberdeen, Hong Kong. 14 minutes. Oct. [Eng]
• ***Summary:*** The company has produced this video for its 50th anniversary. Part of the company sales kit, it is available in two versions, one narrated in English and one in Chinese. The film portion of the two is identical. Address: Hong Kong.

5512. *INTSOY Newsletter* (*Urbana, Illinois*). 1988. India returning to focus on soybeans as human food. No. 40. p. 3. Oct.

• ***Summary:*** "Today India spends the equivalent of almost $1,000 million per year to import edible oils. At the same time, oilseed production in India has been stagnating at about 13 million tonnes per year. Local production of edible oil is about 3.5 million tonnes per year. Annual imports amount to about 1.2 million to 1.4 million tonnes...

"The bulk of the edible oil comes from major oilseed crops, such as peanut, mustard, linseed, and coconut...

"Today approximately 98% of the soybean crop, amounting to about one million tonnes yearly, is used for oil extraction. This yields about 160,000 to 180,000 tonnes of oil and 700,000 to 800,000 tonnes of soybean meal.

"Virtually all the oil is sold locally as edible oil, whereas almost all the meal is exported... Recently, however, India has faced increasing problems in disposing of the meal because of competition from other countries...

"As a result, new efforts currently are under way to develop processes for manufacturing a wide variety of soy-based foods that fit Indian dietary patterns.

"Although there is an emphasis on using defatted soybean meal, work is also moving ahead on whole soybean utilization for such products as soymilk, dairy analogs, and soy paneer...

"M/S Pantnagar Soy Products in New Delhi is currently producing about 100,000 packets of soymilk per day. Each packet contains about 200 milliliters of soymilk...

"Recently Brittania (India) has started marketing edible-grade defatted soy flour to be used as a supplement in chapati, puri, paratha, and other traditional foods...

"According to the Indian scientists, soybean utilization for food is now on a firm basis in India."

5513. *INTSOY Newsletter* (*Urbana, Illinois*). 1988. Soybean markets in Bangladesh prime for future expansion. No. 40. p. 2. Oct.

• ***Summary:*** "The market for soybeans in Bangladesh is now at a critical stage where implementation of small- and medium-scale processing technologies could have a major impact, according to Jane Gleason, INTSOY agricultural economist. Gleason recently spent 12 days in Bangladesh visiting soybean processing facilities and meeting with officials from the government, private volunteer organizations, and local businesses.

"She reports that the Mennonite Central Committee (MCC) has been especially active in promoting increased soybean utilization. Working with local biscuit manufacturers, MCC has helped introduce the concept of fortifying wheat flour with full-fat soy flour. Two biscuit makers are already using soy flour, and at least three others are testing the product. Most of the biscuits are made from raw soybean flour. The trypsin inhibitor is largely destroyed by heat during baking.

"Initially, MCC produced the flour at its processing laboratory in Maijdi. The flour was then sold to the manufacturers through MCC's wholesale outlet. More recently, the biscuit companies have been directly purchasing whole soybeans for processing in their own facilities. One of these companies already produces more than one metric ton of soy-fortified biscuits per day.

"Other organizations, such as Biman and a Baptist Church group, are experimenting with soybeans as animal feed, especially for poultry. In addition, at least two entrepreneurs are interested in producing a soymilk that would be marketed in competition with soft drinks. The two companies are expected to require at least 550 metric tons of soybeans per year."

"The Source, which is MCC's local outlet, also sells processed soy flour at retail and about 400 to 500 kilograms of soybeans per month on the wholesale market. Most of these soybeans are purchased by the local Chinese community to manufacture tofu.

"Promoting rural development with soybeans: Another important component of the soybean program in Bangladesh is the Food Products Development Centre (FFDC). The major objectives of FFDC are to develop low-cost food processing technologies that are accessable to the rural unemployed and to increase use of soybeans and other crops that can improve nutrition in the rural areas. As part of its effort to create new jobs, FPDC plans to promote small-scale commercial processing of soybeans for manufacture of the local snack food, chanachur.

"During 1987, Ellen Jayawardena, training coordinator for the Soybean Foods Research Centre in Sri Lanka, conducted several classes for FPDC personnel on home and village soybean preparation. These people, in turn, are to serve as local trainers. MCC also has several soybean cooking demonstrators in the Moakhali and Chuadanga districts and the Dhaka area. In addition, MCC personnel have sold soybeans door-to-door in a number of villages where that commodity is in short supply.

"Gleason reports that both extrusion cooking and soymilk processing have significant potential for expanding soybean markets in Bangladesh. She further concludes that the extrusion / expelling process developed by INTSOY could play an important role in providing a new source of high-quality soy oil for Bangladesh."

5514. Karta, Susani K. 1988. Market trends in the development of traditional soyfood. Paper presented at the ASEAN Food Conference '88: Food Science and Technology in Industrial Development. 18 p. Held 24-26 Oct. 1988 at Bangkok, Thailand.

• ***Summary:*** Contents: Introduction. Traditional soyfood. Market situation and trends. Indonesia. Singapore. Malaysia.

Thailand. Constraints in the market development of soyfood (in each of the above 4 nations). Major trends in the development of traditional soyfoods. Marketing strategy of soyfood. Tables: 1. Traditional non-fermented soyfood products. 2. Nutritional composition of traditional non-fermented soyfoods. 3. Description and uses of traditional fermented soyfood products. 4. Nutritional composition of traditional fermented soyfoods.

5. 1987 estimated consumption of soybeans as foods in the Far East [total and per capita in East Asia]. China, 1,062 million population, 7,325,000 tonnes, 6.9 kg/capita. Japan, 122 million population, 1,141,000 tonnes, 9.3 kg/capita. South Korea, 42.1 million population, 330,000 tonnes, 7.8 kg/capita. Taiwan, 19.6 million population, 260,000 tonnes, 13.3 kg/capita.

6. Southeast Asia soybean consumption for food. From 1983 to 1989 the increase in 1,000 metric tons was: Indonesia 927 to 1,600. Singapore 14 to 26. Malaysia 32 to 70. Thailand 40 to 150. Philippines 9 to 24. Total 1,022 to 1,870 (increase of 82.9% in 7 years).

7. Per capita soybean consumption for food in Southeast Asia. From 1983 to 1989 the increase in kg/person was: Indonesia 6.0 to 8.8. Singapore 5.6 to 10.5. Malaysia 2.1 to 3.7. Thailand 0.8 to 2.6. Philippines 0.2 to 0.5. Average total: 3.8 to 5.9 (increase of 55.3% in 7 years).

8. 1987 estimated consumption of soybeans as foods in Southeast Asia [total and per capita]. Indonesia, 175 million population, 1,575,000 tonnes, 9.0 kg/capita. Thailand, 53.6 million population, 118,000 tonnes, 2.2 kg/capita. Malaysia, 16.1 million population, 55,000 tonnes, 3.4 kg/capita. Singapore, 2.6 million population, 20,000 tonnes, 7.7 kg/capita. Philippines, 61.5 million population, 18,000 tonnes, 0.3 kg/capita.

9. Indonesian soybean production, imports, and consumption as food (in tonnes). From 1983 to 1989, production rose from 536,000 to 1,250,000, imports decreased from 391,000 to 350,000, and the amount consumed as food increased from 927,000 to 1,600,000. About 50% of the soybeans used for foods in Indonesia go to make tempeh, and 40% are used to make tofu.

10. Singapore soybean consumption as food. From 1983 to 1989 the amount increased from 14,000 tonnes to 26,000 tonnes. Most of these soybeans are used to make tofu and soymilk. 11. Malaysia soybean imports and consumption as food (in tonnes). From 1983 to 1989, production rose from 182,000 to 440,000, and the amount consumed as food increased from 32,000 to 70,000. 12. Thailand soybean production, and consumption as food (in tonnes). From 1983 to 1989, production rose from 113,000 to 490,000, and the amount consumed as food increased from 40,000 to 150,000. Only in 1988 were soybeans imported–40,000 tonnes. This growth of soyfood consumption is due partially to the Government of Thailand's interest in promoting the awareness and utilization of soyfood products. The Thailand Agricultural Extension Service program and other institutions have been actively advocating of soyfoods into the food industry and the human diet, especially in rural areas. The government controls soybean imports by issuing licenses.

In summary: The soybeans with the highest per capita soybean consumption for soyfoods are: Taiwan 13.3 kg, Japan 9.3 kg, Indonesia 9.0 kg, Singapore 7.7 kg, South Korea 7.3 kg, and China 6.9 kg. The greatest potential for growth lies in China, where it is very common to find markets running out of soyfoods early in the morning. There is also great potential for growth in Malaysia, Thailand, and the Philippines. Address: American Soybean Assoc., 541 Orchard Rd., #11-03 Liat Towers, Singapore 0923, Republic of Singapore.

5515. **Product Name:** Back to Nature Soy-Oat Beverage (Powder).
Manufacturer's Name: Organic Milling Co.
Manufacturer's Address: 505 W. Allen Ave., San Dimas, CA 91773. Phone: 714-599-0961.
Date of Introduction: 1988. October.
Ingredients: Soy protein isolate, oat flour, fructose, corn syrup solids, soy oil, plus vitamins and minerals.
Wt/Vol., Packaging, Price: 20 oz can makes 30 servings.
How Stored: Shelf stable.
Nutrition: Per 1 cup (8 fl. oz.) liquid: Calories 80, protein 5 gm, fat 2 gm, carbohydrate 12 gm. Contains 25% of the U.S. RDA for vitamins A, D, E, C, B-1, B-2, B-6, B-12, niacin, folic ccid, pantothenic acid, and biotin; 30% of the RDA for calcium, and 15% for phosphorus.
New Product–Documentation: Ad in Whole Foods. 1988. Oct. p. 79. Fortified with 14 vitamins and minerals, including as much calcium as milk. Label. 1988. 3 by 4.5 inches. Self adhesive. Blue and red on white. Logo at top of horse pulling a plow and man. Soyfoods Center product evaluation. 1988. Oct. Poor. Ad (full color, 8.5 by 11 inches) in Natural Foods Merchandiser. 1989. April. p. 110. "Back to Nature presents a great group of sales builders!" Shows the company's full line of products in their packages. The beverage label appears blue, white, and gold.

5516. *SoyaScan Notes.* 1988. Products containing little or no soya or seitan made by Jonathan in Belgium for which Soyfoods Center has labels (Overview). Oct. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** These labels were sent by Jonathan in 1988, along with many labels for soyfood products. Most labels have the product name given in English, German, French, and Dutch. Only the English is given below. Many of the products contain organically grown ingredients, with the Cinab logo.

Spiced biscuits [with fructose], Bran biscuits [soy flour is the 7th ingredient], Fruit biscuits (without addition of

sugar), Almond biscuits (without addition of sugar), Sesame biscuits (without addition of sugar), Fructose biscuits, Four-cereal biscuits (with cane sugar), Spiced butter biscuits (with cane sugar)

Mochi, Lasagna (vegetarian, with soy sauce), Pilav rice (Pilaf), Risotto and lentils (with soy sauce). This line of products (each 300 gm) has elegant labels with a color photo on the front panel.

Wheat wafers (with soy flour), Muesli wafers without sugar, Coconut cake with fructose, Wheat biscuits, Hasselt spices biscuits (with soy flour; Speculoos, Spekulatius), Baby-food. All self-adhesive labels, 4.5 by 2.25 inches.

Mushrooms in tomato sauce (vegetarian), Lentils (with soy sauce), Lasagna, Whole wheat pasta.

Vegetarian entrees, each 500 gm: Brown rice casserole with lentils + vegetables, Brown rice casserole with lentils + seitan, Pumpkin creme, Pumpkin soup with brown rice, Mushroom soup, Millet-onion soup, Azuki bean soup, Lentil soup, Seitan–Ratatouille (Wheat protein and vegetables), Seitan-Goulash, Seitan, Nutmix spread, Hazelnut spread with almonds.

Each 250 gm: Prepared azuki beans, Prepared lentils, Seitan Bolognaise, Lentil spread, Seitan spread, Mushroom spread, Mushrooms in tomato sauce, Apricot spread, Carob spread, Fig spread, Date spread, Raisin spread, Peanut butter, nutmix spread, hazelnut spread with almonds.

5517. Dervin, Marie-Anne. 1988. Innovations agro-alimentaire: 2,500 t/an de produits à base de soja [Agro-food innovations: 2,500 tonnes/year of soy products]. *Industries et Techniques.* Nov. 1. p. 94. [Fre]

• ***Summary:*** At Valence, Innoval has established an industrial unit for the transformation of soya into drinks, main dishes (*plats cuisinés*), desserts, etc. The Silos of Valence, an agricultural cooperative in Drôme, is looking to diversify in the agro-food sector. It has joined forces with Sojalpe to create Innoval S.A. This September the company launched the above-mentioned products into large-scale distribution supermarkets.

The project, which has cost 20 million French francs, has benefited from the financial support of several banks. In 1989 Innoval SA is planning to come out with a complete line of long-lasting fresh products. The company also hopes to reach collectives and to export to other European countries that consume large amounts of tofu (UK, West Germany, or Switzerland). Address: France.

5518. Bolduc, Bill. 1988. Re: Early history of Eden Foods, Inc. to 1973. Part I. Letter to William Shurtleff at Soyfoods Center, Nov. 5. 2 p. Typed, with signature on letterhead (photocopy).

• ***Summary:*** The following account is based on hours of discussion between Bill Bolduc, the Redmonds, and the Silvers between 1988 and 1991. Bill is not familiar with the details of the history of the food co-op in Ann Arbor prior to 1969. But Ronnie Teeguarden says that in about July 1967 he and Gloria Dunn started a loosely-organized food buying co-op–which had no name–in Ann Arbor, Michigan. Within a few weeks, a number of their friends and acquaintances (a group of eclectic pathfinders, students, graduates, macrobiotics, dropouts, musicians) informally joined the group. These included Tim Redmond, Mark and Nancy Retzloff, Linda Succop, Iona Teeguarden, and Bob Thorson. From time to time, they collectively ordered macrobiotic staples from Erewhon in Boston using the Erewhon catalog. When the foods arrived, the food co-op members got together and divided them up at the Teeguarden-Leabu General Store, located a half flight below street level at 209 South State Street, below the Herb David Guitar Studio in Ann Arbor. Run by Ronnie Teeguarden, with help from Gloria, this store's main business was selling local art, second hand clothes and records, etc.

Bill Bolduc and Judy Succop [Linda Succop's sister], were married in June 1969 in Ann Arbor. They were not yet members of the co-op at that time. A few days later, they went to Berkeley for the summer. When they returned to Ann Arbor at the end of that summer, they lived in Saline, Michigan, 12 miles outside of town with Mark & Nancy Retzloff, Linda Succop, and Tim Redmond. Bill, who wasn't working or going to college, was trying to figure out what to do next. By September 1969, Bill and Judy Bolduc joined the food co-op. They also joined the Zen Macrobiotic Supper Club; all of its members were also members of the food co-op.

In the fall of 1969 the Teeguarden-Leabu second-hand store looked like it was about to close, which would leave the food co-op without a home. The group (especially Ronnie) convinced Bill Bolduc to take charge of the food co-op and find it a permanent home, which he did.

On 4 Nov. 1969 Bill Bolduc incorporated Eden Organic Foods, Inc. as a non-profit corporation in the state of Michigan. The name "Eden," which stood for Environmental Defense Energy Network, was coined at this time by Bob Thorson during a discussion between, Bill Bolduc, and Gloria Dunn at a coffee shop. Thus, the term "Eden" was first used in connection with this co-op or business in Nov. 1969.

Eden was born under a good star. The date Nov. 4 was carefully chosen to be astrologically propitious. At the time, Bill was an intense student of astrology with Michael Erlewine–who is now world famous in the field, and the owner of Circle Books, an astrological publishing company. In 1970 Michael also designed the Eden logo of the 4 sprouts in a circle. Eventually Michael became one of Bill Bolduc's students in macrobiotics.

Bill was president of Eden Organic Foods and his wife Judy (who was working as a secretary at the University of Michigan School of Music) was secretary. Bolduc used $200

of his own money to rent a converted apartment above the bicycle store at 514 East William St. in Ann Arbor, near campus. People from the community loaned $1,500 to help stock the co-op store and buy an 8-inch Meadows stone mill to grind flour.

The question arises: When was Eden Foods established? Bill Bolduc and Tim Redmond believe that the founding should be dated from Nov. 1969, when the company was first named; before Nov. 1969 the food co-op was not even a business. It was dead and had disappeared for about a month until Bill resurrected it by placing an order to Erewhon using his own money.

Eden Organic Foods first began selling soyfoods commercially in November 1969, starting with their first order from Erewhon in Boston. They would buy "tamari" (actually shoyu) and miso (kome = rice, mugi = barley, and Hacho varieties) in bulk from Erewhon (which imported them from Japan). At their store, Linda Succop (Bill's wife's sister) would repackage the products, putting the shoyu into bottles and the miso into plastic bags. They were labeled using plain white pressure-sensitive gummed labels with a rubber stamp. One stamp contained the name and ingredients for each product, and another, that was stamped below it, gave the company name and address. They wrote in the weight or volume by hand. Also at William St. a tiny Meadows Mill was used to grind grains and seeds into flour. Continued. Address: ELI Research Corp., 660 Northland Blvd., Suite 28, Cincinnati, Ohio 45240. Phone: 513-851-0330 or 513-751-9090.

5519. Bolduc, Bill. 1988. Re: Early history of Eden Foods, Inc. to 1973. Part II. Letter to William Shurtleff at Soyfoods Center, Nov. 5. 2 p. Revised 4 Dec. 1991 by Bill Bolduc, Ron Teeguarden, and James Silver.

• ***Summary:*** In Sept. 1970 the fledgling company had an offer to move into a newly-redecorated mini-mall [at 211 South State St.] on the main street of campus. New personnel and financing would be needed. Bolduc called Tim Redmond, who had been studying and working at the Sanae macrobiotic restaurant in Boston, to ask for help. Tim returned to Ann Arbor and joined Bolduc in the expansion effort. To raise money for the move, the two approached Tim Redmond's father, who said he would help finance the expansion only if the business was reorganized as a for-profit corporation with Tim having equal ownership. They agreed and in about Oct. 1970 Eden was reorganized as a for-profit corporation with Bolduc and Redmond each owning 50%. At that time the partners shortened the company name to Eden Foods Inc. Bolduc and Redmond then borrowed a 4-figure sum from Tim's dad, had the new store remodeled, and entered the big time. After the new store was opened and running, Redmond returned to Boston and the Sanae restaurant, where he completed his studies. But with this move they fell from the graces of the political co-opers. In November 1970 they did a "Brown rice, seaweed, and dirty hot dog" Bob Dylan commercial on a local radio station; it was a big hit. They bought a 15-inch Meadows Mill and a rotary-drum roaster, then milled flour and baked granola in the back of the store.

In 1970 Bill had located Tom Vreeland, an organic farmer in Ypsilanti, Michigan. An Eden Foods Wholesale Pricelist dated 26 July 1971 shows that the Eden store at 211 South State St. was wholesaling soybeans, soft wheat, corn, and rye, all grown organically in Michigan. Eden was also selling organic flours that they ground from these grains.

In the spring of 1971, after realizing they were the only "natural food" store in the area, and having some other "health food" store owners in Detroit express an interest in carrying more food, they decided to wholesale foods out of the back of their retail store at 211 South State Street. Bill flew to Boston to meet Tim Redmond. They visited Erewhon (they wanted to convince Erewhon to let Eden be their distributor at lower prices), then Bill flew to Arrowhead Mills in Deaf Smith County, Texas, to make arrangements buying in bulk at wholesale prices. In the summer of 1971 they ordered their first 20-foot trailer load of organic foods from Arrowhead Mills, and ran an ad in *East West Journal*. Soon they started to distribute their foods to 4-5 accounts in Detroit. They bought a 1964 16-foot green Dodge van and a dry weight weigher/dumper machine. Their two main brands were Arrowhead Mills and Erewhon, but soon they developed the Eden brand with printed labels, onto which they would rubber-stamp the product name (such as bottled tamari and packaged miso). Soon they added other brands: Celestial Seasonings, After the Fall, Timbercrest, etc.

The wholesale operation quickly outgrew the back of the retail store, so they borrowed more money and rented a 5,000 square foot Quonset hut (resembling an airplane hanger) down on Main Street by the Huron River. Tim Redmond, Mark Retzloff, and Bill Bolduc ran the wholesale operation. Retzloff later co-founded Alfalfa's, a natural foods supermarket chain based in Boulder, Colorado.

In October 1971 Bolduc hired Michael Potter, who was living in Detroit, to run the store. Just before this, Potter had managed a natural foods store named Joyous Revival in nearby Birmingham, Michigan. Prior to this time, the company had been owned by Bill and Judy Bolduc (50%) and by Timothy Redmond (50%). Potter was given 13.5% of the stock and the other principals' share reduced proportionally.

In the late summer or fall of 1973 the Bolducs sold their shares back to the corporation, which then gave a portion of these to Tim Redmond and Michael Potter so that these two men now owned 51% and 49% respectively.

The Bolducs then left Ann Arbor, moving to Cincinnati, then to Illinois, then back to Ann Arbor. Bill is certain that when he left Eden Foods, the company was not importing any products from Japan. He would guess that it was not

until about 1975 that Eden started to import a line of foods from Japan. Their first supplier in Japan was Muso Shokuhin, a leading macrobiotic and natural foods exporter in Osaka. Initially, all of their imported products were required to bear the Erewhon brand. Imported soyfoods included miso and shoyu. Sales hit $175,000 in 1973.

Note: Eden was the first of the many macrobiotic distributors based on the Erewhon model to open in America. Others that soon followed included Food for Life in Chicago (1970), Janus in Seattle, Washington (1972 Jan.), Essene in Philadelphia (by 1971 Feb.), Laurelbrook in Maryland (1971 Aug. 23), Ceres in Colorado Springs (by 1973), and The Well in San Jose, California (1973). Address: ELI Research Corp., 660 Northland Blvd., Suite 28, Cincinnati, Ohio 45240. Phone: 513-851-0330 or 513-751-9090.

5520. Roller, Ron. 1988. Justice Department lawsuit against Eden Foods (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The FDA filed the original charges then (since they do not prosecute cases), they turned the case over to the Justice Department, which in May 1988 filed 32 counts of criminal charges against Eden Foods. The problem relates to two things: (1) The original pamphlet which claimed that Edensoy is good for babies. The FDA case is that the product was promoted as an infant formula, in violation of the Infant Formula Act. An infant formula may be promoted only as a sole source of nutrition for infants. It is not a dual use product. Eden did a voluntary recall at a cost of about $45,000. (2) After the FDA told Edensoy to stop distributing the pamphlet, Eden Foods subsequently, probably accidentally, sent out (sold) some 20-50 more. That apparent willful flaunting of authority was what made the FDA pursue the case vigorously. They only prosecute 5-7 cases a year. The original counts were worth over $1 million in fines. The prosecutor is the same person who did the Gerber case. It is serious. Eden's attorneys advised that they plead to lesser charges and try for a plea bargain. Ten counts are worth $100,000 and about 22 are worth $1,000 each. Now it looks like the charge may be $150,000. Also Mike Potter is being charged personally, and faces potential but unlikely jail time.

There is only one known case where an infant was adversely affected by Edensoy. This infant lived in Toronto, Canada, and its physician said the child has completely recovered. There was no permanent damage. Address: Eden Foods, Clinton, Michigan.

5521. Amrit Protein Foods Ltd. 1988. Display ad: An investment in Amrit–an investment in prosperity. *Times of India* (*The*) (*Bombay*). Nov. 21. p. 11.
• ***Summary:*** Amrit Protein Foods Limited, "An exciting new venture," is promoted by Amrit Banaspati Co. Ltd. Amrit Protein equity issue opens 12 Dec. 1988.

"A complete line of fitness foods: Health and fitness are making big headlines these days. And to meet the growing demand for a new generation of fitness foods, Amrit Protein will manufacture a wide range of products–Soya Milk, Soya Milk Beverages, Soya Dessert, and High Quality Soya Paneer."

"Proven technology from world leaders:" Amrit has purchased its soymilk making system from STS–Soya Technology Systems–a division of the world renowned Danish Turnkey Dairies.

"Big success in the West! Products based on this technology have been a phenomenal success in the West. In fact, a plant set up as recently as 1985 near Hamburg has substantially increased its capacity [DE-VAU-GU, Lueneburg, West Germany].

"Products backed by extensive research:" The products are a result of extensive market research; they have been thoroughly tested in consumer taste trials.

"The market is ready and waiting:... Amrit Protein will open up a whole new dimension in the Indian consumer market.

"And you have an opportunity to share our bright future: To meet a part of the finance required for the project, Amrit Protein is making a public issue of 24,70,000 Equity Shares of Rs. 10 each for cash at par." The names and logos of the three Indian companies managing the issue are given.

The bottom half of this horizontal ad is a cartoon illustration with many stylized adults and children admiring the various uses of soy protein products such as tofu cubes on a dish and a dessert in a tall-stemmed glass. Address: Amrit Nagar, G.T. Road, Ghaziabad 201 009 (U.P.) [Uttar Pradesh].

5522. *Times of India* (*The*) (*Bombay*). 1988. City notes: Amrit Protein. Nov. 22. p. 11.
• ***Summary:*** "Amrit Protein Foods, a company promoted by Amrit Banaspati, will enter the capital market on December 12, with a public issue of 24.70 lakh [2,470,000] equity shares of Rs 10 each at par to finance its Rs 14.50 crores project being set up at Ghaziabad, Uttar Pradesh to manufacture soyamilk,..."

The company will make 19,800 kilolitres of soyamilk, soyamilk beverages, soya dessert, and high quality soya paneer per annum.

The project is expected to start commercial production by April 1989 according to Mr. N.K. Bajaj, chairman.

5523. Eaton, Eleanor. 1988. He cooked for Henry Ford. *Dearborn Times–Herald* (*Michigan*). Nov. 23.
• ***Summary:*** A large photo shows Jan Willemse, who knew Henry and Clara Ford well when he was head chef at Dearborn Inn, then from 1937, at Ford's private dining room at Lovett Hall in Greenfield Village. "Ford had an obsession with soybeans said Willemse. He wanted them in everything he ate whether it be cookies, cakes, or pies. He drank

soybean milk and ate soybean ice cream. And yes, he insisted soybean bread was the main ingredient for the Thanksgiving turkey stuffing. 'Mr. Ford was ahead of his time in learning the value of the soybean,' said Willemse."

Willemse arrived in the USA 69 years ago from his native Holland. In 1931 in Florida he met Edsel Ford, while taking food to sailors on Edsel's yacht. Edsel told his father, Henry, about the excellent chef in Florida, and Henry wrote Willemse asking him to come to Dearborn to be head chef at the Inn. But he didn't go, because his friend told him that Dearborn was a small town away from the rest of the world. However in 1934 Willemse received a letter from Henry Ford that made him an offer he couldn't refuse. Willemse liked the Fords very much. They were both strict but nice. "Mr. Ford was a wonderful man who didn't mince words. He'd come right out and say what he thought. He was good to me." Willemse liked to smoke now and then but Ford was dead set against cigarettes.

After retiring from his work with the Fords in 1964, Willemse became bored and accepted a job with Miesel Sysco, the largest grocery company in the nation which sells more than 30,000 items to restaurants and hotels. Willemse, who lost his wife in 1987 after 54 years of marriage, is a young 88 and lives with his cat Muffy in the comfortable home in Dearborn. He still works 5 days a week at Miesel Sysco and he likes his job.

5524. **Product Name:** Holiday Nog (Soymilk Based Eggless Eggnog).
Manufacturer's Name: Ambrosia Soy Co.
Manufacturer's Address: 199 Saltonstall Parkway, East Haven, CT 06512. Phone: 203-467-8821.
Date of Introduction: 1988. November.
Ingredients: Incl. soymilk, pearl barley, honey.
Wt/Vol., Packaging, Price: Plastic quarts.
New Product–Documentation: Leaflet (8½ by 11 inch, glossy color, back and front) sent by Richard Rose from Natural Products Expo East. 1989. Sept. On the front is a color photo showing all the company's products. One the rear is a brief description of each of these products: SweetSoy soymilk. Sweet Tofu Pies (like cheesecakes). Holiday Nog. Puddings (Carob or Butterscotch, made from tofu). Frozen Fully Cooked Organic Soybeans. Tofu. Soy Lecithin.

Talk with Liz Appel. 1989. Nov. 9. This was introduced before Christmas 1988. Pearl barley gives it a smooth, thick consistency. Honey is the sweetener now, but she may use Sucanat in the future.

5525. **Product Name:** [Soja Biostar {Soymilk} (Natural, Enriched, Breakfast-Style)].
Foreign Name: Soja Biostar (Nature, Enrichi, Petit Déjeuner).
Manufacturer's Name: Celia Group.
Manufacturer's Address: B.P. 10, 45550 St.-Denis-de-l'Hôtel, France. Phone: 38 59 02 03.
Date of Introduction: 1988. November.
Ingredients: Nature: Water, extracts of soya [soy protein isolates], fructose. Calcium fortified: Water, extracts of soya [soy protein isolates], sugar (from red sugar cane), calcium.
Wt/Vol., Packaging, Price: 100 cl (1 liter) Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Calories per 100 gm: Natural 44.2. Enriched 50.9. Breakfast-style 93.5.
New Product–Documentation: Technique Laitiere & Marketing. 1988. Nov. p. 65. Soja Biostar is a line of soy products made by the Celia group, a dairy co-op. Manufacturer's brochure. 1988? Received March 1989. "Soja Biostar." 16 p.

Call from son of owner in France. 1988. Nov. 14. Celia, a private dairy company with $200 million annual sales, is planning to make soymilk in France.

Manufacturer's leaflet. Received 1990. March 26. "Boire du soja. L'idée vient de germer." ("Soymilk. The idea has just sprouted.") A color photo shows all 3 labels. "The Breakfast-Style, composed of soya, chocolate, vanilla, and cereals, is a breakfast complete and ready, with a tasty flavor which is a real treat for infants and also for parents because of its qualities of lightness and digestibility."

Talk with European soymilk producer. 1990. June 6. Biostar is made from soy protein isolates. He thinks they add oil and do not list it on the label.

Letter (fax) from Bernard Storup. 1990. June 6. This soymilk is made from isolates, not whole soybeans. It is not widely available and we have no figures on its sales. It is sold mainly at supermarkets in the west of France. Celia is the brand name of a group of 3 dairies (industry, not cooperative) mainly in the west of France that make and sell butter, milk, soymilk, and soy desserts in common under the Celia label. The names of these dairies are Laiterie de Craon (Craon, Mayenne, France), Fromagerie L. Gallais (Montfaucon, Maine-et-Loire), and Laiterie du Parc (Saint-Florent-le-Veil, Maine-et-Loire).

Leaflet sent by Heather Paine of SoyaFoods in London. 1991. April 23. "Gamme Traditionelle." Shows three soymilk products in Tetra Brik Aseptic cartons. The flavors: Nature (Natural), Enrichi en Calcium (Calcium Fortified), and Petit Déjeneur (Breakfast). Lists the ingredients and gives a detailed nutritional analysis of each. The calcium fortified brand contains (per 100 gm): Protein 4 gm, lipids 2.3 gm, carbohydrates 3 gm, no lactose or cholesterol, 50.9 calories, calcium 50 mg, phosphorus 40 mg, sodium 30 mg, potassium 160 mg, iron 0.4 mg. By comparison, the natural brand contains: Protein 3.8 gm, lipids 2.3 gm, calories 39.9, calcium 20 mg, potassium 160 mg.

5526. **Product Name:** [Soja Biostar {Soymilk} (Raspberry-

Violet, Peach-Jasmine, Coffee, Mint-Chocolate, Pear-Orange Blossom.)].
Foreign Name: Soja Biostar (Framboise-Violette, Peche-Jasmin, Café, Menthe-Chocolat, Poire-Fleur d'Oranger).
Manufacturer's Name: Celia Group.
Manufacturer's Address: B.P. 10, 45550 St.-Denis-de-l'Hôtel, France. Phone: 38 59 02 03.
Date of Introduction: 1988. November.
Ingredients: Incl. soy protein isolates.
Wt/Vol., Packaging, Price: 100 cl (1 liter) Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.8 gm, fat 2.3 gm, carbohydrates 8 gm, calories 71.9, cholesterol 0, lactose 0, calcium 20 mg, phosphorus 40 mg, sodium 30 mg, potassium 160 mg, iron 0.4 mg.
New Product–Documentation: Technique Laitiere & Marketing. 1988. Nov. p. 65. Soja Biostar is a line of soy products made by the Celia group, a dairy co-op. Manufacturer's brochure. 1988? Received March 1989. "Soja Biostar." 16 p.

Talk with (call from) son of owner in France. 1988. Nov. 14. Celia, a private dairy company with $200 million annual sales, is planning to make soymilk in France.

Manufacturer's leaflet. Received 1990. March 26. "Boire du soja. L'idée vient de germer." ("Soymilk. The idea has just sprouted.") A color photo shows all 5 labels. One-page color flyer. "Santé Plaisir" (Healthy Pleasure). Shows both large and small packages.

Letter (fax) from Bernard Storup. 1990. June 6. This soymilk is made from isolates, not whole soybeans.

5527. Celia Group. 1988. Soja Biostar [Soja Biostar]. B.P. 10, 45550 St.-Denis-de-l'Hôtel, France. 16 p. Catalog. [Fre]
• ***Summary:*** On the beige cover, a tall illustration (line drawing) shows a soybean stalk with dry brown pods hanging. The inside front cover gives a chronology of 9 major events in the history of soya. Contents: The soybean: Its composition, its uses. Soymilk (*filtrat alimentaire de soja*)*:* Principles of production, its constituents. Nutritional aspects of soymilk. Proteins, lipids, carbohydrates, vitamins, energy/calories. Soymilk: Product of a great technology: Elimination of lipoxygenase, trypsin inhibitors, and oligosaccharides. The Biostar products: Technical specifications for 3 products: Natural, Enriched with calcium, and Breakfast-style. Note: This soymilk is made with soy protein isolates. Address: St.-Denis-de-l'Hôtel, France. Phone: 38 59 02 03.

5528. Hagler, Louise; Bates, Dorothy R. eds. 1988. The new Farm vegetarian cookbook. Summertown, Tennessee: The Book Publishing Co. 223 p. Illust. Index. 23 cm.
• ***Summary:*** A slightly revised edition of the 1978 Farm Vegetarian Cookbook, this vegan cookbook contains a wealth of soyfoods recipes, and no recipes calling for eggs or dairy products. Address: Summertown, Tennessee.

5529. Krizmanic, Judy. 1988. Natural foods forecast. *Vegetarian Times.* Nov. p. 32-33, 36-39.
• ***Summary:*** Organics: Organic products will soon become the fastest growing category in natural foods. Even progressive mainstream supermarkets will add organic produce to their inventory or, if they can afford it, will test for pesticide levels on produce that may not be organic. The California and Nevada-based Raley's Superstore chain already has done both.

Legume's Gary Barat has plans to expand his selection of tofu chocolate with a chocolate-covered rice cake (made with Lundberg Farms rice cakes). "Plans are brewing for tofu chocolate chips, fudge sauce, and just about any chocolate product imaginable... Dairy-Free Replacements of Dairy Classics... Expect egg replacers, tofu cheesecake and tofu cream cheese," and, hopefully, tofu sour cream.

"Soymilk. Within this next year, look for soymilk in your supermarket's dairy case... Imagine a soymilk creation: a creamy, malty drink–made from a mixture of soymilk and amasake."

5530. **Product Name:** Naturally Northwest Soy Beverage [Plain].
Manufacturer's Name: Pacific Foods of Oregon.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1988. November.
Ingredients: Pure water, soybeans.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $2.07 avg. (2/89).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet. 1989. April. Gives detailed product specifications. Soya Newsletter. 1988. Sept/Dec. p. 11. Talk with Pat Carey. 1989. Feb. 28. The above address is still correct. This plain soymilk was launched in Nov/Dec. 1988. It is sold to food stores. The product is noted for its very bland flavor. He heard that Eden Foods may be coming out with a plain soymilk. The company's primary focus is to become an ingredient supplier of soymilk concentrates made by ultrafiltration. He can get a solids content about the same as tofu. It makes an excellent ingredient for other foods. The acceptance so far has been very good. He will package this bland perishable product in an aseptic package, up to rail car size using bag-in-a-box aseptic technology. You can make the bag as large as you want. The technology comes from Sholi and Combibloc; its not new technology. He would ship the products refrigerated. Apple juice is now sold retail in 3-liter bag-in-a-box. He also plans to sell other flavors of soymilk (e.g., chocolate, strawberry, etc.) in retail size aseptic packs to help pay the overhead on his equipment and keep it running 3 shifts a day.

He is the only domestic West Coast supplier of soymilk.

Talk with Richard Rose. 1989. April 21. Naturally Northwest appears to be the brand name of Pacific Foods' entire line of natural food products. The company appears very secretive and will not send him information, even though he is a potential customer.

Talk with Luke Lukoskie of Island Spring. 1990. Feb. 17. See SoyaScan Notes interview.

Talk with John Bates. 1990. April 26. Chuck Gray of Pacific Foods says the company uses 3.5 to 4 million lb/year of soybeans to make soymilk.

Talk with Peter Lesser of Northwest Natural Foods. 1991. Feb. 8. "The 'Naturally Northwest' brand was actually under Sunny Jim; Sunny Jim sold it. It was a big venture capital thing."

Note: This is the earliest record seen (Feb. 2003) concerning Pacific Foods, when they are actually in business.

5531. **Product Name:** [Sunsoya].
Foreign Name: Sunsoya.
Manufacturer's Name: Prolait Co.
Manufacturer's Address: Southwest France.
Date of Introduction: 1988. November.
New Product–Documentation: Technique Laitiere & Marketing. 1988. Nov. p. 65. Sunsoya has been launched by Prolait.

5532. Shurtleff, William; Aoyagi, Akiko. 1988. Amazake and amazake frozen desserts: Industry and market in North America. 2nd ed. Lafayette, California: Soyfoods Center. 79 + [52] p. 28 cm. 1st ed. Feb. 21, 1988. [82 ref]
• ***Summary:*** Contents: 1. Amazake industry and market analysis: What is amazake? The amazake production process, microbiology, and biochemistry. History of amazake in Japan. History of amazake in North America and Europe. Market size and growth rate. Comparison with the soymilk market. Largest manufacturers in North America. Ranking by size and annual production. Market segments (buyers, retail outlets, geographical). Product types. Prices. Packaging. Imports. Market outlook and forecast. Several related forecasts. 2. Commercial amazake products and product/company histories: Subject and country index. Company index. 3. Annotated bibliography (1597-1988): Subject and country index. Author index. 4. Directory. 5. Documents, labels & graphics. About the Soyfoods Center. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

5533. *Technique Laitiere & Marketing.* 1988. Les laitiers s'intéressent au soja [The dairies take an interest in soyfoods]. No. 1034. Nov. p. 65. [Fre]
• ***Summary:*** Discusses and pictures several products: Sojasun, a dessert made by Triballat, in part from soya, closely resembles a fermented dairy product, but does not quite resemble a yogurt. It contains bits of fruits and has a very fruity flavor. Soja Biostar is a line of soy products made by the Celia group. Sunsoya has been launched by Prolait. So Good is an Australian soymilk product which won the 1988 SIAL gold medal (SIAL d'Or 88). SIAL is the International Food and Dairy Exhibition in Paris. Cacoja was introduced by the cooperative of Colmar.

5534. Vitasoy (USA) Inc. 1988. Vitasoy healthy heart recipes (Leaflet). Brisbane, California. 3 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** Contains 14 recipes using different flavors of Vitasoy. Address: 99 Park Lane, Brisbane, California 94005.

5535. *Vitasoy Vitabrations.* 1988. Welcome. 2(2):1. Fall.
• ***Summary:*** Jerome K. Maynard was appointed to the position of National Sales Manager in July 1988. Gives a brief biography. A photo shows Maynard. Address: 99 Park Lane, Brisbane, California 94005.

5536. *Vitasoy Vitabrations.* 1988. Vitasoy's broker/distributor network continues to expand. 2(2):4. Fall.
• ***Summary:*** Since the Fall 1987 Newsletter appeared, Vitasoy has appointed 4 new brokers and 15 new distributors. The name, address, and phone number of each is given. Address: 99 Park Lane, Brisbane, California 94005.

5537. *SoyaScan Notes.* 1988. Soymilk and dairy milk prices in California, December 1988 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** At Living Foods, a large natural food store at 1581 University Ave. in Berkeley, California, unflavored (plain or original) soymilk retails for the following prices: Vitasoy liter $1.69 (which is the equivalent of $1.60/qt), Westsoy quart $1.79, Edensoy liter $1.89 ($1.79/qt), Soy Moo quart $1.89. The average of these 4 quart equivalent prices is $1.77 a quart. This is 6% lower than in October of 1987.

Whole cow's milk sells for $0.58 a quart at Safeway supermarkets. Thus soymilk in a liter pack is 3.05 times as expensive as dairy milk per unit volume. In Dec. 1983 soymilk was 3.53 times as expensive as cow's milk, and Oct. 1987 soymilk was 3.42 times as expensive as cow's milk. Thus the price of soymilk relative to cow's milk has dropped 11% since Oct. 1987 and 13.6% since Dec. 1983.

Most small soymilk packs are now sold 3 together wrapped in plastic. Vitasoy 3 x 8.4 fl. oz. retails for $1.55 or $0.517 each. This is the equivalent of $1.97 a quart (which contains 32 fl. oz). Three Edensoy 8.4 fl. oz. packs retail for $1.65.

5538. Skaria, George. 1988. So ya' keep trying: Undeterred by unhappy examples, Amrit Protein Foods wants to shake up the soya-based foods market. *BusinessWorld* (*India*). Dec.

7-20. p. 17.
• ***Summary:*** Amrit Protein Foods, owned by Ghaziabad-based Amrit Banaspati Co. (ABC for short), is scheduled to start soymilk production in April 1989. "The new venture is just a logical extension of our existing activities and we should do well," says N.K. Bajaj, Chairman of the Amrit group (1987-88 annualised turnover: Rs 200 crores). The flagship company ABC's range of successful consumer products includes Gagan vanaspati, Ginni refined oil and Alfa washing soap. The group also claims to have successfully launched potato chips under the brand name Uncle Chipps.

The new outfit, Amrit Proteins, plans to introduce soya beverages and paneer. Soya beverages have not been popular in India. At least one earlier attempt (Noble Soya's Great Shake soya milk beverage) did not do well. The Indian consumer is not enamoured of soya's after-taste. Amrit Soya's beverages will have a neutral taste to make them more appealing to the Indian palate. Bajaj admits "All of us have apprehensions about soya products. They have not found acceptance so far." One strategy for success is to position soya milk as a health product. It is felt Noble Soya's Great Shake was a failure because it was advertised as a fun drink although the taste wasn't fun.

Test marketing of sample products in selected areas seems to have yielded positive results with consumers findings the taste acceptable. Additionally, the company can push for success by relying on the proven marketing strengths of the group–which has a network of 800 dealers and over 1 lakh retail outlets. Amrit's Rs 14.5 crore plant, coming up in Ghaziabad on the outskirts of Delhi, is expected to reach 55% capacity utilisation in its first full year of operations, using up 3,500 tonnes of soyabean. The company expects a turnover of Rs 15 crores.

5539. **Product Name:** [Alpro Soya Drink {Soymilk} (Strawberry)].
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1988. December.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet (full color, 6 by 8.25 inches, in French). 1989. "Alpro Soya Drink. Enrichi au calcium, ça vous fait un homme" (Enriched with calcium, that will make you a man). A photo shows a boy pulling on the reins of a rocking horse. Below the photo is a package and a glass full of Alpro Soya Drink. On the front panel of the package is written, "Enriched with calcium. The non-dairy power of soya" (*Enrichi au calcium. La Force Vegetale du Soja*). The inside 2-page spread shows a contented child with a bowl of breakfast cereal and Alpro Soya Drink. Per 100 gm, this product contains 140 mg of calcium but no cholesterol or lactose, whereas whole cow's milk contains 125 mg, cholesterol 10 mg, lactose 4.6 mg. The back panel shows plain, sugar-free, chocolate, and strawberry flavors.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. Alpro soya drink was first launched in strawberry flavor in Dec. 1988.

5540. Brown, Judy. 1988. The joy of soy: Nutrition for the '80s. *Body, Mind & Spirit.* Nov/Dec. p. 30-32.
• ***Summary:*** Contents (Soyfoods, nutrition, and a healthy diet). Tofu. Tempeh. Miso. Natto. Okara. Soy cheese & soy yogurt. Soy flour & grits. Soymilk. Soy sauce. Resources: Eden Foods, Fantastic Foods, Inc., Lumen Foods Corp., San-J International. Vitasoy (U.S.A.) Inc., Westbrae Natural Foods (Downey, California). Address: President, In Good Taste, 5923 John Adams Dr., Camp Springs, Maryland 20748.

5541. Chow, Edward T.S.; Wei, L.S.; DeVor, R.E.; Steinberg, M.P. 1988. Performance of ingredients in a soybean whipped topping: A response surface analysis. *J. of Food Science* 53(6):1761-65. Nov/Dec. [26 ref]
• ***Summary:*** Most commercial non-dairy whipped toppings use sodium caseinate as the major protein source; they come in various forms, such as liquid, liquid concentrate, aerosol, powdered, and frozen pre-whipped. The authors discuss the performance of "Illinois Soybean Beverage" in various whipped topping systems. The systems contained 1.5-3.5% soybean solids, Hydrol 91 (partially hydrogenated coconut oil), Span 60 (sorbitan monostearate), Tween 60 (polyoxyethylene sorbitan monostearate), sucrose, and water. Desired foam characteristics were obtained with numerous ingredient combinations. Foaming characteristics were improved by partial removal of cell wall particles and decrease in particle size. 5543. Golbitz, Peter. 1988. Soyfoods sales projected to reach $750 million by 1990. *Soya Newsletter* (*Bar Harbor, Maine*). Sept/Dec. p. 1, 6.
• ***Summary:*** The estimated retail value of soyfoods in the USA in 1988 was $682 million. The various soyfoods had the following market shares: soy sauce 67.3% (est. $460

million retail store valuation), tofu 11.3% (est. $77 million), second generation products 9.5%, soymilk 5.3%, miso 4.1%, soynuts 1.7%, tempeh 0.8%.

All of the 1980 figures used in this study for comparisons and growth rates were taken, without permission, from *Soyfoods Industry & Market: Directory and Databook* by Shurtleff & Aoyagi. Address: Soyatech, Bar Harbor, Maine.

5544. Kloss, Jethro. 1988. Back to Eden: A human interest story of health and restoration to be found in herb, root, and bark. Revised and expanded second edition. Back to Eden Publishing Co., P.O. Box 1439, Loma Linda, CA 92354. xxviii + 1007 + 20 p. Illust. Index. 21 cm. Kloss Family Heirloom Edition. Index.

• ***Summary:*** One of the most creative and original sources of early soyfoods recipes, which include "Soybean Cream" and "Soybean Ice Cream." This revised edition contains all essential material from the original text of this classic work on healing herbs, home remedies, diet, and health, but it has been reorganized, re-typeset and re-indexed to make it easier to use and more contemporary. Three hundred pages of natural health information have been added. Old terms have been explained and updated. There are also 16 pages of photographs and 16 pages of new of family recollections by Jethro Kloss' daughter, son, and granddaughter. One interesting illustration in the photo section that has not appeared in earlier editions of this work shows an aerial view of the Nashville Sanitarium-Food Factory with a train and 3 sets of train tracks in front. The book has been published continuously by the Kloss family since 1946.

Contents: Section I: Natural health. 1. Personal experiences. 2. Soil preparation and farming. Section II: Herbs for healthful living. 1. History of herbal medicine. 2. Herbs. 3. General directions for preparation and use of herbs. 4. Tonic herbs. 5. Herbs used to treat disease. 6. Medicinal trees. 7. Specific herbs for various medical problems. Section III: Treating diseases with herbs. Treating diseases with herbs. Special notice. Section IV: Your body and its needs. The digestive section. 1. The importance of good nutrition. 2. Carbohydrates. 3. Fats. 4. Protein. 5. Mineral elements in the body. 6. Vitamins. 7. Water. 8. Fresh air, exercise, and sleep. Section V: Your foods. 1. Fruits. 2. Vegetables. 3. Fiber (to "help keep you regular"). 4. Oatmeal. 5. Nuts. 6. Breads and refined flour. 7. Meat and vegetarianism. 8. Milk. 9. Salt. 10. Garlic. 11. Healthful diets. 12. Obesity. 13. Fasting and healthful eating. Section VI: Food preparation. 1. Useful hints to preserve vitamins. 2. Kloss's favorite health recipes. 3. Cooking under steam pressure. 4. Aluminum cooking utensils. 5. Baking and breads. 6. Preparing wholesome desserts and beverages. Section VII: Effects of polluted and adulterated foods on the body. 1. Adulteration of food. 2. Health-destroying foods. 3. Dangers from disease in animals. Section VIII: Water and good health. 1. History of water cure. 2. Using water to preserve health. 3. Water's effects and use in treatment. 4. Water's effects on sickness. 5. Baths and water treatments. 6. Compresses and fomentations. Section IX: Skills in caring for the sick. 1. Nursing. 2. Massage. 3. High enemas. 4. The value of charcoal. Appendix: Glossary of old-fashioned medical terms. Glossary of medical properties of herbs. General tables.

A press release accompanying the new revised, 2nd edition notes: Back to Eden was written by Jethro Kloss during the 1920s and 1930s, with help from Promise and Eden, his daughter and son. It was first published in 1939, when the author was 76 years old. It has since sold more than 3 million copies. Kloss died in 1946 after retiring to Tennessee. Message Press, a small business in a rural community not far from Chattanooga, continued to publish Back to Eden for more than 25 years after his death, under the direction of Promise, his daughter. Unfortunately in 1967 the copyright expired during the confusion attendant to the illness and death of the book's country publisher. Promise's attempt to renew the copyright in Jan. 1968 was too late. In 1971 other publishers pirated Back to Eden. Address: Loma Linda, California.

5545. Lamont, Heather. 1988. The gourmet vegan. London: Victor Gollancz Ltd. 153 p. Index. 20 cm.

• ***Summary:*** This unillustrated vegan cookbook makes relatively little use of soyfoods, although it does use tofu (4 recipes), miso (3), and soya milk (in Soya Pudding). The author, a nurse by profession, has won three recipe competitions. Address: Quorn, Leicestershire, England.

5546. Langley, Gill. 1988. Vegan nutrition: A survey of research. The Vegan Society Ltd., 33-35 George St., Oxford 0X1 2AY, England. x + 121 p. Dec. Index. 21 cm. [255* ref]

• ***Summary:*** Contents: Foreword by Dr. Barrie M. Margetts. Introduction. Guidelines on vegan diets. Symbols & abbreviations. Tables. Vegan nutrition: 1. Protein and energy. 2. Carbohydrates. 3. Fats. 4. Vitamins: Vitamin A (retinol and beta-carotene), the B Group vitamins–Vitamin B-1 (thiamin), vitamin B-2 (riboflavin), niacin (nicotinic acid and nicotinamide), vitamin B-6 (pyridoxine), folic acid (folate, known as folacin in the USA), pantothenic acid and biotin, vitamin B-12 (cobalamins), daily requirement of B-12–a controversy, vegan sources of B-12, vitamin B-12–the vegan experience, occasional B-12 deficiency, vitamin C (ascorbic acid), vitamin D (ergocalciferol D-2, cholecalciferol D-3), vitamin D deficiency, vitamin E (tocopherols), vitamin K, summary of vitamins.

5. Minerals: The major minerals–Calcium (meat, protein, and calcium balance, calcium balance and other nutrients, calcium and vegan diets, osteoporosis), iron (iron balance and other nutrients, iron and vegan diets), magnesium, phosphorus, sodium and chloride, potassium, sulphur. The trace elements–Zinc, selenium, iodine, copper,

cobalt, chromium, manganese, fluorine, summary of minerals. 6. Milk and health. 7. The general health of vegans. 8. Vegan diets as therapy. 9. Conclusions. Further reading.

This book brings together in a concise, carefully researched, and well documented manner all that is currently known about vegan nutrition. It is the "most comprehensive survey ever undertaken of scientific research on vegan diets. *Vegan Nutrition* shows that a vegan diet can provide all the essential nutrients for health and fitness at any age, without the need to take supplements, as long as a few elementary rules are observed. This proviso is particularly relevant to infants and young children."

Table 12 shows portions of selected vegan foods that provide 100 mg of calcium: Spinach 17 gm, tofu 20 gm (4 times as much calcium as in the same weight of whole cow's milk), molasses 20 gm, parsley 30 gm, figs (dried) 36 gm, almonds 40 gm, soy flour 44 gm, and watercress 45 gm. Calcium is the most abundant mineral in the body. About 99% of it is in the bones and teeth in the form of calcium phosphates. The 5-10 gm of calcium not in the bones and teeth are required for muscle contraction, for the functioning of the nerves, for the activity of several enzymes, and for blood clotting. The British RDAs for calcium are 600-700 mg a day for children and teenagers, and 500 mg for adults (vs. 800 mg in the USA)–rising to 1,200 mg in pregnancy and during lactation. "There have been no reports of calcium deficiency in vegans; the exclusion of meat and the slightly lower amounts of protein in their diets may protect against this."

Concerning vitamin K: This vitamin is fat soluble, and is widespread in plant foods such as spinach, cabbage, cauliflower, peas, and grains. It is provided in roughly equal proportions by diet and from bacterial activity in the gut. Vitamin K is needed for normal clotting of the blood. Vegans are unlikely to suffer a dietary deficiency. Note: The author, whose first name is pronounced Jill, is a woman. Address: Hitchin, Hertfordshire, England.

5547. *SanCo News* (*Sanitarium Health Foods Co., Australia*). 1988. Now the world thinks we're as good as gold: The Gold Food Oscar for So Good. Dec.
• ***Summary:*** "So Good was honoured at the 1988 AIDA-SIAL International Food Oscars held recently in Paris. As one of only 5 products representing Australia, So Good won a Gold Oscar by winning its category for the world.

"A total of 16 countries participated in the competition. An international panel of judges evaluated hundreds of products based on their uniqueness, appeal and sales performance. So Good won the 'non-alcoholic beverages' category thereby establishing itself as the best new product, in its category, in the world for 1988."

"The international award has created many enquiries about So Good from interested parties around the world." Address: Wahroonga, Australia.

5548. *Soya Newsletter* (*Bar Harbor, Maine*). 1988. Pacific Foods opens modern soymilk plant in Oregon: First integrated facility in U.S. for producing soymilk, concentrated soymilk, and tofu. Sept/Dec. p. 17.
• ***Summary:*** In Oct. 1988 Pacific Foods of Oregon commissioned this $8 million plant located at Tualatin, Oregon, just a few miles south of Portland. The 23,000 square foot facility is currently designed to produce 3,000 liters per hour of soymilk base. The plant was designed to make soymilk and tofu for food processors (rather than retail customers) who wanted to use these products as ingredients in other foods. The plant's storage silos can hold up to 200,000 pounds of soybeans. Soymilk can be packaged in bulk or concentrated using ultrafiltration. The company plans to install an aseptic packaging system in the near future.

Pacific Foods is currently making and selling only one product, Naturally Northwest Soy Beverage in a 1-quart Tetra Brik Aseptic carton, packaged at another facility. It is America's first aseptically packaged soymilk that contains only soybeans and water. The company may add flavored soymilk products to its line in the near future. For more information contact Pacific Foods, 19480 S.W. 97th Ave., Tualatin, Oregon. Phone: 503-692-9666. Attn: Pat Carey, Vice President of Sales.

5549. **Product Name:** Rikemal Super.
Manufacturer's Name: Takeda U.S.A. (Importer). Made in Japan.
Manufacturer's Address: Orangeburg, New York.
Date of Introduction: 1988. December.
New Product–Documentation: Food Engineering. 1988. Dec. This is a "new emulsifier, designed as a defoaming agent and quality improver for tofu. It should be added to soaked soybeans during or just prior to grinding, and has a suggested usage level of 0.5 to 0.8% of total dry soybean weight.

"Rikemal Super is a highly concentrated, blended monoglyceride in a free-flowing powder form." Other benefits are listed as: improves protein extraction efficiency, making it easier to separate soymilk from waste materials, and increasing the yield of soymilk. Because it disperses the coagulant homogeneously, loss of soluble protein is minimized and tofu yield increases by 6 to 20%.

"Rikemal Super also aids in increasing shelf life by preventing pore formation on the tofu surface (even when steamed) which prohibits development of bacteria."

5550. **Product Name:** AdeS (Soymilk) [Natural, Chocolate, Orange, or Apple].
Foreign Name: AdeS {Alimento de Soya Liquido Sabor Natural}.
Manufacturer's Name: Alimentos de Soja S.A. (A de S).
Manufacturer's Address: Plant: La Cocha, Tucuman,

Argentina; Offices: Avenida Vélez Sarsfield 1744 (1285), Buenos Aires, Argentina. Phone: 760-0307 or (541) 21-8228 (8964). Fax: (541) 21-9632.
Date of Introduction: 1988.
Ingredients: Spring water, whole selected soybeans, sugar, authorized flavors, pectin (as an emulsifier), and added vitamins A and D.
Wt/Vol., Packaging, Price: 200 ml and 1 liter Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Alimentos de Soja in Argentina. It had a capacity of 4,500 liters/hour and began operation in 1988. Plant: Ruta Prov. 344 Km 7.5, Dto. La Cocha, 4162 Pola. Tucuman, Argentina. Office: Suipacha 570, 3rd floor "B", Buenos Aires 1008, Argentina. Address:

Note: This company is owned by Lic. Alejandro Gutiérrez Herrera, a wealthy landowner who negotiated to buy the Alfa-Laval plant with Italian aid money. When the money never came, he purchased the plant out of his own pocket. Business is said to be good and a second plant is being considered. The sales manager in 1989 was Ricardo Shaw.

SoyaFoods. 1991. Spring. p. 6-7. "AdeS Alimentos de Soja–Soya beverages from Argentina." See in-depth story on the product and company. The earliest product seen containing soymilk and fruit juice.

Product with Label (Natural) brought by Marina Li, from Oaxaca, Mexico. 2004. April 2. Aseptic Tetra Brik carton. Blue, green, white, yellow, red, and black on white. Ingredients: Water, selected soybean seeds, sugar, salt, natural flavors, thickener, soy lecithin, vitamins A & D. The product is now made by Unilever de Mexico, S.A. de CV., Tepalcapa No. 2 Col. Rancho Sto., Domingo, Tutitlán, Edo de México, C.P. 54900. Made in Mexico. Logo: Seal of approval, American Soybean Association.

Color photo brought by Marina Li from Ipanema, Rio de Janeiro, Brazil. 2006. April. Shows many Tetra Brik cartons of AdeS on the shelves of The Natural "a quilo" with lots of vegetarian options–Rua Barao de Torre, next door to Hostel Ipanema. On the same shelves are many cans of Soymix. AdeS flavors include uva (grape, berry), maça (apple), chocolate, laraja (orange), and pêssego (peach).

Visit with Carlos Planes (of Buenos Aires, Argentina) at Soyinfo Center in Lafayette, California. 2012. Feb. 23. He brought this colorful sell sheet in a scrapbook. 5 x 6 inches. Written across the bottom: The drink that is full of Energy. A photo shows 10 cartons of Ades–Two sizes with 5 flavors each: Natural, mandarin orange / tangerine, pineapple, apple, and orange.

5551. Ameyama, M.; Adachi, O.; Yasuda, A.; Nomura, Y. 1988. Method of reducing off-flavor in food materials with acetic acid bacteria. *European Patent Application* 255,588 A2. [Eng]*
• ***Summary:*** Medium chain length aldehydes (e.g. n-hexanal, n-heptanal, n-octanal, n-nonanal and n-decanal) can be responsible for causing off-flavors in soy milk. A considerable reduction in these undesirable aldehydes can be achieved using various *Acetobacter* or *Gluconobacter* spp. For liquid foods, bacteria immobilized on alginates or carrageenan can be used. Address: House Food Industrial Co., Higashi-Osaka 577, Japan.

5552. Beddows, C.G. 1988. The old fashioned way with soya. *Food Science & Technology Today* 2(1):12-15. [6 ref]*
• ***Summary:*** The following soybean products are described briefly: soymilk, bean curd, tofu, tempeh, natto, sufu, miso, shoyu, and yuba. Protein yields are given for a range of plant crops versus milk and beef, e.g. soybeans 3500 kg/ha/annum versus 75 kg/ha/annum for beef. Recipes are included for miso cream cheese dip and deep fried tofu and miso soup. The marked rise in consumption of soybean products in the USA in recent years is noted. Address: Dep. of Applied Sciences, Leeds Polytechnic, Leeds LS1 3HE, England.

5553. **Product Name:** [Bonneterre Sojade: Soymilk (Plain/Natural)].
Foreign Name: Bonneterre Sojade: Boisson Nature à Base de Soja.
Manufacturer's Name: Bonneterre. Affiliate of Laiteries Triballat (Marketer). Made in France by Triballat.
Manufacturer's Address: 1, Place des Planteurs, 94538 Rungis Cedex, France. Phone: 46.87.26.34.
Date of Introduction: 1988.
Ingredients: Water, and soybeans (organically grown).
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton, Retails for 9.80 French francs (10/89 France).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm: Protein 3.7 gm, lipids 2.0 gm, carbohydrates (glucides) 1.7 gm, calories 39, unsaturated fatty acids 61%, saturated fatty acids 14%, cholesterol 0 gm, phosphorus 21 mg, sodium 27 mg, calcium 30 mg, magnesium 21 mg.
New Product–Documentation: Form filled out by Anthony Marrese. 1989. Nov. This product was launched in 1988. It is made by some other company (probably Triballat) and sold under the Bonneterre label. Bonneterre is a large distributor to the natural/health foods trade.

Bonneterre color leaflet. 1989. In French. "Soya in drinks and desserts. A line 100% vegetarian." A color photo shows a glass of soymilk, two cups and two plates of soy yogurt, surrounded by whole and sliced fruits on a bed of soybeans. An illustration (line drawing) on the back shows this product in a Tetra Brik carton. A nutritional analysis is given.

Bonneterre Catalog. 1989. Oct. There is only 1 flavor of

this product, natural.

Letter (fax) from Bernard Storup. 1990. March 10. Laiteries Triballat makes two brands of soymilk. One, under the Bonneterre trademark, is sold in health food stores. The other, under the Triballat trademark, is sold in supermarkets.

5554. Gebrueder Buehler AG. 1988. Verfahren zum Herstellen eines Prodktes aus Soja [Process for the preparation of a product from soybeans]. *Swiss Patent* 655,090 A5. [Ger; Fre]*

• ***Summary:*** Soybeans are dry-milled by a pressure/abrasion milling process, using a series of 3 pairs of mill rolls: in each pair, the 2 rolls rotate at different speeds. Finally, the resulting powder is dispersed in a fluid, preferably water, to give a soy milk which may be further processed to a range of products. Address: Uzwil, Switzerland.

5555. **Product Name:** [Soya Milk].
Foreign Name: Soya Milk.
Manufacturer's Name: Gerblé. Div. of Diététique & Santé.
Manufacturer's Address: B.P. 106, 31250, Revel, France.
Date of Introduction: 1988.
New Product–Documentation: Form filled out by Anthony Marrese. 1989. Nov. This product was launched in 1988. The contact person is Mr. Villac in International Marketing. Gerblé, the division that supplies the health food stores, started using soya in 1988. Diététique & Santé has a wider market and at present all soya use is through the Gerblé division. A lot of their market is just opening up and forming. This company's products are very professionally packed and produced. They taste very good. No label was sent, nor does a 4-page color brochure showing many of the company's products show any soymilk.

5556. **Product Name:** Granose Soyagen: Soya Milk Powder (For Adults).
Manufacturer's Name: Granose Foods Ltd. (Importer-Marketer). Made in West Germany by DE-VAU-GE.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England. Phone: 0923-672281/2.
Date of Introduction: 1988.
Ingredients: (1990): Soya proteins (instant), corn oil, malt, starch, calcium carbonate, vegetable emulsifier: lecithin, sea salt, natural flavourings, vitamins E, B-1, B-2, B-12.
Wt/Vol., Packaging, Price: 350 gm box.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Protein 21 gm, fat 26 gm, carbohydrate 45 gm, calcium 420 mg, phosphorous 200 mg, iron 3.5 mg.
New Product–Documentation: Form filled out and Label sent by Granose Foods Ltd. 1990. June 13. States that product was introduced in 1967. Made by DE-VAU-GE. Address on label is Stanborough Park. Label. 1990. 5.5 by 8 by 1.75 inches. Paperboard box. Black, red, yellow, and dark green on white and light green background."Contains no animal produce. Lactose free. Gluten Free. The vegetable Lactose-free composition of Granose 'Soyagen' Soya Milk Powder makes it easy to digest and suitable for people with an allergy to cows' milk." Illustration on front panel shows a glass of milk in front of green soybean leaves and pods. Side panel: "Preparation: Granose Soya Milk Powder dissolves instantly in hot or cold water. Standard Mix 1 part powder to 6 parts water (40 gm powder to ¼ litre water). Suitable for use in: Puddings, Custard, Yogurts, Soups, Sauces, etc." Note: This was the earliest known soymilk made in Europe for adults that was fortified with calcium.

5557. **Product Name:** [Hong Bao Soya Bean Milk].
Manufacturer's Name: Guangzhou Cannery.
Manufacturer's Address: Huang-pu Da Dao, Yuan Cun, Guangzhou, China.
Date of Introduction: 1988.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the package. Red, white, yellow, and pea green. Note: Hong Bao is the red envelope containing money that Chinese give as gifts during Chinese New Year.

Letter from ASA, China. 1990. Sept. 13. Guangzhou Cannery has the third largest soymilk production capacity in China, 2,000 liters/hour.

5558. **Product Name:** Indreni Soymilk [Chocolate].
Manufacturer's Name: Indreni Soybean Industries Ltd.
Manufacturer's Address: Saibu, Lalitpur, P.O. Box 4556, Kathmandu, Nepal. Phone: 226783 or 227813.
Date of Introduction: 1988.
Ingredients: Soymilk base, cocoa, sugar, flavor.
Wt/Vol., Packaging, Price: 250 ml Prepac pouch.
New Product–Documentation: Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Indreni in Nepal. It had a capacity of 2,500 liters/hour and began operation in 1988.

Letter from Dr. A.S. David of Indreni. 1990. June 20. He received the address of Soyfoods Center during a visit to Eric Fehlberg at the Seventh-day Adventist General Headquarters in Silver Spring, Maryland. Indreni is looking for a U.S. partner to develop soy-based products using simple technologies. They are looking at baby cereal or extruded soy products utilizing their okara.

Photocopy of Label. 1990. Says the plant/company is located at Sainbu, Lalitpur, Nepal.

Letters from T.B. Gubhaju, owner of Nepal Tofu Factory. 1991. April 22. Indreni Soybean Industries Ltd. was established as a joint venture with Nepalese and American entrepreneurs in 1988. The total capital investment is about

2 million U.S. dollars. They have imported equipment from Alfa-Laval. This company does not seem to have made good progress during the past 3 years for two main reasons: (1) The retail price of their soymilk is near the price of dairy milk, and (2) The company has not done enough effective advertising "to attract the Nepalese people to the wonders of soya-based food."

5559. Jain, Manoj. 1988. Educating health workers and villagers on the dietary uses of soy foods in Madhya Pradesh, India. *Food and Nutrition Bulletin* (*United Nations Univ.*) 10(4):41-44. [9 ref]

• ***Summary:*** "Research has shown soy foods to be easily preparable, highly nutritious, and inexpensive. Common soy foods are soy milk, tofu, soy flour, soy yogurt, and miso, which can easily be prepared at home with conventional utensils." A brief description is given of how to make soy milk and tofu at home.

"The training program was developed in conjunction with the Mahatma Gandhi Memorial College in Indore, Madhya Pradesh, and a non-profit voluntary agency, Bharatiya Grahmeen Mahila Sangh (BGMS).

"In a two-day training programme, health workers were taught soy-foods preparation, soy nutrition, and how to conduct demonstrations in villages. Health workers and BGMS workers in groups of four prepared soy milk, tofu (soy paneer), soy yogurt, and other indigenous recipes such as soy bugiya (soaked blended soybeans mixed with gram flour and spices) and halwa (a sweet).

"After completing the training, the workers conducted demonstrations in eleven selected villages."

"Results: Thirty-five extension workers from BGMS and 15 government health workers from Indore District were trained for two days on the uses of soybeans. Over a two-month period, each worker gave an average of nine demonstrations. Each demonstration as attended on average by 23 women.

"The initial response of the villagers to soy foods was one of surprise. A typical comment was: 'We grow the crop and store it in our homes, yet did not know that it could be used for food.' They were amazed to see the many foods that could be prepared from soybeans."

"The most readily acceptable items were those that resembled indigenous foods and were easy to prepare, such as roasted and fried soybean, soy halwa, soy chutney, and vegetables stuffed with okra and tofu. Soy milk was not well accepted because of its beany flavour. When a mixture of 50% soy milk and 50% cow's milk was made and fennel seeds were added, it was more acceptable. The taste of soy yogurt (with 50% or 100% soy milk) was much more acceptable than that of soy milk. In making soy milk, tofu, and soy yogurt, a major problem was grinding the soaked soybeans on a grinding stone; the soybeans are slippery and grinding is time-consuming."

There are 4 tables. Table 3 shows "Nutritional content and cost of various indigenous foods prepared with and without soybeans." The seven foods are: Chappati [chapati], salad, cutlets, weaning food, chikki (sweet), papad, and badi. Address: Medical student, Boston Univ. School of Medicine, Boston, Massachusetts; Also work on his master's degree at the Univ.'s School of Public Health.

5560. **Product Name:** [Soymilk].
Manufacturer's Name: Jiangmen Foodstuff Factory.
Manufacturer's Address: Jiangmen, China.
Date of Introduction: 1988.
New Product–Documentation: Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Jiangmen in China. It had a capacity of 2,500 liters/hour and began operation in 1988.

Letter from ASA, China. 1990. Sept. 13. Jiangmen Foodstuff Factory has the third largest soymilk production capacity in China, 2,000 liters/hour.

5561. **Product Name:** [Risotto with Seitan].
Foreign Name: Risotto mit Seitan.
Manufacturer's Name: Jonathan P.V.B.A.
Manufacturer's Address: Antwerpsesteenweg 336, B-2080 Kapellen, Belgium.
Date of Introduction: 1988.
Ingredients: Water, whole rice*, lentils*, seitan (wheat proteins)*, leek*, onions*, mushrooms, soya milk*, vegetable extract, sea-weed, sea salt. * = Organically grown.
Wt/Vol., Packaging, Price: 300 gm.
How Stored: Frozen.
Nutrition: Minerals 1.37%, vegetable proteins 7.74%, vegetable fats 0.41%, carbohydrates 19.3%. 111 calories (Kcal) per 100 gm.
New Product–Documentation: Label sent by Jos van de Ponseele. 1988. 6.25 by 10.5 inches. This card-stock sleeve fits over the product. Color photo of a slice of seitan on a white dish partly covered by brown rice and a white sauce containing green vegetables. The product name is written in English and German, in white on a reddish-orange band. "Vegetable product." Code CINAB.

5562. Khorasani, G.R.; Sauer, W.C.; Ozimek, L.; Kennelly, J.J. 1988. The utilization of soybean protein concentrate by the preruminant calf. In: University of Alberta 67th Annual Feeders Day Report. See p. 19. *

5563. Kui-xiong, S.; Zhi, T.; Xin-yao, Q.; Gui-se, J. 1988. Epidemiology of gastric cancer in China. In: First Shanghai International Symposium on Gastrointestinal Cancers. See p. 34-44. Held in Shanghai, China. *

• ***Summary:*** Consumption of soy products, including soymilk, were associated with a decreased risk from stomach cancer, but *P* values were not given.

5564. **Product Name:** [Triballat Sojade, and Sojasun: Soymilks].
Foreign Name: Triballat Sojade, Triballat Sojasun: Boisson Nature à Base de Soja.
Manufacturer's Name: Laiteries Triballat.
Manufacturer's Address: Rue Julien Neveu, B.P. 21, 35530 Noyal-sur-Vilaine, Brittany, France. Phone: 99.00.51.01.
Date of Introduction: 1988.
Ingredients: Water, and soybeans (organically grown).
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm: Protein 3.7 gm, lipids 2.0 gm, carbohydrates (glucides) 1.7 gm, calories 39, unsaturated fatty acids 61%, saturated fatty acids 14%, cholesterol 0 gm, phosphorus 21 mg, sodium 27 mg, calcium 30 mg, magnesium 21 mg.
New Product–Documentation: Letter (fax) from Bernard Storup. 1990. March 10. Laiteries Triballat makes two brands of soymilk. One, under the Bonneterre trademark, is sold in health food stores. The other, under the Triballat trademark, is sold in supermarkets.

Letter from Bernard Storup of Société Soy in France. 1990. June 6. Triballat does not make any flavors of soymilk under their own brand. They have only plain soymilk sold under 2 labels: Sojasun in supermarkets, and Sojade in the health food market.

Note: These products may be made under license from PLL: Produits Laiteries Lausanne SA. Soyfoods Center has a document showing that in about 1991 Laiterie Triballat acquired the Sojasun trademark (work and picture) from Produits Laitiers Lausanne.

Leaflet sent by Heather Paine. 1990. Nov. Shows the 1-liter Tetra Brik carton of Boisson à base de Soja. Red, green, yellow, and light blue. Illustration of a golden sun against a light blue sky, over a green and a golden hill. "100% végétal. Without added sugar."

5565. **Product Name:** [Soyolait (Natural Soy Drink)].
Foreign Name: Soyolait.
Manufacturer's Name: Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.).
Manufacturer's Address: 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.
Date of Introduction: 1988.
Wt/Vol., Packaging, Price: 1 liter Pure-Pak carton.
How Stored: Refrigerated, 21 day shelf life at 3ºC.
New Product–Documentation: Talk with Helen Wan, sales manager. 1995. May 26. In 1988 they introduced *Soyolait,* a 1-liter soya drink that is presently the company's best-selling product and also the best-selling fresh soymilk in Quebec. It is sold fresh in Pure-Pak cartons, and has a remarkable 21-day shelf life at 3ºC. The product is made and packaged entirely at their plant. It is sweetened with barley malt extract and sold only in Quebec, and mostly at natural food stores. It is consumed by Caucasian-Canadians rather than by Chinese-Canadians (who prefer a sugar-sweetened product). Soyolait is less expensive than Edensoy, since the packaging is less expensive.

5566. Otomo, T. 1988. [An investigation of the possibilities of and developments in extraction of functional compounds: Separation, extraction, and concentration by membrane techniques]. *Shokuhin Kaihatsu* (*Up-to-Date Food Processing*) 23(3):37-42. [8 ref. Jap]*
• ***Summary:*** The membrane techniques or processes of reverse osmosis, ultrafiltration, and microfiltration are applied to soymilk, fruit juice, and saké.

5567. **Product Name:** Soy Beverages.
Manufacturer's Name: Premier Extractions Ltd.
Manufacturer's Address: Main Office: 107 Chetak Centre, 12/2 R.N.T. Marg, Indore 452001, MP, India.
Date of Introduction: 1988.
New Product–Documentation: Soya Bluebook. 1986. p. 103. Letter from Mr. S. Menon (person in charge). 1987. Nov. Says that "Soya Milk" has not yet been introduced. It will be launched in February 1988. Capacity will be 2,000 liters/hour. Address is now 45/47 Industrial Area, A B Road, Dewas, MP, India. Phone: 2854/2133.

5568. **Product Name:** Tuffy Hi-Protein Soymilk [Malt, Orange, Banana, Mango, Strawberry, or Chocolate].
Manufacturer's Name: Premier Industries (India) Ltd.
Manufacturer's Address: Chetak Centre, R.N.T. Marg, Indore, Madhya Pradesh, India.
Date of Introduction: 1988.
Ingredients: Malt: Soymilk, sugar, malt extract, minerals, edible vegetable oil, vitamin C. Contains permitted colours and flavors.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Mahesh Khaitan. 1989. Aug. 6. This soymilk was introduced in Indore in 1988 in a Tetra Brik carton. Photocopy of Labels for Malt, Orange, and Banana. Sent by Anders Lindner. 1989. "The taste is a knockout. Drink ice cold. In collaboration with Mitsubishi, Japan." An illustration (line drawing) on the front panel shows a Superman-like character with cape flexing his biceps.

Letter from A.K. Bajaj, Managing Director of Amrit Protein Foods Ltd. 1991. June 26. This company has discontinued the production and marketing of its Tuffy brand soyamilk.

5569. **Product Name:** Soymilk.
Manufacturer's Name: Sona Dairies Ltd. / Parmalat.
Manufacturer's Address: Plot 3-4, No. 21, Abebe Village Road, Iganmu Industrial Estate, P.O. Box 4610, Lagos, Nigeria.
Date of Introduction: 1988.
New Product–Documentation: K.E. Weingartner et al. 1987. FAO Food and Nutrition 13(2):24. "A dairy company in Lagos, Nigeria, is in the process of installing ultra high temperature (UHT) equipment supplied by Alfa-Laval (Lund, Sweden), using aseptic packaging which will allow the milk to be stored without refrigeration."

Letters from Eva Akesson, International Marketing Services, Tetra Pak International AB, Lund, Sweden. 1984. Sept. 13 and 28. "Our company in Nigeria is planning a soymilk project." The managing director, Mr. Jerome Bayle, believes that soymilk is the only possible milk for Nigeria.

Letter from Dr. V. Bhandari, Quality Control Manager, Sona Dairies Limited. 1986. Oct. 14. "We are actively engaged in a project on the utilization of soya bean for the commercial production of soymilk. To meet our production requirements, we have to procure 500 to 1,000 tons of soya beans per year from different states of Nigeria." Requests information about drying, packaging, and storing soybeans. Letter is typed with signature on letterhead. Address is that given above in Lagos, Nigeria. Three attached pages show the temperature (maximum and minimum) and average relative humidity each month of the year in five Nigerian cities: Ikeja, Jos, Makurdi, Dadinkowa, and Kaduna.

Letters from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30 and Aug. 24. Alfa-Laval sold a complete soymilk plant to Sona Dairies in Nigeria. It had a capacity of 4,500 liters/hour and began operation in 1988. They installed the plant, had everything started, then it was "frozen" due to political reasons and the cost of the paper for packaging. It is not producing anything today.

Talk with Nigerian Embassy, Commercial Office in Washington, DC. 1990. June 8. They know of no company named Sona Dairies in Nigeria. However they have a Sona Breweries, Plot 3/4 No. 21, Abebe Village Rd., Iganmu Industrial Estate, P.O. Box 4610, Lagos, Nigeria. Phone: 011 + 2341 83-55-75.

Business Card from Amil K. Ahluwualia, Managing Director gives the company name and address as shown in the basic record above. Cable: SonaDairy Lagos. Note: This soy dairy was a joint venture between Parmalat, the Italian dairy giant, and a group of Nigerian businessmen. The dairy went bankrupt when import of milk powder and Tetra Pak packaging material became too hard to get due to falling oil revenues in Nigeria. Sona negotiated with STS (Soya Technology Systems) but Alfa-Laval bought out Parmalat and went in as a new partner. A Swedish dairy engineer went to Sona for a year. The plant is not yet in operation and the product name is not known (June 1990).

5570. **Product Name:** [Bonsoy (Soymilk)].
Manufacturer's Name: Urtekram (Importer). Made in Japan by Marusan. Imported via Muso Shokuhin.
Manufacturer's Address: Denmark.
Date of Introduction: 1988.
Ingredients: Water, soybeans, pearl barley, kombu (sea vegetable), barley malt.
New Product–Documentation: Talk with Yuko Okada. 1992. July 16. Muso first exported Bonsoy soymilk to Urtekram in about 1988. This soymilk was packaged in a foil retort pouch.

5571. **Product Name:** [Soymilk].
Manufacturer's Name: Wuhan Guan Sheng Yuan Foodstuff Factory.
Manufacturer's Address: Wuhan, China.
Date of Introduction: 1988.
New Product–Documentation: Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Wuhan in China. It had a capacity of 4,500 liters/hour and began operation in 1988. Note: Wu-han or Wuhan is a tri-city conurbation in southeastern Hupeh province (eastern central China) at the junction of the Han with the Yangtze River. It was formed in 1950 by the consolidation under a single administration of the three so-called Han Cities of Hankow, Han-yang, and Wu-ch'ang. The population in 1970 was estimated at 4.25 million.

Letter from ASA, China. 1990. Sept. 13. Wuhan Guan Sheng Yuan Foodstuff Factory has the largest soymilk production capacity in China, 20,000 liters/hour.

5572. Anderson, Eugene N. 1988. The food of China. New Haven, Connecticut: Yale University Press. xvi + 313 p. Index. 24 cm. [380 ref]
• ***Summary:*** Contents: Preface. Acknowledgments. Chronology of food and agriculture in China. 1. The natural environment. 2. Prehistory and the dawn of civilization. 3. The crucial millennium: Chou through Han. 4. Food from the West: Medieval China. 5. Definitive shaping of the food system: Sung and the conquest dynasties. 6. Involution: Late imperial China. 7. The climax of traditional agriculture. 8. Chinese foodstuffs today. 9. Some basic cooking strategies. 10. Regions and locales. 11. Traditional medicinal values of food. 12. Food in Society. Appendix: Dinner at the Ngs.

Soybeans and soyfoods are mentioned as follows: North China is the native home of the soybean (p. 3). Soybeans seem to have been introduced to China in about 1000 B.C., but they were not popularized until the early Eastern Chou period (Ho 1975). Called, *shu,* they "seem to have come from the Jung people, northern and northeastern neighbors of the Chinese, who may have been Tungusic or Altaic, and were perhaps related to or descended from the Hungshan."

Domesticated soybeans are descended from wild soybeans (p. 29).

Fan Sheng-chih wrote an agricultural manual in the first century B.C.; it survives in extensive fragments quoted in later agricultural works. This manual mentions the "Nine Staples": wheat, barley, millet, glutinous millet, spiked millet, soybeans, rice, hemp, and small beans (*Vigna* spp.) (p. 50).

The art of fermenting soybeans was perfected sometime in the late Chou period, or perhaps even as late as the very early Han. Thereafter, Han texts devote much space to salt-preserved soybeans [fermented black soybeans], called *tou shih* (*or shih*), the *tausi* of modern Cantonese cooking. *Chiang,* fermented sauce, was made from beans, but also from meat and elm products (p. 51).

During the late Southern Sung, Wu Tzu-mu coined the famous phrase: "the things that people cannot do without every day are firewood, rice, oil, salt, soybean sauce, vinegar, and tea" (Freeman 1977, p. 151). By the Sung, *chiang* had come to refer unequivocally to soy sauce; as late as the T'ang, it would probably have been understood, at least in literary contexts, to refer to a variety of fermented foods (p. 82).

Bean curd or *tou fu* (Japanese tofu) was first mentioned in the early Sung; its invention was attributed to Liu An of the Han Dynasty, "but this is preposterous." In fact, tofu "was invented in the late T'ang or early Sung–possibly by Taoists and/or people from the Huainan region, who then ascribed it, out of a sort of respect, to Liu An, the Taoist prince of Huainan (B.W.-C. Young, pers comm). Buddhists quickly took over the food as a good substitute for meat and for dairy foods..."

Soybean curd is also fermented; the firm tofu cubes are packed in brine and sold. "They constitute the Chinese equivalent of a cheese and are apt to be overpowering, reminiscent of strong German hand cheese [*Handkäse,* a German regional sour milk cheese]. They are graphically known as *ch'ou tou fu* (stinking bean curd). Only the very stoutest of heart eat them and then only in small quantities."

Also discusses: Vegetarian cooking (p. 66, 86, 118, 150, 196, 204, 249). Vegetarianism came to China with Buddhism during the T'ang dynasty. Fish farming (p. 103, 129). Note: Eugene Newton Anderson was born in 1941. Address: Dep. of Anthropology, Univ. of California, Riverside, CA 92521.

5573. APV Crepaco, Inc. 1988. Soybean grinder/cooker. New technology for processing soybeans into soymilk (Leaflet). Lake Mills, Wisconsin. 1 p. Single sided. Section 3. Bulletin B-1-280. [1 ref]

• ***Summary:*** Developed by APV Crepaco in association with ProSoya Foods International Inc. and covered by U.S. Patent 4,744,524. The standard unit has a capacity of 24 gallons (91 liters), outside diameter of 24 in. (610 mm), overall height of 83 in. (2,108 mm), and maximum working pressure of 60 lb per square inch (4.2 kg/sq. cm). Features: All stainless steel construction. High speed grinder, direct coupled to a 10 horsepower motor. Pressure cooking chamber with direct steam injection heating (includes sight glass and discharge valve). A photo shows the standard unit. Address: 100 S. CP Ave., Lake Mills, Wisconsin 53551. Phone: (414) 648-8311.

5574. Cost, Bruce. 1988. Asian ingredients: Buying and cooking the staple foods of China, Japan and Southwest Asia. New York, NY: William Morrow & Co. 333 p. Illust. Index. 27 cm. [39 ref]

• ***Summary:*** Soy related: Soybean sprouts and recipe (p. 86). Beans, incl. soybeans (p. 146-50). Asian "dairy" (p. 186-87): The soybean and the coconut (incl. bean curd, doufu-nao, fermented bean curd / fu-ru, molded bean curd / chou dou-fu, dried bean curd / dou-fu gan, and bean curd skin [yuba]. Soybean milk.

Soybean sauces, condiments and pastes (p. 195-211): Salted and fermented black beans with recipes for "Roast chicken with black beans stuffed under the skin," and "Soft-shell crabs with ginger, lemon, and black beans" ("Fermented black beans, often flavored with bits of ginger and sometimes orange peel, are usually sold in 8-ounce plastic bags." Acceptable brands: Mee Chun or Koon Chun Sauce Factory. "Earthier and probably more classic are the Yang Jiang Preserved Beans (with ginger) from Kwangtung, China), bean sauce (other names: Yellow bean sauce, brown beans sauce, bean paste, jiang; two types are with the beans whole or ground), hot bean sauce / paste with recipe, hoisin sauce, sweet bean sauce (made with soybeans [probably tian mian jiang, p. 202], Taiwan), soy sauce (Chinese, Japanese, tamari; Highly recommended light soy sauce: Pearl River Bridge. Highly recommended dark: Pearl River Bridge Mushroom Soy, flavored with straw mushrooms), Java's ketjap and other soy sauces miso with recipe, yellow miso (*Shinshu miso*), white miso (*shiro miso, Kyoto shiro miso,* sweet white miso), red miso (*aka miso*), Hatcho miso [soybean miso], barley miso (*mugi miso*), fermented bean curd (white or red; also called preserved bean curd, wet bean curd, bean cheese, dou-fu ru or fu-ru {Mandarin}, fu yu {Cantonese}) with two recipes).

"Red fermented bean curd" is described on pages 210 (also called "red bean cheese"), 211, and 283 (together with "red rice").

Concerning ketjap (p. 206): Tomato ketchup, although it may seem to be of Asian origin, may or may not come from a family of Asian pickled products. But the word "ketchup" is clearly of Asian origin. [Note: The modern Indonesian word for soy sauce is *kecap / ketjap / kechap.*] "It comes from the Malay *kechap,* which apparently derives from the *kôe-chiap* of a southern Chinese dialect (Amoy); both of these refer to the kind of briny liquid preserves that include fish and soy sauces." Throughout most of Southeast Asia, fish sauces are the standard condiment, in Indonesia (incl. Java) soy sauce

is more widely used. Sweet Indonesian soy sauce (*ketjap manis*), which is very widely used, is traditionally sweetened with palm syrup and seasoned with garlic, star anise, salam leaves, and galangal.

Also discusses: Seaweed (p. 165-70): Kelp (Laminaria), laver (Porphyra), wakame, dashi, hair vegetable / black moss / hairlike vegetable (China; Gracilaria verrucosa), agar-agar. Monosodium glutamate (p. 247)

Bruce Cost was born in 1945. A photo and brief biography appears on the inside rear dust jacket. Address: [San Francisco, California].

5575. Gruettner, R. 1988. Eiweissbedarfsdeckung durch Sojamilch [Covering you protein needs through the use of soymilk]. In: F. Haschke, ed. 1988. Protein in der Sauglingernahrung [Protein in Infant Feeding]. Stuttgart: Ferdinand Enke. xi + 141 p. See p. 22. [Ger]*

• ***Summary:*** The dust jacket of this book states, under the title: "Freedom from junk food. Freedom from supermarket rip-offs. Freedom from slavery to doctors and landlords. Freedom from food-induced sickness and premature aging." The book has sold very well. In the chapter titled "Eating better for less," there is a section on soybeans (p. 87-94). It discusses cooked soybeans, soy grits, soy flour, soy protein (isolate), soy sprouts, soy coffee, miso, Tofutti, soy milk, and tofu, with the greatest praise reserved for tofu. A number of recipes are included. On page 94, two panels from the Soyfoods Center (Lafayette, California) catalog of publications are reproduced. They describe the center and the many virtues of soyfoods. Below is a caption: "This organization is bringing a new era in good food to the United States. Write for their handsome brochure, listing books and other data."

Das erste komplette Soja-Kochbuch [Soya in whole-foods cookery: Advice and recipe ideas for cooking and baking with all the varieties of soya: Beans, flour, milk, sauce, tofu and miso. The first complete soya cookbook]. Munich, West Germany: Gräfe und Unzer GmbH. 102 p. Illust. Index. 20 cm. [11 ref. Ger]
• ***Summary:*** The copyright (but not the title page) page says that this is a 3rd edition, however the ISBN is unchanged from the 1984 edition. Address: West Germany.

5578. Larcher, Jacques; Volper, S.; Aubin, J.P. 1988. Le soja en régions tropicales: une synthèse des recherches de l'IRAT [The soybean in tropical regions: A summary of research conducted by IRAT]. *Memoires & Travaux de l'IRAT* (*France*) No. 15. 185 p. [91 ref. Fre]
• ***Summary:*** IRAT stands for *Institut de Recherches Agronomiques Tropicales* (Tropical Institute of Agronomic Research). Contents: Varietal improvement: Introduction of varieties, screening varieties, creating new varieties. Cultural practices: Preparing the soil, water needs of the soybean, planting, harvest, production and storage of seeds. Cultural systems: Crop rotations, companion crops, times of working. Fertilizers: Mobilization minerals, diagnosis based on foliage, nitrogen fertilizers, phosphate fertilizers, potassium fertilizers, organic manure, preformulated manure. Inoculation: Effects of inoculation on the nodulation and the yield of soybeans, methods of inoculation, selection of stocks of *Rhizobium japonicum,* determination of the dose of inoculum suited to the field, production of inoculum, survival of *Rhizobium japonicum* in tropical soils. Crop protection: Bacterial diseases, fungal diseases, viral diseases, nematodes, insects, chemical defoliation, herbicides. Technology: Senegal, Cameroon.

Appendixes: 1. List of varieties. 2. List of the main soybean varieties introduced to Benin, Burkina Faso, Cameroon, Comoro Islands, Côte d'Ivoire, Ethiopia, French Guiana, Madagascar, Mali, Niger, Polynesia, Central African Republic, Reunion and Martinique, Senegal, Togo. 3. Norms of observation and methods employed by IRAT. 4. Improvement of the components of soybean yield. Technical guide for growing soybeans in Senegal, Côte d'Ivoire, and French Guyana.

The section titled "Introduction of Varieties" (p. 9) notes that between the first and second world wars, the French peasantry introduced the soybean to Madagascar and cultivated it in the regions of Ambatolampy, Antsirabé, and Ankazomiriotra. It is interesting to note that it was in the latter locality that the first attempts were made to transform soybeans into milk and cheese [soymilk and tofu] in Madagascar. In Cameroon, eleven varieties, which originated in the USA and East Asia, were introduced between 1924 and 1945.

In 1965 IRAT introduced the soybean into its research programs and began, as a first step, by establishing soybean varietal collections in the different countries where IRAT was working: 1966 in Senegal, Madagascar, and Cameroon. 1967 in the Central African Republic and Mali. 1968 in the Côte d'Ivoire. 1969 in Benin. 1971 in the Comoro Islands. 1972 in Ethiopia. 1974 in Togo and Niger. 1975 in Burkina Faso, Réunion, French Guiana, Martinique, and Polynesia. The first collections, established in 1966 from soybean varieties originating in Rwanda, the USA, Rhodesia, and Tanzania, were progressively disseminated to the other countries.

Subsequent participation of IRAT researchers in the international variety trials conducted by INTSOY (USA) and by IITA (Ibadan, Nigeria) enabled IRAT to diversify its genetic resources and to test, mainly through the INTSOY

trials, the varieties that it had developed.

Varietal selection (p. 10-22): Senegal: From 1966 to 1970, 120 soybean varieties received were tested by CNRA Centre National de Recherche Agronomique (French) of Bambey (Baol), then at Nioro du Rip (Sine-Saloum), where the best yields, of about 1,500 to 2,000 kg/ha were obtained with the variety Geduld. Starting in 1970 Bambey was abandoned and trials were continued at Séfa (Sefa, Casamance) and Synthiou Malème (in eastern Senegal), where the ecology was more favorable for soybean cultivation. Breeding of new varieties started in about 1972 in Senegal (see p. 22-33)

Central African Republic: In 1967, at the request of the Ministry of Rural Development, via FAO, 80 soybean varieties of very diverse origins were introduced and tested at the Grimari station. The variety Avoyelles yielded 1,218 kg/ha.

Mali: The varieties G15 and G115 (Jupiter) from Burkina were introduced to Mali in 1967. Then in 1969 IRAT introduced 26 new varieties, of which 11 originated in the Central African Republic and 15 in Senegal.

Côte d'Ivoire: From 1968 to 1977 IRAT introduced 171 soybean varieties to the Côte d'Ivoire.

Togo and Benin: These two contiguous countries have comparable ecologies. IRAT's with soybeans in Benin began in 1969. In 1970 IRAT introduced to Niaouli, Benin, 45 varieties originating in Taiwan, Central African Republic, Madagascar, and Senegal. This collection was continued from 1970 to 1974, because two crops a year were possible, at the stations of Niaouli and Ina in Benin, and 3 stations in Togo. In 1975 IRAT-Togo cooperated with INTSOY in the first soybean trials in Togo. The first seeds were planted at Davié in southern Togo on May 2, at Amoutchou in central Togo on May 7, and in Kitangbao in northern Togo on July 8. Togo. Table 12 shows the average yields from 1970 to 1974 from the varieties Columbia, Mandarin, Clark 63, and E 73. These yields were low due to the absence of any use of fertilizers or inoculants, and the poor germination of the seeds. [Note: From Whigham and Judy (1975) and Dumont (1981) we have learned the exact dates that soybeans were planted in Benin and Togo]. Comoro Islands: 63 soybean varieties from the Madagascar collection were introduced in 1971 and tested on Grand Comoro (*Comore*) and at Anjouan (800 meters altitude). At Anjouan the best variety was Biloxi, which had an average yield of 2,000 kg/ha. On Grand Comoro the yields were lower, about 1,500 kg/ha. Having little future, soybean research was stopped in 1976. Note: This document contains the earliest date seen for soybeans in the Comoro Islands, or the cultivation of soybeans in the Comoro Islands (1971) (one of two documents). The source of these soybeans was Madagascar.

Niger: In 1974 IRAT introduced from Senegal 17 varieties of various origins; the results were mediocre (in part from absence of inoculation): ICA Toroa 662 kg/ha, ICA Lili 312 kg/ha, Improved Pelican 335 kg/ha, Mandarin 300 kg/ha. Two INTSOY trials took place in 1975 at Maradi and Gaya. This time the yields were very encouraging; at Maradi the variety Forrest yielded 3,500 kg/ha.

Note: This document contains the earliest date seen for soybeans in Niger, or the cultivation of soybeans in Niger (1974). The first 17 varieties introduced originated in various countries.

Burkina Faso: The soybean was introduced to this remote country in 1960. At that time IRHO (*Institut de Recherches pour les Huiles et Oléagineux*) was in charge of experiments on this plant. In 1975 IRAT participated in an INTSOY trial at Farako-Ba; Jupiter gave the best yield, 2,405 kg/ha.

Réunion: Four varieties from the USA were tested in 1974, at the station of Mon Caprice, during two seasons. The best yield during the cool season was from Chippewa (1,780 kg/ha), and during the warm season it was from Amsoy (2,070 kg/ha).

Martinique: IRAT-Martinique participated in the 1975 INTSOY trials. Only one variety, Improved Pelican, with a yield of 2,150 kg/ha [sic, 2,154 kg/ha, planted 10 April 1975] seemed interesting, but since soybean cultivation was believed to have no future in the agriculture of the island, the experimentation was abandoned.

French Guiana: The first soybean trials began in 1975 with the introduction of 4 varieties: Jupiter, Acadian, and Improved Pelican from the USA, and Vada, which originated in Java [Indonesia]. From 1976 to 1983 IRAT-Guyane participated in INTSOY trials. In 1976 Jupiter gave the top yield of 3,440 kg/ha.

French Polynesia: From 1976 to 1979 the INTSOY trials continued during the two rainy seasons. The variety Davis gave the best overall average yields (4,260 kg/ha over 5 seasons), with a top yield of 5,286 kg/ha in 1976-77. Address: France.

5579. Leneman, Leah. 1988. Soya foods cookery. London and New York: Routledge & Kegan Paul. ix + 145 p. Illust. Index. 20 cm.

• ***Summary:*** Contents: Introduction. Recipes–1. Soya milk: Soya milk, soya yogurt, soft cheese [made from soya yogurt], and mayonnaise, soya milk skin (yuba). 2. Tofu: Tofu, frozen and dried-frozen tofu, smoked tofu. 3. Tempeh. 4. Miso. 5. Combi-dishes: Tofu and miso, tempeh and tofu.

An introduction to the subject, with more than 100 recipes. Almost half the book is devoted to tofu and tofu recipes. The author, born in the USA, has lived in Britain for more than 20 years. She was once assistant editor of *The Vegetarian,* and also worked at Cranks Restaurant (on Marshall St. in London W1). Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

tropical and sub-tropical foods. London and Basingstoke (Hampshire, UK): Macmillan Publishers Ltd. [304] p. *

5581. Montero R., Rafael A.; Mata M., Eduardo J. 1988. La soya: Guia para sul cultivo y consumo en Costa Rica [The soybean: A guide for its cultivation and consumption in Costa Rica]. San Jose, Costa Rica: Editorial de la Universidad de Costa Rica. 112 p. Illust. 21 cm. [11 ref. Spa]
• ***Summary:*** Contains 23 tables and 8 figures plus some color photos. Contents: Introduction. The plant. Climate. Photoperiod. The variety. The soil. Preparation of the land. Times of planting. Inoculation. Fertilization and nutrition. The analysis of the soil. Visual symptoms of mineral deficiencies. Density of planting seeds. Considerations concerning planting more or less seeds. Diseases. Soybean diseases common in Costa Rica. Weed control. Calibration of sprinklers. Control of insects. Management of the harvest. Mechanical harvesting of soybeans. Aspects which must be considered for a good harvest of the crop. Economic considerations. Feeding and nutrition based on soy: The soybean compared with other protein sources, percentage of protein in various protein sources, diagram showing the many products derived from soya. Preparation of meals with soya: preparation of basic soyfoods at home (preparation of whole soybeans, preparation of soymilk, preparation of soy flour, vegetable stew with soybeans, salad, Oriental minced meat, rice with soybeans, spaghetti in white sauce with soybeans, soybeans in escabeche, cream of soybeans and greens, oil roasted soynuts, soy pudding, homemade tofu, mixed bread with soya flour, quick bread with soy flour). Table of conversion: Measures, weights & equivalents.

Tables show: (1) Description of the vegetative and reproductive states of the soybean plant (Source: Fehr & Caviness 1977). (2) Origin and characteristics of the varieties Jupiter, SIATSA 194-A, and IAC-8. (3) Dates recommended for the harvest of soybeans in Costa Rica. (4) Extraction of nutrients from each 1000 kg of yield of soybean seeds. (5) General reference values for interpreting the analytical results of the laboratory of soils of the Ministry of Agriculture and Livestock, Costa Rica.

(6) Critical foliar levels of nutrients at the end of flowering (*Niveles críticos foliares de nutrimentos*). (7) Summary of generalizations about the essential nutrients for the soybean. (8) Summary of the principal soybean diseases in Costa Rica. (9) Recommended herbicides in the cultivation of the soybean and the different doses for different soil textures in pre-emergent herbicide application. (10) Primary weeds that infect soybean fields and effective herbicides for weed control. (11) Mix of pre-emergent herbicides (*herbicidas preemergentes*) for the control of weeds in soybean cultivation. (12) Recommended nozzle-type for weed control. (13) Levels of economic damage of the soybean from various soybean enemies in Costa Rica. (14) Chemicals used for the control of insects in the cultivation of the soybean.

(15) Marketing volume, consumption and grain reserve for soybean cake / meal (*torta*) and soybean oil in the United States and the world in the years 1984-1986. (16) Cultivated area, average yield and price of the soybean in Costa Rica during the period 1979-1987. (17) Monthly price of grain (grano), oil and meal (*torta*) protein in dollars FOB Chicago, United States, from 1987 and the months January to May of 1988. (18) Price of a metric ton of yellow soybeans (*soya amarilla*) in Caldera, Costa Rica. (19) Projection of the apparent demand of cakes (*tortas*) and oleaginous flours (*harinas oleaginosas*) 1984-1989.

(20) Budget for the production of soybeans in Costa Rica, harvest of 1988. (21) Total cost of soybean production, harvest of 1988. (22) Chemical composition of soybean milk, breast milk, and cow milk. (23) Essential amino acid content in soybean milk and cow's milk.

Figures show: (1) Description of the principal parts of the soybean plant. (2) Needs of the soybean (variety Jupiter) for the various stages of growth. (3) Parts of different types of nozzles for the application of agrochemicals. (4) Various degrees of defoliation of the soybean estimated as percentages of foliar tissue loss. (5) Method for measuring the level of insects infesting soybeans. (6) Principal insects in the cultivation of soybeans. (7) Location of sampled areas concerning loss in the mechanical harvesting of soybeans. (8) Utilization of soybeans (derived from soy flour, soybean cake or meal, isolated soy protein, soy sprouts, whole dry soybeans, tofu, infant formulas, soy sauce, refined soy oil, lecithin). Address: Costa Rica.

5582. Narayan, Ranjana; Chauhan, G.S.; Verma, N.S. 1988. Changes in the quality of soybean during storage. II. Effect of soybean storage on the sensory qualities of the products made therefrom. *Food Chemistry* 30(3):181-90. [7 ref]
• ***Summary:*** Three soy products–soymilk, tofu (soy paneer), and soynuts–were prepared from soybeans that had been stored for different lengths of time, and were evaluated for their sensory properties and some chemical qualities. "Total solids and protein in soymilk, as well as in tofu, decreased with the storage time, whereas colour, crispness and taste of soynuts were lost with increase in storage time of beans. Overall organoleptic score of all the products was found to decrease with increase in storage time of beans." Address: Dep. of Food Science & Technology, G.B. Pant Univ. of Agriculture and Technology, Pantnagar–263 145, India.

5583. Pacific Foods of Oregon, Inc. 1988. Pacific Foods: This unique soy processing plant combines advanced technology with food processing expertise to produce improved soy products at significant savings over traditional methods (Leaflet). 19480 S.W. 97th Ave., Tualatin, OR 97062. 2 p. Front and back. 28 cm.
• ***Summary:*** Printed black and blue on white. Dated 1988.

A photo on the cover shows the outside of the plant. On the inside 2 panels, 10 photos show various views inside and outside the plant. A flow chart shows the soy processing sequence.

On the rear panel is a map showing the location of the plant. And a diagram showing eight typical uses of Pacific Foods' Soy Products. Address: Tualatin, Oregon.

5584. Pacific Foods of Oregon. 1988. Pacific Foods (Brochure). Tualatin, Oregon. 4 p. 28 cm.
• ***Summary:*** This glossy, black, white, and blue brochure, introduces Pacific Foods' new soy processing plant in Tualatin, Oregon. On the front cover is a photo of the plant in what looks like an industrial park. The caption: "This unique soy processing plant combines advanced technology with food processing expertise to produce improved soy products at significant savings over traditional methods."

On the inside left page are six black-and-white photos of various sizes: (1) "State of the art computer-controlled processing equipment." (2) "Revolutionary multi-stage soy bean grinding machine." (3) "Special deodorizer removes undesirable flavors and odors from soymilk." (4) "Sophisticated computerized system controls operations." (5) "Soy bean storage silo." (6) "Our modern laboratory is staffed by trained technicians."

On the inside right page is a flow chart of the soymilk process and four more photos: (1) "This high-volume machine separates okara from soymilk." (2) "Sanitation equipment automatically cleans ducts and processing systems." (3) "Pacific Foods' soy processing plant is operated by experienced professionals." (4) "Bean cleaning and sorting equipment."

Text across the top of the two pages: Introducing Pacific Foods. Unique processes improve product characteristics. Plant features.

The rear cover shows (1) A chart of ten uses of Pacific Foods' soy products. (2) An area map showing how to get to the company. (3) The company phone and fax number.

Attached to the brochure is a business card of John R. Olson, Marketing Division. Address: 19480 S.W. 97th Ave., Tualatin, Oregon 97062.

5585. Perry, Rick. 1988. Hurricane kitchen: how to cook healthy foods for large groups and institutions, Augusta, Maine: Lance Tapley. 172 p. Illust. (by Douglas Alvord). 29 cm. [10 ref]
• ***Summary:*** "Dedication: to those cooks who have realized the need to change the American diet." This is largely a vegetarian cookbook–but not completely (see p. 117).

From April to October Rick is found on Hurricane Island, off the coast of Rockland, Maine, where he has been the food service director for the Hurricane Island Outward Bound School since 1975.

Chapter 3, "Real foods" (p. 32-45) includes whole grains (incl. whole wheat, brown rice, corn, millet, quinoa). The section on "The amazing soybean" begins: "The versatile soybean is truly the food of the future." It discusses miso, tamari, tempeh, and tofu. The section on "Oil" mentions soy oil. The section on "seaweeds" begins: "I prefer to call them sea vegetables..."

Chapter 5, "Ordering staples and setting up a grain room" has a large table for various foods showing the quantity in pounds and barrel size in gallons. Foods include: Aduki beans (azuki). Brown rice, shortgrain. Brown rice, sweet. Sesame seeds. Soybeans.

Soy related recipes: Tofu dill bread (p. 83). Basic miso soup. Miso soup for 30 (p. 106). Cooking legumes (cook 4 parts water with 1 part whole soybeans for 9 hours, p. 111). Pressure cooked beans (cook 3 parts water with 1 part whole soybeans for 2 hours, after coming to pressure, at 15 psi, p. 112). Seitan (p. 113, 122). Seaweeds (p. 115). How to make tofu (and okara) in an institutional kitchen–makes 8 lbs (p. 125). Tofu–Baked, sautéed, or fried (p. 124). Soysage burgers (p. 124). Tofu salad or mock egg salad. Tempeh–Baked or sautéed (p. 125). Tofu salad dressing (p. 138). Soy mayonnaise (with 2 cups soy milk, p. 140). Soy milk (homemade, from 10 cups soybeans, p. 153). Hot carob drink (with milk or soy milk, p. 153). Soy frosting for desserts (p. 155). Address: Portland and Rockland, Maine.

5586. Philippine Council for Agriculture, Forestry and Natural Resources Research and Development. 1988. Mga Gamit ng UTAW Bilang Pagkain [The uses of soybeans as food]. Diliman, Quezon City, Philippines. 46 p. Illust. DA/ATI-PCARRD Farm Primer No. 3. Series of 1988. AC-R4-P-S-V-2-88. [3 ref. Tag]
• ***Summary:*** Part 1 (p. 1-20) of this Tagalog-language booklet, which contains many illustrations (line drawings), is titled "Soybean Products." It describes how to make basic soyfoods, such as soybean ketchup (*Ketsup na utaw*), soy coffee (*Kapeng utaw*), pastillas, soymilk curds (taho), tokwa (tofu), polboron (a confection usually made with powdered milk, but in this case using soybean powder), soymilk, soy flour (harinang utaw; note that utaw is word for soybean in Tagalog), tao-si (fermented black soybeans), soy sauce (toyo), and miso.

Part 2 (p. 25-45) titled "Soybean Recipes," includes chicken with miso, tofu with miso, tofu with mushroom soup, soymilk custard, fried meat (pork; Baboy), fried meat with miso, bamboo shoots with miso, baguio beans with miso, fried tofu with sweet & sour soy sauce, miso with noodle soup, chicken soup with tofu, and fried tofu with vegetable sauce. Address: Philippines.

5587. **Product Name:** Rich's Farm Rich (Non-Dairy Creamer) [Original, Lite, Fat Free].
Manufacturer's Name: Rich Products Corporation.
Manufacturer's Address: Buffalo, New York. Phone:

1-800-356-7094.
Date of Introduction: 1988. January.
Ingredients: Original: Water, corn syrup, partially hydrogenated soybean oil, contains 2% or less of the following: soy protein isolate, dipotassium phosphate, emulsifiers (mono and diglycerides, sodium stearoyl lactylate, polysorbate 60), salt, sodium acid pyrophosphate, artificial flavor, beta carotene (for color).
Wt/Vol., Packaging, Price: Quart Pure Pak (gable top) carton. Retails for $1.39 (Fat Free) or $1.45 (Original) (10/95, Michigan).
How Stored: Refrigerated.
Nutrition: Per 1 tablespoon (15 ml): Calories 20, calories from fat 15, total fat 1.5 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 5 mg (0%), total carbohydrate 1 gm, protein 0 gm. Not a significant source of dietary fiber, sugars, vitamin A, vitamin C, calcium and iron. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Irene Stuttman of Sycamore Creek. 1995. Oct. 23. She buys this product in the dairy case next to milk. It is packaged in Pure Pak quarts, just like cow's milk. It is her and Len's favorite soymilk. It is promoted as a non-dairy product, not as soymilk. Gable-top quart carton with Label sent by Irene Stuttman of Michigan. Blue, green, and white on tan. Illustration of a barn and silo behind a green hill in front of hilly cultivated fields, with stylized rays of a rising sun. "Rich creamy flavor. Cholesterol free. Lactose free. See side panel for nutrition information." Recipe on the side for Blueberry Cake.

Talk with the toll-free customer service line at Rich Products Corp. 1995. Nov. 1. This product was launched in 1988. It is sold in original, lite, and fat free flavors. It is distributed throughout the East Coast but only as far west as Chicago, Illinois. It can be used as a coffee creamer or as an alternative milk; an 8 oz glass (1 cup) of Fat-free Farm Rich contains less than 4 gm of fat in the form of partially hydrogenated soybean oil. Note: Though technically legal, we feel it is deceptive to say that this product can be used as an alternative to milk, then claim it is fat free. By comparison with cow's milk: Low-fat milk contains (per 1 cup): total fat 2.5 gm (incl. saturated fat 1.5 gm), calories 130, and calories from fat 20. And 2% fat + fortified milk contains (per cup) total fat 5 gm (incl. saturated fat 3 gm), calories 140, and calories from fat 45. Thus Farm Rich contains about 60% more fat than low-fat milk, but only about 80% as much as 2% fat milk. Whole milk (about 3.5% fat) is no longer sold at Safeway supermarket in Lafayette.

5588. Wood, Rebecca T. 1988. The whole foods encyclopedia: A shopper's guide. New York, NY: Prentice Hall Press (Simon & Schuster). xv + 218 p. Foreword by Michio Kushi. Illust. 28 cm. [200* ref]
• ***Summary:*** This book is mistitled. It should be titled "Rebecca Wood's Macrobiotic Views on Natural Foods." The parts on quinoa, teff, amaranth, and many "macrobiotic foods" provide good information. There is extensive information on soyfoods, all from a macrobiotic viewpoint, but with many errors or undocumented controversial assertions never seen before in the literature, such as the following: "Cold Tofu. Foods that are cooling, like tofu, tend to reduce the fire in the lower organs. This explains why tofu was eaten by Buddhist monks to abate their sexual desires. This is not a prescription against tofu. Well-cooked tofu is less cooling. For optimum health, we need a balance of warming as well as cooling foods. However, if you are feeling cold, or if it is a cold day, or if you have strenuous activities planned, then you may opt for salmon over tofu."

Foods discussed are: Cheese (imitation soy), ice cream and frozen desserts (soy or tofu ice cream), miso, natto, nigari, soybeans (black, yellow, and "just harvested green soy"), soy flour, soy protein isolate, soy milk, soy nut ("Those oversalted, beggarly little crunches found in everything from trail mix to salads are soynuts,..."), soy oil, soy sauce ("Also known as *Shoyu* and *Tamari*), and soy yogurt, tempeh, tofu, and TVP (texturized vegetable protein {textured soy flour}).

Note: This is the earliest English-language document seen (Feb. 2005) that contains the term "cooling food." Address: P.O. Box 30, Crestone, Colorado 81131. Phone: 303 (or 719) -256-4939.

5589. Wynstra, Robert J. 1988. INTSOY agenda: Expanding the use of soybeans. International Soybean Program, University of Illinois at Urbana-Champaign, 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, IL 61801. 20 p.
• ***Summary:*** Contents: Fulfilling the soybean's promise. The unique versatility of soybeans. Spreading the benefits. Meeting the challenge. Dry extrusion cooking. Catalyst for developing countries. Combination extrusion cooking and oil expelling. Soymilk and dairy analogs. Immature green soybeans. Home soyfood preparation. Address: Urbana-Champaign, Illinois. Phone: 217-333-6422.

5590. **Product Name:** [Thick soymilk].
Foreign Name: Nong Dou Jiang.
Manufacturer's Name: Beijing Shi Lian He Dou Jiang Chang (Beijing United Soymilk Factory) and Beijing Shi Shi Pin Yan Jiu Suo (Beijing Food Research Institute).
Manufacturer's Address: Chao Yang Qu, Outside 10 Li? Phone: 500.5396.
Date of Introduction: 1988?
Wt/Vol., Packaging, Price: 250 gm plastic bag.
New Product–Documentation: Product with Label purchased in Beijing, China, in 1988 by Irene Yen. Blue letters on polyethylene bag.

5591. **Product Name:** Ener-G Pure SoyQuick. A Soy Based Imitation Milk Mix.

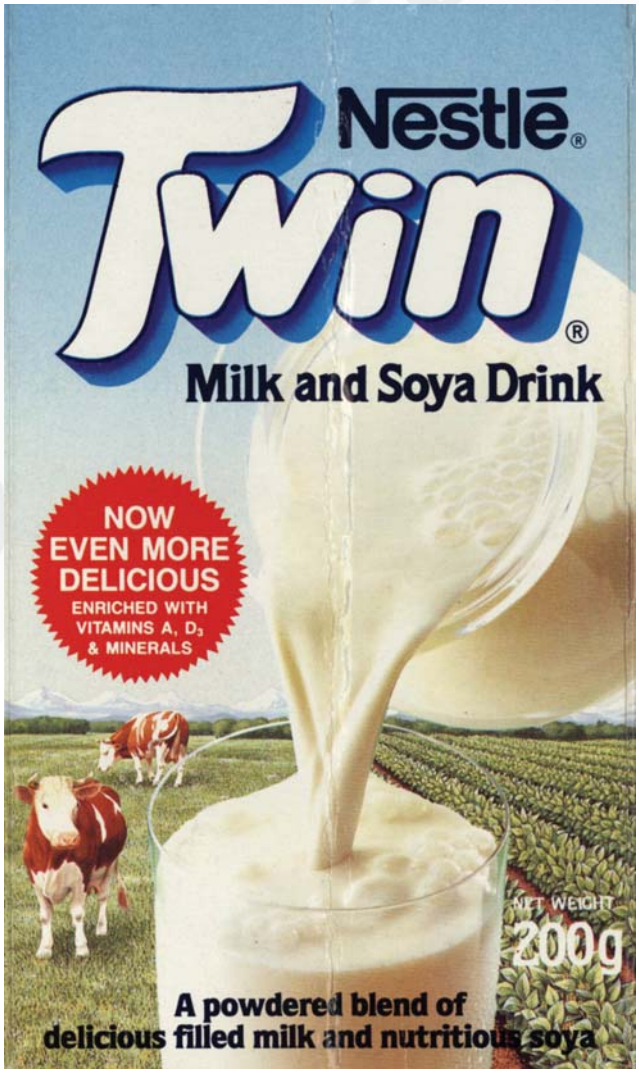
Manufacturer's Name: Ener-G Foods Inc.
Manufacturer's Address: 6901 Fox Avenue South, P.O. Box 84487, Seattle, WA 98124-5787.
Date of Introduction: 1988?
Ingredients: Toasted soy flour (soy flour, soy lecithin, soy oil), guar gum (an emulsifier).
Wt/Vol., Packaging, Price: 14 oz (397 gm) box. Retails for $5.31 (8/88, Calif.).
How Stored: Shelf stable.
Nutrition: Per 2 tablespoons (½ oz): Calories 60, Protein 6 gm, carbohydrates 4 gm, fat 2 gm, sodium 0 mg, potassium 300 mg.
New Product–Documentation: Product with Label (box) purchased in Berkeley, California. 1988. Aug. 30. 5.25 by 8.25 by 1.75 inches. Blue, black, orange, yellow, green, tan, and white. "No preservatives, artificial flavoring, or color added. Contains no cow's milk. Is suitable for dairy milk allergies. Makes 7 quarts. Contains recipes for SoyQuick Beverage (add ½ cup soy quick to 1 cup water. Stir, refrigerate, and serve. No cooking required), Puddings, Biscuits, Salmon Loaf, and Quick Bread." Note: This company also makes Ener-G Egg Replacer and Low Electrolyte Baking Powder.

5592. **Product Name:** [Soymilk].
Manufacturer's Name: Fuoshan Foodstuff Factory.
Manufacturer's Address: China.
Date of Introduction: 1988?
New Product–Documentation: Letter from ASA, China. 1990. Sept. 13. Wuhan Guan Sheng Yuan Foodstuff Factory has the second largest soymilk production capacity in China, 12,000 liters/hour.

5593. Hughes, L. 1988? Soybean food products for West Africa. Ibadan, Nigeria: International Institute of Tropical Agriculture. v + 10 p. Undated. *
• ***Summary:*** The preparation of the following soyfoods, using techniques suited for rural and urban West African households, is described: soy flour, soybean paste, soymilk, soybean meat, scrambled soybean meat, soy ogi, soybean snacks, soybean candies, soy moin moin, soy gbegiri soup, soybean vegetable soup, basic cake mix, soybean bread, soybean biscuits, and fermented soybean iru (dawadawa).

5594. **Product Name:** [Soy Drink, Soya Granules].
Manufacturer's Name: Natur Produkte.
Manufacturer's Address: A-6300 Itter 300, Tirol, Austria.
Date of Introduction: 1988?
New Product–Documentation: Talk with Jack Goethel of Natural Products in Salt Lake City, Utah. 1989. May 5. These products have been out for about 1-5 years. The man in charge is Erwin or Engelbert Perlinger.

5595. **Product Name:** Nestlé Twin (Powdered Milk and Soya Drink).
Manufacturer's Name: Nestlé Philippines Inc.
Manufacturer's Address: Cabuyao, Laguna.
Date of Introduction: 1988?
Ingredients: Milk solids non-fat, soya solids, butter fat, vegetable fat, maltodextrine, sugar, calcium carbonate, salt, zinc sulfate, potassium iodide, vitamins, flavor.
Wt/Vol., Packaging, Price: 350 gm can.
How Stored: Shelf stable.
Nutrition: Per 100 gm powder/per serving of powder: Energy 499/162.2 kcal, protein 25.6/8.3 gm (24% of RDA for children), Carbohydrates 37.9/12.3 gm, total fat 28.0/9.1 gm, Ash (minerals) 5.5/1.8 gm, water 3.0/1.0 gm).



New Product–Documentation: Talk with Rachel Cabato. 1989. May 28. Nestlé has a plant in Luzon for making powdered soybean milk. This is mixed with cow's milk to make at least 3 products, which are sold in cans, both in the Philippines and overseas. Label sent by Rachel Cabato. 1989. Nov. 12 by 4 inches. Goes around a can. Full color illustration of a large pitcher of this soy-dairy blend being

poured into a glass in the foreground. In the background are cows grazing in a grassy field on the left and rows of soybeans on the right. Snow-capped mountains are in the background. Front panel text: "A powdered blend of delicious filled milk and nutritious soya. Now even more delicious. Enriched with vitamins A, D-3 & minerals." Side panel: "Easy to prepare! Add 3 heaped tablespoons of Nestlé Twin to a glass of warm water and stir well." A table shows the amounts of each major vitamin and mineral: For adults ages 20-49. Calcium 56% of the RDA, vitamin D 42%, iodine 28%, vitamin B-2 (riboflavin) 24%, phosphorus 24%. Second label sent by Rachel Cabato. 1990. Jan. 11. 200 gm box with same content and graphics as can label.

5596. **Product Name:** Plamil Soya Milk (Sugar Free and Ready to Use in 1 Liter Tetra Brik Carton).
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1988?
Ingredients: Incl. soy protein isolate.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet. 1990. Plamil. Pioneers of British Soya Milk 1965-1990. Silver anniversary. Shows color illustration of the package. Blue, green, red, and yellow on white. "Provides calcium and vitamins B-2, B-12, and D-2."

5597. **Product Name:** Plamil Soya Milk (Concentrated in 500 ml Liter Tetra Brik Cartons) [Sweetened (Green Label), or Sugar Free (Blue Label)].
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1988?
Ingredients: Incl. soy protein isolate.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet. 1990. Plamil. Pioneers of British Soya Milk 1965-1990. Silver anniversary. Shows color illustration of the package. Blue, green, red, and yellow on white. "Provides calcium and vitamins B-2, B-12, and D-2."

5598. Tofu Shop Deli and Specialty Foods Co. (The). 1988? Its like having a natural foods deli right in your own store (Leaflet). Arcata, California. 1 p. Front and back. 28 cm. Undated.
• ***Summary:*** This marketing flyer, printed with greenish-blue ink on off-white, was created primarily for customers of "Wholefood Express," a natural foods distributor owned by North Coast Co-op (Arcata and Eureka; since 1973), servicing northern California and Oregon.

Side 1: An illustration of the Tofu Shop Specialty Grocery and Deli at top of sheet. Contents: Fresh, refrigerated deli salads, delicious desserts, cold cuts, and handcrafted tofu and soymilk. All cholesterol and lactose free and made with ingredients you can trust. Deli news. Ordering tips. Selling guide: Refrigerate, reduce (price of items whose sell-by date is about to expire), rotate, display ("Use our shelf talkers to create a colorful deli corner in your own cooler...").

Side 2: "Product ingredients." A list of all products with the ingredients in each. "Makers of freshly-prepared natural foods since 1977." Address: 768 18th St., Arcata, California 95521. Phone: (707) 822 7409.

5599. Tofu Shop Specialty Foods Co. (The). 1988? Traditional tofu by the sea (Leaflet). Arcata, California. 1 p. Single sided. 19 x 12 cm. Undated.
• ***Summary:*** This marketing flyer is printed with black ink on white paper. A photo shows two people making tofu by the sea, one cooking in an iron cauldron, the other pouring nigari into a wooden barrel.

The text below the photo: "Traditional tofu by the sea. Distributed exclusively on the North Coast [of California]. The following is written in one of four equal-sized rectangular boxes (2 rows of two each): (1) Handmade tofu & soymilk. Traditional method–sweet, delicate taste. Tofu: Firm nigari, 14 oz tub or 20 lb bucket. Joy of Soy soymilk. Original, unflavored, pint, quart, ½ gallon. (2) Baked tofu cold-cuts: Ready to eat or reheat. Veggie patty tray. Marinated cutlet tray. Tofu sausage tray. (3) Delicious tofu desserts: Pumpkin pie with whole wheat crust. Cocoa carob mousse. Maple almond charlotte. (4) Light tofu salads: Old fashioned potato salad, eggless salad, tahini.

Since 1980. Address: 768 18th St., Arcata, California 95521. Phone: (707) 822 7409.

5600. Voggenreiter, Brigitte; Kuby, Clemens. 1988? Tofu: Essen mit Zukunft [Tofu: Eating with the future]. Reiner Schmid, Leostrasse 14, D-8000 Munich 70, West Germany. Or: B. Voggenreiter, Breisacherstr. 12, Munich, West Germany. 35 p. Undated. Illust. No index. 21 cm. [6 ref. Ger]
• ***Summary:*** Contents: The protein content is the measure for nutrition. Can soybeans also be grown in West Germany? The alternative: Tofu (describes briefly how it is made). What are tofu's benefits? Comparing tofu with meat. Summary, bibliography, and sources of information (Sojaquelle). 15 Tofu Recipes (each accompanied by a half-page color photo). How to make tofu at home. How to use okara and soymilk. Address: Munich, West Germany. Phone: 089 / 448 30 98.

5601. **Product Name:** Dairyless Rice Pudding (With

Soymilk).
Manufacturer's Name: Wildwood Natural Foods.
Manufacturer's Address: 31 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.
Date of Introduction: 1988?
New Product–Documentation: On sale in Berkeley. 1988. Aug. 30.

5602. Dupuy. Pierre. 1989. Un phénomène récent: l'emploi du soja comme matière première des industries de l'alimentation humaine [Soya bean: A new product for the food industry in Europe]. *Comptes Rendus de l'Academie d'Agriculture de France* 75(4):51-58. [7 ref. Fre]
• ***Summary:*** In the EEC (mostly in Italy and France), production of soybeans has reached 1,300,000 metric tons. In addition to the traditional uses as vegetable oil and animal feed, there is a new interest in using soybeans to make human foods, such as soymilk and tofu. Even the dairy industry has started to process soybeans to make dairy alternatives.

Note: Hervé Berbille of France observes the following: "If you read between the lines, this document shows how the French government is trying to stop soyfoods from catching on at a very early date (in the 1980s, while these foods were still not widely known and still in their infancy) by trying to change their regulatory framework in E.U.

"So, for me, I believe this document is very important because it indicates clearly the almost official hostility of the French governmental authorities against soyfoods."

5603. Theses on soybeans and soyfoods: Dissertation Abstracts (Database search report). 1989. 234 p. Jan. 20. 28 cm. Unpublished manuscript. [1106 ref]
• ***Summary:*** The Dissertation Abstracts database contains virtually every American PhD dissertation accepted at an accredited institution since 1861. A search yielded 1,106 theses on soybeans and soyfoods not including records with the terms pathogen*, Disease*, weeds, or insect* in the title or abstract. * = truncated term.

It contained the following number of theses on soyfoods: Soymilk 9-14, tofu 6, tempeh 6, miso 4, soy sauce 3, and natto 2.

The most valuable records for us are in the subject categories Food Science & Technology; Health Sciences, Nutrition; and Economics, Agricultural. Other subject categories include: Agriculture (Agronomy, Animal Culture & Nutrition, General, Plant Culture, Plant Physiology); Biochemistry; Botany; Chemistry (Agricultural and Biological, Analytical); Engineering, Chemical; Entomology.

A count of the records in which we were interested by state where the thesis was written shows the following: Illinois 128, Iowa 68, Indiana 37, New York 30, Missouri 28, Michigan 26, Minnesota 25, and Ohio 17.

5604. Gupta, Rajendra ("Raj") P. 1989. Noble House's Great Shake soymilk is no longer on the market in India (Interview). *SoyaScan Notes.* Jan. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This soymilk product was made in a famous joint venture involving Alfa-Laval and Kibun. Now Noble House only packs juices. Raj tasted the soymilk product and thought the flavor was poor. He likes the soymilk made by Kibun in Japan and thinks the bad flavor may have been caused by bad soybeans in India. The new soymilk company using STS soymilk equipment is expected to launch their product later this year. Address: ProSoya, 627 Gaines Dr., Ottawa, ONT, K1J 7W7, Canada. Phone: 613-744-4401.

5605. Labib, M.; Gama, R.; Wright, J.; Marks, V.; Robins, D. 1989. Dietary maladvice as a cause of hypothyroidism and short stature. *British Medical Journal* 298(6668):232-33. Jan. 28. [5 ref]
• ***Summary:*** A four year old boy was investigated for short stature. When he was 2 years old, his mother sought advice because of his poor appetite and constipation. A dietitian advised his mother to withdraw cow's milk and give him soya milk. During the next 6 months he developed diarrhea. Address: 1. MRCPATH, senior registrar; 2. MRCP, registrar; 3. MRCPATH, Consultant; 4. FRCPATH, Prof.; 5. FRCP, consultant paediatrician. All: Departments of Clinical Biochemistry and Clinical Nutrition and Paediatrics, St. Luke's Hospital, Guildford, Surrey GU1 3NT.

5606. Alpro N.V. 1989. La force du soja n'est pas une légende [The power of soya is not a legend (Brochure)]. Zuidkaai 33, B-8700 Izegem, Belgium. 12 p. 30 cm. [Fre]
• ***Summary:*** On the front cover, against a background of aged brown silk, is an illustration (line drawing) of a hand. On the hand are 15 real, colored soybeans. Contents (each a 2-page spread with a large color photo across the top 40%): The power of soya does not date from yesterday (Photo of the great wall of China and a brief history of soy in ancient China). The soybean is all the power of nature in a simple bean (haricot) (Photo of soybeans sprouting from the earth, table comparing the nutritional composition of soya with meat, milk, and eggs). The power of soya is recognized worldwide (Illustration of map of the world on parchment with major soybean growing areas highlighted in green. Large illustration of a soybean plant). The power of soya makes it a perfect food (Photo of a single soybean held between the tips of two decorated black chopsticks against a black background. Text discusses nutritional benefits). Alpro, one can make a whole meal out of it (Photos of 5 Alpro Soya Drinks, Alpro Soya Minarine [low-calorie margarine], and 5 Alpro Soya Desserts [two in Tetra Briks, 3 in aseptic cups, introduced in about early 1989]. Eight recipes are given in a sidebar). The rear cover is plain brown silk cloth.

This strikingly attractive, creative brochure was

designed by M. Gheysens of Alpro.

Talk with Philippe Vandemoortele. 1990. June 4. Followed by a letter of 1991 Sept. 4. In March 1987 the company began using the subtitle "Alpro Natural Soyfoods" instead of its earlier "Alpro Protein Products." The former name made Alpro sound like a soy protein isolate company. In July 1986 Alpro began using the slogan in French "La Force Végétale du Soja," then in March 1989 they shortened this to "La Force du Soja." Address: Izegem, Belgium.

5607. **Product Name:** [Alpro Soya Dessert {in Aseptic Cups} (Caramel, Chocolate, or Vanilla)].
Foreign Name: Alpro Soya Dessert (Caramel, Choco, Vanille).
Manufacturer's Name: Alpro N.V.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1989. January.
Wt/Vol., Packaging, Price: Aseptic cup.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Alpro. 1989. Jan. "La Force du Soja n'est pas une Légende." p. 11. A color photo shows cups of the three flavors.

5608. Business Communications Co., Inc. 1989. Engineered foods: New directions, trends. 25 Van Zant St., Norwalk, CT 06855-1781. Jan. 2 figures. 66 tables. $2,250.00.
• ***Summary:*** Currently sales of engineered foods covered in this market analysis are expected to total almost $6.5 billion in 1988. This market is expected to grow at 9.6% a year. Product segments include surimi (capacity in the U.S. reached an estimated 77 million lb in 1988) and surimi-based seafoods, soy protein products, engineered dairy products and substitutes, infant formulas and nutritional beverages, engineered fats, high-intensity sweeteners, and fabricated/restructured meat and poultry products.

The chapter titled Soy Protein Products includes: Summary and market outlook for engineered soy protein ingredients. The soy protein market: Market outlook for soy protein ingredients. Suppliers of soy protein ingredients. Consumer attitudes toward foods containing soy protein. The retail market for meat analogs, meat extenders, nondairy frozen desserts, and other foods containing soy ingredients. Patent review. Address: Norwalk, Connecticut. Phone: 203-853-4266.

5609. Dornblaser, Lynn. 1989. Out of the dairy case, onto the shelf: Aseptic processing may not appeal to the masses, but it can be marketed to the niches. *Dairy Foods* 90(1):47-48, 50, 52. Jan.
• ***Summary:*** Dairy foods and refrigeration go hand in hand in the minds of most Americans. Only 34% of Americans are familiar with shelf-stable milk and only 29% are interested in purchasing it. But shelf-stable soymilk is being well received. Health-food firms such as Great Eastern Sun, Vamo Foods, and Eden Foods are successfully marketing soymilk to a specific, health-conscious audience. "All are promoting the product not only as being healthful and nutritious (and offering an alternative to their dairy counterparts), but also as being convenient to use and store." Address: General Mgr., Gorman Publishing Company's New Product News, Chicago, Illinois.

5610. **Product Name:** Soymilk [Plain, or Sweetened].
Manufacturer's Name: Dynasty Foods (Marketer-Distributor).
Manufacturer's Address: 343 Airport Rd., Oceanside, CA 92054. Phone: 619-722-8727.
Date of Introduction: 1989. January.
New Product–Documentation: Talk with Sam Ong of Dynasty Foods. 1992. Sept. 11. He buys these soymilk products, which he introduced in Jan. 1989, private labeled from Wy Ky Food Products in Los Angeles. Born in the Philippines, he is an American citizen; his father was Chinese and his surname is the Fukien [Fujian] pronunciation of the Chinese Mandarin name Wang. His company's main products are noodles.

5611. **Product Name:** Tofu, Tempeh, and Soymilk.
Manufacturer's Name: Gabriella Benjis Soyfoods.
Manufacturer's Address: Johannesburg, South Africa.
Date of Introduction: 1989. January.
New Product–Documentation: Talk with Paul Cohen, her friend. 1989. Oct. 27. Gabriella has been making these 3 products at home since about Jan. 1989. She also works at a natural food store, where she sells them, and distributes them through the Organic Soil Association. There is a Chinese tofu manufacturer in South Africa, but Paul does not known the company name, address, or year started.

5612. Sojarei Ebner-Prosl. 1989. Preisliste [Price list]. Augasse 2, A-2500 Baden bei Wien, Austria. 10 p. Manufacturer's catalog. [Ger]
• ***Summary:*** The company has two catalog/price lists: one (green) for food processors and one (yellow) for retail stores. Products made by the company have been marked by the author with an "S." In the front of each catalog is an organic certificate. The retail catalog contains 20 fresh products, 3 books, and 30 non-fresh products. Fresh products made by the company include Tofu Natur, Tofu Mariniert, Tofu Geräuchert, Tofu Pastete Siddhartha, Tofu Pastete Toscana, Tofu-Burger, Soja-Getreide-Laibchen, Gruenkern Laibchen, Dinkel Laibchen, Reis-Laibchen, Weizengluten Laibchen, Weizengluten, Badener Bratwuerstchen, Badener Grillwuerstchen, Brotaufstrich "Rusticana", Brotaufstrich "Holzknecht." Fresh products sold but not made by the company include soy tempeh, marinated tempeh, and soy sprouts. The company sells 3 recipe books: (1) Their own

recipe book *Wichtig für Ernährungsbewusste* (Important for understanding of nutrition); (2) *Tofu: Essen mit Zukunft* (Tofu: Eating with the future) by Brigitte Vogenreiter and Clemens Kuby, and (3) *Schlank mit Tofu* (Slim with tofu; 117 recipes) by A.W. Dänzer.

The company also sells many non-fresh products including yellow soybeans (organically grown), soya flakes (*Sojaflocken,* not defatted), whole soy flour, tamari, shoyu, barley miso, Hatcho miso, brown rice miso, soba (buckwheat) miso, nigari, Bonsoy soyadrink (natural and cacao), Pinoccio Soybean coffee, and soynuts.

In the catalog for food processors, for example, the regular tofu, marinated tofu, and smoked tofu are each sold in 1 kg, 30 kg, 60 kg, 100 kg, and 200 kg amounts. Address: Baden (near Vienna), Austria.

5613. Rosenthal, Larry. 1989. Soy milk producer squeezes product into supermarket chain's dairy cases. *Associated Press Financial Wire.* Feb. 2.
• ***Summary:*** Liz Appel of Ambrosia Soy Co. has pulled off a major coup by convincing Waldbaum's Foodmart, a major supermarket chain, to carry her SweetSoy soymilk (in chocolate, vanilla, and plain flavors), next to cow's milk in the dairy section. Appel. age 25, was a senior consultant for a Big Eight accounting firm before opening her soybean product business in 1987. Waldbaum's will begin carrying the product on a trial basis this month in several stores in Connecticut. "Waldbaum's is believed to be the first major supermarket chain on the East Coast to carry fresh soy milk in its dairy section."

This article was also run in the Courant (Hartford, Connecticut) on Feb. 3, with a photo of Ms. Appel.

5614. Boeddeker, Ralph. 1989. Mit Tofu 100 Millionen Mark Umsatz: Das Reinheitsgebot fuer Deutsche Wurst ist gefallen–Naturkost-Hersteller rechnen mit Zuwachs [With tofu, sales of 100 million German marks: The standard of purity for German sausage has fallen–Natural-foods producers count on growth]. *Welt am Sontag* No. 7. p. 33. Feb. 12. Sunday. [Ger]
• ***Summary:*** Describes the very successful soymilk plant sold by Soya Technology Systems (DTD) to DE-VAU-GE in Lueneburg, West Germany. Michael Makowski, healthy looking, in his 50s, and managing director of the company, introduces a meatless banquet and explains that he has been a vegetarian for 30 years. The future for this producer of vegetarian foods looks very bright. Meatless sausages or those extended with soy are seen as becoming increasingly popular. The company is now approaching the 100 million mark sales level and employs 350 men and women. It is in the top 10 of the 70 manufacturers of natural foods in Germany, with a market share of about 10%. Each year it ships about 15,000 tons of natural foods from Lueneburg to the country's roughly 2,700 Reformhaeuser (natural/health food retail stores). The company makes an assortment of 300 vegetarian food products, mostly from cereal grains and soybeans. The latter, grown in the USA, Brazil, and China, offer many possibilities. They can be fashioned into spread for bread, milk, or tofu.

Makowski sees the market for tofu, which resembles Quark, as especially promising. It can be nicely seasoned with spices such as paprika, curry, soy sauce, and/or herbs, and made into meatless sausages. The Reformhaeuser pioneered in introducing non-dairy margarine, whole-grain bread, and Muesli to Europe. Makowski sees the next wave as being tofu boom products. A photo shows the company's 3-level soymilk plant that produces 20 million liters a year in 500 ml and 1 liter containers.

Note added by Anders Lindner, head of STS: Up to now the plant has produced soymilk and desserts. Soon they will also start to produce tofu sausages, yogurt, and pâtés.

Mr. Makowski, eyeing the big potential market for tofu products, is a bit worried that the big food heavyweights such as Unilever, Nestlé, Kraft, etc. might enter this market. When the sale of tofu products begins, DVG's sales are expected to exceed DM 100 million. Address: Lueneburg, West Germany.

5615. Stanton, Russ. 1989. Loma Linda Foods sold to Dutch firm but plans to return to health products. *Press-Enterprise* (*Riverside, California*). Feb. 22. p. F-1, F-3.
• ***Summary:*** "The company employed about 140 workers at its plant across from Loma Linda University's La Sierra Campus in southern Riverside [California], and had annual sales of about $20 million. The acquisition by N.V. Verenigde Bedrijven Nutricia (United Nutrition Cos.) of Amsterdam was completed earlier this month, but not announced until yesterday." A photo shows the Loma Linda Foods building in the La Sierra area of Riverside.

5616. Loma Linda Foods, Inc. 1989. [Loma Linda Foods acquired by Nutricia N.V. of the Netherlands] (News release). 11503 Pierce St., Riverside, CA 92505. 1 p. Feb. 23.
• ***Summary:*** "As of February 9, 1989, Loma Linda Foods, Inc., manufacturer of Soyalac products was acquired by Nutricia N.V. Verenigde Bedrijven. Nutricia is an international company specialized in medical nutrition and Infant Formulae. Presently they are marketing leader in clinical nutrition in Europe and are the second largest manufacturer of Infant Formula in Europe.

"Loma Linda Foods, Inc., expects that the affiliation with Nutricia will benefit the present line of Soyalac products." Address: Riverside, California. Phone: 714-687-7800.

5617. Goldstein, Eddie. 1989. Dairene, Pureblend, and non-dairy products (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Eddie, now age 63, comes from California. In the late 1940s he was making a product in Chicago and St. Louis called Sta-Wip. It was sold to bakeries for blending with whipped cream in cake and pie toppings. He knew Bob Rich and Mel Morris in California when they entered the field.

His company Dairene started making soymilk in 1966 in Miami, Florida. Called Dairene: Imitation Vitamin D Milk, it sold for about 60-70% the price of cow's milk. Pureblend was the stabilizer in Dairene. Pureblend was shipped to plants, which used it to make Dairene. His soymilk has no soy or beany flavor or aroma. It tastes the same as cow's milk. He believed that in the future there would be a tremendous shortage of milk. The U.S. has been importing milk since 1972. At the same time he launched the products Dairene TAC (Top-a-Cake), Dairene Sour Cream (widely used for years by Howard Johnson in their cheesecakes), and Dairene Coffee Cream (sold for $0.32/qt vs. $0.80 for the dairy-based product). In 1968 he added Dairene Cream Cheese, and in 1972 Dairene Ice Cream. They used to "smear" the labels to pass labeling laws. The products were initially sold only to the institutional market, to approximately 8,000 hotels, bakeries, restaurants, coffee shops, cruise ships, etc. They were promoted primarily on the basis of their low price. He was not after the kosher market, and in fact some of his products were not kosher because of the high fees required by rabbis for certification.

Dairene was never bothered as long as its products were only sold to institutions. But when they decided to go after the retail market in the early 1970s? they ran into a host of problems from the dairy industry.

The subtitle "Imitation" was removed from the label in the early 1970s after Dec. 1972 when a Circuit Court judge ruled that Dairene was a food producer, not subject to the state of Florida's dairy regulations. He could also sell his products to retail outlets. This victory came only after 7½ years of legal battles in Florida against the dairy lobby and the dairy division of the state department of agriculture. In 1983, after another favorable court ruling, the non-daily milk name was changed to Dairene Vegetable Vitamin D Milk. Likewise with Dairene Vegetable Ice Cream, Dairene Vegetable Muzarel (or Cheddar) Cheese, sour cream, yogurt, or soft-serve frozen yogurt (95% overrun). As of 1989 the company made 27 non-dairy soy-based products, and was involved with aseptic packaging. A half gallon of his soymilk now retails for $1.39 in Florida, and he gives both the wholesaler and the storekeeper a 20% margin (The "five necessities" in grocery stores, milk, bread, butter/margarine, coffee, sugar are sold for a 12% markup, in part because the high volume.) Ingredients included isolated soy protein, defatted soybean meal, vegetable oil; he blends and compounds to make both dry and liquid products. All of his products are non-dairy. He has spent a small fortune on lawyer's fees over the years. Now his products are the only non-dairy ones, including filled milk, that can be sold in the dairy case in Florida. He can manufacture in any state and ship across state lines. He does not have a company history other than a collection of past articles and other documents. He wanted to feed the masses nationwide. The hardest product to develop was the milk; it can compete head to head with dairy milk. "Our milk is a delicious product." He uses no dairy flavoring and unlike Bob Rich, no coconut fats. Yet Rich Products' products are used in hospital diets. Dairene went public in March 1988 but has not yet sold stock or otherwise raised funds. The parent company is Dairene International. He is CEO. Dairene Inc. is its fully owned subsidiary. Farm Maid Inc. (formerly at 1624 N.W. 82nd Ave., Miami, FL 33126) licenses rights to produce the products under the Dairene name overseas. They are active in Spain, Ecuador, Mexico, Argentina and products are made in some of these places. They don't have a lot of money, so things are moving slowly. Their main work in the USA is senior citizen feeding programs and America aseptic packaging in 8 oz. containers shipped UPS as Dairene: Vegetable Vitamin D Milk (soy is not mentioned). The packaging is made by International Paper, the makers of Pure-Pak cartons; he thinks the cartons and machine are much better that Tetra Pak. The price is about the same. He has shut down his plant 2 years ago in Florida, so all Dairene is now made only in Indiana. His Miami market is basically a half gallon market. His pull date is 30 days from the date of manufacture in a half-gallon Pure-Pak. The product goes rancid before it goes sour. Address: 801 41st St. #210, Miami Beach, Florida 33140. Phone: 305-534-5630.

5618. Archer Daniels Midland Co. 1989. Second quarter report to shareholders. 8 p.

• ***Summary:*** The section titled "ADM expands soy protein operations" (p. 3, 6) notes: "ADM's new soy protein concentrate plant at Decatur East became operational in the December, 1988 Quarter. This facility is producing powdered and granular concentrate products for the food industry and for specialty foods.

"Already the market leader in the production and sale of textured soy protein products, ADM now has a full line of textured soy protein concentrates being marketed under the Company's TVP brand. The addition of these concentrate products makes ADM the only full line soy protein supplier... An expansion of the concentrate plant is already underway and the edible isolated soy protein is also being expanded. A new isolated soy protein plant for industrial products is under construction at Decatur East and is scheduled for completion by the end of 1989.

"The growing demand for soy protein products has been aided by the reduction in dried milk supplies resulting from reduced government support programs for milk in the U.S. and in the European Community." Address: Decatur, Illinois.

5619. Dalodom, A.; Chainuvati, C.; Charnnarongkul, S. 1989. Rapid expansion of soybean production in Thailand. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 650-57. [9 ref]
• ***Summary:*** Soybean is an important field crop in Thailand. Production has increased from about 100,000 tonnes in 1980 to 366,400 tonnes in 1986, the peak year. Yields in the same period rose from 793 to 1,238 kg/ha. There are three seasons for soybean cultivation: early rainy season, late rainy season, and dry season.

Soybeans produced in Thailand are used in food products in two ways: First, the medium scale food industry produces soy milk and soy starch for local food mixtures. The other is family-scale food industry that produces fermented soybean chip for food ingredients, bean sprout, custard, curd [tofu], local soymilk and Tao si, etc. The main industries for soybean grain are oil and meal. Soybean oil annually produces about 40,000–45,000 tonnes. It can be categorized into 2 groups: 1. Sea food product canning that demands 15,000 tonnes of soybean oil a year. 2. Cooking oil, resin for light color paint and other canning uses which demand about 25,000–30,000 tonnes a year. Address: Dep. of Agricultural Extension, Bangkhen, Bangkok, Thailand.

5620. **Product Name:** Super Soy Soymilk (Plain, Vanilla, or Chocolate), and Tofu.
Manufacturer's Name: IndoVita Soya Ltd.
Manufacturer's Address: Ghaziabad, India.
Date of Introduction: 1989. February.
Wt/Vol., Packaging, Price: 200 ml pillow pack plastic pouch.
How Stored: Shelf stable, 10-14 day shelf life. Refrigerate after opening.
New Product–Documentation: Talk with Mahesh Khaitan. 1989. Aug. 6. This soymilk was introduced in Ghaziabad in Feb. 1989. The company is a very small one; they bought a small plant from Japan. They also make a little tofu, sold in a 200 gm plastic pouch surrounded by water.

Letter from A.K. Bajaj, Managing Director of Amrit Protein Foods Ltd. 1991. June 26. This company is no longer in business. Formerly they were marketing their soyamilk and tofu under the brand name of Super Soy.

5621. Medoff, Marc. 1989. Rockland tofu lover making mark on local soy scene. *Whole Life.* Jan/Feb. p. 85.
• ***Summary:*** Ex-Brooklynite the loveable and feisty former graphic artist "Soy Man" Sam Weinreb is the 62 years young founder of Local Tofu of West Nyack, New York. Nearly 8 years ago he started making tofu commercially in Haverstraw, and about 4 years ago he moved to 307 Route 59, West Nyack. The company now makes more than 1,500 lb/week of bulk tofu as well as hundreds of pounds of fresh soymilk, tofu salad, and soysage, distributed to health foods stores over a 50 mile radius. Organic soybeans are used in all products.

A large photo shows Sam, wearing a baseball cap and holding a paddle in his left hand, as he finishes making a fresh batch of tofu at Local Tofu in West Nyack, New York.

5622. *Natural Foods Merchandiser.* 1989. Soy inspirations: With plenty of new products on the horizon, retailers should begin to plan now for a sizzling Soyfoods Month in April. Feb. p. 12-13.
• ***Summary:*** Sales of soyfoods (tofu, soymilk, soy sauce, miso, other such as entrees, cheese, ice creams, meat analogs, etc.) are estimated to be $638 million for 1987 and $682 million for 1988, and projected at $754 million for 1990. Discusses Corporate Culinary Carnival soyfoods promotions by Judy Brown, and a soyfoods cooking contest by Mike Shields of Food For Thought in Long Island, New York. Winners received their weight in tofu. The unique idea made it into the pages of *USA Today.* Among the 30 entrants, winners were selected in 3 categories: entree, dessert, and beverage.

5623. Ogundipe, H.O.; Osho, Sidi M. 1989. Soybean in Nigerian diets–Past, present and future. Paper presented at the Soybean Production and Utilization Workshop. 3 p. Held 13-15 Feb. 1989 at Lagos, Nigeria. [3 ref]
• ***Summary:*** "Soybean is reported to have been introduced into Nigeria in about 1908. It was mainly restricted to that part of Nigeria now referred to as Benue State and the Zonkwa-Abuja ecological zones." The earliest known use of soybean in the Nigerian diet was in the form of dawadawa, a fermented soup condiment traditionally made from the locust bean. Presently most of the dawadawa produced in Nigeria uses soybean as its raw material. Production has spread to various parts of the country and there has been a marked improvement in processing techniques. Soy ogi and soymilk have also been used as foods in Nigeria. Since 1984 the Kersey Children's Home in Ogbomosho has run a clinic to treat malnourished children. About 24,000 out patients were teated in 1984 while at any given time about 40 severely malnourished children are admitted and placed on a diet consisting mainly of soymilk and traditional foods fortified with soybeans.

In Nigeria, the lack of recognition of the potential of the soybean is now a problem of the past. The greatest potential is expected to lie in the preparation of Nigerian foods. A book titled "Soybean Recipes" has been published. People in rural households in Nigeria are now learning to use soybeans. "The extension work with soybean utilization commenced at 3 project sites in Oyo State, i.e. Igangan, Ikoyi, Ijaye. Training and demonstrations take place at these sites, in which the villagers participate. The program has since expanded to 27 other villages.

"As a result of these training programs over 25,000

people have been trained and now soybean is found in local markets. The demand for utilization is increasing.

"Also, within the past few years, there are in the markets several soy fortified products like Nutrend, Golden morn, Nutrimax, etc. There are also whole soy products like soy nuts, soybean oil and liquid soy maggi [HVP soy sauce]. It is expected that several others will still enter the market this year.

"The future: While emphasis is presently being placed on the preparation and utilization of soybean at home, there is likely going to be a shift to commercial control processing of soybean... With the reduction in the availability of groundnut coupled with its soaring prices, soybean will play a more vigorous role in the formulation of livestock feed, with the possibility of reduction in feed cost and consequently of livestock produce." Address: 1. International Inst. of Tropical Agriculture (IITA), PMB 5320, Oyo Rd., Ibadan, Nigeria; 2. Inst. for Agricultural Research and Training (IAR&T), Ibadan, Nigeria.

5624. Rhee, Khee Choon. 1989. Production of soy protein ingredients and products. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 2142-51. [9 ref]
• ***Summary:*** Contents: Use of expanders in soy processing: Background, the new expander technology. Industrial ultrafiltration membrane technology: Background, preparation of soy protein isolates, preparation of bland soy milk and wet-curd type food products, preparation of low-salt soy protein hydrolyzates. Address: Food Protein R&D Center, Texas A&M Univ., College Station, TX 77843.

5625. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of soymilk and soymilk products: 2,612 references from A.D. 1500 to 1989. Lafayette, California: Soyfoods Center. 323 p. Subject/geographical index. Author/company index. Extensively annotated. Printed Feb. 6. 28 cm. [2612 ref]
• ***Summary:*** This is the most comprehensive bibliography ever published on soymilk. It is also the single most current and useful source of information on this subject available today, since 64% of all references (and most of the current ones) contain a summary/abstract averaging 80 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 37 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 15 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 577 commercial soymilk products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, and a bibliometric analysis of the composition of the book (by language, document type, year, leading countries, states, and related subjects) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

5626. **Product Name:** [Soymilk (Bulk)].
Foreign Name: Lait de Soja "en vrac".
Manufacturer's Name: SOY (Société Soy).
Manufacturer's Address: 1 rue du Crêt de la Perdrix, 42400 Saint-Chamond, France. Phone: 77.31.24.42.
Date of Introduction: 1989. February.
New Product–Documentation: Form filled out for Anthony Marrese by Bernard Storup. 1989. Nov. The product was launched in 1989. It is all private labeled, i.e., sold only under other companies' labels. Production is 30,000 liters/day, using equipment supplied by APV and Alfa-Laval.

Letter (fax) from Bernard Storup. 1990. March 10. The company started selling soymilk in bulk in Feb. 1989. Letter from Bernard Storup. 1990. Dec. 26. This product never had a Label, as it was sold in bulk, in complete tanks (citernes) of 25,000 liters each. The only buyer presently is Sapov.

5627. Turatti, J.M.; Canto, W.L. 1989. Uses for soy protein products in Brazil. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1774-78. [3 ref. Eng]
• ***Summary:*** "Products such as defatted and full fat flour, textured protein, concentrate, isolate, soy milk powder and hydrolyzed proteins are being produced by four main industries [companies], and its use has been generalized in the infant feeding industry and in meat products. On a similar scale it has also been used in the pharmaceutical and bakery industries, as well as in chocolates, ice cream and candies. The total annual production is around 80,000 tons, and 75% of this amount is textured soy protein. The main reasons for their use are low price, functional and nutritional properties

and also difficulties with the supply of meat. Although small amounts of soy milk powder have been exported, most of the production is consumed on the internal market."

Producers of soybean intermediate products are: Sanbra S.A.–Sociedade Algodoeira do Nordeste Brasileiro S.A. (Sao Paulo–S.P.); Noval–Produtos Alimenticios Ltda. (Guaiba–RS); Olvebra S.A.–Ind. e Com. de Oleos Vegetais (Porto Alegre–R.S.); Nutrimental S.A.–Ind. e Com. [Industria e Comercio] de Alimentos (Sao Jose dos Pinhais–PR); Pink (Belo Horizonte–MG); Fiss (Nestlé, Sao Paulo–SP) and Laboratorios Griffith do Brasil.

Utilizers of soybean intermediate products in infant feeding products: Bhering–Prod. Alimenticios S.A. (Rio de Janeiro–RJ); Nutricia S.A. Industria e Comercio de Produtos Dieteticos e Nutricionais (Rio de Janeiro–RJ); Nutrimental S.A. Industria e Comercio de Alimentos (Sao Jose dos Pinhais–PR.) e Pratica Industrial (Taquara–RS.).

Meat processors: Swift–Armour S.A. Ind. e Com. (Santo Andre–SP.); Frigorifico Herme (Sao Paulo–SP); Frigobras (Sadia–Sao Paulo–SP); Comabra (Wilson–Sao Paulo–SP).

Producers of bakery products: Pao Americano–Industria e Comercio S.A. an Lua Nova–Industria e Comercio de Prod. Alimenticios Ltda.

Pharmaceutical industry: Laborateropica Bristol–Quimica e Farmaceutica Ltda. (Sao Paulo–SP).

"It has been estimated that, in 1985, the total soybean proteic products production was around 80,000 ton, produced in decreasing order, by: Olvebra, Nutrimental–(Filial Energe) and Noval. The most important products, in quantitative terms, were: texturized protein, accounting for 75% of the total production, followed by the powdered soymilk flours, concentrates, isolates, etc.

"The major buyers of soybean proteic products are those industries producing to infant feeding programs coordinated by FAE (Fudacao de Assistencia ao Estudante) and other institutional organizations such as PCA (Programa de Complementacao Alimentar) and LBA (Legiao Brasileira de Assistencia) and the meat processors and on a smaller scale the pharmaceutical, chocolate and baking industries...

"Soybean protein products have been used in vegetarian and macrobiotic products, due to their vegetable origin, high protein content and low price." Address: Instituto de Technologia de Alimentos, Avenida Brasil, 2880–C.P. 139, 13.073–Campinas–SP, Brazil.

5628. **Product Name:** Ah Soy (Soymilk) [American Original, Dutch Cocoa, and French Vanilla in 32 oz sizes; Original, Chocolate, Vanilla, and Carob in 6 oz sizes].
Manufacturer's Name: Westbrae Natural Foods.
Manufacturer's Address: P.O. Box 91-1181, Commerce, CA 90091. Phone: 213-722-1692.
Date of Introduction: 1989. February.
Wt/Vol., Packaging, Price: 6 oz or 32 oz sizes.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: News release from Westbrae. 1989. Feb. 2. "Westbrae acquires Ah Soy. Effective Jan. 31, 1989 Westbrae acquired the Ah Soy line of soymilks from Great Eastern Sun. All Ah Soy products will be available Feb. 1 for pickups and shipping from Westbrae warehouses in Commerce, California, and No. Brunswick, New Jersey."

Soya Newsletter. 1989. Jan/April. p. 12. "Ah Soy is available in quarts, in three flavors, and in six ounce retort packs in four flavors."

5629. Wilson, J.C. 1989. The commercial utilization of soybeans, soymilk and soymilk derivatives. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1750-61.
• ***Summary:*** Abstract. Introduction. Philosophy of preparing soybase: The enzyme lipoxygenase acts as a catalyst, inducing the oxidation of fats to create aldehydes and ketones–"beany" flavour and aroma. The enzyme lipoxygenase can be inactivated in hot water by exposure to temperatures exceeding 80ºC and destroyed by a temperature of 85ºC for two minutes. Excessive heat causes protein insolubility. Ancient method for processing of soymilk.

Dehulling. Cornell hot grind method to control bean flavor: this is the "landmark development of the modern soymilk industry." Blanching (University of Illinois method; steaming dehulled cotyledons before grinding, with no removal of fibre / okara). Problem of "chalky mouth feel [and throat-drying effect]. Removal of fiber (The "Japanese soymilk industry has followed the Illinois method but solved the chalkiness problem by a fibre removal step"). But 2 new problems: protein insolubility and protein instability in aseptically filled UHT soymilk. From 1978 to 1983 the Japanese soymilk market grew at about 85% a year, however the price of soymilk exceeded that of cow's milk.

Alfa-Laval's soybase extraction line Soyal. Alfa-Laval does no dehulling and double grinding in hot water in an air-free environment. One goal is to inactivate 85% of the trypsin inhibitor (see Fig. 5). Market trends. Future expectations: Soybeans without lipoxygenase, growing acceptance of soymilk and products made from soymilk, strong growth of tofu (especially of aseptically packed tofu with spices), realisation of the importance of quality soy foods in school lunch programs. Address: Alfa-Laval Food & Dairy International AB, Postbox 72, 221 00 Lund, Sweden.

5630. Pedrick, Ed. 1989. Clofine spray dried tofu (Interview). *SoyaScan Notes.* March 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ed has been with Clofine since 1982. He is age 36, a vegetarian, and has *The Book of Tofu.* In 1983 he heard that Tofutti was having trouble making their soy ice cream. He began to work with them to develop a spray dried tofu.

Clofine's specialty is drying dairy milk and whey powder; they move 50-60 million pounds of these a year. By late 1983 Clofine was having made and selling a spray dried tofu to Tofu Time, Inc. Tofutti wanted to keep the arrangement secret, but this is no longer a problem for them. Growth of sales was very rapid at the beginning, then it slowed and now it is again rapid, more than doubling each year. In the past 5 months Clofine has sold more product than they sold in the previous year.

Clofine has soybeans dehulled and ground to a fine flour, which is taken to the Armour Foods plant in Springfield, Kentucky. Under license from Clofine, they use the flour to make soymilk, coagulate the milk with calcium sulfate, then slurry the curds and spray dry the slurry for as little as $0.18 to $0.20/lb. The maximum solids content in the slurry is 26%. They could (but do not) add a small amount of polysorbates to lower the viscosity. They keep costs down by running large batches. Pareve (pronounced par-VAY) products require the plant to be shut down for 24 hours before a run, then a rabbi must come, inspect, and stay during the run. Cleanup afterward takes 4 hours. Clofine's spray dried tofu sells for about $1.50/lb. and their spray dried soymilk for $0.70 to $0.85.

Clofine has been working for the past 2 years with Raj Gupta and his ProSoya process, which seems to give better flavor and functionality than their current process. Address: Clofine Dairy & Food Products, Technical Director, P.O. Box 335, Linwood, New Jersey 08221. Phone: 800-441-1001.

5631. Widmer, Myron. 1989. GC sells LLF [Loma Linda Foods] infant formula division for $21 million. *Adventist Review* (*Hagerstown, Maryland*). March 2. p. 6-7 (p. 214-15).

• ***Summary:*** "In a move that radically alters the shape of Loma Linda Foods of Riverside, California, the General Conference Corporation has sold LLF's Infant Formula Division for $21.5 million to the Holland-based company of N.V. Verenigde Bedrijven Nutricia, a diverse food company with annual sales of $350 million and Europe's second-largest producer of milk-based infant formula.

"The sale, effective February 10, 1989, culminated months of negotiations and gave Nutricia ownership of the Soylac [Soyalac] and I-soylac [i-Soyalac] patents, all production facilities in both Mount Vernon, Ohio, and Riverside, and the name 'Loma Linda Foods.'

"The church continues to own patent rights, on-hand inventories, and the equipment for all other LLF products, from meat analogs to its soymilk and gravy mixes."

"The church already has formed a new company–LaLoma Foods, Inc.–that will concentrate solely on producing vegetarian health foods."

"The new LaLoma Foods is renting office space (about 2 miles from its former headquarters) where the staff operates under the continuing leadership of Alejo Pizarro, former president of Loma Linda Foods... The sale contract includes a provision requiring Nutricia-owned Loma Linda Foods to return the name Loma Linda back to the church without charge if LLF chooses a new company name.

"The sale of the Soyalac division brings to a close 38 years of infant formula production by the Adventist Church at the Mount Vernon site. Nutricia's plans for the Mount Vernon plant are not clear at the present, as the newly constructed $5 million infant formula plant at the Riverside site will begin production soon.

Why sell? 1. Competition: LLF's market share has been declining for several years and now stands at less than 1%. 2. Product Liability": LLF has been unable to purchase the $100 million product liability policy recommended by legal consultants. LLF recently has carried a $20 million policy. 3. Stringent (Government) Regulations. 4. Retirement Plan: LLF began to turn the corner on profits in the past 4 years (with a cumulative gain of approximately $4 million), and thus was being forced to create a new retirement plan for its employees. 5. Technical Personnel: LLF has had difficulty in attracting technically and scientifically qualified personnel in both its Research and Development and Marketing departments because of the denominational wage scale. 6. Unique Contribution Gone.

"Of the $21.5 million realized from the sale,... $5 million will be used to pay off LLF's indebtedness (primarily accrued from the construction of the new infant formula plant at Riverside), and the remainder will be available to fund the cost of the new production facility for LaLoma Foods." LaLoma's new address is 12155 (9B) Magnolia Ave., Riverside, CA 92505; phone 714-351-4300.

Photos show: (1) The tall Loma Linda Foods plant in Riverside, California. (2) William Murrill (of the Adventist General Conference, and former LLF board chairman), and Alejo Pizarro.

5632. Storup, Bernard. 1989. Re: History of Société Soy–France's largest tofu manufacturer. Letter to William Shurtleff at Soyfoods Center, March 3. 3 p. See p. 1-3. [Eng]

• ***Summary:*** Soy (also called Société Soy or Soy S.A.R.L.) was founded in Feb. 1982 by Bernard Storup and Jean de Preneuf. (Note that "Société" means simply "company" and S.A.R.L. means "Société a Responsabilite Limitée," like GmbH in German). S.A.R.L. is the legal type of company, and it is compulsory to have this term on all official papers in France. Bernard came from a family of dairy product manufacturers. In the minds of customers and other companies this company's name is "Soy," a term which in French has no particular connection with soybeans.

Bernard and his wife Françoise came to America in Nov. 1980 to study tofu and soymilk around the country; they stayed until July 1981, attending the Soycrafters' Conference at Colorado State University. Jean de Preneuf did the same thing from Sept. 1980 to July 1981. Most U.S. tofu

companies were still small and inexperienced at the time, but those which Bernard and Jean found most interesting were Island Spring, Nasoya, New England Soy Dairy, White Wave, and Swan Gardens (Miami, Florida). Jean and Françoise also visited with William and Akiko Shurtleff in California.

Upon returning to France, Bernard and Jean set up a soy dairy (600 square meters) in Cerny, a small village located (35 km or 22 miles) due south of Paris, near places named La-Ferté-Alais and Torfu. They started to make tofu commercially in June 1982. By 1983-84 they were making 2,500 kg/week (5,500 lb/week) of tofu.

In December 1986 the company stopped production at Cerny and moved to a larger (1,400 square meters) and more rationally designed plant located 500 km (310 miles) south of Paris in the foothills (elevation 600 meters) in St.-Chamond, near St.-Etienne, a little southwest of Lyon. Situated on the border of the Pilat Natural Regional Park (Parc Naturel Regional du Pilat, 65,000 ha or 161,000 acres) they had a nice view of the mountains. They moved to this location for two main reasons: (1) Because it has some of the best French water (of the same phreatic groundwater origin as most French mineral water such as Badoit, Evian, Vittel, etc.); (2) Because of the geographic location, being at the center of France, only 2 hours by road from Switzerland and Italy, 4 hours from Germany, less than 4 hours from Paris, and 5 hours from Spain. Production at Saint-Chamond began in Jan. 1987.

"Throughout the years we have developed our own technology and equipment, and have now a rather good quality soymilk and tofu. At present, we carry different families of products on 3 different markets.

"(1) The health-food market. Up to now it has been our main market, and we are now distributing to nearly all health-food stores equipped with a cooler (about 1,500 out of a total of 2,500 in France). The distribution itself is all done through specialized distributors in this field in France (about 20). We are the leader in this market (being practically alone), but this field is nearly saturated for our products. We should see a maximum increase of 20–30% in the next 3 years, as these traditional health-food stores are getting more and more competition from supermarkets. We are presently in the same type of market in Switzerland through a distributor, and directly in Germany and Belgium.

"(2) The food industry. They are looking for a 'soy-base' to lower fats in cooked pork meats (sausages, pâtés, etc.), or to use in prepared cooked foods ('plats cuisinés', or to fill pastas, etc.). We sell them bulk vacuum-packed tofu pieces of 3–4 kg each. In terms of volume, this market should be the more important in the future, but not in terms of sales, as prices are of course rather low. We began (January 1989) to sell soymilk in bulk (by 25,000 liters tank) to distributors interested in having their own brand-names, and dealing with supermarkets or the health-food market. This soymilk is packaged in Tetra-Brick cartons by another company. Up to now we haven't carried our own brand. There will be such competition (in price) with soymilk in Europe in the forthcoming months that it may be better to stay as a simple supplier. Anyway our position can change rapidly. We should produce about 2 million liters of soymilk this year, having contracts already for more than 1 million, on a market estimated at 7 to 10 million liters in France in 1988. The soymilk market is estimated to increase at 20 to 30% a year for the coming years, and most supermarkets are now considering having their own brands. Prices to final consumers have been rather high up to now (9 to 12 French francs [FF] per liter), and should drop clearly in the future. The leader in Europe, Vandemoortele (with Provamel, etc., brands), lowered his prices twice last year in France. Anyway, these figures are and will remain extremely weak compared to the traditional milk market (plus the dairy lobby takes a strong position against these substitutes in the E.C.C.).

"(3) The super and hypermarkets. These represent actually 54-55% of total food sales in France (1.5% for health-food stores, 5% for co-ops and direct from factory sales, the rest for traditional grocery stores). We will introduce 4 complete lines of products with complete new packaging in April 1989, on a new brand, 'Jean de Preneuf' (remember 'pre' means field, and 'neuf' new), 'SOY' being our brand-name for health-food markets. We do actually 2 or 3% of our total sales in this market, and hope to be at 35% at the end of 1989.

"Last year we sold about 550 tonnes of tofu, most of it under a prepared form (burgers, sausages, desserts, etc); sales of plain tofu represent about 23% in tonnage, but only 10% in turnover. We had a total sales in 1988 of about 13,000,000 FF, and nearly no profit (35,000 FF). This can be explained by the fact that we had very heavy investments, mainly to automate the production, and because we have a policy of very reasonable prices (all those who tried to enter the health-food market became aware of this). For 1989, we should have total sales of 18 to 19,000,000 FF (introduction in supermarkets, soymilk sales, sales development in Germany, etc.). This should represent 750-800 tonnes of tofu plus about 2,000 tonnes = 2,000,000 liters of soymilk. We actually use only organic French soybeans, and have the 'Nature et Progres' organic certification symbol/slogan for all of our products, which is the best one you can have for organic products.

"There are 27 people working in the company, half of them being technicians with a strong professional background (from the dairy industry, agricultural engineers, automaticians, etc). Jean and I have 90% of the shares, 10% belonging to people working in the company."

The company presently has about $2 million (12 million francs) annual sales. Bernard is the owner and head; Jean is in PR and sales. Their main products are: 1. Tofu Burgers

(Croque Tofu) sold in 4 flavors and eaten in France with a sauce, not between buns like a typical U.S. burger. 2. Tofu Sausages (Roulades de Tofu, Tofinelle) with Sauce and mushrooms or smoked salmon. These sausages, larger than a U.S. hot dog, are sold 2 in a package with the sauce. 3. Soy yogurt-like or parfait-like dessert (Soyeux), sold in 6 flavors. They now market these products plus Tofast Soya Paste, Tofumé smoked tofu, and Granioc (wholegrain & tofu meatless burgers) in England, and have a nice brochure to advertise them.

In April 1989 the company changed its legal status from Soy S.A.R.L. to Soy S.A. (Société Anonyme), and added 400 square meters of extra cooler and storage space.

In a form filled out for Anthony Marrese in Nov. 1989, Bernard noted the following production figures: Tofu & Tofu Fumé 3 tonnes/week. Tofu Burgers (Croque Tofou) 2 tonnes/week. Soy dessert (Soyeux [pudding]) 2 tonnes/week. Tofinelle sausage 2 tonnes/week. Soymilk 30,000 liters/day (Maximum capacity 3,000 liters/hour). Société Soy is under a confidentiality agreement with APV of England and Alfa-Laval of Sweden, both of whom are supplying equipment to them. Anthony notes that all Société Soy products are professionally done and very good.

Update 1990 March 10. In Oct. 1989 a new syndicate of 7 large French soyfoods manufacturers was formed. Société Soy is one of the members. In Nov. 1989 a new partner and investor came into the company. He now owns 20% of the stock. He is the brother-in-law of the leader of the most powerful food group in France. Société Soy now employs about 30 people, an excellent team. Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 Saint-Chamond, France. Phone: 77.31.23.66.

5633. Storup, Bernard. 1989. Re: The soyfoods and tofu markets in Europe and France. Letter to William Shurtleff at Soyfoods Center, March 3. 2 p. Typed, with signature on letterhead. [Eng]

• ***Summary:*** "The coming competition in the soyfoods market in Europe will be quite different from what happened in the U.S. There will soon be no room for small companies. The competition in the complex market with its high population density leads most food industry companies to have a necessary minimum critical size, and this will be more true than ever starting in 1992 with the complete opening of national boundaries within the EEC. From now on we should not see the opening of small-scale tofu manufacturers in Europe–at least not viable ones that are larger than community scale.

In France, the soyfoods market should evolve rapidly in two main directions in terms of products. In nearly all cases, tofu will be used as an ingredient, and not presented as plain tofu or soya. One major new area is dairylike products ("produits apparentés laitiers" in French). Most big dairy companies are now working on soy-based yogurts. The first major company to put such a product (Sojasun, major launch in Oct. 1988) in supermarkets is Laiterie Triballat (rue Julien Neveu, 35530 Noyal-sur-Vilaine, France. Phone: 99.00.51.01). They are mainly cheese makers and have nationwide distribution. They also own Bonneterre S.A., the leader in France for fresh products on the health food market. Triballat plans to sell about 40 million x 100 gm yogurt cups (4,000 tonnes) the first year, for a total sales of about 70 million French francs (FF). The product is relatively good but rather sugary. Last October, Triballat had a national TV ad campaign to launch its products for 2 weeks on our 5 networks, costing about 10 million FF; another will appear in the spring. Within a year, 1 or 2 other major dairy companies should be on the market with similar products.

But actually the market will be much bigger for "mixed cheeses" (made from a mixture of cow's milk and soymilk). Most major cheese makers are working on such products, but nothing should be launched before at least 1 year. We already tasted "mixed cheeses"; its hard to tell any difference from regular cheese. The interest for dairy companies lies in a different set of facts. It will be increasingly difficult and expensive in the coming years to find cow's milk in Europe, especially after the EEC programs cutting milk production to reduce milk and butter surpluses. The only growing cheese market is for low-fat cheese (growing at least 20% a year). There is also the difference in price between cow's milk and soymilk. And there is such competition for cheese that a good part of the production does not generate adequate profit. So everybody is looking for a market niche, and they know there is money to be made by the first new products on the market in each new niche.

Major players in the soyfoods industry in France are Sojadoc in Albi (Started Dec. 1981; Make tofu and soymilk), Cacoja in Issenheim (an affiliate of Coopérative Agricole de Colmar, or CAC; Started April 1986; Make soymilk and soy desserts), Sojalpe (Started 1986 or 1987, but bought out in early 1988 by a large agricultural cooperative, Coopérative Agricole Silos de Valence; This co-op created a company named Innoval at the end of 1987; Make tofu and yoghurt-like Innovy). Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 Saint-Chamond, France. Phone: 77.31.23.66.

5634. Storup, Bernard. 1989. Re: Brief history of Sojadoc. Letter to William Shurtleff at Soyfoods Center, March 3. 1 p. See p. 5. [Eng]

• ***Summary:*** In Dec. 1981 Olivier Attié began to make tofu on his farm in a small village named Penne-d'Agenais, 47140 in southwest France. With 3 friends, he decided to start a small company to sell tofu in shops and market places, so they founded Sojadoc S.A.R.L. The group split up rapidly, and only 2 of them, Alain Lacombe and Jacques Isnard, went on with the business, which began operation at the end of 1983. In 1985 they had financial problems–they

were making only plain tofu and distributing it locally. The company started again at the end of 1985 with three new partners: (1) Coopérative Agricole de Lavaur, one of the biggest agricultural cooperatives in France, with about 5,000 ha (12,350 acres) of soybeans cultivated under contracts with farmers in southwest France; (2) Charbonnages de France, a coal mining company that paid for part of the new factory in a region where they had to close coal mines; and (3) Sanofi, an affiliate of the oil group Elf-Aquitaine, which is very interested in biotechnology.

Sojadoc S.A. built a new factory (1,350 square meters) at Zone Industrielle de la Viscose, 81000 Albi, France (Phone: 63.45.46.45). They intended to sell a "soy-base" (tofu, and a thick soymilk they called "tonyu") mainly to the food industry, and for 2 years they had a rather efficient program for promoting soyfoods among industrialists. They began to get some contracts with the industry for what we call "plats cuisinés" (things like quenelles, quiches, and pizzas), and for ice cream making, but these didn't last since the quality was very irregular, with major bacteriological problems. In 1987 they began to sell soymilk packed using the Doypack system. Sold mainly to Spain, it was very poor in quality with a strong beany taste. They had so much sales, that they were obliged to go out of business in mid-1988. At the end of 1988 the company was purchased by a big dairy cooperative group named Coopérative Laitière de Riches Monts (65 Boulevard Berthelot, 63000 Clermond-Ferrand, France) located in the center of France. Production had stopped completely by the autumn of 1988, and all equipment is going to be transferred to the new location. The aim of the new operation is to make and sell soymilk in the near future. Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 St.-Chamond, France. Phone: 77.31.23.66.

5635. Storup, Bernard. 1989. Re: Brief history of Cacoja, an affiliate of Coopérative Agricole de Céréales, Colmar (CAC). Letter to William Shurtleff at Soyfoods Center, March 3. 1 p. See p. 6. [Eng]

• ***Summary:*** In April 1986 CAC decided to create an affiliate to produce value-added products from the soybean cultivation they were promoting in Alsace (in southeastern France). They bought an Alfa-Laval soymilk system (5 million French francs plus 6 million francs for the building and grounds). In Jan. 1987 they produced their first soymilk and soy desserts, using very good quality soymilk, under the brand name Bioforme, and packed in Tetra Brik cartons by a neighboring dairy, La Calas. They have also prepared a line of products made by other companies, from "soy-nuts" (made by Benenuts) to tofu sauces and "plats cuisinés." These products are targeted mainly to supermarkets and the food industry, to whom they market the concept of a soy-base obtained by ultrafiltration.

In Sept. 1988 they launched their own tofu (coagulated ultrafiltered soymilk), marketed as a fresh product, but they are blocked by two facts: (1) they cannot distribute it in the health food market, since Société Soy is there; (2) the large scale distribution supermarkets are not ready for such a product. They intend to market their product line to supermarkets this coming spring, as well as a line of low-fat pork meat products. They have been obliged to change their brand name from Bioforme/Bioforce to Formoja by the end of 1988, having been prosecuted by another company named Bioforce.

This is an intelligent team, with good financial backing from CAC, efficiently run by Mr. Rochet, but they may be lacking a real marketing policy.

It is hard to say how much they produced last year. They planned to produce 1 million liters in 1987 and 2.5 million in 1988, but it seems unlikely that they have been able to produce such large amounts. They will never reveal their actual production figures.

Note: A form filled out for Anthony Marrese in Nov. 1989 stated that they make Mayonnaises, Sauce Vinaigrette, Chocolat, Desserts, and Aperitifs. They suggested that Anthony phone Dr. Cuatron at 89.74.17.07.

Update by Bernard Storup. 1990. March 26. This company has had constant problems with having to change its name. In Sept. or Oct. 1989 that had to change from Cacoja to Biosoja, and now they will have to change the latter again. They are presently the largest soymilk maker in France. They also had to change their original brand, Bioforme, to Cacoja, and now that will have to be changed again to Formoja.

Update by Bernard Storup. 1990. June 13. The company is presently named Cacoja (pronounced KA-ko-jah), but the name Cacoja belongs to another group–a health food group named Aida, which distributes health food products in France. So only the brand name has changed. Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 St.-Chamond, France.

5636. Storup, Bernard. 1989. Re: Brief history of Innoval / Sojalpe, an affiliate of Coopérative Agricole Silos de Valence. Letter to William Shurtleff at Soyfoods Center, March 3. 1 p. See p. 6. [Eng]

• ***Summary:*** Sojalpe was started as a traditional tofu shop by a very dynamic and inventive guy named Martial Gonin in about 1986 or 1987 [sic, Dec. 1986]. He was definitely in business by late 1987 and located at Saint Quentin sur Isere, 38210 Tullins (near Valence), France. This is in southeast France. he first made and sold plain tofu, then his "Royales au Tofu," which were kind of quenelles (specialties of that part of France, between a sausage and a souffle, usually prepared with a sauce, and made from wheat flour and animal fat). In these he used tofu instead of the fat, and packed the product in cans with a shelf life of at least 1 year. He also made and sold "Palets au Tofu," which were kind of

tofuburgers.

In early 1988 he made a big deal with an agricultural cooperative named Coopérative Agricole Silos de Valence (441 bis Avenue Victor Hugo, 26000 Valence, France. Phone: 75.44.01.61). This co-op created a company named Innoval at the end of 1987. Innoval purchased 50% of the Sojalpe shares of stock, then dismissed Martial Gonin from the company by the end of 1988. Innoval had a brand new factory built, and equipped with an Alfa-Laval system (to be installed in early 1989), plus a 5 million French franc Buhler-Miag cleaning and dehulling system; all this for an total investment of nearly 20 million French francs. Sojalpe was the only way that they could enter the health food market, so they kept that as their brand for this market. Sojalpe presently sells their products directly to shops and co-ops in France, as no distributors want to work with them (the distributors are already distributing Société Soy products). As Sojalpe has low prices and large transportation expenses, with low sales, it is quite certain that they are losing money. They make an estimated 300 to 400 kg/week of tofu. Innoval also carries a line of yogurt-like products named Innovy.

In fact it is to early to know exactly what this company intends to do, and it seems that they themselves don't known exactly–which is not so rare among co-ops.

Update from Bernard: 1990 March 10. "Innoval does not seem to be doing very well, but I don't have details. They seem to sell only some soymilk in health food stores. It is very expensive but one of the best I've ever tasted. I have never seen even 1 pack of their Innoval tofu." Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 St.-Chamond, France.

5637. Bishop, N.; McGraw, M.; Ward, N. 1989. Aluminium in infant formulas. *Lancet* i(8636):490. March 4. [11 ref]
• ***Summary:*** "Compared with carefully collected breast milk (5-20 micrograms/liter), aluminium concentrations are 10-20 fold greater in most cow's milk derived formulas and 100-fold greater in soy-based formulas... The current European Community directive specifies that the aluminium content of drinking water must not exceed 200 mcg/liter so the aluminium concentration in infant formulas may increase considerably during preparation.

"Aluminium absorption may be increased in the neonatal period. The permeability of the gastrointestinal tract is greatest in the first days after birth, enhancing the potential for absorption of substances normally excluded... Aluminium is excreted through the kidney, and immature or reduced renal function can result in accumulation... Preterm infants are at increased risk of retaining absorbed aluminium... Aluminium is deposited in bone and brain where, if in sufficient quantities, it exerts toxic effects...

"There is no evidence that cow's milk formulas pose a particular risk to most full-term infants. The American Committee on Nutrition suggested that it would be prudent to avoid soy-based formulas in low birthweight infants and those with impaired renal function, including preterm infants... Soy-based formulas have the highest aluminium and phytate contents of any available for newborn infants and may represent an avoidable hazard when gastrointestinal and renal function are immature; these formulas should be available on medical advice only." Address: 1. MRC [Medical Research Council] Dunn Nutrition Unit, Cambridge CB4 1XJ; 2. Dep. of Pediatrics, Southmead Hospital, Bristol; 3. Trace Element Analysis Lab., Dep. of Chemistry, Univ. of Surrey, Guildford, Surrey. All: England.

5638. Bishop, N.; McGraw, M.; Ward, B. 1989. Aluminium in infant formulas. *Lancet* i(8637):565. March 11. [3 ref]
• ***Summary:*** Infants at particular risk from aluminium in infant milk formulas are those born prematurely or those with impaired renal function. "For infants born full term, there is evidence to suggest that larger amounts of aluminium are absorbed during the first month after birth, and it would seem prudent to suggest that formulas with higher aluminium content should be used at this time only for specific medical indications. There is, however, no evidence to suggest that the use of soy-based formulas in older infants and children is likely to result in aluminium toxicity." Address: 1. MRC Dunn Nutrition Unit, Cambridge CB4 1XJ; 2. Dep. of Pediatrics, Southmead Hospital, Bristol; 3. Trace Element Analysis Lab., Dep. of Chemistry, Univ. of Surrey, Guildford, Surrey. All: England.

5639. Stanton, Russ. 1989. Dutch firm to expand Loma Linda Foods. *Press-Enterprise* (*Riverside, California*). March 11. p. H-1, H-3.
• ***Summary:*** "The Dutch company that acquired Riverside-based Loma Linda Foods last month plans to greatly expand the size of the health-food maker beginning next year, the company's new president [43-year-old Cornelis Rumpff] said yesterday... Nutricia acquired Loma Linda Foods for its soybean-based infant formula operations, which accounted for about 60% of the company's $20 million in sales last year. Loma Linda Foods' liquid and powder formula are sold under the Soyalac and I-Soyalac labels... The Dutch company's first order of business, Rumpff said, is to complete a $5 million infant formula processing line that the company's previous owner, the General Conference of the Seventh-day Adventist, started in 1987 but didn't complete."

"In Europe, Nutricia sells infant formula, baby foods and cereals, Chocomel, a chocolate milk drink popular among teenagers, and clinical nutrition products to hospitals for patients with special dietary needs. In 1988, Nutricia earned $24 million (U.S.) on sales of $430 million (U.S.)"

5640. Lechevestrier, Yvon. 1989. Triballat lance le dessert au soja: L'industrie peut aider l'agriculture [Triballat launches soya dessert: Industry can aid agriculture]. *Tribune de*

l'Ouest (*La*). March 17. [Fre]
• ***Summary:*** The new product, Sojasun, is sold in a small pot like yogurt or fresh cheese (*fromage frais*) under the Rians brand. A photo shows Jean Clanchin and co-workers at Nyal tasting the dessert. "Amidst 550,000 tonnes of yogurts and other desserts in small pots consumed by the French in 1987, a new product is trying to conquer a place: Soja Sun." Local soybean farmers near Rennes are also happy. Clanchin, age 50, and the man behind this product, has been director of this dairy company since 1964. He hopes to sell 40 million little pots a year. "Its a big challenge for Jean Clanchin and his 450 employees. He keeps smiling. In 1964 he started with 37 people/employees. If we had not moved ahead, we wouldn't be here any longer.

"The Triballat dairies are two sister companies, which are named after Hubert Triballat, who directs the unit at Rians in the department (like a county) of Cher, while his brother-in-law, Jean Clanchin, is at the head of the dairy at Noyal-sur-Vilaine. The combination employs 1,400 people (including those employed by affiliates) and has an annual turnover of about 1,200 million French francs."

Note: This private company is actually run by both Mr. and Mrs. Clanchin. She is a smart, aggressive, cost-conscious businesswoman who has played a key role in the company's success. Address: France.

5641. Lawson, Margaret; Milla, P.J.; Harper, J.I. 1989. Aluminium and infant formulae. *Lancet* i(8638):614-15. March 18. [4 ref]
• ***Summary:*** The aluminum content of soya formulas seems higher than that regular infant formulas based on cow's milk, and infant formulas containing a protein hydrolysate may be equally high. Address: Dep. of Dietetics, Gastroenterology Unit, and Dep. of Dermatology, Hospitals for Sick Children, London WC1N 3JH, England.

5642. *Pacific Union Recorder* (*Westlake Village, California*). 1989. Loma Linda Foods sells infant formula division. Continued availability of meat analogs assured while company seeks new manufacturing site. March 20. p. 5. [1 ref]
• ***Summary:*** "The company was turned over to N.V. Verenigde Bedrijven Nutricia (United Nutrition Cos.) of Amsterdam in early February. Most of the 100 workers who served at the plant will continue working under an agreement which allows for conditions similar to that they already had. The company will not operate on Saturdays. Including sales representatives and staff at Mr. Vernon, Loma Linda Foods had employed about 170 people."

"Loma Linda Foods was one of Riverside's largest private companies, according to the Riverside *Press-Enterprise.* It was established in 1906 in Loma Linda and moved to Riverside in 1938."

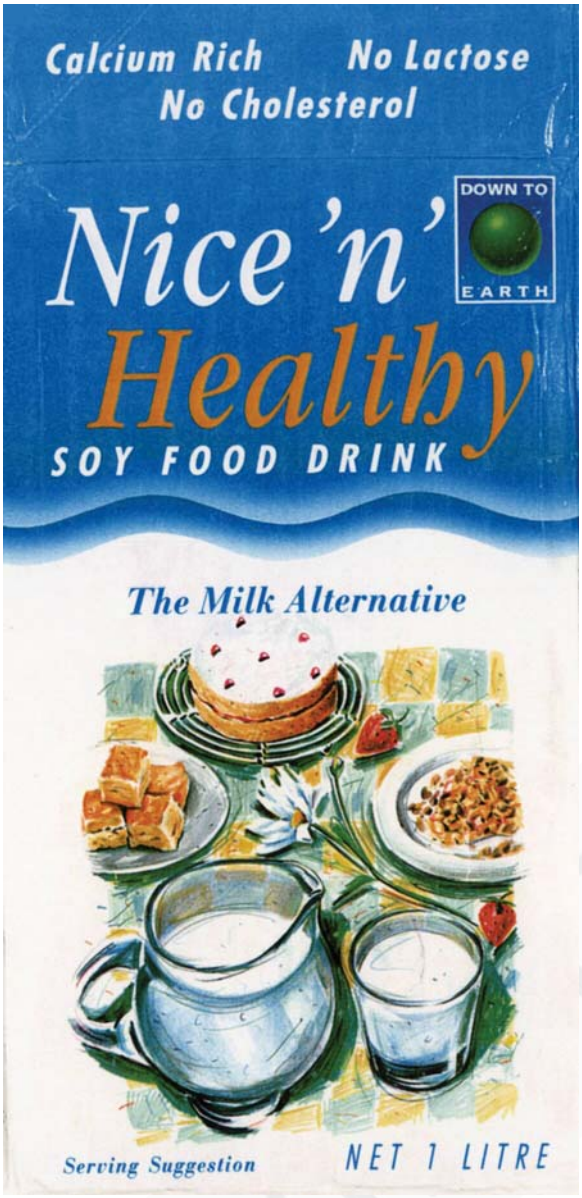
• ***Summary:*** 1985. DE-VAU-GE, Lueneburg, West Germany. 4,000 liters/hour soymilk plant. Products: Long life beverages and desserts.

1988. Pacific Foods, Tualatin, Oregon, USA. 3,000 liters/hour soymilk base plant with ultrafiltration unit. Products: Concentrated soymilk for the processed food industry.

1989. Amrit Protein Foods Ltd., Ghaziabad, India. 6,000 liters/hour soymilk plant. Products: Fresh and long life beverages, soy ice cream mix, soy-lassi.

1989. Gitic, Guangzhou, China. 3,000 liters/hour soymilk base plant. Products: Vacuum dried soymilk/cane sugar crystals. Address: Aarhus, Denmark. Phone: (06) 12 4155.

5645. **Product Name:** Nice 'n' Healthy: Soy Food Drink.
Manufacturer's Name: Down to Earth Natural Products Ltd.
Manufacturer's Address: Box 12082, Penrose, Auckland, New Zealand. Phone: (09) 590 592.
Date of Introduction: 1989. March.
Ingredients: Soya protein [isolate], vegetable oil, maltose syrup, maltodextrin, fructose, vegetable emulsifier and stabiliser (471, 401, 412), mineral salts [incl. calcium] (341c, 170, 332, 340, zinc gluconate), vitamins (B-1, B-2, B-12, A, D), water added (pure south island artesian water).
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml.: Energy 260 kj, protein 3.4 gm, fat 3.4 gm, carbohydrate 4.7 gm, calcium 116 mg, phosphorus 58 mg, sodium 44 mg, potassium 140 mg, zinc 0.34 mg, vitamin B-1 0.04 mg, vitamin B-2 0.17 mg, vitamin B-12 0.50 mcg, vitamin A 40 mcg, vitamin D 0.33 mcg.
New Product–Documentation: Label (carton with product) sent by Bean Supreme (Box 12082, Penrose, NZ). 1990. Feb. 19. 3.75 by 6.5 by 2.5 inches. Tetra Brik carton. Blue, tan, green, and yellow on white. Down to Earth logo is a green sphere. "The milk alternative." An illustration on the front panel shows a table setting with a pitcher and glass of milk, stack of pancakes, a daisy, strawberries, and fried tofu. Back panel reads: "Nice 'n' Healthy contains 8.5 gm of quality protein for every 250 ml serving. Calcium rich, Nice 'n'



Healthy contains as much calcium as milk [290 mg per 250 ml serving], and other vitamins and minerals important to people who may be restricting their intake of meat or dairy products." Top of carton reads: "Best before 11 Jul 1990. Serve chilled. Refrigerate once open. Shake well. Calcium rich. No lactose. No cholesterol. Distributed in Australia by Spiral Foods, 13 Cubitt St., Richmond, Victoria. Phone: 03-429-8425.

In about Feb. 1990 the company changed its name from "Bean Supreme" to "Down to Earth Natural Products Ltd." Bean Supreme will remain as a brand name for their existing and expanding range of traditional soy products. This is the first product launched under the new name.

Letter from Trevor Johnston, Managing Director of Bean Supreme Ltd. 1994. July 8. This isolate-based soymilk was launched in March 1989. It is sold in an aseptic carton, a color photo of which is shown.

5646. Hamm, Ulrich; Mueller, Andreas. 1989. Nachfrage nach imitationsprodukten fuer Milch und Milcherzeugnisse in der EG-9: Analyse und Prognose unter besonderer Beruecksichtigung der Aufhebung von Imitationsverboten [Demand for imitation products for milk and milk products in the EG-9: Analysis and prognosis with special consideration for the suspension/cancellation of forbidden imitation products]. *Agrarwirtschaft* 38(3):74-83. [35 ref. Ger]

• ***Summary:*** This study, originally published as a report in 1987, indicates that use of tofu in West Germany was only 800 tonnes in 1986 but is expected to reach 4,000 tonnes/year by 1992. In the entire EG (European community), the use of tofu in 1986 was about 5,000 tonnes/year, expected to climb to 12,500 tonnes by 1992.

Soymilk (Sojamilch) consumption in the EG-9 in 1986 was about 16,000 tonnes, expected to grow to 28,500 tonnes by 1992.

See also Boeckenhoff et al. 1989. Address: Institut fuer Agrarpolitik und landwirtschaftliche Marktlehre der Universitaet Stuttgart-Hohenheim, Schloss/Postfach 70 05 62, D-7000 Stuttgart 70, West Germany.

5647. **Product Name:** Better Than Milk? (Liquid Soymilk Made with Spray Dried Tofu and Casein) [Natural, Chocolate, Carob, Natural Light].
Manufacturer's Name: Sovex Natural Foods, Inc.
Manufacturer's Address: 9104 Apison Pike, Box 310, Collegedale, TN 37315. Phone: 800-227-2320.
Date of Introduction: 1989. March.
Ingredients: Spring water, soy oil, cereal solids (from corn), spray dried tofu, calcium carbonate, sodium caseinate, sea salt, carrageenan, vitamin B-12 (cyanocobalamin), natural flavor.
Wt/Vol., Packaging, Price: 8 oz or quart Tetra Brik Aseptic cartons, 27 or 12 to a case.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Sovex. 1989. Feb. 28. The company plans to launch this product in late March 1989.

Letter to *Veggie Life* by Genevieve Gowman. 1993. Nov. p. 6. "Unfortunately I didn't realize how deceitful the term 'non-dairy could be. This drink contains casein, which is a milk protein... Please inform your readers of this." The magazine answers: "According to FDA guidelines, a product can contain up to 2 percent casein and still be labeled 'non-dairy.'" The Natural flavor contains only 0.37% casein; the Chocolate, Carob, and Natural Light flavors do not contain casein.

Note: In response to this concern about caseinate, by March 1995 Sovex had removed caseinate from their product.

5648. **Product Name:** Unisoy Gold Soya Milk (Enriched with Calcium and Vitamins. Made with Organic Soya Beans).
Manufacturer's Name: Unisoy Milk 'n' By-Products Ltd.
Manufacturer's Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.
Date of Introduction: 1989. March.
Ingredients: Water, whole organic soya beans, pure apple juice (Alar free), calcium, magnesium, emulsifier, lecithin, vitamins B-12, A, and D-2.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for 0.42p (5/91, London).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: Energy 45 kcal (calories), protein 3.3 gm, carbohydrate 4.1 gm, total fat 1.9 gm, saturated fat 0.25 gm, cholesterol 0.0 gm, calcium 95 mg, magnesium 20 mg, vitamin 53 mcg, vitamin D-2 0.03 mcg, vitamin B-12 0.6 mcg.
New Product–Documentation: Talk with Neil Rabheru of Unisoy. 1990. July 2. Followed by letter (fax) of July 9. This product was launched in March 1989. It is a liquid (ready to use, not concentrated) soyamilk enriched with minerals (calcium, magnesium), and vitamins (A, D, B-12), made with organic soya beans. It was developed to bridge the nutritional gap between cow's milk and soyamilk, and try to bring the taste closer to cow's milk. "This product is the closest match to cow's milk in terms of nutrition in the ready-to-use form on the European market." The level of vitamin B-12 was deliberately made higher than that of cow's milk since it can be difficult for people on non-dairy diets to obtain a sufficient amount of this vitamin.

This new product, which led to the gradual phasing out of the White Wave sweetened soya milk, has been a phenomenal success for Unisoy. It was developed in response to the hundreds of letters they used to get every month asking about the calcium and vitamin content of White Waves Soya Milk. Unisoy was the first company in Europe to launch a ready-to-use, calcium-fortified soyamilk for adults (not including infant formulas). [Note: Earlier calcium fortified soymilks made in Europe for adults included: Granose Soyagen (Powdered, 1967), Plamil Soya Plantmilk (Concentrated, 1981), Semper Soja Dryck (Ready to drink in plain and chocolate flavors, Jan. 1988)]. Alpro's calcium-fortified soymilk, which appeared on the UK market in Jan. 1990, was developed in response to the success of Unisoy Gold.

Label sent by Heather Paine of SoyaFoods in London. 1991. May. 3.75 by 3.5 by 1.25 inches. Tetra Brik carton. Gold, black, red, and blue on light yellow. "Gold must be shaken well before use. Non-dairy. Tea and coffee: Enjoy the excellent taste of Gold in tea & coffee, by putting milk in the cup first and allowing the beverage to cool slightly before pouring. Refrigerate after opening. Use within 3 days of opening."

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. The type(s) of calcium used to fortify this product is very critical; Neil figured it out by himself. He uses a combination of calcium types, and this is a trade secret, but neither is calcium sulfate (which would cause coagulation) nor calcium lactate (which would make the product non-vegan).

5649. Chikaarashi, Shigeru. Assignor to Nichii Company, Ltd., Osaka, Japan. 1989. Apparatus for manufacturing a foodstuff suitable for soybean milk production. *U.S. Patent* 4,817,516. April 4. 4 p. Application filed 9 Oct. 1987. [5 ref. Eng]
• ***Summary:*** "The apparatus includes a brushing machine for removing earth matter and earth-born germs deposited on soybean material, a band dryer for adjusting the water content of the soybean material so as to facilitate separation of the material into skin and flesh portions, a skin remover for separating the skin portion from the flesh portion and for dividing the flesh portion of each piece of soybean into four to eight parts, and flat pressing rollers for converting the resulting powdery masses into uniformly distributed flaky masses."

Note: The resulting soy flakes are used by Nichii to make tofu in Japan. The compact tofu plants are located in supermarkets or department stores. Address: Sapporo, Japan.

5650. Beamonte, Ignacio. 1989. Proteinas de Noroeste plans for soymilk and tofu in northern Mexico (Interview). *SoyaScan Notes.* April. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ignacio presently runs two businesses (Si Products harvests and sells sea vegetables; Alimacro sells macrobiotic foods) and plans to start a third, Proteinas de Noroeste, in Ensenada, Mexico just south of the California border. He recently purchased a soymilk system from Gary Stein of San Diego Soy Dairy. He plans to sell his soymilk mostly in Mexico (half gallon containers, with seaweed and barley, get a 15-day shelf life) and also to import Tetra Pak soymilk from the USA. He also plans to make tofu and tofu products.

We talk again on 1 May 1990. He hopes to have his first soyfood products on the market by the end of this year. Soymilk will be his main product, followed by tofu and some okara products. Address: Apdo Postal 1073, Ensenada, Baja California Norte, Mexico. Or P.O. Box 1740, San Ysidro, CA 92073.

5651. Thompson, Martha Gifford. 1989. Early work with tofu at Rochester Zen Center (Interview). *SoyaScan Notes.* April 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The staff of 30-50 people in the Zen Center

kitchen prepared strictly vegetarian meals. Kapleau roshi at that point had a dairy allergy, so very few dairy products were used in the meals. The diet was almost a vegan one. The Toronto Zen Center, was an affiliate group nearby in Canada. In Toronto, which has a large Asian population, were at least three tofu shops: one very small family-run Korean shop on Baldwin Street (which is no longer there), one on Avenue Road (perhaps Chinese run), and a third on Dundas Road. A member of the kitchen staff would make the 2½ hour trip to Toronto, go the shop on Baldwin Street (which had no name) to buy tofu. "The first room was stacked to the ceiling with soybeans. Down in the basement were many people slogging around making tofu. It was quite a scene, and nobody spoke any English. At that point we realized that we could make tofu ourselves. The trip to Toronto was always a hassle. You always got stopped at the border; they always thought you were smuggling something. Jay Thompson took the lead in setting up tofu making facilities. Kapleau roshi was very excited about and supportive of the project, in part because he had practiced for so long in Japan, and in part because he likes projects, right livelihood, and soyfoods. Once the shop was set up in the basement, we also made a lot of soymilk, yuba, and soy yogurt, and served spicy curds; we tried everything! The tofu shop of course never received any financial support from Zen Center." Address: Rochester, New York. Phone: 716-461-5388 Home.

5652. Amrit Protein Foods Ltd. 1989. Today a nation-builder's vision takes shape (Poster). Ghaziabad, Uttar Pradesh, India. 1 p. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.
• ***Summary:*** "Mr. Jagdish Tytler, Minister of State for Food Processing Industries, Government of India, will be inaugurating the plant of Amrit Protein Foods Limited on Thursday the 18th of May, 1989 at 10:00 a.m."

"Fifty years ago, Mahatma Gandhi [the nation-builder] had the vision to foresee the potential of soya... Amrit Protein Foods Limited is a new venture of a quiet giant–Amrit Banaspati Company Limited, a Rs. 200 crore group, with winners like Gagan Vanaspati, Uncle Chipps potato wafers and Ginni Refined Oil to its credit. Amrit Protein Foods Limited has acquired its technology and equipment from the world-famous Danish Turnkey Dairies Limited, Denmark. Its aseptic packaging system has been imported from Prepac, France."

Note: This poster contains a quotation from Gandhi and its source. Examination of the source (which is cited incorrectly) indicates that the quotation and citation are only partially authentic. Address: Ghaziabad, Uttar Pradesh, India.

5653. Asano, Mitsuo; Okubo, K.; Yamauchi, F. 1989. Tônyû no hinshitsu ni oyobosu nama shibori ondo no eikyô [Effects of squeezing temperature on the quality of soymilk]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society of Food Science and Technology*) 36(4):318-24. April. [16 ref. Jap; eng]
• ***Summary:*** Traditionally soymilk was pressed from the ground soybean slurry at a low temperature, but today this step is usually eliminated when making tofu. Yet tofu prepared in this traditional way was thought to be preferable to that made in the modern way. "In order to make optimum temperature clear, the effects of squeezing temperature on yield, viscosity, glycoside content, lipoxygenase activity and n-hexanal level of soymilk from the cotyledon and the whole bean were examined. A yield as solid was maximum in soymilk squeezed over 30ºC from the cotyledon and at 60ºC from the whole bean. Viscosity of soymilk significantly decreased with increasing temperature and showed a minimum value at 60ºC. A glycoside content as solid increased in soymilk squeezed above 50ºC and was approximately 2.6 times higher in soymilk at 95ºC than at 20ºC. The lipoxygenase activity, which is the major cause of undesirable flavor of soymilk, decreased in soymilk squeezed over 70ºC. n-Hexanal, which was produced by lipoxygenase, was about half in soymilk squeezed at 60ºC as compared with 20ºC. Accordingly, optimum squeezing temperature on soymilk and tofu processing was recommended in range of 50-60ºC." Address: Faculty of Agriculture, Tohoku Univ., Amamiya-machi, Tsutsumi-dori, Sendai-shi, Miyagi 980, Japan.

5654. Brown, Judy; Bates, Dorothy R. 1989. Judy Brown's guide to natural foods cooking. Summertown, Tennessee: The Book Publishing Co. 160 p. Index. With 8 pages of color photos. 23 cm.
• ***Summary:*** This natural foods, vegan cookbook, which does not require the use of dairy products or eggs, includes more than 200 recipes, many of which contain soyfoods. In the chapter titled "The Natural Foods Pantry" is a sub-chapter titled "Soy Foods," which gives brief introductions to tofu, tempeh, miso, soy milk, soy cheeses, soy yogurt, soy flour, and soy pulp or okara. There are also sub-chapters on sea vegetables, sprouts (including soy sprouts), organic foods, macrobiotics (which is "heavily emphasized in this book"), more natural foods ingredients (which, under soy sauce, discusses the differences between shoyu and tamari).

The number of recipes featuring various soyfoods are: Tofu (15), tempeh (5), miso (4), soymilk (1), shoyu (1), and okara (1; soysage).

The author, a specialist in consumer education, presently organizes culinary carnivals and natural foods tasting fairs. She has written extensively on natural foods and holds a Master's degree in Consumer Economics from the Univ. of Maryland. She is president of Judy Brown Enterprises, a public relations company for natural foods products. Address: 9 Dovetree Court, Indian Head, Maryland 20640. Phone: 301-753-6548.

5655. **Product Name:** [Formoja Sauc'annaise {Soymilk Mayonnaise}, Mexican Sauce, and Salad Sauce {Dressing}].
Foreign Name: Formoja Sauc'anaise, Sauce Mexicaine, Sauce Salade.
Manufacturer's Name: Cacoja. Affiliate of Coopérative Agricole de Colmar (CAC).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France.
Date of Introduction: 1989. April.
Wt/Vol., Packaging, Price: 1-2. 130 gm jar. 3. 350 gm bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Photo in Amanthe. 1990. Revue Technique des Hotels et Restaurants. P&B. April. p. 8. A photo shows these 3 products. Each has "No Cholesterol" written prominently below the product name. These products are promoted as being cholesterol free and very low in fat.

SoyaFoods (ASA, Europe). 1990. 1(1):3. Cacoja Leaflet. 1990. April. "The soybean sauce line: Super Light. A complete new line of 100% vegetal sauces with soja milk, cholesterol free, and with a very low fat content. These state-of-the-art products are really satisfying the needs of modern, well-balanced nutrition.

"Sauc'annaise (210 ml/190 gm jars): A smooth sauce resembling mayonnaise, containing only 13.5% fat, and cholesterol free. Excellent accompaniment for raw vegetables, eggs, fish, and cold meat. Nutritional value per 100 gm: Protein 5.9 gm, fat 13.5 gm, carbohydrate 3.3 gm, calories 160.

"Mexican Sauce (210 ml/190 gm jars): A fine and very exotic sauce, containing only 14% fat and cholesterol free. Excellent accompaniment for meat, skewers, fondues and fish. Nutritional value per 100 gm: Protein 6 gm, fat 14 gm, carbohydrate 3.4 gm, calories 165.

"Salad Sauce (320 ml/300 gm bottles): Seasoning sauce, cholesterol free and exceptionally low in fat: less than 10% (against about 75% for a classical salad dressing). Excellent accompaniment for salads and crudities. Nutritional value per 100 gm: Protein 5.1 gm, fat 9.7 gm, carbohydrate 1.1 gm, calories 115."

SoyaFoods. 1993. Winter. p. 7. "A profile of Sojinal." See Table 2. "Biosoja retail food products." "Sauces based on tonyu. Sauc'annaise."

5656. DeSilver, Drew. 1989. Eden Foods pleads guilty to infant formula violations: Paradise lost. *Vegetarian Times.* April. p. 9-10. [1 ref]
• ***Summary:*** "Eden Foods was fined $110,000 in January after pleading guilty to 11 counts of violating the federal Infant Formula Act, which sets nutritional standards for products sold as infant formula. Company president Michael J. Potter, who pleaded guilty to one charge of violating the act, was sentenced to 30 days in jail, two years' probation and a $25,000 fine. Both Eden's and Potter's penalties were the maximum allowable.

"The 12 misdemeanor charges, filed last year in the U.S. District Court in Detroit, involved a promotional pamphlet that Potter wrote in 1983 for Edensoy brand soymilk. The Food and Drug Administration and the Justice Department charged that a pamphlet paragraph headed 'Good for Babies' said Edensoy was a 'quality substitute' for mother's milk, when in fact it lacks adequate amounts of several nutrients, including vitamins A, B-12, C, D and E, thiamin, pantothenic acid, calcium and iodine...

"The pamphlet attracted the attention of the FDA, which in October 19893 notified Eden that it was in violation of the Infant Formula Act. Eden immediately agreed to stop distributing the pamphlets and told a few of its large distributors to stop using them.

"There the matter stood until 1985, when a child suffering from malnutrition and failure to thrive was admitted to a Toronto hospital. The mother said she had seen a copy of the pamphlet at a natural food store and had been feeding the infant nothing but Edensoy. When the FDA learned about the infant (who eventually recovered with no ill effects), it ordered Eden to recall all the pamphlets. The FDA also called in the Justice Department, which filed charged against Eden and Potter in July 1988... Potter doesn't deny that he and Eden broke the law, but he says it was unintentional...

"In 1978, the Syntex Corp. promoted a product called Neosoy as an infant formula. Neosoy was deficient in chloride and was blamed for causing neurological damage to at least 80 children. The FDA wanted to prosecute Syntex, Gibbs said, but in 1984 the Justice Department decided not to. In another case, which occurred in 1985, the department filed 12 misdemeanor counts against Wyeth Laboratories for marketing a formula that lacked vitamin B-6. Wyeth pleaded guilty and received what was then the maximum fine, $1,000 per count. The total fine was only $12,000...

"Last year Eden made a $142,000 profit–slightly more than Eden's and Potter's combined fines."

5657. Gibbs, Jeff. 1989. The Edensoy case: Lessons for the industry. *Soya Newsletter* (*Bar Harbor, Maine*). Jan/April. p. 4-5, 19.
• ***Summary:*** On 20 Jan. 1989, nearly 6 years after Eden Foods had published its ill-fated Edensoy pamphlet, the company was fined $110,000 and its president, Michael Potter, was fined $25,000 and sentenced to 30 days imprisonment. Jeff Gibbs represented Eden Foods of Michigan in its case against the Justice Dept. and the FDA. He is a specialist in federal regulatory law, especially Food and Drug Administration issues, such as product liability, labeling, clinical research, and compliance matters. "Long time court observers were shocked by the severity of the penalties. The fines were about ten times greater than the

average for the court; jail time is unusual for people who plead guilty to one non-violent misdemeanor, especially when the government does not recommend prison." The judge was a woman. Neither the court nor the government articulated the lessons it wished to teach. But the following were implicit: 1. Companies must be careful what they say when promoting products. The FDA, which administers the Federal Food, Drug, and Cosmetic Act (FDCA) prohibits making false and misleading statements about food. 2. Ignorance is no defense. The burden is on companies to understand a complex and ever changing law. The government charged CEO Michael Potter with 32 separate violations. 3. Do not expect to be treated similarly to other companies. "For example, in the late 1970s, Syntex of Palo Alto, California sold an infant formula that lacked sodium chloride. The product permanently injured some children. Yet, the government decided not to prosecute Syntex. Wyeth Laboratories of Philadelphia, Pennsylvania, another large pharmaceutical company, sold infant formula that was deficient in a critical nutrient. Wyeth was fined $12,000; no individual was prosecuted." 4. Cooperation has its limits. Eden Foods and Michael Potter were models of cooperation. It is not clear whether or not this helped them. Address: Attorney, Mackler, Cooper and Gibbs, P.C., Washington, DC.

5658. Golbitz, Peter. 1989. Eden Foods' CEO gets thirty days in jail: Edensoy pamphlet wording in violation of law. *Soya Newsletter* (*Bar Harbor, Maine*). Jan/April. p. 1, 6-7. [1 ref]
• ***Summary:*** The story of Eden Foods' encounter with the FDA and the U.S. Justice Department. On 20 Jan. 1989 a federal judge in Detroit, Michigan, levied fines and a sentence on Eden Foods and Michael Potter. Potter, who pleaded guilty of one misdemeanor count of adulteration, was personally fined $25,000 and sentenced to 30 days in the county jail in Bay City, Michigan. He began to serve out his jail sentence on Feb. 24. Eden Foods, which pleaded guilty of an additional 12 counts of misbranding and adulteration, was fined $111,000. Address: Soyatech, Bar Harbor, Maine.

5659. **Product Name:** Soy-Rice Amazake.
Manufacturer's Name: Grainaissance, Inc.
Manufacturer's Address: 1580 62nd St., Emeryville, CA 94608. Phone: 415-547-7256 (1/88).
Date of Introduction: 1989. April.
Ingredients: Incl. Dry soy powder from Clofine.
New Product–Documentation: Ad in Whole Foods. 1989. April. p. 105. "Grainaissance Soy-Rice Amazake nectar." "New. High protein!" This ad also appeared in Natural Foods Merchandiser. 1989. April. p. 104. Ad (¼ page, black and white) in Whole Foods. 1989. Sept. p. 128.

Spot in Vegetarian Times. 1990. Feb. p. 68. Soy rice is a little thinner and less sweet than the other types of Grainaissance amazake.

Talk with Janet Crolius of Grainaissance. 1990. Jan. 23. This is basically plain amazake with flavors and dry soy [milk] powder (which you can't taste) to give better protein complementarity. The labels arrived in March 1989 and it was definitely being sold by July.

Talk with Tony Plotkin of Grainaissance. 1993. Oct. 17. This product has been discontinued. The soy it contained was a powder he bought from Minnesota or Kentucky–and the quality of the soy component was not that good. Yet he liked the product. He did not market it that heavily. He feels that fresh soymilk is always better than dry–which is chalky.

5660. *INTSOY Newsletter* (*Urbana, Illinois*). 1989. Remodeled facility bolsters INTSOY's research and development efforts. No. 41. p. 1-2. April.
• ***Summary:*** After more than a year of dislocations due to construction, INTSOY has moved into the newly remodeled Agricultural Bioprocess Laboratory (ABL) on the University of Illinois campus. "Nearly $1.4 million in remodeling costs were provided by the State of Illinois through the 'Build Illinois' program and a special legislative appropriation for value-added research."

The INTSOY facility centers on a 2,600-square-foot pilot plant in the basement of the building. The main pilot plant is divided into dry and wet processing areas. The dry process area will house two INSTA-PRO extruders (a 2000 and a 600 Jr.) plus several continuous oil expellers. The adjacent wet procession area is designed for work on soymilk, dairy analogs, and immature green soybeans. A photo shows the dry processing area and Wilmot Wijeratne.

5661. *INTSOY Newsletter* (*Urbana, Illinois*). 1989. Interest in soybeans continues to grow across much of Africa. No. 41. p. 2-3. April.
• ***Summary:*** "Recent developments in Africa point toward an increased demand by agricultural leaders for expanded soybean utilization efforts, according to Karl Weingartner, INTSOY senior food technologist. Weingartner recently completed a six-week trip to Uganda, Kenya, Zambia, Zimbabwe, the Ivory Coast, Ghana, Togo, Benin, and Nigeria. The purpose of the visit was to collect information on current soybean marketing, utilization, and research efforts.

"According to his report, officials in Uganda have a strong interest in expanding the use of soybeans. Help is needed, however, to train home economists and extension workers how to prepare soybeans in the home. The introduction of commercial processing equipment is needed for extracting oil from soybeans, and better ways must be found for using high-protein meal in both food and feed.

"In Kenya, officials from the Ministry of Agriculture are reported to be working on a detailed plan for increased use of soybeans. Ken-Soya Company in Nairobi is attempting to obtain improved equipment for producing new food products, including full-fat soy flour, soy ugali, and soy

snack foods. Plans were also discussed with USAID officials for a possible utilization workshop in 1990.

"In Zambia, the Lee Yeast and Soy Nutrients companies continue to manufacture full-fat soy flour. Most of the flour is currently used by Zambian feed mills as a protein source for feed. Soy Nutrients is especially interested in expanding its product line to include more human food products.

"A new program, the Zambia Agriculture Business and Marketing Service Project (ZAMS), is planning a major study on the feasibility of small-scale oil processing. Fred Javaheri, the national soybean coordinator, is working with a home utilization project in Luanshya that teaches poor urban women how to use traditional cooking equipment to prepare soyfoods.

"In Zimbabwe, the Nutresco company is developing soy products for human consumption. Nutresco has recently solved some major technical problems and is moving ahead with plans to introduce new product lines by mid-1989. Lion's Den, another company, is especially interested in using the new extrusion-expelling technology to produce a partially defatted meal suitable for human consumption. In addition, food technologists from the International Crop Research Institute for Semi-Arid Tropics (ICRISAT) Program in Bulawayo have discussed the possibility of producing a high-protein, soybean-sorghum food.

"Focusing on West Africa: A major soybean project is scheduled to begin in the Ivory Coast during 1989. The office of the president and the Direction et Controlle des Grands Travaux are providing important support. Researchers are enthusiastic about developing commercial food products by extrusion cooking of soybeans. They are planning to locally market inexpensive, protein-rich foods in both urban and rural areas.

"Soybeans have also generated a strong interest in Ghana, where there is a great need for an inexpensive source of edible protein in the central zone and the northern savanna. One focal point for this interest is the Food Research Institute in Accra, which has a well-trained and enthusiastic staff. The Secretary of Agriculture and other government officials have also expressed support for increased soybean use.

"In Togo, the Food Research Center is using roasted soybeans mixed with cereals to prepare baby food. Outside the center, distribution of the baby food is limited. Staff members are interested in setting up a small-scale process for producing soymilk in sterilized containers. The well-trained and knowledgeable staff at the center has been involved with soyfood production for about four years.

"In Benin, work on soybeans is conducted by the Catholic Relief Service (CRS). In 1983, CRS began demonstrations of a soyflour preparation used to enrich the local potage and installed mills in 20 villages. A soy-maize baby food is available in a local supermarket. Soybeans are also used to make stock cubes, which are added to stews."

5662. *Soya Newsletter* (*Bar Harbor, Maine*). 1989. Ambrosia Soy's fresh soymilk in supermarket dairy case. Jan/April. p. 12.

• ***Summary:*** Waldbaums supermarkets [actually Waldbaum's Foodmart] will carry SweetSoy soymilk made by Ambrosia Soy Co. of East Haven, Connecticut. It will be sold in the dairy section of stores in Massachusetts and Connecticut. "Waldbaums is the first major supermarket chain in the Eastern United States to feature fresh soymilk in their dairy section... The product is available in Plain, Chocolate, Vanilla and Almond flavors and comes in pints and quarts, with a 28-day shelf life."

5663. Vitasoy (USA) Inc. 1989. Soymilk users love Vitasoy. Here's why... (Ad). *Vegetarian Times.* April. p. 3.

• ***Summary:*** This full-page color ad shows a large carton of Creamy Original, plus excerpts of letters from satisfied users.

This ad also appeared in Bestways, July/Aug. 1987, p. 43. Address: San Francisco, California 94107.

5664. Wood, Rebecca. 1989. Quinoa the supergrain: Ancient food for today. New York, NY: Japan Publications Inc. Distributed by Kodansha International USA/Ltd. 202 p. April. Illust. Index. 26 cm. [51 ref]

• ***Summary:*** Quinoa (pronounced KEEN-wa; scientific name *Chenopodium quinoa* Willd.) originated in the *altiplano,* the high plains of the Andes in Peru and Bolivia. It was called the "mother grain" by the ancient Incas. The protein content of quinoa seeds ranges from 7.5% to 22.1%. The two men most responsible for creating a quinoa market in the USA are Stephen Gorad and Don McKinley of the Quinoa Corporation in Boulder, Colorado.

Note: *Webster's Dictionary* defines quinoa (derived from Spanish, via the Quechua *quinua;* the term was first used in 1625) as "a pigweed (*Chenopodium quinoa*) of the high Andes whose seeds are ground and widely used as food in Peru."

Chapter 8, "All about cooking quinoa," contains many recipes. A number of these use soyfoods, including natural soy sauce or tamari (p. 65): Star canapés with tofu-caper topping (p. 88-89). Noodle salad with fresh soy mayonnaise (with soymilk, p. 110). Tofu, quinoa, and dulse salad (p. 114-15). Sweet and sour quinoa tempeh (p. 129-30). Address: Crestone, Colorado.

5665. Fisher, C.E.; Knowles, M.E.; Massey, R.C.; McWeeny, D.J. 1989. Levels of aluminum in infant formulae. *Lancet* i(8645):1024. May 6.

• ***Summary:*** "... it has been suggested that a greater proportion of ingested aluminum is absorbed and retained in infants, whose gastrointestinal tract and kidneys are not fully developed... We have surveyed the aluminum content of a range of retail infant formulae... Samples of cow's milk-

based and soya-based infant formulae were purchased at retail outlets in Norwich [England] during 1987 and 1988...

"The aluminum content of made-up cow's milk-based infant formulae is in the range 0.03-0.20 mg/l (mean 0.11 mg/l): for soya-based formulae the contents are in the range of 0.64-1.34 mg/l with a mean of 0.98 mg/l. The figures for cow's milk-based formulae are similar to the aluminum contents found in cow's milk, indicating that there is unlikely to be much, if any, contamination during processing. The figures for soya-based formulae are higher, but this would be expected given the higher levels naturally present in vegetable materials such as soya...

"The potential aluminum intake can be estimated as 0.28-0.55 mg per week from cow's milk-based formulae and 2.5-4.9 mg per week from soya-based formulae...

"The Department of Health's Committee on the Toxicity of Chemicals in Food, Consumer Products and the Environment, considering the results of the survey, commented that the levels of exposure to aluminum from infant formulae were well below the provisional tolerable weekly intake of 7 mg/kg body-weight set in March, 1988, by the Joint FAO/WHO Expert Committee on Food Additives and Contaminants, and that in relation to body-weight aluminum intakes for infants were no greater than for adults. The committee concluded that no immediate regulatory action was warranted. However, the committee also commented that, since the neonatal kidney is not fully developed, aluminum elimination in infants could be less efficient than it is in adults, and that there was a lack of information on the gastrointestinal absorption of aluminum in infants. The committee also recommended that the source of aluminum in soya-based infant formulae should be established.

"Aluminum is not deliberately added to infant formulae during manufacture. However, it can find its way into the formulae through being present, in small amounts, in the salts added to make the mineral content of formula as close to mother's milk as possible. Manufacturers estimate that this may add about 10% to the total aluminum content of cow's milk-based formula and about 25% in soya-based formula. It would be difficult to exclude all the 'extra' aluminum since it is present in so many mineral preparations. There is no clear evidence that the additional aluminum is harmful." Address: 1-2. Food Science Div. I, Ministry of Agriculture, Fisheries and Food, London SW1P 3HX, England; 3-4. Food Science Lab., Food Science Div. I, MAFF, Norwich, England.

5666. Cabato, Rachel M. 1989. Nestlé's work with soybeans and soyfoods in The Philippines (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Nestlé has a large soybean farm in Cotabato, Mindanoa, where they are doing extensive research to breed soybeans having a low beany flavor. Nestlé is also working with IRRI. Some 300 farmers each plant 4-10 hectares of soybeans; Nestlé gives them the seeds and fertilizers, then buys back the beans. The price is based on Nestlé's quality standards.

Nestlé has a plant in Luzon for making powdered soybean milk. This is mixed with cow's milk to make at least 3 products, which are sold in cans, both in the Philippines and overseas. Nestlé has contributed a great deal toward development of soya in the Philippines. Follow-up letter from Rachel Cabato. 1989. Nov. 14. The only Nestlé soya product currently on the market is Nestlé Twin, a powdered blend of filled milk and soya solids. It can be used for both adults and children. Address: Senior Director, The Livelihood Corp., Hanston Building, Emerald Ave., Pasig 1600 Metro Manila, Philippines. Phone: 673-21-06.

5667. **Product Name:** Big Sipp Soyamilk [Mango Shake, Banana Shake, Rose, or Pinakool (Pineapple)].
Manufacturer's Name: Amrit Protein Foods Ltd.
Manufacturer's Address: Amrit Nagar, G.T. Road, Ghaziabad, Uttar Pradesh, 201 009, India. Phone: 91-118-714215 or 714216.
Date of Introduction: 1989. May.
Ingredients: Mango Shake: Soyamilk, mango pulp, sugar, added flavour, and permitted colour.
Wt/Vol., Packaging, Price: 200 ml aseptic, multi-layered, metalized Prepac Standi-Pak pouches.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *The Hindu.* 1987. June 18. "Biggest soyamilk plant in Ghaziabad." Note: Ghaziabad is a large city about 7 miles to the east of Deli and New Delhi. Letter from Anders Lindner. 1988. Sept. 22. "Our Indian client, Amrit Protein Foods Ltd. in Ghaziabad, is now aiming for a market launch in Feb. 1989." Booklet. 1989. "Soyamilk Makes Sense." A photo shows the plant and products. Ad. 1989. "Today a nation-builder's vision takes shape." The plant will be inaugurated on 18 May 1989. Letter from Anders Lindner. 1989. July 13. "This product was launched on 29 May 1989. Amrit said on July 2 that sales were good, but we have no details yet."

Talk with Mahesh Khaitan, technical advisor to Amrit and nephew of Mr. N.K. Bajaj, the head of Amrit. 1989. July 31 and Aug. 6. Big Sipp has been well accepted and has much better flavor (less beany flavor) than Noble Soya. Noble Soya had to add a lot of vegetable oil to try to mask their beany flavor. But Big Sipp has recently had a serious sealing problem with their packages. The product is presently off the market, but they hope to have it back on by September 1989. Big Sipp is packed in a Standi Pack pouch, a multi-layered metalized plastic pouch made by Prepac in France. Each package costs about half as much as a Tetra Brik carton of the same volume. Mr. Bajaj is the man behind the soymilk project.

The product was introduced in May and June in

two flavors: Mango and banana. The rose and pinacool (pineapple) flavors will be introduced in about August when packaging problems have been solved. All flavors except rose contain 1.1% protein. The mango and banana are naturally thick because of their fruit pulp. Carrageenan is added to Pinakool to give thickness. Rose contains 3.1% protein to give thickness. All products have a 3-4 month shelf life without refrigeration. All Amrit products are made from the DTD soymilk base; none contain soy protein isolates. The discovery of adding calcium lactate (see Vigo) was made after the Big Sipp packaging material had been printed in France, but it may be added later. The slogan for this product is "Soyamilk makes sense."

APV Soymilk Technology. 1990. Contains a color photo of all 4 packages.

Labels sent from India by Anthony Marrese. 1990. Nov. 29. Flavors: Banana Shake, Mango Shake, Rose, Pinakool. 4.75 by 5.25 inches. Silver foil Standi Pak pouch. Pinakool: Yellow, light green, dark green, red, and white on silver. Illustration of waves. Inset in these are three boxes. One shows the silhouette of a man with a briefcase climbing stairs, one a schoolboy with a backpack running, one a woman carrying a shopping basket walking briskly. The two Shake flavors have color photo of two milkshake glasses with straws.

Letter from A.K. Bajaj. 1991. June 26. Big Sipp

flavoured soyamilk is packed in a laminated film on Prepac's AS-2 Aseptic Packing Machine. The pack which comes out of the machine can stand by itself and hence is given the name Standi Pack. The address of Prepac is 62 rue Pasteur, 94807 Villejuif Cedex, France. Big Sipp is now marketed in three flavours: Mango, Rose, and Pinakool. All of them have 3.1% protein, are artificially flavoured, and contain no fruit pulp.

5668. Lucking, Evelyn. 1989. Tetra Pak moves its headquarters and main library to Lausanne, Switzerland, from Lund, Sweden (Interview). *SoyaScan Notes.* May 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The new address is Tetra Pak Rausing S.A., Case Postale 181, 1009 Pully/Lausanne, Switzerland. The move took place in about 1987. There is no one person in the company specifically in charge of soymilk.

Note: According to David Wiesenfeld in Connecticut, the packs should be called "Tetra Brik Aseptic cartons" and never Tetra Packs, etc. By 1990 the company had started to use the term "Ever-Fresh" instead of "aseptic" for marketing. Address: Marketing Services Mgr., Tetra Pak Inc., 200 Van Dorf Rd., Aurora, ONT, L4G 3G8, Canada. Phone: 416-727-0171.

5669. Amrit Protein Foods Ltd. 1989. Soyamilk makes sense. Ghaziabad, India. 14 p. 21 x 14 cm. [Eng]
• ***Summary:*** This promotional booklet, extolling the many virtues of soybeans and soymilk, is preparing the way for Amrit's launch of their new line of soymilk products named Big Sipp. The three flavors are Mango Shake, Banana Shake, and Rose. Contains color photos of the outside of the new Amrit Protein plant at Ghaziabad, STS soymilk equipment inside the plant, and (on the inside rear cover) of 6 foil packages of the three products.

Note: the product was launched on 29 May 1989.

5670. Amrit Protein Foods Ltd. 1989. Golden Glow soyamilk cookbook. Ghaziabad, India. 16 p. 21 cm. [Eng]
• ***Summary:*** Golden Glow is a brand of unflavored soymilk launched in 1989 in Ghaziabad, India, by Amrit Protein Foods Ltd. This attractive cookbooklet, apparently written by a person named Tarla Dalal and packed with color photos, contains numerous recipes describing how to use that brand of soymilk in both Indian-style and Western-style dishes. A photo (p. 2) shows a close-up of the Golden Glow package, a paperboard box which contains 500 ml of natural soymilk in a Prepac Pillow-Pack aseptic package.

Contents: Introduction. Dietary importance of soyamilk, by Dr. P.L. Wahi, Cardiologist, Director (retired) of the Post Graduate Inst. of Medical Sciences, Chandigarh. Drinks. Soups. Snacks: Waffles and pancakes. Rotis (baked round flatbreads, like chapatis). Vegetables. Rice dishes. Desserts. Salad dressing. Basic recipes: White sauce, soya curd (fermented soy yogurt), basic brown stock. Address: Amrit Nagar, G.T. Road, Ghaziabad, Uttar Pradesh, 201 009, India. Phone: 91-118-714215 or 714216.

5671. Bajaj, Naresh Kumar. 1989. Welcome address. Paper presented at opening of Amrit Protein Foods soymilk plant in Ghaziabad, 18 May 1989. 8 p. 21 x 14 cm. [Eng]
• ***Summary:*** Shri Jagdish Tytler, the Honorable Minister of Food Processing Industries, was present at the opening, along with many invited guests. "Protein energy malnutrition is wide-spread amongst almost all segments of the population in India... The abnormal infant mortality rate in our country is 100 per 1,000 births... This problem cannot be tackled by conventional means and therefore there is a need to find non-conventional sources. Since in our country a large number of population is accustomed to a vegetarian diet, one of the means to solve malnutrition problem is in a simple little protein packed wonder i.e. soyabean... The daily requirement of the essential amino acids (the tissue building materials) of a 5 year old child can be covered by consumption of ½ liter of soyamilk alone."

"With so much goodness of soyamilk I am tempted to say (and this I do with due apologies to our friends in the medical profession who are present here)–'Drink a pint of soyamilk a day & keep your doctor friend away.'"

"There are some areas–Sir–where the Government policy needs to be liberalized so as to promote nutritional benefits of soyamilk. A few to mention are: (a) Extension of dairy milk by addition of 25% of soya milk. (b) All weaning foods for babies to be based, as far as possible, on soya milk, because of its obvious advantages. (c) Encourage & promote the use of soya milk in products like ice cream, kulfi, paneer, khoya, etc., which are basically non-essential and where the usage of milk is rather high–up to 50%. Such a step will certainly help to improve the availability of dairy milk to children for drinking. In short, wherever possible, normal milk should be extended by soya milk."

"The main soya milk plant has been supplied to us by Danish Turnkey Dairies of Denmark. The packaging machinery have been supplied by Prepac of France." Address: G.T. Road, Ghaziabad, Uttar Pradesh, India.

5672. *FDA Consumer.* 1989. Not like mother made. 23(4):30-31. May.
• ***Summary:*** Describes the alleged illegal sale of Edensoy soymilk as "quality substitute" for mother's milk by Eden Foods of Michigan. "By 1985, the new soy drink accounted for one-third of Eden Foods' $5.5 million annual sales, and 35 percent of sales of all similar products in the nation's health food market, according to industry reports."

"Because of the illness in Canada–the sole report of injury from Edensoy–Eden Foods voluntarily issued a nationwide Class I recall..."

5673. Langley, Gill. 1989. Aluminium and soya milks. *Vegan* (*The*) (*England*). Spring. p. 12. [3 ref]
• ***Summary:*** Dr. Langley cites articles in *The Sunday Times* (Nov. 20), *The Manchester Guardian* (Jan. 4) and *New Scientist* (Jan. 21) that reported on the presence of aluminum in food and its effect on health. "Scientists presently believe that there may be a link between the gradual build-up of aluminum in the bones, brain and blood, and conditions ranging from a softening of the bones, senile dementia (or Alzheimer's disease), and anaemia. Higher levels of aluminum in soya-based infant formula feeds were reported in some of these articles...

"There is no legal requirement for manufacturers of baby milk powders or soya milks to state the level of aluminium in their products, nor is there an established maximum for these products. Normally, we would not absorb very much of the aluminium that finds its way into our digestive systems–between 75 and 95% of the average 4-8 milligrams of aluminium a day most people eat goes straight through their bodies undigested.

"However, patients with kidney disease are less able to excrete aluminium. In newborn infants during the first week of life (and longer for premature babies) the gut is more permeable, and the likelihood of aluminium being absorbed into the bloodstream is higher; such infants, and particularly underweight babies, have less effective kidneys and may also be deficient in zinc, which puts them at higher risk. These two groups, and possibly old people whose kidneys are not too efficient, are most at risk from aluminium poisoning."

"Plamil Foods Ltd. estimate that Plamil soya milk in the ready-to-use form contains not more than 780 micrograms of aluminum per litre... Vandemoortele reported that Provamel milk contains 'less than 5,000 micrograms' of aluminum per litre... "Unisoy's soya milk has 50 micrograms per litre... Farley is currently reformulating its OsterSoy powdered infant feed so that it is acceptable to vegans (by replacing animal derived vitamin D-3 with vitamin D-2). This will be available some time later this year. [Ed. See News, 'Ostersoy Update'.] The amount of aluminum in OsterSoy powder is 2,000 micrograms per kg, but when made up with water the level is about 400 micrograms per litre...

"Those who are concerned to minimize their consumption of aluminum could avoid the use of aluminum pans and antacid medicines." Address: England.

5674. Library of Congress, Subject Cataloging Div., Processing Services. 1989. Library of Congress subject headings. 12th edition. Washington, DC: Cataloging Distribution Service, Library of Congress. 3 volumes.
• ***Summary:*** This 12th edition (LCSH 12) contains approximately 173,000 headings established by the Library through Sept. 1988. The book was available on 3 May 1989. Approximately 10,000 headings were added since the 11th edition in 1988. Among these headings are 139,000 topical subject headings, 22,000 geographic subject headings, 10,000 personal names (incl. 9,000 family names), 2,600 corporate headings. This book should be used with the Subject Cataloging Manual (1989. 3rd ed.).

These subject headings have been accumulated by LC since 1898 and the first edition of LCSH was printed between 1909 and 1914. Subject headings are listed in boldface type. Approximately 40% of headings are followed by LC class numbers, which are added only when there is a close correspondence between the subject heading and the provisions of the LC classification schedules.

References show the relationship between terms: (1) The equivalence relationship: Use of UF (Use for) references. (2) The hierarchical relationship: Broader terms (BT) and narrower terms (NT). BT and NT function as reciprocals. A term appearing as a BT must be matched by the reversed relationship as an NT (e.g., Motor Vehicles. BT Vehicles. NT Trucks). (3) The associative relationship: Related terms (RT. Ornithology. RT Birds). May Subd Geog (MSG) = May subdivide geographically. Soy related subject headings, listed alphabetically, are:

Fermented soyfoods (MSG). BT Food, Fermented. Soyfoods. NT Fermented soymilk. Miso. Natto. Soy sauce. Tempeh.

Fermented soyfoods industry (MSG). BT Soyfoods industry. NT Miso industry. Nattô industry. Soy sauce industry. Fermented soymilk (MSG). BT Fermented soyfoods. Soymilk.

Hydrogenation [QD281.H8]

Information storage and retrieval systems–Soyfoods.

Lecithin [QP752.L4 (Physiology), or RM666.L4 (Therapeutics)]. UF Phosphatidylcholine. BT Phospholipids. NT Lysolecithin. Also: Lecithinase.

Margarine (MSG) [TP684.M3 (Manufacture)]. UF Butter, artificial, Margarin, Oleomargarine. BT Oils and fats, edible. NT Vanaspati. Margarine industry (MSG) [HD9330. M37-374] BT Oil industries. NT Vanaspati industry.

Meat substitutes [TX838]. BT Food substitutes. Vegetarianism.

Miso (MSG) [TP438.S6 (Manufacture)]. UF Paste, Soybean. Soybean paste. BT Fermented soyfoods. NT Cookery (Miso).

Miso industry (MSG). BT Fermented soyfoods industry.

Nattô (MSG) [TP438.S36 (Manufacture)] [TX558.S6 (Nutrition)]. BT Fermented soyfoods.

Nattô industry (MSG). BT Fermented soyfoods industry.

Natural food restaurants (MSG). UF Restaurants, Natural food. BT Restaurants, lunch rooms, etc. RT Food, Natural.

Natural foods industry (MSG) [HD9000-HD9019]. UF Health foods industry. BT Food, Natural. Note: Natural food (Use Food, Natural). Natural food cookery (Use Cookery (Natural foods)).

Nonfermented soyfoods.

Nonfermented soyfoods industry.

Shortenings–Use Oils and fats, edible.

Soy ice cream (MSG). Here are entered works on no-dairy frozen desserts in which soy protein largely or completely replaces the dairy proteins. UF Ice cream, Soy. Soymilk ice cream. Tofu ice cream. BT Non-dairy frozen desserts. Nonfermented soyfoods.

Soy ice cream industry (MSG) [HD9330.S63-HD9330.S633]. BT Nonfermented soyfoods industry.

Soy sauce (MSG) [TP438.S6 (Manufacture)]. [TX407.S69 (Nutrition)]. UF Sauce, Soy. Soy. Soya Sauce. BT Fermented soyfoods. NT Cookery (Soy sauce).

Soy sauce industry (MSG) [HD9330.S65-HD9330.S653]. BT Fermented soyfoods industry. NT Strikes and lockouts–Soy sauce industry.

SOYA (Information retrieval system [SoyaScan from Soyfoods Center]) [Z695.1.S68]. BT Information storage and retrieval systems–Soyfoods.

Soybean (MSG) [QK495.L52 (Botany)]. [SB205.S7 (Culture)]. UF Glycine max. Soja bean. Soja max. Soy-bean. Soya. Soya bean. BT Beans. Forage plants. Oilseed plants.

Soybean–Diseases and pests (MSG). NT Diaporthe phaseolorum. Heterodera glycines [Nematodes]. Soybean mosaic disease. Soybean rust disease.

Soybean as feed [SF99.S]. NT Soybean meal as feed.

Soybean flour. UF soya flour. BT Flour. Soybean products.

Soybean glue. BT Glue. Soybean products.

Soybean industry (MSG) [HD9235.S6-HD9235.S62]. BT Vegetable trade. NT Soybean oil industry.

Soybean meal (MSG). UF Soybean oil meal. Soybean oilmeal. BT Meal. Soybean products

Soybean meal as feed [SF99.S]. BT Soybean as feed.

Soybean mosaic disease (MSG) [SB608.S7]. UF Soybean chlorosis. Soybean leaf curl. BT Soybean–Diseases and pests. RT Soybean mosaic virus.

Soybean mosaic virus. BT Plant viruses. RT Soybean mosaic disease.

Soybean oil (MSG) [TP684.S]. UF Bean oil. Chinese bean oil. Soy oil. BT Drying oils. Soybean products.

Soybean oil industry (MSG) [HD9490]. BT Soybean industry.

Soybean oil mills (MSG). BT Oil mills. Soybean processing plants.

Soybean processing plants (MSG). BT Factories. Food processing plants. NT Soybean oil mills.

Soybean products (MSG). NT Soybean flour. Soybean glue. Soybean meal. Soybean oil. Soyfoods.

Soybean rust disease (MSG) [SB608.S7]. UF Rust disease of soybean. BT Fungal diseases of plants. Soybean–Diseases and pests. RT Phakopsora pachyrhizi.

Soyfoods (MSG). [TX401.2.S69 (Nutrition)]. [TX558.S7 (Composition)]. UF Soybean as food. BT Food. Soybean products. RT Cookery (Soybeans). NT Fermented soyfoods. Nonfermented soyfoods.

Soyfoods industry (MSG) [HD9235.S6-HD9235.S62]. BT Food industry and trade. NT Fermented soyfoods industry. Nonfermented soyfoods industry. Soymilk industry.

Soymilk. UF Beverages, Soy. Milk, Soy. Milk, Soybean. Soy beverages. Soy milk. Soybean milk. BT Nonfermented soyfoods. NT Fermented soymilk.

Soymilk industry (MSG) [HD9235.S6-HD9235.S62]. UF Soy milk industry. Soybean milk industry. BT Soyfoods industry.

Tempeh (MSG) [TX558.T39]. UF Bongkrek. Tempe. BT Fermented Soyfoods. RT Cookery (Tempeh).

Tofu (MSG).

Note: Changes in this edition from the 11th edition. Changed: Soybean as food to Soyfoods. Changed: Soybean milk to Soymilk. Changed: Soybean milk industry to Soymilk industry. Added: Soyfoods industry. Added: Fermented soyfoods. Added: Fermented soyfoods industry. Added: Nonfermented soyfoods. Added: Nonfermented soyfoods industry. Added: Fermented soymilk. Address: Washington, DC.

5675. McDougall, John A. 1989. Questions and answers about children's diets: The hazards of dairy products. *Vegetarian Times.* May. p. 64. [1 ref]

• ***Summary:*** "Question: Please explain why you don't recommend cow's milk for children. Aren't dairy products the best sources of calcium? Answer: The dairy industry has brainwashed most people into believing that cow's milk is essential for children. But let's take a look at some of the hazards of feeding your children dairy products. First, dairy products are the No. 1 cause of food allergy, resulting in problems ranging from runny noses to asthma to bed-wetting. Second, dairy products are loaded with cholesterol and fat. The fat contributes to obesity and increases a child's risk for cancer and heart disease later is life. Third, the lactose in milk is difficult for many people to digest, resulting in gas, stomach cramps and diarrhea. Fourth, there's no fiber in dairy products–one of the reasons milk and cheese can make children constipated. Fifth, some dairy products contain infectious agents like salmonella and tuberculosis; toxic pesticides are also concentrated in milk products.

"Besides these reasons, I tell parents about the leukemia viruses found in 20% of the dairy cows in this country. These leukemia viruses can cross species of animals and have caused leukemia in other animals under laboratory conditions. Not surprisingly, leukemia is most common in parts of the world where dairy products are most heavily consumed. (Ferrer, J., *Science* 213:1014, 1981)

"But now to calcium. The dairy industry mistakenly insists that cow's milk is the only source for calcium. But the fact is, plants are loaded with it–enough to grow the skeletons of elephants, cows, horses and people. Although Asian and African children usually don't drink any milk after

weaning, they have normal-sized bones and greater bone strength throughout life than milk-drinking Americans." Address: Santa Rosa, California.

5676. Schmutz, W.G. 1989. Soybean proteins in the diets of preruminant calves. In: L.A. Johnson, ed. 1989. New Technologies for Value-Added Products from Protein and Co-Products: Symposium Proceedings. Ames, Iowa: Center for Crops Utilization Research. 312 p. See p. 223-47. Unnumbered. [81 ref]

• ***Summary:*** Contents: The preruminant calf. The clotting of milk. Enzyme activity. Nutrient requirements of the preruminant calf. Soy proteins in calf milk replacers. Soy protein concentrates. Isolated soy proteins. Changes in digestive events. Passage rates. Gastrointestinal hypersensitive reactions. "Reduced feed costs and the demand for milk products for human consumption have stimulated this area of research...

"The use of non-milk proteins in calf milk replacers have been studied for the past 50 to 60 years... Of these protein sources, soybean flours and soybean protein concentrate have received the greatest research attention and are used in the greatest amounts in the milk replacer industry...

"Isolated soy proteins have not been evaluated as protein sources for calf milk replacers to the extent of soy flours and soy protein concentrates. Cost of the isolated soy proteins is a major consideration...

"Currently, due either to the inability of the young calf to adequately digest soy proteins and/or the creation of an allergic response to poorly digested proteins, the present usage level of soy protein remains at less than 50% of the protein." Address: Central Soya Co., Decatur, Indiana.

5677. **Product Name:** [Soy Ice Cream Bars {Made with Soymilk} (Sour-Cherry, or Coconut)].
Foreign Name: Soja Frucht-Riegel (Sanddorn, Kokonuss).
Manufacturer's Name: Schoeller Lebensmittel GmbH & Co. KG.
Manufacturer's Address: Bucherstrasse 137, D-8500 Nuremberg 90, West Germany. Phone: 911-34-000.
Date of Introduction: 1989. May.
Ingredients: Incl. soymilk, fruit juices, vitamins.
How Stored: Frozen.
New Product–Documentation: Letters from Anders Lindner. 1990. April 4 and 26. Schoeller, in West Germany makes soymilk that is used in ice cream production. Capacity is not known.

Talk with Thomas Karas of Soyastern in West Germany. Schoeller, a very big manufacturer of ice cream and frozen foods in Nuremberg, makes Soja Stangen, soy ice cream bars. It is a very new product. Thomas has an article about the product in a dairy journal. The product manager from Schoeller, who now works for Huegli, told Thomas that there is a very small amount of soy in this ice cream. Thomas also heard that Schoeller tried to sell the "Soy Bars" in the company's line of soy ice cream shops.

Talk with Ted Nordquist of Aros Sojaprodukter in Sweden. 1990. May 18. One soymilk ice cream is made by Schoeller, which is one of Europe's largest ice cream producers. They bought an Alfa-Laval system that transforms whole soybeans (using the Illinois method, without separation of okara) into soymilk, which they then spray dry and use to make a soy ice cream. "The samples of the ice cream and powder that they sent to Semper in Sweden were a total catastrophe."

Talk with Harry Whitford of Germany. 1990. May 19. Schoeller, a big dairy ice cream manufacturer, makes a cholesterol-free frozen bar with soymilk, fruit juices, and a mixture of vitamins. In Europe, especially Germany, there are a lot of popular non-soy fruit drinks containing 10-12 different fruit juices plus many vitamins and minerals. Schoeller sells the product at the Moewin-Pick, a big chain of restaurants & inns owned by some American hotel chain like Holiday Inn, which resemble Howard Johnson's in America. Moewin-Pick also makes their own brands of ice cream based on American classics. Schoeller makes these and they market them together under the brand Schoeller-Moewin-Pick. He bought one of these bars at a little shop/stand at Starnbergersee south of Munich and thought it tasted very good.

Letter (fax) from Harry Whitford. 1990. May 30. "I found the product yesterday and devoured two within 10 minutes while driving. Very good quality! I could only find one of the two flavors, sanddorn/sour-cherry, the other being coconut." He did an interview with Mrs. Manuela Pilz, head of marketing and distribution at Schoeller. Schoeller has been experimenting with soymilk as an ingredient for 4 years, conducting ongoing product research. They bought and installed an Alfa-Laval soymilk system in 1986. The product development for the Soja Frucht-Riegel lasted 1 year. They conducted a regional test market from May-Sept. 1989. Full distribution and marketing began on 1 March 1990.

Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soybase plant to this ice cream manufacturer in West Germany. It had a capacity of 3,000 liters/hour and began operation in 1985.

5678. Soyamilk Information Centre. 1989. Soyamilk makes sense. New Delhi, India: Soyamilk Information Centre. 17 p. 21 cm. [15 ref]

• ***Summary:*** This is a promotional booklet for Amrit Foods Ltd. printed with help from APV. Contents: Soyamilk makes sense. Soya bean–So nutritious, so versatile. Soya–The wonder bean. Dietary importance of soya milk. Nutritive and therapeutic values of soyamilk. Soya milk–The cholesterol lowering factor. References. Soya based products are taking the world by storm. APV supply largest soyamilk plant in

India. Contains color photos of the Amrit soyamilk plant, and packages of Golden Glow natural soyamilk in a paper box and in a can, Big Sipp soyamilk in foil pouches, and Soyum, a canned special infant food based on soyamilk.

A similar 32-page booklet, written in Hindi, with different photos, was published by Amrit Protein Foods at about the same time. Address: G-7, 9th Floor Himalaya House, 23, Kasturba Gandhi Marg, New Delhi–110001, India. Phone: 3711963.

5679. Tetra Pak Rausing S.A. 1989. Time series data on soymilk consumption in Europe and the USA: 1985-1988, fragments. Case Postale 181, CH-1009 Pully/Lusanne, Switzerland. Unpublished manuscript.

• ***Summary:*** The figures for each year given below are in millions of liters of soymilk consumed. The 1986 report has been lost. Each Year Tetra Pak International in Sweden sends out a questionnaire to each of its country offices. The above statistics are the responses to that questionnaire. Imports and exports and included. Figures based on orders to print packages are not released by Tetra Pak.

France: 1985 = NA. 1987 = 3. 1988 = 4
United Kingdom: 1985 = 6. 1987 = 30
USA: 1985 = 0.011721. 1987 = NA. 1988 = NA
West Germany: 1985 = NA. 1987 = 9. 1988 = 13.

5680. Mann, Oscar. 1989. Re: Problems in trying to introduce tofu to Kenya. Letter to William Shurtleff at Soyfoods Center, June 7. 2 p. Typed, with signature on letterhead.

• ***Summary:*** "I was making my own tofu for a while, then supplying friends and now a main deli/grocery in town. It's little known here but sales are steadily growing and are now at around 20 kg/week. I'm also producing soysage and have just begun okara Tempeh."

The main problems are: 1. Very strict government health regulations; all products must undergo strict government testing. 2. Poor quality soybeans and concern with aflatoxins on soybeans. "I have one person whose job it is to sit and sort soaked beans–particularly any that look moldy or infected in any way. We actually discard 20-30% of our raw stock... For some reason Kenya is having a hard time producing soy beans. The market has been low but their main problem is that the beans rot as soon as they are ready, necessitating 2 or even 3 pickings per day! Beans on the market currently come from Uganda or Tanzania and are old. I buy what I can (at around $0.50/lb) and there are never two loads the same which makes control and scientific methodology difficult." 3. Local coagulants are expensive. Lab grade calcium sulfate, the least expensive, costs $1.66/lb. So the cost of producing tofu is about $0.95/lb (with labor costing only $0.50/hour); it wholesales for $1.25 and retails for $1.66/lb. 4. Tofu and other soyfoods are not well known.

"I am holding a tofu-making class this coming week end and will have samples of tempeh and soysage to try. Next is a tofu cooking class, a small recipe book and a soya festival with one of the largest restaurants."

"My analysis of the situation soy-wise here is that probably the most accepted products will be flavored soy milk in tetra bricks, burgers, soysage, and dried frozen tofu for the various hunger and famine-relief projects. (I actually thought I had invented this stuff before finding it in your books. I use it as my main staple on safari and have given samples to trekking companies.) I would like to see a full-scale soy dairy in operation." Address: Kenya Natural Products Development Co., P.O. Box 20360, Nairobi, Kenya. Phone: 60099.

5681. Earthsave. 1989. How to win an argument with a meat eater (Ad). *New York Times.* June 18. p. B-39. National ed. Business section. Sunday.

• ***Summary:*** "The hunger argument: Number of people worldwide who will die as a result of malnutrition this year: 20 million. Number of people who could be adequately fed using the land freed if Americans reduced their intake of meat by 10%: 60 million. Percentage of corn grown in the U.S. eaten by people: 20. Percentage of corn grown in the U.S. eaten by livestock: 80. Percentage of oats grown in the U.S. eaten by livestock: 95. Percentage of protein wasted by cycling grain through livestock: 90. How frequently a child dies as a result of malnutrition: every 2.3 seconds. Pounds of potatoes that can be grown on an acre: 20,000. Pounds of beef produced on an acre: 165. Percentage of U.S. farmland devoted to beef production: 56. Pounds of grain and soybeans needed to produce a pound of edible flesh from feedlot beef: 16.

"The environmental argument: Cause of global warming: greenhouse effect. Primary cause of greenhouse effect: carbon dioxide emissions from fossil fuels. Fossil fuels needed to produce a meat-centered diet vs. a meat-free diet: 3 times more. Percentage of U.S. topsoil lost to date: 75. Percentage of U.S. topsoil loss directly related to livestock raising: 85. Number of acres of U.S. forest cleared for cropland to produce meat-centered diet: 260 million. Amount of meat imported to U.S. annually from Central and South America: 300,000,000 pounds. Percentage of Central American children under the age of five who are undernourished: 75. Area of tropical rainforest consumed in every quarter-pound of rainforest beef: 55 sq. ft. Current rate of species extinction due to destruction of tropical rainforests for meat grazing and other uses: 1,000 per year.

"The cancer argument: Increased risk of breast cancer for women who eat meat daily compared to less than once a week: 3.8 times. For women who eat eggs daily compared to once a week: 2.8 times. For women who eat butter and cheese 2-4 times a week: 3.25 times. Increased risk of fatal ovarian cancer for women who eat eggs 3 or more times a week vs. less than once a week: 3 times. Increased risk of

fatal prostate cancer for men who consume meat, cheese, eggs and milk daily vs. sparingly or not at all: 3.6 times.

"The cholesterol argument: Number of U.S. medical schools: 125. Number requiring a course in nutrition: 30. Nutrition training received by average U.S. physician during four years in medical school: 2.5 hours. Most common cause of death in the U.S.: heart attack. How frequently a heart attack kills in the U.S.: every 45 seconds. Average U.S. man's risk of death from heart attack: 50 percent. Risk of average U.S. man who eats no meat: 15 percent. Risk of average U.S. man who eats no meat, dairy or eggs: 4 percent. Amount you reduce risk of heart attack if you reduce consumption of meat, dairy and eggs by 10 percent: 9 percent. Amount you reduce risk if you reduce consumption by 50 percent: 45 percent. Amount you reduce risk if you eliminate meat, dairy and eggs from your diet: 90 percent. Average cholesterol level of people eating a meat-centered diet: 210 mg/dl. Chance of dying from heart disease if you are male and your blood cholesterol is 210 mg/dl: greater than 50 percent.

"The natural resources argument: User of more than half of all water used for all purposes in the U.S.: livestock production. Amount of water used in production of the average cow: sufficient to float a destroyer. Gallons to produce a pound of wheat: 25. Gallons to produce a pound of meat: 2,500. Years the world's known oil reserves would last if every human ate a meat-centered diet: 13. Years they would last if human beings no longer ate meat: 260. Calories of fossil fuel expended to get 1 calorie of protein from beef: 78. To get 1 calorie of protein from soybeans: 2. Percentage of all raw materials (base products of farming, forestry and mining, including fossil fuels) consumed by the U.S. that is devoted to the production of livestock: 33. Percentage of all raw materials consumed by the U.S. needed to produce a complete vegetarian diet: 2.

"The antibiotic argument: Percentage of U.S. antibiotics fed to livestock: 55. Percentage of staphylococci infections resistant to penicillin in 1960: 13. Percentage resistant in 1988: 91. Response of European Economic Community to routine feeding of antibiotics to livestock: ban. Response of U.S. meat and pharmaceutical industries to routine feeding of antibiotics to livestock: full and complete support.

"The pesticide argument: Common belief: U.S. Department of Agriculture protects our health through meat inspection. Reality: fewer than 1 out of every 250,000 slaughtered animals is tested for toxic chemical residues. Percentage of U.S. mother's milk containing significant levels of DDT: 99. Percentage of U.S. vegetarian mother's milk containing significant levels of DDT: 8. Contamination of breast milk, due to chlorinated hydrocarbon pesticides in animal products, found in meat-eating mothers vs. non-meat eating mothers: 35 times higher. Amount of Dieldrin ingested by the average breast-fed American infant: 9 times the permissible level.

"The ethical argument: Number of animals killed for meat per hour in the U.S.: 660,000. Occupation with highest turnover rate in U.S.: slaughterhouse worker. Occupation with highest rate of on-the-job injury in U.S.: slaughterhouse worker.

"The survival argument: Athlete to win Ironman Triathlon more than twice: Dave Scott (6 time winner). Food choices of Dave Scott: vegetarian. Largest meat eater that ever lived: Tyrannosaurus Rex." Address: Box 949, Felton, California 95018-0949.

5682. Bhat, Nirmala. 1989. Catch 'em young: Children are emerging as the single most promising buyer segment in the country. And advertisers have been quick to cash in on the trend. There has been a virtual deluge of advertisements aimed at children–on TV, on radio and in the print media. *Times of India* (*The*) (*Bombay*). June 24. p. A2.
• ***Summary:*** "But children can be very fastidious, and several 'me-too' products such as Favy noodles, Noble Soya's Great Shake tetrapack drinks [made of soya milk] and the Voltas soft drink concentrate Ju-C failed to catch their fancy."

5683. *SoyaScan Notes.* 1989. What are soybean saponins? Can they reduce human blood cholesterol levels? (Overview). June 28. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** *Webster's Dictionary* (1983) defines saponin (derived from the French *saponine,* which is from the Latin *sapon-, sapo* = soap, and first used in 1831) as "any of various mostly toxic glucosides that occur in plants (as soapwort or soapbark) and are characterized by the property of producing a soapy lather; esp: a hygroscopic amorphous saponin mixture used esp. as a foaming and emulsifying agent and detergent."

Thus it may be the saponins (carbohydrates, water soluble sugars) in the whey which is a by-product of the tofu-making process that causes that whey to foam.

Webster's Dictionary defines glucoside (a term first used in 1857) as a glycoside that yields glucose on hydrolysis. A glycoside (first used in 1930) is defined as "any of numerous sugar derivatives that contain a nonsugar group attached through an oxygen or nitrogen bond and that on hydrolysis yield a sugar (as glucose)."

Birk and Peri (1980, p. 161) state: "The saponins are glycosides that occur in a wide variety of plants. They are generally characterized by their bitter taste, foaming in aqueous solutions, and their ability to hemolyze [break down] red blood cells."

The earliest document seen (Jan. 2005) that mentions soybean saponins was published in 1931 by E. Walz in German. In early 1979 a team of Australian researchers (led by Potter, Topping, and Oakenfull) at the CSIRO Division of Human Nutrition in Adelaide found that the cholesterol-lowering effect of soybean products was attributable to the

presence of saponins rather than proteins or amino acids. Subsequent research by this group and others seemed to verify this hypothesis. Note that saponins impart an unpleasant, bitter taste to most soyfoods (e.g. tofu or soymilk) in which they are present.

In 1990 Japanese scientists from the Department of Food Chemistry at Tohoku University found that soybean saponins could control reproduction of the HIV virus which is associated with Acquired Immune Deficiency Syndrome or AIDS. These saponins showed inhibitory effects against HIV infection in vitro.

5684. Akwarius Almere. 1989. Akwarius prijs en bestelboek: Natuurvoedingsprodukten [Catalog and price list. April-June]. P.O. Box 50070, 1305 AL Almere, The Netherlands. 77 p. [Dut]

• ***Summary:*** Akwarius is a larger importer and distributor of natural food products. They have worked in this field since 1971, and have a strong interest in macrobiotic and anthroposophical foods. Contents (p. 2). Philosophy and function (p. 3). Beverages (p. 7): Sojamelk naturel and Bonsoy, Provamel Sojadrink (4 flavors in 500 ml and 4 flavors in 1 liter sizes), Provamel Soja dessert (puddings; 5 flavors in 125 gm and 1 flavor in 1050 gm).

Manna sweeteners (p. 12): Amasake drink in 350 and 700 gm sizes, and rice koji. Note that Akwarius imports and distributes large line of Manna-brand macrobiotic products from Muso in Japan. Manna vegetable protein products (p. 21): Dried tofu (non-organic). Bonsoy soymilk, Seitan, and three types of dried wheat gluten (fu). Manna Soy Sauces (Sojasausen, p. 21): shoyu (B = biological or organically grown, and NB = not biological, i.e. non-organic), and tamari (non-organic).

Witte Wonder (p. 22): Seitan, Tofu Spread (in paprika, garlic, celery, dill, mushroom, and pepper flavors, 220 gm sizes, all organic), Tofu in Sauces (peanut, curry-pineapple, and tomato flavors, 340 gm, organic), Tofunaise (plain and lemon flavors), Tofu Dressing (Italian, garden herbs, Mexican, and plain flavors).

Yakso (p. 23): Seitan, Tempeh Spreads (in Indonesian poesta and doeloe flavors), Temmo (round tempeh burger, deep fried then marinated, ¼ inch thick, sold 5 in a glass jar), Soyaroma (tempeh spread like butter), Sweet Indonesian-style soy sauce (Ketjap manis), Tofu Spreads (cream cheese consistency, in salsa, dill, green, shallot, and pommodore [apple?] flavors), Tofu Mayonnaise (Sojanaise), Smoked tofu (paprika, mushroom, and celery flavors in 170 gm wide mouth glass jars).

Akwarius soybeans and soybean meal/flour (p. 27-28, 35, organic). Manna Pasta (p. 28): Soya macaroni. Manna black soybeans from Hokkaido (p. 35; 350 gm, non-organic). Manna Tekka Condiment (p. 44), Manna soynuts (*Sojanootjes*, p. 45, 3 flavors). Lima soyadrink (p. 47).

Manna Miso (Sojapasta; p. 48): Brown rice miso (organic and non-organic), young rice miso (non-organic), barley miso (organic and non-organic), natto miso (non-organic), soybean miso (non-organic), instant miso soup (with and without fish, non-organic), instant miso soup with tofu. Manna sea vegetables (p. 49).

Note: This is the earliest Dutch-language document seen that mentions soynuts, which it calls *Sojanootjes*. Address: Almere, Netherlands. Phone: 03240-20800.

5685. **Product Name:** Soyum: Special Infant Food Based on Soyamilk (Spray Dried Powder).
Manufacturer's Name: Amrit Protein Foods Ltd.
Manufacturer's Address: Amrit Nagar, G.T. Road, Ghaziabad, Uttar Pradesh, 201 009, India. Phone: 91-118-714215 or 714216.
Date of Introduction: 1989. June.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable.
New Product–Documentation: Soyamilk Information Centre. 1989. Soyamilk makes sense. p. 17. Color photo of this product in its can. "Lactose free."

5686. **Product Name:** Vigo (Soymilk) [Cardamom, or Strawberry].
Manufacturer's Name: Amrit Protein Foods Ltd.
Manufacturer's Address: Amrit Nagar, G.T. Road, Ghaziabad, Uttar Pradesh, 201 009, India. Phone: 91-118-714215 or 714216.
Date of Introduction: 1989. June.
Wt/Vol., Packaging, Price: 200 ml aseptic 2-layer plastic Prepac Standi-Pack pouch.
Nutrition: 3.1% protein.
New Product–Documentation: Talk with Mahesh Khaitan, technical advisor to Amrit and nephew of Mr. N.K. Bajaj, the head of Amrit. 1989. July 31 and Aug. 6. This line of soft drink-type products was launched by Amrit in July. They have been a great success, especially the cardamom. The plant capacity is 6,000 liters/day and the company is now producing 4,000 liters/day of these 2 flavors. They plan to introduce a chocolate flavor soon. They decided to distinguish this brand from Big Sipp largely because of the packaging. Vigo is sold in a Standi Pack pouch made from a two-layered plastic film. A 10-day unrefrigerated shelf life is stated on the label, but it actually stays good for 4 weeks. It is sold only locally, within a radius of 200 km of the plant, which means mostly New Delhi. Moreover, Vigo contains 3.1% protein, versus 1.1% for the two existing Big Sipp flavors. Most stores sell the product unrefrigerated, but some sell it refrigerated so it is ready to drink. The company suggests that it be refrigerated before consumption.

Letter from A.K. Bajaj. 1991. June 26. Vigo flavoured soyamilk has been discontinued.

5687. **Product Name:** Golden Glow Natural Soyamilk

[Plain].
Manufacturer's Name: Amrit Protein Foods Ltd.
Manufacturer's Address: Amrit Nagar, G.T. Road, Ghaziabad, Uttar Pradesh, 201 009, India. Phone: 91-118-714215 or 714216.
Date of Introduction: 1989. June.
Ingredients: Water, soybeans, calcium lactate, sugar, vanilla [no salt].
Wt/Vol., Packaging, Price: 500 and 1,000 ml aseptic 2-layer laminated plastic Prepac Pillow-Pack.
How Stored: Shelf stable, 10-14 day shelf life. Refrigerate after opening.
Nutrition: Per 250 gm.: Proteins 7.5 gm, fats 4.25 gm (of which more than 60% are polyunsaturated fats), carbohydrates 7.85 gm, fibre 0.575 gm, calcium 128 mg, iron 4.6 mg, calories 100 Kcal (calories).
New Product–Documentation: Talk with Mahesh Khaitan, technical advisor to Amrit and nephew of Mr. N.K. Bajaj, the head of Amrit. 1989. July 31 and Aug. 6. They plan to introduce this product in Aug. 1989. Khaitan accidentally discovered that calcium lactate, added at a level of less than 0.2% by weight, masks any beany flavor, adds a nice milklike flavor, and of course adds calcium. Even if the product is boiled, no coagulation takes place. They also add 1 ppm of vanilla. They also add the calcium lactate to Vigo but the vanilla (20 ppm) only to Golden Glow.

Note: This is the earliest English-language document seen (Aug. 2013) that uses the term "milklike flavor" in connection with soyamilk.

In a blind, head-to-head taste test against Edensoy among managers of the company, Golden Glow won by a big margin. Most of the dairy milk in India is water buffaloe's milk, which is less expensive than cow's milk. In north India about 90% of all milk comes from water buffaloes and the remaining 10% from cows. In south and west India the proportions are about 55% and 45% respectively. Water buffaloe's milk contains 5.2% protein, 8.7% fat, and 210 mg of calcium, versus 3.1%, 3.5%, and 114 mg respectively for typical cow's milk (which contains 3.5% fat). In India, there are few large dairies which own many head of cattle. Most dairy cows are raised on small farms; they are not confined and are milked by hand. Golden Glow sells for about 80% the price of water buffaloe's milk. This is a plain, unflavored soymilk, made with the DTD soymilk base, not with soy protein isolates. The Pillow Pouch is not a stand-pack type. It is made of two layers of low-density polyethylene film. The product is targeted for use not mainly as a beverage but as a household food. Though the shelf-life at room temperature is given on the package as 10 days, tests show that it is still good after 30 days.

Golden Glow Soyamilk Cookbook. 1989. 16 p. A large color photo (p. 2) shows the product in its package.

Letter from A.K. Bajaj. 1991. June 26. Golden Glow natural soya milk is being marketed in the local markets with the help of the medical profession. In its formulation, the addition of vanilla has been discontinued. Note: Golden Glow is now also sold as a canned spray-dried powder. With his letter Mr. Bajaj also sent 4 leaflets promoting Golden Glow, 2 of them alone, 2 of them together with Big Sipp.

5688. Belleme, John. 1989. The soymilk face-off: Top brands differ widely in ingredients, nutrients, fat, and sugar. *East West*. June. p. 53-55, 58-59.
• ***Summary:*** Four brands of soymilk are now available in the USA: Edensoy (3 flavors), Vitasoy (4 flavors), Westsoy (6 flavors), and Sunsoy (2 flavors). Contains a nutritional analysis, ingredients, and other basic information about each product. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

5689. Benard, Marc. 1989. Celnat: La longue marche d'un entrepreneur Celnat: The long march of an entrepreneur [Robert Celle]. *Compas* (*Le*) (*France*) No. 46. p. 8-12. June. [Fre]
• ***Summary:*** This is an interview with the founder of Celnat, a company in Blavozy, France, that processes soybeans and sells soymilk and soymilk desserts. He became interested in macrobiotics in 1976. His family business, Les Moulins Celle, had existed on the banks of the Loire since 1834. His own business name comes from that of his family. It began operation in 1979. In 1988 it had a turnover of 22 million French francs, using only organically grown grains and oilseeds, including soybeans. Contains a detailed discussion of the company's equipment.

Organic certification organizations include (1) Unitrab = Union Nationale Interprofessionnelle de l'Agriculture Biologique. (2) Cinab = Comité Interprofessionnel National de l'Agriculture Biologique. (3) Nature et Progres.

5690. Brown, Peter J. 1989. Organic soybeans: Filling a farmer's need and a market demand. *Soya Newsletter* (*Bar Harbor, Maine*). May/June. p. 1, 3-6.
• ***Summary:*** A Soyatech survey indicates that nearly 11,000 acres of organic soybeans were planted last year, yielding 415,200 bu (24.9 million lb), or 38 bu/acre, and worth nearly $4 million. Some organic farmers feel these figures are too low. They estimate 30,000 acres, with yields averaging 50 bu/acre and a total value of $10-$15 million a year. No official statistics are available from USDA's Low Input/Sustainable Agriculture (LISA) research and education program, according to director Neill Schaller, largely because the market is so small. A summary of LISA's work and results is given. The states producing the largest amounts of organic soybeans are Iowa, Nebraska, Illinois, Indiana, and Minnesota. Most of these beans end up in tofu or soymilk. Soyatech estimates that 17.5% of the 74.8 million lb of soybeans used to make popular low-tech soyfoods for consumption in the USA in 1989 were organically grown,

and that 53% of this organic crop will end up in soyfoods. Many brokers could sell more if they had more. Dan Burke of Pacific Soybean and Grain in San Francisco notes that in the mid-1980s interest in organic soybeans began to decline, but it has risen during the past 18 months, and especially during the past 6 months. Minnesota has led the way in setting organic standards, which include a 3-year chemical-free requirement.

5691. Ishak, Soleha; Abdullah, Aminah. 1989. The use of soy milk in the preparation of corn starch pudding. *Malaysian Applied Biology* 18(1):53-58. June. [16 ref. Eng; mal]
• ***Summary:*** Tofu is the most widely consumed food in Malaysia. The four "most popular types of tofu in Malaysia are hard tofu (*tow kwa*), soft tofu (*tow foo*), fried tofu (*tow foo pok*), and sweet tofu (*tow foo fah*). Of these, only sweet tofu is served as a dessert. Calcium sulphate is traditionally used as a gelling agent [curding agent] in tofu." Yuba is known as *fucuk.* Address: Jabatan Sains Makanan dan Pemakanan, Fakulti Sains Hayat, Universiti Kebangsaan Malaysia, 43600 Bangi, Selangor, Malaysia.

5692. La Russo, Carol E. 1989. Almond ventures. Cortona, Italy: Grafiche Calosci. 75 p. No index. 28 cm. [104* ref]
• ***Summary:*** This book contains an excellent and well-documented history of the almond. The almond originated in the Middle-East, in the area around today's Turkey and Israel. The Persians grew to appreciate the almond's virtues and "passed onto the Arabs the particular value of almond meal–how, when soaked in water, the resulting liquid became a nutritious fluid when needed for mixing with other ingredients, but more importantly it was a very refreshing milk drink" (p. 14).

Almonds were grown in the Nile Valley in ancient times; they have been found in excavations of Egyptian Dynasty tombs, dating back to approximately 1450-1341 B.C. King Tutankhamun [Tutankhamen or Tutankhaten] reigned briefly in Egypt from 1361-1352 B.C. In his burial chamber, with his mummy, were found some thirty almonds, prized for their nutritional value even at this early date, and intended to help sustain this royal figure on his journey to join the Gods [see the book *Wonderful Things: The Discovery of Tutankhamun's Tomb,* by the Metropolitan Museum of Art].

The almond tree was widely grown in Egypt at the time that Moses was there [ca. 1500 B.C.]. When he received instructions to build a tabernacle in the desert and furnish it with holy vessels, it is written in *The Torah* that one of the items was to be a lampstand of beaten gold, ornamented with cups in the shape of almond blossoms.

The almond is mentioned frequently in the Old Testament Bible: Genesis (43:11), Exodus (25:31-40, 37:19), Numbers (17:8), Ecclesiastes (12:5), Jeremiah (1:11). Perhaps the best known of these is Numbers (17:8) which states (King James' Version): "And it came to pass, that on the morrow Moses went into the Tabernacle of witness; and behold, the rod of Aaron for the house of Levi was budded, and brought buds, and bloomed blossoms, and yielded almonds."

A Roman orator, politician, and philosopher, Marcus Cato (234-149 B.C.) advised: "... as for nuts, see that they are planted; the chestnut, filberts... and the almond" (E. Brehaut 1933).

The people of Renaissance England extracted milk from ground almonds and water. It was used as a thickener and a flavoring ingredient for other dishes, as well as a milklike beverage. A long quote from Boorde (1542) is given, with the source cited as Lorna Sass (1975, p. 116) (p. 16-17).

Page 61 notes that the almond is considered by botanists as not a true nut tree but a member of the stone-fruit tree family of plums, apricots, peaches, and cherries. Yet the almond's seed, or pit, is most often listed with nut crops.

Marzipan (p. 64) is the ultimate savory confection. Note: *Webster's Dictionary* (1998) states that the word marzipan (which was first used in English in 1542) comes to us through Greek, from the Italian *marzapane.* This confection made of crushed almonds or almond paste, sugar, and egg whites, is often shaped into various forms. However La Russo (based on Tannahill) believes that "marzipan" comes from the Arabic word *mawthaban.* Italians were familiar with marzipan by the 1570s when a banquet containing it was prepared for Pope Pius V. The five courses began with pieces of Marzipan and Marzipan balls. Address: Eugene, Oregon.

5693. Matsuura, M.; Obata, A.; Fukushima, D. 1989. Objectionable flavor of soy milk developed during the soaking of soybeans and its control. *J. of Food Science* 54(3):602-05. May/June. [23 ref]
• ***Summary:*** Beta-glucosidases, enzymes in soybeans, were found to be responsible for the production of daidzein and genistein from the isoflavone glucosides, daidzine and genistin, respectively, during the process of making soymilk. Address: Research & Development Div. of Kikkoman Corp., 399 Noda, Noda City, Chiba prefecture 278, Japan.

5694. **Product Name:** [Nestlé Bonus (Powdered 50:30 Blend of Cow's Milk and Soymilk)].
Foreign Name: Nestlé Bonus.
Manufacturer's Name: Nestlé (Mexico) Ltd.
Manufacturer's Address: Veracruz, Mexico.
Date of Introduction: 1989. June.
Ingredients: Cow's milk, soymilk.
How Stored: Shelf stable.
New Product–Documentation: Peter Golbitz. Trip report to Mexico City, Mexico, September 18-24, 1990 [for American Soybean Assoc. conference on soymilk and soy-based cheese products]. 1990. Oct. 8. "Nestlé is currently marketing a powdered milk drink called Bonus, which is a blend of

about 50:30, cow's milk to soymilk. The balance of the ingredients are sugars and added vegetable oil. The product is being priced just slightly lower than cow's milk but is being promoted as offering the best of both worlds. It has an upscale image with its bright and attractive packaging." Their soymilk plant in Veracruz currently operates only 5 days a month.

Soyafoods. 1992. 3(1):4. "Nestlé–a Bonus for Mexico." Nestlé is promoting the soya component of Bonus as a benefit and specifically as soya. A photo shows the can. Bonus was launched in June 1989 and originally sold for 5% less than the leading brand of powdered cow's milk; now it sells for 15% less. It is sold in 3 different sizes: 195 gm, 350 gm, and 1,000 gm. In 1990 sales of Bonus totalled 692 tonnes and 1991 sales are projected to be 1,500 tonnes.

5695. Thomas, R.; deMan, J.M.; deMan, L. 1989. Soymilk and tofu properties as influenced by soybean storage conditions. *J. of the American Oil Chemists' Society* 66(6):777-82. June. [14 ref]

• ***Summary:*** After soybeans have been stored for 8 months, the amount of protein extracted into soymilk decreases by about 14% compared with the initial extractability, whether the soybeans are stored at 20º or 30ºC, at relative humidities of 65% or 85%. Tofu made from soybean that were stored at 85% relative humidity became less uniform in microstructure near the end of the storage period. The volume of whey resulting as a by-product of the tofu increased with soybean storage time. Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

5696. Kessler, Helga. 1989. (K)ein Markt fuer die Milchimitate aus Soja? Im Ausland laufen die pflanzlichen Milkprodukte gut [Is there a market for imitation milks made from soya? Overseas, plant-based milk products are selling well]. *Badisches Zeitung* (*Germany*). July 10. p. 12. No. 155. Monday. [Ger]

• ***Summary:*** For about two months, imitation milk products have been sold in West Germany, but the officials are generally not aware of this. The EG laws say that such products (usually made from soya) can be sold legally in Europe. One of their main selling points is that they are free of cholesterol.

But they are not yet widely available, and are found mostly at natural food stores (*Bioladen*) and Reform Houses (*Reformhaeuser*). One is called "Sojamilch." Dairy people call it "Kunstmilch" (artificial milk), and say that it tastes pretty poor.

Since the middle of July a Soya Cocktail with Raspberries or Apricots (*Sojacocktail mit Himbeeren oder Aprikosen*) has been sold by Gottlieb-Filialen; the price is 4.29 German marks for a four-pack. It is an imitation yogurt made in France.

The leader in dairy alternatives is England. They have long spread margarine on their bread. In Sweden, for 20 years, "mixed fats" such as margarine has been sold, and in France since 1980.

No doubt, the foreign manufacturers will try to sell their products on the German market.

A photo shows two girls looking at the dairy case: One says, Look at this! Soyamilk (*Sojamilch*)*!*

5697. Perez Baez, Oswaldo. 1989. Re: New developments with soyfoods in Venezuela. Letter to William Shurtleff at Soyfoods Center, July 10. 3 p. Typed, with signature on letterhead. [Eng]

• ***Summary:*** "In my last visit to Caracas I contacted: Prof. Makie Kodaira and Prof. Amaury Martinez of the 'Instituto de Ciencia y Tecnología de Alimentos, Facultad de Ciencias, U.C.V.' (Universidad Central de Venezuela) who are very interested in offering a theoretical and practical course about soyfoods, using their pilot plant (the second of importance in Venezuela). Prof. Kodaira studied in Hiroshima, Japan in 1977 and she is a specialist on seafoods. They would like the 'Centro de Alimentos de soya de Venezuela' to organize this course.

"I think this is the time to offer in Venezuela a complete course about soyfoods and I have thought to invite you to come to Venezuela. I am thinking about 2 courses:

"(a) One oriented to Institutional level (Instituto Nacional de Nutrición, Fundación Polar, CIEPE, Universidades, Industry, etc.) for professional people. This course could be in Caracas, Instituto de Ciencia y Tecnología de Alimentos, U.C.V.

"(b) Another one oriented to the general public (not necessarily professional level). This course could be here in La Azulita which is a rural and beautiful place, epicenter of the Venezuelan movement for alternative lifestyles.

"I have thought of the following content for these courses: (1) Soymilk. (2) Tofu. (3) Tofu and soy milk ice cream. (4) Miso. (5) Tempeh. (6) Shoyu.

"I am working on a book about soyfoods, and am enclosing an outline of the contents: I. Introduction. II. Agronomic aspects. III. Soya and food security. IV. The most important soyfoods. V. Industrial potential of the soybean. VI. Bibliography. VII. Index." Address: Ing., Centro de Alimentos de Soya de Venezuela, Granja Tierra Nueva, Aldea San Luis, La Azulita, Estado Merida, C.P. 5102, Venezuela.

5698. Zodiac Consultants. 1989. Display ad: Project reports: Newly prepared, computer processed. *Times of India* (*The*) (*Bombay*). July 15. p. 18.

"Soya Milk & Paneer."

5699. Rumpff, Barbara; Rivera, Esther. 1989. Loma Linda Foods' infant formula line sold to N.V. Nutricia of the Netherlands. New company, La Loma Foods, soon to be sold (Interview). *SoyaScan Notes.* July 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Loma Linda Foods wanted to start marketing a cow's milk based infant formula, and they were discussing marketing a product made by Nutricia, a Dutch company, which already made Nutri-Soja and Nutri-Soja Plus, two soy-based infant formulas. Nutricia is the second largest infant formula company in Europe behind Nestlé and one of the world's largest companies in clinical nutrition.

In Feb. 1989 the tables were turned and Nutricia ended up buying Loma Linda's infant formula line (Soyalac) as well as both the Riverside and Mt. Vernon, Ohio food factories. Loma Linda decided to sell because of liabilities and stiff competition. Cornelius Rumpff came to head the Nutricia operation in Riverside. The General Conference (GC) of Seventh-day Adventists (the Church, which owns and operates Loma Linda Foods), spun off a new company named La Loma Foods, to market Loma Linda's food line (mostly meat analogs), which was to be made by Nutricia for 18 months until La Loma could build a new plant. But by July 1989 the GC had decided that instead of building a new plant (an expensive project), it would sell La Loma Foods and its food line. Bids would be open during the month of July. It was hoped that another Adventist company would buy the company; both Worthington Foods and Australia's Sanitarium Foods (which had managed Loma Linda Foods for 4-5 years and saved the company from going under) were expected to bid. The infant formula business had been roughly 75% of Loma Linda's total business. The takeover has been low key, not widely publicized. All the formulas and liquids had been made in Ohio. But at one time Loma Linda had made a decision to consolidate the two plants. The Mt. Vernon, Ohio, plant was shut down then reopened because the Riverside plant was not finished in time. Address: 1. Loma Linda Foods, Div. of Nutricia N.V., Riverside, California; 2. La Loma Foods, 12155 Magnolia Ave., Suite 9-B, Riverside, CA 92503. Phone: 714-351-4300 (LLF).

5700. *Adventist Review* (*Hagerstown, Maryland*). 1989. GC seeks buyer for La Loma Foods. July 20. p. 6 (p. 758).
• ***Summary:*** "Less than 5 months after the General Conference (GC) sold Loma Linda Foods' (LLF) Infant Formula Division, the GC is now receiving purchase offers for the newly formed meat analogues and soy milk producer–La Loma Foods."

"In May, Worthington Foods, Inc., of Worthington, Ohio, an independent meat analogues producer owned by Adventist businessmen, proposed to purchase La Loma Foods. The multimillion-dollar offer calls for an up-front payment for the assets and an annual royalty payment based on a percentage of sales to Adventist customers over 10 years. If La Loma is sold to Worthington, the La Loma name would be discontinued and all production would be consolidated at Worthington's new plants, currently under construction in Zanesville, OH.

"On June 30 the GC Executive Committee, after a lengthy discussion, decided by a 28 to 19 vote that La Loma Foods should be offered for sale... 'At least 3 other groups are interested in making proposals,' says William Murrill, GC undertreasurer and La Loma Foods board chairman."

"The former meat analogues and soy milk division generated between $8 and $9 million in sales for 1988, or approximately 40% of combined sales."

5701. May, Lucy. 1989. The truth about tofu: Cooking with it is just becoming a matter of taste. *Times* (*St. Petersburg, Florida*). July 27. p. 1D, 3D.
• ***Summary:*** John and Marcia Miller, self-described former hippies, started Marjon Specialty Foods in 1972. John, 49 is president, and Marcia, 46, is vice president of the company (located in Plant City, Florida), which produces [mung] bean sprouts, alfalfa sprouts, ginger root, all-natural salad dressing, and tofu. The tofu is sold in water-packed and vacuum-packed blocks. They have also developed Tofu Crumbles–which resembles ground beef or hamburger.

Don Young is owner of the 11-year-old Lecanto Tofu Shop in Lake Butler, Florida. He sells tofu and soymilk.

5703. Blix, Glen. 1989. Preparation and use of dry soy products and nutritional beverages. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 234-36.
• ***Summary:*** "In modern times, the dairy industry has pioneered the techniques of beverage drying. First with drum driers and more recently with spray drying technology." A pioneer in the production of commercial soymilk was Dr. Harry Miller. In the mid-1930s his soy dairy delivered soymilk to customers in Shanghai, China. World War II necessitated his return to the USA, where he set up a soymilk plant in Ohio. "Spray drying equipment was added to the

plant in the late 1940's. This produced a product definitely superior to those other experimenters had obtained using soy flour. In the United States, both liquid and powdered soy milks still are being produced using methods which differ little from those originated by Miller...

"In the United States approximately 25% of the 1.1 billion dollar infant formula market is comprised of soy-based products. Of this amount over 17% is in the powdered form. These numbers indicate that soy milk is being utilized by many infants who do not require it to combat allergy since only 7% to 10% of all infants fall into this category... Infants raised on soy milk formulas often find it difficult to make a later transition to cow milk, and thus either refuse to use milk (placing them at nutritional risk) or demand an adult soy beverage substitute. This fact, coupled with a multitude of other factors, has contributed to a proliferation of soy beverages in recent years...

"The market for an adult soy beverage in the United States is difficult to determine but best estimates indicate that it approached 8 million liters in 1987. The bulk of this amount was made up of aseptically packaged ready to drink milk (7.2 million liters) with the balance comprised of reconstitutable powder."

The high fat content of powdered soymilk can lead to problems with oxidation and the resulting off-flavors. Vitamins C, E, and A can be added as antioxidants. Vitamin A should be used with a nitrogen flush to greatly reduce its decline over time.

The most familiar soy powder product is soy isolate. In 1983 the American Soybean Assoc. estimated that 80 million lb of isolate were produced in the USA, and projected that by 1987 usage of isolates would reach 100 million lb. Those projections have proven to be too optimistic. Address: School of Public Health, Loma Linda Univ., Loma Linda, California.

5704. Business Trend Analysts, Inc. 1989. The health and natural food market: A product-by-product marketing analysis and competitor profile. 2171 Jericho Turnpike #342, Commack, NY 11725. 280 p. Price $950.00. *

• ***Summary:*** Section 6 of this report is titled "The Market for Soyfoods" (24 pages). It projects 6.2% growth for the soyfoods industry, and contains the following (much of it provided by Soyatech, Inc. and Soyfoods Center): Analysis and summary. Manufacturers' sales of soyfoods. Manufacturers' sales of soyfoods to major outlets. Manufacturers' sales of soyfoods, by type of outlet. The top six soymilk producers in the U.S. U.S. per capita consumption of soymilk. Retail sales of soyfoods. Retail sales of soyfoods at major outlets. Retail sales of soyfoods, by type of outlet. Graph: Product mix of U.S. soyfood sales. Estimated mix of distribution channels used to market various soyfoods. U.S. soybean production. Characteristics of women's use of soy sauce. Quick Tamari tips. Selected 1988/89 new product introductions: Soyfoods.

Under "Report Highlights and Special Features" we read: "Soyfoods continue to gain popularity with mainstream consumers, as sales are expected to top the $380 million mark, at the wholesale level, by year-end. At the retail level, sales of tofu alone are currently pegged at $77 million, with supermarkets capturing close to 60% of dollar volume."

Overall report Contents: 1. Executive summary. 2. The overall market for health and natural foods (including Soyfoods 1979-1988, with forecast to 1998). 3. The market for health and natural dairy foods. 4. The market for health and natural grocery products. 5. The market for health and natural snack food products. 6. The market for soyfoods. 7. The market for health and natural grains and cereals. 8. The market for health and natural frozen foods. 9. The market for herbal products. 10. Distribution channels. 11. Factors affecting demand. 12. Trends in organic farming. 13. Competitor profiles: Alta-Dena Certified Dairy, Arrowhead Mills, Barbara's Bakery, Celestial Seasonings, Golden Temple, San-J International, Thompson Kitchens. Tivall U.S.A./Garden Gourmet, U.S. Mills (partial list). 14. Directory of more than 200 health and natural food producers. Address: Commack, New York. Phone: 516-462-2410.

5705. Canto, Wilson L.; Turatti, J.M. 1989. Production and markets for soy protein industrial ingredients in Brazil. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 560-63. [3 ref]

• ***Summary:*** Contents: Abstract. Introduction. Results: Producers, industrial users. Discussion. Acknowledgments.

"There are four soy protein derivatives (SPD) producers in Brazil: Samrig S.A., factory located in Esteio-RS; Olvebra, factory in Guaíba-RS; Noval, factory in Guaíba-RS; and Nutrimental, through its filial Energe, located in Guaramirim-SC.

"Samring produces defatted soy flour, 30 types of textured flours of different colours and granulation, and five types of isolates and concentrates with distinct functional properties. Samrig is the only industrial producer of isolates in Brazil and its products are marketed under the brand Maxten, Escol, Proteinmax, Alipro and Samprosoy.

"Olvebra produces defatted soy flour, powdered soy milk and its residue, textured flour and others. They are sold under the brand names Provesol and Novomilk. The products of Noval are: pre-cooked full fat soy flour, powdered soy milk and its residue, whole soy flakes, and others. Nutrimental produces defatted soy flour, the base of its textured products, sold under the brand name Energe."

Brazilian production of SPD was 80,000 tons in 1985; 75% of this amount (60,000 tons) was textured soy flour, followed by powdered soy milk. The largest producer was

Samrig, followed by Olvebra.

There are also 3 manufacturers of HVP in Brazil: Nestlé (50% of total), Laboratórios Griffith do Brasil (40%), and Indústrias Reunidas Jaraguá do Sul (branch Duas Rodas) (10%). The HVP is made from mixture of defatted, protein-rich meals obtained from soy, groundnut, cottonseed, wheat germ, corn gluten, etc.

The most important users of SPD in Brazil are the makers of enriched foods for institutional markets, and the meat industry. The main institutional market is the school feeding program, coordinated by FAE (Student Assistance Foundation), which operates under the Brazilian Ministry of Education and Culture. This program is large and increasing, including 32.5 million children who consumed approximately 5,800 million meals in 1987.

5706. Chen, Steve. 1989. Preparation of fluid soymilk. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 341-52. Contains 8 tables and 9 diagrams. [41 ref]

• ***Summary:*** Contents: Development & history of soymilk (based on *Soymilk Industry and Market* by Shurtleff & Aoyagi). Problems of soymilk production: beany flavor, trypsin inhibitors, flatulence factors. Basic steps in soymilk production. Methods of soymilk production. Yields of soymilk: Typically 70-80% of the protein and 55-60% of the solids from soybeans are recovered in the soymilk. Soymilk standards and quality control. Cost and price of soymilk production. Soymilk utilization and types. Nutrition of soymilk. A photo shows Steve Chen. Address: American Soybean Assoc., P.O. Box 3512, Taipei, Taiwan ROC 10099.

5707. Eriksen, Svend. 1989. Enzyme use in the food industry with potential applications to vegetable protein utilization in human foods. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 503-06. [22 ref]

• ***Summary:*** Contents: Abstract. Introduction. Enzyme technology. Nutritional ingredients: Protein hydrolyzates for general nutrition, protein hydrolyzates for clinical use, protein allergenicity. Functional ingredients. Discussion.

"In the vegetable protein industry the use of proteolytic enzymes for protein modification serves mainly two purposes: (a) in the production of functional ingredients, e.g. whipping agents, and (b) as nutritional ingredients for application in certain medical foods. In the area of enteral nutrition, where elemental diets are required for medical reasons, the use of enzymatic protein hydrolyzates from soy is a real possibility that is economically attractive to the current practice of using amino acid mixtures... As processing aids, enzymes have potential in the vegetable protein industry, for example, in the soy milk industry as a yield improver or in the manufacture of acidified or cultured milk-like drinks from soy...

"In the protein industry to date, hydrolyzates are the only enzyme derived products of commercial interest. Protein hydrolyzates have been used as food ingredients for over 70 years and since the 1940's the production of soy-based whipping agents has been an established technology." A photo shows Svend Eriksen. Address: Food Ingredients Team, Novo Industri A/S, DK 2880 Bagsværd, Denmark.

• ***Summary:*** Contents: Abstract. Introduction. Variables in manufacturing tofu: Soybean variable, processing variable, maceration and extraction (soaking and grinding) stages, filtration and heating stages, coagulation stages, types and concentration of coagulants used in tofu manufacturing. Tofu products.

Tables: (1) Chinese nonfermented soy food products. Five columns show: Food items, Chinese names, organisms used, description, uses. The soy foods are: Fresh green soybeans (*mao-tou*). Toasted soy powder (*tou-fen*) (Description: "Ground toasted dry soybeans, nutty flavor"). Soy sprouts (*huang-tou-ya*). Soy milk (*tou-chiang*). Soy milk film / yuba (*tou-fu-pi*). Soybean curd (*tou-fu*).

(2) Chinese fermented soy food products. Five columns (same as table 1) The soy foods are: Fermented whole soybeans (*tou-shih*). Soy sauce (*chiang-yu*). Soy paste (*chiang*). Fermented tofu (*so-fu* [*sic*]). Actinomucor or Mucor molds are used. Description: Creamy cheese, mild flavor, salty. Uses: Relish, also cooked with meat or vegetable.

(3) 1987 consumption of soybeans as foods in Asian countries. The results are presented here in descending order of per capita consumption: Per capita soybean consumption, country (population), total soybean consumption in 1,000 tonnes. 13.3 kg/capita, Taiwan (19.6 million), 260,000 tonnes. 9.3 kg/capita, Japan (122.2 million), 1,141,000 tonnes. 9.0 kg/capita, Indonesia (175 million), 1,575,000 tonnes. 7.8 kg/capita, South Korea (42.1 million), 330,000 tonnes. 7.7 kg/capita, Singapore (2.6 million), 20,000 tonnes. 6.9 kg/capita, China (1,062 million), 7,325,000 tonnes. 3.4 kg/capita, Malaysia (55 million), 55,000 tonnes. 2.2 kg/capita, Thailand (53.6 million), 118,000 tonnes. 0.3 kg/capita, Philippines (61.5 million), 18,000 tonnes. (4) Nutritional composition of traditional nonfermented

foods: Fresh green soybeans, toasted soy powder, soy sprouts–raw, soy milk, soy milk film / yuba, tofu (Source: *Food Composition Table for Use in East Asia,* 1978). (5) Nutritional composition of traditional fermented foods: Fermented soybeans [tou-shih], soy sauce, soy paste [doujiang], fermented tofu (Source *Food Composition Table for Use in East Asia,* 1978).

In China, fried tofu is called Tou-Pok. Address: American Soybean Assoc., 541 Orchard Rd., #11-03 Liat Towers, Singapore 0923, Republic of Singapore.

5709. Kim, Seung Ho; Kwon, Tai-Wan. 1989. Vegetable protein foods in Korea. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 439-42.

• ***Summary:*** Contents: Abstract. Introduction. Situation of traditional protein foods. Situation of vegetable proteins. Traditional protein foods in Korea: Soy sauce (*kan jang*), hot soy paste (*ko chu jang*), *chung kuk jang* (a kind of soy paste made by mixing natto [*naap doo*] with seasonings [salt, red pepper, and garlic], and grinding then aging the mixture), soybean sprouts (*kong na mool*).

Note: This is the earliest English-language document seen (March 2009) that uses the term "ko chu jang" to refer to Korean-style red pepper and soybean paste (miso).

Note 2. This is the earliest English-language document seen (Jan. 2012) that uses the term "chung kuk jang" to refer to Korean-style natto.

Tables: (1) Domestic Korean production and import of soybeans from 1982 to 1987. Domestic production rose to 250,000 tonnes from 233,000 tonnes. Imports for food uses rose to 144,000 tonnes from 104,000 tonnes. Imports for feed uses rose to 936,000 tonnes from 479,000 tonnes. Total supply rose to 1,330 tonnes from 816 tonnes, up 63% in 5 years.

(2) Consumption of soybeans in traditional Korean foods, in 1,000 metric tons, from 1982 to 1987 (1982/1987). Figures in parentheses are for home production. Soy sauce (*kan jang*) 69(50)/70(51). Soy paste (*doen jang* [Korean soybean miso]) 51(41)/50(40). Hot soy paste (*ko chu jang*) 5(4)/5(4). Soybean curd (*doo bu*) 60/114. Soy milk (*doo yoo*) 7/14. Others: Homemade soybean curd and soy milk, *chung kuk jang, choon jang* (kinds of soy paste), soybean sprouts (*kong na mool*), and whole soybeans 145/141. Total 337/394, or an increase of 19.9% in 5 years.

Note: This is the earliest English-language document seen (March 2009) that uses the term "choon jang" to refer to Korean-style soybean paste (miso).

(3) Domestic production and import of soybeans in Korea (Estimated for 1987, in metric tons): Soy protein–Textured vegetable protein (domestically made) 4,500. Soy protein isolate (import) 1,800. Soy protein concentrate (import) 150. Wheat protein–Textured vegetable protein (domestic) 900. Vital gluten (domestic) 150. Gluten (wet & dry) (import) 409. Total 7,909.

(4) Nutritional composition of soybeans and soybeans sprouts (per 100 gm).

Figures show: (1) Manufacturing method for rice hot soy paste (*ko chu jang*) (flow sheet). Numbers represent typical ratio of ingredients in volume. (2) Manufacturing method for chunk kuk jang (a type of soy paste) (flow sheet). Numbers represent typical ratio of ingredients in volume.

A photo shows one of the authors. Address: Korea Food Research Inst., P.O. Box 131, Chongryang, Seoul, South Korea.

5710. Natufood B.V. 1989. Prijs-bestelboek [Natufood price list and catalog, July-Sept. 1989]. Fahrenheitstraat 18, 3840 BN Harderwijk, Netherlands. 73+ p. [Dut]

• ***Summary:*** This catalog of a Dutch natural foods distributor lists the farming method (organic or not), wholesale and retail prices for each product: Page 8: Witte Wonder tofu spreads (mushroom, chili, green peppercorn, garlic, paprika, celery), Lima Limapast contains sunflower seeds, miso, and soy flour. Page 30. Joannusmolen roasted soy flour.

\ Note. This is the earliest English-language document seen (Nov. 2012) that contains the term "roasted soy flour."

Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 204-12. Contains 5 tables, 1 graph, and 2 pictures. [105 ref]

• ***Summary:*** Contents: Abstract. Introduction. Soy proteins as antigens. *In vitro* studies of soy antigenicity. Soy intolerance in the pre-ruminant calf. Post-weaning diarrhea in the piglet. Soy protein allergy in humans. Antigen activity of soy-containing foods. Effect of processing. Acknowledgements.

The way that soybeans are processed can affect allergenicity. Therefore the use of different soy products among studies may contribute to conflicting results. Even different brands of the same product, such as soymilk, can produce markedly different results. Address: Aarhus Oliefabrik A/S, P.O. Box 50 DK-8100 Aarhus C, Denmark.

5712. Taniguchi, Hitoshi. 1989. Novel traditional and manufactured soy foods in Japan. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 444-48.

• ***Summary:*** Contents: Abstract. Introduction. New soy processed materials in soy bean consumption. Contemporary soy food products. Classification of new soy protein products in Japan. Utilization and popularization of new soy protein products: Soy protein isolate, textured soy protein.

"In Japan, the classification of new soy protein products is based on the form of the products; the new soy protein products are classified into three groups, namely, powdered soy protein, granular soy protein and fibrous protein, and it is required that labeling of each product shall bear a protein content statement in 5% steps." Address: Fuji Oil Co. Ltd., 1-sumiyoshi-cho, Izumissano-shi, Osaka FU 590, Japan.

5713. Vitasoy (USA) Inc. 1989. Soymilk users love Vitasoy. Here's why... (Ad). *Vegetarian Times.* July. p. 16.

• ***Summary:*** This half-page color ad shows 4 cartons of Vitasoy soymilk (Creamy Original, Rich Chocolate, Carob Supreme, Vanilla Delite) plus excerpts of letters from satisfied users. Address: San Francisco, California 94107.

5714. Stanton, Russ. 1989. Adventists seek buyer for La Loma Foods. *Press-Enterprise* (*Riverside, California*). Aug. 1, Tuesday. [1 ref]

• ***Summary:*** "The owner of La Loma Foods Inc. [The General Conference of Seventh-day Adventist] has decided to sell the Riverside [California]-based maker of meat substitutes and other health food products after receiving an unsolicited offer for the company from its largest competitor... The move comes about 2 months after Ohio-based Worthington Foods Inc. made an undisclosed offer for La Loma. Worthington, which sells its products under the Morningstar Farms and Worthington labels, is the nation's largest maker of meat substitutes and other health food products."

"La Loma, which has about 70 employees, has seen sales improve 15 to 20% this year, [company president Alejo] Pizarro said. The non-meat business had 1988 revenue of about $9 million. Pizarro said the church was hoping La Loma will fetch around $10 million."

"The church sold La Loma's parent, Loma Linda Foods Inc., to a Dutch company last Feb. In the interim, N.V. Verenigde Bedrijven Nutricia (United Nutrition Cos.) has allowed La Loma to continue making its more than 70 non-meat products at the La Sierra area plant. Nutricia purchased Loma Linda Foods for its soybean-based infant formula operations."

5715. Khaitan, Mahesh. 1989. Introduction to Amrit Banaspati Co., Ltd. (Interview). *SoyaScan Notes.* Aug. 6.

• ***Summary:*** Ghaziabad-based Amrit Banaspati Co. Ltd. (ABC for short) was founded in 1940 Mr. G.L. Bajaj (N.K. Bajaj's father) and Mr. D.P. Khaitan as a manufacturer of vanaspati. Production began in 1941. Mr. T.P. Khaitan joined the firm in 1941 and was the key man thereafter until he died in 1988.

The company is publicly owned and issues annual reports. Naresh Kumar Bajaj, who is Mahesh's uncle, is Chairman of the Amrit group (1987-88 annualised turnover:

Rs 2,000 million), and the key man behind the decision to launch soymilk. The flagship company ABC's range of successful consumer products includes Gagan vanaspati, Ginni refined oil (the company refines mostly peanut and cottonseed oil), Uncle Chipps' chips, and Alfa washing soap. An estimated 90% of all soy oil used in India (both domestically produced and imported) goes into vanaspati. 2-3% is used in paints, and the rest is refined and sold as vegetable oil. Amrit does not presently refine soy oil. Address: Technical Advisor, Amrit Banaspati Co., G.T. Road, Ghaziabad, India.

5716. Nordquist, Ted. 1989. Recent developments with soyfoods in Sweden (Interview). *SoyaScan Notes.* Aug. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ted's basic work has been to determine the usefulness of and find applications for a soy base (condensed or concentrated soymilk) as a substitute for dairy products. Recently he has been working mostly on a vanilla soy ice cream with a man named Bo Funeteg, head of the ice cream and margarine division of Karlshamn, which makes ice cream for Konsum. There are two major food outlets and distributors in Sweden: (1) Konsum is like Safeway, but it is a co-op (owned partially by all its members) and the largest distributor in Sweden. (2) ICA is 99% owned by each of its individual stores, and 1% is owned centrally. No soy products are yet on the market but the ice cream would be produced by Vinner (in the town of Karlshamn), a division of Karlshamn Oliefabrik (a private company with yearly gross sales of 3,000 to 4,000 million Swedish crowns), and private labeled for Konsum. The name of the ice cream has not yet been decided, nor is the launch date. A 40-person taste panel test gave the vanilla soy ice cream a score of 7.5 on a scale of 1-10.

"We are basically involved in the question 'Can soya be used as a substitute for milk products, and if so, in what way and what are the economics of it.' No one is questioning soya as a future product. Even if the soy ice cream got a grade of 10, Arla (Sweden's largest milk company, owned by Swedish farmers) would have to decide what to do with it. Karlshamn buys all of its dairy products from Arla and Arla buys all of its oils and fats from Karlshamn. Let's say that we could produce a substitute for dairy milk at one-third of the cost. It could become a political question. Arla might ask the Swedish government to put an extra tariff on the import of whole soybeans. It also relates to the larger question of Sweden joining the Common Market." Address: Aros Sojaprodukter, Orsundsbro, Sweden. Phone: 0171-604 56.

5717. Laboyrie, David. 1989. The Australian soymilk market and Australian Natural Foods Holdings Ltd. (Interview). *SoyaScan Notes.* Aug. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Approximately 8 million liters/year of soymilk are presently sold in Australia. His company, Australian Natural Foods, has 3 basic soymilk products. The first, sold to the health food market, is Aussie Soy, which was launched in June 1987 and now has about 60% of the health food market, around 2 million liters a year. It is in a Tetra Pack container. The other two (Excel and VitaFresh) are designed as milk alternatives, and are fortified with vitamins and calcium. But after about 3 months, calcium fortification (with calcium phosphate and calcium chloride) has an definite undesirable thinning effect on most of the soymilk with the formation of a thick layer of sediment settling to the bottom. They sell through supermarkets, and have a much smaller market share. Sanitarium Foods dominates that market, producing about 100,000 liters/week, or 5.2 million liters/year. David's company makes their soymilk from whole soybeans rather than isolates, and promotes it as such.

Excel was originally launched in Aug. 1987 as a fresh product but it was discontinued in June 1988 due to distribution problems and short shelf life. It is now sold in supermarkets in a UHT pack in plain flavor only. They also make another product (similar to Excel) under another brand for another company. It is called VitaFresh. It has the same settling problem. The existing formula does not contain tri-polyphosphate. They think there is still a big market for fresh soymilk in Australia, but they need either a dairy distributor or a 28-day shelf life. Address: Australian Natural Foods Holdings Ltd., 80 Box Rd., Taren Point, NSW 2229 Australia. Phone: 02-526-2555.

5718. Roth, Martin. 1989. Early history of Great Eastern Sun and subsequent work with soyfoods (Interview). *SoyaScan Notes.* Aug. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Other records describe in detail Martin's pioneering work with commercial production of Brown Rice & Tofu Sandwiches, Sweet White Miso, Amasake, Amasake Shakes, and America's first Amasake Ice Cream. In 1982 he and his very close friend Barbara Svenning Garvey (they were never officially married) moved from Boulder, Colorado, to Miami, Florida, then to North Carolina. Martin met Barry Evens in Florida and Barry commissioned Martin to go to North Carolina and set up a macrobiotic distribution and import company near the American Miso Co., of which Barry was then the principal owner. "The beginning of that company was a wonderful experience. Everybody was thrilled. We were the first ones to actually take a full line of Japanese foods and present it to the health food stores in a big way. At that time Erewhon still had a much more limited selection of Japanese imports, such as miso, tamari, soba, etc. We had only imports, 200 to 300 esoteric items that many people never heard. We put together a nationwide sales force and went store to store, introducing the concept of a macrobiotic section. We put that on the map. We had great success, opening hundreds of accounts. I left in about

1984 because I got an opportunity to work for Westbrae as sales and marketing manager, and North Carolina was not my favorite place to live." Martin developed the concept, the name, and the graphics for the Westbrae Malteds and for Mitoku's Supersoy. Address: Berkeley, California. Phone: 415-527-7066.

5719. Chandra, Ranjit Kumar; Singh, G.; Shridhara, B. 1989. Effect of feeding whey hydrolysate, soy and conventional cow milk formulas on incidence of atopic disease in high risk infants. *Annals of Allergy* 63(2):102-06. Aug. [26 ref]
• ***Summary:*** Some of the infants were fed Similac or Isomil infant formulas. "It is concluded that exclusive breast feeding for more than 4 months is partially protective against the development of atopic disease among high risk infants. Among those not breast-fed, feeding a milk/whey hydrolysate formula to infants at high risk because of history of atopy among first-degree relatives reduces the incidence of atopic disease and this approach is significantly beneficial compared with breast feeding without maternal dietary restriction or feeding a soy-based formula." Address: Dep. of Pediatrics, Memorial Univ. of Newfoundland, and the Immunology Lab., Janeway Child Health Centre, St. John's Newfoundland, Canada.

5720. Golbitz, Peter. 1989. State of Maine bans aseptic packaging: Law will prohibit sales of aseptic soymilk. *Soya Newsletter* (*Bar Harbor, Maine*). July/Aug. p. 1-3. [1 ref]
• ***Summary:*** Maine's new landmark solid waste bill, L.D. 1431, which goes into effect on 1 Sept. 1990, prohibits the sale of all aseptically packaged beverages and of any other beverage container that cannot be recycled. In section 8. MRSA 1868 titled "Prohibition on certain types of containers and holders, the bill states, 'No beverage may be sold or offered for sale to consumers in this State... In a container composed of aseptic packaging composed of aluminum, paper, and plastic in combination, where those materials are for practical reasons inseparable and commonly referred to as a 'brick-pack.'" Exempted from this legislation are "milk and dairy-derived products," whose containers need not be recyclable nor carry a deposit. The bill hopes to reduce Maine's solid waste by 50% by 1994. Many health food stores in Maine reported that aseptically packaged soymilk is one of their ten best-selling products. The only soymilk presently available in the state is aseptically packaged. It is estimated that far less than 1% of all Tetra Pak cartons sold in Maine contain soymilk. Many other states are now in the process of drafting similar bills for reducing solid wastes. If they follow Maine's policies on aseptic packaging, it could be a major blow for soymilk (and Mori-Nu Tofu) in America. "As Maine goes, so goes the nation." Address: Soyatech, Bar Harbor, Maine.

5721. Soyfoods Association of America. 1989. Complimentary buyers guide to Soyfoods Pavilion: Natural Foods Expo '89 East, Philadelphia, Pennsylvania, September 22-24, 1989 (Portfolio). Bar Harbor, Maine. 10 p. 28 cm.
• ***Summary:*** The Soyfoods Pavilion was organized by Gary Barat. The 1st page of this stapled portfolio is a leaflet (8½ by 11 inches, single sided, printed blue and red on white) announces the Pavilion. It states: Expo '89 East Pavilion Members: Book Publishing Co., Farm Foods, Great Eastern Sun, Lee Seed Company, Inc. [soynuts], Legume / Richter Bros., Lightlife Foods, Inc., Morinaga Nutritional Foods, Nasoya Foods, Ltd., Vitasoy (U.S.A.) Inc. Leaflets from most of these companies are stapled to the top Pavilion leaflet. Address: 318 Maine St., Bar Harbor, Maine 04609. Phone: 207-288-9419.

5722. Rose, Richard. 1989. Re: Impressions of Natural Products Expo East at Philadelphia. Letter to William Shurtleff at Soyfoods Center, Sept. 27. 1 p. Typed, with signature.
• ***Summary:*** "Dear Bill: Enclosed are the things I got from the [Natural Products] Expo East show in Philadelphia [held 23-24 Sept. 1989]. Finally the industry is awakening to soyfoods, more so than at previous shows. There were many more soyfoods there, and many more soyfoods companies, including some smaller ones (Ithaca, Spring Creek, SoyBoy). Jofu had a booth, but Galaxy Cheese and Tofutti did not.

"There were several interesting new soy products, and from talking to manufacturers I believe there will be many more in the next year.

"The Soyfoods Pavilion was at the rear of the hall, on one small part of a row in the corner, and sold only about 8 or 10 booths. K.S. Lo was at Vitasoy's booth on Sunday. I did not go to the SAA meeting (which was open to the public) or the Standards seminar. Apparently there were only about 25 people attending the seminar, and there is some disagreement within the SAA about the standards.

"I met and talked with Joel Schumann and his partner Lynn at the show.

"Peter Golbitz, his wife, Leslie Harlow, the Pirellos, John Paino, Dan Burke, Joel, Lynn, and I went to dinner Saturday night, then (except Dan) to a classic neighborhood bar / restaurant that had a trio with a mean age of 70 playing rock and roll and standards. It was very funny.

"Harlow is the Executive Director of SAA. She seems fairly competent, but has no industry experience. Her last business was a restaurant that ended in bankruptcy. She asked me to go to the SAA meeting and to 'not alienate [myself] from the SAA.'

"Mori-Nu introduced an 'extra firm' tofu, actually about 8% protein, I think. Pacific Soyfoods' soymilk tasted beany and not very pleasant. A small Chinese company (Sun Foods Inc, 87 Pelham Avenue, Toronto ONT M6N lA5 Canada, phone 416-658-6668, Harry H.K. Ha is President) displayed a very interesting product. It had the texture and consistency

of an egg product, such as fritatta, but was free of eggs, and is mung bean-based. It also contains soybeans and is called SunPatty (Mung Bean Patties), just sold as pancakes about 7 inches diameter. I am excited about this development. Lee Soynuts had a booth. Tony [Plotkin of Grainaissance] had his aseptic amasake there and I feel it is better tasting than the fresh product.

Sincerely, Richard. Address: Rose International, P.O. Box 5020, Santa Rosa, CA 95402-5020.

5723. *Adventist Review* (*Hagerstown, Maryland*). 1989. Granose Foods opens new factory: Growth from bakery to Britain's major health food manufacturer. Sept. 28. p. 20-21 (p. 1036-37).

• ***Summary:*** The brand new factory is at Newport Pagnell, Buckinghamshire, England–30 miles away from its former location at Stanborough Park, on the outskirts of London, near Watford, Hertfordshire. The founder is said to be J. Heide, who, a hundred years ago, came to London from Germany to start a new life. With help from his uncle, he became a master baker. He soon joined the small group of members of the Seventh-day Adventist Church. "In 1899 John Hyde (as he soon became known) was living over his bakery at 332 Portbellow Road in east London with his wife" and four children. He worked hard to make bread that tasted better and was fresher than anyone else. He and his brother delivered their loaves late at night or early in the morning.

"John soon learned about health foods and the church's teaching that God is honored in a healthy body as well as in a healthy mind and spirit. Samples from the Sanitarium Health Food Company in Battle Creek, Michigan, found their way to Britain, and in 1899, with the blessing of the church, John went to the United States to learn how to make the foods. He spent six months with Dr. John Harvey Kellogg, who was president of the medical college in Battle Creek, superintendent of the Battle Creek Sanitarium (with its health food company) and member of more than a dozen medical societies and associations,..."

"Kellogg created the formula for a gluten biscuit. The Battle Creek Sanitarium Health Food Company also produced Granola, a cooked preparation of wheat and oats to be used as a breakfast food. Granose flakes, Granose biscuits, Protose, and Bromose were among their strangely named products.

"Imported know-how: John Hyde took the production know-how back to Britain, where he put it into operation. Adventists purchased a flour mill at Salford, near Redhill, Surrey, and formed the International Health Association Ltd. Hyde imported used plant equipment from Battle Creek and purchased other items locally.

"But the road to success was not to be easy. Before the advent of electricity, candles were used for lighting. This practice led to a fire that burned down the factory in 1900.

"In 1907 the association moved to Stanborough Park, an idyllic 75-acre estate on the outskirts of London, near Watford, Hertfordshire. In 1926 it became Granose Foods Ltd."

John Hyde, the baker, worked many years for Granose Foods. He eventually had 13 children–a baker's dozen. The name of each is given. "Almost all his children became employees of the Adventist Church."

Why did the factory move? Over the years, the SDA church leadership sold off portions of the valuable estate surrounding the Granose food factory; as new houses were built, the factory became a "noncoforming user" in a residential zone. Income from a recent sale of 10 more acres at Stanborough Park helped to pay for the new plant and the 3 acres of land on which it was built.

A photo shows the ribbon-cutting ceremony on July 9. Present were: (1) "Eric Fehlburg, who coordinates the activities of 52 Adventist health food companies worldwide, with $300 million in receipts, from church headquarters in Washington, D.C." He believes that Granose has a bright future but believes that, since the 3 acres is already too small, Granose should purchase 20 acres somewhere else. Note: Why did they not buy more land on which to build the new factory? Apparently for lack of money. (2) Peter J. Archer, age 50, who left school at age 16 and got a job sweeping the yard for Granose. He has been the manager of Granose since 1984, and he and his team have turned the company around (after years of indifferent sales) and appear to be on a path of continuing growth. "Granose is my life," says Archer. A small photo shows Archer and Fehlberg shaking hands.

Granose products include "Ravioli, Nuttolene, Vegecuts, Mock Duck, Burger Mix, Sausfry, Soya Wieners, a variety of soymilks, and more than 100 other products. The latest, Sweet Sensation, is a soy ice cream. With the assistance of De-Vau-Ge in Germany, Granose supplies a tremendous demand for nondairy products. The company sells 656,000 gallons (2.5 million liters) of soymilk a year. From the Nutana factory in Denmark, Granose imports and distributes five different packs of nondairy margarine containing oils, but no whey. Tue Westing and marketing manager Inge Kjeldal of Nutana were present at the opening."

• ***Summary:*** Discusses general methods of processing and using the following: Cowpeas (*Vigna unguiculata;* also known as beans, black-eyed peas). Pigeon peas (*Cajanus cajan* Druce; also known as red grain, Congo pea, non-eye pea). The oilpalm (*Elaeis quineensis* Jacq.). Groundnut

(*Arachis hypogea;* also known as peanut, monkey nut). Water melon seed (*Citrullus vulgaris* Schrad; used to make egusi soup in Nigeria).

African locust bean (*Parkia filicoides;* known as Dawadawa [Hausa], Irugba [Yoruba], Ogiri-Igala [Ibo/Igbo]). African oil bean seed (*Pentaclethra macrophylla;* also known in Igbo/Ibo as Uba, Ogiri). Bambara groundnuts (*Voandzeia subterranea* Thouan).

Table 18.2, titled "Utilization of traditional food legumes," includes the soybean. It is most frequently used as a source of vegetable oil or vegetable milk, frequently utilized in composite flour, and least frequently utilized as follows: boiled as a main meal or snack; boiled and eaten with starchy root, yam, or plantain; in soup/stew as a meat/fish supplement; in gruel or porridge, spiced or sweetened; cooked with cereal grains such as rice, millet, or maize; roasted as a snack; in a paste as a spread; or fermented as a food condiment. Also discusses the limitations and advantages of traditional food processing, upgrading traditional food processing techniques, and summary. Address: 1. Dep. of Biochemistry, Univ. of Port Harcourt, Port Harcourt, Nigeria; 2-3. Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Griffin, GA 30223-1797. Phone: 2&3: 404-228-7284.

5725. **Product Name:** [Alpro Soya Drink {Soymilk} (Enriched with Calcium, or Without Added Sugar or Salt)].
Foreign Name: Alpro Soya Drink (Enrici en Calcium, Sans Sucre ni Sel Ajoutés).
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1989. September.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton (both).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Without sugar or salt added. Per 100 gm.: Protein 3.6 gm, fat 2.1 gm, carbohydrates 0.9 gm, calories 37, calcium 20, cholesterol 0, lactose 0.
New Product–Documentation: Leaflet (6 by 8.25 inches, color, in French). 1989. "Alpro Soya Drink. Enrichi au calcium, ça vous fait un homme" (Enriched with calcium, that will make you a man). A photo shows a boy pulling on the reins of a rocking horse. Below the photo is a package and a glass full of Alpro Soya Drink. On the front panel of the package is written, "Enriched with calcium. The non-dairy power of soya" (Enrichi au calcium. La Force Vegetale du Soja). The inside 2-page spread shows a contented child with a bowl of breakfast cereal and Alpro Soya Drink. Per 100 gm, this product contains 140 mg of calcium but no cholesterol or lactose, whereas whole cow's milk contains 125 mg, cholesterol 10 mg, lactose 4.6 mg. The back panel shows plain, sugar-free, chocolate, and strawberry flavors.

Leaflet (full-color, 8.5 by 11 inches, in French). 1989. Alpro: La force végétale du soja (Alpro: The plant power of soya). The front panel has a color photo of 4 varieties of Alpro Soya Drinks (plain, enriched with calcium, without added sugar or salt, chocolate) and 2 Alpro Soya Desserts (vanilla and chocolate). The text reads: 100% natural. 100% from plants (végétal). No cholesterol. No lactose. Rich in vegetable protein. The back gives packaging and shipping information and a nutritional analysis of the 6 products. Sold in France by Distriborg, Division Alpro France, Chemin du Grand Revoyet, F-69230 Saint-Génis-Laval. Phone: 72.39.94.25.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. Alpro Soya Drink enriched with calcium was introduced in Sept. 1989. This was the first soy drink fortified with calcium made by Alpro for any company. Three months later, in Dec. 1989, Alpro launched Provamel Soya Drink enriched with calcium.

5726. Bates, Dorothy R. 1989. The tempeh cookbook. Summertown, Tennessee: The Book Publishing Co. 96 p. Contains 11 color photos and some line drawings. Index. Sept. 26 cm.
• ***Summary:*** This is a vegetarian (but not a vegan) cookbook. Contents: Introduction to tempeh: Nutritive values, how tempeh is made, storing tempeh, cooking tempeh. Ingredients and suggestions: Discusses soymilk, soy oil, and tamari. Making tempeh at home. Appetizers. Salads. Soups. Sandwiches. Main dishes: Oriental, Italian, Mexican, American, International. Dessert. Contains 100+ recipes. Address: Summertown, Tennessee.

Proceedings of the Short Course on Food Uses of Whole Oil and Protein Seeds held at Makaha, Hawaii, May 11-14, 1986. [49 ref]
• ***Summary:*** Contents: Historical development of soymilk. Principles of soymilk production. Problems of soymilk production. Basic steps of soymilk production. Methods of soymilk production (Traditional, Cornell, Illinois, RHHC [Rapid Hydration Hydrothermal Cooking]). Yields of soymilk. Soymilk nutrition. Soymilk standards and quality control. Soymilk utilization. Address: American Soybean Assoc., P.O. Box 3512, Taipei, Taiwan ROC 10099.

5728. Griffis, Gil; Wiedermann, Lars. 1989. Marketing food-quality soybeans in Japan. American Soybean Association. Sept. *
• ***Summary:*** This report was published in Jan. 1989, mainly for the American Soybean Association's Tokyo office. Address: 1. American Soybean Assoc., Division Manager; 2. Japan Country Director, American Soybean Assoc.

5729. **Product Name:** [Innofun Soymilk (Vanilla, Strawberry, or Chocolate)].
Foreign Name: Innofun: Boisson Végétale (Au Soja {Vanille}, Soja-Fraise, Soja Chocolat).
Manufacturer's Name: Innoval S.A. Affiliate of Coopérative Agricole Silos de Valence.
Manufacturer's Address: Allée Joule, Zone Industrial (Z.I.) des Auréats, B.P. 1418, 26014 Valence Cédex, France. Phone: 75.41.41.50.
Date of Introduction: 1989. September.
Ingredients: Chocolate: Water, soya beans 12%, raw cane sugar, chocolate 5%, fat reduced cocoa, plant extracts, seaweed extracts, sea salt.
Wt/Vol., Packaging, Price: 500 ml Combibloc aseptic package.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Calories 62, protein 3.8 gm, carbohydrate 9.8 gm, fat 0.8 gm, cholesterol 0 mg, lactose 0 gm, lecithin 25 mg, magnesium 132 mg, sodium 39 mg, potassium 208 mg.
New Product–Documentation: Form filled out by Gilles Charriere of Innoval. 1989. Nov. This product was launched by Innoval in Sept. 1989. Labels. 1989. 3 by 5.5 by 2 inch Combibloc carton. Cartoon motif, with red, white, yellow, black, and brown on blue and white. The front panel of the chocolate carton shows a glass of cold chocolate soymilk with a straw in it, and a cup of hot chocolate soymilk with a spoon in it, with 2 cubes of milk chocolate nearby and 3 soybean leaves at one side. Rear panel text and ingredients are in French, English, and German. "Liquid food preparation from soya. The taste of balance/equilibrium. 100% vegetable and natural soydrink. Prepared with selected soybeans. Rich in proteins and polyunsaturated fatty acids. At home, at the office, in the country."

Color leaflet. 1989. In French. "Innofun Soya Drink. The taste of equilibrium." A color photo shows the 3 cartons and a cartoon like illustration (line drawing) shows a glass of soymilk with a straw. Description of the products is given on the back.

Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soybase plant to Innoval in France. It had a capacity of 1,500 liters/hour and began operation in 1988.

• ***Summary:*** Of the 24 chapters, the first 10 are entirely about soybeans and soyfoods, and 5 of the remaining 14 chapters are partly about soya. Many individual chapters are cited separately. Address: 1. Protein R&D Center, Texas Engineering Experiment Station, The Texas A&M.

5736. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of soya in the Indian Subcontinent (South Asia): 1,118 references from 1679 to 1989, partially annotated. Lafayette, California: Soyfoods Center. 180 p. Subject/geographical index. Author/company index. Printed Sept. 2. 28 cm. [1118 ref]
• ***Summary:*** The soybean has a surprisingly long history in South Asia. The earliest known reference dates from the year 1679 when the Englishman John Locke noted that soy sauce (saio) was imported to England from the East Indies (probably India). There were 3 references to soybeans or soyfoods prior to 1700, 12 during the 1700s, and 53 during the 1800s. Many of these references were to soy sauce or to soybean plants (by botanists) grown in the northern hills. In the period 1908-12 the British tried to grow soybeans in India without much success. During the 1930s Mahatma Gandhi took a serious interest in growing soybeans and using them as a food.

The earliest known commercial soy product on the Subcontinent was Golden Label Soya Bean Sauce, introduced in 1949 by Yung Hwa & Co. in Sri Lanka. The earliest such product in India was Nutri Nugget, a textured soy flour meatlike product, introduced in 1970 by the Soya Production and Research Association in Bareilly.

The rise of the soybean as a commercial crop in India can be dated from the mid-1960s, when University of Illinois soybean specialists, working with Indian counterparts, showed that high soybean yields could be obtained using proper varieties and a package of practices. In 1967 the All-India Coordinated Program on Soybeans was founded at Pantnagar in the state of Madhya Pradesh, where the great majority of India's soybean came to be grown. In April 1968 the first Workshop on Soybean was held in New Delhi by the Indian Council of Agricultural Research, and in 1971 India's first soyfoods development project started at G.B. Pant University. But when the U.S. sided with Pakistan during a small war between India and Pakistan, the government of India asked that most U.S. technical assistance programs be discontinued by Sept. 1972. In 1973, out of the success of this work, INTSOY (the International Soybean Program) was founded at the University of Illinois.

Total soybean production in India increased from a mere 18,000 tonnes in 1971 (production was negligible in 1970) to 450,000 tonnes in 1980, an astonishing 25-fold increase in ten years, and a growth rate greater than that of Latin America.

This is the most comprehensive bibliography ever published on soya in the Indian Subcontinent (South Asia). It is also the single most current and useful source of information on this subject available today, since 48% of all references (and most of the current ones) contain a summary/abstract averaging 102 words in length.

One of more than 40 bibliographies on soybeans and soyfoods being published by the Soyfoods Center, it is based on historical principles, listing all known documents and commercial products in chronological order. Containing 37 different document types (both published and unpublished, including many original interviews and partial translations of Japanese and European works), it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 15 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original

title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 109 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, and a bibliometric analysis of the composition of the book (by language, document type, year, leading countries, states, and related subjects) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

5737. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of soya in Latin America: 1,520 references from 1880 to 1989, partially annotated. Lafayette, California: Soyfoods Center. 215 p. Subject/geographical index. Author/company index. Printed Sept. 5. 28 cm. [1520 ref]
• ***Summary:*** This is the most comprehensive bibliography ever published on soya in Latin America. It is also the single most current and useful source of information on this subject available today, since 44% of all references (and most of the current ones) contain a summary/abstract averaging 89 words in length.

• ***Summary:*** Contents: Introduction. Composition. Required characteristics: For soy milk, tofu, miso, natto, soy sprouts. Conclusions.

The most desired characteristics of soybeans for food processing include: Large seed size, high protein content, high quality, reasonable price. The characteristics desired for each of the soyfoods mentioned above are given.

Table 1.1 shows world production of the eight major oilseeds in million metric tons from 1981-82 to 1985-86. Over this 5-year period, total production of the eight oilseeds has grown by 14.6%, from 169.4 to 194.2. In descending order of production, the eight are: Soybean 96.0. Cottonseed 34.1. Peanut 19.7. Sunflowerseed 18.6. Rapeseed 18.6. Copra (dried coconut meat, 5.0). Flaxseed 2.6. Palm kernel 2.3. Source: Foreign Agricultural Service, USDA. Address: American Soybean Assoc., P.O. Box 27300, St. Louis, Missouri 63141.

5740. **Product Name:** Spring Creek Whole Soy (Soymilk) [Plain, Original].
Manufacturer's Name: Spring Creek Natural Foods.
Manufacturer's Address: 212-C East Main St., Spencer, WV 25726. Phone: 304-927-1815.
Date of Introduction: 1989. September.
How Stored: Refrigerated.
New Product–Documentation: Leaflet sent by Richard Rose from Natural Products Expo East at Philadelphia. 1989.

Sept. Single sided, blue on beige.

5741. **Product Name:** Soy Drink.
Manufacturer's Name: Wa Heng Dou-Fu.
Manufacturer's Address: 5063 24th St., Sacramento, CA 95822. Phone: 916-737-0545.
Date of Introduction: 1989. September.
Ingredients: Soy bean, water, sugar.
New Product–Documentation: Talk with Mr. Peng-Xiang (Martin) Lin, Owner. 1990. Jan. 19. He started this company in Sept. 1989. Before that, he made soyfoods out of his home.

Label sent by Martin Lin. 1991. Nov. 20. 2 by 3 inches. Green on chartreuse yellow. Most of the label text is written in Chinese. It states that no preservatives are added.

5742. Liveoak, Val. 1989. Current developments with soya in El Salvador (Interview). *SoyaScan Notes.* Oct. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Val is a registered nurse, living in El Salvador and working with health promoters in the countryside. She has a budget of about $12,000 to set up a soy processing program, and is thinking of making either powdered soymilk or soya meat. There is now a national soya program (Program Nacional de Soya) in El Salvador; they publish a book on soybean production. Related to them is CESTA (Centro de Estudios de Tecnologia Appropriada) in San Salvador. CESTA publishes and distributes a soy recipe book, which also contains information on soybean production. And their workers go to villages to show the people how to make home-level soymilk and use the okara. In a few areas they have planted some soybeans.

A priest named Walter Guerra in Sonsonate is national head of Caritas (Catholic Charities) and so is quite influential. He has worked with the program for a long time, promoting both soybean cultivation and home-level soyfood processing, especially making soymilk then using the okara in patties with wheat or masa, plus egg and sliced vegetables.

Another group working with soya is APROCSAL (Association de Promotores Comunitarianos del Salvador). They mainly work with health promotion. In some areas they have planted ¼-½ acre of soybeans and taught how to make soymilk at home. Val does not think that these home-level programs continue for long after the novelty of the idea wears off. Address: Friends Meeting of Austin, 3014 Washington Square, Austin, TX 78705, Or Convento, Parr. San Antonio, Estanzuelas Usulutan, El Salvador.

5743. *SoyaScan Notes.* 1989. Occurrences of the terms "tofu," "bean curd," and "soybean curd" in current American dictionaries (Overview). Oct. 4. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** At a large bookstore in California, all American dictionaries copyrighted since 1980 were examined. Each is listed here in descending order of copyright year, which is the first number on the line preceding the dictionary title. Thus, the most recent editions are listed first.

Note that the word "tofu" is the main entry in all four of the most recently copyrighted dictionaries, and in 6 of the 9 dictionaries copyrighted since 1980. Every dictionary examined listed the term "tofu" as either the main or secondary entry. Not one single dictionary listed the term "soybean curd." Only 5 of the 9 dictionaries listed the term "bean curd."

1988. *The Random House College Dictionary,* revised ed. (New York, NY; 173,000 entries, hardcover). Main entry: "tofu–a soft, bland, white cheese-like food made from curdled soybean milk, high in protein content, used originally in Oriental cookery but now in a wide variety of soups and main dishes." Secondary entry: "bean curd–tofu."

1988. *Thorndike Barnhart Student Dictionary* (Glenview, Illinois; hardcover). Main entry: "tofu–a cheeselike food consisting of curds coagulated from milk made from powdered soybeans, often pressed into squares." Secondary entry: bean curd is not listed.

1987. *Random House Dictionary of the English Language,* 2nd ed. (New York, NY; over 315,000 entries in 2,500 pages, hardcover). Main entry: "tofu–a soft, bland, white cheese-like food made from curdled soybean milk, high in protein content, used originally in Oriental cookery but now in a wide variety of soups and main dishes. Also called 'bean curd' (1875-80; Japan tôfu < Mod Chinese equiv to Chinese dófu (dou = bean + fu = turn sour, ferment))." Secondary entry: "bean curd–tofu."

1981. *Webster's Handy College Dictionary* (New American Library, div. of Penguin Books, USA, New York, NY). Main entry: "tofu–bean curd." Secondary entry: bean curd is not listed.

1985. *Webster's Ninth New Collegiate Dictionary* (Merriam-Webster Inc., Springfield, Massachusetts). Main entry: "bean curd (ca. 1909)–a soft vegetable cheese prepared by treating soybean milk with coagulants (as magnesium chloride or dilute acids)–also called tofu." Secondary entry: "tofu [Jap. tôfu] (1880)–bean curd."

1984. *Webster's New World Dictionary* (Publ. in different formats by Simon & Schuster and Warner Books, New York, NY; over 59,000 entries) Main entry: "tofu–a Japanese custard-like food made from soybeans." Secondary entry: bean curd is not listed.

1983. *The American Heritage Dictionary* Based on the New Second College Ed., (Dell Publ., The Bantam, Doubleday, Dell Publ. Group, New York, NY). Main entry: "bean curd–a soft cheeselike food made from pureed soybeans." Secondary entry: "tofu–bean curd."

1980. *Oxford American Dictionary* (Avon Books. Div. of The Hearst Corporation, New York, NY). Main entry: "tofu–bean curd." Secondary entry: bean curd is not listed.

1980. *The Random House Dictionary,* concise ed.

(New York, NY). Main entry: "bean curd–a creamy, white cake made from soybean flour, used in Oriental cooking." Secondary entry: "tofu–see bean curd."

5744. Lo, K.S. 1989. New developments with Vitasoy and Hong Kong Soya Bean Products Co. Ltd. (Interview). *SoyaScan Notes.* Oct. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The main new development is the company's launch of what it calls the "American Version" of Vitasoy, a new formulation. It is sold throughout the United States.

The company has exported quite a lot of soymilk to China, but it was all made and packaged in Hong Kong. Earlier in 1989 they signed a joint venture project with the Guangming Overseas Chinese Farm, a dairy cooperative with whom they have been doing dairy farming, to build a factory right across the border to serve southeast China. They bought the land, had the ground leveled, and were about to put up the building when the Tiananmen Square massacre took place on 4 June 1989. So they put the project on hold and are waiting to see what happens now in China. If the political and financial environment improves, Lo hopes to have the project back on track within the next 1-2 years.

Also, they have been talking with one party in Beijing that is very interested. A letter of intent has been signed. Lo has visited 2 of the soymilk plants that the Chinese have imported from Japan. Both were sitting idle. Apparently the Chinese have never been taught how to use the equipment to make a proper soybean milk. Address: HKSBPC Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

5745. Kraft, Raymond C. 1989. Remembrances of Dr. Harry Miller and his work with soyfoods (Interview). *SoyaScan Notes.* Oct. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On 22 April 1990 the Mount Vernon Academy, the Seventh-day Adventist high school that both he and Dr. Miller attended at different times, will celebrate the 50th anniversary of Dr. Miller's return to Mt. Vernon, Ohio, in the fall of 1939, to start the International Nutrition Laboratory, his soymilk plant, with a memorial to Dr. Miller. It may be a bust and/or a plaque, with exhibits. In the fall of 1939 Dr. Kraft was a senior at that school; now a physician who will be age 67 in April (2 generations behind Dr. Miller), he worked for Harry Miller at his Mt. Vernon soyfoods plant from January to September 1941. Dr. Miller bought 140 acres on which to build his plant and house, and to grow soybeans. He grew his own soybeans there from the first spring. In 1940 Dr. Miller's son, Clarence, had just finished college. He went to Mt. Vernon from Takoma Park to get the bookkeeping records for Dr. Miller's business in order.

Dr. Kraft has several strong recollections. "First, when he fired me on the first of September, I asked him if there was anything wrong with my work. He said 'No, not a thing. It's time for you to go back to school.' Second, he was a man who never knew the meaning of the word 'menial.' He would come out to the factory at 3:30 or 4:00 in the morning to do whatever needed to be done; sweeping the floor, grinding beans, cleaning out the spray drier, shoveling coal into the boiler, digging ditches. Then he worked at his medical profession (surgery and hospital) during the day and at 7:00 or 8:00 P.M. he'd be back in the factory again until 10:00 or even midnight. He had an inexhaustible supply of energy. He was a quiet, self-effacing man. He was not a public speaker, and didn't relish publicity–quite like General George C. Marshall."

The 4 main soy products that Dr. Kraft remembers the company selling when he began work there were Soyalac (the principal one, sold mostly for allergenic babies), probably Soyagen for general usage, (both liquid and spray dried; but he is not positive that they were making Soyagen), Soybean Sandwich Spread (made from the mash left over after making soymilk; he does not remember if the product contained additional soybeans), and Canned Green Soybeans.

All this was only 2 years after Dr. Miller started the farm in Mt. Vernon. "He was the first to produce soybeans in Knox County, Ohio, for food use. He had to go out and almost brow-beat the farmers into growing the soybeans for him. They would do it only on the condition that he contracted the entire crop." Address: 500 Cohasset Square, Suite 23, Chico, California 95926. Phone: 916-345-9500.

5746. Marrese, Anthony. 1989. Re: Soyfoods in France. Letter to William Shurtleff at Soyfoods Center, Oct. 28. 2 p. Handwritten. [Eng]

• ***Summary:*** The author conducted a soyfoods market study in France for William Shurtleff of Soyfoods Center, sending out forms which were filled out by 12 companies, visiting or interviewing 9 companies, and visiting 5 companies at the Diet Expo '89 held 21-23 Oct. 1989 in Paris. It seems like there are four types of companies working with soya in France:

1. Independents, both large and small, mainly in primary soymilk, tofu, or tempeh production, or in second generation burgers, smoked products, or desserts production, with either organic (biological) or non-organically grown products. Examples: Le Ferme du Jas, Innoval/Sojalpe, Société Soy, Le Bol en Bois / Tama / Daizou, La Maison du Tofu, Les 7 Marches, Boulangerie Artisinale des Maures, Odile Corbel & Dan Ludington [named Gaia Enterprises by Feb. 1992], Communauté de la Lix (United Macrobiotic Company), Tofu Kuehn.
2. Non-Independents owned by large companies or agricultural co-ops: Gerblé, Bonneterre / Triballat, Sojadoc, Cacoja (C.A.C.), Renaitre.
3. Bean or cereal (agricultural) companies: Celnat.
4. Specialty manufacturers for the Asian-European

(Japanese, Chinese, Korean, etc.) markets: Yamato.

"I had some very good talks with Bernard Storup of Société Soy, the Bol en Bois people, Celnat, Bonneterre, Gerblé and others. In general the market and usage seem to be going nowhere but up and it is still in the very early stages of 'real consumer' type foods, not just health store specialties. Some French soybeans are used but a lot are imported... Real quantity information is not available since it is changing so fast (mainly in an upward direction and mostly with secondary processed products which use tofu or soya in them)." Address: c/o Terre Nouvelle, Eourres, 26560 Séderon, France. Phone: 92.65.10.95.

5747. Pierce, Michael. 1989. Re: Early work with tofu: Wildwood in America and Auenland in West Germany. Letter to William Shurtleff at Soyfoods Center, Oct. 30. 4 p. Typed, with signature.

• ***Summary:*** Pierce got involved with tofu while he was in Georgia. He learned to make tofu from a guy in Macon named Pat Powell, who had just gone up to The Farm in Tennessee and learned from Lewis Headrick, who now lives in Northern California. In about Sept. 1980 Pierce went to California and the day he arrived he met Paul Duchesne, who told him his dream of starting a tofu shop. Pierce explained that he already knew how to make tofu, so Duchesne asked Pierce to be the first tofu maker. Pierce moved into the building that is now occupied by Wildwood; it was his apartment. For about the next year, Pierce made tofu sandwiches with Duchesne, until the Wildwood Natural Foods tofu kitchen opened in Sept. 1980, at which time he became Wildwood's first tofu maker. David Patton came down and showed them how to use larger scale equipment than their original 60 quart pot.

"I met Peter and Elgard Wiegand in the summer of 1981 in California. They expressed great interest in returning to Europe and starting a small tofu shop like Wildwood. Peter started working with us at Wildwood, then a few months later, they left for Germany to piece things together.

Around Nov. 1981, Elgard wrote saying they needed me to come soon. A purchased a Mini Might disintegrator from Bean Machines Inc., took two old pressing bags from Wildwood, some recipes and *The Book of Tofu,* and landed in Germany on 1 Feb. 1982. It was snowing a cold. This was the most exciting time of my life. I was the Ambassador of Goodwill and Tofu. Instantly, the Bean King from San Francisco. I was treated with great respect."

There follows a description of the original equipment. "The water came from very deep in the ground. It was cold year round and made the best tofu. The first batch of tofu was magical. We had 40-50 people from all over Germany one night for dinner and a slide show by Wolfgang Furth-Kuby. This batch of tofu was probably the best I ever made. It radiated. That was the fun time. Everyone was charged and everyone wanted tofu. We started selling in bulk... but soon Peter purchased a vacuum pack machine. Then we had a good clean product. It was easier to deal with, people liked it more, and it lasted longer. We made soya milk, but more as a special order. We also made tofu cakes, pizzas, sandwiches, and salads... Peter, myself, and usually some lady with good taste and a talent for cooking would do demonstrations at restaurants, yoga centers, and once at a private sanitarium. We had a lot of fun."

But then things got harder for Peter. There were many expenses but not as much income. Pierce went to India in Feb. 1983 and made some tofu there. When he returned in June Peter had begun building his new kitchen. He had 3-4 large cookers, a new grinder, and a big vacuum packager. But still the financial picture was bad and eventually the company went under. Pierce taught two guys how to make tofu and both bought bits and pieces of Peter's equipment and started their own small tofu operations. "Rolf put together something in Trostberg, West Germany. Herbert, the other guy, went north.

"I know that Peter became very unstable. He lost everything, including his wife and kids. He is now working odd jobs painting houses, trying to keep his head up and pay off his debts. He really worked hard but he lost his spirit. Peter had a very hard life. Pleas give Peter and Elgard a lot of credit for helping tofu get started in Europe. They worked so hard and got nothing to show for it. They are truly beautiful, caring people. I love them both dearly. Their vision was pure. We just didn't have much on the business end."

Peter's address is presently Kampenwandstr. 25, 8213 Aschau, W. Germany. Phone: 08052-2967. Note: In Nov. 1989 Peter Wiegand reviewed all information on his work and stated, in a touching letter, that it was all correctly reported. "The whiteness and pureness of tofu brought out one of my darkest sides that I really didn't know before."

Update: Talk with Michael Pierce. 1993. Dec. 8. Rolf Barthof's (Prabuddha) tofu company in Breitbrunn is doing very well. Peter Wiegand is a rock musician in Germany. Address: Graphic designer, 408 2nd St., Macon, Georgia 31201. Phone: 912-752-8083.

5748. AFISA (Association Française des Industriels du Soja Aliment). 1989. Membres de l'Association, présentation de l'action et programme [Members of the Association, plan of action, and program]. AFISA, 5 Boulevard de la Méditerranée, 31400 Toulouse, France. 2 p. Unpublished manuscript. [Fre]

• ***Summary:*** The seven members of the association are Celia (located in the city of St. Denis l'Hotel; Mr. Vasseneix), Cacoja (Issenheim; Mr. Rochet), Innoval (Valence; Mr. Balitrand), Prolait (Niort; Mr. Helie), Société Soy (St. Chamond; Mr. de Preneuf), Sojadoc (Clermond Ferrand; Mr. Monraisse), Triballat (Noyal-sur-Vilaine; Mr. Clanchin). The consultant is Pierre Maitre (of Aix en Provence; General Manager of Maho, an affiliate of Aixagri in 1987). In charge

of promotion is E. Prudon at ONIDOL, in Toulouse.

These member companies are all large soyfoods manufacturers. Their program includes: 1. Studies: A. Scientific, medical, and nutritional. B. On raw materials and the definition of products (norms, standards, legislation). C. Genetics, specific varietal selection. 2. Promotion. A. Documentation. B. Promotion animation and generic promotion of soyfoods. 3. ONIDOL will send periodic "flashes" to members. 4. Coordinated actions during the next 5 years. A. What are we talking about; definition of products. B. What are our trump cards? Nutritional, economic, and technical arguments. C. What dissemination and publicity. The part played by promotion will be more important during the 2nd year, when we have established a base from our studies.

Note that this association is composed entirely of large manufacturers of tofu and soymilk; modern soy protein products (such as isolates and concentrates) are not included. Address: Toulouse, France. Phone: 61.53.81.80.

5749. Alpro N.V. 1989. Tous le bienfaits du soja dans un drink. Provamel: l'alternative naturelle [All the benefits of soya in a drink. Provamel: The natural alternative (Leaflet)]. Izegem, Belgium. 2 panels each side. Each panel: 21 x 15 cm. [Fre]

• ***Summary:*** On the cover of this full-color leaflet, distributed with the DietExpo '89 catalog in Paris (Oct. 1989), is a drawing of Provamel Soya Drink being poured into a glass in front of a window showing an idyllic green mountain landscape and sunrise. Inside are 5 questions and 5 responses. The company name is listed in the DietExpo guide as Provamel (rather than as Alpro N.V.). The Provamel line now contains the following products: Provamel Soya Drink: Without sugar (½ liter and 1 liter), with sugar (½ liter and 1 liter), chocolate, strawberry, or carob (each ½ liter). Provamel Soya Dessert (like a tofu pudding): Vanilla (½ liter and 1 liter), chocolate, strawberry, or carob (each ½ liter). Address: Zuidkaai 33, B-8700 Izegem, Belgium. Phone: 32 / 51 30 96 01.

5750. Alpro N.V. 1989. Die Gesundheit von Soja in einem Drink. Provamel. Die gesunde Alternative [The wholesomeness of soya in a drink. Provamel: The healthy alternative (Leaflet)]. Izegem, Belgium. 2 panels each side. Each panel: 21 x 15 cm. [Ger]

• ***Summary:*** On the cover of this full-color leaflet (of which a French-language edition also exists) is a drawing of Provamel Soya Drink being poured into a glass in front of a window showing an idyllic green mountain landscape and sunrise. On the inside two panels are 5 questions and 5 responses. The company name and address are not listed in the leaflet. The Provamel line now contains the following 12 products: Provamel Soya Drink: Without sugar (½ liter and 1 liter), with sugar (½ liter and 1 liter), chocolate, strawberry, or carob (each ½ liter). Provamel Soya Dessert (like a tofu pudding): Vanilla (½ liter and 1 liter), chocolate, strawberry, or carob (each ½ liter).

General distributor in Switzerland: Biorex AG, Kappler Strasse 53, CH-9642 Ebnat-Kappel. Phone: 07432175. General distributor in Austria: Bio-Quelle Klaus Loesch GmbH + Co KG, Haagerstrasse 44a, A-4400 Steyr. Phone: 0725262388. General distributor in West Germany: Landsieg, D-6670 St.-Ingbert. Phone: (06894) 7077. Address: Zuidkaai 33, B-8700 Izegem, Belgium. Phone: 32 / 51 30 96 01.

5751. Bonneterre. 1989. Bonneterre c'est tout naturel: Tarif détaillant 20/10/89 [Bonneterre is all natural: Distributor's catalog and price list. (Includes Lima catalog)]. 1 place des Planteurs, 94538 Rungis cedex, France. 28 p. 30 cm. Includes a catalog for Lima Foods. [Fre]

• ***Summary:*** This catalog, in an outside folder accompanied by various leaflets, lists all products distributed by Bonneterre, with their prices. On pages 19-20 is a section on soyfoods (Produits a base de soja), with two subcategories: Milks and desserts (brands from Bonneterre and Société Soy), and Soy preparations (only from Société Soy).

Bound into the back of the catalog is a 9-page catalog for Lima in Sint-Martens-Latem, Belgium. Address: Rungis cedex, France. Phone: 46.87.26.34.

5752. Fédération Nationale des Syndicats de la Diététique. 1989. DietExpo '89: 10e salon international des produits de diététique, de nutrition et d'hygiène [DietExpo '89: 10th international exhibition of dietetic, nutritional, and hygienic products]. Paris, France. 138 p. Held 21-23 Oct. 1989 at Paris, France (Parc des Expositions, Porte de Versailles). Illust. Index. 21 cm. [Fre]

• ***Summary:*** This book contains ads, an index then alphabetical listing of exhibitors, and a list of brands. The following soy-related companies are listed: Bonneterre (distributor, full-page color ad, inside front cover), Lima France (via Bonneterre; full-page color ad, p. 8), Laboratoires Heuprophax (full-page ad, p. 18; Sojacithine), Alré (full-page ad, p. 21; Soja Cao, Soja Fruits, Sojacao Gluten, Soja-Vita. This company, in business since 1934, is a division of Heuprophax Laboratories in Nanterre, France), Aliments de Regime & Alre (p. 30), Bioforce (p. 34-35), Bonneterre (p. 36), Celnat (full-page ad, p. 41-42), Creation (p. 44, Soyalet and Soyavit brands of soyfoods), Diététique et Santé (p. 50, Gerblé), Heuprophax Laboratoires (p. 64), Innoval (p. 68), Jonathan-France (p. 72), Naturavit (p. 73), Laboratoires Marins (p. 76, Soyal soy lecithin), Lima-France (p. 80), Nature et Progres (p. 88, organic certifiers, their logo looks like a round yin-yang (*t'ai chi*) symbol with one white circle in it), Provamel (p. 98, Izegem, Belgium; 4-page color insert shows products), Société Soy (half-page ad, p. 99; tofu specialists), Pur Aliment (p. 100, Pural brand; Seventh-day

Adventist broker of many soyfood products), Soy (Société Soy, p. 112). Address: Paris, France.

5753. Lima N.V. 1989. Lima: Tarif détaillant [Lima Foods catalog and price list]. Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium. 9 p. [Fre]
• ***Summary:*** This macrobiotic food catalog was bound into the back of the Bonneterre catalog at a 1989 food expo in Paris. Lima sells the following soyfoods, each proceeded by its product category: Fresh products: Skewered seitan/tofu, Presto natural tofu, Presto tofu legumes/vegetables, Presto tofu cheese. Legumes: Yellow soybeans. Sprouts: Green soy/mung (500 gm or 5 kg). Flours: Roasted soy flour. Vegetarian preparations: Lima soy sauce (500 ml or 1 liter), tofu, natural tempeh, tempeh with shoyu. Dressings: Salad dressing with soy and tomato, Salad dressing with soya herb. Specialties: Organic miso (1 month), Hatcho miso, Barley miso (organic or regular), Rice miso (organic or regular), Heiwa brand Instant miso soup (regular or red, From Japan), Tamari (250 ml, 1 liter, 18 liters), Mansan Tamari from Japan, Shoyu (250 ml, 1 liter, 18 liters), Sakai shoyu from Japan. They also carry one book titled "Tofu dans le Cuisine Macrobiotique" (Eddie Hara, 1982).

Accompanying the catalog is a packet of individual full-color sheets with of photos of products in a folder titled Lima: Quality is our passion." There are sheets titled "Vegetable products rich in protein," "Tamari and shoyu," "Japanese specialties (incl. Heiwa brand shoyu and tamari), and a brochure titled "Lima: 30 years as a producer of organically grown (biological) foods." It describes the life and work of Edgar Gevaert (poet, artist-painter, ecologist, and a leader of the European peace movement). Address: Sint-Martens-Latem, Belgium.

5754. Stefanak, M.A.; Jarjoura, D. 1989. Weight gain in supervised take-home feeding programmes in Chad. *J. of Tropical Pediatrics* 35(5):214-17. Oct. [11 ref. Eng]
• ***Summary:*** During the Sahelian drought and food shortages of 1984-1986, many children in areas too remote to be reached by child feeding programs experienced hunger and malnutrition. A total of 641 malnourished children in Chad from 2 nomadic camps were enrolled in a supervised feeding program. In a third camp, 133 children were enrolled in a take-home feeding program. Each child was allowed 821 kcal/day of a supplement consisting of corn-soya-milk (CSM) mix, nonfat dried milk, vegetable oil, and sugar, prepared in the feeding centers and served as porridge. The children stayed in the programs for a mean length of 59 days. The supervised group had an average weight gain 60 days after enrollment of 1,013 gm, whereas the take-home group had a gain of 951 gm (6.2% less). The difference was not statistically significant.

Note: The CSM used in this study was sent from the United States as part of its PL 480 Food for Peace program. Address: 1. MPH, Mahoning General Health District, 2801 Market St., Youngstown, Ohio 44507.

5755. Wang, H.L.; Cavins, J.F. 1989. Yield and amino acid composition of fractions obtained during tofu production. *Cereal Chemistry* 66(5):359-61. Sept/Oct. [18 ref]
• ***Summary:*** Five fractions were isolated during processing of whole soybeans into tofu: soak water, water-insoluble residue [okara], soymilk, tofu, and whey. Into the soak water or whey went 14% of the soybean solids, 4.7% of the soybean protein, and a small amount of oil. Into the okara went 30, 20, and 11%, and into the soymilk went 63, 79, and 82% respectively. Finally, 52% of the soybean solids, 71% of the protein, and 82% of the oil were recovered in the finished tofu. Address: NRRC, Agricultural Research Service, USDA, 1815 N. Univ. Street, Peoria, Illinois 61604.

5756. Demos, Steve. 1989. White Wave's strategy for marketing soyfoods in America as cholesterol-free protein foods (Interview). *SoyaScan Notes.* Nov. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "White Wave welcomes the movement of tofu, a potentially hazardous food, out of the produce case. I think we are positioned and prepared as well as we possibly could be for this kind of change. This is what we've been waiting for! Years ago, White Wave designed its boxed, vacuum-packed tofu with a 60 day shelf life to sell in the dairy case. The disruption of an existing habit pattern opens up to opportunities for innovative companies." Demos does not see, even in the short term, any major loss of sales. At least 2/3 of White Wave's tofu is already out of the produce case and into either the dairy case or temperature controlled cases. He feels the best place to sell tofu is next to yogurt, ideally between yogurt and the deli meats in the dairy/deli case. White Wave conceives of itself as selling a new category of foods, "cholesterol free protein foods." This category should be well defined unto itself. Eventually Demos would like to see this heart/smart concept evolve into the "soyfoods section." Since signs identifying sections are generally not allowed in supermarket cases, the section/category might be partitioned off with plastic dividers at each end, like the Pillsbury Doughboy category. King Soopers has already pioneered this idea, starting in about 1983, putting tofu between the yogurt and the milk (with no plastic dividers), on the basis of the demographics, then building the concept by adding other soyfoods and soymilk. But tempeh, a slow mover, is now in the frozen foods case, and the meatlike products (such as hot dogs) are next to Armour in the deli meats.

Safeway seems to have made a top level decision to aggressively promote soyfoods. This year they called White Wave and said, "We don't know what you make, but give us everything. Then in August, in their two largest new classy "Safeway Marketplaces" in Boulder (and maybe in a few

newer or college-oriented stores in Denver), entirely on their own initiative, they installed temperature controlled end-aisle cases at the end of the produce section facing the cash registers. The location is very prominent–an impulse location. Each case has the word "Tofu" in large letters on it. Many different types of soyfoods (and nothing but soyfoods) are sold in these cases–tofu, tofu dressings, tofu hot dogs, soy cheeses, Stir Fruity (soy-based yogurt), etc. All White Wave soyfood products in these 2 stores are sold in the Tofu case. Demos feels that "Tofu" this is the best title for the case. Also the "Approved by Healthmark" with the Healthmark logo on each display case identifies these as healthy foods. Only foods that are low in cholesterol, fat, and sodium get the Healthmark. Each case, constructed like an open dairy case, 5 feet wide by 6 feet high, has a temperature range of about 35-40º. Demos would definitely prefer to have his products sold in these cases rather than any other location in the store. White Wave's main strategy is to "identify a category," and to group foods in that category together. Again, the current category definition is cholesterol-free protein foods, but the long term goal is to have the category defined as "soyfoods." It is too early to say how the new isolated cases are affecting sales, but preliminary signs all look very positive.

White Wave started pasteurizing its tofu in Dec. 1988. Since then they have not had a single complaint of spoilage or sourness. Pasteurization does effect the tofu texture, making it firmer, but it also makes tofu much more profitable. White Wave makes both a 16 ounce vacuum packed and a 10-ounce single serve water-pack tofu. He prefers the vacuum pack and has worked the bugs out of his Tiromat so that it is no longer a significant source of problems. Tree of Life on the East Coast sells un-boxed vacuum-packed White Wave tofu very successfully, but Demos strongly prefers to box it. He has a whole new tofu plant at his new facility with automatic cooking and curding, conveyorized press tables and pasteurization.

Concerning the competition: Demos compliments Morinaga on a brilliant strategy. The net result is to help in the Americanization of tofu by identifying it clearly as a protein food and therefore forcing it out of the produce case. The irony is that when the dust settles, Mori-Nu Tofu may be the only brand left in what becomes an outdated, foreign location–with the oriental vegetables instead of with the protein foods. Azumaya and Hinode are rooted in the produce distribution network. Getting kicked out of the produce section will be very hard on them and their reaction will probably be to fight it rather than use it to their advantage. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3485.

5757. Lo, K.S. 1989. Re: Vitamilk, Sunspot, and Vitasoy. Letter to William Shurtleff at Soyfoods Center, Nov. 3. 2 p. Typed, with signature on letterhead.

• ***Summary:*** "According to our written record, the Urban Council objected to our use of the term 'milk' in English 3 months after the factory was opened in 1940. The reason was that the soyamilk was not of animal origin, and, therefore, it contravened the definition of milk in the Ordinance. I was hard pressed to come out with a substitute name and thought of the word 'Sunspot.' This was approved by my partners and the name was changed from Vitamilk to Sunspot in English. The Sunspot trademark was used from 1940 until 1953, when we changed from a wide-mouth bottle to the present narrow-neck soft drink bottle. The change of bottle was simultaneous with the change from pasteurization to sterilization... The trademark 'Vitasoy' was not registered until 1955, whereas Wai-ta-nai, written in Chinese characters, was registered in 1940 and 'Sunspot' was registered in 1952.

"In my various papers, I continued to use the word 'Vitamilk' despite the fact that the trademark had been changed to 'Sunspot.' I did so subconsciously, because Vitamilk had always remained in my subconscious mind, and I disliked the trademark 'Sunspot' right from the start."

In about 1958, for a second time, Mr. Lo's competitors lobbied the Urban Council, this time to try to prevent him from using the Chinese character "nai," which means milk. On this occasion, his company successfully defended its use of that Chinese term because it formed part of the company's registered trademark.

"In my article 'The story of soybean milk' in the *Far Eastern Economic Review* (1953) I was mistaken in writing Dr. Webb instead of Julian Arnold. I probably read an article by Dr. Webb about Arnold's speech." Address: Chairman, The Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd., Aberdeen, Hong Kong. Phone: 5-528211.

5758. Agriculture Canada Research Station, Harrow. 1989. Description of variety: Harovinton. Harrow, Ontario, Canada. 2 p. Nov. 9. Unpublished typescript.

• ***Summary:*** Harovinton is a "Large-seeded tofu-type soybean. Registration date: May 24, 1989. Registration No.: 3118... Harovinton, tested as OX733, was developed by the Agriculture Canada Research Station, Harrow. This variety was derived from the cross Vinton x Vinton 81, made in 1982." Vinton is susceptible to Phytophthora (a fungus) and tolerant of metribuzin (an herbicide) applied at recommended rates. Growth habit: indeterminate.

"Seed characteristics: Shape: spherical flattened. Size: large; 23 grams per 100 seeds. Seed coat: dull yellow. Hilum colour: yellow. Oil content: lower than Corsoy (18.6% vs. 20.1%). Protein content: higher than Corsoy 79 (44.9% vs. 40.9%). Seed coat peroxidase activity: high.

Maturity: 3100 heat units (Ontario). Performance and adaptation: In yield trials conducted in 1986, 1987 and 1988 at Harrow, Malden and Woodslee, Harovinton yielded about 6% less than Corsoy 79. Harovinton is shorter, more

lodging tolerant, and earlier maturing than Corsoy 79... The yield of soymilk and tofu per kilogram of Harovinton beans was 4% and 11% greater, respectively, than for Corsoy 79." Maintenance of breeder seed: Agriculture Canada, Research Station, Harrow, Ontario. Canadian distributor: Canada Packers.

Note 1. This is the earliest document seen (June 2013) that mentions the soybean variety Harovinton.

Note 2. The letterhead reads: "Agriculture Canada, Food Production and Inspection Branch, Seed Division." No address is given. Address: Harrow, Ontario, Canada.

5759. Harovinton: New Canadian domestic soybean variety. Large-seeded and/or vegetable-type soybean. 1989. Seed color: Yellow (dull), hilum yellow.

• ***Summary:*** Sources: Agriculture Canada Research Station, Harrow. 1989. "Description of variety: Harovinton." Harrow, Ontario, Canada. 2 p. Unpublished typescript. Nov. 9. Harovinton is a "Large-seeded tofu-type soybean. Registration date: May 24, 1989. Registration No.: 3118."

Ontario Ministry of Agriculture and Food. 1990. *Soybean Buyers Mission from New Markets, July 1-7, 1990.* Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. See p. 40. Appendix 5, titled "Development of soybean varieties," states: "Researchers at the Agriculture Canada Research Station in Harrow have focused on the development of varieties for the manufacture of tofu. With help from the OSGMB, a new variety named Harovinton, was recently released from this breeding program. This variety was higher than average protein content, white hilum and large seed size to better suit the needs of the tofu and soymilk manufacturers.

"To secure the best marketing and promotion of this variety to overseas buyers, exclusive marketing rights were given to the International Trade Division of Canada Packers Inc. and Wheatley Elevators Ltd. Both companies have extensive soybean export trading experience."

Bernard, Richard L. 1999. "Historical list of publicly developed North American specialty soybean cultivars to 1989: Large seeded." Year released: 1989. Developed by: Ontario, Harrow. Cultivar: Harovinton. Maturity group: I. Parentage: *Hm Rpsl-c* from Vinton x Vinton 81.

Note: Harovinton was the first food-grade soybean variety developed in Canada for the Japanese tofu industry, and helped pave the way in establishing Canadian food-grade soybeans as a premium quality product in Asia. Address: USA.

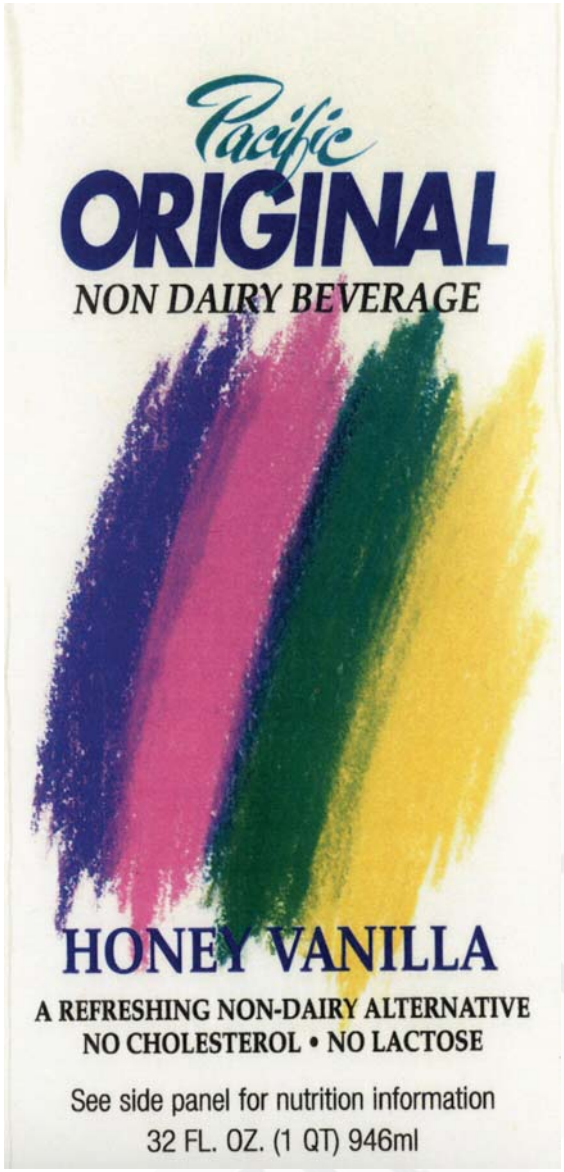
5760. McCarty, Meredith. 1989. Fresh from a vegetarian kitchen. Turning Point Publications, 1122 M Street, Eureka, CA 95501-2442. ii + 263 p. Illust. by Bernice Kagan. Index. 28 cm.

• ***Summary:*** A macrobiotic cookbook containing over 450 recipes, many using tofu (at least 20, including many innovative sauces and dressings), tempeh, miso, amazake, soy sauce, soymilk, and amazake. A section titled "Soyfoods: Tofu and tempeh" (p. 151-55) contains 6 recipes and several variations. On page 202 is a recipe titled "Amazake-Soymilk" in which 3/4 cup soymilk is mixes with ¼ cup plain amazake. The author has co-directed this natural health center in northern California since 1977. Address: Eureka, California.

5761. **Product Name:** [Amisoya Fresh Soy Beverages (Natural with Sugar, Natural Without Sugar, With Carrot Juice, Bilberry, With Yeast, Almond)].
Foreign Name: Amisoya Bevande (Naturale Con Zucchero, Naturale Senza Zucchero, Alla Carota, Al Mirtillo, Al Lievito, Alle Mandorle).
Manufacturer's Name: Medical Soy S.p.A.
Manufacturer's Address: Via Matteotti 55, 20068 Peschiera Borromeo (Milan), Italy. Phone: 02.547.54.56.
Date of Introduction: 1989. November.
Wt/Vol., Packaging, Price: Plastic bottles, probably 1 liter.
How Stored: Refrigerated.
New Product–Documentation: Medical Soy leaflet. 1990. *"Linea Amisoya: L'alt(r)a Gastronomia. Prodotti a base di soya del tutto privi grassi animali. Prodotti di Soya freschi. Nutrirsi meglio per rimanere giovani"* [The Amisoya Line: The high/alternative gastronomy. Soyfoods containing no animal fats. Fresh soy products. Eat better to stay young]. Lists six flavors. "Use as a thirst quencher or like milk." Individual labels are in the form "Lievito Soy" or "Mirtil Soy."

5762. **Product Name:** Pacific Foods Organic Soy Beverage [Original, Honey-Vanilla, Cocoa].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1989. November.
Ingredients: Original: Water, organic whole soybeans*. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.77 (12/90, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz.: Calories 100, protein 10 gm, carbohydrate 4 gm, fat 6 gm, cholesterol 0 mg, sodium 0 mg.
New Product–Documentation: Product with Label purchased from Berkeley Natural Grocery Co., California. 1990. Dec. 28. 4 by 2.5 by 6.5 inches. White and black on brownish red. "A flavorful and refreshing non-dairy drink that offers a delicious change-of-pace. Try it: The great taste will surprise you. Cholesterol free. Lactose free. Organic. No preservatives. A significant source of protein. Sodium free. No animal fats. No sweetener added. Great tasting."

Talk with Pat Carey of Pacific Foods. 1991. Jan. 23.



This product was launched in about Nov. 1989. The contents is basically the same as that of the previous Naturally Northwest line, which has been discontinued and replaced by this line. A new version of the label with graphics was introduced in Jan. 1991. All three flavors, in liter cartons, were introduced at the same time. Soyfoods Center product evaluation for Cocoa: WRS. Delicious. AA. Good, but slightly bitter aftertaste.

Product (Honey Vanilla) with Label purchased at Berkeley Natural Grocery Co. 1994. Aug. 20. New package design. Dark blue on purple. On the front panel is a black-and-white lake surrounded by snow, with a snow-capped peak and a cloud banner from its top in the background. "Made from organic soybeans and pure mountain water." Product (Honey Vanilla) with reclosable spout and Label purchased at Berkeley Natural Grocery Co. 1994. Dec. 7. New package design. Four strokes of pastel colors, almost vertical going from lower left to upper right: Purple, pink, green, and yellow. Product is now named: Pacific Original Non Dairy Beverage–Honey Vanilla. It is made with organic whole soybeans.

5763. Vitasoy (U.S.A.) Inc. 1989. Vitasoy: America's first.... soymilk from 100% organic soybeans." (Ad). *Natural Foods Merchandiser.* Nov. p. 40.

• ***Summary:*** On the front of this glossy color insert (8½ by 11 inches) is a large color photo that shows 4 cartons of soymilk (each 8.45 oz or 250 ml) standing in a field of soybeans: The flavors are Creamy Original, Vanilla Delite, Carob Supreme, and Rich Cocoa.

On the rear: "In support of the wave for organic foods, Vitasoy was the first to use organically grown soybeans to produce a premium soymilk."

"Since 1984, Vitasoy has been using organically grown soybeans in our delicious soymilk. Unlike other soymilk brands that only use organic beans in one or two flavors, all flavors of Vitasoy are made with certified organic soybeans. Our soybean supplier, Pacific Soybean and Grain, Inc., has set high organic standards. It [sic] requires that our soybeans come from fields which are organically farmed for a minimum continuous period of thirty-six months prior to harvest. These stringent requirement meet and exceed existing state organic standards." Address: P.O. Box 552, Brisbane, California 94005. Phone: (415) 467-8888 or 1-800-Vitasoy.

5764. **Product Name:** WestSoy Unsweetened (Soymilk).
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 5701 South Eastern Ave. Suite 330, Commerce, CA 90040. Phone: 213-722-9817.
Date of Introduction: 1989. November.
Ingredients: Water, organic soybeans*. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.
Wt/Vol., Packaging, Price: 33.8 fluid oz (1.06 quart; 1 liter) Tetra Brik Aseptic carton. Retails for $2.04 (12/90, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz.: Calories 100, protein 7 gm, carbohydrate 5 gm, fat 5 gm (percent calories from fat 45, polyunsaturated fat 3 gm, saturated fat 1 gm), cholesterol 0 mg, sodium 40 mg, potassium 330 mg.
New Product–Documentation: Product with Label purchased from Berkeley Natural Grocery Co., California. 1990. Dec. 28. 4 by 2.5 by 6.5 inches. Red, blue, and white on tan. Pale white illustration of a glass of white soymilk with a straw in it. The front panel states: "All natural. New. 100% organic ingredients. Great tasting non dairy beverage. No oil added. No cholesterol." Side panel: "Not for use as an infant formula." Back panel: "Lactose free. Very low sodium.

Serve chilled. Pour over cereal. Cooking and baking."

Talk with Julie Heiman, purchasing agent, Vestro Foods. 1991. Jan. 23. This product was introduced in Nov. 1990. It is made in America, not imported but the source is confidential. It comes in one flavor and size only (unsweetened liter).

5765. O'Bannon, Kathleen. 1989. The last years of Victor Food Products in Canada (Interview). *SoyaScan Notes.* Dec. 7, and 6 March 1990. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The problems started in three areas. First was the growing competition from small Chinese tofu companies. There were 6-10 little Asian-Canadian tofu makers, some making tofu in a bathtub in their basements, and selling it for cut-rate prices. One even attempted to get into Stephen's plant, disguised as a food inspector, to spy on/study his equipment. Stephen wanted to get out of the "Chinese tofu wars." The second cause was the two gay followers of the Indian guru Rajneesh. One day they came seeking employment, saying that they had made tofu in Poona for years. George Harris (Bodhi-dharma) was the good guy; Kathleen hired him after a careful background check. But when he left to live on the Rajneesh commune in Oregon (where he ended up staying for nearly a year), his partner, Kirti (Joe Lewis) took his place. Joe Lewis turned out to be a malicious character–at times pure evil. The Rajneesh commune in Oregon would not let him live there, which angered him. He became the bookkeeper and office manager. He made life so difficult for Kathleen and ruined the good friendship that she had had with Stephen Yu (he deliberately connived to turn each against the other), that she finally felt compelled to leave the company in 1984. Joe Lewis falsified the company books, making it look like the company had more accounts receivable that was the case; this led local banks to refuse key loans to the company and to distrust Stephen. Joe Lewis charged the company for more time than he was working, messed up the office, then finally got into a big fight with Stephen. The Rajneesh guys were talking about suing Stephen. Finally Stephen fired them both.

The third cause was Bing, who was one of Stephen's long-time key production employees. He was very chummy with the Rajneesh guys. Bing left and told everything he knew to somebody else down-town, found somebody with money, set up a business in Chinatown and competed fiercely with Stephen.

After Kathleen left the first time but before Joe Lewis was fired, someone approached Stephen Yu about a joint venture making soymilk ice cream with a company named Tofu Parlor (formally Tofu Restaurant and Ice Cream Parlors, 304 Victoria Ave. East, Regina, SASK, S4N 0N7, Canada [near Saskatoon]. Owner: Wayne Knipple), which was already making soymilk ice cream. Stephen found one or two investors. One was John van Kessel, a 55-year-old chain-smoking accountant and computer expert, who was part of Tofu Parlor, invested money in Victor Food Products (VFP), liked to tell dirty jokes. The other was Larry Ginsberg. Stephen did a great deal of original research, using custom-designed equipment, to develop a new process for making excellent quality soymilk and ice cream from that soymilk. He worked with Guelph University researchers (such as Dr. Leni DeMann, a woman) to eliminate the gas and chalky flavor from soymilk. Kathleen and others thought this ice cream tasted better than Haagen-Dazs, and many people felt that the soymilk and the ice cream had great potential. But the Chinese on the Board of Directors VFP wanted Stephen to behave like a Chinese and just make tofu. They were opposed to the ice cream venture and they tied his hands.

In order to get around this limitation, in late 1985 or early 1986 Stephen decided to start a new corporation (at the same address as VFP–102 Hymus Road, Scarborough, Ontario, Canada M1L 2C9) named Tofu Master Inc. Van Kessel and Ginsberg owned part of it. The Chinese on the board of VFP had nothing to do with the new company. VFP would focus its marketing on the Asian-Canadian market and Tofu Master would aim for the Caucasian market. Stephen could now do more R&D. Stephen then brought in some new people to do the soymilk production. Tofu Master launched a firm and a soft tofu Tofu Master brand, and Entice (the soy ice cream) under the Tofu Parlor brand. The ice cream was made in a small, independent dairy in Toronto, and certified kosher. It came in individual small (100 ml) cups in chocolate, strawberry, and vanilla flavors. Stephen had the rights to sell to foodservice institutions and hospitals; Tofu Parlor in Saskatchewan had rights to the retail market. Saskatchewan also made a Tofu Parlor Bar (ice cream on a stick). Stephen also developed a remarkable vacuum packed Tofu Master Gourmet Tofu (in Barbecue, Herb & Green Onion, Cheese, and Bacon flavors). When he vacuum packed this tofu (either sliced or in whole cakes) in a remarkable machine he had, the process sucked the flavors into the tofu. But the banks wouldn't loan him the money to market the products because of what Joe Lewis had done, so it never was launched. By this time Stephen had lost so much face with the Chinese that they didn't want him to do anything that was not Chinese. He had to fight this attitude the whole way. Tofu Master was apparently the cause of the company's bankruptcy, for the project was never completed.

After Stephen fired Joe Lewis, Kathleen came in for 7 months. She ran the plant, did the recipes and promotion and marketing, and straightened up the office after Joe Lewis had messed things up. She helped promote the new ice cream. After that she got in an accident when she tripped on something and fell. She injured her neck, her lungs collapsed, and her back and neck were out for a year. She was very ill and had to have surgery. She left in Sept. 1987 and moved to Santa Fe, New Mexico, where she is now

living. The company was still very much alive at that time. The company sold the equipment from the bankruptcy in April 1988. When she returned in November 1988 to do a health foods trade show in Toronto she was very surprised to hear that Victor Food Products had gone under. She can only assume that the people who were calling the shots had made big mistakes. Kathleen was very close to Stephen and felt very badly about what happened to him. Apparently after the bankruptcy he went to work with his brother-in-law who ran a Gold Chin fast food Chinese restaurant franchise.

Kathleen first made tofu in the early 1970s in her barn. She has followed the Sikh philosophy, was a yoga teacher for 8 years. He company in Toronto was named Natural Light Publications. She wrote a cookbook titled "Tofu: How to do it book," which was scheduled to be published in the winter of 1983 and to be sold with a stainless steel tofu kit that Stephen Yu was developing, to be produced in China. The kit turned out to be too expensive to make, so neither the kit nor the book was ever sold. Kathleen is now writing a book on "Nutrition and the Bible" and doing 6 home videos on cooking with natural foods. She wants to lecture on health and nutrition. Udo Erasmus has written a good book titled *Fats and Oils* published by Alive Press. It argues that butter is a safer product than margarine. Heating oils causes the free radicals to break off. They circulate in the body, causing many diseases and problems. Address: 227 Ojo de la Vaca, Santa Fe, New Mexico 87505. Phone: 505-983-5961.

5766. *SoyaScan Notes.* 1989. Influence of Japanese and Japan on soyfoods in America (Overview). Dec. 7. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Soyfood Center's SoyaScan database presently contains 30,790 publications and commercial products related to soya. Of these, 876 (2.9%) concern the influence of Asian-Americans (Japanese, Chinese, Koreans, or Indonesians) or their home countries on soyfoods. Of these 876 records, 638 (73%) concern Japanese influence, compared with 178 (20%) that concern Chinese influence–including Chinese from Taiwan, Hong Kong, Singapore, etc. Thus Japanese influence on soyfoods in America is much greater than that of any other Asian cultural group. We can identify at least seven major areas of influence:

1. Soyfoods Terminology. It is interesting to note that many of the most popular soyfoods in America are most widely known by their Japanese names. We say tofu (not doufu or bean curd), miso (not jiang or soybean paste), natto, okara (not soy pulp), yuba (not doufu-p'i or soybean skin). Even "soy" (as in soy sauce) is derived from the Japanese word "shoyu." Increasingly Americans interested in natural foods also use the terms shoyu and tamari to distinguish them from HVP soy sauce.

2. Kikkoman. By far the most influential Japanese soyfoods company in America today is Kikkoman, just as soy sauce is by far the most important soyfood product. Kikkoman was also the first Japanese company to introduce soyfoods to America. In 1868 the first Japanese immigrants to Hawaii took kegs of Kikkoman brand shoyu with them. In 1879 Kikkoman brand shoyu was registered in California, where it was exported to Japanese immigrants. Exports rose steadily, until between 1949 and 1954 exports of Kikkoman shoyu to the U.S. ranged from 213,000 to 305,000 gallons a year. Kikkoman's first real attempt to reach any foreign market dates from 1956 when, during the U.S. presidential elections, Kikkoman ran television ads to promote its product to mainstream American audiences as a seasoning for meat, fish, and poultry. In 1957 Kikkoman International Inc., a new sales company was established in San Francisco. Sales skyrocketed. In 1973 Kikkoman opened a huge modern shoyu plant at Walworth, Wisconsin. In 1976 Kikkoman passed La Choy to become America's best-selling soy sauce.

3. Introducing Soyfoods to Hawaii. The first Japanese who arrived in Hawaii in 1868 brought shoyu and miso with them. The earliest known soyfoods company there was a shoyu brewery started in 1891 in Honolulu by Jihachi Shimada. This was also the earliest known soyfoods company started by a Japanese anywhere in the Western world. Hawaii became part of the USA in 1898 by annexation. Hawaii and California were the first two areas in the U.S. where soyfoods became widely available. During the 20th century, Japanese started roughly 183 companies in Hawaii making shoyu, miso, and tofu–far more than Chinese (6) or Koreans (2). They developed innovative new products–such as sweet Hawaiian-style shoyu and miso. These products profoundly influenced the food life of Hawaii.

4. Soyfood Manufacturers in the USA. The earliest known soyfoods manufacturer in the Continental USA was a company (the name is unknown) run by the wife of Chieko Hirata that started making tofu in Sacramento in about 1895. The second earliest was Yamamori Jozo-sho, which started making shoyu in San Jose, California, in 1897. Many of the earliest soyfoods companies in America were run by Japanese Americans. By 1942 at least 158 soyfoods manufacturing companies had been started in America by Asian Americans; of these, 143 (91%) were run by Japanese Americans. When *The Book of Tofu* was published in 1975, it listed 55 tofu companies in America, all run by Asian-Americans; 39 were Japanese- and 16 were Chinese-run. Today America's two largest tofu companies are both run by Japanese Americans: Azumaya Co. in San Francisco, and House Foods & Yamauchi Inc. in Los Angeles. Hawaii's three largest tofu companies are also run by Japanese Americans: Aloha Tofu Co., Kanai Tofu Factory, and Hawaii Tofu. Morinaga Nutritional Foods in Los Angeles and Kikkoman Foods in San Francisco both import large amounts of aseptically packaged long-life silken tofu from Japan.

Another major manufacturer is San-Jirushi Corp. of

Kuwana, Mie-ken. In the late 1970s San Jirushi started exporting tamari and soybean miso to America. They set up an office in the early 1980s and began to promote their product as "real" tamari to industrial food processors and the natural foods market. In Sept. 1987 the company opened a state-of-the art tamari plant in Richmond, Virginia, with a capacity of 1 million gallons a year. The company now has 75% of the industrial soy sauce market in America.

In Oct. 1986 a major new joint stock company named American Soy Products began producing Edensoy soymilk in Clinton, Michigan. It was a joint venture between Eden Foods and 4 Japanese companies: Marusan Ai, Kawatetsu Shoji, Muso Shokuhin, and Seikensha. Edensoy has since become America's best-selling soymilk. Prior to 1986 much of the soymilk sold in America was made in Japan.

Finally, three of America's 4 largest miso manufacturers are run by Japanese-Americans. The largest is Miyako Oriental Foods in Los Angeles. The other two are located in Hawaii.

5. Soyfoods Imports from Japan. The first importers of shoyu and miso were Japanese distributors such as Japan Foods Corp., Mutual Trading Co. and Nishimoto. But starting in 1962 American macrobiotic and natural foods companies started to import large amounts of shoyu and miso. Pioneers were Chico-San, Erewhon, Eden Foods, Westbrae, Edward & Sons, Tree of Life, and Great Eastern Sun. U.S. imports of soy sauce from Japan jumped from 1.7 million lb (174,400 gallons, worth $317,000) in 1949, to 18.6 million lb (1,897,000 gallons, worth $3,116,000) in 1972, an 11-fold increase in quantity during only 23 years.

6. Teachers and Information. Many Americans first learned about soyfoods from Japanese teachers, especially macrobiotic teachers, such as George and Lima Ohsawa, Michio and Aveline Kushi, Herman and Cornellia Aihara, and Noboru Muramoto. All have written many influential books and lectured and taught extensively since the 1960s. In addition, many young Americans learned how to *make* soyfoods from these macrobiotic teachers. Moreover, Japan is Asia's best source of information about soyfoods. For example, the Soyfoods Center's SoyaScan database contains 5,095 publications and products about soya and Japan, compared with 1,867 on soya and China or Taiwan.

7. Tofu Equipment Manufacturers. Hundreds of tofu companies have started in America since the mid-1970s. The majority of these are run by Caucasian Americans and most use specialized tofu equipment made in Japan by Takai Tofu & Soymilk Equipment Co., or by Sato Shoji.

5767. J.-P.V. 1989. Innoval croit au soja [Innoval believes in soya]. *Le Figaro–Lyon* (*France*). Dec. 11. [Fre]
• ***Summary:*** Innoval presently has a soymilk capacity of 2,000 liters/hour and a piece of [ultrafiltration] equipment that can produce 500 kg/hour of liquid soy concentrate. The total represents an investment of 20 million French francs. Expected turnover in 1990 is 25 million francs. "Our objectives are to capture 25-30% of the French market, and to gain a significant part of the European market," explains Jean-Marie Gorce, president of the cooperative and general counsel for Innoval.

Innoval now has a line consisting of four products: Innofun soy beverages (vanilla, strawberry, or chocolate); Royales (a type of tofu quenelles); Creamy Concentrate, and Soymilk (*jus de soja;* natural, non-sweetened). And, Innoval has announced that it will introduce sorbets, sauces, desserts, and a pâté à tartiner.

5768. Rogers, Wally. 1989. The Continuous Cooking System sold by Bean Machines, Inc. (Interview). *SoyaScan Notes.* Dec. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Larry Needleman began to develop this cooker in about 1983. It is a continuous, pressurized system. The first one was purchased by Silver Sprout in San Francisco in 1984 for about $17,000. They were never able to make it work, and eventually they junked it. On 1 Aug. 1984 Wally Rogers moved to California and soon he and Steve Fiering bought Bean Machines from Larry Needleman. Wally and Tim Huang did a lot of work on the cooker at the University of California at Davis. The second one was ordered by Tomsun Foods, but they never installed or paid for it. That one is now used by China Rose (formerly Rosewood Foods and The Soy Plant) in Ann Arbor, Michigan. Purchased by them in Dec. 1988, it has a capacity of 300 gallons/hour. Two other systems have been sold: One in Sept. 1989 to Unisoya in Montreal, Canada (600 gallons/hour), and one in Nov. 1989 to Soyfoods of America (800 gallons/hour; Tim Huang now works there). Mr. Eng Lim of Mandarin Enterprises in Richmond (near Vancouver), BC, Canada, is also thinking of buying one. The current price of a 300 gallon/hour system with a cooking time of 2 minutes is $28,500 FOB Hayward, California. The corresponding price of a 600 gallons/hour system is $34,500. The system's modular design allows for simple and inexpensive expansion. The system meets all dairy standards, operates at 230ºF and is CIP.

Note: After the interview, Rogers sent two product description sheets and a color photo of the system.

Update: Talk with Wally Rogers. 1991. Nov. 4. Wally has now installed 6 continuous cookers. The latest showcase system, installed at cost, is at Wildwood Natural Foods in Santa Cruz. It reduced the number of workers by two and saved 2 cents/pound on the cost of making tofu. Wally sold a system to a dairy in Peru. They plant to blend soymilk with cow's milk to reduce the cost; the soymilk will cost 18 cents/liter. They will also sell soymilk in plastic bags. Wally now offers a soymilk system that can produce soymilk whose flavor is as good as that from an Alfa-Laval or an APV/DTD system but whose equipment cost is only 10-15% as much– with a continuous cooker. Tim Huang has left Soyfoods of America for a new career in medicine in Chicago, Illinois.

Wally likes the Nichii Microsoy flakes.

Update: Talk with Wally Rogers. 1994. Aug. 22. Other companies that have purchased his Continuous Cooking System are: Wildwood Natural Foods (California; 300 gallons/hour capacity), Les Aliments Alfa (Bolivia, South America; 600 gallons/hour), Northern Soy (Rochester, New York; 500 gallons/hour), Mandarin Enterprises (Vancouver, BC, Canada; 300 gallons/hour). White Wave (Boulder, Colorado).

He now also sells a centrifuge for soymilk extraction, priced at $19,500 FOB San Francisco. It is made in China and has no expensive screens to replace. The capacity is approximately 150 to 200 kg of dry soybeans per hour, with a 3 horsepower motor.

Talk with an owner of a Bean Machines cooker. 1998. Aug. 25. The slurry is cooked in a long tube, under pressure, at various temperatures starting at 212ºF, reaching a peak of 230ºF, and falling to 200ºF at the exit end. Address: President, Bean Machines Inc., 390 Liberty St. #2, San Francisco, California 94114. Phone: 415-285-9411.

5769. Krieger, Verena. 1989. Soja als Nahrungsmittel: genutzt oder missbraucht? [Soya as a food: Used or misused?]. *Zum Beispiel* (*Switzerland*) No. 12. p. 15-17. Dec. 21. [Ger]

• ***Summary:*** Soybeans can be fermented to make miso, soy sauce, tempeh, or natto. Or the protein can be extracted in traditional ways to make soymilk, tofu, or yuba. One can also make soy sprouts. In the Western world, soybeans are mostly misused to make high-protein meal for livestock fodder, and vegetable oil. Address: Lucerne, Switzerland.

5770. Kirkpatrick, Dan. 1989. Soybeans help Mexico to feed its people. *South Benton Star-Press* (*Blairstown, Iowa*)**.** Dec. 27.

• ***Summary:*** The Mexican government has a national policy to ensure that people have enough food. "Desarrollo Integral de la Familia (DIF or Family Development Institute) is an example of one of Mexico's most impressive poverty relief organizations. DIF is a federal program with 32 offices throughout the nation... Susana Dehesa, director of technical assistance in the American Soybean Association's Mexico City office, began working with Monterrey DIF personnel four years ago. She introduced them to texturized soy protein and showed them how its use as an extender would allow the facility to provide economical quality nourishment, not just cheap sustenance... Soy protein's benefits are clearly evident in DIF's efforts with ground beef. A pound of the meat normally costing 11,000 pesos (roughly $4.25) drops to 4,500 pesos ($1.75) with a 30% extension using texturized soy protein...

"Fluid milk is a very precious commodity in Mexico. So precious, in fact, dairy producers for years have slaughtered bull calves to market the milk rather than use it to grow the calves... ASA animal nutrition experts Benjamin Ruiz and Hector Navarro have been working with the U.S. Feed Grains Council to show dairy producers there's a viable alternative to the calf slaughter. 'We've been conducting trials with soy-based milk replacer,' Ruiz notes. 'Saving the bull calves adds to the animal protein supply, creating another market for U.S. soybeans.'"

5771. Ingersoll, Bruce. 1989. Dairy dilemma–Milk is found tainted with a range of drugs farmers give cattle: Federal tests don't catch all of the perils; how far can testing go? Residues in 38% of samples. *Wall Street Journal.* Dec. 29. p. A1, col. 6; p. A2, col. 4.

• ***Summary:*** Though milk has the image of being thoroughly inspected, regulators and processors customarily test for only a narrow category of contaminants. They rarely check for a variety of drugs widely used to treat sick cattle; some of these are potentially harmful to humans. This week two surveys of low-fat and nonfat milk detected some of the drugs that regulators routinely miss. The first, conducted by the Center for Science in the Public Interest (a consumer advocacy group in Washington, DC) found that in 20 off-the-shelf samples, 20% were tainted by sulfa drugs, including sulfamethazine, a suspected carcinogen. The second, by the *Wall Street Journal,* involved 50 retail samples collected in 10 major cities; 38% were found to be contaminated with sulfamethazine, other sulfa drugs (erythromycin, streptomycin), or antibiotics (penicillin). In both surveys, the screening for drug residues was conducted by scientists at Rutgers University.

Also discusses similar damaging surveys conducted in 1987 and 1988. Address: Staff reporter.

5772. Friedrich, Corrine. 1989. Cacoja recentre son activité: Filière soja [Cacoja refocuses its activity]. *Process* (*France*) No. 1046. p. 26-29. [Fre]

• ***Summary:*** "In the heart of Alsace, the soy adventure continues. At Issenheim, 20 km from Colmar, Cacoja, an affiliate of the CAC (Coopérative Agricole de Colmar), has worked for several years to master the transformation of soybeans into human foods, using its automated plant. The company's dynamism allowed it to obtain at the last SIAL the prize for development by an affiliate for its entire line of products. Today Cacoja is refocusing its activities on the production of products, both basic/unrefined, and semi-processed (soy milk and soy concentrate, tofu, powder, flour), leaving to industrial food processors the cares of producing finished products."

Recall that in 1985 CAC began to reflect on the possibilities of diversification. They asked: "What will be the foods of the year 2000?" The response from M. Rochet (present director of Cacoja) was that healthfulness would be the key concept. In 1986 they did a market study, then built a factory (investing 16 million French francs and buying a

completely automated Alfa-Laval soymilk system), which began operation at the end of 1986.

The semi-continental climate of Haut-Rhin is favorable to the culture of soybeans; 3,500 ha are now grown on the plains of Colmar and Mulhouse. Studies are now underway to reach a compromise between high yield and high protein content. The latter can vary from 32 to 44%. In this region, soybeans are gradually taking the place of cereal grains. 15% of the harvest is processed by Cacoja. A third of the soybeans bear the valued CINAB organic mark.

M. Rochet estimates that the soyfoods market is growing at 40% a year. In 1985 it was the equivalent of 1-2 million liters of soymilk; in 1989 it was 5-7 million liters. Each year Cacoja produces several million liters (figures are confidential) giving it a turnover of 18 million French francs for 1988-89 (July to July). So far, the products have been sold to specialty stores. Since Jan. 1989 Cacoja has exported to Germany, Italy, and the Netherlands the equivalent of 15% of its annual sales. The company plans to increase exports and double production. Cacoja is at the head of the French market and second in Europe.

Since 1987 Cacoja has sold basic materials to food processors under the Formoja brand, but this has led to Cacoja competing with itself. Starting in Jan. 1990 will begin to phase out its finished products and focus on making products for its industrial clients, and supporting these with R&D. A sidebar discusses the Cacoja/Alfa-Laval soymilk and tofu processes. Ultrafiltration is used, and Cacoja also makes powdered tofu and soy flour.

In the journal IESIEL, Mr. Rochet recently emphasized the complementarity between vegetable and animal proteins; they should not be seen as competitors. He predicted that mixed products (soy-dairy, or soy-flesh blends) would soon become popular. The finished products will be commercialized by the affiliate Bio-Soja, which started last July.

There are regulations for all food products, but nothing specifically concerning soy. Thus, in Oct. 1989 AFISA (l'Association française des industriels du soja alimentaire), the French Soyfoods Manufacturer's Association, was created. There are 7 member companies. It goals: To establish product standards with respect to regulation and fraud. To better study the soybean as a new food (nutritional and organoleptic) and technology. To propose studies on this subject. To promote soyfoods. To help interest the public in soyfoods by means of the press.

5773. Golbitz, Peter. 1989. Soyfoods under attack: Editorial. *Soya Newsletter* (*Bar Harbor, Maine*). Sept/Dec. p. 2.
• ***Summary:*** The FDA has written "'regulatory' letters to a number of tofu companies asking them to change their labels, and call tofu 'soybean curd.' It is their opinion that American consumers aren't familiar with the word 'tofu,' but are with the term 'soybean curd.'" They are also asking retail stores to refrigerate their tofu at 45ºF or below. Address: Soyatech, Bar Harbor, Maine.

5774. Litov, R.E.; Sickles, V.S.; Chan, G.M.; Springer, M.A.; Cordano, A. 1989. Plasma aluminum measurements in term infants fed human milk or a soy-based infant formula. *Pediatrics* 84(6):1105-07. Dec. [18 ref]
• ***Summary:*** "Aluminum is the most abundant metal in the earth's crust. There is a constant environmental exposure to this element because it is ubiquitous. Under usual conditions, dietary aluminum has not been shown to have any deleterious effects because aluminum is poorly absorbed and readily excreted in the urine. However, aluminum may be a health concern in patients with compromised kidney function and those receiving total parenteral nutrition. Aluminum, if retained, results in an increase in the concentration of body aluminum...

"Human milk has low levels of aluminum, reported to be less than 5 to 45 micrograms/liter. Because aluminum is poorly absorbed by mammals, their biologic fluids such as milk have a low aluminum content. Koo found cow's milk-based infant formulas to have aluminum contents ranging from 14 to 565 micrograms/liter... Soy-based infant formulas were found to have 455 to 2346 micrograms/liter of aluminum. This is due to incidental aluminum from the various added ingredients, including the soy protein source. Plant proteins, such as soy, naturally contain more aluminum than milk proteins. Plants obtain their nutrients from the soil which generally contains more than 10% aluminum. Plants lack an excretory mechanism for aluminum and thus accumulate aluminum to a greater extent than animals...

"In conclusion, healthy term infants from birth to 3 months of age fed soy-based infant formulas containing amounts of aluminum severalfold greater than that found in human milk had plasma aluminum levels similar to breast-fed infants." Address: Mead Johnson Research Center, Bristol-Meyers United States Pharmaceutical and Nutritional Group, Evansville, Indiana; and Univ. of Utah Medical Center, Salt Lake City.

Talleres populares de producción de leche de soya: Un proyecto técnicamente factible y econónomicamente viable [Popular workshops for the production of soymilk: A project that is technically feasible and economically viable]. *La Era Agricola* (*Merida, Venezuela*). Oct/Dec. No. 9. p. 28-29. [1 ref. Spa]
• ***Summary:*** An idea for neighborhood / community organizations / businesses. Illustrations show: (1) A hand-turned screw press. (2) Two soymilk cookers, each with a gas burner underneath. (3) A small had-mill powered by an electric motor. (4) A lady making soymilk and selling it from her window. Address: Granja Tierra Nueva, Aldea San Luis, La Azulita, C.P. 5102, Estado Merida, Venezuela.

5776. **Product Name:** Solcon, Solcaf 70 (both soy protein concentrates), Solpro (functional soy protein), Soybar (defatted non-toasted soy flour), and Sobit (refined soybean fiber).
Manufacturer's Name: Solbar Hatzor Ltd.
Manufacturer's Address: P.O. Box 2230, Ashdod 77121, Israel. Phone: 08-561414.
Date of Introduction: 1989. December.
New Product–Documentation: Spot in *Soya Newsletter.* 1989. Sept/Dec. p. 13. "Solbar Hatzor now offering products under its own name." "Solbar Hatzor Ltd. [formerly Hayes Ashdod Ltd.], Ashdod, Israel, manufacturers of soy protein products, previously under contract to a major factory in the soy protein industry, has fulfilled its contractual obligations and now enters the market directly. Under its own name and identification, they are offering" the products shown above. "Textured soy protein and textured soy protein concentrates are also available." Note: This is the earliest document seen (Dec. 2007) that mentions Solbar Hatzor Ltd.

Brochures issued by Solbar Hatzor Ltd. 1990. Oct. Sent 1992. Jan. Individual sheets describe Solcon, Solcaf, Soybar, and Sobit. Solcon and Solpro are non-texturized soy proteins used in food products. Founded in 1963, Solbar Hatzor Ltd. was formerly named Hayes Ashdod Ltd. "Sobit is processed from refined and desugared soybean hulls and cotyledons–all derived from high quality defatted soybeans."

5777. *Soya Newsletter* (*Bar Harbor, Maine*). 1989. Soy powder plant to be built in Minnesota. Sept/Dec. p. 8.
• ***Summary:*** "The Upper Minnesota Valley Regional Development Commission (UMVRDC) along with PdT, a Minnesota-based specialty soybean supplier, has announced that they will soon be signing an agreement that will result in the building of a soy powder plant sometime in the Spring of 1990. The plant, being built in conjunction with Showa Boeki of Osaka, Japan, will produce Neo Soya Powder (NSP), made through a proprietary dry process. The Minnesota group plans to buy, dismantle and install Showa Boeki's soy powder system in Madison, Minnesota. Showa Boeki will have a five year agreement with the group to buy their NSP. The powder will be shipped to Japan and used in producing tofu and other products."

5778. *Soya Newsletter* (*Bar Harbor, Maine*). 1989. Ambrosia Soy to expand production. Sept/Dec. p. 12.
• ***Summary:*** "Ambrosia Soy Company, East Haven, Connecticut, has announced they have contracted with a Connecticut pizza company to private label, whole wheat soy cheese pizzas. Production began July 20 with two varieties of Sicilian style pizza in *regular* and *deluxe.* A vegan style is also planned... A chain of six New York City croissant stores are being provided with Ambrosia's cookie dough for instore bake-up... Appel also reported that *SweetSoy* (Ambrosia's soymilk) is now available in 23 Waldbaums supermarkets, up from the initial 6 stores, and several other independent stores in the New York City area. Look for a new package design soon."

5779. *SoyaScan Notes.* 1989. Major soy-related company acquisitions and mergers worldwide 1970-1989 (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1970 March–Miles Laboratories of Elkhart, Indiana (most famous as the maker of Alka-Seltzer) acquires Worthington Foods of Worthington, Ohio (most famous for its Morningstar Farms line of meat alternatives), making it a wholly owned subsidiary.

1973 Jan. 15–ADM acquires 50% of British Arkady Holdings Ltd. and its subsidiary British Arkady Co. Ltd. of Old Trafford, Manchester, England.

1977 (late)–Bayer A.G. of Germany (makers of Aspirin) acquires Miles Laboratories of Elkhart, Indiana; as part of the deal they Worthington Foods, a subsidiary of Miles.

1979–Bunge Corp. acquires Lauhoff Grain Co. of Danville, Illinois.

1982 Oct. 15–Worthington Foods is repurchased from Miles Laboratories by a group of three Seventh-day Adventist investors in a leveraged buyout. During the 12 years under Miles, sales increased five-fold. Sales volume in 1983 was an all-time high. The company employed 250 people.

1983 April 21–Hybritech Seed International, Inc., a wholly-owned subsidiary of Monsanto Company, purchases the Jacob Hartz Seed Co. of Stuttgart, Arkansas.

1983–House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1985 May 31–Barricini Foods Inc. acquires Farm Foods (makers of Ice Bean soy ice cream) of Summertown, Tennessee.

1985 March–British Arkady acquires Direct Foods Ltd.

1986 Feb.–British Arkady acquires Vegetarian Feasts Ltd.

1986 Dec. 1–White Wave acquires Soyfoods Unlimited, Inc. of San Leandro, California. It is White Wave's first acquisition.

1987 Aug.–British Arkady acquires Haldane Foods Ltd. and Regular Tofu Co. Ltd. It also acquires Vegetarian Cuisine Ltd. in 1987.

1987 Oct.–The Ferruzzi Group in Ravenna, Italy, acquires Central Soya Co. in Ft. Wayne, Indiana.

1987 Dec. 31–ADM acquires the rest of British Arkady Holdings Ltd. so that it now owned 100%.

1988 Jan.–The British Arkady Group acquires Haldane Foods.

1988 Feb.–Westbrae Natural Foods (of Berkeley, California, maker of soymilk) is merged with and becomes a

wholly-owned subsidiary of Vestro Foods, a publicly traded company in City of Commerce, Southern California. Most of Westbrae's top management decides not to stay with the company.

1988 Sept.–Haldane Foods Group acquires Realeat Foods Ltd.

1989 Feb.–Haldane Foods Group acquires Saucemasters Ltd. It also acquires Genice Foods Ltd. in March 1989.

1989 Feb. 16–Edward Lowe of Michigan, the inventor of Kitty Litter, purchases the majority of shares in INARI Ltd. from Len and Irene Stuttman; but they. kept a minority ownership in the company.

1989 April–Huegli Naehrmittel A.G. acquires Yamato Tofuhaus Sojaprodukte of Tuebingen, Hirschau, West Germany. Note: This is the earliest record seen (Feb. 2013) that mentions Huegli in connection with soy.

1989 April 22–Lima Foods of Belgium acquires Jonathan P.V.B.A. of Belgium.

1989 Sept.–Lima Foods of Belgium is purchased from Vibec by Euronature (pronounced as in French, YU-ro na-TYUR), a large international food company headquartered in Paris, France.

5780. **Product Name:** [Soialat: Soy protein beverage].
Foreign Name: Soialat: Bevanda proteica di Soia.
Manufacturer's Name: Amisoya (Marketer-Distributor). Made at Centro Latte Cremora S.r.l.
Manufacturer's Address: Amisoya: Pescheria Boromeo (Milan), Italy; Centro Latte Cremora, Via Ostiano, 4–Gadesco Cremona.
Date of Introduction: 1989.
Ingredients: Water, partially defatted soybeans, sugar, natural aromas.
Wt/Vol., Packaging, Price: 1000 ml.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.2 gm, carbohydrates 4.0%, lipids 2.3 gm, calories 49.5.
New Product–Documentation: Letter (fax) from Xavier Karis in Italy. 1990. June 14. "About the name Soialat, I have asked several people but nobody has heard of the name or seen the product. However I did find out that Soialat is a registered trademark of a company named Parmalat S.p.A. It was registered on 15 July 1986 and paid for 10 years. Parmalat is located in Collecchio di Parma in the province of Parma. It is a rather big company with a large line of dairy products.

"There is however another problem with the name Soialat. Italian law forbids use of the terms 'soia' and 'latte' together. A company cannot promote its product as 'Latte di Soia.' Therefore the name Soialat probably cannot be used legally. A short time ago a lawsuit concluded that it was legal to call a soymilk product 'Soia Milk,' but there is still big chaos in Italy over the naming of soymilk products."

Label sent by Xavier Karis. 1990. June 27. 2.5 by 4.5 inches. Orange, blue, white, brown, yellow, and black on light orange. "Soya and life. No cholesterol. With sugar. A beverage rich in all the high-quality protein of soya."

Letter from Xavier Karis. 1990. June 27. "Medical Soy's Soialat has only been in the shops for about a week. I am sure the name Soialat is patented by Parmalat, so either these two companies are connected or Medical Soy will get into trouble."

5781. Combemale, Isabelle. 1989. Un nouvel outil de production du tofu en continu: Reportage soja [A new tool for the continuous production of tofu: Reporting on soya]. *Technique Laitiere* [*Process, Rennes*] No. 1038. p. 51-54. [Fre]

• ***Summary:*** A description of the installations at the cooperative "The Silos de Valence" used for automated, continuous tofu production. Describes processing conditions and the principal outlets for the products obtained: Miso, soymilk (flavored desserts), and by-products (okara).

Les Silos de Valance, a cooperative that produces soybeans in the south of France, first considered processing soybeans for human consumption while looking for new markets and more profitable high value-added products. In 1988, after market surveys and feasibility studies had confirmed the choice, they established a new company named Innoval. The new production plant in Valence is similar to the one built by Alfa-Laval for Cacoja at Issenheim in 1987. Soymilk base is continually processed up to the point where it is coagulated into tofu.

The new and innovative part of the plant is the concentration of the soymilk base using ultrafiltration (developed by Tech-Sep) [also a DTD patent!] and continuous dosing of the calcium sulfate coagulum, developed and patented by S.E.R.E.A. and equipment built by Steachma.

Simultaneously with coagulation, spices, herbs, vegetables, etc. are added. The total production is sold to the diary industry, which markets and distributes the products.

The article ends by noting that large companies like Alfa-Laval and Nestle are interested in soybean utilization and many soymilk products are currently marketed by Celia, Triballat, and Est Lait dairy groups in France.

Black-and-white photos show: (1-4) Equipment inside the Innoval plant. (5) Several Innoval products, incl. Inno Fun. (6) An exterior view of the Innoval plant, with details about two companies: (1) Innoval–Address: Allée Joule, Les Auréats, 26014 Valence cedex. Director: M. Pastonnier. Asst. Director: Mr. Reynaud. Capital: 4.8 million francs, of which 70% is Silos de Valence and 28% is financial establishments. Personnel: 10. Expected transformation in 1989: 700 tonnes of grains. (2) Les Silos de Valence–Cooperative of cereal grain producers with capital in 1987 of more than 100 million francs. *Remise d'adherents:* 5,300. *Producteurs outils:* 1,130. Personnel: 21. (7) Messrs. Tocart, Steachma,

and Toulouse. (8) The front gate. Address: Ingénieur agro-alimentaire [France].

5782. Doborjan, Karolyne; Goenczi, Ildiko. comps. 1989. Eteleink szojaval. Masodik kiadas [Our soya foods. 2nd ed.]. Budapest, Hungary: Feherjetechnologiai Tudomanyos Termelesi Egyesules (Association for Protein Research Technology and Production). 48 p. [Hun]
• ***Summary:*** This is a soyfoods cookbook, compiled by two Hungarian women, with recipes using tofu, soymilk, and TVP.

Contents: Introduction. I have prepared it and enjoyed it: List of products and first courses. Soups. Main courses. Desserts, candies and cakes. Beverages. The introduction gives a short account of the aim of the booklet: to serve as a guide for the reader to the use of different soy products. Address: Budapest XII., Goldmark K. u. 3. Budapest Pf: 340 1536, Hungary. Phone: 155-52-02.

5783. **Product Name:** So Good Soya Milk [Regular, or Sugar-Free Organic].
Manufacturer's Name: Haldane Foods Ltd. (Importer-Distributor). Made in Australia by Sanitarium Foods.
Manufacturer's Address: 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England. Phone: 050981-6611.
Date of Introduction: 1989.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton. Retails for £0.69.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Haldane Foods Group catalog and price list. 1989. Oct. 2. This product is listed in both documents under the Haldane Foods Ltd. product line. A color photo in the catalog shows the label (1 liter carton). It has black lettering and vertical stripes on a white background. On the front panel is am impressionistic sketch of a snow-capped mountain in the distance with several soybean plants growing in the immediate foreground.

Talk with Philip Marshall of Cauldron Foods. 1990. July 9. Haldane's soymilk used to be called Sojal. They may have lost the fight over the name. It is very likely that the Haldane group has this product made by some company outside of the group. They do not have the equipment needed to make a quality soymilk. There is no connection with Sanitarium Foods in Australia.

5784. **Product Name:** Tofu, Soy Milk, Tempeh, Soy Ice Cream, Soy Punch.
Manufacturer's Name: Natural Cafe. Expanded to include La Soyarie by June 1994.
Manufacturer's Address: Mailing address: 73 Chaussee Rd., Castries, St. Lucia, West Indies. Plant: Union Hilltop Choc, Castries. Phone: 809-452-6421.
Date of Introduction: 1989.
New Product–Documentation: Plenty International. 1994. Jan. A Guide to Growing and Using Soybeans for Food. p. 30. This company makes fresh soyfoods.

Form filled out by Johnson Clarke, Manager. 1994. May 25. The plant is now located at Union Hilltop Choc, Castries, and the phone number is 809-450-2570. The company was founded in 1989. The founders were Johnson Clarke, Maya Clarke, and Ignatius Longville. The original purpose was to work as a group to produce high-quality foods at an affordable price and to educate the populace about soybeans. There have been no changes in the company address or ownership. Milestones: (1) When Johnson built a proper structure of concrete for processing; and (2) When CIDA (Canadian International Development Agency) gave the group a grant to purchase some equipment in 1991. Reasons for success: "I am the only person on the island that is processing [soybeans] on a commercial scale, and I take pride and joy in what I'm doing." The company makes tofu, soy milk, and tempeh, and it buys and markets Vitasoy soymilk, miso, soy oil, Mori-Nu tofu, and soy powder. They make about 100 lb/week of tofu, and they use about 7 gallons of soy milk to make soy ice cream and soy punch. The company's three best-selling products (in descending order of dollar value) are tofu, soy punch, and soy ice cream. The company now employs 6 people. Their factory is 14 x 30 feet. Offices are in a separate building. Net sales last year were "not much" and the net worth of the business is "not much." "We are a small group of six and just making ends meet. We still have a long way to go in making the population of St. Lucia realize the true potential of soybeans. I don't know if we can continue since were are poorly equipped for processing the beans and packaging the products to sell at supermarkets and shops. We are presently selling only at one small outlet we own. We could sell at hotels, supermarkets, and shops if we had proper packaging equipment such as a vacuum packer." Note: This is the earliest known commercial soy product made in St. Lucia.

5785. **Product Name:** Sanitarium So Good: Flavoured Non-Dairy Soy Drink [Strawberry, Jaffa {Chocolate & Orange}, Honeycomb, or Caramel].
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.
Date of Introduction: 1989.
Ingredients: Jaffa: Water (80.0%), soya isolate (3.7%), sugar (3.7%), vegetable oil 3.2%, maltodextrin 2.8%, fructose (1.7%), mineral salts, vitamins, flavours, food acid, colour.
Wt/Vol., Packaging, Price: 250 ml Combibloc Aseptic carton. Retails for $0.75 (10/93, Walnut Creek, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 250 ml.: Calories 178 (or 750 kJ), protein 8.0 gm, fat 8.0 gm, carbohydrate (total 19.7 gm, sugars 13.7 gm,

lactose 0 gm), cholesterol 0 gm, sodium 137 mg, potassium 350 mg. Provides 40% of the Daily Allowance of calcium and 35% of vitamin B-12.

New Product–Documentation: Letter and Labels sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1989.

Sanitarium Nutrition Education Service. 1990. April. "So Good." This 4-page leaflet gives a clear explanation of each ingredient used, plus nutritional and other information.

Product with Label (Jaffa and Strawberry flavors) purchased at Diablo Oriental Foods in Walnut Creek, California. 1993. Oct. 11. Each retails for $0.75. 3 inches by 3 inches by 1.87 inches thick. Jaffa: Brown, reddish brown, orange, pink, blue, and red on white. Illustration of a large glass of pink soymilk with a straw in it. Beside it is an orange and two squares of chocolate. Behind it is the morning sun rising over purple mountains and green fields. Front panel: "Long lasting. No cholesterol. No lactose." Back panel: "So Good is an excellent source of protein. A 250 ml serve of So Good supplies 8g of vegetable protein. Another quality product from the Sanitarium Health Food Company–the people who believe that food should not only taste good, it should be good for you." Side panel: "So Good has no cholesterol, no lactose, and as much calcium as milk. Quality Guarantee: If you are not satisfied with this product, please send the top of the pack with your complaint to SRL Consumer Services... or to the nearest Sanitarium State office." Soyfoods Center taste test. Excellent. No beany flavor at all.

5788. AB Tetra Pak. 1989. Tetra Pak. Lund, Sweden. 20 p. [Eng]

• ***Summary:*** "Contents: Tetra Pak–a uniquely specialized group of companies. Variations on a theme. The packaging material. The packaging machines. Complete packaging lines. Extended product life. Distribution. Research and development. Products of the future.

"Tetra Pak is the creation of Dr. Ruben Rausing: In 1951, when he started the family company in Lund, Sweden, he founded an enterprise which specialized solely in one-way beverage packaging systems... despite enormous growth, Tetra Pak remains family-owned with headquarters in Lausanne, Switzerland.

"Still widely used today, the Tetra Classic was introduced in 1952, the Tetra Classic Aseptic in 1961... the modular Tetra Brik, brick-shaped as its name implies, was launched in 1963; the Tetra Brik Aseptic followed in 1969 and is the world's most popular package for long-life liquid foods.

"The packaging material... is a laminate of paper, polyethylene and, for aseptic packages, aluminum foil. The material is printed by flexography, rotogravure or offset lithography, often in a magazine-style four-colour process with even the option of a fifth special colour. Paper makes the packages stiff. Plastic renders them liquid-tight, and aluminum foil blocks light and oxygen and permits induction sealing from the inside out... There are more than 5,000 Tetra Pak machines that are now forming, filling and sealing Tetra Pak packages.

"Of all the packages produced by Tetra Pak machines, two-thirds are used for aseptic filling. Milk products account for a large part of Tetra Pak's total aseptic package volume. The remainder contains a wide variety of products, including juice, still drinks, mineral water, table wine, soya products, coffee, tea, cooking oil, sauces and soups.

"Ultra-high temperature (UHT) treatment consists of a brief thermal shock 140-150ºC (284-302ºF) for 2-4 seconds. The product is then cooled quickly to room temperature and packaged aseptically." Address: Lund, Sweden.

5789. Blackman, Jackson F. 1989. Working chef's cookbook for natural whole foods. Morrisville, Vermont: Central Vermont Publishers. vi + 344 p. Illust. Recipe index by category. Alphabetical recipe index. 28 cm. [20 ref]

• ***Summary:*** This large-format book fills a gap in the world of natural foods. Contents: Foreword. Introduction. Part I: Information, philosophy, technique. 1. Healthy and unhealthy foods. 2. Getting started. 3. Meal design. 4. Directed diets for special occasions. 5. Philosophy, practice and tradition. 6. Charts and lists. 7. Ingredients description. At the end of Part I (p. 95) is a "Suggested reading" list of 20 references.

Part II: Recipes (each on 4x6 inch cards, with 2 cards per page).

The section on "Miscellaneous food description" includes brief descriptions of barley malt, Chinese white cheese (fermented tofu), daikon, gomashio, kuzu, mirin, miso, rice syrup, seitan, shoyu, soy milk (American style vs. Oriental style), soy cheese (American), tahini or tahinah (sesame butter), tamari, tempeh, and tofu. This section, and the book shows the influence of macrobiotics.

Page 74: "Chinese white cheese: (Chin.) Tofu marinated and fermented in rice wine; taste and texture of Camembert

cheese. Used as flavoring for noodles or vegetables, or served as a condiment."

The word "tamari" appears on 100 pages in this book, tofu on 92 pages, miso on 57 pages, brown rice on 48 pages, "sea vegetables" on 16 pages, nori on 13 pages, tempeh on 7 pages, kombu on 6 pages, shoyu and soybean on 5 pages each, adzuki beans and wakame on 4 pages each, and soybeans, soy cheese, and soy milk on 2 pages each.

About the author: "Jackson F. Blackman has lived and traveled extensively in Mexico, Belize, Guatemala, Europe, China, Egypt, Saudi Arabia, Libya, Lebanon, Jordan, and Syria. During his travels he studied local eating habits and their relationship to social customs, and the methodology of preparing natural whole foods. He was a sous-chef in a Houston [Texas] restaurant, and operated his own coffee shop in Houston. He then moved to Vermont, where he made and sold health food products to health food stores and co-ops. He is now a food service consultant and lecturer" (Rear cover).

He favors plant foods over animal foods, but does include fish in his recipes. Address: Vermont.

Nachfrageveraenderungen bei Milch durch Imitationsprodukte [Changes in the demand for milk caused by imitation products]. *Schriftenreihe des Bundesministers fuer Enaehrung, Landwirtschaft und Forsten "Angewandte Wissenschaft"* No. 317. 173 p. (Muenster-Hiltrup). [Ger]*
• ***Summary:*** This is the publication of a 1987 report on this subject.

5791. Bryan, Ford R. 1989. The Fords of Dearborn. Revised ed. Detroit, Michigan: Harlo Press. 301 p. 1st ed. 1987. [23 ref]
• ***Summary:*** Chapter 19, titled "Henry Ford's friend–Dr. Carver," discusses Ford's work with farming and soybeans and the Carver Laboratory at Dearborn.

"Henry Ford was intensely interested in agriculture, although he seems to have been somewhat at odds with the horse and the cow. As soon as Mr. Ford began to realize a significant profit from the manufacture of automobiles (1909), he began to buy land and operate farms in the Dearborn area. With money to spend, he immediately accelerated his experiments with a farm tractor designed to replace the horse, and with a large ultra-modern dairy farm, started experiments with milk and milk products."

"When the Dearborn Water Works ceased pumping water in the early 1930s, Mr. Ford was concentrating on Greenfield Village. Within the Village grounds a chemical laboratory and a greenhouse were built... Robert Boyer was put in charge of the Chemical Plant. Mr. Ford's stated objective was to 'find industrial uses for farm products... In a separate building near the Engineering Laboratory in Dearborn, Dr. Edsel Ruddiman, Henry's boyhood schoolmate, was working with wheat, soybeans, carrots and tomatoes to 'make milk without a cow.'

"In 1932 [sic, Dec. 1931], Mr. Ford issued orders to concentrate on the soybean. His tractors began to plant and harvest thousands of acres. In a 25-acre field on Greenfield Village property some 500 experimental varieties of soybeans were grown. In September, 1932, Dr. Ruddiman and Mr. Boyer attended the American Soy Bean Association Convention in Washington, D.C. That year the Village Chemical Plant was extracting six tons per day of soybean oil. The Rouge started with twenty-four tons a day, followed by Milan and Saline Plants. These industries utilized the oil in making paints and plastics. The small Village Plant led the parade, however, with soybean milk, bread, ice cream and an experimental plastic car (chassis excluded). The soybean foods became standard fare at the Ford plant cafeterias and at Ford Hospital. The ice cream–most delicious–was for years sold as Del(icious) Soy(bean) Topping.

"In May, 1935, Mr. Ford hosted the First Dearborn Conference of the National Farm Chemurgic Council. This was the charter meeting of some 300 agricultural chemists who, in Mr. Ford's replica of Independence Hall, signed a 'Declaration of Dependence Upon the Soil.' Again, in 1936, the same group met in Dearborn and Dr. Carver, then the Director of Research at Tuskegee Institute, was invited to attend. Mr. Ford visited with him in his suite at the Dearborn Inn. This is perhaps the first time the two had met in person. Dr. Carver now had a very competent research assistant, Mr. Austin W. Curtis, Jr...

"Mr. Curtis spent a summer (ca. 1940) in Dearborn working with Robert Boyer in The Soybean Laboratory. During these years, reports of research being conducted in Dearborn by R.H. McCarroll, Robert Smith and Robert Boyer were being forwarded to Dr. Carver...

"The Fords traveled to Tuskegee in March, 1941, where Henry and Clara dedicated the Carver Museum, inscribing their names in the cement and donating soybeans and a variety of soybean plastic car parts to be placed in the cornerstone."

In July 1941 Carver visited Ford in Dearborn. A log cabin replica of Carver's birthplace was dedicated. On 21 July 1942 a laboratory building on 8.3 acres on Michigan Ave. was dedicated by Dr. Carver. Initially named the "Nutritional Laboratory" of the Ford Motor Co., it later became better known as the Carver Laboratory. Outside the building a greenhouse was added and the land beside the building was planted to corn, soybeans and potatoes. "Both Dr. Carver and Mr. Ford were firm believers in natural foods." The Laboratory, which eventually housed a staff of 25 under Mr. Robert A. Smith, went into volume production of soybean milk and ice cream. On 5 Jan. 1943 Dr. Carver died in Tuskegee.

The Carver Laboratory operated for at least a while after 1945 when Robert Smith left to go into business for himself,

and Clem Glotzhober took charge. After Mr. Ford died in 1947 the building was essentially abandoned. Address: Dearborn, Michigan.

5792. Cituk, Kathy; Finnegan, John. 1989. Natural foods and good cooking. Elysian Arts, 20 Sunnyside Ave. Suite A161, Mill Valley, CA 94941. 122 p. No index. 22 cm. [64 ref]
• ***Summary:*** This non-vegetarian cookbook contains considerable introductory information about and recipes using amazake (p. 16, 41, 56, 91, 98-99, 103), miso (p. 43), soymilk (p. 43), mochi (p. 44, 54), tamari soy sauce (p. 46), tofu (p. 46, 51, 80, 88, 96), tempeh (p. 46). Numerous references are made to a book by John Finnegan (1989) titled "Amazake Rice Nectar." Address: Mill Valley, California.

5793. Clergeaud, Chantal; Clergeaud, Lionel. 1989. La cuisine au tofu et lait de soja [Tofu and soymilk cuisine]. Paris: Equilibre aujord'hui. 95 p. Illust. 20 cm. Series: Cuisine et santé. [Fre]*
Address: Naturopathes–Ostéopathes, France.

5794. Dominguez de Diez Gutiérrez, Blanca. 1989. Datos biograficos de Blanca Domingues de Diez Gutierrez [Biographical sketch of Blanca Dominguez de Diez Gutierrez]. Mexico. 6 p. Unpublished manuscript. [Spa; Eng]
• ***Summary:*** Blanca was born on 8 Nov. 1919 in Comitan, Chiapas, Mexico. She was reared in California and Texas, and began undergraduate studies in biology and chemistry at Texas A&I University, Kingsville, Texas, before returning to Mexico to study philosophy and history at the National University of Mexico in Mexico City. She later studied art and art history at the Universidad Ibero Americana, Mexico City, and her interest in art led her to become a professional painter and art teacher for 16 years.

In 1972? Blanca became a disciple of Swami Pranavananda Saraswati, who has been twice decorated by the Mexican Legion of Honor for his humanitarian work and worldwide efforts for peace. Senora Dominguez has served as a lecturer and yoga instructor, and a President of the Yoga Center of Tapasthana at Tepoztlán, Morelos, Mexico (directly south of Mexico City). Since 1976 she has been incorporating yoga in the field of nutrition.

In 1976 she learned about the direct use of soya after reading *The Book of Tofu* by William Shurtleff and Akiko Aoyagi, founders of the Soyfoods Center in Lafayette (near San Francisco), California. Starting at the Yoga Center at Tepoztlán, Morelos, she introduced the soybean and its use in the state of Morelos, traveling from village to village, conducting workshops in schools and private homes. Her main goal was to introduce soymilk to children in rural schools. During 1977 Blanca was extremely active in her work with soya. In 1977 her first publication on soya appeared as a booklet titled "Los Mil Usos de la Soya" (*The Thousand Uses of Soya*) occupying an entire issue of the popular health magazine *Quadernos de Natura* by Editorial Posada. Shortly thereafter the magazine published 2 articles about Blanca's work, "The woman who is taking soya to the countryside" (April 1978) and "The Soy Cooperative" (1980). Then in Feb. 1979 her first major book was published. Featuring soyfoods and her system of nutrition based on soyfoods and whole grains, it was titled *Alimentacion Integral Para Una Vida Plena: Los Mil Usos de la Soya* ("Integral food for a fuller life: The thousand uses of soya"). This was followed by other books in Spanish: "Know your Feminine Potential" (1979?), "Sprouts and a balanced diet" (1983), "The art of eating," and a biography of Belisario Dominguez, Mexico's greatest civil hero.

In 1981 Blanca attended the Soyfoods Association of North American conference in Fort Collins, Colorado. In 1981-82, financed by the DIF (Desarrollo Integral de la Familia, or Family Integral Development) of Jalapa, Veracruz.

Between 1972 and 1978 Blanca made 3 extended visits to India to learn more about its culture and further her studies in Yoga. She enhanced her knowledge of grains and proper food combinations, and was invited by the Rotary Club of Erode, Tamil Nadu, India, to share her knowledge of the soybean.

Note: This biography consists of a Spanish-language version written in 1984 and an English-language translation of it, plus update, written in 1989. Address: Fundacion Mariposa A.C., Apartado Postal #21140, Mexico 04000 D.F., Mexico. Phone: 554-43-56.

5795. Eastham, Edmund J. 1989. Soy protein allergy. In: Robert N. Hamburger, ed. 1989. Food Intolerance in Infancy: Allergology, Immunology, and Gastroenterology. Carnation Nutrition Series, Vol. 1. *
• ***Summary:*** In healthy, non-allergic children, soy is generally less allergenic than cow's milk. Address: Dep. of Pediatrics, Harvard Medical School; Pediatric Gastrointestinal Unit, Massachusetts General Hospital; and Pediatric Dep., Cambridge City Hospital, Boston, MA.

5796. Food & Agriculture Organization (FAO). 1989. Utilization of tropical foods: Tropical oil-seeds. Rome, Italy: Food & Agriculture Organization of the United Nations (FAO). xiv + 82 p. 21 cm. Series: FAO Food and Nutrition Paper 47/5. *
• ***Summary:*** The 1st chapter, titled "Leguminous oil-seed crops, has these contents: Soybean (p. 1-35): The golden bean from China, varieties and production, soybeans in the tropics. Hydrolysis of soybeans using microbial enzymes. Nutritional and acceptability aspects of soybeans: Cooking characteristics, soybean flavour, digestibility of soybeans. Soybean processing in eastern Asia: Fermentation of soybeans. Fermentation inoculants: Koji and ragi, angkak and masam [a green fermentation starter from Nepal,

made from wheat and selected moulds], preparation of koji. Preparation of soy sauce: Traditional Japanese shoyu, other types of soy sauce. Fermented soybean pastes: Types of miso, preparation of miso koji, preparation of mame miso, preparation of hamanatto. Other fermented soybean products: Natto and thua nao. Indonesian tempe: Preparation of tempe ragi, production of tempe kedele, other types of tempe, domestic use and nutritional content of tempe. Foods fermented by molds: Role of moulds in food processing, food safety aspects. Non-fermented soybean products: Production of soy milk, improving soymilk flavour. Soybean protein products: Preparation of tofu, preparation of yuba. Soybean cheese products: Preparation of sufu ("The Chinese prepare a fermented soy curd called *sufu,* which resembles a moulded, soft-texture cheese." Red sufu is made using "red rice koji" (angkak)). Use of soy milk and tofu residues: Preparation of oncom tahu, preparation of meitauza. Use of soybean sprouts. Soybeans as a cash crop. Soybean as an oil-seed: Problems of small-scale extraction. Solvent extraction of soybean oil: Economic aspects, extraction process, refining operations. Nutritional and organoleptic aspects of soybean oil. Commercial production of vegetable fats and oils: Solid shortenings, effects of hydrogenation, hardness of fats. Margarine production: Composition of margarine, manufacture of margarine. Production of soybean grits and flour. Commercial production of soybean protein products: Protein concentrates, protein isolates, economic aspects. Introduction of soyfoods at the village level: Snack foods, vegetable relish, pastes and flour. Preparation of soybeans at the village level: Reducing bitter flavours, preparation of soybean flour. Prospects for soybean products in the tropics.

Concerning the preparation of sufu (p. 21): "... the cubes [of tofu] are drained and heated for about 15 minutes at 100ºC to sterilize them. The sterilized cubes are cooled, placed on trays, and inoculated with one of the following fungi: *Actinomucor elegans, Mucor lienialis,* or *Rhizopus chinensis* var. *chungyen,* depending on the type of 'cheese' to be produced. They are then incubated at 12-20ºC for three to seven days. At that stage, the cubes become covered with a white mycelium and are known as *pehtzu* [*pehtze*].

"In the final stages, the cubes of *pehtzu* are transferred to ageing tanks, where they are immersed in a mixture of rice wine and salt, 2-5% sodium chloride, for forty to sixty days. The alcohol content of this 'dip' (approximately 10 percent) is much higher than that normally obtained by anaerobic fermentation using osmophyllic [osmophilic] yeasts. The final product, after completing the ageing period, is soft and pale yellow, with a pleasant taste and aroma. It is often served with sesame oil. More pungent cheeses are prepared by related processes, by adding other components to the final brine solution. These may include red rice koji, fermented rice mash, anise or pepper. An outline of a preparation from Thailand, using red rice koji to give a red sufu is shown in Figure 3" (a flow sheet, p. 22; Source: Narudom Boon-Long. 1983. "Traditional fermented food products." United Nations University (UNU) Workshop Paper, CFTRI, Mysore, India).

The peanut from Peru (p. 36+).

5797. Hoshijo, Kathy. 1989. Kathy cooks: Vegetarian, low cholesterol. New York, NY: Simon & Schuster (A Fireside Book). 728 p. Illust. Index. 24 cm.

• ***Summary:*** Previously published as *The Art of Dieting Without Dieting* (1986). A whopper of a cookbook, with 350 easy-to-prepare vegetarian recipes from the star of the PBS television series "Kathy's Kitchen"–which airs in 180 cities nationwide. Each recipe contains a detailed (full-page!) nutritional analysis.

This book contains a wealth recipes using tofu, tempeh, soymilk, miso, and whole soybeans.

5798. ISCAH (Instituto Superior de Ciencias Agropecuarias de la Havana) Video. 1989. La soya–Mito o realidad en la agricultura Cubana [The soybean–Myth or reality in Cuban agriculture (Color videotape)]. Agricultural College of Havana, Cuba: ISCAH. 17 minutes. [Spa]*

• ***Summary:*** This film was shown at agricultural cooperatives, schools, and ministries; it was not shown on television. Some 200,000 tons of soybeans are now being imported to Cuba. The rhizobium bacteria on soybean roots fix nitrogen in the soil, thus creating biofertilizer and reducing imports of commercial fertilizer. This biofertilizer works for both crop rotation and intercropping. Research on soybeans is being conducted at INCA (*Instituto de Ciencia Agricola*), the research center for agriculture in Havana, under the Ministry of Higher Education.

In 1986 some 138 co-operatives planted soybeans. These were mainly vegetable, dairy, or citrus enterprises located in 34 principalities in 6 provinces. Some of the soybeans were mixed with bagasse from sugar cane for use as animal feeds. In Cuba, one *quintale* (pronounced keen-TAL-ay) = 100 pounds weight. Sacharina is a type of bagasse which may include soya. Soya is called "green gold," because it requires low agricultural inputs, brings much profit, and is the world's least expensive source of protein. Photos show commercial soy products: (1) Taoro, a type of soy sauce (*salsa de soya*) presently made in Cuba. (2) Three flavors of bottled soymilk, which is good for infants allergic to cow's milk. (3) Soy yogurt in 1 liter bottles.

Some very interesting archival film footage shows Fidel Castro speaking on 3 April 1959 at the opening of a vegetable oil plant in Cuba. This was the first industrial enterprise in Cuba built after the Revolution. After cutting the ribbon, Fidel says: "We are going to start preparing the way for the planting of soybeans, so that we don't have to import any more from abroad." The video narrator then adds: "After 30 years of this, we think that there are no technical limitations to the development of this crop which can today prevent us from turning Fidel's words into reality." Address:

Havana, Cuba.

5799. Kadam, S.S.; Adsule, R.N.; Salunkhe, D.K. 1989. Utilization. In: D.K. Salunkhe and S.S. Kadam, eds. 1989. CRC Handbook of World Food Legumes: Nutritional Chemistry, Processing Technology, and Utilization. Vol. III. Boca Raton, Florida: CRC Press, Inc. 323 p. See p. 271-310. [188 ref]

• ***Summary:*** Contents: Introduction. Whole beans: Whole beans as a food, milk and milk products (incl. soymilk, tofu, kori-tofu, soyogurt, tairu [fermented soymilk in Malaysia], fermented soy cheese), microorganisms, nutritive value, fermented soy cheese, beverage, yogurt, other products, fermented foods, microorganisms, physicochemical changes, nutritional composition and quality, toxicological aspects, preparation, microorganisms, chemical composition, nutritional value. Cotyledons: Traditional products, soups, fermented foods, confectionery products. Flours: Composite flours (incl. soy flour), papad, pasta, traditional products.

Note: According to the author's definition: "A papad is a thin, wafer-like product, usually circular in shape, rolled from a legume-based dough and other farinaceous materials, with added salt, spices, and condiments. In India it is either toasted or deep-fat fried to a crispness which produces a crackle when *papad* is eaten. Papads are also known as "appalam" in south India... Black gram flour is the most indispensable constituent of *papad* dough because of the mucilaginous substance it contains." Address: 1-2. Dep. of Biochemistry, Mahatma Phule Agricultural Univ., Rahuri, Maharashtra, India; 3. Dep. of Nutrition and Food Sciences, Utah State Univ., Logan, Utah.

5800. Leneman, Leah. 1989. The single vegan: Simple, convenient and appetizing meals for one. Wellingborough, Northamptonshire, England: Thorsons Publishing Group. 127 p. Illust. Index. 21 cm.

• ***Summary:*** Vegan recipes for one, grouped seasonally, and within each season by day of the week, with weekly shopping lists and staples to be kept on hand. Soy-related recipes include: Smoked tofu à la king (with smoked tofu and soymilk, p. 21). Strawberry cheese (with plain soy yogurt, p. 29). Spaghetti stir-fry (with tofu, p. 34). Mediterranean-style potato salad with yogurt dressing (with soy yogurt, p. 37). Savoury mushroom bake (with tofu, soy yogurt, and miso, p. 38). Tofu and green pepper savoury (p. 44). Bean and potato salad (with soy yogurt and vegan mayonnaise, p. 47). Courgette (zucchini) and tomato flan (with tofu, p. 48). Tofu and vegetable stew (p. 51). Tofu pot pie (p. 53). Scalloped tofu au gratin (incl. soymilk, p. 58). Nasi goreng (with tofu, p. 63). Chilled cream of tomato soup (with soy yogurt, p. 65). Cream of cauliflower soup (with soymilk, p. 69). Scrambled tofu and leek (p. 79). Irish stew with frozen tofu (p. 84). Tempeh and sweetcorn roast with tahini/mushroom sauce (p. 92-93). Tempeh and mushroom stew on a mashed potato base (p. 98). Sweet tofu 'omelette' (incl. soymilk, p. 105). Curried tofu (p. 107). Mushroom miso gravy (p. 115; shows a pack of Sunwheel brown-rice miso). Tropical blancmange (with soymilk, p 116).

Note: Soymilk and soy sauce are used in small amounts in many other recipes. This book is distributed in the USA by Sterling Publishing Co. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

5801. Leneman, Leah. 1989. Slimming the vegetarian way. Revised and reset ed. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 144 p. Index. 20 cm. 1st. ed. 1980.

• ***Summary:*** The menus in this natural-foods, vegan cookbook are designed for 1 person and the daily calories intake is kept at about 1,000 calories. The book takes a positive attitude toward dieting by focusing on those foods you can eat, rather than those you should avoid. Each "menu" consists of breakfast, lunch, and dinner for 1 day. For each meal there is one column for Imperial (Metric) measurements, one for American measurements, and one for calories, with a calories for each meal and for the day. There are menus for each of the four seasons plus chapters on crash diets, desserts, and a vegetarian wholefood calorie chart.

The preface to the new edition notes: "The greatest change which has occurred since the first edition of this book appeared has been the phenomenal proliferation of soya foods (soyfoods in American parlance). Tofu is arguably the best friend a slimmer ever had, for no other food so low in calories and high in protein is as versatile as tofu. Tempeh is another fine soya food for slimmers, though as it is not as readily available as tofu, I have confined its use to only one recipe. Since soya milk and yogurt are now so easy to obtain, I have given them as alternatives to the dairy versions, so that vegans, and others trying to cut down on dairy produce, will be able to use the book in the same way as lacto-vegetarians."

Soy-related recipes include: Pineapple tofu salad (p. 36). Tofu celery loaf (p. 39). Tofu-stuffed aubergine (eggplant, p. 66). Scrambled egg or tofu, sausalata and tomato (p. 89, 118). Tofu slices on toast with creamy gravy (p. 98). Miso soup with tofu (p. 102). Spaghetti with tempeh and mushroom sauce (p. 127). Vegetable charlotte with smoked tofu (p. 129). Soya milk and soya yogurt are always listed as alternatives to skim milk or yogurt from cows. TVP is used as an ingredient in many recipes, and "Tamari (soy sauce)" is widely used as a seasoning. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

5802. Massey, Robert C.; Taylor, David. eds. 1989. Aluminum in food and the environment. Royal Society of Chemistry, Distribution Centre, Blackhorse Road, Letchworth, Herts., SG 1HN, England. 108 p. Proceedings of a conference held 17 May 1988 in London. Subject index.

21 cm.
• ***Summary:*** This 1-day conference was organized by the Environment and Food Chemistry Groups of the Industrial Division of the Royal Society of Chemistry. A review by SoyaFoods (Dec. 1990) notes: "Current interest in the possible health risks from human exposure to aluminium, particularly in the UK and U.S., has led to a continuing debate on the subject of aluminium in the diet. This publication looks at the possible adverse health effects associated with aluminium and reviews the evidence for aluminium's involvement in dialysis dementia and Alzheimer's disease. It also discusses the biochemical mechanisms by which aluminium may effect the brain tissue and describes the dietary sources of exposure to aluminium. Leaching of aluminium from cookware and the use of aluminium in packaging is also covered.

Contents: Aluminium in food and the environment, by J.R. Duffield and D.R. Williams. Aluminium toxicity in individuals with chronic renal disease, by W.K. Stewart. Aluminium and the pathogenesis of neurodegenerative disorders, by J.A. Edwardson, et al. An epidemiological approach to aluminium and Alzheimer's disease, by C.N. Martyn. The chemistry of aluminium and silicon within the biological environment, by J.D. Birchall and J.S. Chappell. The determination of aluminium in foods and biological materials, by H.T. Helves, et al. Aluminium in foods and the diet, by J.C. Sherlock. Aluminium in infant formulae and tea and leaching during cooking, by M.J. Baxter et al. The use of aluminium–especially as packaging material–in the food industry, by H. Severus. Address: 1. Ministry of Agriculture, Fisheries and Food, Norwich, England; 2. Imperial Chemical Industries PLC, Brixham, England.

5803. Meetings with remarkable men and women: Interviews with leading thinkers on health, medicine, ecology, culture, society, and spirit. 1989. Brookline, Massachusetts: East West Health Books. xiv + 296 p. Illust. No index. 26 cm. Introduction by Tom Monte.
• ***Summary:*** This book consists of excerpts of 87 interviews previously published in *East West Journal.* One of these is an interview (published Jan. 1977) with Bill Shurtleff about soybeans and soyfoods, including soymilk, Vitasoy, and tofu (p. 58-60). Address: Brookline, Massachusetts.

5804. Ogundipe, H.O.; Dashiell, K.E.; Osho, Sidi M. 1989. Soymilk yield and quality as affected by soybean varieties and processing techniques. *Tropical Grain Legume Bulletin* No. 36. p. 12-14. [6 ref]
• ***Summary:*** Seeds of nine soybean varieties were made into soybean milk; the milk yield and protein content (%) were determined, then sensory evaluations were conducted. A significant difference was found among the varieties for soymilk yield and acceptability, but no significant difference for protein content.

In a 2nd experiment seeds of five different soybean varieties were made into soymilk using five different processing techniques: (1) Hot extraction (Intsoy method). (2) Cold extraction. (3) Use of sodium bicarbonate. (4) Delayed filtration. (5) Use of Kanun (a local tenderizer). No one technique gave the best acceptability using all varieties of soymilk. For all varieties, cold soaking for 24 hours have the highest soymilk yield, whereas delaying filtration for 2 hours gave the lowest soymilk yield. Address: 1-2. International Inst. of Tropical Agriculture (IITA), Ibadan, Nigeria; 3. Inst. of Agricultural Research and Training (IAR&T), Ibadan, Nigeria.

5805. Pearce, Anna. 1989. Simply living: the story of Compassion and the wonderbox. Saffron Walden, Essex, England: Box Publications in association with the Self Publishing Association. 239 p. Illust. 23 cm.
• ***Summary:*** This is a remarkable book about small things, real people, ideas, successes and failures. It is about the Kingdom of Heaven–and a case study of community development in South Africa.

Compassion is an organization through which people help those in need. A Wonderbox is a box out of which come wonderful things, somewhat like a hat produces wonderful things for a magician or conjurer.

Chapter 12, "Soya beans," begins: "It was appropriate that our most creative period could be traced back to a visit to Cape Town by Peter and Eileen Caddy in April 1977. They were the two people who had founded Findhorn in Scotland in 1962. They had been led to the Findhorn Caravan Park by guidance that Eileen received while meditating." The Caddys talk about the guiding light within that will guide anyone who is able to quiet their thoughts sufficiently to hear what it has to say. He had hardly finished speaking when a soft-spoken women came up to the author and said, shyly, "'I hope you don't mind but I feel there is something I have to pass on to you.'

"We introduced ourselves. She was Dorothy Beaumont, who had been living in Rhodesia. Her husband, who had recently died, had been a farmer. Five years ago they had started growing soya beans on their farm. Two years ago, Dorothy told me, she had been in a wheel chair, crippled with arthritis. A naturopath had advised her to give up all animal products and to get her protein from beans and pulses instead. A friend taught her how to make soya milk, not only for herself but for their African laborers as well. She felt she had to pass on the way of making soya milk and using the residue [okara], which she did–in the kitchen of St. Margaret's Church at Fish Hoek. "I did not realize at that stage how extraordinary it was that she picked me out of several hundred other people that she might have approached." Various members of Compassion also attended. The process is described. As Dorothy was making the soya milk she explained how the Chinese also make tofu

out of soya milk, and how they can slice and fry it for use instead of meat. She said that soyabeans had been exported from Rhodesia to China and to Holland. Then Holland had exported dried soya milk to South Africa. Yet "when the Chinese were building the Tanzanian railway line went through Southern Africa, barrels of Tofu were off-loaded at the docks for the Chinese to eat. Dorothy explained that soya milk was "very suitable for giving to babies with 'runny tummies,' as these were often caused by a shortage of protein. In addition it contained no lactose which, for some people, was difficult to digest." After making the soymilk, Dorothy used the residue [okara] "to make delicious soya pancakes that won us all over to soya–as it was with people to whom we demonstrated in the following years."

Jill Fletcher, who worked for a radio station outside South Africa, interviewed Dorothy on her programme, "The Voice of the Gospel."

Jill and her husband Tony Fletcher, who was first class puppeteers, used a tape recording of this program to introduce people to soya and to show them how to make soya milk.

"One of the big advantages of soya beans was their incredible cheapness, once we had found somewhere to buy them." Soon the author and co-workers were experimenting with soya recipes; they made "cakes and puddings, milk shakes, yoghurt, cream-cheese and coffee. The first time she managed to fool her husband "was when he drank a mid-morning cup of coffee without realizing it was soya." She fooled him again with soya rissoles, but he was pleased and said she could give them to him every day of she wished. "It was quite comforting to find that nearly all husbands were like mine as far as soya beans were concerned."

But South African women were not so willing to try soya recipes. A large photo (p. 61) shows Mrs. Mbatani making soya milk for one of her grandsons.

The term "soya coffee" appears on pages 70 and 77. On page 70 we read: "We were amazed to hear that soya coffee was being given to babies in Illingi instead of what we had considered other near-perfect baby food or 'milk' that could be made from the beans." A Quaker doctor, who was always able to get expert opinions, said that it should be all right."

Chapter 16 is titled "Kay Simmons." Page 77 states: "The last to come out [of the Wonderbox], and perhaps the most impressive course, was Christmas pudding with soya custard. This was followed by coffee with soya milk for those prepared to try it. We thought we would be taking things too far if we offered them soya coffee with soya milk!

"The Christmas pudding, made with soya beans, was our own original recipe and it became a lasting favorite for demonstrations."

The ten appendixes include (p. 225-36): 1. Advantages of a Wonderbox. 2. Cooking with a Wonderbox. 3. Making a Wonderbox. 4. Cooking soya beans. 5. Making soya milk. 6. Soya for babies.

5806. Rakosky, Joseph, Jr. 1989. Protein additives in foodservice preparations. New York, NY: Van Nostrand Reinhold. An AVI Book. xiv + 258 p. Illust. Index. 24 cm. [187 ref]

• ***Summary:*** Contents: 1. Protein additives: Use and regulations. 2. Proteins, amino acids, and derivatives. 3. Nutritional considerations. 4. Functional properties and economics. 5. Bakery products. 6. Pasta products. 7. Processed meats. 8. Dairy-type applications: Introduction, regulatory aspects (filled milk, casein and caseinates), dairy products: modified and/or simulated, beverages (filled milk, soymilk, soymilk preparations), coffee whiteners, whipped toppings, frozen desserts, cheese analogs, tofu. 9. Dietary and miscellaneous uses. This book discusses both animal and vegetable proteins. Among the vegetable proteins, it focuses mostly on modern soy protein products–soy flour, soy protein isolates, concentrates, textured soy protein products–and gluten, however information is also given on tofu (p. 187, 211, 225-27) and soymilk (p. 187, 192-95), especially in chapter 8, "Dairy-type applications."

Concerning regulation of casein and caseinates, p. 190 notes: "Almost all casein produced until the later 1940s was for industrial application, such as glue and paper coating (Reed 1974). Most persons accepted casein as an industrial product rather than an edible dairy product; it was generally considered a chemical derivative. Later, as Reed (1974) pointed out, improved processing and developments changed this. Today, an estimated 60 to 70 percent of the casein produced is for edible use in the form of casein or caseinates.

"Since caseinates were designated chemical products, formulations using caseinates were considered nondairy-hence, the appearance of 'non-dairy creamers' and 'non-dairy toppings.' Many feel that this is misleading because many people want to know whether a milk protein is present for religious and/or medical reasons. Present FDA policy still allows the use of caseinate in nondairy creamers, but they recommend that the ingredient statement show, in parentheses, that the caseinate is derived from milk (Sheeler/Sheeles 1985, personal communication)."

Concerning whipped toppings (p. 200-203): "Whipped toppings are formulated to simulate whipped dairy cream. Their widespread use in foodservice began when certain benefits were realized: convenience, eye appeal, stable structure, good shelf life, wide acceptance, and low cost. There is also an appeal for those people who prefer nondairy products for one reason or another.

"The typical topping formulation is composed of fat, protein, sugar, sweetener, stabilizer, emulsifier, buffering salts, and, in some cases, artificial color and flavor. The formulation is very much like the formulation for a coffee whitener except that toppings have more fat. There are also minor differences in proportions of the other ingredients. As with coffee whiteners, each ingredient has a specific

requirement placed on it." The requirements for each ingredient are then discussed in detail. Concerning protein: "Protein serves two emulsification functions in toppings: as an emulsifier of fat and as an emulsifier of air. As with coffee whiteners, protein also contributes to body and taste. Any number of protein products can be used. In the early days of development, the two most used protein products were caseinates and nonfat dry milk (NFDM)." NFDM was generally found to give the best results. However since soy processors "learned how to obtain more desirable products for this use, they are now more competitive with dairy-derived additives. This is especially so as the price of dairy products rises. or this reason, more functional nondairy protein products are being produced and utilized in dairy simulated products." Address: Food Industry Consultant, J. Rakosky Services, Morton Grove, Illinois.

5807. Sahm Yook Korean Foods. 1989. [Sahm Yook Soymilk Products (Leaflet)]. Chunwon-gun, Choongchungnam-do, South Korea. 1 p. One sided. 19 x 25 cm. Color photo. [Kor]
• ***Summary:*** A photo on the front shows 5 packages of soymilk and a glass of soymilk surrounded by fresh green vegetables and mikan oranges. The back shows a young lady with a Western-style hairdo holding a Tetra-Brik carton of Sahm Yook Soy Milk. The three foil pouches are displayed nearby. Ways of using the product are described with cartoons below. Other photos show two cans of gluten products, Vegeburger, and Vegemeat. Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.

5808. Sherlock, J.C. 1989. Aluminum in foods and the diet. In: R. Massey and D. Taylor, eds. 1989. Aluminum in Food and the Environment. Royal Society of Chemistry, Distribution Centre, Blackhorse Road, Letchworth, Herts., SG 1HN, England. 108 p. See p. 68-76. Proceedings of a conference held 17 May 1988 in London. [26 ref]
• ***Summary:*** Contents: Introduction. Aluminium in foods: Aluminium in milk and infant formulas. Normal dietary intake of aluminium: Factors affecting intake (aluminium from cookware, additives, antacids, soil contamination, bioavailability). Conclusions.

Concerning aluminium in milk and infant formula: In Japan, soybeans were found to contain about 12 mg/kg which is at the upper end of the concentration range reported for aluminium in vegetables. Infant formula containing soya has high concentrations of aluminium, up to nearly 1 mg/kg on a fresh weight basis. "Conclusions: Aluminium concentrations in commonly consumed foods are generally less than 10 mg/kg and average intakes of aluminium in 5 countries are about 5 mg/day. Aluminium concentrations in cows' milk, breast milk and infant formula are similar and are generally less than 0.1 mg/kg. The presence in food of aluminium from cookware is most unlikely to have a major effect on dietary intakes of aluminium. There is a need for information about aluminium absorption by man and the factors which affect it." Address: Ministry of Agriculture, Fisheries and Food, Great Westminster House, Horseferry Road, London, SWIP 2AE, England.

5809. Simpson, J.A.; Weiner, E.S.C. 1989. The Oxford English dictionary. 2nd ed.: Almond milk. Oxford, England: Clarendon Press. *
• ***Summary:*** (1) "1430–Recipes in Babees Book. Take Almaunde Milke & yolkys of Eyroun." Notes–In modern English: "Take almond milk and egg yolks." *Babees Book: Medieval Manners for the Young,* was edited by Frederick James Furnivall. The first character of the word *yolkys* (pronounced YO-kus) is not actually a *y* but an ancient orthographic character called a "yogh," that looked liked somewhat like the number 3 and was sounded like a guttural *y. Eyroun* means "eggs" in a dialect of English.

(2) "1598–Hakluyt–Voy. I. 97. It leaueth behind it a taste like the taste of almond milke." Notes–*Hakluyt's Collection of the Early Voyages, Travels, and Discoveries of the English Nation.* Volume 1, p. 97.

(3) "1678–Andrew Marvell–To Dr. Witty. The doctor doth stint [confine] them to cordials, almond-milk and broth."

Note: In the USA, almonds typically ripen and mature at the end of summer. But Lent is in March or April. So the almonds would have to be stored for 8-9 months if they were to be used in Lenten dishes. Address: England.

5810. Simpson, J.A.; Weiner, E.S.C. 1989. The Oxford English dictionary. 2nd ed.: Soya. Oxford, England: Clarendon Press. [10 ref]
• ***Summary:*** The earliest entry is in 1679 from John Locke's *Journal* in Lord King's *The life of John Locke,...* (1830). There are also attributive definitions and examples for soya flour (1930, 1951), soya meal (1968), soya milk (1977), soya oil (1917), soyaoil (1982), soyaburger (1953, 1974), soya link (1965), soya sausage (1971). Address: England.

5811. *SoyaScan Notes.* 1989. Terms related to soyfoods, soybeans, and the soybean industry: Library of Congress subject headings and call numbers (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Two different types of call numbers are used by American libraries for cataloging their books. Most larger libraries use the Library of Congress call numbers (LC numbers, which start with two letters) and many smaller libraries use the Dewey Decimal System (Dewey numbers, which contain only numbers).

The following are from the Library of Congress Subject Headings (12th ed. 1989) and the Library of Congress Classification Schedules. The first edition of Class S (Agriculture), for example, was published in 1911, and the

4th edition in 1982. BT = Broader terms. NT = Narrower terms. UF = Use for. May Subd Geog = May subdivide geographically, e.g., Soy sauce industry-Japan.

Class H is Social sciences and economics. Class Q is science. Class S is agriculture (SB is plant culture. SB205 is field crops, legumes). Class T is technology (TX includes nutrition). Class Z is bibliography and library science.

HD9000-HD9019 Natural foods industry

Z5776.S63S5 Bibliographies on soyfoods
Z696.1.S68 SOYA (Information retrieval system)

The following soy-related terms have a subject heading but no LC call number: Miso industry, Natto industry, Soy sauce, Soybean flour, Soybean glue, Soybean meal, Soybean milk, Soybean products.

5812. Vaidehi, M.P.; Kadam, S.S. 1989. Soybean. In: D.K. Salunkhe and S.S. Kadam, eds. 1989. CRC Handbook of World Food Legumes: Nutritional Chemistry, Processing Technology, and Utilization. Vol. III. Boca Raton, Florida: CRC Press, Inc. 323 p. See p. 1-31. [208 ref]
• ***Summary:*** Contents: Introduction. Seed structure. Chemical composition: Proximate composition, carbohydrates, proteins, lipids, vitamins, minerals. Antinutritional factors: Protease inhibitors, hemagglutinins, saponins, goitrogens, estrogens, allergens, oligosaccharides, phytic acid. Storage. Processing: Cooking, processing for oil, processing into protein products, germination. Utilization: Bakery products, snack foods, macaroni products, milk and milk products, comminuted meat products and meat analogs. Other uses of protein products. Nonfermented foods. Fermented foods. Traditional products. Address: 1. Dep. of Rural Home Science, Univ. of Agricultural Sciences, Bangalore, India; 2. Dep. of Biochemistry, Mahatma Phule Agricultural Univ., Rahuri, Maharashtra, India.

5813. *Good Food News* (*Nutrition Education Service, Sanitarium Health Food Company, Australia*). 1989--. Serial/periodical. New South Wales, Australia: Sanitarium Health Food Co. Frequency: Quarterly.
• ***Summary:*** Contains information about healthy (largely vegetarian) eating, with recipes that use products made by Sanitarium Health Food Co. The format changed in Sept. 1997 (vol. 9, no. 3) by adding 2 more pages and including a "New Products" section.

Some new soy products and the dates mentioned: Sept. 1997–Crispy Nuggets, Country Burgers, Seafarers Patties, Potato Pockets. Dec. 1997–So Good Now (chilled soy beverage in gable-top cartons, regular and low-fat), Weet-Bix Hi Bran with Soy & Linseed. March 1998–So Good Smoothie (Mango, or Banana). June 1998–Soyaccino (cappuccino-style So Good soy drink), Up & Go (Liquid Breakfast). Sept. 1998–Today's Gourmet: Cacciatore Kiev. Dec. 1998–Fat Free So Good. March 1999–So Good Plus (calcium + linseed oil). SoyHealthy: Eight chilled (incl. Original Soy Slices) and five frozen (incl. Tender Soy Schnitzels, Country-Spiced Burgers). Sept. 1999–So Good Ab+ (Soy Yoghurt with Acidophilus and Bifidus, in Strawberry, Apricot & Mango, and Passionfruit flavors). Address: 146 Fox Valley Road, Wahroonga, NSW 2076, Australia. Phone: (02) 487-1711.

5814. Alpro N.V. 1989? Alpro: La force végétale du soja [Alpro: The plant power of soya (Leaflet)]. Izegem, Belgium. 1 p. Front and back. 30 x 21 cm. Undated. [Fre]
• ***Summary:*** The front panel of this full-color, 8.5 by 11 inch leaflet has a photo of 4 varieties of Alpro Soya Drinks (plain, enriched with calcium, without added sugar or salt, chocolate) and 2 Alpro Soya Desserts (vanilla and chocolate). The text reads: 100% natural. 100% from plants (végétal). No cholesterol. No lactose. Rich in vegetable protein. The back gives packaging and shipping information and a nutritional analysis of the 6 products. Sold in France by Distriborg, Division Alpro France, Chemin du Grand Revoyet, F-69230 Saint-Génis-Laval. Phone: 72.39.94.25. Address: Zuidkaai 33, B-8700 Izegem, Belgium.

5815. **Product Name:** [Soyo Soymilk Dessert (Chocolate, or Vanilla)].
Foreign Name: Soyo Dessert (Chocolat, Vanille).
Manufacturer's Name: Celnat.

Manufacturer's Address: Z.I. de Blavozy-Saint-Germain, 43700 Blavozy, France. Phone: 71.03.04.14.
Date of Introduction: 1989?
Ingredients: Vanilla: Water, concentrated apple juice, dehulled organic soybeans (6%), corn starch, natural vanilla aroma, sea salt. Thickeners: Guar flour and carob flour, plant extracts.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Vanilla: Per 100 gm.: protein 3.0 gm, lipids 1.9 gm, carbohydrates 14.0 gm, calories 85.
New Product–Documentation: DietExpo '89 catalog. 1989. Oct. p. 42. The company is a manufacturer, broker, and importer.

Leaflet. 1989. "Soyo: Soymilk from organically grown soybeans. Soya: Food of health." This 6-panel, black and blue-green leaflet describes Soyo soymilk and desserts, shows how to use the soymilk to make tofu at home, and gives 4 recipes.

5816. **Product Name:** [GranoVita Sojagen Plus Instant {Powdered Soymilk}].
Foreign Name: GranoVita Sojagen Instant.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1989?
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 350 gm. Retails for DM 9.80.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Protein 14.2 gm, fat 29.2 gm, usable carbohydrates 53.7 gm, calories 535.
New Product–Documentation: Label sent by Anthony Marrese. 1989. Nov. 5.5 by 8 by 1.5 inches. Paperboard box. Red, light green, dark green, pink, and black on white. "Sojagen Plus. Milk free, Gluten free. Lactose free. For the bottle. Contains a measuring spoon. Infant food." A photo on the front and back panels shows a young mother holding a baby that she is feeding this soymilk to in a bottle.

Manufacturer's brochure. Dr. Anemueller. 1989? Richtige Ernährung für Mutter und Kind [Right nutrition for mother and child]. 24 p. See p. 18-19. Though said to be published by the Deutscher Verein für Gesundheitspflege [DE-VAU-GE] e.V., this looks like a GranoVita promotional and information brochure, describing their full line of infant and baby foods. Sojagen Plus is one of only 2 foods that can be introduced from birth.

Manufacturer's brochure. 1989? "GranoVita Soja-Drinks und -Desserts... ein erfrischender Genuss [a refreshing enjoyment]." 6 pages, with many color photos. Contains a brief description of Sojagen and Sojagen Plus, with a color photo of both packages/boxes.

5817. **Product Name:** [GranoVita Organic Soya Drink (Unsweetened/Sugar Free)].
Foreign Name: GranoVita Bio Soja Drink (Ungesuesst).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1989?
Ingredients: Water, soyabeans (grown in a biologically controlled area), emulsifier: lecithin (of plant origin).
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: Protein 3.6 gm, fat 2.8 gm, carbohydrates 1.7 gm, calories (kcl) 46 (197 kJoules).
New Product–Documentation: Label sent by DE-VAU-GE. 1990. June 11. 12.75 by 9.5 inches. Red, orange, blue, and green on white. Illustration of a blue glass of soymilk with 6 green soybean leaves below it on the front panel. "A pure plant protein source. Cholesterol-free (Rein pflanzlicher Eiweisstraeger. Cholesterinfrei. Sugarfree)." The back panel states: "Organic Soya Drink is made with 100% natural ingredients. Easily digested. The fat and total sugar content

of Organic Soya Drink is less than that of cow's milk. It's lactose free too, so it's suitable for people with an allergy to dairy products. Contains no animal produce. 100% non dairy.

"Totally free of artificial colouring or flavouring. A blend of water and organic soya beans. A tasty and refreshing drink, delicious served hot or cold. suitable for use in tea or coffee (pour milk first), mashed potato, pudding, custards, sauces and yogurt, etc."

Label sent by Anthony Marrese of Hamburg. 1991. June. ½-liter Tetra Brik carton. The product name in German is now written Bio-Soja-Drink. Green, black, yellow, and red on white. Illustration of a large yellow sun rising behind a red-roofed farmhouse. Retails for DM 1.69. Use by 26 Nov. 1991. Exclusive Neuform certification symbol.

5818. **Product Name:** [Fit & Active Vitalkost Soya Drink (Strawberry, or Unsweetened)].
Foreign Name: Fit & Aktiv Vitalkost Soja-Drink (Erdbeer, Ungesuesst).
Manufacturer's Name: Dr. Fischer GmbH.
Manufacturer's Address: Postfach 13 20 43, D-2000 Hamburg 13, West Germany.
Date of Introduction: 1989?
Ingredients: Water, soybeans*, cane sugar, sea salt, natural- and identical to natural aromas, plant emulsifier, plant stabilizer. * = Organically grown.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for DM 2.59.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.4 gm, fat 2.1 gm (linoleic acid is 56% and linolenic acid is 7% of the total fatty acids), usable carbohydrates 6.6 gm, calories 59, sodium 83 mg, potassium 150 mg, calcium 20 mg, phosphorus 67 mg, magnesium 24 mg, iron 0.6 mg.
New Product–Documentation: Label for strawberry sent by Anthony Marrese. 1989. Nov. 3.5 by 3.5 by 2.5 inch Tetra Brik carton. Red, green, and pink on white. "Made 100% from plants (100% pflanzlich). Cholesterol free. An active drink–the plant alternative. Lactose free. Rich in several unsaturated fatty acids. Soya Drink is made from whole soybeans. Contains no added colorings. Shake before using." An illustration of a soybean plant with leaves and pods is on the front panel.

Label for unsweetened sent by Anthony Marrese. 1990. Dec. 12. Same size. Orange, red, light green, and dark green on white. Retails for DM 1.29.

5819. **Product Name:** [Martin Evers Naturkost Soya Drink (Unsweetened, With Honey, With Carob & Honey)].
Foreign Name: Martin Evers Naturkost Sojatrunk (Mit Carob-Honiggesuesst).
Manufacturer's Name: Evers Naturkost GmbH.
Manufacturer's Address: D-5418 Marienrachdorf, West Germany.
Date of Introduction: 1989?
Ingredients: With honey: Water, soybeans*, carob, honey, sea salt, vanilla. * = Organically grown.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton. Unsweetened is also sold in 1 liter Tetra Brik Aseptic carton. Carob-Honey retails for DM 2.10. Unsweetened liter retails for DM 3.45.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 2.4 gm, fat 1.7 gm (unsaturated fatty acids are 63% of total fatty acids), carbohydrates 5.5 gm, calories 47, sodium 28 mg, potassium 140 mg, calcium 17 mg, phosphorus 45 mg, magnesium 17 mg, iron 0.4 mg.
New Product–Documentation: Labels for Honey and Unsweetened sent by Anthony Marrese. 1989. Nov. 3.5 by 3.5 by 2.5 inch Tetra Brik carton. Red, brown, and green on white. "Made purely from plants. With organically grown soybeans. Shake before using. Refrigerate after opening." On one side is a brief description of how this soymilk is made. An illustration of a soybean plant with flowers is on the front panel.

5820. **Product Name:** OsterSoy (Powdered Nondairy Soy-based Infant Formula).
Manufacturer's Name: Farley or Farley's.
Manufacturer's Address: England.
Date of Introduction: 1989?
New Product–Documentation: The Vegan. 1989. Spring. p. 4, 12.

5821. **Product Name:** [Formoja {Soymilk}].
Foreign Name: Formoja.
Manufacturer's Name: Granero (Importer-Distributor). Made in Issenheim, France, by Cacoja.
Manufacturer's Address: Carretera de Petres, s/n. Sagunto (Valencia), Spain. Phone: (96) 315 71 36.
Date of Introduction: 1989?
New Product–Documentation: Letter (fax) from Hernadette Dechamps, American Soybean Assoc., Madrid. 1990. May 23. Granero (gives address and phone number) distributes a soymilk called GranoVita imported from Germany.

5822. **Product Name:** [Hensel Soya Malt (Sweetened, or Unsweetened)].
Foreign Name: Hensel Soja Malt (ungezuckert).
Manufacturer's Name: Henselwerk GmbH. Div. of Walther Schoenenberger.
Manufacturer's Address: Muehlstrasse 5-7, Postfach 1120, D-7037 Magstadt, West Germany. Phone: 07159/4906.
Date of Introduction: 1989?
New Product–Documentation: Manufacturer's leaflet. Sent 1990. March 30. Color photo shows label of box, which is red, yellow, and white. Neuform certification symbol. A

second leaflet states that there are regular and unsweetened varieties. The regular is "The high-quality strengthening drink for young and old." The unsweetened is "The strength and body-building food for everyone."

5823. **Product Name:** [Creamy Concentrate {Concentrated Soymilk}].
Foreign Name: Concentré Crémeux.
Manufacturer's Name: Innoval S.A. Affiliate of Coopérative Agricole Silos de Valence.
Manufacturer's Address: Allée Joule, Zone Industrial (Z.I.) des Auréats, B.P. 1418, 26014 Valence Cédex, France. Phone: 75.41.41.50.
Date of Introduction: 1989?
New Product–Documentation: J.-P.V. 1989. Le Figaro–Lyon (France). "Innoval believes in Soya."

5824. **Product Name:** [Lima Soymilk Based Salad Dressings (Tomato, Mountain Herbs, or Natural)].
Foreign Name: Salad'Soy (à la Tomate, aux Herbes de Montagne, Nature).
Manufacturer's Name: Lima Foods.
Manufacturer's Address: Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.
Date of Introduction: 1989?
Ingredients: Soymilk, sunflowerseed oil, vegetables and herbs.
Wt/Vol., Packaging, Price: 185-195 gm glass jar.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Lima catalogue, price list, and color product brochure. 1989. Shows two glass jars with labels. A pastel illustration on the label shows a salad with tomatoes and the dressing. The dressing contains less than 25% oils, and the added oil is Lima unrefined, cold-pressed sunflowerseed oil. Three flavors are described but only 2 are listed on the back of the page and in the catalog (tomato, and herb).

5825. Loma Linda Foods, Inc. 1989? Soyagen delights: Easy to prepare recipes. Riverside, California. Five panels each side. Each panel 21.6 x 8.8 cm. Back to back. Undated.
• ***Summary:*** A glossy color leaflet. On the cover panel are various meatless foods against a background that fades from light blue up to dark blue. These recipes show how to use Soyagen (powdered soymilk) in: Entrees. Soups. Breads. Beverages. Puddings. Desserts, etc. On the rear panel are color photos of three different cans of Soyagen (one is carob). Address: 11503 Pierce St., Riverside, California 92515.

5826. **Product Name:** [Nuxo Soymilk Dessert (Caramel)].
Foreign Name: Nuxo SojaDessert (Karamel).
Manufacturer's Name: Nuxo-Werke Rothfritz + Co. KG. (Marketer).
Manufacturer's Address: D-2000 Hamburg 54, West Germany.
Date of Introduction: 1989?
Ingredients: Water, unrefined cane sugar (roher Rohrzucker), dehulled soybeans, native cornstarch, caramel, plant extracts, sea salt, thickeners (carob bean meal, guar seed flour).
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for DM 2.45.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 2.8–3.2 gm, fat 1.7–2.1 gm (of which 60% are unsaturated, 14% are saturated), usable carbohydrates 14.0–14.6 gm, calories 85, sodium 95 mg, potassium 60 mg, calcium 15 mg, magnesium 17 mg, phosphorus 40 mg, iron 0.4 mg.
New Product–Documentation: Label sent by Anthony Marrese. 1989. Nov. 3.5 by 3.5 by 2.5 inch Tetra Brik carton. Caramel-brown, green, and white on beige. "A pure source of vegetable protein. Low in sodium. Cholesterol free. Made purely from plants. Nuxo Soya Dessert is: Cholesterol free. Free of animal protein. Free of lactose (milk sugar). Low in purines (purinarm)." An illustration of an ear of wheat and of green leaves is on the front panel. Neuform certification symbol.

Letter from Bernd Drosihn. 1990. May 10. This company just markets tofu and soymilk products, they do not make any.

5827. **Product Name:** [Nuxo Soya Cream (Neutral)].
Foreign Name: Nuxo SojaCrème (Neutral).
Manufacturer's Name: Nuxo-Werke Rothfritz + Co. KG. (Marketer).
Manufacturer's Address: D-2000 Hamburg 54, West Germany.
Date of Introduction: 1989?
Ingredients: Water, dehulled soybeans, native corn starch, guar seed meal, carob bean meal.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for DM 2.45.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.4–3.8 gm, fat 1.8–2.1 gm (of which 60% is multiple unsaturated fatty acids, linoleic and α-linoleic, and 14% is saturated fatty acids), usable carbohydrates 4.4–4.8 gm, calories 51. 0.39 BE (Broteinheit, or diabetic exchange) (1 BE (Broteinheit, or diabetic exchange) = 260 gm), 40 mg sodium, 75 mg potassium, 25 mg calcium, 40 mg magnesium, 50 mg phosphorus, 0.4 mg iron.
New Product–Documentation: Label sent by Anthony Marrese. 1989? 3.75 by 3.75 by 2.25 inches. Tetra Brik carton. Blue, red, and green on white. "A pure plant source of protein. Low in sodium. Free of cholesterol. No sugar or salt added. Nuxo Soya Cream is neutral in taste and therefore suited for preparation of many sweet and piquant/spicy,

cold or hot dishes, such as desserts, salad dressings, sauces, vegetables gratin, and egg dishes. It is free of colorings aroma agents or preservatives." Marrese adds: "It tastes like and has the same consistency as their Soya Dessert but with no flavoring or sweetener. I do not see any varieties other than Neutral."

Leaflet. 1989? Vitaquell recipes with Nuxo SojaDrink and SojaCrème. Green, red, and dark blue on white. In German.

Letter from Bernd Drosihn. 1990. May 10. This company just markets tofu and soymilk products, they do not make any.

5828. **Product Name:** Sipso Cold Coffee.
Manufacturer's Name: Pantnagar Soymilk Products Pvt. Ltd.
Manufacturer's Address: New Delhi, 110 055, India.
Date of Introduction: 1989?
Ingredients: Soymilk, fresh ground coffee, sugar, permitted flavours and colours.
Wt/Vol., Packaging, Price: 200 ml.
How Stored: Refrigerated.
New Product–Documentation: Photocopy of Label sent by Anders Lindner. 1989. "Pasteurized. Nutritious. Rich in protein. Sweetened. Serve chilled." This is apparently a coffee-flavored soymilk.

5829. Sanitarium Health Food Co. 1989? Sanitarium: The people who believe food should not only taste good, it should be good for you! 148 Fox Valley Rd., Wahroonga, NSW 2076, Australia. 8 p. Undated. Manufacturer's catalog.
• ***Summary:*** Contents: Background. Manufacture. Retail. Export. Products.

In the late 1800s a group of immigrants from the USA, all of whom were members of the Seventh-day Adventist Church, decided to make their living by distributing health foods. At first they imported a selection of products from Battle Creek, Michigan, then famous for its sanitarium. The first products arrived in Melbourne in 1897. They included Granola, Caramel Cereal, and gluten products. But when demand outstripped supply, in late 1897 a baker, E.C. Halsey, was persuaded to migrate to Australia to start up a manufacturing plant similar to the one he had operated in Battle Creek. On Nov. 8 he arrived in Sydney en route to Melbourne, totally unaware of what he was starting. The records show that the St. George's Bakery was rented in Melbourne in 1898. The production of Caramel Cereal and Granola commenced immediately.

In 1898 the group moved to larger premises in Cooranbong, a rural area south of Newcastle in New South Wales, and adopted the name Sanitarium Health Food Company. With Halsey in charge, production commenced in a large defunct sawmill in 1899. After a period of uncertainty, the Company grew and expanded until today, it has manufacturing plants in all states of Australia, in both islands of New Zealand, and in Papua New Guinea. In about 1906 the company's first retail shop opened in the Royal Arcade, Sydney. Many of the early shops included a vegetarian restaurant. Today the company operates some 70 retail shops. It also has an export division in Sydney. In 1935 the Australasian Food Research Laboratories were started. Located on the spacious grounds of the Cooranbong plant, they new employ a staff of nearly 40 people. Photos show the original Cooranbong factory, early products (incl. Nut Meat, Protose, Weet-Bix, Corn Flakes, and Marmite yeast extract), and today's food factories at Cooranbong, Victoria, and Palmerston, North New Zealand.

Product lines include Cereals (The company's leading product is Weet-Bix, the most popular breakfast cereal in Australia and New Zealand. It was first manufactured under the Sanitarium name in the mid-1920s, and comes in the shape of little biscuits. Other well known brands are Granose, Bran-Bix, and Sanitarium Skippy Cornflakes), Juices and Drinks (So Good, a non-dairy soy drink, is the newest introduction), Spreads (such as peanut butter and Marmite), Muesli Bars, Specialty Lines (such as dried fruits), Canned Protein Foods (all vegetarian, such as B-B-Q Links, Tender Bits, Vegetarian Rediburger, and Nut Meat), and Sundried (incl. TVP products, and Caffex coffee substitute); a color photo shows all of these.

The name and address of the company's head office, export division, and various food factories and retail outlets is given. Address: Wahroonga, NSW, Australia.

5830. **Product Name:** Soy Beverage.
Manufacturer's Name: Teruya Tofu Factory.
Manufacturer's Address: 1830 Mill St., Wailuku, Maui 96793. Phone: 808-244-5313.
Date of Introduction: 1989?
New Product–Documentation: Talk with Roger Krehl of Paradise Fruit Maui. 1990. July 4. This company makes a soy beverage.

5831. **Product Name:** [Nulife / Nülife Malted Soybean Drink].
Manufacturer's Address: Korea.
Date of Introduction: 1989?
Ingredients: Incl. malt.
Wt/Vol., Packaging, Price: 250 ml.
New Product–Documentation: Photocopy of Label sent by Anders Lindner. 1989. Illustration on the front panel shows a house with two trees to its left.

5832. Mitchell, Cheryl R.; Mitchell, Pat R.; Nissenbaum, Robert. 1990. Nutritional rice milk product. *U.S. Patent* 4,894,242. Jan. 16. 8 p. Application filed 29 March 1988. [4 ref]
• ***Summary:*** This patent is quite similar to the May 1988

patent (No. 4,744,992) by the same inventors. Address: 1-2. 466 N. Powers, Manteca, California 95336; 3. 750 Homer Ave., Palo Alto, CA 94301.

5833. Broom, Maria. 1990. Serulada Spiritual Foundation in Uganda, and soybeans (Interview). *SoyaScan Notes.* Jan. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This foundation is a spiritual, vegetarian community of about 200+ people who live on the land at Sseesamirimbe, near Masaka, Uganda. They grow a lot of soybeans and eat them as such; they do not do any processing, but are interested in making tofu, soymilk, and tempeh. Maria gave them three Soyfoods Center books on these subjects. She has visited the community twice, for 1 month each time. They have been together for about 15 years, have an African spiritual master named Bambi Baaba, but their spiritual practice resembles East Asian practices. They have a city address too: P.O. Box 5374, Kampala, Uganda.

Maria visited Dr. D. Warren Harrison of Africa Basic Foods. He hopes to contact the community and teach them more about soyfoods. Address: 1728 Linden Ave., Baltimore, Maryland 21217. Phone: 301-462-5370.

5834. Chikaarashi, Shigeru. Assignor to Nichii Company, Ltd., Osaka, Japan. 1990. Method for manufacturing a foodstuff suitable for soybean milk production. *U.S. Patent* 4,895,730. Jan. 23. 4 p. Application filed 28 Oct. 1988. [2 ref]
• ***Summary:*** "The apparatus includes a brushing machine for removing earth matter and earth-born germs deposited on soybean material, a band dryer for adjusting the water content of the soybean material so as to facilitate separation of the material into skin and flesh portions, a skin remover for separating the skin portion from the flesh portion and for dividing the flesh portion of each piece of soybean into four to eight parts, and flat pressing rollers for converting the resulting powdery masses into uniformly distributed flaky masses."

Note: The resulting soy flakes are used by Nichii to make tofu in Japan. The compact tofu plants are located in supermarkets or department stores. Address: Sapporo, Japan.

5835. *Journal of Commerce & Commercial* (*New York, NY*). 1990. Japan's Nichii plans to build U.S. soy plant. Jan. 23.
• ***Summary:*** "Nichii Co., a major supermarket chain operator, plans to build a 500-million-yen soybean-processing plant in the U.S. to produce flaked soybean, starting in October, company officials said Monday. The project is designed to ensure a stable supply of the flakes, the raw materials for 'tofu' and soybean milk, they said. Nichii is now considering a site for the plant, possibly somewhere in Iowa. The company plans to import [to Japan] half the plant's product for the production of tofu and for direct sale at its stores, the officials said."

5836. **Product Name:** Provamel Soya Milk (Calcium Enriched. Naturally Sweetened with Apple Juice. Made from Organic Soya Beans).
Manufacturer's Name: Alpro.
Manufacturer's Address: Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium.
Date of Introduction: 1990. January.
Ingredients: Filtered water, dehulled whole organic soya beans, apple juice concentrate, barley malt, calcium, seasalt.
Wt/Vol., Packaging, Price: 500 ml and 1 liter Tetra Pak cartons. Retails for 49p and 92p respectively (1/90, England).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: Energy 46 kcal (calories; 196 kJ), protein 3.6 gm, carbohydrates 3.3 gm, total fat 2.1 gm (of which polyunsaturated fatty acids: 60%), cholesterol 0 gm.
New Product–Documentation: Provamel news release/ leaflet. 1990. Jan. "New healthy alternative to cow's milk." This new soya milk contains more calcium and less sugar than cow's milk. The calcium content is 140 mg/100 gm compared to 120 mg/100 gm found in cow's milk, according to Nigel Meadows, marketing manager for Vandemoortele (UK) Ltd. The milk is naturally sweetened with apple juice and made from organically grown whole soya beans. "A major breakthrough in food technology at our new plant in Belgium has achieved a close and unrivalled parallel to cow's milk."

SoyaFoods (ASA, Europe). 1990. 1(1): 3. Provamel has launched this new product "with the help of Dolly the cat. The promotion includes free in-store demonstrations and customer taste kits. Containing 20 mg/kg more calcium than cow's milk, Provamel is sweetened with apple juice and made from organically grown whole soya beans."

Talk with Alpro. 1990. June 4. The promotion for this product in England is handled by Alpro's sister company, Vandemoortele (UK) Ltd., which has its own distribution. The cat has nothing to do with the product. It's just the British way of advertising. The name in French is "Provamel Soya Drink (Enrici en Calcium)."

Label sent by Heather Paine of SoyaFoods in London. 1991. May. 3.75 by 3.5 by 1.25 inches. Tetra Brik carton. Blue, green, yellow, and red on white. Illustration of green leaves on front panel. "100% natural ingredients. Calcium enriched. Naturally sweetened with apple juice. Made from organic soya beans. Best served chilled. Shake before using. When opened, Provamel will keep fresh for up to three days when refrigerated... The soya beans have been grown on soils which have been treated in accordance with the organic standards for a continuous period of at least 36 months... New Provamel Calcium Enriched Soya Milk contains 140 mg of calcium/100 gm compared with 120 mg of calcium/100 gm of cow's milk. The delicious taste of Provamel makes it an ideal alternative to cow's milk that

the whole family can enjoy. Use Provamel on cereals and in recipes where it is just as versatile as cow's milk. In tea and coffee pour the Soya Milk first. It is also a refreshing drink by itself when served chilled." Circled V vegetarian logo. Retails for 52p.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. Provamel Soya Drink fortified with calcium was introduced in Dec. 1989. It was sold in the UK (Distributed by Vandemoortele (UK) Ltd.), Belgium, France, the Netherlands, Spain, and Germany.

5837. **Product Name:** [Mamina Soya {Infant Formula/ Mother's Milk Substitute} (Legumes, Junior)].
Foreign Name: Mamina Soja (Legumes, Junior).
Manufacturer's Name: Galactina Ltd.
Manufacturer's Address: Belp, Switzerland.
Date of Introduction: 1990. January.
Wt/Vol., Packaging, Price: 300 gm aluminum bags in a paperboard box.
How Stored: Shelf stable.
New Product–Documentation: Talk with Conrad Seewer of Galactina. 1990. May 17. Mamina Soya (pronounced ma-MEE-nah ZO-yah) was Galactina's first infant formula after Bebe Nago. Since it is a better product, using new technology, it replaced Bebe Nago. It has a better taste and completely fulfills the baby's nutritional needs according to modern pediatric standards. It was launched 5-6 years ago. It is made from whole soybeans that are made into soymilk, which is then spray dried and formulated. It contains no isolates, and this is part of Galactina's philosophy and history. This allows better control of the product quality and the milk is less highly processed. The processing method has solved the problem of flatulence.

Talk with Peter Speck. 1990. May 23. The market for Galactina's new line of two baby products looks very promising. There is Mamina Soya and then 2-3 different types of gruels.

Letter (fax) from Conrad Seewer of Galactina. 1990. July 13. The three basic products in the line are mother's milk substitutes. Both these and the gruels for spoon feeding are in powder form, sealed in aluminum foil bags that are packed in paperboard boxes. The products contain no soy isolates; rather they are made with powdered soymilk made directly from soybeans. Flatulence is prevented by a special technical manufacturing process that is confidential and that eliminates trypsin inhibitor. The first Mamina Soya product was introduced in June 1986.

5838. LeMaire, William H. 1990. Aseptic packaging USA. West Chester, Pennsylvania: Packaging Strategies. 121 p. 3-ring binder.
• ***Summary:*** The Executive Summary (p. 1) begins: "Aseptic processing and packaging was invented in the 1930s when the first commercial system for aseptically heating and cooling food products was developed by Dr. C. Olin Ball. In the late 1940s and early 1950s this technology was improved upon by Dr. William McKinley Martin. His early work is still the basis for the Dole Aseptic Canning System.

"But the site of a technology's birth and its 'home' are not always to be found in the same place. Applying the benefits of aseptic technology in the marketplace had essentially eluded the American food industry... largely until the 1980s when we rediscovered aseptic technology. In the intervening 50 years, between its American birth and its triumphant commercial return, aseptic packaging grew up in Europe and was, in fact, implanted in the U.S. by a Swedish company, Tetra Pak.

"Aseptic packaging had, so to speak, left the U.S. as a canning process but returned in the 1980s as a process available in a far broader rage of packaging materials and containers: Paper/foil/plastic cartons, multilayer plastic cups, glass, barrier bottles, etc.

"Most importantly, however, aseptic packaging returned to find an American food industry caught up in a frenzy of new product development, throwing 3,000 or more new products a year at the American consumer. New ideas in packaging and product distribution were in great demand."

Contents: Executive summary: What is aseptic packaging?, benefits/advantages, caveats, products for which aseptic is suited, market for aseptic filing equipment, current market for aseptic packages, the road ahead in aseptic. Markets for aseptically packaged products. Aseptic fillers installed in the U.S... Summary (lists 400). Profiles of aseptic packaging equipment for low acid foods: Form-fill-seal equipment, pre-formed container equipment (Combibloc, Dole, Hamba, Metal box). Profiles of aseptic equipment for high-acid foods. Food processors aseptically filling high/low acid foods (includes names of food and beverage companies, locations of installations, number of packaging machines, type of filler, size of container, etc.). Aseptic filler installations in the U.S. for low acid foods. Tetra Pak installations. Combibloc installations. Aseptic bag-in-box installations. Aseptic drum installations. Other aseptic filler installations, acid foods. Address: Editor, Packaging Strategies, 122 South Church St., West Chester, Pennsylvania 19382. Phone: 215-436-4220.

5839. *Natural Foods Merchandiser.* 1990. Soyfoods industry faces changes. Jan. p. 6, 10.
• ***Summary:*** Lawmakers in Maine are being asked by the Soyfoods Assoc. of America (SAA) to exempt soymilk from a ban on non-recyclable aseptic packaging scheduled to take effect on 1 Sept. 1990. SAA feels that soymilk should have the same exemption provided to "milk and dairy-derived products." Less than 1% of all aseptic packages sold in Maine are for soymilk. But some lawmakers reportedly prefer an extension to an exemption in order to encourage manufacturers to create alternative packaging.

Also discusses briefly FDA's classification of tofu as a potentially hazardous food.

5840. Wang, Guangjian; Kuan, S.S.; Francis, O.J.; Ware, G.M.; Carman, A.S. 1990. A simplified HPLC method for the determination of phytoestrogens in soybean and its processed products. *J. of Agricultural and Food Chemistry* 38(1):185-90. Jan. [14 ref]
• ***Summary:*** Discusses the phytoestrogen content of soybeans, defatted soy meal, hard tofu, soft tofu, dry spiced tofu, soy milk skin (p. 189) / soy milk film (p. 188) [yuba], soy milk, soy sauce, hot soy paste, sweet soy paste [miso?], fermented tofu, soy sprouts (homemade), soy sprouts (grocery), daidzein, genistein, formononetin, coumestrol. Address: Natural Toxins Research Center, Food and Drug Administration, 4298 Elysian Fields Ave., New Orleans, Louisiana 70122.

5841. Whiteman-Jones, Michael. 1990. Soyfoods in the 1990s: Potential may be realized. Expanding market fuels sales growth. *Natural Foods Merchandiser.* Jan. p. 24-25.
• ***Summary:*** Views and forecasts on the U.S. soyfoods industry by Peter Golbitz (vice president of the 40-member Soyfoods Association of America), William Shurtleff (author of *The Book of Tofu* and director of the Soyfoods Center), Sjon Welters (industry analyst and president of Craft International Consultants in Acton, Massachusetts), and Richard Rose (Marketing consultant and president of Rose International in Santa Rosa, California). Photos show: Peter Golbitz, William Shurtleff, and his wife Akiko Aoyagi are shown. All agree that the future looks bright. Sales of soymilk have been rising by 100% a year in natural foods stores. April is Soyfoods Month.

5842. Nielsen, Niels C. 1990. The Tofu Center at Purdue University and research on food uses of soybeans (Interview). *SoyaScan Notes.* Feb. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Nielsen, a member of the USDA Agricultural Research Service, is more a molecular biologist than a soybean breeder. He did post-doctoral research and taught in the biochemistry department at the University of California at Davis. The Tofu Center, established in about Feb. 1989, is a corner of the pilot plant in the Food Science Department at Purdue. They have accumulated the equipment they need to make tofu, and they have had people from Taishi Foods (Taishi Shokuhin Kogyo K.K.) a large tofu manufacturer in Aomori prefecture, Japan come to help them make tofu that meets Japanese quality standards. Funding for the Tofu Center and his closely related Soybean Protein Improvement Project comes from Central Soya, Taishi Foods, Mitsubishi, and state grants to support value added research (about $15,000)–plus his USDA/ARS funds. Total funding is still small.

The purpose of the Center is to ask 2 kinds of questions: (1) What is the effect of the way soybeans are stored while being shipped to Japan on the quality for the final tofu? (2) What kind of very small scale tofu preparation techniques can be used in conjunction with soybean breeding programs designed to incorporate into American soybeans traits that will make them more suited for food uses in the USA and abroad. Nothing has been published by the Tofu Center about its goals and activities except for 1-2 news releases from the Purdue Information Office, plus a little video on that was shown at halftime during a recent Purdue basketball game. Suzanne Nielsen (no relation), a food chemist, is also active in the program. The lipoxygenase program is only a very small part of his lab. The major thrust of the whole program is to try to convert the soybean into an edible food, and to make it more acceptable. This will open a whole new market in the West. Most of the effort is aimed at changing the quality characteristics of soy protein by genetic engineering. The major problems they are looking at now are flavor, protein quality, sedimentation value ratios, and flatulence. Concerning flavor, they have made major advances by removing lipoxygenase. Nielsen believes that this is their most important advance to date and that it may have a major effect in improving the acceptability of soybeans for food use. They used backcrossing into Century soybeans (a good-yielding, maturity group 2, field type soybean) to get near isogenic lines. Soybeans missing the L-2 and L-3 lipoxygenase isozymes make a very bland tofu and soymilk, which is much more acceptable to American taste panels. The absence of L-2 alone gives somewhat less bland products. L-1, which has a high pH optimum, plays little role in generating off flavors. Last year about 4,500 acres of soybeans missing the L-2 isozyme were grown in Indiana. The lines lacking lipoxygenase yield the same as Century, but Century no longer yields nearly as well as the best-yielding varieties today. A lot of private and public soybean breeders are now using this germplasm. Concerning protein quality, they have learned how to change the sulfur amino acid content (to increase methionine) and now they are working to get it into a soybean variety.

Being able to change the ratio of 7S to 11S protein sedimentation values (the S stands for Svedberg, who was an early Swedish researcher on the subject) will be important in adjusting the hardness or softness of tofu. But Japanese tofu makers have no clear idea of what ratio they want. Concerning elimination of flatulence factors, that work is just starting.

The Japanese have learned to like soyfoods made from large-seeded vegetable-type (LSVT) soybeans, but American's have not yet learned that. Tofu makers are most concerned about taste and tofu yield, and they prefer LSVT soybeans for their flavor. But they prefer American soybeans for their swelling characteristics during soaking, and this gives a more uniform product. Many Japanese tofu

makers plan to have LSVT soybeans grown in America under special contract, but they cannot do that economically due to (1) their poor yield due to problems of shattering during mechanical harvesting, and (2) their thin seedcoat, which leads to more damage during mechanical harvesting. The way the Japanese have traditionally harvested their soybeans, cutting the plants early by hand and hanging them upside down on racks, shattering is an advantage, allowing the beans to be manually threshed from the pods with a minimum of effort. The thin seedcoat, which does not effect shattering, does aid uniform swelling during soaking. Yet he has heard that new-crop LSVT soybeans do not swell as well as year-old ones. Nielsen feels it may not be necessary to start with a vegetable-type soybean to produce the characteristics that they want.

Nielsen believes that the program on food uses of soybeans at Purdue will expand in the coming years. Soybean breeders will be working much more closely than ever before with food scientists. Other key people are Phil Nelson (the department head in the food science department) and Marv Phillips (the department head in agronomy). There have already been 9-10 PhD theses in his soybean protein improvement program. A few of his graduates now doing important work in the area are Nilgen Tumer (from Turkey) at Monsanto (working with cross protection by putting the proteins of a virus into a plant to immunize it against infection) and Paul Staswick at Univ. of Nebraska (working with vegetative storage proteins).

Keith Smith of the American Soybean Assoc. has been very supportive of Nielsen's work. The early work on preparing the low-lipoxygenase lines and modifying the nutritional quality of the soy protein was all funded by ASA. In Dec. 1989, at a meeting at ASA in St. Louis, he first heard expressed concern with the quantity of protein in soybeans, for the crushing industry. This seems like a major change of attitude. They are not yet very concerned with the various components of the seed and how those effect quality. At the ASA board meeting, he pointed out that in the coming years, especially because of the development of biotechnology, we will be seeing the developing of niche markets. That will fragment the soybean industry as a commodity crop. A value-added market will emerge, and this will be a major change in the market. So ASA needs to establish better quality standards. He is already working with Central Soya toward component pricing. Indiana has a value-added program with grants to specific projects; it does not have a Center as exists in Iowa and Illinois.

Nielsen's father was a plant breeder at the Univ. of Wisconsin. He was personally more interested in biochemistry and chemistry. So it was very apparent to him due to the environment in which he was raised that there was not enough of a connection between the basic sciences and the applied sciences. The problem was to learn how to establish those bridges. He, who does cutting and splicing of DNA, now has developed close ties with the food science department. The real question will turn out to be whether or not we can find new places to put the improved soy proteins, for example as extenders. Central Soya thinks that these new soybeans will increase the use of isolates and concentrates in foods. Gary Felger (Phone: 219-425-5403) is Nielsen's contact at Central Soya. David Swanson, the CEO, is also very interested in this work. Address: Purdue Univ., West Lafayette, Indiana 47907. Phone: 317-494-8057.

5843. Down to Earth Natural Products Ltd. 1990. Some companies start out really small and then... they grow! (Leaflet). Penrose, Auckland, New Zealand. 1 p. Front and back. 30 cm.

• ***Summary:*** "Which is why we've changed our name from Bean Supreme to Down to Earth–to make room for things to come.

Bean Supreme will remain as the brand name for our existing and expanding range of traditional soy products–Tofu and Tempeh.

"Our new company name Down to Earth Natural Products Ltd reflects our intended diversification into new areas of product development and marketing. We believe the name will speak directly to our core group of consumers, those with increasingly convergent interests in health and the environment.

"Our first product launch [soymilk] under our new name is imminent. In fact we'll send you some in the post! Until then–goodbye from Bean Supreme. More to follow from Down to Earth.

"From the directors–Paul and Trevor Johnston and all of the team, best wishes for 1990."

Brands: Bean Supreme, Nice 'n' Healthy, Lite Licks, Bio Farm, Spiral Foods. Address: Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: (09) 590 592.

5844. Klaper, Michael. 1990. Diet and the environment (Interview). *VegeScan Notes.* Feb. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Large-scale animal agriculture is among the main eco-destructive forces at work on the planet today. It is destroying virtually every ecosystem on which all lifeforms depend: topsoil, forests, water, atmosphere including the ozone layer, flora, fauna. It also unleashes toxic and radioactive wastes. Rebalancing our biosphere depends upon reforestation and stabilization of these other ecosystems. To do this we must change our national diet, away from a meat-centered diet, toward a more vegetarian diet. The general lack of awareness of the diet-environment link, especially among the environmental, scientific, and governmental organizations, is surprising and must now be remedied if major eco-catastrophe is to be avoided. Diet must now become a major plank in the environmental platform.

Since time immemorial, cutting the forests and replacing

them with cattle grazing or fodder growing land has been the standard practice for food production. Previously, when people were few and forests seemed vast, it didn't make much difference. But today most of American agriculture is devoted to growing animal flesh, either through the animals themselves or their feed. Due to the inherent inefficiency of cycling plant foods through animals, massive amounts of feed grains must be grown to support a meat-centered diet, thus consuming the majority of fossil fuels, water, land, and energy used by American agriculture. Today, after 5,000 years of deforestation and 5,000 million people on the planet, we have now cut half the world's trees and are suffering the inevitable consequences:

1. Global warming: Cutting and burning forests, as well as the huge amounts of methane from animal manure and belching, adds carbon dioxide to the air, contributing to global warming.

2. Erosion: Exposing the topsoil to sun, wind, and water while growing row crops leads to massive erosion.

3. Water usage: More than half the total amount of water consumed in the USA goes to irrigate land growing feed and fodder for livestock–more than is used by all the cities and industries in America. The falling water levels in rivers leads to silting, killing of wildlife, and decreased hydroelectric power generation. Falling groundwater levels lead to dry wells, encroachment of salt water into coastal water supplies, and depletion of aquifers.

4. Water pollution. Every 24 hours, the animals destined for America's dinner tables produce 20,000 million lb of waste. That is 250,000 pounds of excrement a second and twenty times as much as all humans in this country. The pesticides used in growing feedcrops and the eroded soil from those fields also adds organic pollutants to our water supplies.

5. Energy. Every day the USA imports 8,300,000 barrels of petroleum. About 12% of this, or 1,000,000 barrels goes into production of meat, poultry, and dairy products, including running irrigation pumps, farm machinery, heating and cooling factory farm buildings, running slaughterhouses and refrigeration units, and transporting animals and their products.

6. Ozone layer depletion. Chlorofluorocarbons from refrigerants and Styrofoam containers (widely used by fast food chains) are major causes of this problem. Address: 8843 Pennfield Ave., Northridge, California 91324. Phone: 818-341-0652.

5845. Hokanson, J.D. 1990. Inventions with soymilk and tofu (Interview). *SoyaScan Notes.* Feb. 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This 60-year-old man applied for three patents in Nov. 1989; they should be issued by July 1990. 1. For soymilk which has a better taste and takes less time to prepare. The key lies in adding 2-3 tablespoons of Gold Label Brewer's Malt Extract (sold in a 3-4 lb can at many food stores and used by home beer brewers) per cup of dry soybeans to the soymilk at the start of cooking. 2. For an extra firm tofu product named Solein, that is sold with any of five American-style herb-based sauces, and which tastes like steak. 3. For a tofu box, built on the principles of a botanical press, to press the extra firm tofu. Address: 1950 East Cairo, Springfield, Missouri 65802. Phone: 417-864-6074 (8/90) or 800-526-3309 (2/90).

5846. Lukoskie, Luke. 1990. Recent developments at Island Spring, Inc. (Interview). *SoyaScan Notes.* Feb. 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Following the split-up with ELCO, Island Spring endured severe financial hardships. "We'd been bleeding profusely from October 1987 until June 1988, at which time we had been able to turn things around. From that time until now we have been in a holding pattern, because we were in such serious debt to ELCO that we had no opportunity for expansion. At the time of the separation (when ELCO unexpectedly demand total control of Island Spring, and Luke refused them), ELCO had demanded that they get all the assets and then Island Spring lease or rent them back. Island Spring had no choice but to accept their terms. To do battle with them would have required Island Spring to declare immediate bankruptcy. So in Oct. 1987 Island Spring began to make $11,000/month payments to ELCO for rent/lease of equipment and as repayment of loans that they had made to Island Spring. Each month the amount of the payment decreases and they will essentially be finished at the end of 1990. Island Spring has retrenched, let go of all of its marketing and sales people (some of whom earned $60,000/year), and is running on a skeleton crew. Luke is doing the tofu curding. "Frankly, I'm having the best time in this business that I've had for 15 years. I'm thoroughly enjoying being in the plant, working with the crew. There's a lot of spirit in there. I'm having fun with the struggle that historically tofu makers have faced to make a good batch every time. We have been able to make enough profit to pay off ELCO because of two things: (1) The employees have agreed to forego wage increases; (2). Yvonne, Suni, and I have worked without wages for 15-16 months."

Island Spring has been able to keep all its major distributors in the Pacific Northwest. Rock Island in California dropped Island Spring and took on White Wave. That did not hurt much because it was a very, very small percentage of Island Spring's business, but it did hurt expansion into the Bay Area. Some Island Spring products are sold in Los Angeles, an even more important market that looks secure. Island Spring has lost its ability to spend money for marketing. But the company has always consciously set its prices above the competition. This has not hurt sales and has helped profits. Some people prefer to buy the high priced product, assuming it is the best quality. They

are the premier tofu brand in the Pacific Northwest. Island Spring sales for 1989 were about the same as 1988. One new product is on the drawing boards: A natural foods TV dinner (ready to eat, frozen entree, microwaveable), somewhat like what Legume Inc. did but better tasting. "That is the single category that distributors say they can move all the product we can make. We'd start in the natural foods industry and, as funds are available, expand into supermarkets. This one entree (not a line), which has been ready for years, may be on the market by early fall of 1990. The yogurt, and the tofu in Oscar Meyer sausages are not being actively pursued, though Luke would like eventually to make tofu in Eastern Europe for use in sausages there. He has done some exploratory work in this area. He wonders how much interest there is in Eastern Europe in natural and vegetarian foods. Luke no longer has the drive to be a huge company with $50-100 million a year sales. He is much happier to be a smaller company with a good life now.

As of Nov. 1989 the law changed making it now possible to trademark a name before the product is on the market. This brings U.S. patent and trademark law in accord with most such foreign laws. However the product must be launched within a year or two or the trademark is lost.

Luke has heard that a Japanese trading company [Kyoto Food Corp. USA] is building a $4.5 million tofu plant in Indiana [Terre Haute].

Luke has a video "of extruding tofu out of a 6-inch tube–and its just keeps coming. We could feed soybeans in one end and extrude soybeans out the other. You could obviously put knives on it and cut it into any shapes you want. We could sell tofu in a slightly less solid form in large bulk quantities, even in tank car quantities. But it only makes sense with large scale production, since it is capital intensive and requires a highly trained person to run it."

Update: Dec. 1991. Luke and Suni now have 3 children. He manages Island Spring, sells real estate for Keywest Realty part-time, keeps his five rentals running and rented, services the Island Spring Water Co. customers, keeps his two cars and an old pick-up truck running, tends the vegetable garden, sits on the Community Council and two Island-wide water study committees, spends time with his family, coaches his daughter Sulu's 8th grade basketball team, and spends plenty of time alone in the woods. He is "addicted to Compuserve." Address: P.O. Box 747, Vashon, Washington 98070. Phone: 206-622-6448.

5847. Lukoskie, Luke. 1990. Thoughts on Pacific Foods of Oregon and their soymilk (Interview). *SoyaScan Notes.* Feb. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** One of ELCO's companies is called Pacific Foods of Oregon, which owns the soyfoods plant and warehouse in Tualatin, Oregon. The equipment in that company came from the Island Spring breakup. Naturally Northwest was a label that was owned by a company named Sunny Jim in Seattle, which was purchased by ELCO. It has folded. The "Naturally Northwest" brand was going to be on the label of the Sunny Jim line for the natural foods industry. I was then absorbed as the label for the natural foods industry by Pacific Foods of Oregon. They recently have tended to blend the name and call it Pacific Foods / Naturally Northwest. He has heard that there is a soymilk with a Pacific Foods brand. They do have a 1-quart plain soymilk that is sold in the Pacific Northwest, distributed by NutriSource. It is sold in most natural food stores, and it tastes good. But they "practically gave it away to get distribution. And it appeared that sales quickly leveled off."

Luke has reports indicating that they are trying to sell their concentrated soybase to small tofu makers. The tofu made from the base was found to have a poor flavor. They have tried to sell their soybase to various friends of Luke's who make second generation soyfoods around the USA. Their sales people talk as if they are just an arm of Island Spring with 15 years of history. Not only do they misrepresent themselves, they are not being successful in selling to small companies. "There aren't really many big people to approach who are interested." Luke has heard that Pacific Foods has a soy cheese product (with casein) out but he hasn't seen it. They have also announced (at least to a tofu maker in Takoma) that they are planning to launch an organic tofu product in 6 months. It will probably not be aseptically packaged.

Earlier joint efforts to sell tofu to 20 major food corporations (including to Gerber for use in baby foods) were not successful. There was little interest and the demand was too small. These companies would rather talk to ADM or Ralston Purina. Alfa-Laval has an "Achilles" aseptic packaging system that allows packaging in pallet-size containers.

There was a rented ultrafiltration unit at Pacific Foods of Oregon, but Luke does not know if they have ever hooked it up.

Luke does not think Pacific Foods could be selling enough soyfoods to pay their bills and interest. Luke's debt payments may be their biggest source of income! He thinks there is a very strong likelihood that Pacific Foods soyfoods venture will fail and they will then sell their STS/DTD system on the open market at a low price. Luke would be interested in buying back his equipment at $0.10 on the dollar. Address: P.O. Box 747, Vashon, Washington 98070.

5848. Achter-Theiss, Elke. 1990. Speise statt Futter [Food instead fodder]. *Oeko-Test Magazin* (*Frankfurt, West Germany*). Feb. p. 57-59. [Ger]
• ***Summary:*** Discusses whole dry soybeans, soybean meal, soy sauce, soymilk, tofu and silken tofu, tempeh, and miso.

5849. Baxter, M.J.; Burrell, J.A.; Massey, R.C. 1990. The aluminum content of infant formula and tea. *Food Additives*

and Contaminants: Analysis, Surveillance, Evaluation, Control (*London*) 7(1):101-07. Jan/Feb. [25 ref]
• ***Summary:*** Tea and infant formulas were examined for the presence of aluminum. Concentrations in 13 different tea infusions ranged from 2.2 mg/liter to 4.5 mg/liter. In cow's milk-based infant formulae as made up for consumption, aluminum levels of between 0.03 mg/liter and 0.20 mg/liter were detected. Higher amounts were present in soya-based formulae with concentrations ranging from 0.64 mg/liter to 1.34 mg/liter. Address: Ministry of Agriculture, Fisheries and Food, Food Science Div., Queen St., Norwich NR2 4SX, UK.

5850. Harzig, J. 1990. Les silos de Valence au lait de soja [The Silos of Valence cooperative and its soymilk]. *Agro Fourniture* 4:14. Feb. [Fre]*

5851. Karty, Cheryl. 1990. Soy drink sales rise fast [in Australia]. *Retail World* (*Australia*). Feb. *
• ***Summary:*** Australia's 16 million inhabitants consumed about 25 million liters of soymilk, and the market is growing at 20-25% a year. There are now at least 8 companies making soymilk in Australia; three of these are dairy companies. There are roughly 100 different flavors, packaging types, and sizes. All supermarkets now carry soymilk.

5852. **Product Name:** [Viana Rice Pudding: Amazake].
Foreign Name: Viana Reispudding (Amazake).
Manufacturer's Name: Viana Naturkost GmbH.
Manufacturer's Address: Schmittenstr. 106, D-5030 Huerth 6, West Germany. Phone: (02233) 41323.
Date of Introduction: 1990. February.
Ingredients: Brown rice*, koji ferment. * Organically grown.
Wt/Vol., Packaging, Price: 350 gm.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Bernd Drosihn. 1990. May 10. 3.5 by 3 inches. Self adhesive. Reddish-purple, black, brownish gold, and pea green. Dot matrix printed. "Without sugar! And without honey! A product of natural rice fermentation." The company also makes a product named Sweet Rice Cream with Lemon (*Suesse Reiscreme mit Zitronen*). It does not containing any amazake. The ingredients are rice, raisins, lemon, barley malt, and sea salt.

5853. Lo, K.S. 1990. Re: Preparing for 50th anniversary celebration. Letter to William Shurtleff at Soyfoods Center, March 1. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Mr. Lo is "in the midst of preparation for the celebration of the 50th Anniversary of the founding of our Company which is going to take place on March 23, 1990.

"I wish to express my thanks and appreciation for the copy of Bibliography of Vitasoy which you sent me. It is a very painstaking and carefully compiled record of Vitasoy for which I am most grateful.

"With reference to the translation of *Dou-Lei* [by C.N. Li, 1958] into English, I feel that this will be more of an academic interest and should be funded by research institutions. We, as a business firm, would be more interested in marketing and development of soya bean products." Address: HKSBPC Ltd. Office & factory: 41 Heung Yip Rd. Aberdeen, Hong Kong.

5854. Coker, Curtis E., Jr. 1990. Soy Moo used incorrectly as an infant formula. The child is now malnourished (Interview). *SoyaScan Notes.* March 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The hospital report to the FDA says: "On Feb. 22, 1990 a 5½-month-old female infant was transferred to this hospital. Secondary to a severe metabolic acidosis accompanied by severe deficiencies of calcium, potassium, phosphorus, thiamine, and vitamin D. She is severely malnourished and an x-ray is compatible with rickets. By parental history, the patient received Soy Moo obtained from a health food store since 3 days of life [as the sole source of nutrition]."

FDA is keeping the name of the hospital and child confidential. The parents were college-educated. The child was in critical condition and could have died. The FDA is now doing an open investigation on this problem. FDA is planning to do a mailing to all U.S. soymilk manufacturers and importers requesting that they include a statement on their packages that says, "This product should not be used as an infant formula."

Note: The FDA Center for Food Safety and Applied Nutrition used to be named the Bureau of Foods; the name was changed 7-8 years ago. Address: Asst. to the Director, Div. of Regulatory Guidance, Center for Food Safety and Applied Nutrition, Food and Drug Administration HFF-314, 200 C Street S.W., Washington, DC 20204. Phone: 202-485-0024.

5855. Fehlberg, Eric C. 1990. Seventh-day Adventist health food companies in Europe (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter dated 24 May 1990 clarifying details.
• ***Summary:*** There are three major Seventh-day Adventist (SDA) food factories in Europe, each owned by the church: DE-VAU-GE in West Germany, Nutana in Denmark, and Granose in England. There are smaller factories in Spain, and Switzerland. All these companies are owned by the SDA church. The leading Adventist food companies, ranked in descending order of annual sales, are: 1. DE-VAU-GE, established 1899 in West Germany. They are by far the biggest in Europe. They manufacture a total of 257 products. DE-VAU-GE began making its own tofu in Jan. 1986; before

that it purchased tofu from a Belgian soymilk company [Note: actually from Heuschen-Schrouff in the Netherlands]. When Michael Makowski took over as managing director in about 1972-73, company sales were about US$3-4 million. By 1983 sales were about $18 million. Since then growth has been fantastic. 1989 turnover was DM 84 million (US$49 million). This is due to both excellent management and the German interest in natural, health, and vegetarian foods. 2. Nutana, est. 1898 in Denmark. They are about half the size of DE-VAU-GE. Under the management of Bent Nielsen, who was there until 3 years ago, the company grew rapidly. Since 1987 growth has flattened, but there is great potential for future growth. 3. Nutana in Norway (Nutana Norge), formerly Dagens Kost, est. 1970. They were established as a marketing company for Nutana, Denmark, and they sell all the soyfoods made by Nutana, Denmark. They also manufacture 55 products, but they import and wholesale 321 products. All of the imports come from European Adventist companies. 4. Granose Foods, est. 1899 in England. They manufacture 39 products and distribute 98 more (mostly from Nutana or DE-VAU-GE). They have been a manufacturer since 1899, and they built a new food plant in 1989. Their business is now growing rapidly. 5. Nutana in Sweden (AB Svenska Nutana) was renamed in 1987. It was formerly named Edakost Food Company, Sweden, est. 1970. 6. Nutana in Finland, formerly Finn-Nutana, est. 1979. 7. Pur-Aliment, est. 1928 in France. They are not a food manufacturer; purely marketing. 8. PHAG Food Factory (Fabrique de Produits Dietetiques), est. 1895 in Switzerland. The small factory produces 40-50 tons of food a month. 9. Granovita Spain, was founded and began manufacturing in about Aug. 1985 in Valencia, Spain. They do not produce any soyfoods at all, but they market soy products made by DE-VAU-GE in West Germany and by Nutana in Denmark. 10. Nutana in the Netherlands, founded in 1986. They are presently selling all the products produced by Nutana of Denmark as well as 5 other products: Vitanex (Sandwich cream), Rondolettes (Chickenlike or beeflike flavor), Snackers (Soy sausages), Boulettes (Dinner balls).

The Austrian Food Company, founded in 1976, was a restaurant rather than a food manufacturer; it was closed in 1987.

Granose and DE-VAU-GE were both importing foods from Loma Linda in the USA. But now that Loma Linda has been sold to Worthington Foods, it is not clear what will happen to these imports. Today, the various Nutana companies are independent, but there is much talk of bringing Nutana in Norway and Holland together with Denmark. Nutana has always been behind the expansion of SDA food work in the Scandinavian countries. Using the common name Nutana greatly facilitates marketing.

The European food companies have grown at different rates, largely dependent on the effectiveness of each company's management. The trend has been generally up. The highest growth rates in the past 5 years have been shown by Granose in England (though it started from a smaller base), followed by DE-VAU-GE in West Germany. Pur-Aliment and Nutana have had a bit of a struggle.

All of these companies pay a portion of their profits back to the church. They are encouraged to pay about 20% of profits back to the church, but some pay almost 50%. This is similar to the dividends paid by secular companies. Fehlberg believes that tofu will be the growth food of the future; it has great growth potential that has not yet begun to be realized. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

5856. Fehlberg, Eric C. 1990. Recent Seventh-day Adventist work with soymilk (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** So Good soymilk from Australia has had remarkable success since it was launched in April 1987. Sanitarium Health Food Co. was the first to make soymilk in Australia. It caught on rapidly, and soon prompted 4-5 competing brands to be launched, but none of them have sales nearly as large as So Good. The main problem has been the company's inability to produce enough to keep up with demand. It was launched in about April 1987. In Oct. 1989 they sold 1,738 long tons (2,240 lb/ton, thus 3,893,120 lb). The equipment used to produce the soymilk is Adventist technology, not that purchased from Alfa-Laval, STS, etc. although in the last 6 months Sanitarium Foods purchased a pilot plant from Alfa-Laval which they plan to use in their laboratory. Originally So Good was packed under contract by a nearby dairy company in Combibloc cartons. After a year or so they purchased their own Combibloc packaging machine. Australia started to make soymilk after DE-VAU-GE in West Germany. The latter is very happy with their STS system, and Fehlberg is now seriously considering ordering one or two more turnkey soymilk plants for other countries in the near future. Sanitarium Foods has a very strong research lab.

The Seventh-day Adventist food company in South Korea, Sahm Yook Foods, now makes a Tetra Pak soymilk. The company was established in 1978, but did not begin food production until Sept. 1981. It began to make Sahm Yook Soy Milk in May 1985. Only a plain soymilk is produced–no flavors. After launching soymilk, the company began to grow dramatically, as that product grew. Last year they built a very large, now soymilk plant (based on Adventist technology) and they are now about the 2nd or 3rd largest soymilk maker in Korea. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

5857. Fehlberg, Eric C. 1990. Thoughts on Loma Linda Foods, its acquisition by Worthington Foods, and the health foods industry in America (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Worthington Foods purchased Loma Linda Foods (LLF) from the Seventh-day Adventist Church in Jan. 1990. Loma Linda Foods, unlike most other Seventh-day Adventist companies worldwide, tended historically to target its products to Seventh-day Adventists. Within North America there are very, very few respectable SDA businessmen. That is the problem. "Loma Linda has been working since 1906 with their eyes blindfolded. Too often, instead of using a businessman to head the program, the men in their wisdom have elected to install a broken down minister, and expected him to make a roaring success of it."

A very good businessman, George T. Chapman from Australia, ran LLF from 1938 to 1963. The company did very well financially under his leadership. Since 1963 the company has had a series of managers who lacked business experience; the result was ongoing financial problems. In June 1984 Mr. Fehlberg went from his position at the General Conference to Loma Linda where he turned the company around. Fehlberg ran LLF for about 2 years, during which time it went from a substantial loss to a very profitable company. Mr. Pizzaro was brought in Nov. 1984 and has kept it profitable. He is a very conservative man with a background in banking. He was able to hold LLF together but was not inclined to take the risks to make it really take off.

The church first wanted to sell off the infant formula part of the company because of the high cost of liability insurance. The FDA are really down on infant formula foods. If anything goes wrong, there is no end to the strife. LLF had one small recall due to a small shortage of vitamin A–from dissipation. It was very expensive. Fehlberg understands that but does not understand at all and strongly disagreed with the sale of LLF. "I talked myself hoarse on the committee opposing the sale but I didn't win. I am not happy that it ended up in the hands of Worthington Foods. Their financial report over the past 5 years is not that strong. The last year has not been a healthy year. I hope they can survive. Loma Linda will definitely help them survive by giving them a lot of extra new sales with no extra administration or marketing costs. Now that they have a monopoly, they may relax their standards. I believe that once the 5-year non-compete term expires, you'll get an influx of products into the United States from Adventist companies overseas that will make it very difficult for Worthington to operate–unless they can improve things. Fehlberg prefers the flavor the Australian meat analogs, which are less highly flavored and easier to digest.

Fehlberg feels that the USA is 20 years behind many other countries (Australia, West Germany, Japan) in food processing and storage techniques, largely because of Food and Drug Administration (FDA) restrictions. One area where the USA lags behind is in retorting of food products in plastic film containers. We tend to retort foods too long, and do not have foods retorted in sausage-type pouches (e.g., tofu sausages), which require no refrigeration. The FDA is afraid of botulism in such protein foods, so they require that the foods be frozen. In Australia, West Germany, and Japan these foods are refrigerated, but Adventist tests show they can be stored at room temperature for 6-12 months, or more. If Worthington's frozen meatlike products could put in plastic containers made of this special film (which is available in America) there would be major cost savings in factory storage, transportation, and retail storage. Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904. Phone: 301-680-6674.

5858. Gaiser, Klaus. 1990. Huegli acquires majority ownership in Yamato Tofuhaus GmbH and in Heirler (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Huegli Naehrmittel A.G. is a Swiss company, but they have a German branch. The head of the German branch approached Gaiser and asked him if Yamato would like to work together with Huegli. Until the spring of 1989 Klaus had a business partner (Wolfgang Haberger, who had joined the company in early 1984) but he was not very happy with him, so he bought him out. At the time of the buyout, Huegli approached Gaiser, who was now suffering from undercapitalization. Gaiser found Huegli to be fair, trustworthy, and competent. Huegli bought more than 50% of Yamato in April 1989. Before that, Thomas Karas had tried to sell his company to Huegli.

In Jan. or Feb. 1990, Huegli purchased Horst Heirler, the biggest distributor of fresh health foods in West Germany. Heirler's packaging is very attractive. To the best of Klaus' knowledge, there is definitely no relationship between Huegli and Nestlé. Yamato has not yet announced its relationship with Huegli to the general public, so nothing has been published. Tofu production has not yet expanded enough to fill the needs of potential Huegli customers. Yamato is now selling tofu on one of Huegli's tracks–to hospitals and factories (institutions; Grossverpflegung); other tracks are (2) Reform Houses, and (3) industry and supermarket chains. Presently Klaus is working most on track 1. To reach tracks 2 and 3 Yamato would have to develop new packaging and products suited to their very special needs. "At the moment Yamato and Huegli are not yet working so closely or effectively. Their new capital comes one step at a time for specific goals/projects.

Yamato presently makes 8 tofu products: Tofu (250 gm and 400 gm), Tofu Enriched with Mung Bean Sprouts, Smoked Tofu, (the best in Germany), three types of

deep-fried tofu (Sour Marinated Tofu, *Hirschauer Laible* [Hirschau is a small village near Tuebingen]; *Laible* = little loaf or loaflet; the tofu is first marinated in soy sauce and spices, then deep fried), and Tofu Burgers with Sprouts (*Sprossen Tofuletten;* made with mung bean, sunflower, radish, alfalfa, and mustard seed sprouts {no soy sprouts}, these burgers were deep fried), 2 tofu pâtés in glasses (a little like sausages), and soymilk sterilized in bottles. He presently developing some new products.

Note: Huegli Naehrmittel A.G. (P.O. Box, CH-9323 Steinach-Arbon, Switzerland. Phone: 71.46.92.92) was founded in 1935. They currently have about 600 employees and capital of 100,000 Swiss francs. They are a well-known company in Switzerland. Address: President, Yamato Tofuhaus GmbH, Rittweg 11/1, D-7400 Tuebingen–Hirschau, West Germany. Phone: 7071-71094 or 95.

5859. *SoyaScan Notes.* 1990. Trends in the soyfoods market in Western Europe, and comparison with the USA (Overview). March 13. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1. Since 1988, many more large food companies have become soyfoods manufacturers in Europe than is the case in the USA. A great deal of new money is pouring into the soyfoods industry, especially from dairy and agricultural co-ops, and from large food companies. There have been many acquisitions and mergers involving dynamic small companies with large established companies. Products receiving the greatest attention are soymilk, dairylike soymilk products (such as non-dairy yogurts), tofu, and second-generation tofu products. Many industry leaders feel that the latter type of products have the greatest potential for the future.

2. There is much more use of and interest in organically grown soybeans and other ingredients in Europe. Organic certification marks (such as Nature et Progres, or CINAB) appear on the front panel of many products.

3. There is no U.S. equivalent of the huge and powerful Reformhaus health food chain, found in German-speaking countries. This chain helps to market soyfoods and set standards. It requires that all manufacturers put its Neuform certification symbol on all products sold by the chain.

4. Restrictive anti-soy labeling laws are more prevalent in Europe than in the USA. This is because of the very powerful dairy lobbies in most European countries. However these will be weakened after 1992.

5. Laws governing the way soy ingredients are listed on the label generally allow a more vague listing in Europe. In Germany, for example, a company can say simply "soy protein preparation," without specifying whether they are using a soy protein isolate, concentrate, textured isolate, textured soy flour, etc.

6. There are no good publications or information centers that focus on soyfoods in Europe, either for individual countries or for the continent as a whole.

7. The European market is much more fragmented and diverse. Much of the fragmentation comes from the fact that each country has its own food culture, language, and labeling laws. Exporting products, in an attempt to expand one's market, often requires duplicate or complex labeling, plus dealing with tariffs, etc. This will become less of a problem after 1992.

8. In most countries soyfoods are marketed primarily to the health foods trade, but in France there is much more focus on the mainstream mass market.

5860. *SoyaScan Notes.* 1990. Low-acid Tetra Brik aseptic packagers in the USA (Overview). March 14. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** There are three such packagers west of the Rocky Mountains: (1) Real Fresh in Visalia, California (near Fresno) is the oldest. The Graves family started the company and its pioneering work with UHT and aseptic packaging in the 1950s. A talk with Real Fresh reveals that: In June 1988, Real Fresh was bought by a French company named Bongrain, which basically threw out the whole Graves family. In recent years the family had been losing money. (2) Pacific Foods in Tualatin, Oregon, which started in 1989 to package soymilk. (3) Gossner in Utah.

In the eastern USA, American Soy Products in Saline, Michigan, makes and packs Edensoy.

5861. *SoyaScan Notes.* 1990. Use of *Bifidobacterium* species in dairylike soymilk products (Overview). March 15. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** A growing number of soy yogurts, dairy milks, and cultured milks (such as Yakult) in Europe, Japan, and Canada are being promoted as containing species "Bifido" (pronounced BIF-uh-doe) or "Bifidus" bacteria. Keum et al. (1984) used *Bifidobacterium bifidum* as a starter for soymilk yogurt with good results. Sakai et al. (1987) showed that *Bifidobacterium breve* grown on soymilk assimilates the flatulence-causing oligosaccharides stachyose and raffinose in preference to sucrose, and hydrolyzes galactosyl compounds.

Talk with Brian Quigley of Canada. 1990. March 15. These bacteria are found in the large/lower intestine of newborn infants, but they gradually disappear a few months after birth. If these bacteria are ingested by adults, they supposedly go into the digestive tract, where they survive and kill bad bacteria. By eating a food containing these bacteria, an adult is replenishing his/her digestive tract with a bacteria found there at birth but lost. Some studies ascribe amazing benefits (anti-carcinogen, etc.) to this organism. Chris Hansen's Lab. in Milwaukee, Wisconsin, has done extensive work on this organism in Europe and the USA. They have worked with Yoplait in France and other companies to develop good strains. Products now containing

the bacterium are often labeled "BA" or "Bifido Active." In Japan, the bacteria are sold in pill form. Researchers at Laval University in Quebec, Canada, have also done considerable research on these bacteria.

Bergey's Manual of Systematic Bacteriology (1984) lists 32 species of *Bifidobacterium,* including the species *bifidum* and *breve* (p. 1424). "Distinction of two serovars have been made. Serovar A predominates in the feces of human adults, while B predominates in that of neonates (Reuter 1963)."

A search for the term "Bifidobacterium" the MEDLINE database from 1986 to the present lists 78 publications.

5862. Sellars, Bob. 1990. The health benefits *Bifidobacterium* species in dairy products (Interview). *SoyaScan Notes.* March 16. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** Chris Hansen's Lab was founded in Denmark in 1874. Mr. Sellars has been interested in *Lactobacillus acidophilus* and *Bifidobacterium* since 1964, and has done many experiments on himself. His lab has supplied acidophilus to the health food industry since 1962. The single best source of information on *Bifidobacterium* (pronounced BIF-uh-doe-, and called "Bifido" for short) is a 1983 book by Rasic and Kurmann titled *Bifidobacteria and Their Role.* It cites most of the important studies.

The main benefit of Bifido is that it produces some very beneficial enzymes that help to inhibit the formation of pro-carcinogens. But acidophilus also produces an enzyme/compound which reduces or inhibits the azo-reductase and nitro-reductase enzymes in the human body. Those enzymes can produce carcinogens, such nitrosamines (pronounced nai-TROE-suh-meens).

The species of *Bifidobacterium* used by most people are *bifidum, longum, adolscenpis,* and *infantis.* His Lab. makes a mixed culture product named Nu-Trish a/B which contains the longum and the bifidum. The "a" stands for acidophilus, which resides primarily in the small intestine; the B stands for Bifido, which resides primarily in the large intestine. This culture is not used for making yogurt. In the USA the standard for yogurt requires it to contain live *Streptococcus thermophilus* (pronounced ther-MOPH-uh-lus) and *Lactobacillus bulgaricus* organisms. So Nu-Trish a/B (which contains whole cells) is usually added to sweetened pasteurized fluid milk, which is not fermented, but is sold in many supermarkets. In a fermented yogurt, the 3 organisms in Nu-Trish would be antagonistic to the 2 yogurt organisms, so it wouldn't work well. The acidophilus and the bifidum found in newborn infants come primarily from the colostrum in mother's milk, but some may be found in the fetus at birth. Both organisms are found in both intestines of the infant, but (as noted above) acidophilus predominates in the small intestine and *Bifidobacterium infantis* in the large. Infants gradually loose these bacteria as they mature. The Japanese are very interested in these organisms for health reasons because of the Yakult company, and Japanese consume more of these bacteria per capita than any other nation. In Japan, it is legal to promote the health benefits of these organisms, and say that they help cure cancer, that they are good for lactose intolerance (the bacteria produce an enzyme that breaks down lactose in both the milk and in the stomach and small intestine), or that they cure gastroenteritis infections; in the USA, this is illegal. In Europe and Japan extensive clinical research shows the benefits to humans, but in this country the American Medical Assoc. and the Food and Drug Administration have refused to recognize the research done here because the sample size was too small to make it statistically valid. Now Dairy Research Incorporated, the National Dairy Council in Chicago, the National Dairy Research and Promotion Board, the Wisconsin Milk Marketing Board, and the North Carolina Dairy Foundation, Chris Hansen's Lab., and Miles Lab. are all supporting one large scale study in 3 locations. The results, expected in June 1990, if promising will be published in *New England Journal of Medicine* or *Lancet.*

The key to the rapid growth of interest in Bifido was the discovery in Japan a few years ago of the "Bifido factor," i.e. that Bifido need the sugar lactulose for rapid sustained growth. Dairy milk contains small, irregular amounts of this sugar. Hansen's Lab. is interested in dairy milk, and NOT in soymilk.

Al Huggins, president of Huggins International in Chicago has a database on dairy cultures such as acidophilus (Phone: 312-477-0014). Address: Senior V.P. of technology, Chris Hansen's Laboratory, 9015 W. Maple St., Milwaukee, WI 52315. Phone: 414-476-3630.

5863. Storup, Bernard. 1990. The soymilk market in France (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** By far the biggest seller of soymilk in France in Alpro/Vandemoortele, whose plant is in Belgium. They sell an estimated 7-9 million liters/year of soymilk in France.

The biggest soymilk manufacturer in France is Cacoja (pronounced KA-ko-jah). They make an estimated 2.5 to 3 million liters/year. Cacoja's original brand name was Bioforme. They changed their brand name to BioSoja in the fall (Sept. or Oct.) of 1989. Unfortunately BioSoja is a brand owned by another soyfoods company (which notified Cacoja of the problem, and Cacoja chose to ignore it), so they will almost certainly be obliged to change the brand name once again! [to Formoja]. Cacoja was actually not their own name; it had been sold to a distributor, and they got into legal problems with that distributor, bu they are still using the name as their company name. Their plant is still in Issenheim. This company is making so many mistakes that it is hard to imagine how they can survive. In part, this is because they are a cooperative and in part because they have so much money that they can afford not to be careful. For

them, every day is a jackpot!

Société Soy presently makes 70,000 to 100,000 liters/month. In 1990 they expect to produce 1.5 million liters, because they will soon introduce their own Tetra Pack line under the brand Biosoy.

The third and fourth largest soymilk manufacturers in France are probably Triballat and Innoval. Both make about the same amount, an estimated 500,000 liters a year. But this is a rough guess since they do not give out figures. Innoval's soymilk is very good quality.

Cacoja, Triballat, and Innoval all have big financial problems. They have large, expensive, automated, computerized factories and very low production. They have too much invested for the size of the market. They may produce only 1 day a week. They have no real leaders in the companies so the people are not really motivated by what they do. Its a pity, because they have two of the most interesting factories in Europe. They hope to private label soymilks for supermarkets.

It appears that Sojadoc sells their soymilk only in Spain (none in France), so it is very difficult to tell how much they are making or what they are doing. They were supposed to move their complete factory in Clermond-Ferrand, and now we do not know where they are.

DE-VAU-GE started to sell their soymilk in France, but they stopped. They now sell their soymilk mainly in West Germany, Belgium, and the Netherlands.

Thus soymilk consumption in France is presently estimated to be about 11 million liters/year, whereas production is about 3 million liters/year. Both figures are very small compared to the 2,000 million liters of cow's milk.

Bernard would estimate that soymilk consumption in France is presently growing at 25% a year. Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 St.-Chamond, France. Phone: 77.31.23.66.

5864. Friend, Tim. 1990. Soybeans may help fight cancer. *USA Today.* March 27. [1 ref]

• ***Summary:*** "Daytona Beach, Florida–New research presented here Monday at an American Cancer Society meeting shows rats fed a soybean-rich diet, then injected with a carcinogen, have 50% fewer breast cancers than rats given another source of protein.

"The link is not proven in people yet, but the findings may explain why Asian countries, which rely heavily on soybeans in the diet, have breast cancer rates that are five times lower than rates in the USA, says Stephen Barnes, University of Alabama.

"When Asians move to the USA, their daughters have the same breast cancer risk as U.S. women, he says.

"Barnes also showed soybeans and the drug Tamoxifen, which stops recurrences of hormone-dependent breast cancer, are chemically similar. That means a lifelong diet of soybeans may block estrogen from breast cells that use it to grow tumors.

"Dr. Samuel Broder, National Cancer Institute, finds the study 'fascinating, but you must keep it in perspective.' He says many factors could be involved, such as lower-fat diets in Asian countries and the higher breast cancer risk among U.S. women due to bearing children at later ages.

"Barnes says processed soybeans added to food do not contain anti-estrogen compounds that may prevent cancer. Foods that do, include tofu, soy milk and unprocessed soy flour."

This story was also broadcast on national radio news (incl. KCBS in San Francisco) the same day.

5865. Hansen, Asger Somer. 1990. The soymilk market in Europe (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** There are no statistics published on soymilk in Europe. The soymilk that is made can be used in either of two ways: (1) Aseptically packaged (typically in Tetra Brik cartons) for consumer use as a beverage or pudding-like dessert; (2) Soymilk base is used as an ingredient in other foods or to make "processed tofu," which is made by ultrafiltration rather than by coagulation. Alpro is definitely the largest manufacturer with output estimated at 18-24 million liters/year. DE-VAU-GE is second biggest with about 12 million liters/year in the form of long-life packs (beverages and desserts). DE-VAU-GE will soon start to make tofu, which will be used mostly as an ingredient in their foods (sausages, etc.). In Asger's opinion these are very good products. Finally there is Cacoja, Triballat, and some smaller companies making a total of about 5 million liters/year. This gives a rough estimate of 35-40 million liters/year of soymilk made in Europe.

The growth rate of this market during the past 2 years has been slow, maybe 5-10%. "The real growth area has been in processed foods with tofu as a main ingredient. That's where I see the growth happening, in foods like dressings, egg-free mayonnaise, sausages, etc."

Cacoja sells "soymilk base," which is sold from the factory in tankers. Last time he talked with customers, they were not satisfied with the quality of the product. The capacity is only 1,500 liters/hour. The Adventists are considering a soymilk plant in the USSR.

Anders Linder left DTD on 1 Nov. 1989. He was asked to leave because the company was not making enough money, and because the company has new management under APV. He is now living at Domsten, Helsingborg, in Sweden. DTD's name is now APV-DTD, part of APV-Pasilac. Asger is in charge of the Soya Technology Div. Two other people are employed by this division with him (Elizabeth Gibson). John Davies is in Hong Kong. Address: Technical Manager, Danish Turnkey Dairies Ltd., Soya Technology Div., 2 Europaplads (P.O. Box 146), DK-8100

Aarhus C, Denmark. Phone: (86) 12 4155.

5866. Bundesfachverband Deutscher Reformhaeuser. 1990. [Re: Overview of the Reform House (Reformhaus, including Neuform) movement in Europe]. Questions answered on Soyfoods Center letterhead (dated 22 March 1990) and returned to SC on 30 March 1990. 5 p. [Ger]
• ***Summary:*** The first Reformhaus was started in Berlin, Germany, in 1877 by Karl Braun as a health center (*Gesundheitszentrale*)**.** Today there are 2,800 Reform Houses in West Germany, 400 in Switzerland, and 50 in East Germany. Each house is owned by an independent merchant who is a member of the cooperative.

Concerning the Neuform part of the Reform Houses (as of 31 Dec. 1988), there are 1,325 members, a total of 2,804 sales places of which 1,902 are Reform Houses. There are 902 storehouses / warehouses (Depots). Annual sales (Umsatz, EVP) are 1,050,000 million.

A breakdown by type of goods sold is: Foods 56.1%, natural medicines / pharmaceuticals 19.6%, body care products & cosmetics 13.3%, dietetic foods 9.6%, diverse minor products 1.4%.

There are about 4,500 Neuform products made by 73 contractors / producers. Employees: About 10,000.

Sales by Neuform-Reform Houses and Depots has grown from DM 700 million in 1988 to 1,050 million 1988. In 1988 of the 2,804 Neuform locations, 67.8% were Reform Houses and 32.2% were Depots. In 1980 of the 2,638 Neuform locations, 64.2% were Reform Houses and 35.8% were Depots. Address: Waldstrasse 6, Postfach 4110, D-6370 Oberursel 4, West Germany.

5867. Carantino, Sabine. 1990. Le soja perd son amertume [Soya loses his bitterness]. *Management et Technologies Alimentaires* No. 2. March. p. 65-66. [Fre]
• ***Summary:*** Last Oct. 7 companies that process soybeans joined to create AFISA (Association Francaise des Industriel du Soja), the French soyfoods association (5 Blvd. de la Mediterranée, 31400, Toulouse, France). This article uses the term "soyfoods" and discusses soymilk, tofu, tofu products (desserts, prepared foods). ONIDOL is involved, as is GEPV (*Groupement d'Études sur les Protéines Végétales,* 10-A rue de la Paix, 75002, Paris, France; founded in 1975). It has been decided to finance a market study (which will be completed this year) of 4 European countries: Belgium, France, Great Britain, and West Germany. They may develop a "French Soya" logo. At the same time, ONIDOL is organizing an Interprofessional Committee for Soy Proteins Destined for Human Consumption. It will coordinate scientific studies, communication, and information on vegetable proteins and "soyfoods."

In Europe, the degree of advancement of use of soy protein in human foods differs considerably from one country to the next. The UK and Germany started earlier than France. In Germany, soyfoods are positioned on the "battlements of the dietetic market" whereas in France they are more oriented toward the mass market. In France, the high consumption of dairy products has not favored soymilk. 3-5 million liters of soymilk were produced in 1988, and the amount had roughly doubled by 1989. The new technologies allow production of soymilk with almost no bitter (beany) flavor, and it can be used to make good yogurts and desserts.

The first soy beverages and flavored desserts were launched only 5 years ago by Alpro (a division of Vandemoortele). The movement was then expanded with the creation of new brands, Celia (Laiterie Saint-Hubert-de-l'Hôtel) and Cacoja (Coopérative agricole de Colmar). Triballat created Soja Sun, a line of soy desserts. In 1988 the cooperative of Valence launched the Innoval line. Others include [Société] Soy, Sojadoc (Richemont) and Sojal. Many of the leaders are dairy companies, but they position their products very differently from dairy milk. Also in the French market are Lima from Belgium (with tempeh and tamari). Tonidoc makes soynuts sold as an aperitif. The French company Bunge, a third party, and Sofiproteol (Sofiprotéol) have created Sogip, which produces soy protein concentrates for use as both calf milk replacers and in human foods.

Concerning regulations, the definitions and uses of soy protein are set forth in a circular of 27 Aug. 1975, which related to another document of 12 Oct. 1972 for terminology. Finally a new circular of 1986 replaced the earlier ones. The Codex Alimentarius will finish its work on these areas in 1991.

A sidebar describes Innoval and its goals. Address: France.

5868. **Product Name:** Promoveal (Soy Protein Concentrate Milk Replacer).
Manufacturer's Name: Central Soya Co.
Manufacturer's Address: Bellevue, Ohio.
Date of Introduction: 1990. March.
New Product–Documentation: Central Soya Co. 1991. 1990 Annual Report. p. 10. "The Company's Chemurgy Division, which produced record sales and earnings again in 1990, successfully launched production in March at its new soy protein concentrate plant, the largest expansion project in the Company's history, at the Bellevue, Ohio multipurpose facility... New technology was used to produce a new soy concentrate product named Promoveal, designed as a nutritionally improved high protein milk replacer for use in specialty animal feed formulations..."

5869. Choi, Po-King. 1990. Hou sheng yü ch'uang yeh: Wei t'a nai 50 nien (1940 chih 1990) [Enriching life and creating business: Fifty years of Vitasoy (1940-1990)]. Hong Kong Soya Bean Products Co. Ltd., 1 Kin Wong Street, Tuen Mun, New Territories, Hong Kong. 103 p. Illust. 26 cm. [Chi]
• ***Summary:*** This excellent, detailed Chinese-language

history of the Hong Kong Soya Bean Products Company Ltd. is packed with interesting photos, both old and new, and contains a 2-page chronology of key events at the end. Photos of K.S. Lo include: At graduation in 1934 (p. 12). In 1935 with three other men (p. 15). In the 1980s with Winston and one other son (p. 16). At the company's grand opening in 1941 (p. 21) and re-opening in 1949 (p. 31). Inauguration day of the Green Spot plant in Hong Kong, 10 June 1950 (p. 36). With two daughters (p. 37). At the back of a Pepsi Cola van, p. 44. Toasting Richard Nixon in 1964 (p. 47). Standing next to a Vitasoy truck (p. 49). With a huge stone mill and two of his sons (p. 51). With two other men (p. 52). In the Hong Kong plant (p. 71-73). Painted color portrait (p. 96). Photos include: The original Vitasoy plant (frontispiece, facing the title page). The grand opening of the Hong Kong Soya Bean Products Co. with management and employees (p. 21). Making and bottling soymilk inside the plant (p. 22-23).

Note: Talk with Yvonne Lo. 1990. Sept. 10. She thinks the company will do an English-language version of this book. The author spent 2 years doing the research. Address: Hong Kong.

5870. Diamond, Marilyn. 1990. The American vegetarian cookbook: From the Fit for Life kitchen. New York, NY: Warner Books. xx + 422 p. Index. 29 x 22 cm. [74* ref]
• ***Summary:*** This is a beautifully presented vegan cookbook, with many creative and delicious recipes. Soy-related recipes and entries include: Description of unpasteurized misos (p. 42). Soy products (p. 43; see also How to replace animal products, p. 93). Red miso tea (p. 71).

Chapter 6, titled "How to replace animal products" (p. 93-119), is devoted largely to soyfoods, especially tofu. At one time the Diamonds were not fans of tofu, but now Marilyn hails it as an "extraordinarily healthful" food. She uses it in what she calls "'stedda" foods–such as tofu salad "instead of" chicken salad. In this chapter you will find: Nondairy milk and cream: Soymilk (p. 94-95; the author finds nut and seed milks, almond and sesame, to be more flavorful). Enriched almonnaise (non-dairy mayonnaise with almonds and soymilk, p. 98). Instead of meat (p. 100): Exactly what is tofu? Culinary utopia: A dream come true. Buying and storing tofu. Wrapping tofu. Freezing tofu. Marinating tofu. Mixing tofu with other foods. How to proceed. "Stedda" sour cream. "Stedda" sour cream and onion dip. Cottage tofu or "stedda" feta. "Stedda" ricotta. Tofu "cheese" and olive spread. "Stedda" eggs: Rancheros (with tofu, p. 107). Scramblers (with tofu). Scrambled tofu (another way). Scramblers with fresh shiitake mushrooms. "Stedda Matzo brie (with soymilk and tofu). Burgers and other sandwiches (p. 110): "Stedda" egg salad (with tofu). Happy "chicken" burgers (with tofu). "Stedda" fish fillets (with tofu). "Stedda" meat marinades (* = with low-sodium soy sauce): All-purpose marinade I*. "Chicken" flavoring*. "Beefy" marinade*. Sweet and sour*. "Stedda" chicken fillets (with tofu). Mixed grill platter (with tofu). Kebobs! (with tofu). Tofu meunière. Lemon "stedda" chicken (with tofu). "Stedda" Chinese chicken salad.

"Sour cream" garlic dressing (with tofu, p. 128). "Cheesy" dijon dressing (with tofu, p. 130). French green salad with cottage tofu (p. 141). "Stedda" beef salad (with tofu, p. 155). "Stedda" mozzarella salad (with tofu, p. 159). Tofu salad (p. 169). "I used to love a fried egg" sandwich (with tofu, p. 181). Spicy tofu tacos (p. 186). Seasonings for soups (miso, p. 189). Basic cream soup (with light miso, p. 191). Miso soup with ginger and green vegetables (p. 193). Easy miso soup with vegetables and tofu (p. 194). Asparagus with tofu (p. 222-23). Vegetable lasagna with tofu ricotta (p. 278). Meatless bolognese spaghetti sauce (with frozen tofu, p. 280). Dairy-free "cheese" sauce for any pasta (with soymilk and light miso, p. 282). Tamale pie (with tofu, p. 311). Mushroom-leek crepes (with miso, p. 316). Winter squash blintzes (with tofu, p. 317). Spinach quiche (with tofu and light miso, p. 317). Asparagus quiche (with tofu and light miso, p. 318). Country pot pie (with tofu). Spanokopita with "stedda" ricotta (with tofu, p. 320). Superb vegetable sushi (with tofu, p. 322). Baking ingredients (soy flour, p. 331, and soymilk, p. 333-34). Carrot-cake cookies (with soy flour, p. 346). "Cheesecake" bars (with tofu, p. 346). Easy banana bread (with tofu, p. 348). "Cheese" strudel (with tofu, p. 349). Mocha parfait (with tofu, p. 350). Baked Indian pudding (with soymilk, p. 350). Applesauce cake (with tofu, p. 352). "Chocolate" carrot cake (with tofu, p. 353). Holiday pumpkin pie (with tofu, p. 355).

Talk with Marilyn Diamond. 1991. Sept. 18. The book is in its 9th printing now and the publisher just allowed her to do a revision, correcting typos and improving recipes. The publisher is not even planning the paperback edition yet because the hardcover edition is selling so well. They now have a 10-year contract with Doubleday (with a 10-year option to renew), and she and Harvey are working on a book together titled "How to Save Your Husband's Life While Saving Your Own." It stresses the need to re-affirm the female energies, which are the earth energies. The Diamonds have established a foundation to support the environment and ecological projects. This last year they contributed funds from it to support tree planting through the National Arbor Day Foundation. Address: Bradenton, Florida 34209.

5871. DTD Soya Technology Div. 1990. APV soymilk technology (Leaflet). Europaplads 2, P.O. Box 146, DK-8100 Aarhus C, Denmark. 3 panels each side. Each panel: 30 x 21 cm. March.
• ***Summary:*** This glossy, full-color leaflet, Anders Lindner's last project before leaving DTD/STS, describes: "Our products and services: Hardware, software, turnkey plus, some products made from soymilk base (yogurts, ice creams, tofu products, etc.). Our business is soymilk plants: About

ourselves (APV DTD belongs to the APV-Pasilac Group), about soymilk." A color photo shows 4 flavors of Big Sipp soymilk. Soymilk processes and products. Progress of a typical project (2 flowcharts). On the back panel, 9 small color photos show commercial products made from soymilk, including Nasoya creamy tofu dressings, Nayonaise, GranoVita Bio-Tofu-Pastete (spread), and Tofuletten (liked sliced luncheon meats). Address: Aarhus, Denmark. Phone: +45 86 12 41 55.

5872. Golbitz, Peter. 1990. Is aseptic packaging the problem or solution for soymilk? *Soya International* (*Bar Harbor, Maine*). Jan/March. p. 2, 9.
• ***Summary:*** The author sat through eight hours of testimony before the Maine legislature's Energy and Natural Resources Committee concerning the merits and demerits of three proposed amendments to Maine's new solid waste/bottle bill. Presents both sides of the issue.

5873. **Product Name:** [Mam Soylet Soymilk (Liquid, or Powdered; With, or Without Added Salt and Sugar)].
Foreign Name: Mam Soylet (In Polvere; Bevanda Proteica di Soya).
Manufacturer's Name: Medical Soy S.p.A.
Manufacturer's Address: Via Matteotti 55, 20068 Peschiera Borromeo (Milan), Italy. Phone: 02.547.54.56.
Date of Introduction: 1990. March.
Ingredients: Water, partially defatted soybeans, natural aromas.
Wt/Vol., Packaging, Price: Powdered: 350 gm bag. Liquid: Square plastic bottle.
How Stored: Liquid: UHT treated so probably shelf stable.
Nutrition: Per 100 gm.: Protein 3.2 gm, carbohydrates 1.0 gm, lipids 2.3 gm, calories 37.5.
New Product–Documentation: Talk with then letter (fax) from Xavier Karis in Italy. 1990. June 13 and 18. Medical Soy makes a line of products including a soymilk, which he found to taste excellent, and which he thinks they make themselves. Mr. Bolleti is the contact person. Their fax number is 02-553-00-754. The company that distributes Medical Soy dry products is named La Moderna Distribuzione in Bergamo, Italy. Fax: 035-231-876.

He first tasted their soymilk at a fair (CIBUS in Parma) where they told him it was the version without added salt and sugar. That was the one he liked. "Last Saturday I bought one of their horribly designed plastic bottles without added salt and sugar. The taste sure wasn't as good as I remembered from the fair. I think at the fair they gave me the one with added salt and sugar."

Medical Soy leaflet. 1990. A photo shows 13 soy products.

Label sent by Xavier Karis. 1990. July 22. 2.5 by 3.75 inches. Self adhesive. Blue, yellow, and black on white. Design of 4 concentric boxes against a background of yellow-orange soybeans. "Contains soya protein (*Contiene le proteine della soia*). UHT treatment. Without sugar. Produced at the establishment of Gadesco Pieve Delmona (CR) of/for Medical Soy." UPC indicia. Recycle bottle symbol/roundel. Note that the Italian term "mam" has its roots in the words "mother" or "breast" (mamma, mammario, mammella).

5874. *Natural Food Trader* (*England*). 1990. Company news: Plamil Foods. March.
• ***Summary:*** "Plamil Foods is involving retailers and consumers in its silver jubilee [25th anniversary] celebrations. A competition is being held for children to draw a picture of their favourite / local health food store, and the stores featured in the winning pictures will be awarded £100 worth of Plamil goods at trade prices."

Note: Plamil Foods was apparently founded in about 1965.

5875. Ontario Soybean Growers' Marketing Board. 1990. A profile of the Canadian soyfoods market–Characteristics and potential. Box 1199, Chatham, ONT N7M 5L8, Canada. vi + 40 p. March. 28 cm. Spiral bound.
• ***Summary:*** Contents: 1. Introduction: Background, study objectives. 2. Research procedures: Data limitations, data collection (data sources). 3. The soyfood market: Soyfood production and utilization, domestic production, imports and exports (introduction, whole soybeans, soy flours and meals, soy oil, soy sauce, protein substances, cream and other substances, bran & soy hulls, soy meal oil cake), balance, conclusions regarding opportunities.

4. Soybeans for food purposes: Natto beans (background, market characteristics, market potential), whole bean soyfoods (introduction, soynuts, full fatted soy flours, soymilk, tofu, soy sprouts, tempeh, miso, natto, soy sauce), foods from soy ingredients (introduction, defatted soy flakes, soy protein concentrate, soy protein isolates, textured soy protein, consumption and imports). 5. Organic soyfoods: Introduction, organizations (major players, labelling requirements, certification), organic soybeans, organic soyfoods, market opportunities, recommendations.

6. Market estimates: Introduction, conversion rates, market characteristics (introduction, ethnic characteristics, immigration trends, implications), soyfood consumption (production). 7. Soyfood products: Introduction, new products (whole bean products, products from soy components), existing products (products with potential for growth). 8. Marketing strategy: Introduction, respondent requests (background), market opportunities (traditional soyfoods, new products), systems development (system information needs, human resources, production research), institutional needs.

This study was commissioned by the Ontario Soybean Growers' Marketing Board to provide a description of the

Ontario soyfood industry. "Production and utilization: In the 1988 crop year, approximately 1.12 million tonnes of soybeans were produced on 1.28 million acres in Ontario. Approximately 86% of the soybeans were sold through the Board, with the remainder being fed or retained on the farms where they were grown. In 1988, 860 thousand tonnes of soybeans were crushed in Canada to produce soybean meal and soy oil, and 272 thousand tonnes were exported.

"Imports and Exports: Canada had a negative balance, a deficit, of almost $190 million in the value of soybeans and soy products traded. This is just over half a million dollars per day. Our largest single area of exports is whole soybeans for human foods. The percentage of these beans going to the major markets in 1988 were: USA, 37%; Pacific Rim Countries, 34%; and Europe and other 29%. Our greatest imbalance in exports and imports is in soybean meal or oil cake. Canadian crushers are unable to maximize their sales of oil cake because of difficulties in selling surplus soybean oil in the US. Soy oil being sold into the US presently faces a tariff of 18% which is decreasing at the rate of 2.25% per year as per the Canada United States Trade Agreement...

"Institutional development: We suggest the Board initiate the establishment of a Soyfood Development Association similar in structure and function to the Canola Council of Canada... There is a need to begin to bring all industry stakeholders together to systematically identify problems, information and research needs; develop data bases; and cooperatively promote the soyfood industry."

Soybeans for food purposes: The total volume of soybeans consumed as soyfoods in Vancouver (BC), Toronto (Ontario), and Montreal (Quebec) was estimated at about 6,000 tonnes, and imports were estimated to be equivalent to 8,000 tonnes of soyfoods.

Miso: One large Vancouver producer and one Toronto producer estimated that the volume of soybeans used to make miso in Canada is only about 35 tonnes/year.

Modern Soy Protein Products: Soy flour, concentrates, isolates, and textured soy protein products. Roughly 2,400 tonnes of soybeans are used in Canada for the production of these products, and 5,600 tonnes of soybeans are used to make the imported products (only bakery flour and extruded flour are made in Canada). Almost 1,000 tonnes of soy protein concentrates and isolates, and 400 texture soy proteins were imported, 83% from the USA. Total exports were 800 tonnes, of which 578 tonnes went to the USA. Soy flour (full-fat): The term "flour" generally signifies that the material has been ground finely enough to pass through a 100-mesh screen. Only relatively small volumes of full-fat soy flours are used directly as human foods. Some are used in bread, crackers, and pastry products. 5 companies in Canada make 1,538 tonnes of soy flour worth $495,000.

Natto: Canadians sell roughly 8 to 10 thousand tonnes of natto beans in Japan each year. Natto-type beans are "created by screening out the small beans from among regular food grade soybeans which have white hilums" (p. 15). In Japan about 100,000 tons/year of soybeans are used to make natto. Recently, Canada (via 3 companies–First Line Seeds, W.G. Thompson, and King Grain) has supplied about 10% of this market. Ontario produces about 8,000 to 10,000 tonnes of natto beans. Competition is expected to increase from U.S. seed breeders.

Soymilk: There are presently no large Canadian soymilk manufacturers. A plant is being built by an international trading company near Vancouver (YHS Pacific Fruit Concentrates Ltd., owned by Yeo Hiap Seng). It will supply both the local market and the Western U.S. market when it goes on stream later this year. A high proportion of imported soymilk is organic. Two brands account for 3/4 of all imports: Edensoy and Vitasoy. A high proportion of all soymilk imports are certified organic. This emphasis makes it difficult for Canadian producers to compete because of the shortage of organic soybeans in Canada. Consumption of soymilk is increasing at about 10% a year. Prices range from $1.50 to $2.75 per liter, with the organic product commanding the higher prices. Just under 100 tonnes of soybeans are used to produce soymilk in Canada: Vancouver 42 tonnes, Toronto 30 tonnes, Montreal 25 tonnes, plus imports 240 tonnes. 1 kg of soybeans produces 16.5 kg of soymilk.

Soynuts: The volume of soynuts made in Canada is quite small. One Toronto company [Grove Country Foods Canada, Inc.; they were in business 1-2 years, but were out of business by Jan. 1991], which began operation in Nov. 1988, sells a line of roasted nuts, which are roasted in the USA and chocolate-dipped in Ontario. Production was only a few tonnes in 1989 and is estimated to be about 10 tonnes in 1990.

Soy sauce: In 1986, according to Statistics Canada data, 2,503 tonnes of soy sauce were produced by 6 firms. The value was $2,161 per tonne for a total of $5,411,000. In 1988 Canada imported 5,680 tonnes of soy sauce valued at $4 million, primarily from China, the United States, Hong Kong, and Japan. Exports were 58 tonnes valued at $65,000. The major Canadian producers are China Lily and Sun Fresh in Toronto, Wong Wing and VH in Montreal, and Golden Dragon in Vancouver. The value of Toronto production is currently estimated to be about $5 million.

Soy sprouts: One Toronto manufacturer uses 20-25 tonnes of soybeans per year.

Tofu: About 3,300 tonnes of soybeans are used to produce tofu in Canada, more than any other soyfood. The volume of soybeans used is estimated at 1,400 tonnes in Toronto, 1,200 tonnes in Quebec (when a relatively large operation in Hull [La Soyarie, Inc.], near Ottawa, which exports to Ontario is included), 625-700 tonnes in Vancouver, and 125 tonnes for imported tofu. 1 kg of soybeans produces 2.4 kg of tofu.

Tempeh: Only about 33 tonnes of soybeans are used

to make tempeh in Canada, and an estimated 15-20 tonnes in Ontario. Imports are relatively small. 1 kg of soybeans produces 1.6 kg of tempeh. Very few firms produce tempeh in Canada. One producer claims to have over half the Ontario market. A major distributor suggested they sold 4-5 times as much tofu as tempeh.

Soybean crushing: Since 1986 the number of firms crushing soybeans and producing soy oil has decreased from 3 to 2 [Central Soya owns two plants; in 1990 they bought the Canadian Vegetable Oil Processing (CVOP) plant in Hamilton, Ontario, formerly owned by Canada Packers Inc. They purchased Victory Soya Mills in Toronto in early 1985. So now 2 firms own 3 plants]. In 1986 the three plants made 95,108 tonnes of crude soy oil worth $57,271,000. Two firms made deodorized soy oil, but the volume and value were confidential. Less than $2 million of any type of soy oil is imported.

Consumption of soyfoods in Canada is strongly linked to Asian-Canadians. A table (p. 32) shows that according to the 1986 census, there were about 444,000 people of East- and Southeast Asian origin living in three major Canadian cities: Vancouver (155,105 people comprised 11.2% of the city's population), Toronto (234,325 people comprised 6.8%), and Montreal (55,585 people comprised 2.4%). Thus Toronto was by far the largest market, but Vancouver had the highest density of Asian-Canadians. A similar table (p. 33) updates the previous table to 1988. Immigration has increased sharply since then.

Note: This is the earliest document seen (Feb. 2002) that uses the term "food grade" (or "food-grade") in connection with Canadian soybeans (see p. 15). Address: Chatham, ONT, Canada.

5876. **Product Name:** Plamil Carob [Easter] Egg Raw Sugar Confection (100% Non-Dairy).
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1990. March.
Ingredients: Vegetable fat, raw sugar, defatted soya flour, carob flour, emulsifier–soya lecithin, flavouring–natural vanilla. Note: Carob flour 12% minimum is produced by milling beans from the carob tree.
Wt/Vol., Packaging, Price: Two solid halves weigh 65 gm, in a recyclable box or paper bag.
How Stored: Shelf stable.
New Product–Documentation: SoyaFoods (ASA, Europe). 1990. 1(1):3. The product is made with "soya" instead of cow's milk. Leaflet (Color, 6 by 8.25 inches). 1990. April. Plamil delectable tasting confections. A photo shows the bag containing the eggs.

Letter and Label sent Arthur Ling, Managing Director of Plamil Foods. 1990. July 24. The product was launched on 13 March 1990. Label. 2 by 4.25 by 2 inch box. White, chocolate brown, green, and gold. Vegan certification symbol. "Two solid halves. With organic carob."

5877. Price, Caroline. 1990. Food for thought: Natural food is more than nuts and berries. It also makes dollars and cents for state firms. *Michigan Business* 7(3):24. March. Section 1.
• ***Summary:*** Apple Valley Market, a natural foods and vegetarian supermarket in Berrien Springs, Michigan, is operated by Andrews University and employs about 100 people. They sell no meat or meat products in the store and offer more than 500 bulk food items. The store makes its own bread, which it distributes widely.

Wysong Medical Corp., a 10-year-old company based in Midland, Michigan, makes foods and supplements for animals and people.

The last section is about Eden Foods and American Soy Products. Soymilk is Eden's best-selling product. Ron Roller, vice president and general manager of Eden Foods, says the company sells about 100 truckloads of soymilk each month, has 83 employees, and does over $20 million in sales annually–from all products.

The European soyfoods market for tofu, soymilk, dairylike products, and meatlike products in the UK, France, West Germany, Belgium, and The Netherlands: From 1980 to March 1990. Lafayette, California: Soyfoods Center. 54 + 24 + 104 + 52 p. Unpublished manuscript. Subject/geographical index. Author/company index. 28 cm. [827 ref]
• ***Summary:*** This is a photocopy copy of a market study and bibliography conducted for a customer. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

5879. *Soya International* (*Bar Harbor, Maine*). 1990. Soymilk suffers legislative setback. Jan/March. p. 7, 9, 28.
• ***Summary:*** Aseptic packaging is rejected in Maine.

5880. *Soyanews* (*Sri Lanka*). 1990. Soya workshop. 12(1):1, 3. Jan/March.
• ***Summary:*** "A workshop was held by 'Plenty Canada' at Rochdale Hall, Multi-Purpose Cooperative Society Building in Kandy on March 19th 1990 for Soya entrepreneurs in the Soya field. 115 Soya processing entrepreneurs participated.

"The opening ceremony was graced by the Field Director, Plenty Canada Mr. P. Dudding. The inaugural speech was made by Dr. M. Sikurajapathy, Co-ordinator Soyabean Foods Research Centre, Gannoruwa... The entrepreneurs displayed their varieties of soya food preparations and dishes... Participants were very happy to have gathered informations, that are useful in their small scale business and self employments.

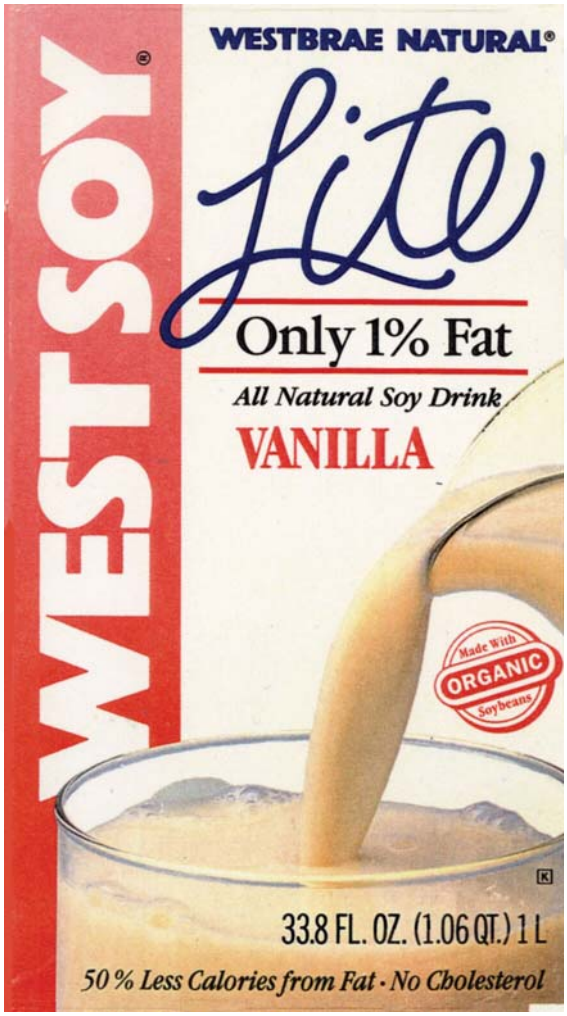
"All participants were treated generously by Plenty Canada with varieties of Soya delicacies, Soya milk and a

sumptuous lunch finished with delicious soy ice cream."

A photo shows (p. 1): "A group of participants who attended the workshop on soya held by Plenty Canada on 19th March in Kandy."

5881. Vitasoy (USA) Inc. 1990. Vitasoy: America's first... (Ad). *Vegetarian Times.* March. p. 22.
• ***Summary:*** This 2/3-page, color ad shows four different cartons of four flavors of Vitasoy against a field of soybeans. A large, red and white circular seal says "Certified organic whole soybeans." The text reads: "Soymilk from 100% organic soybeans." Address: P.O. Box 552, Brisbane, California 94005. Phone: 415-467-8888 or 1-800-VITASOY.

5882. **Product Name:** WestSoy Lite: Non Dairy Soy Beverage [Plain, Vanilla, or Cocoa].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor). Subsidiary of Vestro Natural Foods.
Manufacturer's Address: 5701 South Eastern Ave. Suite 330, Commerce, CA 90040. Phone: 213-722-9817.
Date of Introduction: 1990. March.
Ingredients: Vanilla: Water, whole organic soybeans*, brown rice syrup (brown rice, water), natural vanilla flavor with other natural flavors, xanthan gum (vegetable gum), sea salt. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.
Wt/Vol., Packaging, Price: 33.8 fluid oz (1.06 quart) 1 liter. Combibloc Aseptic carton. Use by 25 Oct. 1991.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Three products with Labels purchased in Lafayette, California. 1990. Vanilla and Plain. "Only 1% fat."



Note: This is the earliest commercial soymilk product seen (July 2013) with the word "Lite" on the front panel (one of two products). It is also the earliest low-fat soymilk seen. Such products are typically made by mixing 1 part regular soymilk with about 1 part water–a practice known as "watering" that might be illegal with most other beverages. So far as we know, no one has ever found a way of removing the fat from soymilk.

5883. Bodis, Laszlo. 1990. Re: The work of FTTE with tofu, soymilk, and soy protein products in Hungary. Letter to William Shurtleff at Soyfoods Center, April 2–in reply to inquiry of Jan. 25. 2 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "FTTE is an engineering, research, and development enterprise rather than a manufacturing one. Technologies worked out by our technicians for producing feed and food products are then tried and used by companies producing food or feeds. Thus in the introduction and spread of tofu, we did all the initial work (conceiving the idea, drawing up the technology, sizing up demand, 'digging out' consumption, etc.) except for direct manufacturing... At present the manufacturer of the tofu developed by FTTE is Pest-Budai Vendeglato-Ipari Vallalat. We are talking with other companies about scaling up production.

Besides tofu, we cooperate in the production of a soymilk and sour cherry beverage mixture, soybean flakes, soy-cubes, TVP, soy-meal, lecithin, and UNIPRO–a feed made from whole (non-defatted) soybeans.

An undated 4-page color leaflet accompanying this letter, titled "FTTE–a bridge between research and application," notes that FTTE stands for "The Association for Protein Research Technology and Production." It was founded by OMFB (the National Technical Development Board) in 1983.

Also accompanying the letter are photocopies of pages from a publication: Unipro–a high-energy feed made from whole cooked soybean. Vetomag–a new variety of soybean. OMFB advisory service for growing pulses. Feherje (Protein) a quarterly magazine published in Budapest by 3 organizations. The chief editor is Kralovansky U. Pal. Dr. Laszlo Bodis is on the editorial board. It covers all aspects of proteins. Pronutti, soy-based products for food

from Proteinvest. Szoja feldolgozas soybean processing. Takarmanygyar feed mixing plant. Szolnok Megyei (a company that produces and distributes soybean meal). KEKI (Kozponti Elelmiszeripari Kutato Intezet; the Central Institute for Food Research in Budapest) provides expertise for developing soybean applications. Address: Director, Feherjetechnologiai Tudomanyos Termelesi Egyesules, Budapest XII., Goldmark K. u. 3. Budapest Pf: 340 1536, Hungary. Phone: 155-5202.

5884. Storup, Bernard. 1990. Re: Update on Sojadoc. Questions answered on Soyfoods Center letterhead (dated 30 March 1990) and returned to SC, April 2. 1 p. Handwritten. [Eng]

• ***Summary:*** Sojadoc has moved from Clermond-Ferrand. The new address is: 2 rue du Parc, 81000 Carmaux, France. Phone: 63.36.89.92. They have almost no production. They are working on a "pharmaceutical" soymilk, sold only at pharmacies.

Alain Lacombe and Jacques Isnard, the early owners of the company, are now no longer with it. Lacombe is at St. Paul de Mamiac, 81140 Penne, France. Phone: 63.56.01.04. Fax: 63.56.36.11. Isnard is working in Burkina Faso (Africa) on a governmental soymilk project. None of his neighbors has heard from Olivier Attié (the company's founder) for 2 years. Address: Founder and Owner, Société Soy, 1 rue du Crêt de la Perdrix, 42400 St.-Chamond, France. Phone: 77.31.23.66.

5885. Lindner, Anders. 1990. Re: The soymilk market in Europe. Letter (fax) to William Shurtleff at Soyfoods Center, April 4 and April 26. 3 p. [Eng]

• ***Summary:*** The following figures contain many guesstimates. The only countries in western and eastern Europe where significant amounts of soymilk are produced are Belgium, West Germany, France, England, and Switzerland. The following are the seven largest soymilk manufacturers in Europe, ranked in descending order of size:

1. Alpro/Vandemoortele, Belgium. Capacity: 35 million liters/year. Present output: 25 million liters/year. Growth: Believe so, but don't know how much.

2. DE-VAU-GE (DVG), West Germany. Capacity: 20 million liters/year. They are running their plant at full capacity, but as Adventists I think they don't work on Friday afternoon or Saturday, they close down during the summer, and they send one road tanker of soymilk each week to Granose in England, where it is made into soy yogurt. So they probably end up making about 12 million liters a year of soymilk in long life packs. Soon some of their soymilk will be made into tofu. Growth: Would if they could, but they can't with the line they have, which they bought from DTD/STS for DM 4 million. DVG is making an excellent profit on their soymilk products, that's for sure. This is in part because they have the Neuform chain at their disposal.

3. Cacoja, France. Capacity: 11 million liters/year. Believed to be running at full capacity. Growth: Planning a new line but no decision yet as far as I know. I think that Cacoja produces more than 1 million liters/year. They visited DTD/STS a year ago to discuss a second line. The first one had a capacity of 2,000 liters/hour or approximately 5 million liters/year.

4. Soya Health Foods Ltd., Manchester, England (Sunrise Soya Milk). Capacity estimated at 8 million liters/year. Actual production not known.

5. Soyana, Switzerland. Capacity and production not known. Soyana has consistently refused to allow us to visit them. Even our Indian client who wanted to discuss purchase of their Dahi dessert recipe was given the cold shoulder. I think that they have their own soymilk plant, but I'm not sure. Why shouldn't they, when they have plenty of products in Swiss shops.

6. Galactina, Switzerland. Capacity estimated at 6 million liters/year. Most is used for products other than liquid soymilk. They sell limited amounts of soymilk, definitely less than 1 million liters/year packed in Tetra Brik Aseptic at the Thun Dairy in Switzerland.

7. Schoeller in Nuremberg, West Germany. Capacity not known. Soymilk used in ice cream production. There are also soymilk producers in Italy [Crivellaro], and Spain [Proti].

"Total size of European soymilk market in 1989 estimated at 50 million liters. Some is in the form of dairy analog products. Alpro and DE-VAU-GE have about 70% of the market, including bulk distributed product. Growth rate over the past few years 10–15%.

"General observations of the European soymilk industry and market: The dairy industry in France was the first to go into soymilk to offer alternatives to consumers who prefer 'non-dairy dairy type products'. The soymilk-based ice cream of West Germany's Schoeller may start a trend for the rest of the European ice cream industry. There has been no equivalent to the U.S. Tofutti boom in Europe so far. Major liquid food companies do not at present see soymilk as a significant product for Europe but follow the trends and do some development, just in case.

"The future? It is necessary to make a distinction between Eastern and Western Europe. Western Europe has a surplus food production in general and surplus dairy milk production in particular. The health aspect alone, i.e. soymilk without improved palatability, will not significantly increase soymilk sales in Western Europe. The removal of dairy production subsidies in the EEC in the years to come, especially after 1992, may give an incentive to the big names in the food industry to develop soymilk into mainstream market products. There is EEC legislation on imitation dairy products and soymilk is mentioned as an example, but currently different member countries use their own laws.

"Many Eastern European countries have food shortages but lack money and entrepreneurship to venture into an

unknown product like soymilk on their own. Furthermore, in these difficult markets, western companies with soymilk technology do not seem to find it worth the effort to first educate on the advantages and uses of soymilk and then to promote and arrange financing before they can hope to sell a soymilk processing plant. The new Eastern Europe with market economies now evolving gives hope for the future in general, but I couldn't make any guesses about soymilk.

"It is the aim of EEC to dismantle the agricultural subsidies. This will effect dairy production and new cheaper protein sources will be sought by the food industry. Soymilk definitely has a chance of 'growing up' when this happens.

"STS-Soya Technology Systems Limited no longer exists. It was the decision of APV's CEO to close it down as an independent company when the big APV reorganization took place. When we moved to Denmark we became DTD-Soya Technology Division. Now Danish Turnkey Dairies has itself become a division of the APV Pasilac Ltd and the official name is DTD-APV Pasilac Ltd (the result of mergers and takeovers!). Asger Somer Hansen now handles soymilk activities within the APV group and works in DTD-APV Pasilac Ltd.

"John Wilson still works at Alfa-Laval in Lund as far as I know–at least he did 2 years ago. Alfa-Laval also has another soymilk person, a young woman.

Note: Lindner, the managing director of Soya Technology Systems from May 1982 until Nov. 1989, has a good grasp of the world soymilk market. Address: P.O. Box 19002, S-250 09 Helsingborg, Sweden. Phone: 42-92776.

5886. Krohn, Joni. 1990. Standard Industrial Classification (SIC) Codes: SIC classification ended in about 1984; SITC (Standard International Trade Classification) is now in use (Interview). *SoyaScan Notes.* April 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** *The Standard Industrial Classification Manual* is published by the Office of Management and Budget (OMB), which also publishes the SIC codes. Another related publication is *The Numerical List of Manufactured and Mineral Products,* and its *Alphabetic Index,* both published by the Census Bureau (within the Department of Commerce); these documents expand the basic 4-digit SIC codes to 7-digits to give more detail: Our industry is most aptly characterized by 2075A = Soybean products.

0116 = Soybean farms. Any industry that starts with zero is agricultural.

2024-071 = Mellorine and similar frozen desserts, incl. those made with tofu.

2026-717 = Products which substitute for fluid milk products [probably includes soymilk].

2026-718 = Other perishable dairy product substitutes [probably includes soy yogurts & cheeses].

2035 = Pickled fruits and vegetables.

2035-234 = Other finished pickles and pickled products [incl. mixes, relishes, peppers, onions, and mushrooms; probably includes miso].

2035-351 = Other sauces, incl. Worcestershire, soy sauce, horseradish, meat, vegetable, etc.

2075 = Soybean flour, grits, meal, cake, and soy oil (unrefined).

2079 = Soybean cooking and salad oil.

2084 = Soybean fibers.

2099-955 = Tofu (Bean curd).

2099-998 = Other perishable prepared foods, sold in bulk or packages, not frozen [probably includes tempeh].

Note: in May 1984 the "Primary SIC" code assigned to tofu manufacturers by Dun & Bradstreet was either 2075 (Soybean Oil Mills), or 2099 (Food Preparation Nec.).

Examples of SITC numbers: Soya bean flour and other protein substances, textured 098.09. Soya bean flour, defatted (excl. protein concentrates) 081.31. Soya bean flour, non-defatted 223.9. Bean curd 098.09... Soya sauce 098.04. Soybean–see soya bean 098.04. Address: Dep. of Commerce, Bureau of the Census, Economic Surveys Div., Industry & Commodity Classification Branch, FOB-3, Room 2744, Washington, DC 20233;. Phone: 301-763-1935.

5887. Gupta, Rajendra P.; Gupta, Rashmi R. Assignors to Prosoya Corp. (Maryland Heights, Missouri). 1990. Food processing in oxygen-free environment. *U.S. Patent* 4,915,972. April 10. 5 p. Application filed 29 March 1989. [3 ref]

Address: [Raj Gupta, ProSoya Foods International Inc., 801-275 Slater Ave.], Ottawa, ONT, K1P 5H9, Canada. Phone: 613-745-9115 or 613-744-4401.

5888. Marshall, Philip. 1990. The soymilk industry and market in the UK (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The two brands of soymilk with the largest shares of the UK soymilk market are both imported: Provamel, the best-seller, is imported from Alpro in Belgium. Granose Soya Milk is imported from DE-VAU-GE in West Germany.

There are four soymilk manufacturers in the UK. The largest is probably Unisoy Milk 'n' By-Products Co. in Stockport (Cheshire County near Manchester). Their quality is excellent, almost as good as Alpro's. The people who founded Unisoy were formerly involved with Soya Health Foods Ltd. The founder, who had the money, died before production started. [Note: Neil Rabheru (see interview, 1990 July 2), founder of Unisoy, says the previous 2 statements are not true.] Unisoy started making soymilk about 4 years ago, and today their biggest product is own-label soymilk, packed in Tetra Brik by a contract packer, and sold to Sainsbury, a large chain/multiple retailer in the UK. Unisoy does not and will not make tofu. The company is not very strong. The person in charge is Neil Rabheru, of Indian extraction, a

very nice man. He recently sold the company for a relatively small sum.

Second largest soymilk manufacturer is Soya Health Foods in Trafford (Sunrise brand, founded by Michael Cole and Mr. Arora, a Sikh / Indian). It was the Indian connection that resulted in the formation of Unisoy some years ago. Third may be the Regular Tofu Co., a division of Haldane Foods (Arkady/ADM), which produces Sojal Soya Milk. The Sojal brand was the property of another company in France, which originally produced the product for them using a soymilk powder made in Sao Paulo, Brazil (by Norsul, Agro-Nippo Productos, or ITAL?). Haldane no longer has the product produced in France but they still use the Sojal brand, and still has the product produced by another company (in what country is not known) and it is probably now made from whole soybeans rather than soymilk powder. [Note: The only soymilk listed in Haldane's Oct. 1989 catalog is So Good Soya Milk (organic or non-organic); Sanitarium Foods in Australia makes a product by the same name].

Fourth is Plamil, which contracts with some other company to have its soymilk made from soy protein isolates. They are quite a small company, ethically based, into vegan foods and marketing strategies from the 1960s and 1970s. Fifth is Itona (pronounced ai-TOW-nuh), which makes a soya milk of some description, but they are not really in the mainstream of the soymilk market. They probably make their soymilk from soy protein isolates and it is sold in cans–every other brand is in Tetra Pak or Combibloc. Address: Owner, Cauldron Foods Ltd., 149 South Liberty Lane, Ashton Vale Trading Estate, Bedminster, Bristol BS3 2TL, England. Phone: (0272) 632835.

5889. Vandemoortele, Philippe. 1990. The soymilk industry and market in Europe (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Philippe estimates that Alpro has about 70% of the fluid soymilk market (not including infant formulas) in Europe. In 1984 in Brussels Michael Martin of the American Soybean Association estimated the size of the European soymilk market to be 9-10 million liters/year. Philippe thinks that figure was too high; it was probably about 6 million liters. Now it is about 30 million liters/year in all of western Europe. The growth rate for soymilk production over the past 2 years has been about 20% a year.

The second largest soymilk manufacturer in Europe is DE-VAU-GE, with roughly 15-20% of the market. The rest are very small, with a combined percentage of only 10-15%. Third may be Triballat and fourth may be Cacoja. Together these two may be producing 1 million liters per year, but that is just a very rough guess. Innoval just started so they have not had time to do anything. Unisoy in England is very small. Soya Health Foods Ltd. (Sunrise brand) is almost out of business in soymilk. Galactina is limited to Switzerland, and they produce mainly tofu, not soymilk.

Looking at Cacoja and Triballat, they are completely different types of companies. Cacoja is a classical cooperative that has no experience in or organization for commercializing consumer products. So they have to co-pack, i.e. make products for other companies. Triballat is a small but very active dairy company, with a good sales and marketing organization in France. They are used to making and selling their own consumer products. Their Sojasun soy yogurt is a good-tasting, fresh product. It has been quite successful for a soya food, although compared with dairy products it is nothing.

There are have always been may negative things about soymilk in Europe. 1. The retail price of soymilk is very high compared to basic cow's milk, usually 2-3 times as high. In the USA the price of both cow's milk and soymilk are higher, but the ratio is similar. 2. The taste of soymilk is a big problem, although it is steadily getting better. 3. Cow's milk is a very traditional, widely accepted product in Europe. 4. The dairy lobby and its employees are very powerful in Europe and recently they have been attacking soymilk on issues such as its calcium content being lower than that of cow's milk. Doctors have been taught and teach their patients that cow's milk is a perfect product. Only a minority, but a growing minority, are opposed to the use of cow's milk. 5. The many European government regulations hurt soymilk. There are many taxes, such as a Value Added Tax (VAT) on soymilk that are not imposed on cow's milk since soymilk is considered in some countries to be a juice. Every country has a VAT system. The Netherlands, Belgium, and France had an 18% VAT on soymilk versus 6% on milk, but that changed 1 year ago so it is no longer a basic problem. In Belgium there is now a 6% VAT on both soymilk and cow's milk.

The two things needed to make the soymilk market grow are better taste and a better image of soymilk (compared to cow's milk) as a food that is good for one's health, and dissemination of the information showing the health benefits of soymilk over cow's milk. The quality of soymilk products is steadily improving and should continue to do so, not through discovery of any new basic principles but through many small adjustments.

The opening of Europe in 1992 will have little or no effect on soymilk. Competition is already international. The need for a multitude of packages in the various languages will not change; Alpro presently packs soymilk in more than 100 different Tetra Brik cartons! This includes both their own brands and those of companies for which Alpro private labels. This is both complicated and expensive. One possible change may be that governments will work faster to establish soymilk terminology. Now soymilk has no name! It can be called "soya juice, soya drink, soya beverage," but it cannot be called "soymilk." As long as it has no name, no regulations or standards can be made that effect it. Philippe would like to see the term "soya drink" or "soya milk" adopted. The latter was tolerated in the UK but it will

probably be forbidden.

Philippe sums up the overall situation as follows: "I always repeat, there is more enthusiasm about soyafoods than turnover and certainly no profit. Alpro has lost money every year that it has been in business." He thinks DE-VAU-GE must also be losing money on its soymilk operation. "How can you make money when you invest $3-4 million in a factory that is making only a few million liters of soymilk a year? DE-VAU-GE is a very large company and they do well largely because they have a sort of monopoly in the German Neuform (Reform House) organization. An organization controls all of the Neuform stores, and it is linked with both the producers and the sales people. They all together pay money for this organization to help each other. If you want to make soymilk in Germany and deliver it to these stores, you cannot, because everything is protected. The competition now comes from the independent *Biolaeden."* Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: (056) 43 22 11.

5890. Vandemoortele, Philippe. 1990. Early history and recent developments at Alpro N.V. in Belgium (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter (fax) on 30 May. 1990.

• ***Summary:*** N.V. Vandemoortele (the N.V. is written first in Flemish, but often last in English) began research on new soy products (mostly soy protein isolates and concentrates) in 1973. The goal was to find a way to bring soya beans to the consumer. They bought and sold soy protein products but never manufactured any. In May 1975 research on soymilk began. From 1975 to 1979 they were basically doing pioneer research. In Dec. 1979 they began production of soymilk, but they did not pack or sell it; it was just to get their new plant running. Famalac was a potential/fictitious product name that was described in a brochure, but the product was never sold commercially. This soymilk was produced at a plant located at Zuidkaai 33 in Izegem on a piece of land located next door to the main N.V. Vandemoortele facilities (whose official address was Prins Albertlaan 12). In Jan. 1980 Vandemoortele began to make its first commercial soymilk product (GranoVita Soja Drink in plain and carob flavors, packed in 500 ml Tetra Brik cartons) which was private labeled (co-packed) for DE-VAU-GE, a large Seventh-day Adventist health food manufacturer in West Germany. This was Alpro's first customer.

N.V. Alpro (named simply Alpro in English), was founded in June 1980. Alpro then purchased the land on which it was located from N.V. Vandemoortele. During 1980 Alpro became a truly independent producer, now also doing their own sterilization and packaging. It was Philippe Vandemoortele's idea to start Alpro.

His grandfather began to import soybeans in 1934 from Manchuria, and he started a small crushing plant. Philippe has always been interested in soya (he read a lot) and he wanted to go back to the use of soybeans for human consumption in the form of soyfoods rather than as isolates, concentrates, etc. While researching new developments in soymilk processing, he learned that new methods for making soymilk had been developed in other countries such as the USA [at Cornell University and University of Illinois], Brazil, etc. His company, which had many engineers and R&D staff, was the first soymilk manufacturer in the western world to invest in a pilot plant and then in a factory to make soymilk using the new technique. In the beginning, Alpro designed and built its own soymilk equipment.

At that time it looked like Alpro's main business would be selling this equipment to Third World countries to provide a practical solution to their nutritional and protein problems, especially for infants. In 1982 Alpro signed a contract to sell a soymilk plant to Lalasoa SA in Madagascar. The plant, which cost US$11 million, began operation in Jan. 1984 and it is still in operation. This was the only plant Alpro ever sold to a Third World country.

[Note: Alfa-Laval, which developed soymilk equipment, sold its first major piece of soymilk equipment (a VTIS sterilizer) to Yeo Hiap Seng in 1967, and its first complete soymilk line to Lam Soon (Ace Canning) in Kuala Lumpur, Malaysia. The latter began making soymilk in Dec. 1979, exactly the same year and month that Alpro began.]

The reason for the lack of sales of soymilk plants to Third World countries was mostly politics and lack of organization in those countries. It was not a problem of the resulting soymilk being too expensive. Another problem was that Alpro had only a single product to promote (the turnkey plant). So in Aug. 1984 the company decided to return to its basic business, producing foods, rather than idealistically trying to sell technology (soymilk plants) to the Third World. "In the beginning, we at Alpro had never imagined that there would be a market for soymilk in Europe. Almost nobody wanted the product. There was no interest, except among motivated health-food people. Everybody else in Europe thought the product tasted lousy."

In the early 1980s, while focusing on its Third World plants, Alpro also made soymilk for the European market. The main reason for making this soymilk was to demonstrate what the Alpro equipment could do. In Jan. 1981 Alpro began making and private-labeling Granose Soya Drink in plain and carob flavors for Granose, a Seventh-day Adventist food manufacturer and distributor in England. In March 1981 Alpro launched Soyamel (plain with vitamins), the first of its own soymilk brands, sold only in drug stores and pharmacies (chemie stores). It was followed in Dec. 1982 by Provamel plain and chocolate drinks, and the company's first pudding-like dessert (in chocolate flavor); the Provamel line was sold in health food stores. Next, in March 1984, came Alpro Soya Drink in plain and chocolate flavors, sold only in supermarkets (multiples). All the above were sold

in 500 ml Tetra Brik cartons. Then in Nov. 1984 Alpro launched Sunsoy for the export market. It was sold in both 250 ml (plain, carob, or strawberry) and 1 liter (plain) Tetra Brik cartons. All four brands still exist, although Soyamel sales are small. Statistics on the sales of each brand are confidential. Alpro launched its first pudding-like soymilk dessert under the Provamel brand in about 1984, in chocolate and vanilla flavors. The concept, though based on a similar dairy product, was a first for soymilk.

Alpro continues to private label soymilk for anyone who can pay for it. The company's philosophy on this point has not changed over the years. "We are a producer, and as such we try to produce as much as possible, otherwise we could not pay for our research and fixed costs. We would like to sell as much of our own brands as possible, but if we do not private label for other companies, our competitors will do so instead."

In 1984 Alpro had planned to build a new soymilk plant in Ghent with a capacity of 40 million liters/year, but this plan was delayed. Instead they ended up building a new soybean cleaning and dehulling system. Finally Alpro did build a new plant at Vlamingstraat 28, in Wevelgem, near the French border. They started construction in June 1988 and they plan to be moved in completely by June 1990. The plant cost about US$15 million and its capacity is about 45 million liters/year, which is more than the present total European and American soymilk markets. It is a complete plant with packaging, sterilizing, and several lines. It is the biggest soymilk plant in the western world. Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: (056) 43 22 11.

5891. Karis, Xavier. 1990. Buton, Crivellaro, and soyfoods in Italy (Interview). *SoyaScan Notes.* April 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Gio. Buton, founded in 1820 and now the biggest liquor company in Italy, owns 60% of Crivellaro. Crivellaro in Padova makes soy oil, organic soymilk, and lecithin, but they do not have an outstanding name in Italy. Buton's main interest is selling soyfoods in supermarkets. Address: Export/Marketing Dep., Gio. Buton & Co. S.p.a., Viale Angelo Masini, 24, 40126 Bologna, Italy. Phone: 051-506368.

5892. Amante, Agathe. 1990. La petite graine qui monte [The little grain that is rising]. *Revue Techniques des Hotels et Restaurants.* April. p. P&B 6-9. [Fre]
• ***Summary:*** Discusses soy flour, soy protein concentrates and isolates, soymilk, and tofu, plus their nutritional benefits. To develop new products, Cacoja is working with the hotel school of Strasbourg–creams, desserts, sauces, and entrees, not to mention tofu raviolis, quenelles, sauces and dressings without cholesterol, etc. Triballat makes a type of yogurt that contains no milk or cholesterol. Soyfoods fit perfectly with the now fashionable "slender cuisine" (cuisine minceur). 2% of soy proteins can be added to meats without changing the labeling. A photo shows 3 jars of Cacoja's Formoja-brand soymilk dressings: Sauce salad, Sauce Mexicaine, and Sauc'annaise. Each has "No Cholesterol" written prominently below the product name. Soyfoods can help attract people to restaurants, they are an excellent ingredient for the restaurateur, and they can play a major role in the emerging light new French "Nouvelle Cuisine." Gives a recipe for Tofu Red & Green Mousse. Address: France.

5893. Bates, Jonathan. 1990. West Coast tofu industry: Soybean market outlook for Malheur County, Oregon. Oregon State University, Corvallis, Oregon. 33 p. [12 ref]
• ***Summary:*** Contents: Introduction. Soybean market: World and domestic. The low technology soyfoods industry. Processor requirements. Assessment of producing soybeans in Malheur County. Conclusion. West Coast tofu and soyfood processors: California, Oregon, Washington. Bean warehouses and cleaners. Selected soybean brokerages and growers. Other information. Literature.

"There is interest in Malheur County, Oregon in introducing soybeans as an alternative rotation crop in place of wheat." Research is being done at the Malheur Experiment Station. These would be food grade soybeans destined for the West Coast soyfood processing industry. "The purpose of this report is to investigate the west coast food grade soybean market. Particular emphasis is placed on the tofu market in Portland and western Oregon, Seattle (Washington), and San Francisco (California). The main objectives of the study are: 1. To determine the requirements and/or preferences of soyfoods processors in regards to soybean quality, bean variety, growing regimes (organic or regular), packaging and delivery, and method of purchase. 2. To determine the economic feasibility of using soybeans as a rotational crop in the county in place of wheat. 3. To consider the competitive advantages, if any, of growing soybeans in Malheur county as opposed to the more traditional growing areas of the Midwestern and Southeastern United States.

Information on soybean consumption is given for the following tofu and soyfoods manufacturers, ranked here in descending order of soybean usage. All produce tofu and/or soymilk unless otherwise noted.:

Pacific Foods Inc., Tualatin, Oregon (57,700–77,000 lb/week [expressed as 3-4 million lb/year] of nonorganic and organic soybeans from midwest brokers, bulk and bagged, for soymilk. "Growth is expected to slow unless soymilk can be marketed to the general public").

Azumaya Inc., San Francisco, CA (48,000–60,000 lb/week of Vinton and Corsoy purchased from broker. Market growing at 3-4% annually).

House Foods & Yamauchi, Los Angeles, CA (54,000 lb/week of nonorganic Corsoy and Vinton purchased from broker-grower association. Steady growth. Expanded

capacity in 1987).

Mighty Soy, Los Angeles, CA (11,000–12,400 lb/week of mainly Corsoy and Vinton, half organic and half not, purchased from brokers or growers associations).

Wy Ky, Los Angeles, CA (7,800–9,000 lb/week of nonorganic Corsoy, purchased from growers. 5% annual growth).

Island Spring and Soy Resources Inc., Vashon, WA (5,400–6,000 lb/week of organic Corsoy, purchased broker. 3-5% annual growth).

Surata Soyfoods, Eugene, Oregon (3,000–4,200 lb/week of organic Vinton and Corsoy purchased from broker-grower).

Silver Sprout, San Francisco, CA (3,000–3,600 lb/week of nonorganic Corsoy and Vinton purchased from broker, bagged or bulk).

Dae Han & Co., Portland, Oregon (2,400–3,000 lb/week of organic Vinton purchased from Midwest grower association. Steady growth).

Turtle Island Soy Dairy, Husum, WA (2,100–2,400 lb/week of organic Corsoy and Vinton purchased from Iowa broker for tempeh. 5% annual growth).

Arcata Soyfoods, Arcata, CA (1,200 lb/week of organic Corsoy purchased from grower).

Fuji Tofu Co., San Jose, CA (1,200 lb/week of organic varieties purchased from broker).

Ashland Soy Works, Ashland, Oregon (1,800 lb/week of organic Vinton and Corsoy, purchased from growers. Steady growth).

Hoven Foods Co., Seattle, WA (1,655 lb/week of Lee 74 purchased from Jacob Hartz Seed Co. 5% annual growth).

Tacoma Soyfoods, Tacoma, WA (1,200 lb/week of Vinton, Corsoy, Davis, Lee, and Holland, organic and inorganic, purchased from Midwest Soy International [grower assoc.]. 5% growth last year).

Kobayashi's Soybean Products, Ontario, Oregon (420–540 lb/week of Corsoy purchased from Midwest growers). Address: Graduate research asst., Oregon State Univ., Corvallis, Oregon.

5894. Cacoja. Affiliate of Coopérative Agricole de Colmar (CAC) (Marketer). 1990. [Soy products made by Cacoja]. 8 rue Merxheim, 68500 Issenheim, France. 5 p. Catalog. [Eng; Ger]

• ***Summary:*** This photocopied black-on-white brochure, with pages stapled together, written in only English and German, attempts to describes the Cacoja/Formoja lines of soy products: The Soj'aperitif line (soynuts), the soybean sauce line (a soy mayonnaise, a sauce, and a salad dressing), chocolate tablets (2 types of soy chocolates), Formoja beverage and dessert line, and soybean delight and tofu ravioli line. Lacking a title, and filled with errors and poorly chosen words, this document is very poorly done–almost comical. Address: Issenheim, France.

5895. **Product Name:** Holland & Barrett Soya Milk [Sweetened].
Manufacturer's Name: Holland & Barrett (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: Healthways House, West Byfleet, Surrey, KT14 6NE, England.
Date of Introduction: 1990. April.
Ingredients: Water, dehulled soya beans, raw cane sugar, sea salt.
Wt/Vol., Packaging, Price: 500 ml or 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml.: Fat 2.3 gm (saturates 0.3 gm, polyunsaturates 1.4 gm), protein 3.6 gm, carbohydrate 3.4 gm, calcium 20.0 mg, energy 49 kcal.
New Product–Documentation: SoyaFoods. 1990 1(1):1. Black-and-white photo of a 1-liter carton. Photocopy of Label sent by Heather Paine of SoyaFoods in London. 1990. June 18. The 500 ml carton is 3.5 by 3.5 by 1.75 inches. An illustration of soybean pods and leaves is on the front panel. "A 100% natural product made from the best grade of American Soya Beans. Holland & Barrett: The natural choice for a healthier way of life." Good for people with allergies, in the kitchen, as a drink, or with tea or coffee. Heather adds: "Holland and Barrett is one of the largest health food chains in the UK. The product is made in Belgium so I suspect the manufacturer is Alpro."

5896. Inforesults Ltd. 1990. Canadian soyfood directory. Brampton, Ontario, Canada. 22 p. April 6. 28 cm.

• ***Summary:*** This directory, prepared for the Ontario Soybean Growers' Marketing Board (P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8), lists individuals and organizations involved in the production of soybeans and soyfoods in Canada. The majority of listings are for commercial firms. The directory includes the name of the firm or individual, address, postal code, phone number, contact person, activities (any of 10 types, such as manufacturer, exporter, importer), products (any of 18 types, including soymilk, tofu, soybeans, or services), and whether or not the products are claimed to be organic. The various listings are sorted by province, and within province by company name. Address: Information Research Consultants, Suite 204, The Mill, 60 Queen St., East Brampton, ONT L6V 1A9 Canada. Phone: (416) 453-1174.

5897. **Product Name:** Itona Decaf (Non-Dairy, Caffeine-Free Chocolate Bar).
Manufacturer's Name: Itona Products Ltd.
Manufacturer's Address: Itona Works, Leyland Mill Lane, Wigan, Lancashire, WN1 2SB, England.
Date of Introduction: 1990. April.
New Product–Documentation: SoyaFoods (ASA, Europe).

1990. 1(1):3. Suitable for vegans.

Itona News. 1990. Spring. "Decaf–It's better than chocolate!" "Decaf, the bar with all the rich flavour of real chocolate with none of the caffeine!" Contains no animal products.

5898. Lefferts, Lisa Y. 1990. Cows on drugs? *Nutrition Action Healthletter* 17(3):8-9. April. [6 ref]

5899. Leigh, Roberta. 1990. Soyfoods: Why their popularity is growing. Special advertising section. *New Age Journal* (*Boston, Massachusetts*) 7(2):100-. March/April.
• ***Summary:*** Since the 1920s, Americans have been taught that they need at least two servings of meat and two glasses of milk each day to get enough protein. Many people switching to vegetarian diets or reducing their meat consumption feel most comfortable if they continue to plan at least some of their meals around a high-protein food.

"Consequently, the popularity of soyfoods has boomed during the past two decades... They can also be prepared in a number of ways, such as tofu and tempeh, that mimic 'meatiness' in terms of eating satisfaction.

"Shoyu and tamari, both fermented soy sauces, and miso, a fermented soy paste, are often used as bases for soups, gravies, and sauces; many people feel they impart a rich flavor to meat stock. Soy milk and soy cheese are popular with people who want to minimize or eliminate dairy products from their diets. There are even smokey-flavored imitation bacon products made from soy.

"Tofu is a cheese-like product containing the protein, oil, and soluble carbohydrates from whole soybeans that have been crushed and cooked...–Roberta Leigh."

5900. Muso Co. Ltd. 1990. Muso product manual: Foods from Japan. Tanimachi 2-5-5, Chuo-ku, Osaka 540, Japan. 62 p. Catalog. April. 30 cm. [Eng]
• ***Summary:*** This English-language catalog describes Muso's natural-food macrobiotic products that are exported to the West. There are 8 pages of color photos at the front, and many flowcharts and recipes in the body of the catalog. Interesting color photos include: Shoyu fermentation room. Spreading moromi before pressing to make shoyu. Hatcho miso aging room. Drying kombu and cultivating nori on nets. Umeboshi and brown-rice vinegar. Shiitake mushrooms growing on logs and huge kudzu roots.

Contents: Shoyu (organic, low salt), tamari (wheat-free soy sauce), miso (Hatcho, barley, rice, white miso, brown-rice miso, awase miso [mixed miso], buckwheat miso, unpasteurized miso [nama miso]), seaweeds, Japanese pasta, wheat free pasta (incl. kudzu noodles), Japanese tea, other beverages, soymilk, amazake, ume/plum products (incl. umeboshi), Japanese pickles, dried foods (incl. kudzu root starch, shiitake mushrooms, koya tofu, fu [gluten cake]), condiments (incl. tekka miso, *nori no tsukudani,* natto miso [miso condiment]), seasonings, instant foods (incl. brown rice mochi, yomogi mochi, kibi mochi, yaki mochi, abekawa mochi with kinako, cooked brown rice, ramen [Chinese style noodles], instant miso soup), crackers and chips, barley malt syrup and rice malt syrup, food supplements (plum balls, kombu balls), adzuki beans, black soybeans, nigari. Address: Osaka, Japan. Phone: 06-942-0343.

5901. **Product Name:** [Soilat Soymilk (Plain)].
Foreign Name: Bevanda Alla Soia Vegetale.
Manufacturer's Name: Parma Soia (Marketer-Distributor). Made in Belgium [by Alpro].
Manufacturer's Address: Strada Logheretto 2, 43010 Corcagnano (Parma), Italy. Phone: 0521-639-148.
Date of Introduction: 1990. April.
Ingredients: Organically grown soybeans, water, cane sugar, sea salt.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Talk with Xavier Karis in Italy. 1990. June 13. About 2 months ago this company, located in Parma, started a line of soya products: Soya milk (Soilat) in plain and chocolate flavors, Soy Pasta, and Soy Sauce (which they probably do not make themselves). It is not known whether or not they make their own soymilk. Because this is a small company, nobody has made any trouble yet over the Italian name of their soymilk, but if they

get bigger, they are bound to get in trouble because Italian law forbids use of the terms "soia" and "latte" together. Their phone is 0521-639-148.

Parma Soia brochure. 1990. Photo shows aseptic package.

Letter from Xavier Karis. 1990. June 15. On the Soilat brik from Parma Soia is written: "Produced in Belgium." So it is probably made by Alpro.

Label sent by Xavier Karis. 1990. June 27. 3.3 by 3.5 by 2.5 inches. Tetra Brik carton. Orange-red, green, yellow, and tan on white. The large, semicircular logo on the package shows a large field with long rows of soybeans. Across the top in large letters is written: "Campi di Soia" (Fields of Soya), while across the bottom, in the same letters is written Parma Soia. There are three groups of soybean leaves at the bottom two corners and the bottom middle of the logo. On the back is a brief description of 5 other products made by the company. A second logo shows two green leaves upholding an orange sphere.

5902. **Product Name:** [Parma Soia Soy Drink (Chocolate, Strawberry, and 1 Other Flavor)].
Foreign Name: Parma Soia Soidrink (Al Cioccolata, Alla Fragola).
Manufacturer's Name: Parma Soia (Marketer-Distributor). Made in England by Unisoy.
Manufacturer's Address: Strada Logheretto 2, 43010 Corcagnano (Parma), Italy. Phone: 0521-639-148.
Date of Introduction: 1990. April.
Ingredients: Water, soya, cane sugar, strawberry puree.
Wt/Vol., Packaging, Price: 500 ml plastic bottles with foil lid.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Xavier Karis in Italy. 1990. June 13. About 2 months ago this company, located in Parma, started a line of soya products, including soya milk (Soilat) in plain and chocolate flavors (which they probably do not make themselves). Because this is a small company, nobody has made any trouble yet over the Italian name of their soymilk, but if they get bigger, they are bound to get in trouble because Italian law forbids use of the terms "soia" and "latte" together. Their phone is 0521-639-148.

Parma Soia brochure. 1990. Photo shows aseptic package.

Letter from Xavier Karis. 1990. June 15. On the plastic Soidrink bottle is written: "Produced in England." Talk with Neil Rabheru of Unisoy. 1990. July 2. Unisoy makes this soymilk.

Label (for strawberry) sent by Xavier Karis. 1990. June 27. 9 by 2.5 inches. Red, gold, green, black, and orange on white. The semicircular logo on the front panel shows a large field with long rows of soybeans. Across the top in large letters is written: "Campi di Soia" (Fields of Soya), while across the bottom, in the same letters is written Parma Soia. There are three groups of soybean leaves at the bottom two corners and the bottom middle of the logo. And below that, an illustration of many ripe strawberries. "An energy beverage ideal for those who like sports, who study, and who live an active life. A Natural product, without preservatives or colorings. Shelf stable; Refrigerate after opening and consume within 3-6 days."

5903. **Product Name:** [Soymilk (Fresh)].
Foreign Name: Leche de Soya.
Manufacturer's Name: Productos Alimenticios Soyavyn.
Manufacturer's Address: Planta Soyavyn, 2a Calle Poniente No. 2-4, Lourdes, Colón, Depto. La Libertad, El Salvador. Phone: 51-0705 or 23-3554.
Date of Introduction: 1990. April.
Ingredients: Water, soybeans, sugar, flavorings (*saborizantes*), minerals, vitamin A.
Wt/Vol., Packaging, Price: ¼, ½, or 1 liter pre-printed plastic bag.
How Stored: Refrigerated.
New Product–Documentation: Label and letter sent by

Kris Duville of Productos Alimenticios Soyavyn. 1992. April 22. 5.5 by 9.75 inches. Pre-printed plastic bag. Blue and red on white. "This is a product rich in protein, oil, vitamins and minerals. It is recommended for good health because it contains no cholesterol or lactose. You can consume it with honey or sugar to taste. Serve hot with cinnamon, chocolate, vanilla or coffee. Serve cold blended with fruits. Use as a substitute for cow's milk in cooking and pastry recipes. Keep refrigerated." This is a fresh (not a dried) soymilk product.

Letter sent by Kris Duville of Productos Alimenticios Soyavyn. 1992. June 2. This products was introduced in April 1990. They make it using an improved version of the traditional process, grinding hot and working with batches of about 500 liters. The equipment is made out of stainless steel and made by Packo Inox Belgium; It was donated by the European Community.

5904. **Product Name:** [Soy Cream, Soy Cottage Cheese].
Foreign Name: Crema de Soya, Requesón.
Manufacturer's Name: Productos Alimenticios Soyavyn.
Manufacturer's Address: Planta Soyavyn, 2a Calle Poniente No. 2-4, Lourdes, Colón, Depto. La Libertad, El Salvador. Phone: 51-0705 or 23-3554.
Date of Introduction: 1990. April.
Nutrition: Per 100 gm.: Protein 9.7 gm, fat 5.6 gm, minerals 0.4 gm, carbohydrate 3.1 gm.
New Product–Documentation: Letter and Label sent by Kris Duville of Productos Alimenticios Soyavyn. 1992. June 2. These two products were introduced in May 1990. These fresh dairy analogs are prepared from soymilk coagulated with calcium chloride. They are prepared from soymilk curds mixed with milk, vegetable oil, and other ingredients.

Letter from Chris Duville. 1992. Dec. 13. Crema de Soya and Requesón are sold in white blank pouches, only identified by a small label giving the name and maker (Soyavyn). The volume is too small to order specially printed labels.

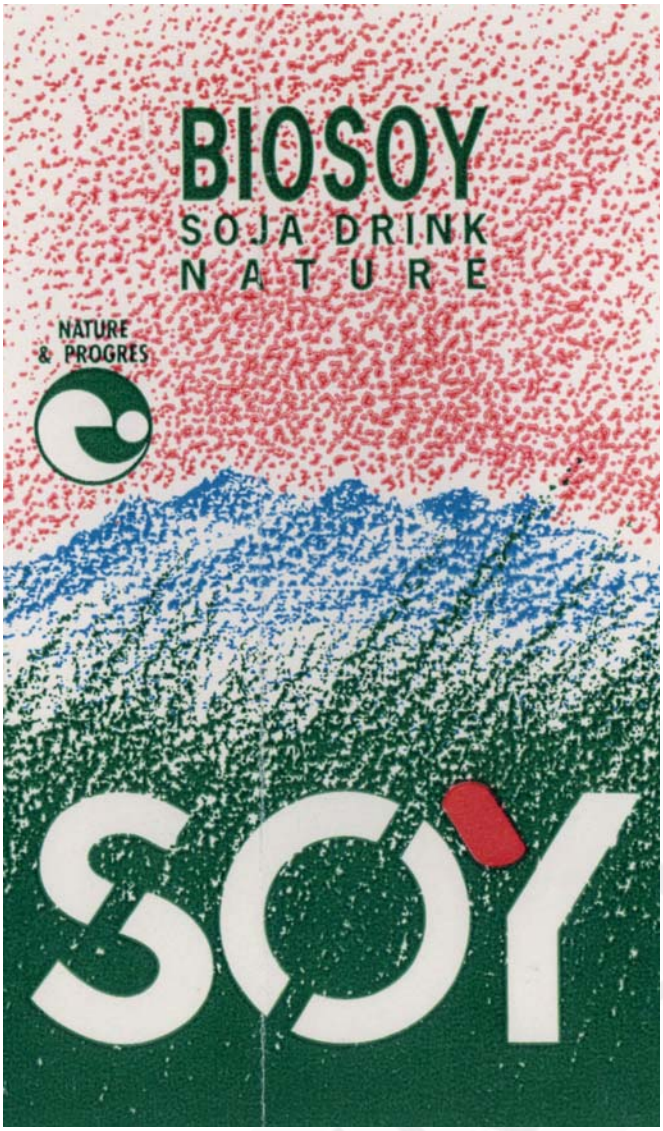
5905. Sanitarium Nutrition Education Service. 1990. Information for health professionals. Sanitarium So Good Non-dairy Soy Drink. Sanitarium Health Food Co., P.O. Box 249, Wahroonga, NSW, 2076, Australia. 8 p. April. 30 cm. [3 ref]
• ***Summary:*** Contents: Introduction. Ingredient description. Nutritional analysis. Suitability for special diets. Directions for use. So Good for babies. Typical nutritional profiles. Nutritional aspects of So Good. Address: Wahroonga, Australia. Phone: (02) 487 1711.

5906. Sanitarium Nutrition Education Service. 1990. So Good (Brochure). Sanitarium Health Food Co., P.O. Box 249, Wahroonga, NSW, 2076, Australia. 4 p. April. 30 cm.
• ***Summary:*** Contents: The amazing soya bean. The So Good story. Package size. Nutritional information. Ingredient description: Soya isolate ("extracted by sequential treatments of soya flour with alkali and acid solutions"), maltodextrin (derived from wheat or corn starch which is partially hydrolyzed with enzymes and/or acid; it contributes dextrose), corn syrup solids, sugar (sucrose; white / unflavored contains 1.6%, flavored 3.6%, lite 0%), vegetable oil (sunflower oil; it accounts for 3.4% of the fat level in So Good (white), 3.2% in the flavored varieties, and 0.7% in So Good Lite. All So Good products are free of cholesterol and lactose), vitamins and minerals ("The addition of vitamins and minerals is aimed at providing an equivalent level to that of full cream dairy milk.") Note that a major problem in fortifying soymilk with calcium is how to keep it from coagulating; So Good uses calcium chloride [509] and calcium oxide [(529]), flavors and colors (Flavored products use a combination of natural and artificial flavors. For example, Jaffa flavor uses natural orange and artificial chocolate flavors, plus Sunset Yellow color).

Nutritional analysis. Suitability for special diets. Directions for use. So Good for babies (So Good white is not recommended for babies under the age of 12 months; So Good Lite is not recommended for babies under the age of 2 years because of the low fat content). Gives five recipes. Address: Wahroonga, Australia. Phone: (02) 487 1711.

5907. Société Triballat. 1990. Nutrition: Équilibre du système cardio-vasculaire–Sojasun [Nutrition: Balance of the cardiovascular system–Sojasun (Brochure)]. B.P. 21, 35530 Noyal/Vilaine, France. 4 p. 21 cm x 21 cm. [8 ref. Fre]
• ***Summary:*** This impressive color brochure presents Sojasun, a non-dairy yogurt-like product, as a tasty way to treat high cholesterol levels. Two pages of graphs and nutritional data are given. The two products are Natural with Bifidus, and With Fruits. A color photo shows the package. A bibliography of 8 references providing supporting scientific data is given on the last page. Address: Noyal/Vilaine, France. Phone: 99 00 51 01.

5908. **Product Name:** [Biosoy {Soymilk in Tetra Brik cartons} (Natural/Plain)].
Foreign Name: Biosoy: Soja drink (Nature).
Manufacturer's Name: SOY (Société Soy).
Manufacturer's Address: 1 rue du Crêt de la Perdrix, 42400 Saint-Chamond, France. Phone: 77.31.24.42.
Date of Introduction: 1990. April.
Ingredients: Water from the natural park of Mont Pilat, soya* (9%). * = Organically grown. 100% vegetable without added sugar.
Wt/Vol., Packaging, Price: 1 liter (33.8 fluid oz) Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.8 gm, carbohydrates 2.5 gm, carbohydrates 2.5 gm, minerals 0.4 gm.
New Product–Documentation: Letter (fax) from then talk



with Bernard Storup. 1990. March 10. The company will start selling soymilk in Tetra Brik cartons for retail stores in April 1990. The name will be Biosoy.

Label sent by Bernard Storup. 1990. June 6. Red, green, and blue on white. Pointillist red sky over blue mountains, behind green foreground. The word "Soy" is written in medium and large letters around the base of the carton. Nature et Progres organic certification symbol.

5909. *SoyaScan Notes.* 1990. New Trend: Large European food companies, and agricultural- and dairy cooperatives now launching and actively promoting innovative new tofu and soymilk products: Mostly dairylike and meatlike products (Overview). May 8. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Jan. 1980 Vandemoortele N.V., one of Europe's largest oilseed crushers, located at Izegem, Belgium, began to make its first commercial soymilk product (GranoVita Soja Drink in plain and carob flavors, packed in 500 ml Tetra Brik cartons) which was private labeled (co-packed) for DE-VAU-GE, a large Seventh-day Adventist health food manufacturer in West Germany. This was Alpro's first customer. In June 1980 Vandemoortele created Alpro N.V. to take over this production. The company quickly became Europe's leading soymilk producer and by 1990 had about 70% of the European soymilk market. Their new soymilk plant, costing about US$15 million and having a capacity of 45 million liters a year, opened in Wevelgem in June 1990.

In June 1984 Migros, Switzerland's leading retail food chain, launched 5 tofu products: Natural Tofu, Tofu Snack with Spices, Spicy Tofu Spread, Diced Tofu with Cream, and Tofu Bolognaise. In 1985 they introduced Tofu with Mushrooms and Gravy, followed in 1986 by Canned Tofu Kashmir (with Curry and Fruits), Tofu Spread with Cheese (in a Tube), Tofu Chocolate Crème, and Tofunaise (in a Tube), then in 1987 by Seasoned Tofu. In 1986 Migros, a 61 year old cooperative with 1.4 million members, had net sales of 3,166 million Swiss francs. The tofu was made by a Migros company named Conserves Estavayer in Estavayer-le-Lac, near Zurich.

Galactina is a well established Swiss company (located in Belp) that has made a soymilk named Naga Sonda for enteral tube feeding since 1980. In 1981 they launched the product in liquid Tetra Pack. They entered the tofu market in 1984 with Galactina Tofu, then in 1985 added three types of Seasoned Tofu (Gourmet Diced with Soy Sauce & Spices, Provencale with Herbs, and Jardiniere with Vegetables), followed in 1987 with Tofu Spread and 1988 with Tofu Burger and Tofu Salads. All were marketed very attractively.

In Aug. 1985 DE-VAU-GE, one of Europe's oldest and largest producers of vegetarian health foods, began operation of its new soymilk plant (purchased from STS/DTD) in Lueneburg, West Germany. By 1990 they were Europe's second largest soymilk manufacturer, with 15-20% of the market. They also sold many tofu products and were planning to produce tofu in the near future.

In 1985 Laiteries Triballat, a large French dairy products company (mostly cheese, located at Noyal-sur-Vilaine, Brittany) introduced Sojasun, an innovative cultured soymilk yogurt in 4 flavors, two with bits of fruit and two with fruit puree. In Oct. 1988 and early 1989 they promoted the product extensively on French television and in German print media. Sales in several western European countries were said to be good.

In 1986 Parmalat, the Italian dairy giant, introduced a soymilk named Soialat. By 1989 they had created a subsidiary named Parma Soia, which sold three lines of more than 20 soy products. The Campi di Soia line (containing soymilk, soy pasta, sauce, and sprouts) was sold at supermarkets. The Nature Soy line was imported, and the Erboristeria line was for the health food market.

In Jan. 1987 Cacoja, a newly-formed affiliate of the Coopérative Agricole de Colmar (CAC), began production of soymilk and soy desserts at its new, fully-automated plant (with an ultrafiltration system) at Issenheim, France. Purchased from Alfa-Laval, the plant cost 11 million French francs and had a capacity of 1,500 liters/hour of soymilk containing 4% protein. By 1990 Cacoja was Europe's third largest soymilk producer.

In Sept. 1987 Rayner Burgess Ltd., a large British Food company that specializes in an array of unique condiments, purchased Cauldron Foods Ltd., Britain's second largest tofu manufacturer, and the largest marketing its products to the Caucasian and health-food trades.

In Jan. 1988 British Arkady, a large British food conglomerate owned by Archer Daniels Midland Co. (Decatur, Illinois) acquired the Haldane Foods Group, and made it part of British Arkady's Health Foods Div. The Haldane Foods Group was put together by acquisition of Direct Foods Ltd. (founded 1980, acquired by the Group in 1985), Vegetarian Feasts Ltd. (founded 1984, acquired 1986), Haldane Foods Ltd. (founded 1983, acquired Aug. 1987), Vegetarian Cuisine Ltd. (founded 1985, acquired 1987), Regular Tofu Co. Ltd. (founded 1983, acquired Aug. 1987), Realeat Foods Ltd. (founded 1984, acquired Sept. 1988), Saucemasters Ltd. (founded 1988, acquired Feb. 1989), and Genice Foods Ltd. (founded 1988, acquired March 1989). Self-proclaimed as "Europe's leading healthier food group, most of these companies make tofu or soyfood products.

In April 1989 Huegli AG, a leading Swiss food company, purchased 75% ownership in Yamato Tofuhaus GmbH, one of West Germany's leading tofu manufacturers. At about the same time, Huegli purchased Horst Heirler, the country's leading distributor of fresh products.

Also in April 1989 Lima N.V. of Belgium, one of Europe's earliest natural foods companies, purchased Jonathan PVBA, Belgium's leading tofu manufacturer.

In Sept. 1989 Innoval (formerly Sojalpe), an acquired affiliate of Les Silos de Valence (a large 5,000-member cereal cooperative in Rhone Alpes, France), began to produce tofu, soymilk, and liquid soy concentrate (with an ultrafiltration unit) at a modern new plant, with a capacity of 2,000 liters/hour, purchased from Alfa-Laval at a cost of 20-21 million French francs.

In Feb. 1990 Euro-Nature, a French investment fund, purchased 97% Lima N.V. of Belgium.

In early 1990 Avo Feinkost GmbH, a large West German spice from Osnabrueck, launched the Sofit line of soy products, including various meatlike products, dressings, and salads.

5910. Boodram, Ramlakhan. 1990. Supplying small-scale screw presses and extrusion/expelling systems to Third World countries (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Boodram, a native of Trinidad who started BAR Export/Import Inc. in 1980, makes small-scale screw presses and sells systems containing them to developing countries. His presses are those that have been used by INTSOY. At IITA in Ibadan, Nigeria, he has an extruder/expeller system. The extruder is made by Insta-Pro, for which he is an agent. For any seed other than soy, the screw press would be adequate, but with soy, in order to get a high-quality oil that requires no further processing (such as caustic refining, deodorization, etc.) you must first run the soybeans through an extruder, then press the hot extrudate. The resulting crude oil is of high quality and has the same chemical characteristics as once-deodorized soy oil. BAR Exports also supplied IITA with a soymilk and tofu plant containing a Bean Machines 150 mill, a Kawanishi hydraulic press, and a small tofu press. No commercial products are produced.

A system at Ken Soya in Nairobi, Kenya, is used to make low-cost extruded soy products, including flour and oil. The company, which to extrude animal feeds, is doing well. Tests started in Dec. 1989 and the soy flour is just now entering the market.

He is now shipping an extrusion/expelling pilot plant system to Sokoine (pronounced so-ku-AY-ne) Univ. of Agriculture in Morogoro, Tanzania. It will be used as a training system to disseminate the technology throughout the country. Using a scale and mixer, the low-fat flour will be mixed with a carbohydrate source, then run back through the extruder to make a cereal-soy blend that can be used for anything from a weaning food to animal feeds. The full system, which requires no boiler or compressor, fits in a space 20 by 50 feet and costs about $110,000, not including the building.

BAR also has an extruder-expeller system at Grove Country Foods in Ohio. He and Carl Hastings, who runs the company, are long-time personal friends. BAR has another system at B and B International in Trinidad. They sell the oil for food and use the meal/flour in animal feeds. BAR tries to reduce marketing costs by placing their systems in international or regional centers, then let them disseminate the technology. They have also been working with CARIRI (the Caribbean Industrial Research Inst.) at the Univ. of the West Indies, with CARDI in Belize, with Eat Soy in Dominique, and Nature Treats in Jamaica. The woman who owns Nature Treats also makes tofu. Address: BAR Export Inc., P.O. Box 190, Seymour, Illinois 61875. Phone: 217-687-4810.

5911. Seewer, Conrad. 1990. The soymilk market in Switzerland (Interview). *SoyaScan Notes.* May 17 and 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The two main manufacturers of soymilk in Switzerland are Galactina and Soyana, but only Soyana makes their own soymilk (from whole soybeans, packed

in Tetra Brik) for regular, healthy adults. Soyana is more a regional than a national company, being more active in the area of Zurich. Seewer has no idea how much soymilk Soyana makes. Galactina's soymilks, all made from whole soybeans, are used only for clinical or infant feeding. He is not aware of any other smaller manufacturers of fresh soymilk. The main imported soymilk is from Alpro.

The market for adult soymilk in Switzerland is quite small and a segment of the health food market. Galactina does not know this market well since they are not part of it and no statistics are available. Adult soymilk is rarely sold in supermarkets, and in only a few department stores. They are sold mostly in Reform Houses. Address: Marketing Manager, Galactina Ltd., Birkenweg 1-6, CH-3123 Belp, Switzerland. Phone: +41 31 811 111.

5912. Seewer, Conrad. 1990. Recent developments at Galactina Ltd. in Switzerland (Interview). *SoyaScan Notes.* May 17 and 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Galactina bought the Naga line of products from Lindt & Spruengli in 1979 and started selling the products in 1980. At that time the line consisted of clinical beverages for oral and enteral feeding (Naga-di and Naga Sonda), and a baby food (Bebe Nago). In Nov. 1984 the company introduced its first tofu product.

Seewer joined Galactina Ltd. 20 years ago. Dr. Peter Speck left Galactina about 2 months ago. He went to work at a nearby company. Ulrich Bringold left several years ago to work with a yeast company. Neither Speck nor Bringold is involved with soya any longer.

Galactina now makes three types of soy products: (1) Beverages/liquids for clinical use, both for oral and enteral and tube feeding; (2) The tofu line; and (3) The Mamina Soya baby food line. They have both a milk and ready-to-feed meals. The meals, which contain soy [powdered soymilk] plus fruit or vegetables, were introduced recently. Galactina does not make any soymilk for regular, healthy adults. Address: Marketing Manager, Galactina Ltd., Birkenweg 1-6, CH-3123 Belp, Switzerland. Phone: +41 31 811 111.

5913. Nordquist, Ted. 1990. Soy ice cream in Sweden and Europe (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This week Ted introduced the "absolutely best-tasting soymilk-based ice cream in the world. Called Tofu Line Glass in vanilla and chocolate flavors, it tastes like old fashioned ice cream made from cream. The vanilla is better than its dairy counterpart." Four-color brochures and labels have been printed. Ted makes the soymilk at the rate of 4,000 liters/hour at Trensums Musteri, a juice company located in Tingsryd, located 20 or 30 minutes miles to the north of the southern seaside city of Karlshamn. Both Tingsryd and Karlshamn are located in Blekinge County. Its a very high-tech soymilk. This is the first product to come out of Ted's years of collaboration with Trensums. Ted buys the soy base from Trensums and ships it by tank truck to Winner (pronounced Vinner), one of Sweden's largest ice cream producers; it is a division of Karlshamn in Karlshamn. He sells the soy base to Winner. Winner makes the ice cream, and sells it back to Ted. It is hard-packed in 3/4 liter octagonal cartons (each has 8 sides with the top and bottom flat). Ted then sells the ice cream to AB Svenska Nutana, a Seventh-day Adventist distributor and marketer in Rimbo, Sweden. Nutana has exclusive sales rights in Sweden. Ted is now working on exports to Finland and Japan.

Ted and his coworkers are only interested in high-volume products. He hopes to sell in Sweden at least 400,000 liters/year of the new ice cream, made from 200,000 liters of the liquid mix. This is 9,000 liters/week, or 30 pallets/week. In addition, he hopes to export the product to other Scandinavian countries and to Japan and perhaps the continent.

It is quite surprising that, whereas there are many soy ice creams in America, there are only 2 others in Europe. One is made by Schoeller, which is one of Europe's largest ice cream producers. They bought an Alfa-Laval system that transforms whole soybeans (using the Illinois method, without separation of okara) into soymilk which they then spray dry and use to make a soy ice cream. "The samples of the ice cream and powder that they sent to Semper in Sweden were a total catastrophe."

Unisoy in England, run by Neil Rabheru, an Indian man, also makes a soymilk named Unisoy Gold and a soymilk ice cream named Maranellis Ice Supreme. They have been out since about mid-1989. It is fortified with calcium and vitamins to be as close as possible to dairy milk. Ted thinks it tastes fantastic, but the ice cream doesn't come close to Ted's. The owner of the company came to Sweden and tried to sell Ted his ice cream and aseptically packed soy base. Address: Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

5914. Nordquist, Ted. 1990. The soymilk market in Scandinavia (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The most popular soymilk in Scandinavia is that imported under the Nutana brand and made by DE-VAU-GE in West Germany. It is sold in an aseptic package. Nutana, located in Rimbo, Sweden, and owned by the Seventh-day Adventists, is a wholesaler and distributor for vegetarian products. Some Alpro soymilk is imported to Sweden but there seems to be less and less of it because Nutana has a very active marketing organization in Scandinavia. Within Scandinavia, Sweden is by far the biggest market for soyfoods. The population sizes are Sweden 8.3 million, Denmark 5.07 million, Finland 5.0 million, Norway 4.2

million, and Iceland 251,000. Alpro's soymilk dessert, in vanilla and chocolate flavors, is selling well.

The soymilk market in Scandinavia is, at most, 150,000 liters/year. It is growing slowly. This is still too small to be interesting or to pay for printing aseptic packages for a soymilk product. The minimum order for a Tetra Brik carton is 200,000 units, and the normal economical order for one single package is about 350,000 to 400,000 units. The labels are so expensive that he would not want to buy more than a 2-year supply. So he would not start until he can sell at least 200,000 liters/year. The cost of aseptic cartons is a major problem for soymilk makers in Europe. All are struggling. Aros will be interested in the next 2-3 years. His first product will probably be a "cooking milk" rather than a milk for drinking. He may work with the milk company Semper to produce a children's "Välling" (pronounced VEL-ling). This is a very popular breakfast product for both children and adults, usually made from powdered milk plus oats or wheat. It is sold as powder which is mixed with water and heated on the stove to make a sort of thick milk. They have developed a soy-based counterpart that tastes better than its dairy counterpart.

Ted's long term goal is to have his fresh soymilk beat powdered cow's milk on the market. His soy-base is so neutral or bland in taste that it can be used in place of powdered milk in ice creams, margarines, etc. That is his basic marketing strategy. As 1992 approaches and subsidies are eliminated over the next 2 years, 8,000 Swedish farmers are projected to loose their jobs from competition from the Continent. In Sweden there is a tremendous surplus production of milk and dairy products, as well as meat, wheat, barley, and oats. In Sweden, the dairy farmer presently gets almost 2 crowns/liter for his milk. That milk is retailed for 5.90 Swedish crowns/liter, but it would cost 6-8 crowns/per liter if it were not subsidized by the Swedish government. What is not sold as a liquid is spray dried, and sold at a low price to companies like Karlshamn to make ice cream and margarine. The price will go up as the subsidies are eliminated–all over Europe. Ted can produce liquid soymilk at 1.10 crowns/liter without subsidies. So Ted wants the farmers which would otherwise go out of business to start growing a new soybean that grows well in Sweden. Ted would buy those soybeans, make soymilk, and use it in Sweden in place of powdered milk, and export it as a premium product at a higher price.

Ted's soymilk system started with some ideas that he got from Alfa-Laval in Lund–the concept of starting with unsoaked, whole soybeans. They exchanged this for Ted's information on tofu. They have never been successful in making a bland soymilk like the one Ted makes today. Ted left Alfa-Laval in 1983-84 and went to Trensums. He has worked with Mark Ljungström (pronounced YUNG-strum) at Trensums for 6 years. Mark has built the machinery (using mostly Alfa-Laval equipment but with pieces from other suppliers) and Ted has the processing concepts. This has been repeatedly tested, changed, re-run, etc. until now it is a unique, excellent system. During the past 2 years, Arla (the Swedish milk company, and Semper, their development subsidiary) and Karlshamn (the Swedish fat company, that uses 90% vegetable oils) have entered the project. In the fall of 1989 Arla decided the leave the project because the new director of Semper new nothing about soya. So now Ted/Aros, Trensums, and Karlshamn are working together. Address: Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

5915. Speck, Peter. 1990. How Galactina got involved with tofu in Switzerland (Interview). *SoyaScan Notes.* May 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Galactina bought the Naga product line from Lindt & Spruengli in 1979 and began selling the products in 1980. When Speck arrived at Galactina, the only soy products made by the company were Naga-di and Naga Sonda, both sold only in dried form. Then in 1981 they started to produce them in a liquid form in Tetra Pak. Speck's first job at Galactina was to develop the liquid form of Naga Sonda in Tetra Pak. Then they began to look for ways to use their extra soymilk production capacity. So he read the literature and learned about tofu, a product widely made in East Asia. He made tofu once and found it promising. The company decided they wanted to be a pioneer in introducing tofu to Switzerland. So they began to develop a regular tofu. During the development, Speck met Verena Krieger and asked her if she could show him how her company produced tofu. In 1984 Verena came to Galactina and made an excellent presentation, for which she was paid. She explained what tofu was and what could be done with it. Initially Galactina decided to buy their tofu from Sojalade (the company of which Krieger was one owner), since they had no idea whether or not the product would be successful. At first Sojalade agreed to supply the tofu to Galactina, then two months before the test market they changed their mind saying that they did not want to supply an industrial producer. So Galactina had to develop their own whole process in 2 months.

In Nov. 1984 Galactina launched their regular tofu in test market in Bern at Co-op supermarkets. The launch was successful and Co-op became the leading outlet for Galactina tofu. Co-op kept Galactina tofu even after they launched their own brand of tofu in Aug. 1985, made and private labeled for them by PLL. But they kicked out Galactina in 1988 when they took on Baer's Yasoya, because Baer, which has an excellent cheese distribution system, was able to deliver its own product to each individual Co-op supermarket and service the product, removing any that were not fresh. Galactina could not provide such a service. Address: Home: Muenzingen, Switzerland. Work: Haco Co. in Gumlingen. Formerly with Galactina, Ltd. Phone: 031-52-1631.

5916. *SoyaScan Notes.* 1990. What are celiac disease, celiac sprue, and Duhring's disease / dermatitis herpetiformis (Overview). May 29. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** People with these diseases must avoid consumption of gluten, even in minute amounts. This gluten can be found in wheat, oats, barley, or rye, and thus these people cannot enjoy any soy sauce except wheat-free tamari. *Webster's Dictionary* defines celiac disease (pronounced SEE-lee-ak; the term was first used in 1936 and is also spelled coeliac in the UK) as "a chronic nutritional disturbance in young children characterized by defective digestion and utilization of fats and by abdominal distention, diarrhea, and fatty stools." Wikipedia (Aug. 2011) defines it as "an autoimmune disease of the small intestine that occurs genetically predisposed people of all ages from middle infancy onward." The term celiac by itself (first used in 1662) is defined as "of or relating to the abdominal cavity."

But celiac sprue refers to a tremendous intolerance (much stronger than an allergy) to wheat or gluten in any food. Many people suffering from celiac sprue are also intolerant to milk and milk products. Thus they often consume soymilk instead of milk and wheat-free tamari instead of shoyu.

Duhring's disease, named after U.S. dermatologist Louis A. Duhring (1845-1913), is much less common and therefore less well known that celiac or celiac sprue diseases. Also known as dermatitis herpetiformis or dermatitis multiformis, it is caused by an inability of the small intestine to digest gluten. When a person who has Duhring's disease consumes even a minute amount of gluten, they will experience severe, extensive itching, and their skin will generally break out with a terrible rash and eruption of blisters (vesicules and papules, which occur in groups), often over much of the body, that last for weeks. But if they are scratched, they burn, causing intense pain. Spontaneous healing rarely occurs, except in children, and relapses are common. Many people with Duhring's disease are also dairy intolerant and 70% of them have some form of thyroid disease. Most people with Duhring's disease are Caucasian; few are African- or Asian-American. The disease is often misdiagnosed by dermatologists. A society has been formed at a university in Ohio to help those who suffer from Duhring's disease.

5917. Daenzer, Walter. 1990. The tofu and soymilk markets in Switzerland (Interview). *SoyaScan Notes.* May 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soyana introduced its Soyaquell brand in about 1985 for the mainstream market. The Soyana brand is reserved for the Reform market. Many (but not all) Soyana products are now sold under the Soyaquell brand–such as tofu, soymilk, etc. New products include Tofu Pastete (cake-shaped hors d'oeuvres, 1989) and some new Tofu Burgers.

Competition in the soyfoods market is terrible in Switzerland–its the most competitive market in Europe. The market is small and people have very high quality expectations. Galactina is trying to get into all the Reform stores. They are doing everything they can to market their products there. Some years ago the regular food industry got interested in soya, but their standards allowed them to make tofu and related products using soy protein isolates. Baer Weichkaeserei had a big campaign which resulted in Galactina tofu products being kicked out of all Co-op supermarkets. Also Galactina products had many problems selling in the supermarkets. So Galactina has decided to sell their products in the Reform stores. And now Soyana has lots of competition from Galactina. The Swiss Biona Association used to sell only Swiss soyfoods. Nothing else was imported until about 2 years ago. At that time, they got offers to sell soymilk made in France and Germany. "Then Biona did something terrible; they gave the Biona sign to all foreign suppliers. So now Société Soy is coming in from France, Heirler with a big range of products from Germany, etc. Products from all over Europe are now being imported to Switzerland and sold at Reform stores."

Soyana invested a great deal of money as a pioneer in the Swiss soyfoods market. Just when it looked like they were about to recover their losses, the terrible new competition began. And the competitors are using every trick in the book, including unfair means and deceptive advertising. They have no sense of purity of product; for example they say they are using nigari but they use calcium sulfate with 10% nigari. Soyana does not pasteurize its tofu but the competition does. So now Soyana has to educate its former customers about the advantages of not pasteurizing. Now Soyana has to become a quality pioneer and an advertising pioneer. Reaching and convincing all these people costs lots of money, but Soyana is doing it. Soyfoods have changed from being an alternative food to being a big money maker, so the big food companies jump in with the goal of making more money by selling lower priced, lower quality foods. Their advertising is often dishonest.

"The whole soy thing has proved to be an alternative for people who really need it. And that is a stable market, but it is not booming. In America it seems that the big food producers have slept while the soyfoods market has grown, but in Switzerland the situation is different. Many big Swiss companies jumped in when they got the idea that soya is healthy, but many of them didn't know anything about the products. So now Soyana is looking for alternate things to do to avoid this terrible situation."

If Soyana tries to export its products from Switzerland, it has to pay 20% customs duty, and Swiss wages are high. But companies that import foods to Switzerland have to pay a much smaller tax, and the process is easier. This will not change with the opening of trade in 1992 because Switzerland is not part of the EEC! Swiss has always

cherished its separateness, independence, and neutrality.

Concerning the term Broteinheit ("Bread Unit," it is not Broteinhalt) relating to diabetic exchanges, the term is not well defined or agreed upon by professionals, so it is a big problem.

Soyana used to be the only soymilk manufacturer in Switzerland. Then a Swiss-French company with a French name started making soymilk. Their prices were low, but they couldn't reach the big consumer chains. Address: Soyana, Postfach 8039, Zurich, Switzerland. Phone: 01/202 89 97.

5918. Kjellker Gimre, Monica. 1990. Re: Complete soymilk or soybase plants installed by Alfa-Laval worldwide from 1979–1989. Letters to William Shurtleff at Soyfoods Center, May 30 and Aug. 24–in reply to inquiry. 2 p. Typed, with signature on letterhead.

• ***Summary:*** The following plants are listed chronologically by year of start-up, and within each year, alphabetically by country. Start-up–Country–Company–Product–Capacity (liters/hour)

1979–Malaysia–Lam Soon–soymilk–5,000

1980–Thailand–Kickapoo–soymilk–4,000

All plants made from 1984 on use Alfa-Laval's new Soyal design.

1985–West Germany–Ice cream maker [Schoeller]–soybase–3,000

1985–Switzerland–Soyana–soybase–1,000

1986–China–Guangzhou Cannery [Guangdong]–soymilk–2,500, 2 dec.*

1986–France–Cacoja–soybase–1,500

1987–China–Jin Jiang Foodstuffs Factory–soymilk–2,500

1987–India- Noble Soya–soymilk–4,000, 2 dec.*

1988–Argentina–Alimentos de soja–soymilk–4,500

1988–China–Jiangmen Foodstuff Factory–soymilk–2,500, 2 dec.*

1988–China–Wuhan Guan Sheng Yuan Foodstuff Factory–soymilk–2,500, 2 dec.*

1988–France–Innoval–soybase–1,500

1988–Nepal–Indreni–soymilk–2,500

1988–Nigeria–Sona Dairies–soymilk–4,500

1989–Australia–Sanitarium Foods–soybase–500

1990–France–Dairy Co-op**–soybase–500

* = 2 decanter centrifuges per system to boost the protein yield. The systems made before 1984 were for more traditional soymilk. Those made afterwards no longer require that the soybeans be soaked, and the "new" soyabase line in designed primarily for producing a non-beany soymilk, but it can be easily adjusted to give a traditional soymilk. "Soybase" is the product that comes out of the Soyal soyabase line after grinding, separation in one or more decanters, and deactivation of enzymes like trypsin inhibitors. This base is more concentrated than soymilk (9-12% solids/dry matter) and is what is used as the raw material for any soy-based product. "Soymilk" is a blended drink, often containing sugar, and standardized to a protein level required by the market. Soybase would only be run through an ultrafiltration unit to (1) remove phytic acid and oligosaccharides, or (2) to remove moisture and increase the percentage solids, as to make tofu. ** The plant owned by the Dairy Co-op in France is secret, but the base it produces will be used mostly for research on calf milk replacers and on replacing cow's milk in certain dairy products. This dairy does not have any products on the market. Address: R&D manager, Alfa-Laval East Asia Pte. Ltd., 11 Joo Koon Circle, Singapore 2262. Phone: 86 22 711.

5919. Kjellker Gimre, Monica. 1990. Re: Current developments at Alfa-Laval. Letter to William Shurtleff at Soyfoods Center, May 30. 1 p. Typed, with signature on letterhead. Plus 2 brochures.

• ***Summary:*** John Wilson is presently working a special projects in Jamaica. The former agreement with Kibun is no longer active nor in effect.

"Right now Alfa-Laval's soya application group is concentrating on technological support and development work. The general knowledge of soya is now so well spread throughout our organization that it is taken care of by our normal sales organization channels in market companies and Lund. The support and development work here is taken care of by our R&D Centre in Singapore where we have pilot plant facilities for all types of soya products. I have been head of this R&D Centre since June 1989." Address: R&D manager, Alfa-Laval East Asia Pte. Ltd., 11 Joo Koon Circle, Singapore 2262. Phone: 86 22 711.

5920. Pringle, William. 1990. Re: History and present activities of The British Arkady Company Ltd. Letter to William Shurtleff at Soyfoods Center, May 30. 2 p. Typed, with signature on letterhead.

• ***Summary:*** This company, founded in Sept. 1921, is now a member of the Arkady ADM Group. "The British Arkady (pronounced AR-kuh-day) was originally a joint company between The Ward Baking Co. in the U.S.A. and Baker Perkins of Willesden, London, a bakery machine company. The original purpose of the company was to sell the Arkady product... The original address was Willesden, London, England."

"Arkady Soya mills is not a separate entity. It is simply a name we have used in advertising and promotion. The mills making full fat soya flour belong to British Arkady and are on our premises here.

"British Arkady began to sell T.V.P. in 1965, but we did not produce on this site until 1973. The product we sold was ADM's, and we were their agent in the UK.

In 1974 ADM acquired British Arkady.

Concerning soymilk: "Our company had a joint venture

for the production of soya milk dating back to the early 70's. We were the providers of technology and our partners made and sold the product. It was based on the use of full fat soya flour (dehulled ground soya beans) which was extracted with water. The milk was sold in cans. We no longer have a commercial interest in this product, but I believe it is still on sale. We have never sold soya milk based on isolated soya protein, but we have given other companies the technology and some of these products are still for sale.

"Haldane Food Group and S.I.O. are fully owned subsidiaries of The British Arkady Co. Ltd.

"British Arkady's three best-selling products that contain soy as a major ingredient, ranked in descending order of annual sales, are Full-fat Soya Flour, Textured Vegetable Protein, and Bakery ingredients.

Information on number of employees and annual sales is confidential. Address: Director-General Manager, The British Arkady Co. Ltd., Skerton Rd., Old Trafford, Manchester M16 0NJ, England. Phone: 061-872-7161.

5921. Krieger, Verena. 1990. Re: The soymilk market in Switzerland. Letter (fax) to William Shurtleff at Soyfoods Center, May 31. 5 p.
• ***Summary:*** Soyana in Geneva is the only soymilk maker in Switzerland; their production figures are confidential. Galactina Ltd. in Belp makes soymilk powder, but it is used only in Galactina baby foods. PHAG Sarl in Gland is Switzerland's oldest distributor of soymilk and soymilk products; they sell 2,800 liters/week of DE-VAU-GE soymilk. Biorex AG distributes soymilk imported from Alpro in Belgium. Address: Bruchmattstr. 24, CH-6003 Lucerne, Switzerland. Phone: 041-22 50 34.

5922. Gardner, R.W.; Shupe, M.G.; Brimhall, W.; Weber, D.J. 1990. Causes of adverse responses to soybean milk replacers in young calves. *J. of Dairy Science* 73(5):1312-17. May. [21 ref]
• ***Summary:*** Six Holstein bull calves were randomly divided into three treatment groups. They were fed either whole cow's milk, or ethanol-extracted or hexane-extracted soy flour in milk replacers to 6 weeks of age. Average weight gains were 13.8, 7.3, and 2.9 kg respectively. mortality was 0/20, 4/20, and 9/20 respectively. Heart rates (beats per minute) were 87.6, 99.1, and 116.3 respectively. Respiratory rates (breaths per minute) were 41.6, 67.6, and 61.1 respectively. Intradermal wheal growths showed allergic sensitivity to the soybean products. Phenolic compounds in the soybean flour were implicated as possible causative factors in the adverse responses to the soybean milk replacers. Ethanol extraction of the soy flour was more effective than hexane extraction in removing phenolic compounds (2.19 vs. 1.00% phenolics). Address: 1-3. Dep. of Animal Science, Brigham Young Univ., Provo, Utah 84602.

5923. *Health Food Business* (*England*). 1990. Plamil–pioneers of soya milk. May.
• ***Summary:*** "Twenty-five years ago in 1965 the first British-made soya milk crept quietly on to the scene via HSW. Before this, it was not available anywhere. Plamil Foods, the firm who pioneered this soya milk, now celebrates its 25th trading anniversary. Plamil justifiably claims to have influenced enough health food and wholefood shop-owners and their customers to have created a market for soya milk and soya milk products...

"It is Plamil's proud boast that throughout its 25 years it has marketed exclusively through the health food trade and has turned down all requests from supermarkets."

A photo shows C.A. Ling.

5924. *SoyaFoods* (*ASA, Europe*). 1990. Misleading use of dairy names. 1(1):2. Spring/Summer.
• ***Summary:*** "New UK regulations banning the misleading use of dairy names have been introduced in the UK. The Milk and Milk Products (Protection and Designations) Regulations 1990 implement EC Council Regulation 1898/87/EEC which protects dairy names by prohibiting the use of terms such as 'soyamilk' on labels...

"It will also be an offence to claim or suggest that a product is a dairy product by using dairy imagery in the labelling or advertising of non-dairy products. In countries, like France, where there are even difficulties in using the term 'Soyadrink', alternatives such as the Japanese term 'tonyu' are being considered."

5925. *SoyaFoods* (*ASA, Europe*). 1990. More soya protein production. 1(1):2. Spring/Summer.
• ***Summary:*** "Loders Croklaan, Wormerveer, Netherlands, a Unilever subsidiary is to expand its capacity of its soya protein concentrate plant by 50% at its sister company, Unimills in Germany [sic, actually UniMills in the Netherlands, according to Aat Visser of Loders Croklaan (Aug. 1990)]. The extension will be ready by late 1990 and will allow the company to meet the increasing demand for its antigen-free Soycomil soya concentrate."

5926. *SoyaFoods* (*ASA, Europe*). 1990. Soyafoods gain in Italy. 1(1):2. Spring/Summer.
• ***Summary:*** "Buton S.p.A. of Bologna, leading manufacturers of brandy and spirits, have recently gained a controlling interest in the Paduan-based company Crivellaro S.r.l. Plans to develop the growing market for soyafoods in Italy and abroad will continue under the Buton group, not only with Crivellaro's present range of soya products, oil, lecithin and milk but also through new product lines."

5927. *SoyaFoods* (*ASA, Europe*). 1990. Report of an interview with John Wilson, United Nations International

Development Organisation: Soya–the original golden egg? 1(1):6. Spring/Summer.
• ***Summary:*** Wilson, formerly Manager, Business Development for Soy Process Technology, with Alfa-Laval in Sweden, now works for UNIDO (United Nations Industrial Development Organization) in Jamaica. He addresses the question: "How difficult is it to set up a soya processing plant in developing countries and can soyafoods really match up to expectations?" Table 1 lists 11 questions that Wilson feels should be asked by developing countries when planning food policy. "In the past year the 'mountains' of surplus milk products in both Europe and North America have diminished to non existence and countries which have received free milk supplies have seen this reduced or cancelled. The cost of milk on the world market has increased nearly 2½ times." Address: Food Processing Expert, International Projects Coordinator for UNIDO, Jamaica.

5928. *SoyaFoods* (*ASA, Europe*). 1990. Soya milk information [in the UK]. 1(1):7. Spring/Summer.
• ***Summary:*** "The Soya Milk Information Bureau was launched in April/May last year with the support of Vandemoortele (UK) Ltd. and since then has handled over 2,000 enquiries from all over the world. Most queries come from consumers concerned about milk allergies but interest is also coming from schools. The Bureau produces an information pack on soyamilk including literature on calcium, diets and packaging. For further information please contact: The Soya Milk Information Bureau, The Chestnuts, Fosse Way, Moreton Morrell, Warwickshire CV35 9DE.

"The British Soya Milk Advisory Service was set up by Plamil Foods Ltd. also to answer consumer requests for information about soyamilk. Their information pack includes the history of soyamilk, composition, medical and nutritional information and 'green' aspects. Their address is British Soya Milk Advisory Service, Bowles Well Gardens, Dover Rd., Folkestone, Kent CT19 6PQ."

5929. *University of California, Berkeley Wellness Letter.* 1990. Comparing milks. May. p. 8.
• ***Summary:*** Cow's milk is 89% water. The following are the average values for 8 ounces:

Whole milk (3.3% fat), 150 calories, 8.5 gm fat, 51% of the calories come from fat.

Low-fat milk (2% fat), 120 calories, 4.7 gm fat, 35% of calories from fat.

Low-fat milk (1% fat), 100 calories, 2.5 gm fat, 22% of calories from fat.

Skim milk (0.4% fat), 85 calories, 0.4 gm fat, 4% of calories from fat. Address: Univ. of California, Berkeley. Phone: 415-642-8061.

5930. Vandemoortele, Philippe. 1990. N.V. Vandemoortele and Alpro N.V. in Belgium (Interview). *SoyaScan Notes.* June 4. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter (fax) on 30 May. 1990.
• ***Summary:*** There is no written history of Vandemoortele. The starting point and center of operations has always been Izegem in Belgium. The company name is pronounced van-duh-MOOR-tuh-luh in Flemish and van-duh-moor-TELL in French. The protein division of N.V. Vandemoortele started the company's soy protein and soymilk research. As long as it was only doing research and losing money there was no need to start a new company. Alpro started when it was clear that there would be income from the sale of the first turnkey soymilk plant. At that time, the protein division of N.V. Vandemoortele turned into Alpro, and the former then ceased to exist. About 5 years ago, Vandemoortele was re-structured. Vandemoortele International is the new holding company for the group (replacing Safinco) and under it are four product groups: N.V. Vandemoortele works with oils and fats. N.V. Vamo Mills is an oilseed crusher and maker of flours (including full-fat and defatted soy flours). Vamix is a bakery. And Alpro works with natural soyfoods, especially soymilk. One top manager is in charge of each of the four subsidiaries and he is responsible for everything in that company from research to consumer. Philippe is the top man at Alpro. Vandemoortele is no longer 100% owned by the Vandemoortele family.

In March 1987 the company began using the subtitle "Alpro Natural Soyfoods" instead of its earlier "Alpro Protein Products." The former name made Alpro sound like a soy protein isolate company. In July 1986 Alpro began using the slogan in French "La Force Végétale du Soja," then in March 1989 they shortened this to "La Force du Soja."

Concerning Tetra Brik labels, there are three different printing techniques available; some are more economical and some give higher quality. If you use the flexographic (flexo) technique, which uses rubber plates to print, you can co-print, i.e. print several packages in one print run. Every time you print, they make new rubber plates. There is less flexibility in design. Alpro uses only flexographic because it has more than 100 different packages (It co-packs for Lima, Celnat, Perlinger [a health food company in Austria], and most U.K. supermarkets under their own brand), but the resulting package often looks very simple in color and design. Offset uses fixed plates, which cannot be changed; this technique is used for most package printing in the USA. Roto (Rotogravure) uses a copper cylinder and is the highest cost and highest quality.

In June 1990 Alpro moved from Izegem into its new factory at Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: 056/43.22.11. Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8610 Wevelgem, Belgium. Phone: (056) 43 22 11.

5931. Wilson, John. 1990. Re: Changes in the food

department at Alfa-Laval. Letter to William Shurtleff at Soyfoods Center, June 15. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "I am here on a two year assignment from UNIDO (United Nations Industrial Development Organization) to assist the food processing industry in Jamaica. During those two years, I am on leave of absence from Alfa-Laval in Sweden.

"The food department of Alfa-Laval in general and the soya application in particular has undergone and is undergoing considerable restructuring, part of the reason for which is to match the tremendous market changes in Eastern Europe.

"Goeran Leufstadt, who was the original chief of the soya research laboratory from 1982 to 1985 and subsequently chief of the Singapore food lab from 1985 to 1989 is now chief of the food department F. F. which has the product responsibility for soya foods." Address: Food Processing Expert, International Projects Coordinator for UNIDO, Jamaica, c/o JAMPRO Ltd., Jamaica's Economic Development Agency, 35 Trafalgar Rd., Kingston 10, Jamaica. Phone: (809) 929-7190.

5932. Lindner, Anders. 1990. Re: Dairylike products made from soymilk in Europe. Retail outlets for soymilk in Europe, country by country. Letter (fax) to William Shurtleff at Soyfoods Center, June 19. 1 p. Handwritten. [Eng]

• ***Summary:*** The following figures are my guesstimates:

I would estimate that no more than 15% of the soymilk made in Europe is then made into dairylike products, not including tofu. Of the soymilk made into dairylike products, roughly 60% is made into ice creams, 20% into non-frozen desserts (incl. puddings, and custards), 15% into yogurts, and 5% into non-dairy cheeses.

Of all the soymilk soy in Europe as a beverage, I would estimate that 50% is sold at health food stores, 40% at supermarket chains, multiples, and general food stores, and 10% at Asian retail stores.

A wild guess as to the percentage of soymilk sold at Supermarkets–Health food stores–Asian stores in each country would look something like this: United Kingdom, West Germany, France, Belgium, the Netherlands, and Switzerland would all be 40%–50%–10%.

Italy, Scandinavia, Spain, and Others would all be 10%–80%–10%.

Austria would be 30%–60%–10%. Address: P.O. Box 19002, S-250 09 Helsingborg, Sweden. Phone: 42-92776.

5933. Lindner, Anders. 1990. Re: Consumption of soymilk in Europe, by country and per capita. Letter (fax) to William Shurtleff at Soyfoods Center, June 19. 1 p.

• ***Summary:*** The following figures are my guesstimates for the amount of soymilk consumed in major European countries. Most of the soymilk produced in Belgium [by Alpro] and Germany [by DE-VAU-GE] is consumed in other countries. Note: The large consumption in the U.K. is due to both its large total population and its large population of vegetarians and vegans. The latter do not consume milk or other animal products.

Country (Population)–Soymilk consumption in million liters–% of total–liters per capita per year

United Kingdom (56.7 million)–20 million liters*–40% of total–0.35

West Germany (60.2 million)–10 million liters–20% of total–0.17

France (55.8 million)–6 million liters**–12% of total–0.11

Belgium (9.9 million)–3 million liters–6% of total–0.30

Netherlands (14.7 million)–2 million liters–4% of total–0.14

Switzerland (6.5 million)–2 million liters–4% of total–0.31

Scandinavia*** (22.8 million)–2 million liters–4% of total–0.088

Italy (57.4 million)–1 million liters–2% of total–0.017

Austria (7.6 million)–1 million liters–2% of total–0.13

Spain (39.8 million)–1 million liters–2% of total–0.025

Others**** (24.3 million)–2 million liters–4% of total–0.082

Total (355.7 million)–50 million liters–100%–0.14

* Neil Rabheru, founder and director of Unisoy, the largest soymilk manufacturer in the UK, estimates that 18-20 million liters/year of soymilk are consumed in the UK. ** Bernard Storup of Société Soy, a large soymilk maker in France, estimates consumption of soymilk in France to be much higher, about 11 million liters. Storup's estimate is probably more accurate. *** Scandinavia = Sweden (8.3 million), Denmark (5.0 million), Finland (5.0 million), Norway (4.2 million), Iceland (0.25 million).

**** Others = Portugal (10.2 million), Greece (10.0 million), Ireland (3.7 million), Luxembourg (0.369 million), Malta (0.358 million).

Highest per capita consumption: United Kingdom 0.35, Switzerland 0.31, Belgium 0.30, West Germany 0.17, Netherlands 0.14, Austria 0.13, France 0.11. Lowest per capita consumption: Italy 0.017, Spain 0.025. Address: P.O. Box 19002, S-250 09 Helsingborg, Sweden. Phone: 42-92776.

5934. Menzies, John. 1990. Re: Harry Miller's work with soymilk in East Asia. Plans by the South China Island Union Mission of Seventh-day Adventists to set up a health food company in Hong Kong and Taiwan. Letter to William Shurtleff at Soyfoods Center, June 20. 2 p. Typed, with signature on letterhead.

• ***Summary:*** After his soyfoods plant in China was destroyed, Dr. "Harry Miller retreated to Taiwan along with the Nationalists and later set up a soya milk plant associated

with the Taiwan Adventist Hospital which has long since gone. I am not even sure when the soya milk operation was discontinued. Unfortunately the only industries set up in Hong Kong were hospitals.

"Recently I was asked by the South China Island Union Mission of SDA's to set up a health food industry in Hong Kong and Taiwan... My background is food technology and I have worked for Sanitarium in Australia and New Zealand for a number of years.

"Initially we will import various products from our sister institutions around the world and where possible re-pack under our own label. This will allow us to get a feel for the market so in the near future we will know what sort of a manufacturing plant to set-up (i.e. soyamilk, vegetarian, or cereal). It looks like we might even have an opportunity to set up a manufacturing base in one of the specially administered regions in communist China." Address: General Manager, Food Div., South China Island Union Mission of Seventh-day Adventists, 40 Stubbs Rd., 2nd floor, Hong Kong. Phone: 838-3991.

5935. *SoyaScan Notes.* 1990. Co-packing and private labeling (Overview). June 20. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** From the point of view of a company who wants another to co-pack/private label products for them. Examples Tofutti Brands has a ice cream maker make its soy ice cream. White Wave has a sausage company make its Healthy Links. Advantages: No need to buy new equipment, space, insurance, or hire new workers, which saves money and time. The co-packer has the experience and equipment needed to produce the products. Product development time is usually reduced. Disadvantages: Logistics may be more complicated, especially if the company is not located nearby. A big company may not be very interested in giving you the specialized help and service you need at the beginning or in emergencies. Watch out: Be sure to get a non-compete clause so that company can't steal your product, drop you, and start to compete with you. Get a contract with a long duration, and lots of specifics.

From the point of a company who has a product that other soyfoods companies want to have packed and sold under their label. Examples: Hinoichi Tofu, and Alpro soymilk and soy desserts. Advantages: Co-packing greatly expands your sales. It allows you to use your plant at higher percentage capacity, which lowers per-unit costs. Disadvantages: The co-packed products usually end up competing with yours, thus lowering sales and profit margins of the in-house brand.

5936. Trevor Johnston. 1990. Some companies start out really small and then they grow. Sometimes they change their name. Very rarely they change it back again (Leaflet). Penrose, Auckland, New Zealand. 1 p. Front and back. 30 cm. June 23.
• ***Summary:*** "Yes Bean Supreme is back. We've changed to avoid ongoing confusion between our company and the Reckitt and Coleman 'Down to Earth' brand of household cleansers. No legal conflict exists between our two companies, however for marketing purposes we don't want this name association to continue."

"Bean Supreme–we think you'll like it."

In the upper left corner is the Bean Supreme logo + "Brings happiness." Address: Marketing Director, Bean Supreme Ltd., Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: (09) 590 592.

5937. Karis, Xavier. 1990. Medical Soy, Parma Soia, and Soyfoods in Italy (Interview). *SoyaScan Notes.* June 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Of the two companies, Karis thinks that Medical Soy was founded about 3-4 years ago, before Parma Soia. For details ask Medical Soy introduced their line of soy products first, but only lately have they put much effort into promoting the line, especially after the introduction of their Fresh Amisoya line. They apparently make all or most of these products themselves, since on the products is written "Product of Italy," and he is not aware of any other company that could make these products for them. Parma Soia apparently does not make any of their own products. They have a large and very impressive brochure describing their Amisoya line and attempting to find stores to sell the line. These products are now fairly widely sold in big supermarkets, including in Bologna, Milano, Torino, etc. It is surprising that they do not package their soymilk in Tetra Brik cartons.

Karis hasn't seen any Parma Soia products in stores. Parma Soia (a subsidiary of Parmalat, the giant Italian dairy company) has 3 lines of products. The "Campi di Soya" line is probably meant to be sold through supermarkets. They also have an "Erboristeria" line for health food stores and places resembling Reform Houses. The root of the word is "erborista" = botanist or herbalist. The products in the first and second lines seem the same except for the packaging. The Nature Soy line is imported tofu, soy curd, and soymilk. "Parma Soia" does not appear prominently on the label and the product was not on display at the fair where he obtained the brochures. Address: Export/Marketing Dep., Gio. Buton & Co. S.p.a., Viale Angelo Masini, 24, 40126 Bologna, Italy. Phone: 051-506368.

5938. Rosa, Bianca. 1990. Medical Soy S.p.A. in Milan, Italy (Interview). *SoyaScan Notes.* June 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bianca has been with the company for 1 year and will get a history from the founders, especially her boss Mr. Migliavacca, the commercial director. His son is the president. The line of dry products has been transferred to a

sister company, Moderna Distribuzione, which will start to sell the products in 1-2 months. Mr. Polletti ran the Medical Soy booth at the fair in Italy. They are an independent company, not owned by a larger company. They started a couple of years ago. In May 1989 their company sponsored a conference in Milan on the medical benefits of soyfoods. Prof. Sirtori, Descovich, and many other scientists from the USA, Japan, etc. presented papers at the conference on the medical benefits of soy. The abstracts of the conference were published in English. The company is called Medical Soy because their products all contain soy proteins, which are very good for one's health. The founder of the company was a PhD but not an M.D. Address: Medical Soy S.p.A., Via Matteotti 55, 20068 Peschiera Borromeo (Milan), Italy. Phone: 02/547-5456.

5939. *SoyaScan Notes.* 1990. Unisoy Milk 'n' By-Products Ltd. (Interview). June 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The company, which is basically a soymilk company, now makes 6 products: White Wave Soya Milk (in sugar free and sweetened varieties), Unisoy Gold (a soymilk reinforced with calcium and vitamins), Soya Yogart, Maranellis (Organic soya ice cream, sweetened with fruit juice; it is delicious), Carob and Banana Drink (organic). They plan to soon launch some organic pancakes called Crêpolettes. Neil Rabheru founded the company, but the idea came from John Patel. Jan Freeman was also involved. Mr. Arora, who Neil knows, has never been involved in this company. Address: Stockport, Cheshire SK6 2RF, England. Phone: 061-430-6329.

5940. Cardenas, Danilo C. 1990. Status of the Philippine soyfood industry. Paper presented at the International Conference on Soybean Processing and Utilization. Held 25-29 June 1990 at the Jilin Academy of Agricultural Sciences, Gongzhuling, China. *
Address: Supervising Science Research Specialist, Philippine Council for Agriculture, Forestry, and Natural Resources Research and Development (PCARRD), Los Baños, Laguna 3720, Philippines.

5941. *FDA Consumer.* 1990. Soy drinks not infant formulas. 24:2. June.
• ***Summary:*** "Soy-based beverages should not be fed to infants as a sole source of nutrition, FDA has warned. The warning does not apply to soy-based infant formulas."

"There are soy-based infant formulas that are complete and appropriate for infants. However, other soy beverages are grossly lacking in the nutrients infants need, FDA said. The agency issued the warning after receiving a report of a severely malnourished 5-month-old baby girl, in critical condition at the Arkansas Children's Hospital in Little Rock, who had been fed a soy drink since right after birth."

"In a nationwide investigation after a similar incident in 1985, FDA found instances in which employees of retail stores (primarily health food stores) advised undercover investigators that soy drinks were suitable for use as infant formulas. FDA warned each store that such misrepresentations are violations of federal law and could cause serious damage to infants."

5942. Golbitz, Peter. 1990. Lite soyfoods making their way to market: Shape of things to come? *Soya International* (*Bar Harbor, Maine*). April/June. p. 16-17.
• ***Summary:*** New low-fat soyfood products include Westsoy Lite (made by Westbrae Natural Foods, and containing only 1% fat and 18% of calories from fat), fat-free versions of Soyco cheese (made by Galaxy Cheese Co. in Cheddar Chunk and Mozzarella Chunk styles), Lean Links (made by Lightlife Foods and containing only 12% of calories from fat). Address: Soyatech, Bar Harbor, Maine.

5943. Golbitz, Peter. 1990. FDA asks for warning on soymilk packages. *Soya International* (*Bar Harbor, Maine*). April/June. p. 7.
Address: Soyatech, Bar Harbor, Maine.

5944. **Product Name:** Rice Dream Low Fat Non-Dairy Beverage (in a Tetra Brik Carton) [Chocolate, Almond, Carob].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Rice Beverage made by California Natural Products, Manteca, Calif.
Manufacturer's Address: 299 California Ave. #305, Palo Alto, CA 94306. Phone: 415-327-1444.
Date of Introduction: 1990. June.
Ingredients: Filtered water, certified organic brown rice (partially milled), almonds, vanilla, sea salt (carob or vanilla if indicated).
Wt/Vol., Packaging, Price: 250 ml but 8 oz liquid Tetra Brik Aseptic carton. Retails for $0.89-$0.95.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Robert Nissenbaum, president of Imagine Foods. 1990. March 14. This is their new amazake-like beverage in Tetra Pak. It is made using commercial enzymes, not koji. It has more of a milky consistency than Grainaissance's Tetra-Pack amazake, though it actually has a higher solids content, but less starch. A little bit of starch gives a lot of thickness but not much solids. It is presently packaged at Real Fresh, Inc. in Visalia and Pacific Foods in Oregon. There is one other company in Utah called Grossner.

The product is made with organically grown rice, and will probably be a bit more expensive than soymilk products. He wants it to be a high-volume item. The 245 ml package contains only 8 oz. of product with nitrogen in the headspace, so you can shake before drinking. It looks like he

will have the product packaged by Pacific Foods as soon as they add the nitrogen. Talk with Robert Nissenbaum. 1990. June 21. The product was in the stores in June.

Ad in Vegetarian Times. 1990. July. p. 35. "When choosing a non-dairy beverage, start dreaming. Made from certified organic California brown rice. Non-dairy. Rich in complex carbohydrates. Less than 12% of calories from fat. No cholesterol. Certified Kosher (OU). Rice Dream low fat non-dairy beverage is a great tasting alternative to dairy and soy drinks. Light and refreshing, it has a mildly sweet, clean flavor. It is delicious served chilled or hot, delightful with fresh fruit or berries, and great on breakfast cereal. Rich in complex carbohydrates, yet low in fat, Rich Dream beverage provides a balanced energy source for your active life." Note that the term "Amazake" does not appear on the package or in the ad.

Labels and many samples of each flavor sent by Robert Nissenbaum. 1990. July.

Talk with Robert Nissenbaum. 1993. Oct. 19. Trader Joe's is now selling this product for $1.49 a quart. As the volume of this product sold has grown the cost to produce each unit has dropped. Imagine Foods has kept its price constant but offered bigger and bigger discounts to large-volume buyers.

Product with Label purchased at Trader Joe's in Concord, California. 1993. Nov. 4. It retails for $1.59. Excellent flavor and color.

5945. **Product Name:** Beano.
Manufacturer's Name: Lactaid Inc.
Manufacturer's Address: P.O. Box 111, Pleasantville, NJ 08232. Phone: 1-800-257-8650 or 609-645-5100.
Date of Introduction: 1990. June.
Ingredients: Alpha-galactosidase enzyme from *Aspergillus niger* in a glycerol and water carrier. By May 1996 the carrier was corn starch, sorbitol, mannitol, and hydrogenated cottonseed oil.
Wt/Vol., Packaging, Price: 12 serving bottle (0.9 fluid oz) or 75 serving bottle (0.55 fluid oz). They retail doe $1.95 and $8.95 respectively.
How Stored: Shelf stable.
New Product–Documentation: Letter from Nancy Hamren of Springfield Creamery in Oregon. 1990. Dec. 11. Lactaid in Pleasantville, New Jersey, has recently launched Beano, an enzyme product that eliminates gas from beans. Talk with Luanne Hughes, nutritionist at Lactaid Inc. 1990. Dec. 19. This is sold only as a consumer retail product that was introduced in mid-June 1990 but was not available in most supermarkets, health food stores, or drug stores until October. To use, add 3-8 drops to the first bite of your food at the table. Then the enzyme, alpha-galactosidase works in the stomach to break down the indigestible oligosaccharides in beans that cause gas, into simpler sugars that the body can digest. The product is brown, looks like soy sauce, and has a slightly salty flavor. To use it with soymilk, do not disperse it a glass of the milk. Rather put the drops on a cracker and eat that first or put the drops into a spoon and consume or directly on your tongue or dissolve them in several tablespoons of soymilk and drink this before drinking the rest. That way the enzymes will be in the stomach when the rest of the milk arrives there. Do not cook with Beano; it is not heat stable. Heat inactivates the enzymes.

Samples, leaflets, news releases, and Labels sent by Luanne Hughes. 1990. Dec. 19. Label. Bottle is shrink packed into white paperboard. 4.25 by 5.25 inches. Green, black, and red on white. "Beano drops. Prevents the gas from beans*... and cabbage, peas, broccoli, eggplant, soy, and many others. A social and scientific breakthrough. Beano drops. The gas preventer." Other "gassy" foods include cauliflower and oats.

Ad in Vegetarian Times. 1991. Feb. Full-page, color. "An important dietary announcement for all... Gassy foods without the gas... Beano is sold at your pharmacy."

Counter-ad (full page, color) by Quad Laboratories (Wyckoff, New Jersey) in NFM's New Product Review. 1996. Summer (May). Inside rear cover. "What's the difference? Why pay more?" Compares Quad's product named "Beans, Beans" with Beano tablets.

Call from Beano sales lady. 1996. Oct. 15. A published 1994 scientific study shows that Beano is effective. Alan Kligerman invented Beano and the enzyme that hydrolyzes lactose (milk sugar), used to make Lactaid. Shortly after it was introduced, he renamed his company, Lactaid Inc. to Akpharma Inc. because he was licensing the Lactaid brand to Johnson & Johnson. He sold the brand to them in 1996. Akpharma recently introduced a new product, Prelief, a dietary supplement that neutralizes acidy/acidic foods, the main ones being coffee, orange juice, and tomatoes. Prelief contains calcium.

5946. Lark, Susan M. 1990. The menopause self help book: A woman's guide to feeling wonderful for the second half of her life. Berkeley, California: Celestial Arts. 239 p. 22 x 22 cm. [228* ref]
• ***Summary:*** The title page states: "The first completely practical all-natural master plan to relieve and prevent every symptom of menopause."

Soy is mentioned as follows: Dairy products: There are many negative health aspects of using dairy products. Soybeans are a good source of calcium. Soy milks and nut milks can be used as alternatives to dairy milk (p. 46). Breakfast–beverages: Stop using coffee, which contain caffeine. Grain-based coffee substitutes such as Postum, Pero, or Caffix are both nutritious and satisfying. Other good breakfast beverages include nondairy milk, such as soy, nut, or grain milks. Soy milk is now easy to find in health food stores (p. 52-53). Spreads: Peanut butter (without added salt), sesame butter (which is rich in calcium), and soy spreads

are good (p. 55). Soups: For women who can't eat soup unseasoned with salt, try adding one teaspoon of miso per cup of soup. Miso, a fermented soy product from Japan, is widely available at Oriental markets and health food stores. It contains less salt than regular table salt. How to substitute for dairy products: Tofu can be used in some recipes to replace cheese. Use soy milk, nut milks, or grain milks in place of dairy milks (p. 70). Substitutes for common high-stress ingredients: In place of 1 cup milk, use 1 cup soy milk, nut milks, or grain milks. In place of ½ teaspoon salt, use 1 tablespoon miso or ½ teaspoon Bragg's liquid amino acids, or ½ teaspoon sea vegetables–dulse, kelp (p. 72-73).

Chapter 8, titled "Menopause self help cookbook," contains many recipes: A "Fruit smoothie" (p. 75) contains only fruits, no dairy products or soy. For recipes for sesame milk and almond milk, see p. 76. Tofu and sesame-butter spread (p. 79). One dish meals: Almond tofu (Tofu with almonds), and Tofu with snow peas (p. 94). Tofu-wild rice salad (p. 95). Tofu & brown rice (p. 96). Apple-tofu custard (p. 97).

In chapter 10, titled "Herbs for menopause," is a section on "Herbs for your menopausal symptoms." The subsection titled "Heavy irregular menstrual bleeding" notes that bioflavonoids, flavonoids from plants, help to strengthen capillaries and prevent heavy bleeding. The section titled "Hot flashes" states: "Many plants are good sources of estrogen, the hormone that helps to control hot flashes. Besides controlling heavy menstrual bleeding, bioflavonoids also have weak estrogenic activity (1/50,000 the strength of estrogen). They are very effective in controlling such common menopause symptoms as hot flashes, anxiety, and irritability... Plants also form the basis for the production of medical hormones. Many common plants such as soy beans and yams contain a preformed steroidal nucleus. Estrogen and progesterone can be synthesized from plants in relatively few steps and have allowed sex hormones to become available commercially at a reasonable cost" (p. 127-28).

Susan M. Lark, M.D., born in 1945, "is a noted authority on women's health care and preventive medicine. She is the Director of the PMS and Menopause Self Help Center in Los Altos, California. She also sees women patients in her private practice. Dr. Lark has been on the clinical faculty of Stanford University Medical School, Department of Family and Preventive Medicine. She is also an associate member of the Department of Family Medicine, El Camino Hospital in Mountain View, California. Dr. Lark lectures widely on women's health care issues and is a sought-after speaker."

On the inside rear cover is a mail order form for Dr. Lark's Menopause Self Help Book, plus 3-month supplies of Menopause Vitaminerals, Herbal Formula, and Essential Oil, to be sent to Self Help Options for Women, Carson City, Nevada. On the rear cover is a portrait photo of Dr. Lark. Address: Director, The PMS and Menopause Self Help Center, 101 First St., Suite 441, Los Altos, California 94022. Phone: (415) 964-7268.

5947. Loma Linda Foods. 1990. For sale: Soy milk plant located in Ohio (Ad). *Soya International* (*Bar Harbor, Maine*). April/June. p. 27.
• ***Summary:*** The plant, being sold by Loma Linda Foods of Riverside, California, includes 122 acres of land, 26,000 square feet of plant and warehouse building, 14,400 sq. feet of office building and laboratory, 3,600 sq. feet of raw material storage building, equipment including a retort line, three residential properties, and a large storage area and garage building. "The plant is a cost efficient operation under local management."

Note: This plant was built and started by Dr. Harry Miller in 1939. Loma Linda is consolidating their soymilk production operations in Riverside, California. Address: Riverside, California.

5948. *Soya International* (*Bar Harbor, Maine*). 1990. SAA loses battle for aseptic soymilk exemption in Maine. April/June. p. 7.
• ***Summary:*** The Maine legislature recently defeated a request by the Soyfoods Association of America for a soymilk exemption to the ban on aseptic packaging. The strict new solid waste bill takes effect in Maine on 1 Sept. 1990.

5949. **Product Name:** Yeo's Soy Bean Drink.
Manufacturer's Name: YHS Pacific Fruit Concentrates Ltd. (Yeo Hiap Seng).
Manufacturer's Address: 11880 Machrina Way, Richmond (near Vancouver), BC, V7A 4V1, Canada. Phone: 604-277-7707.
Date of Introduction: 1990. June.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Ontario Soybean Growers' Marketing Board (OSGMB). 1990. "A profile of the Canadian soyfood market–Characteristics and potential." March. p. ii, 19. "A [soymilk] plant is being established near Vancouver, BC, which will supply both that and the Western U.S. market." The plant "is being built by an international trading company."

Talk with Fred Brandenburg of the OSGMB. 1991. Jan. 23. This plant is run by Yeo Hiap Seng. It opened in March 1990, and he attended the gala opening; they had the press there, a print packet, news releases, and the whole works. The plant is quite impressive and definitely state-of-the-art. They only have one line right now, making soymilk in cans. They bought a bankrupt co-op that was already making fruit juices. In early Oct. 1990 the *Vancouver Sun* and *The Province* (from Vancouver) both ran stories on the company.

Talk with Wimsey Lam of YHS. 1991. Jan. 29. The company started producing canned soy bean milk in June 1990. They presently have only one soy product.

5950. Muso Shokuhin. 1990. [Pure heart: Muso general catalogue]. Otedori 2-2-7, Chuo-ku, Osaka 540, Japan. 88 p. Printed 1 July 1990. 30 cm. [Jap]
• ***Summary:*** This strikingly beautiful, full-color catalog, pictures and describes Muso's natural-food macrobiotic products in Japanese for the Japanese market–although the title is written only in English. Includes many kinds of miso, shoyu (incl. Marushima Shoyu), black soybeans, yellow soybeans, kinako [roasted soy flour], seitan (in a jar from Marushima, p. 41; the product name is written as "Seitan" in large roman letters, then in smaller letters in katakana), San-Iku Foods canned products (Gluten Burger, Gluten Meat, Linketts, Soyees, Snack Joe; p. 41), yuba, gomoku nimame (cooked whole soybeans), many kinds of sea vegetables and related products, San-Iku Soyalac (8 different products), Marusan soymilk (5 different products; 3 are named mineral tou-jyan; the latter is the Chinese term for soymilk), macrobiotic books. Address: Osaka, Japan. Phone: 06-942-0343.

5951. Rabheru, Neil. 1990. Brief history of Unisoy Milk 'n' By-Products Ltd. (Interview). *SoyaScan Notes.* July 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Neil, who founded this company, was born in Tanzania. One of his parents was of Indian origin (born in India). He arrived in the UK in 1972 and went to work for a very large electronics company. By the mid-1980s he had cornered himself into a very specialized field of environmental testing and performance of defence equipment. The next step up in the organization was a long way away, so having run out of excitement in life, he began to look for more rewarding work. While doing a little import/export work he met an Indian named Mr. John Patel [pronounced puh-TEL] who suggested to him that they start a company to make soymilk, soy ice cream, and burgers. Mr. Patel did not have any money. The company was founded in June 1985. Before anything else happened, Neil became very concerned over irregularities in Mr. Patel's financial activities, and decided to discontinue his involvement with Mr. Patel. A few days later Mr. Patel died unexpectedly on 5 Nov. 1985. On Nov. 10-12 Neil selected the location for his new plant, then he raised the necessary startup capital from five venture capitalists in high tax brackets, but he was the company's only executive. Neil was never in any way involved with Michael Cole or with Soya Health Foods Ltd. (which is still owned by Mr. Arora, a Sikh) despite what others have said. Jan Freeman is presently involved with Unisoy.

In May 1986 Unisoy began to make its first product, White Wave Soya Milk (plain/unsweetened, or sweetened with raw cane sugar) at their present address. Before this time, the soymilk market in the UK was "very stagnant and boring, with limited growth. There was a very high price differential between dairy milk and soya milk. Soymilk packaging was poor. The ratio of the volume of business to the number of brands on the market was too high. Too many brands were fighting for too small a market. There was tremendous brand loyalty, promoted in part by the wide range of product tastes. That was Unisoy's biggest problem. So Unisoy decided to crash the price barrier, and develop some nice packaging and a better tasting, much creamier product." To learn how to make soymilk, Rabheru did an extensive study of the literature. He found many conflicting opinions but agreement on some basic points. To help resolve these, he consulted with Dr. H.L. Wang at the USDA Northern Regional Research Center in Peoria, Illinois. He developed a unique process, purchased a soymilk plant from Taiwan, modified it with steam injection and instrumentation to suit his application (he has an engineering background), developed soymilk products, ran taste tests, and continued improving his process. Unisoy's main competitors in the soymilk market at that time (and still today) were Alpro/Vandemoortele and Granose. Unisoy has taken over virtually all of the market share of Soya Health Foods Ltd., mostly because of better quality and lower price.

In May 1987 Unisoy introduced White Wave Soya Yogart, a line of products were yogurt-like desserts in fruit flavors with a shelf-life of 10-11 weeks with aseptic packaging. This was followed by Unisoy Carob & Banana Organic Drink (Aug. 1988), Unisoy Gold soymilk (March 1989), Maranellis Ice Supreme (soy ice cream, May 1989), and Unisoy Soy Yogart (Aug. 1989). All the previous soy ice creams and yogurts in the UK had contained soy protein isolates, since the manufacturers did not know how to make soymilk with a high protein levels. Even today, all the soy ice creams in the UK are made from soya isolates. Unisoy makes a special rich soymilk used specially for making their ice cream.

Over the years Unisoy steadily improved its soymilk process with numerous innovations. They now make excellent quality soymilk without dehulling the soybeans, without adding any oil or lecithin, and using only 1-2 people to operate the largely automated plant.

In Dec. 1988 Neil sold the company to Daisy Dairies Ltd. This cooperative group of companies has their head office in Hyde, Cheshire, and they also have fresh milk, UHT, catering, and ice cream manufacturing divisions, plus now Unisoy. He would prefer not to comment on the effects/results of the sale. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

5952. Rabheru, Neil. 1990. The soymilk industry and market in the United Kingdom (Interview). *SoyaScan Notes.* July 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are only two significant manufacturers of soymilk from soyabeans in the U.K.; Unisoy and Soya

Health Foods Ltd. Plamil Foods Ltd. buys soy protein isolates from Protein Technologies International, then subcontracts with a dairy to have these mixed with water and other ingredients, according to Plamil's formula, to make a soymilk. As far as he knows, Plamil has never purchased soybeans to make soymilk and has never had their own plant. Haldane used to import its soymilk from France. This soymilk was made, not from soybeans but from some kind of a spray-dried formulation. Then Unisoy started supplying Haldane, but that contract came to an end when Haldane was acquired by another company. Neil thinks they are now importing again, probably from France, not from Australia. Haldane's imports are very small. Neil has never heard of Itona Products Ltd. in Wigan, Lancashire [although they are still in business in 1990].

Of the soymilk made in the Unisoy produces well over 50%. Approximately 18-20 million liters of soymilk are sold and consumed in the UK each year. It is the biggest soymilk market in Europe, and it is growing at the rate of roughly 15-26% a year. "The growth has been phenomenal, and the bulk of the growth in the European soymilk market seems to have been in the UK." But he doubts very much that it is growing faster than 26% a year. The estimated market shares by company are: Alpro/Vandemoortele 51%, Granose 15-17%, Unisoy 15-17%, and others (Plamil, Soya Health Foods, Haldane, etc.) 15-19%.

In terms of outlets, Granose is sold only in health food outlets. Unisoy's best-selling and most profitable line is its four soyamilk products. White Waves sugar free has long been the best selling single product, but it is rapidly being overtaken by Unisoy Gold (fortified with vitamins and minerals), which has been a phenomenal success. The bulk of Unisoy's soyamilk sales is in national multiples/grocery chains. Of all Unisoy's products, about 65% of sales is in multiples and 35% in health food stores. Plamil has its own clientele; its products are very popular among vegans. Soya Health Foods Ltd. has been able to survive largely because of their soy ice cream, which was one of the first ones on the market in the UK [after Sojal and SoyBoy Soymilk Ices from the Regular Tofu Co.] and the most widely available brand for a long time. Soyamilk is a very small product for Soya Health Foods Ltd. now.

Alpro/Vandemoortele did the pioneering work in getting soymilk into British multiples (supermarkets). In about 1982 Safeway (which has its origins in America), became the first multiple (supermarket chain) to sell soymilk in the UK. They sold the Alpro/Vandemoortele line but they sold only a small quantity. Safeway has always purchased its soyamilk from Vandemoortele. Michael Cole of Soya Health Foods Ltd. also deserves a good deal of credit for the growth of soymilk in the UK. He did the early work in getting British-based supermarkets, large chain stores, and normal grocery stores interested in carrying soyamilk. By late 1985 Cole was selling large amounts of his aseptically packed Sunrise Soya Milk to multiples, including Tesco. "Cole did the solid job of marketing and bringing soyamilk into the perspective it is in now. Then he left Soya Health Foods in mid- to late-1987." He started his own consulting company. Today every multiple in the country, including the large chemist chains (drug stores) are now offering soyamilk to the consumer.

Unisoy exports their soymilk to the Netherlands, Italy (to Parma Soia), and Ireland. It is also sold in Portugal. It used to be sold in Belgium. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

5953. Tabuchi, Ichiro. 1990. [Re: History of Soyalac soymilk production by San-iku Foods in Japan]. Letter to William Shurtleff at Soyfoods Center, July 4. 1 p. Handwritten, with signature on letterhead. [Jap; eng+]

• ***Summary:*** In 1948 Mr. Tabuchi visited Dr. Harry W. Miller and studied at his soymilk plant in Mt. Vernon, Ohio. During this period, Dr. Miller visited Nihon San-iku Gakuin (a Seventh-day Adventist school located at Chiba prefecture, Sodegaura-cho) almost every year and earnestly advised the people there to make soymilk. In about 1957-58 they started to make soymilk at a tofu plant that was owned by Mr. Ueda. They bottled it in 180 ml dairy milk bottles, which they sold with their tofu. It was a small scale operation and it didn't last long.

In 1959 at the Food Department of Nihon San-iku Gakuin, they set up a tofu manufacturing plant and started to make soymilk in 180 ml milk bottles for the school's lunch program. Several years later they started to make canned soymilk for general consumers. In order to help introduce the soymilk to the school, Dr. Miller lived on the school campus for 2 months. He taught and gave orientation to the students.

In 1970 San-iku Foods became independent from the San-iku Gakuin Food Department and started to make and sell infant formula. Address: San-iku Foods, Japan.

5954. Michael, Brenger. 1990. History of La Fonte della Vita S.r.L., Italy's largest manufacturer of tofu and seitan (Interview). *SoyaScan Notes*. July 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This company was founded in Feb. 1985 by Mr. Demontis and his wife, Ms. Borello, on Via Matteotti?, in Fossano, about 35 miles south of Torino (Turin). He joined the company in the fall of 1985 and became a partial owner. He learned to make tofu from *The Book of Tofu* by Shurtleff & Aoyagi. Today the company is owned by 5 people, with the DeMontis owning the largest share; Mr. Mario Cozio joined later. Originally the company made only nigari tofu, but by autumn they had introduced 4 tofu spreads (tofu pâté), and soymilk. In April 1986 the company moved about 15 miles further south to Via Circonvallazione 87, 12049 Trinita (Cuneo), Italy. They are still at the same location but the street was renamed in about 1987? so that their present

address is Via Monviso 18, 12049 Trinita (Cuneo). After the move, they introduced two types of seitan (plain and fried), fried tofu, tofu with herbs, then two tofu burgers (one with sea vegetables, and one with seitan). They used to make soymilk but after it grew to a certain level they stopped making it and began buying it from a company in Belgium [probably Alpro], so that they could focus on expanding tofu production. In June 1990 they began making tempeh.

Today they are the largest among 5 tofu manufacturer in Italy. They make about 2,500 kg/week of tofu and have 23 employees. The company's best-selling product is fried seitan, followed by natural seitan and regular tofu (about equal), tofu burgers, and tofu spreads. During the last year sales have grown about 30%, due in part to an aggressive program to introduce 2-3 new products a year. New products are tempeh and seitan burgers. Address: Via Monviso 18, 12049 Trinita (Cuneo), Italy. Phone: (0172) 66 397.

5955. Michael, Brenger. 1990. The tofu market in Italy (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Demontis, head of Fonte della Vita, knows the Italian tofu market better than Michael Brenger, since Brenger is tofu production manager. But Brenger speaks English better than Mr. Demontis. There are five tofu manufacturers in Italy. The largest is La Fonte della Vita (in Trinita, near Cuneo, about 50 miles south of Turin), which makes about 2,500 kg/week of tofu. Second largest is probably Terra e Pane (Chinzena? near Ravenna [actually S. Arcangelo di Romagna near Forlì]; they also make soymilk, tofu spreads, and seitan), followed by Soyalab near Firenze (Florence; they are about ¼ to 1/5 the size of Fonte Della Vita), Arc-en-Ciel srl (a cooperative at Loc. Molino 4, 10070 Ceres, 20 km from Torino/Turin; they make more seitan than tofu), and Sunsoy Food (Bologna; very local and small). Total production of the five is estimated at 5,000 kg/week of tofu, or about 250,000 kg/year. All these companies make tofu from whole soybeans and sell the tofu at natural and health food stores. Recently Parma Soia and Medical Soy started selling soy products, including some tofu products, but they sell to the mainstream market through supermarkets rather than to the alternative market. Their tofu products use tofu only as an ingredient; they do not sell tofu as such. They make a vegetable cheese and add about 20% tofu. He does not know from whom they buy their tofu. The first tofu maker in Italy was Gilberto Bianchini of Centro Macrobiotico Tofu (Via Cuoco 9, 47037 Rimini, Italy), but he stopped in about 1986 and moved to Belgium. Ferro Ledvinka at Fondazione Est-Ouest only makes tofu for their own macrobiotic restaurant; they buy some of their tofu from Fonte della Vita and Soyalab, and they also do health counseling. Address: Production Manager, La Fonte Della Vita, Via Monviso 18, 12049 Trinita (Cuneo), Italy. Phone: (0172) 66 397.

5956. Nissenbaum, Robert. 1990. The early work of Imagine Foods with Chico-San, California Natural Products, and enzymes in making Rice Dream (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The term "Rice Dream" was first used to refer to a nondairy frozen dessert. Address: President Imagine Foods, 299 California Ave., #305, Palo Alto, California 94306. Phone: 415-327-1444.

5957. *SoyaScan Notes.* 1990. The meaning of the symbol "e" appearing on European food labels (Overview). July 19. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This is a European Economic Community mark, usually written just to the right of a product's weight (e.g. 250 g e), signifying that the product has been packaged under the average weight system as covered by the United Kingdom's weights and measures act of 1985.

5958. Svejgard, Torben. 1990. Soy protein concentrates in Europe (Interview). *SoyaScan Notes.* July 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Central Soya is building a soy protein concentrate plant in Italy, south of Venice. They also have a joint venture with a Yugoslavian company named Preduzcce Sojaprotein Becej, which is building a functional concentrate plant in Yugoslavia. The plant in Italy will provide the raw material for the plant in Yugoslavia. He is quite sure that ADM will soon start to build a concentrate plant in Rotterdam. He feels that these two U.S. companies are overestimating the potential demand for concentrates in Europe. They probably made their market studies in 1989 when there was an enormous demand for concentrates to be used in calf milk replacers, due to a lack of nonfat dry milk. But now the situation is more normal and the demand for and production of calf milk replacers has fallen off sharply. The American companies think that when it becomes legal in Germany to use soya proteins with meat, there will be an explosion in demand, but Torben thinks that this will grow only very slowly because German consumers do not presently want soy in their meats. Europeans are much less concerned than Americans about cholesterol intake; calorie intake is a bigger issue in Europe.

Loders Croklaan (pronounced krok-LAAN) and Aarhus are the two biggest European manufacturers of soy protein concentrates. They are about the same size [Loders says that Loders is bigger]. Loders started making concentrates in the mid-1970s [1976], at about the same time as Aarhus. Loders is a subsidiary of Unilever, in the same division as the oil and fats specialty division. In the USA the division is called Van den Berg. They make Soycomil K and P (calf milk replacer and piglet milk replacer). They also sell a concentrate for food use (Unico) but they are much bigger in the feed area.

They do not make textured concentrates. They also have Unisoy, a regular defatted soy flour sold in small amounts. In addition, they are a soybean crusher.

Note: Aat Visser, sales and marketing manager for Loders notes in a letter of 6 Aug. 1990: "Loders Croklaan is substantially larger than Aarhus and continues to be the largest European manufacturer of soya protein concentrate. Loders Croklaan (at that time Unimills) started to produce concentrates on a pilot plant scale in 1973. In Jan. 1976 the full-size plant was completed. Although the main sales of Soycomil K and P are to the specialty feed industry, the sales of Unico for food use are becoming more and more important. A textured soy protein concentrate is produced on the basis of Unico and marketed under the name Unibit. Unisoy is sold mainly in flour, grit, and flake form. The grit is used as a raw material for extrusion, and the flakes for solvent extraction processes." Address: Marketing Manager, Aarhus Oliefabrik A/S, 27 M.P. Bruunsgade, P.O. Box 50, DH-8100 Aarhus C, Denmark. Phone: 45 86 19 62 52.

5959. Gerner, Bob. 1990. Best-selling soyfoods at Berkeley Natural Grocery Co. in Berkeley, California (Interview). *SoyaScan Notes.* July 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** By far the best selling soyfood product type at Bob's store is soymilk, accounting for 50-65% of total soyfoods sales. The best selling brands, in descending order of sales volume, are Vitasoy (about 40% of soymilk sales, and rising; his store promotes it more in part because he sees sales reps longer and in part because the Vanilla Vitasoy is his favorite soymilk product), Edensoy (30-35% and falling; it used to be the best seller), Westsoy and Westbrae Malteds (20% and rising), Pacific Soy (from Tree of Life), and Other (Wildwood Yosoy, Quong Hop, Soy Moo, AhSoy, 5%).

The next best selling soyfood type is tofu (accounting for about 20% of total soyfoods sales, and rising), followed by soy sauce & tamari (10%, stable), soy cheeses (4%, rising), tempeh (2%, falling), soy ice cream (1%, stable or falling), and miso (1%, falling).

Total per capita purchases of soyfoods have risen steadily since the mid-1970s. There have been no plateaus or declines.

Bob dislikes (but understands) the way soymilk manufacturers discount their products, basically forcing him to buy very large quantities–typically 60 cases at a time. This policy favors large retailers, ties up a lot of his capital up-front, and takes up a lot of space in his warehouse. So 95% of the time he buys Vitasoy and Edensoy soymilk when they are on sale at discount prices, then he sells these at discount/sale prices–a practice that he does not like since it seems to contradict the idea of a "sale." Customers won't buy soymilk any more at "regular" prices. Bob would rather buy what he needs from week to week, then sell all products at a regular price most of the time, then have promotions once in a while. Vitasoy has played a lot of games with distributors to try to get them to buy more at one time, and Bob has heard that this is hurting the distributors and that they don't like it. They can't make money selling at an 8% margin, which they often must do. Edensoy's discount is constant whereas Vitasoy has on and off discounts–which makes buying harder for Bob. Westbrae/Vestro has a more typical discount policy and Bob sells Westbrae products at a regular price most of the time. Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

5960. Fleming, Diana J. ed. 1990. Country Life vegetarian cookbook: Delicious recipes from the kitchen of the Country Life vegetarian restaurants. Family Health Publications, 13062 Musgrove Highway, Sunfield, MI 48890. 190 p. Index. 23 cm.

• ***Summary:*** This book contains the most popular vegan recipes from Country Life vegetarian restaurants. In 1966 the first Country Life Restaurant opened its doors in Grand Rapids, Michigan. Today the 15 Country Life Restaurants, though all independently owned and staffed by Seventh-day Adventists, "share a common commitment to serve delicious, wholesome, 100 percent vegetarian food. They are also dedicated to furnishing educational programs, to ministering to the needs of the community, and to providing a relaxed, Christian atmosphere as a refuge for customers from the stresses of the work-a-day world." A list of the addresses and phone numbers of the 15 County Life restaurants (10 in the USA, 3 in Europe, and 2 in East Asia) is given on page 4.

"Soy or nut milk" is called for in many recipes throughout this book. Soy-related recipes include: Soy-oat waffles or pancakes (p. 20). Carob-banana tofu topping (p. 25). Tofu-pineapple "cottage cheese" (p. 28). Soy raisin puffs (with cooked whole soybeans, p. 35). Fluffy soy-corn muffins (p. 36). Scrambled tofu (p. 38). Chipped tofu (p. 39). Tofu cheese rarebit (p. 40). Tofu potato latkes (p. 41). Soy whipped cream (#1-#3, p. 60-61). Tofu whipped cream (p. 61). Tofu orange whipped cream. Tofu cheesecake (p. 66). Carob tofu cheesecake. Tofu loaf (p. 73). Kidney bean and tofu pie (p. 83). Pasty (filled with frozen tofu, p. 84). Soybean creole (p. 88). Tofu balls (p. 93). Lasagne (with crumbled tofu, p. 94). Stuffed shells (with tofu, and soy mayonnaise or soy sour cream). Eggplant Parmesan (with tofu). Tofu cacciatore (p. 96).

Stir fry vegetables (with tofu, p. 103). Tofu foo young (p. 105). Oriental medley (with tofu, p. 106). Walnut cheese spread (with tofu, p. 108). Gluten and broth. Teriyaki sauce (with soy sauce, p. 111). BBQ sauce (p. 112). Tofu "egg" salad (p. 118). Thousand island dressing (with soy mayonnaise, p. 120). Olive dressing (with soy base, or Soyagen, p. 121). Soy mayonnaise (#1 with soy milk, #2 with soy base, #3 with Soyagen, p. 123-24). Tofu mayonnaise (p. 125). Aioli or garlic mayonnaise #1 (with soy

milk). Soy sour cream (p. 126). Soy margarine (#1 and #2). Tofu cottage cheese. Tofu tomato stars (p. 135). Sour cream potatoes (with soy sour cream or mayonnaise, p. 139). Tofu gumbo soup (p. 146).

Soy milk (#1 from soy beans, #2 from soy base, p. 149). Soy base (from soy flour, p. 150). Basic nut milk (with cashews, walnuts, filberts, or Brazil nuts, and honey or dates, p. 151). Cashew-pear milk (p. 152). Half and half (with cashews and almonds). Almond milk supreme... plus many other nut and fruit milks.

One innovative ingredient in many recipes is "Lecithin-oil slicker: This is a replacement for products such as Pam, a food release spray. Pour 6 parts oil, not olive, peanut or sunflower, into a jar with 1 part liquid lecithin. Cover tightly and shake well. Keep at room temperature. Do not use lecithin granules. Measure oil first then use the same utensil to measure lecithin to help prevent sticking of lecithin on utensil."

At the end of the book are several very interesting chapters: "The protein myth: When too much of a good thing is a bad thing," by M.G. Hardinge and W.C. Andress. One very interesting table (taken largely from G. Bunge 1902) shows that the longer it takes for a baby animal to double its birth weight, the lower the protein content of the mother's milk. Humans, with 1.4% protein in the milk, take 180 days (the longest). Cats, with 9.5% protein in the milk, take only 7 days (the shortest). A second chapter is titled "Dietary fat–good or bad?," by Bernell E. Baldwin. Address: Michigan.

5961. *Health Now* (*England*). 1990. Plamil's 25th silver anniversary. July.
• ***Summary:*** From the beginning, Plamil has had "vegan nutritional requirements uppermost in mind with the provision of the necessary calcium and vitamins B-2, B-12, and D-2–this in contrast to some other brands of imported soya milk which are devoid of these nutrients."

5962. Hsiao, Laurence. 1990. Role of Taiwan soybean importers. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 13-15. [Eng]
• ***Summary:*** In Taiwan, soybeans are imported primarily from the USA. During the days of the Soybean Importers Joint Committee (SIJC) other countries producing soybeans complained that the Taiwanese market was, in effect, closed. However since soybean import liberalization on 1 July 1988, the SIJC was abandoned, yet almost all soybeans are still imported from the USA.

While SIJC was active, each importer declared his requirement based on import volume the preceding year plus or minus 10%. Then the Committee reported to the Government Authority, which invited tenders from suppliers. Because soyfood manufacturers had to rely on soybean oil millers for their supply, the quality was greatly restricted. Hence Taiwanese consumers did not enjoy the high quality of tofu and soymilk found in other countries.

Although soybean imports are bound by the "Sino-America Grains Agreement," which requires that Taiwan purchase at least 1.2 million tonnes/year of soybeans from the USA, the importers now have more flexibility in dealing with the suppliers. Thus the market is now more price-oriented. But food soybeans are still imported in the same way. Hence, soyfood manufacturers still complain about their poor quality.

Preliminary research has shown that the yield of tofu from Ontario special quality white hilum soybeans is 15% higher than from U.S. #2 soybeans. In Taiwan, most food soybeans are sold in 50 kg bags in small lots of 10-25 tonnes/lot. The author advises Ontario suppliers to promote their soybeans on the basis of yield and quality, and to try to build these factors into their price structure. In conclusion, in Taiwan the market for food soybeans is undeveloped. The time is ripe for Canadian soybean exporters to penetrate this market. "Initially you may find that price is a major factor. Do not be discouraged."

Addendum: The following documents are available from the Ontario Soybean Growers' Marketing Board: 1. Sino-America Grains Procurement Agreement. 2. Bulk Carrier Charter Agreement. 3. Soybean Importers Joint Committee Tender Invitation. 4. Chronology of 1988 Soybean Shipments to Taiwan. 5. Sales Agreement of Paraguayan Soybeans. Address: Vice President, Sun Ford Conglomerate Corp., 21 Lin 1 Street, Taipei, Taiwan. Phone: (02) 321-1005.

5963. Loh, Michael. 1990. An overview of export opportunities in the new markets. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 10-12. [Eng]
• ***Summary:*** It has been almost 20 years since the first container load of soybeans grown in Ontario was shipped to Japan. By the end of 1989, Ontario was exporting more than $25 million worth of soybeans to Japan, Hong Kong, Malaysia, and Singapore. Now the new markets for Ontario soybeans are Korea, Taiwan, the Philippines, and Indonesia.

In Korea, trade restrictions have eased on soybeans and other agricultural products. With hefty trade surpluses, Korea is under pressure to balance trade. Korea soybean imports jumped from only 428,000 tons in 1979 to 1,100,000 tons in 1989. About 120,000 tons of the imported soybeans are for food use, as follows: Tofu 100,000 tons (83% of the total), soymilk 17,000 tons, and soy sprouts 2,000 tons. Nearly all of Korea's soybean imports come from the USA.

Taiwan ranks second, after Japan, in terms of best prospects for agricultural exports. The strong Taiwanese currency has made exports less expensive. Burgeoning trade

surpluses have led to increasing pressures from trading partners, like the USA, to balance trade. So Taiwan has liberalized imports by lowering tariffs and eliminating non-tariff barriers. "U.S. soybean exporters took advantage of their dominant market position in Taiwan to expand sales. Backed by aggressive trade negotiators, the American soybean industry has enhanced its competitive position by securing a 5-year supply agreement contract with the Government of Taiwan. The agreement calls for the purchase of 5.7 million tons of U.S. soybeans over a five-year period from July 1, 1986 to June 30, 1991. As a result the United States has over 75% of the market share. Taiwan's annual requirements of food soybeans are estimated at 250,000–300,000 tons. With recent market opening measures announced by the Taiwanese government, direct sales of food soybeans to end-users are now permitted."

Philippines: In Feb. 1987 Michael led a mission to the Philippines, and contacted a buyer. Ontario soybeans were first shipped to that country later in 1987. The Philippines import about 10,000 to 15,000 tons/year of soybeans for food use, and this is expected to increase in the near future. Filipro, Inc., which is the Philippines' licensee for Nestle S.A., reported increasing market acceptance of its re-launched powdered soya milk product Vita (chocolate flavor), and a soy-based baby cereal named Ceresoy.

Indonesia: Ontario soybeans (worth $4.2 million) were first sold to Indonesia in 1980 after Canada's first mission there that year. 90% of the 1.7 to 2.0 million tons of soybeans required by Indonesia are used for food. Tempeh is a delicious Indonesian food and Indonesia requires over 750,000 tons/year of soybeans to make tempeh. Address: Senior Representative, Asia/Pacific Region, Ontario Ministry of Agriculture and Food (OMAF), Tokyo, Japan.

5964. MacNeil/Lehrer Newshour. 1990. Osteoporosis. Television broadcast. PBS. July 11. *

• ***Summary:*** It is estimated that some 15-20 million Americans, the majority of them women, suffer from osteoporosis. It is a painfully debilitating disease, marked by the progressive loss of bone tissue. The bones become thinner and more brittle. It causes 1.3 million spine, wrist, and hip fractures each year among the elderly. The victims of osteoporosis are mostly post-menopausal women, those whose bodies produce less estrogen and absorb less calcium. Their bones loose density, becoming more fragile as the years go by. Fair-skinned women, thin women, women who smoke, and those who don't exercise are at the greatest risk. Today machines that measure bone density have allowed experts to spot osteoporosis in its early stages. Calcium supplements for women over the age of 35 have no effect. Estrogen treatments increase heart disease, and uterus cancer 300-500%. Unlike estrogen, a new drug, etidrinate (uh-TID-ruh-nate) does not appear to have harmful side effects. It stopped the loss of bone in the spine and reduced by 50% the loss of new spinal fractures. The drug is now awaiting FDA approval for treatment of osteoporosis. Dr. Watts in Atlanta, Georgia, has done a study to published in tomorrow's *New England Journal of Medicine.* 429 women with osteoporosis (all had at least one vertebral [ver-TEE-brul] compression fracture, the most common complication) were studied at 7 centers for 2 years; it will continue for a total of 5 years. The women receiving the drug gained 4-5% bone mass and had a 50% lower rate of new fractures. A earlier but shorter Danish study got the same results.

"Bone remodeling" is a natural process constantly taking place. Old bone is taken away and new bone is put in its place. The bone in the spine is spongy or trabecular bone. It has a very high rate of bone remodeling. The bone in the hip contains both trabecular and cortical (or compact) bone, which is remodeled more slowly. Osteoporosis effects spongy bone more. Etidrinate seems to inhibit the amount of bone being removed in the remodeling process, this changing the balance. Estrogen is a very valuable drug for preventing bone loss. Calcium supplements cannot reverse osteoporosis.

5965. Shurtleff, William; Aoyagi, Akiko. 1990. Soymilk in Europe: The industry and market, commercial products, publications, and history. Lafayette, California: Soyfoods Center. 261 p. July 17. Indexes. 28 cm. [763 ref]

• ***Summary:*** Since the mid-1980s, the soymilk industry and market in Western Europe has been booming, and the future looks very bright. Many large companies with plenty of capital and marketing expertise are entering the market, product quality and diversity is steadily improving, and consumers are showing and increased interest in nutritional protein beverages that are free of cholesterol and lactose, and low in saturated fats.

Soymilk production and growth rate: Production of soymilk in western Europe as a whole is estimated to have grown to 30–42.5 million liters/year (7.9–11.2 million gallons/year) in 1990, up from only 6-10 million liters/year (1.59–2.64 million gallons/year) in 1984, a roughly fivefold increase in 6 years. This represents an average compound growth rate of about 30% a year.

Estimates of total market size (not including infant formulas): Philippe Vandemoortele, managing director of Alpro, Europe's largest soymilk manufacturer, estimates the adult soymilk market in Europe to be 30 million liters/year. Asger Somer Hansen, managing director of DTD/STS, one of Europe's two largest suppliers of soymilk plants, estimates 35-40 million liters/year. Anders Lindner, managing director of DTD/STS until late 1989, estimates 42.5 million liters/year, plus an additional 7.5 million liters/year that are made into dairylike products such as soy puddings, yogurts, ice creams, and cheeses.

Leading countries: The largest soymilk market in Europe is clearly in the UK, because of its large population of vegetarians and vegans (vegans do not consume milk

or any other animal products), its large total population, its large number of soymilk manufacturers and marketers, the fact that soymilk is now sold in many UK multiples/supermarkets, its relatively long history of soymilk production, and the fact that many soymilk products bear the generic name "Soya Milk" on the front panel. The first commercial soymilk in England was Solac, launched in 1912 with great fanfare and publicity by the Solac Company/Synthetic Milk Syndicate. Roughly 40% of all soymilk consumed in Europe is consumed in the UK, and per capita consumption is also highest there. The second largest market is probably France, with West Germany a very close third.

Leading manufacturers: Two companies (Alpro in Belgium and DE-VAU-GE in West Germany) dominate the market with an estimated 70% market share, and that percentage is not likely to decrease. Competition is fierce and increasing. Alpro, which began making soymilk in 1979 and now produces about 21 million liters/year, is building a new plant at Wevelgem, Belgium, which is scheduled to begin operation in June 1990. Costing about US$15 million, it will have a capacity of 45 million liters/year. DE-VAU-GE's plant, which was built by DTD/STS and began operation in August 1985, now produces about 12 million liters/year but has a capacity of 3,000 to 4,000 liters/hour of finished soymilk. Other manufactures with the year they started making soymilk and their current estimated annual production in liters/year: Unisoy (UK, 1986) 3 million; Cacoja (France, 1987) 3 million; Soyana (Switzerland, 1985) 2.5 million; Société Soy (France, 1975) 1.2 million; Soya Health Foods (UK, 1985) 1 million; Galactina (Switzerland, 1969) 1 million; Triballat (France, 1989) 0.5 million; Innoval (France, 1987) 0.5 million; Crivellaro (Italy, 1989) 0.5 million. Other smaller producers include Plamil (UK, 1965), Haldane (UK, 1984), Itona (UK, 1964), and Ralston Purina España (Spain 1984).

Price: The retail price of soymilk is 2-3 times as high as that of cow's milk.

Packaging: Virtually all European soymilk and soymilk-based products are now sold in Tetra Brik Aseptic cartons. But with the growing concern about and legislation concerning disposal of solid wastes, one very big potential danger lies on the horizon for soymilk–that aseptic packaging will be increasingly banned, as it already has been in the state of Maine in the USA after Sept. 1990. If the manufacturers of aseptic packaging do not find a truly recyclable package or establish a workable system to recycle their current packages, soymilk could be in for hard times.

Soymilk trends in Europe: Though soymilk production has increased fivefold since 1984, it is still minuscule compared to cow's milk. The flavor of soymilk continues to be a major problem for most Europeans. Features/benefits attracting Europeans to soymilk are its freedom from cholesterol and lactose, and the fact that its production places less of a burden on the environment and on factory-farmed dairy cows. Most of the soymilk in Europe is sold to the natural/health food trades via health food stores and (in German speaking countries) Reform House chains. Only in France and the UK (plus a little in Belgium) is it also marketed as a mainstream product through supermarkets. A small amount is consumed by Asian-Europeans and Seventh-day Adventists. Organically grown soybeans are used in a large and increasing percentage of European soymilk. In the UK, innovative natural sweeteners (such as apple juice) have also started to be used. Private labeling: Many large European natural/health food manufacturers and/or distributors now sell soymilk under their own brand. Alpro produces many private-label brands. This practice is much more common in Europe than in the USA. Medical Soy and Parma Soia in Italy are two recent additions to this growing list. Soymilk is widely exported across national boundaries within Europe. This will probably not change much after 1992. Many large companies have entered the market since 1985 with large automated plants, but many of these are running at a small percentage of their capacity–and thus are losing money. Because of the surpluses of cow's milk in Europe, there are many regulations (including value added taxes and labeling restrictions) against "imitation dairy products." These differ from country to country and will probably become less severe after 1992. These practices are much more restrictive in Europe than in the USA, although also in the USA soymilk is not allowed to be labeled "soymilk." European dairy magazines (unlike their counterparts in America) continue to view soymilk with fear and criticism, even ridicule, at the same time that many large European dairy companies are jumping into this new market that shows future promise–which the European cow's milk market seems not to. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

5966. **Product Name:** Spring Creek Tofu Taco Dip.
Manufacturer's Name: Spring Creek Natural Foods.
Manufacturer's Address: 212-C East Main St., Spencer, WV 25726. Phone: 304-927-1815.
Date of Introduction: 1990. July.
Ingredients: Organic tofu, organic soy drink, safflower oil, onion flakes, parsley, hot sauce (cayenne peppers, vinegar, salt), sea salt, red chilies, garlic, onion, paprika, cumin, oregano, celery seed, dried red and green bell peppers, cayenne, bay.
Wt/Vol., Packaging, Price: 7 oz or 10 oz. The latter retails for $1.30–$1.70.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Tenley Weaver. 1990. Aug. 20. 3 inch diameter. Red, brown, green, yellow, blue, and tan on white. The Mexican Taco Dip was introduced in July 1990.

5967. Fehlberg, Eric C. 1990. Re: Seventh-day Adventist

health food companies worldwide. Letter to William Shurtleff at Soyfoods Center, Aug. 17. 4 p. Typed, with signature on letterhead.
• ***Summary:*** Discusses Nutana in Holland and Denmark. Nutana of Norway, formerly known as Dagens Kost, was renamed Nutana Norge in 1982. Sahm Yook Foods is the official name of the Korean Food Factory. Alimentos Colpac is the official name of the food factory in Navojoa, Sonora, Mexico; it was established in 1969. The Montemorelos Branch is known as Alimentos Integronaturales y Panificadora la Carlota; it was established in 1981.

Granose Foods Ltd. of England moved from Stanborough Park, Watford, Herts, to Howard Way, Newport Pagnell, Bucks., in Jan. 1989. The official opening date was 9 July 1989.

PHAG (of Switzerland) is written in all upper-case letters; it is not an abbreviation of anything. Glaxo Ltd. India has nothing to do with the Seventh-day Adventist church.

DE-VAU-GE was primarily responsible for setting up the Adventist food industry in Spain and the Kolett's brand is packed specifically for the Spanish market. DVG has two brand names which are manufactured for the reform or natural foods market in Europe: Granovita and Bosen. The products under the Bosen label were originally made in their bakery.

Pan American Health Service in Honduras still produces soymilk. Mountain View College in the Philippines is still making meat analogues and perhaps soya milk–but only for their own use. Bandung College (now called Bandung Academy) in Indonesia is still in operation and they may be making soya products. Two years ago they wanted very much to start a food factory, but it did not happen. The Hong Kong Hospital is still operating and they still manufacture small amounts of food, basically for their own use. South China College has a long history. It was established in 1903 as Bethel Girls' School, but underwent several name changes and changes of location due to political turmoil and the Sino-Japanese war of 1937, followed by the violence of the Second World War.

"Eventually it was re-established at Clear Water Bay in Kowloon, in 1958 and a college curriculum introduced in 1962. Its name was changed to South China Union College in 1964. In 1981 they officially adopted its name and has been called Hong Kong Adventist College since then. It still operates today, and possibly manufactures small quantities of food, basically for their own use." Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904.

5968. Fehlberg, Eric C. 1990. Re: Dr. Steven Youngberg and the Pan American Health Service. Letter to William Shurtleff at Soyfoods Center, Aug. 17. ½ p. Typed, with signature on letterhead.

• ***Summary:*** "Pan American Health Service was established by Dr. Steven Youngberg. He is over 70 today, and still operates the health service and still produces soyamilk. His brother indicates that he is quite an authority on soyamilk and protein. At present they are caring for more than seventy orphans in Honduras, where their daughter continues the program while they are in America. This is run by an Adventist, but not owned by the church. His U.S.A. address is: P.O. Box 888, Keene, Texas 76059. Telephone: 817-611-2646.

"The Honduras address is: Apartado 191, San Pedro Sula, Honduras." Address: Director, International Health Food Assoc., Seventh-day Adventist General Conference, 12501 Old Columbia Pike, Silver Spring, Maryland 20904.

• ***Summary:*** Three soya companies reported corporate financial results last week. Noble Soya turned a net loss of Rs. 72 lakh [7.2 million rupees] into a net profit of Rs. 5 lakh [500,000 rupees] this year.

Vegepro Food came up with a first-year net loss of Rs. 2 crore [200,000 rupees].

Alpine Solvex reported a 44% jump in net profits to Rs. 72 lakhs [7.2 million rupees]. Alpine plans to make a 1:2 rights issue at par.

5970. Nordquist, Ted. 1990. Changes in ownership at Aros Sojaprodukter in Sweden. Development of soy yogurt. Soybean production in Scandinavia (Interview). *SoyaScan Notes.* Aug. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** On 1 Aug. 1990 Ted changed Aros into a corporation and took in a partner, Eric Kennhed. The official company name changed from Aros Sojaprodukter KB to Aros Sojaprodukter AB. KB (*kommanditbolag*) means "limited partnership" whereas AB (*aktiebolag*) means "incorporated." Ted now owns 51% of the stock and Eric owns 49%. Eric was the former head of Volvo Penta, Volvo's marine division in London. He has excellent business experience and the ability to understand large contracts and international deals. Aros now has a process and equipment for making the best tasting soymilk and soy ice cream in the world. They want to establish this in countries worldwide. It has the potential to revolutionize the world of dairylike soyfoods. Ted will contact Anders Lindner and explore ways of working together.

Aros is now developing a fermented soy yogurt which it hopes to introduce in about Sept/Oct. 1991, starting in Sweden and Finland. The flavor is excellent, but wheying off is still a problem. In Sweden, Arla, Sweden's largest milk company, makes dairy yogurt. In Finland, Hemholmen-Ingmen OY (OY is like AB in Swedish, meaning

"Incorporated") makes 20 million liters/year of dairy yogurt. They have a huge, new automated dairy plant that has the capacity to process 32 million liters/year of raw milk. They are interested in Aros' new yogurt in part to help them use more of their plant's capacity. Ted feels that Alpro's soy yogurt has an unappealing beany flavor.

Soybeans are not grown in Norway or Finland, but they are grown in Sweden, in 5 different areas from Uppland to Skåne, by Sweden's agricultural university at Ultuna, Uppsala. However a total of only several tons a year are produced. Address: Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

5971. Vitasoy (USA) Inc. 1990. Vitasoy acquires Nasoya Foods Ltd. (News release). 99 Park Lane, Brisbane, CA 94005. 2 p. Aug. 31.
• ***Summary:*** A 12-year-old-company owned by John Paino and Bob Bergwall, Nasoya has annual sales of $7.0 million and is one of America's leading tofu manufacturers. "Nasoya brand tofu products command over 90% market share on the East Coast... Recently Nasoya has introduced a line of non-dairy frozen pasta products... The company produces over 6 million lbs. of tofu per year and packages pasteurized fresh tofu with an extended shelf life." Paino and Bergwall will continue in their present roles as President and Vice President of Production at Nasoya. Vitasoy was founded by K.S. Lo 50 years ago. The company is now the second largest beverage manufacturer in Hong Kong. Its daily production registers over 1.5 million packs of soy and non-soy beverages with annual gross sales in excess of US$100 million. Address: Brisbane, California. Phone: 415-467-8888.

5972. Lim, B.T.; deMan, J.M.; deMan, L.; Buzzell, R.I. 1990. Yield and quality of tofu as affected by soybean and soymilk characteristics. Calcium sulfate coagulant. *J. of Food Science* 55(4):1088-92, 1111. July/Aug. 4 tables. [31 ref]
• ***Summary:*** New varieties of soybeans are compared. Variations in the coagulation of tofu and the quality of soymilk are studied as a function of the soybean composition. Two models are proposed for predicting the tofu yield. Address: 1-2. Dep. of Food Science, Univ. of Guelph, Guelph, Ontario N1G 2W1; 3. DeMan Food Technology Services Inc., Guelph, Ontario N1H 6B5; 4. Agriculture Canada Research Station, Harrow, Ontario N0R 1G0. All: Canada.

5973. **Product Name:** Soymilk.
Manufacturer's Name: Surata Soyfoods.
Manufacturer's Address: 302 Blair Blvd., Eugene, OR 97402.
Date of Introduction: 1990. August.
New Product–Documentation: Talk with Shevah Lambert. 1990. Oct. 31. This product was launched in Aug. 1990. The company is planning to buy an homogenizer to aid in its production. It is currently sold only out of the shop, and is not distributed.

5974. Takai Seisaku-sho. 1990. [Takai 1991 systems catalog]. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 62 p. 30 cm. [Jap]
• ***Summary:*** Photos show the company's many pieces of equipment and systems for manufacturing tofu and soymilk. The catalog is divided into 6 sections: 1. Transportation and soaking systems. 2. Soymilk production systems. 3. Curding and forming systems; Poached tofu systems. 4. Cooling systems; Hot-pack systems. 5. Curding & forming systems. 6. Deep-frying systems.

Letter (fax) from Wataru Takai. 1990. Sept. 29. Two years ago the company rebuilt its factory and installed CAD (Computer Assisted Design) systems. This year they acquired two computer networks: IBM AS/4000 and IBM 5550. Address: Ishikawa-ken, Japan. Phone: 0762-48-1355.

5975. *Tetra Pak Age.* 1990. Rice drinks sweeten the non-dairy beverage market. 8(2):12-13. Summer.
• ***Summary:*** Describes 2 flavors of Amazake from Grainaissance and 3 flavors of Rice Dream from Imagine Foods, both from California, both in 8 fl. oz Tetra Brik cartons. Address: Shelton, Connecticut.

5976. Paino, John. 1990. The acquisition of Nasoya Foods by Vitasoy (USA) Ltd. Reflections and new developments (Interview). *SoyaScan Notes.* Sept. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Vitasoy's acquisition of Nasoya Foods, Ltd. was finalized on 3 Aug. 1990 in Boston, Massachusetts. Nasoya is now a wholly owned subsidiary of Vitasoy (USA) Inc. and has become a corporation (Nasoya Foods, Inc.) of Massachusetts. Yvonne Lo and John have been on the board of directors of the Soyfoods Association of America for 4 years, and they have often discussed possible cooperation. John first met K.S. Lo in late January 1985 at the Natural Foods Expo, and soyfoods association meeting in Anaheim, California. He was impressed by his presence and recalls thinking that he and Yvonne had strong constitutions and good energy. John knew that Vitasoy was looking for a U.S. soymilk manufacturing facility. Vitasoy wants to start making soymilk in America one of these days. Now they are shipping organic soybeans from America to Hong Kong, then shipping back the soymilk. In June 1989 Winston Lo (Managing director of Hong Kong Soya Bean Products Co. Ltd. in Hong Kong) was in Boston visiting his daughters who went to Choate and Phillips Andover. He visited Nasoya and got very excited about the company. That evening at dinner serious talks began about the two companies doing something together. In Oct. 1989, when Bob Bergwall was

going to Japan to look at the Sato automatic tofu cutting-packing system (which they just purchased), John suggested that he visit the Vitasoy in Hong Kong. John wanted to be sure that the two companies had the same philosophies–which he feels is the most important thing. Bob went and came back very excited and impressed, convinced that the two companies should work together in the emerging world economy. Both companies were built on a philosophy, and the same philosophy of making good foods/soyfoods available to people for health reasons. Both are family-run businesses. He was very impressed with Vitasoy's management style. Bob brought back a fantastic English-language video titled "The Vitasoy Story," similar to the book, and telling the Vitasoy story. While Bob was in Hong Kong, John met K.S. Lo in Philadelphia at the NNFA health food show. Mr. Lo came by the Nasoya booth. John was very impressed with what a wonderful, cultured gentleman and K.S. Lo was and the class with which he and his daughter, Yvonne, conducted their lives and their businesses. At dinner, for 3 hours they discussed the mechanics of the joint venture. In March 1990 John and his wife Sarah went to Hong Kong for Vitasoy's 50th Anniversary celebration. They visited K.S. Lo's home. The details of the deal were worked out by Winston and Yvonne. A letter of intent was written in April 1990.

John feels that the main benefits to Nasoya of the new relationship will be financial backing, technical, management, and marketing expertise, but most important the synergy between the two companies.

The main benefits to Vitasoy will be Nasoya's expertise in manufacturing and marketing soyfoods, the ability to eventually run and manage Vitasoy's USA soymilk plant, and Nasoya's capabilities for getting Vitasoy into East Coast supermarkets. Only 30-35% of Nasoya's business is in the natural/health food market; the rest is in supermarkets–which Vitasoy has had difficulty penetrating. Vitasoy looked at many other U.S. companies but chose Nasoya as a company with good management in place, one that could take it to the next level, with the most growth potential and market share in their area, one that was marketing driven, diversified, and innovative. In Nasoya they have a company that can be the base for their future expansions in America. If and when Vitasoy does build a plant in America, it will probably be under the same roof as Nasoya but in a new and larger nearby location. The Midwest would not be a good location because it is a poor marketing area for a perishable product. There are no specific plans to try to develop an aseptic tofu.

The acquisition was made by Vitasoy (USA) Inc. purchasing Nasoya for cash. The amount of the transaction is confidential. No stock was transferred. The Paino family has been very successful over the years in real estate. Nasoya was established with the spinoff as some of that income. There were certain tax advantages to Paino Associates, and certain financial advantages to Nasoya Foods, Ltd. They were the limited partner, and Nasoya Foods Inc. was the general partner of the limited partnership. It was very complicated but for tax reasons it worked out very well. In effect, John, his father, and Bob Bergwall each owned a certain percentage of Nasoya, and when it was sold, they divided the cash income according to the percentage ownership. All were very pleased. John's wife, Sarah, an acupuncturist, got pregnant after 10 years of marriage just 4-5 days after John sold the business. "You can see how much of my energy went into Nasoya."

Nasoya now sells their soy mayonnaise (Nayonaise) and dressings nationwide. Their new line of frozen tofu-filled pasta products will also go nationwide.

Nasoya still uses well water. They have two wells on their property. The first one discovered gives 20 gallons/minute. The second one, which John and Bob discovered by dousing after they bought their large Sato tofu making system, gives 100 gallons/minute from 400-foot deep aquifer.

Concerning competition on the East Coast, Azumaya and Morinaga both have some distribution and are about equal as competitors; Hinoichi does not compete. Nasoya fresh tofu sells much faster than Mori-Nu Brik-Pak. Azumaya sits side by side in the produce case with Nasoya but is not serious competition. Northern Soy is the main competitor in natural/health hood stores. Sam Sung is strong to the south but they sell mostly to the Asian-American market.

Basic tofu still accounts for roughly 70% of Nasoya's sales. Second-generation tofu products account for most of the rest, with egg-roll wrappers and wonton skins being a very small percentage. Address: President, Nasoya Foods Inc., Leominster, Massachusetts. Phone: 508-537-0713.

5977. Sand, Avraham. 1990. Pioneering soyfoods and natural foods in Israel (Interview). *SoyaScan Notes.* Sept. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Avraham first went to Israel in 1975 and stayed for about a year. During this time he and Avraham Leider and one other person founded Israel's first natural foods company, named Amud Ha Shachar (Pillar of Dawn) and located in Jerusalem. The first product they made was granola, followed by whole wheat flour, bulgur wheat, brown rice (which they packaged), and date bars. With this company established, a number of Americans and other westerners who had recently immigrated to Israel and were connected with the company approached the Sachnut, the Jewish government agency which helps finance Jewish cooperative settlements. They asked to be given a moshav. A moshav is like a kibbutz (a cooperative agrarian, rural settlement) except that the families have their own homes and land, and the children live at home. In 1976 the Sachnut gave the group a piece of land, infested with scorpions, upon which nine other groups had tried and failed since 1948 to

establish a successful community. The Sachnut also financed a small natural foods factory and bakery on the moshav, complete with an oven and a packaging machine. The moshav was named Moshav Me'or Modi'im, located at Doar Na Hamercaz, in the Judean Hills between Jerusalem an Tel Aviv, Israel.

Avraham returned to North America for several years. While living in a community of 5-6 people in Nova Scotia, Canada, he was introduced to tofu by people who made tofu for the community, but he did not make tofu there himself.

Between 1975 and 1990 Avraham has spent a total of 8 years in Israel. The rest of the time he was in the USA or Canada or travelling. Avraham returned to the moshav in 1978 and that year he established Israel's earliest known tofu shop as part of Pillar of Dawn. The tofu was made in the same bakery room as the granola, especially in the evenings when the granola wasn't being made. Originally the community scale shop was established solely to make tofu for the 25 or so families living on the Moshav. Tofu production was small, averaging 50 lb/day of tofu one day a week, using a Corona mill grinder powered by a washing machine motor. The tofu was curded using bittern (nigari) from a salt factory on the Dead Sea. The Moshav owned the tofu company collectively and financed it. Avraham was the motivating force that got the operation started with temporary help initially from Yaacov Sack and Moshe Reuben. About 3-6 months after tofu production began, they started to make tempeh. Then Ben Zion Solomon joined Avraham 6-12 months after the company started and they worked together like equal partners for several years as the tofu and tempeh makers. Solomon was also making quite a bit of miso on the moshav (with a little help from Sand). They also introduced soymilk. At some point, they began to sell their tofu and miso at a few health food stores in Jerusalem. As far as Avraham knows, his was the first company to make tofu, tempeh, miso, or soymilk in Israel. They developed a 1-page informational pamphlet, written in Hebrew on one side and English on the other, explaining what tofu was and how it was made, plus some recipes. At that time Israelis, other than recent immigrants from America, didn't know what tofu was.

They reached the point where they decided to buy large scale equipment (from Takai) and set up a real commercial shop on the moshav that could produce 500 to 1,000 lb/day of tofu. The Sachnut indicated that they would be willing to help set up this new business. So in about 1979 or 1980 Avraham traveled to the USA and did a lot of study to learn about tofu equipment, products, and processes in small to medium sized shops. He visited about 20 tofu shops nationwide (most were very open and helpful) and collected information in a notebook. He worked at the Soy Plant in Ann Arbor, Michigan, for approximately a year in about 1980. From time to time he shared information with his father, Ralph Sand, who was doing research on non-dairy cheese and tofu at Anderson Clayton at the time. At the last minute the Sachnut pulled out and decided not to finance the project, so the expansion never took place. They continued to make tofu on a small scale. But the moshav was suffering economically so in about 1981 Avraham and his wife, unable to make a living there, left and returned to the USA. The little soyfoods plant dissolved but shortly thereafter a commercial operation (probably Golden Jerusalem Tofu) started in Jerusalem and the people on the moshav bought their tofu from Jerusalem.

During the time that Avraham made soyfoods in Israel (1978-81) there was a lot happening with soya. There was a man called the "Soya King" ("Hamelech Soya," probably Eliahu Navot) who was famous in Israel as the country's soybean pioneer. Avraham thinks he lived in Herzlia/Herzliyya, just north of Tel Aviv, but he died in about 1979 or 1980 several months before Avraham was able to meet him. Avraham went to his home town and met his widow, who told him a little about her husband's work with soya.

The most popular food use of soybeans in the late 1970s was in textured soy flour (like TVP). These products were made in Israel by 1 or 2 big companies and sold in supermarkets in very stylish packages indicating that the manufacturers were well established. There were several flavors and large amounts were sold. He does not know the name or address of the manufacturer, but he got the feeling that Eliahu Navot had at least helped inspire these products; he may have helped to develop them.

In America, Avraham set up a soy deli named Sand-Munches in Madison, Wisconsin. They bought tofu from Bountiful Bean in Madison and made and sold tofu sandwiches, nori rolls, tofu salad, tempeh salad, various tofu spreads. They sold to health food stores and had a sandwich cart on the campus.

Avraham was in on the soyfoods wave at the very beginning, but after it became more established and mainstream he felt that his work had been done in that area, so he moved into the field of aroma therapy, inhaling aromatic essential oils from herbs, where he has been working for the last 8-9 years. It is a very powerful form of herbal medicine. He has developed several product lines under the Tiferet brand (a term taken from the Tree of Life in the Cabala) which he markets in health food stores in the USA and overseas. Address: 210 Crest Dr., Eugene, Oregon 97405. Phone: 503-344-7019.

5978. Lo, Yvonne. 1990. Recent developments with Vitasoy in Hong Kong and America (Interview). *SoyaScan Notes.* Sept. 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Nasoya Foods, Inc. is now a subsidiary (not a division) of Vitasoy (USA) Ltd. Note that Nasoya has changed from a limited partnership to a corporation. The parent company in Hong Kong will soon change its name

from Hong Kong Soya Bean Products Co. Ltd. to Vitasoy International Holdings Ltd. They had a hard time choosing between "Vitasoy International" and "Vita International." Choice of the former name may indicate that "there will be a whole new look at the company philosophy." Presently the company produces many non-soy beverages. The labels of all of the company's products made in Hong Kong will have to be reprinted.

Building a soymilk manufacturing plant in America may soon make sense for Vitasoy (USA) Ltd. "It was something we had in mind when we decided to acquire Nasoya."

The parent company has produced a 14-minute color video, The Vitasoy Story, for its 50th anniversary. Part of the company sales kit, it is available in two versions, one narrated in English and one in Chinese. The film portion of the two is identical.

K.S. Lo's collection of Yixing Chinese teapots is now touring the USA, and he will soon be lecturing on the subject in San Francisco on Sept. 22 at the Chinese Culture Center.

Note: Concerning ownership of Vitasoy (USA) Ltd., This company was originally established by Yvonne and Irene Lo, daughters of K.S. Lo, in San Francisco in Jan. 1989 as The Soya Bean Products Co., N.A. Inc. They immediately began to import Vitasoy from Hong Kong, and to distribute it first in Canada, then after Feb. 1981 to the USA. By mid-1982 they were selling some 3.2 million cartons of Vitasoy in the USA. The venture was so successful that in April 1982, to raise capital and facilitate long-term operations with Hong Kong Soya Bean Products Co. Ltd., Yvonne and Irene sold their company to HKSBPC, which renamed the affiliate Vitasoy USA, Inc. The parent company now began to take a serious interest in the U.S. market. In 1983 U.S. sales of Vitasoy rose 60% to 5 million cartons (328,125 gallons). Address: President, Vitasoy (USA) Ltd., 99 Park Lane, Brisbane, California 94005. Phone: 415-467-8888.

5979. American Soybean Assoc., China. 1990. Re: The soymilk industry and market in China. Letter to William Shurtleff at Soyfoods Center, Sept. 13. 3 p. [Eng]
• ***Summary:*** There are more than 100 soymilk processing lines in China, of which 34 have been imported from Sweden, Japan, etc. Each year China produces about 100,000 tonnes of soymilk. (Processing capacity is even larger.) Of this total, 60,000 tonnes are produced in the provinces of Guangdong (Kwangtung), Fujian (Fukien), and Guangxi (Kwangsi), all in southern China.

The five largest soymilk manufacturers in China, in descending order of capacity, are: 1. Wuhan Guan Sheng Yuan Foodstuff Factory (20,000 liters/hour capacity); 2. Fuoshan Foodstuff Factory (12,000 liters/hour; Product name: Vita Milk); 3. Guangzhou Cannery (2,000 liters/hour; Product name: Hong Bao; Equipment from Alfa-Laval); 4. Jiangmen Foodstuff Factory (2,000 liters/hour); 5. Jin Jiang Foodstuff Factory (2,000 liters/hour).

All of the soymilk made by large companies in China is sold in bottles; none is sold in aseptic packages, plastic bags, or by street vendors. Most of this soymilk is consumed in China, but 5,000 to 10,000 tonnes (5-10%) is exported to Japan and Southeast Asia each year. A new trend is to develop instant soybean powder [probably powdered soymilk] for the people of northern China, who do not like soymilk. Address: Citic International Building, 25th Floor, Room 4, 19 Jianguomenwai Street, Beijing 100004, China. Phone: 512-7125.

5980. Mulraj, J. 1990. The stock market reacts. *Times of India* (*The*) (*Bombay*). Sept. 17. p. 15.
• ***Summary:*** Noble Soya is [on 1 Jan. 1991] to be merged with Vegoils, a profitable unit. Shareholders of Vegoils will be given four shares of Noble Soya for each of theirs. "Noble Soya's equity will nearly double to Rs. 12.29 crores."

5981. *Times of India* (*The*) (*Bombay*). 1990. Friday's traded scrips. Stock quote. Sept. 22. p. 16.
• ***Summary:*** On the Bombay Stock Exchange (BSE), "Other securities" are listed alphabetically by ticker symbol. Soya companies include: Noble Soya 25, 27, 23, 25.
Ruchi Soya 21.25, 23.75.
Sagar Soya 10, 12.
Sakthi Soya 19, 21.

5982. Stievenard, Sylvain. 1990. Re: Cacoja changes its name to Sojinal. Letter to William Shurtleff at Soyfoods Center, Sept. 24. 2 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** On 8 Aug. 1990 Soyfoods Center received a letter (fax) from A. Kirschner of Sojinal, located at the same address as Cacoja in Issenheim, France. A letter from Soyfoods Center asking what had happened to Cacoja was answered on Sept. 24 by Sylvain Stievenard, who reported that the company name was changed from Cacoja to Sojinal on 1 Aug. 1990. No answer was given to the question as to why the company name was changed. The phone number was changed on 15 Dec. 1989 to 89.74.53.53 from 89.74.17.07. Mr. Maurice Rochet is still director. Three labels, each bearing the Formoja brand, were enclosed, implying that these products are made currently: Delicacy with basmati rice and curry sauce, Lasagna with Tofu, and Ravioli with tofu. The address on each label is Cacoja, 10, rue Lavoisier, 68000 Colmar, France. Address: Factory: 8, route de Merxheim, Issenheim 68500 Guebwiller, France. Phone: 89.74.53.53.

5983. McReynolds, Thomas. 1990. Morinaga decides to introduce private labeling and a Fresh Fruit Shakemate (Interview). *SoyaScan Notes*. Sept. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Morinaga will aggressively offer to provide

their aseptic tofu, on a private label basis, to other companies in the soy and natural foods industries. To print the package directly, the buyer must commit to ordering at least 500,000 cartons/year, but with affixed pressure-sensitive labels, they can get the minimum down to 25,000 to 50,000 pieces. They will make all three textures available (red = soft, blue = firm, yellow = extra firm). Projected price is about $10/case. Some potential clients are Vitasoy/Nasoya, Frieda's, Eden Foods, Tree of Life.

Next summer, Morinaga will be introducing their first second generation product, called (and trademarked) Fresh Fruit Shakemate. It will be like their soft tofu but with a lower bean profile and perhaps with vanilla added. They will sell/position it in the fruit section of food stores. It will be packaged in a 3-pack, with no printing on individual packages in order to (1) get a bigger face, (2) Put brochures in the back. The theme: Shake up your day 8 days a week. Tom wants to do more second generation products.

There are rumors that Nasoya has secured aseptic packaging equipment from Tetra-Pak (an AB-3 machine for the purpose of manufacturing a 250 ml aseptic tofu) and that Vitasoy in Hong Kong is, or in the near future will be producing an aseptic pack tofu. They may be using a 3-layer laminate to get around the Morinaga 5-layer process with the polyurethane lining. Tom held some kind of an aseptic tofu package in Hong Kong about 18 months ago, but he is not sure who made it. When he talked with Yvonne Lo recently, she hinted that they were developing such a product. But Morinaga has no solid evidence.

Update: Nov. 5. Morinaga will initially offer the private label to only 1 company in each of 3 market categories: Eden in the natural foods market, Vitasoy in the ethnic market, and Frieda's Finest in the national produce market. Address: Marketing Consultant, Morinaga Nutritional Foods, Los Angeles, California 90040. Phone: 213-728-4325.

5984. Archer Daniels Midland Co. 1990. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p.
• ***Summary:*** Net sales for 1990 were $7,751 million, down 2.3% from 1989. Earnings for 1990 were $483.5 million, up 13.9% from 1989. Shareholders' equity (net worth) is $3,573 million, up 17.8% from 1989. "This fifth straight year of record earnings showed good contributions from the Company's core businesses of oilseed, corn, and wheat processing and was aided by initial contributions from some of the new value-added operations... The company operates 121 processing plants in the U.S. and owns, or has an ownership interest in, 25 foreign plants...

"The protein specialties division expanded both in terms of output and facilities this year. The production of edible soy protein isolates more than doubled this year due to greater market penetration in both domestic and export markets. The production of soy protein concentrates also increased as this product demonstrated its adaptability in food and animal feed products.

"A new facility for the production of industrial soy protein isolates was brought on line in February. These products are used in a variety of markets worldwide, including the paper coating industry. ADM is the only company which produces a complete line of value-added soy proteins.

"ADM has introduced its veggie burger, an all-vegetable protein food product based on soy protein concentrate. This innovative, cholesterol-free, reduced calorie product also contains dietary fiber and appeals to the vegetarian market. Early indications of good acceptance in the U.S. and U.S.S.R. suggest that this product has global potential...

"ADM Ross & Rowe expanded its facilities this year with the completion of a new lecithin production plant in Decatur, Illinois. The division is now capable of producing modified, enzyme hydrolized, complexed and microbiologically pure lecithins" (p. 4-5).

From page 8 to page 15 are four 2-page color photo spreads, each concerning ADM's new Vege Burgers. The text of each reads: London: "Due to the trend toward healthier eating, many restaurants in Great Britain, including the Hard Rock Cafe in London, offer Vege Burgers as a popular menu choice." Moscow: "Cafe Vege Burger opened in Moscow in early spring and sales have far exceeded expectations." Great Britain: "Vege Burgers are sold in a variety of flavors in many retail grocery and health food stores throughout Great Britain." Decatur, Illinois: "In the Decatur area, several grocery stores and employee cafeterias are now selling veggie burgers to the growing number of health-conscious consumers looking for nutritious, good-tasting food."

"Haldane Food Group has benefitted from the ongoing trend toward a healthier and more varied diet. A recent Gallup poll which indicates a 150% increase in vegetarians since 1984 helps to explain the emergence of Vege Burger and other TVP products as market leaders. Over 60 million servings of Vege Burgers were sold by Arkady Group companies last year. Production capacity at the Coventry frozen food factory has been supplemented with off-site storage and additional burger manufacturing machinery. Kwality Foods, now renamed Saucemasters Ltd., has enjoyed increased sales in a potential growth market, especially with private label businesses. The company's manufacturing capacity has been expanded with the addition of bottle and jar fillers, labellers, and more off-site storage. Genice Ltd. has introduced an extended range of non-dairy ice creams based on soya isolate, soya milk, or tofu. Yogurt-based ice creams are now being marketed." Address: Decatur, Illinois.

5985. Golbitz, Peter. 1990. Soymilk: Expanding opportunities in Mexico? *Soya International* (*Bar Harbor, Maine*). July/Sept. p. 1-2.
Address: Soyatech, Bar Harbor, Maine.

5986. Maitre, Pierre. 1990. Current European markets for soyafoods. Lecture presented at Eurosoya Conference. Held 5-7 Sept. 1990 at Strasbourg, France. *

• ***Summary:*** The following is summarised from a report by SoyaFoods (1990. 1(2):6-7). France: A study in April 1990 on 2,052 men and women showed that for 33% of respondents the word 'soya' was associated with oil. Indeed 66% had not heard of any soyafoods. Of the remaining 34%, only 19% had heard of soyamilk and 19% of soya-based desserts. Tofu and other products were less well known. Some 57% thought soya was a modern product, 66% thought soya was nutritious, and 61% thought soya was good for slimming. The reasons for not consuming soyafoods were given as follows: Never thought about it 45%. Prefer to buy my usual brands 14%. Do not like the taste 14%. Not found in shops 6%. Too expensive 5%.

For those who had tasted soyamilk or desserts, the taste was rated as follows: Soyamilk and other soy drinks: Rather good taste 58%, neither good nor bad 29%, rather bad taste 8%. Desserts: Rather good taste 61%, neither good nor bad 26%, rather bad taste 11%. As a result of this survey in France, SOJAXA is targeting its activities to address the problem of educating the consumer about soyafoods, in particular tofu which is less well known in France than soyamilk and desserts.

The UK: Most large supermarkets carry soyafoods, except Marks and Spencer. The strong interest in vegetarianism has played a major role in the development of the soyafoods market. Vegetarians represent about 8.6% of the population and the vegetarian market is estimated at about £5 billion.

Benelux: The Benelux markets are similar to France. In Belgium there are at least 11 suppliers of soyamilks. The most popular products are drinks and desserts. Higher income groups tend to consume soyafoods.

Germany: Soyafoods are more widely carried in natural food stores (*Biolaeden*) and Reform Houses (*Reformhaeuser*) than in supermarkets. Young German consumers accept soyafoods more readily than French consumers but price is an important factor. German consumers seem to be well informed about products and the best selling items (in descending order of importance) are tofu, sauces, sausages and delicatessen products, milks, and desserts. The following percentages of shoppers in *Biolaeden* and Reform Houses have positive opinions about soyafoods: 70% in the age 20-30 group, 55% in the age 30-40 group, and 65% in the over 40 age group.

"Spain: Soyafoods development is fairly constant in Mediterranean countries such as Spain. All soyafoods are imported and are found in specialist shops, generally associated with dietetic products, e.g. calorie controlled products. Only recently have soyafoods been sold in large supermarkets. The influence of tourism has led to a changed image for soyabeans which are perceived as good for health and a modern lifestyle. Current interest is producing new products which are geared to local tastes. The most common products at present are soya drinks, desserts, sauces and soya sausages. Sales in non-specialist shops are likely to become more important.

"Italy: Soya foods and products containing soya are sold mainly for dietetic reasons.

"In summary Mr. Maitre felt that progress had been made over the years in terms of product quality, marketing, product information and international recognition, but there should be no complacency. More will need to be done to stimulate demand in Europe." Address: 18 Square les Oliviers, 13111 Coudoux–Aix en Provence, France. Phone: 33/43.52.09.44 (fax).

5987. Muller, Mr. 1990. The process of producing powdered soyamilk. Lecture presented at Eurosoya Conference. Held 5-7 Sept. 1990 at Strasbourg, France. *

• ***Summary:*** Powdered soymilk is produced by spray drying, a simple, natural process that uses no chemical additives. Applications include desserts, yogurt, ice cream, drinks, purees, soups, sauces, baked goods, meat products, etc. including low calorie and cholesterol-free products. It can also be used as an alternative to sodium caseinate. Powdered soymilk has functional properties which are similar to soy protein concentrates and isolates but with the added advantage of being totally natural. Like them, it contains no lactose or cholesterol. A typical spray-dried soymilk has the following composition: Protein 45%, lipids 20%, carbohydrate 20%, and minerals 5%. Address: B.P. 37, 14 rue Inkermann, 79001 Niort, France. Phone: 49.24.09.42.

5988. Ornish, Dean. 1990. Dr. Dean Ornish's program for reversing heart disease: The only system scientifically proven to reverse heart disease without drugs or surgery. New York, NY: Random House. xxxi + 638 p. Sept. Index and recipe index. 17 cm. [288* ref]

• ***Summary:*** This is a landmark, pioneering book–indeed a classic. In addition to carefully documented information on how to reverse heart disease, it offers 100 pages of vegan recipes, including a 21-day menu. It focuses on a low-fat, low-cholesterol diet, regular moderate exercise, stopping smoking, stress management through meditation and yoga, and (ideally) a support group.

Contents: Author's note. Foreword. Introduction–Heart and soul. Part one: Opening your heart. Part two: The opening your heart program. Part three: Opening your heart recipes. Introduction to the recipes by Shirley Elizabeth Brown, M.D., and Martha Rose Shulman. Twenty-one days of menus. The recipes. Epilogue. Appendix: Nutrient analysis of common foods. Selected references.

In the chapter titled "Introduction to the recipes" a long section on "Soybean products" gives basic information about

the following: Whole soybeans, soy flour, soy milk ("It is much higher in fat, lower in vitamin B-12, and lower in calcium than nonfat cow's milk."), soy sauce, tamari, miso, soy cheeses, tempeh, textured vegetable protein (TVP), isolated soy protein, and tofu ("Tofu is a miracle food; it is very easy to digest, very high in protein, low in calories and fat, economical, and extremely versatile").

In the chapter titled "Recipes" is a long section on "Tofu Dishes," which begins with a good introduction: "Tofu is one of the most versatile foods." "Tofu is very high in protein and the perfect substitute for cheese and eggs." Eleven recipes follow: Tofu cheese with fresh herbs. Marinated tofu. Scrambled tofu and vegetables. Lydia's Mexican casserole. Tofu stew with miso. Sweet and sour wok-cooked vegetables with tofu. Chinese eggplant and tofu. Steamed fresh vegetables and tofu with soba noodles (and Misoyaki sauce). Stuffed manicotti (with Marinara sauce).

At the start of each chapter are great quotations. The 288 selected references, listed chapter by chapter at the back, are a valuable addition. As early as 1972 Dr. Ornish was learning meditation and yoga techniques from Swami Satchidananda; these evolved into the stress management program described in chapters 7-9. In 1975 he first became interested in conducting research on heart disease, when he was a medical student at Baylor College of Medicine in Houston, Texas. In 1977 he had the privilege of studying with Dr. Michael DeBakey, assisting in the operating room when he performed bypass surgery. Though his surgical skill was amazing, Ornish began to see the "limitations of technological approaches that literally and figuratively *bypassed* the underlying causes of the problem. It was the difference between temporizing and healing." Most bypass patients "would go home and continue to do the same things that led to the problem in the first place. They would smoke, eat a high-fat, high-cholesterol diet, manage stress poorly, and lead sedentary lives."

For details on this book and its significance, see MacNeil/Lehrer Newshour. 1990. Dec. Address: M.D., Preventive Medicine Research Inst., Sausalito, California 33658. Phone: 415-332-2525.

5989. Reddy, M.; Flynn, A. 1990. Bioavailability of iron and zinc from cow's milk and soya milks in suckling rats. *Irish J. of Food Science and Technology* 14(2):121. Sept. [1 ref]
• ***Summary:*** This is the abstract of a paper presented at the 20th Annual Food Science and Research Conference, held 12-13 Sept. 1990 at Cork, Ireland. "Recently, soy milks have become widely available as substitutes for cow's milk. Soy products contain phytic acid which has been shown to reduce the nutritional bioavailability of trace elements. This study was carried out to compare the bioavailability of iron and zinc in cow's milk and soy milks." The results show that soy milks are slightly better sources of bioavailable iron but much poorer sources of bioavailable zinc than cow's milk. Address: Dep. of Nutrition, University College, Cork, Republic of Ireland.

5990. *Soya International* (*Bar Harbor, Maine*). 1990. Bean Machines installs three new systems in North America. July/Sept. p. 3.
• ***Summary:*** San-Francisco based Bean Machines Inc. has recently installed their new continuous tubular cooking systems, used for making tofu and soymilk, in plants at Ann Arbor, Michigan, Duarte, California, and Quebec, Canada. Capacities range from 300 to 900 gallons/hour. Contact Bean Machines at P.O. Box 2122, Mill Valley, CA 94242. Phone: 415-285-9411.

5991. *Soya International* (*Bar Harbor, Maine*). 1990. Medical center says nondairy products may not be milk free. July/Sept. p. 3.
• ***Summary:*** "Foods that do not list milk as an ingredient may not be completely milk-free. Johns Hopkins Children's Center reported that three children with cow's milk hypersensitivity developed acute allergic reactions after eating tofu and rice based frozen desserts. The desserts were manufactured in dairy processing plants, but despite standardized cleaning procedures, the nondairy products were contaminated with milk sufficient to cause allergic reactions (half a teaspoon or less per serving.) In one case, a child reacted to a hot dog which contained hydrolyzed sodium caseinate, a milk derivative. This ingredient was not listed on the label, because it fell into the category of 'natural flavoring.' The hot dog contained an amount of sodium caseinate equivalent to a third of a milliliter of milk. The USDA is changing the regulations so that milk-derived ingredients can no longer be designated 'natural flavorings' and must be labeled by their common or usual name."

5992. Stehlin, Dori. 1990. Soy beverages not complete formulas. *FDA Consumer* 24:29. Sept.
• ***Summary:*** "A severely malnourished 5-month-old infant was admitted to Arkansas Children's Hospital, Little Rock, Arkansas, last February with symptoms including heart failure, rickets, vasculitis (blood vessel inflammation), and possible neurological damage. According to the hospital, the baby girl had been fed nothing but Soy Moo since she was 3 days old. Soy Moo is a soy beverage sold in health food stores.

"This kind of soy beverage, sometimes improperly called 'soy milk,' should not be confused with soy-based infant formulas. Unlike true infant formulas, which are nutritionally complete and appropriate for infants, soy beverages are lacking some of the nutrients infants need. Analysis of Soy Moo by the Arkansas Children's Hospital revealed deficiencies in calcium, niacin, and vitamins D, E and C.

"Labels on Soy Moo cartons and literature about the

drink do not suggest that Soy Moo be used as an infant formula. In addition, an FDA investigation found no evidence that the infant's parents were explicitly told that Soy Moo could be used as a baby's sole nourishment. Nevertheless, Soy Moo's distributor, Health Valley Foods, Irwindale, California, has voluntarily stopped distribution until new labels stating 'Do Not Use As Infant Formula' can be printed.

"FDA learned of a similar incident that occurred last April when a California couple questioned a physician about their 2-month-old daughter's failure to gain weight. The physician discovered that the baby had been exclusively fed Edensoy, another brand of soy beverage. A midwife had recommended Edensoy to the parents, according to the FDA investigator assigned to the case."

Photos show cartons of Sunsoy Original, and Edensoy Original, and cans of Loma Linda Soyalac, Isomil, Nursoy, and ProSobee.

5993. Stehlin, Dori. 1990. Feeding baby: nature and nurture. *FDA Consumer* 24:27. Sept. *
Address: Rockville, Maryland.

5994. Stievenard, Mr. 1990. Concentrating soya milk by ultrafiltration. Lecture presented at Eurosoya Conference. Held 5-7 Sept. 1990 at Strasbourg, France. *
• ***Summary:*** The initial soymilk contains 4% solids at 80ºC. Ultrafiltration is conducted using a carbon / zirconium membrane with a process control factor of 3.5 at 80ºC. The resulting concentrated milk, which now contains 12% protein, is cooled in a chamber. It is then heated to 55-80ºC, conditioned, and chilled. The concentrated contains 12% solids and at 4ºC its texture is that of a gel. The typical composition of the final product is: dry matter 22.8%, protein 12.7%, lipids 7.4%, and carbohydrate 1.2%. Compared with normal soyamilk, concentrated soyamilk has higher levels of phosphorus, calcium, and magnesium, and lower levels of the flatulence-causing oligosaccharides saccharose, stachyose, and raffinose. Applications of concentrated soyamilk include soya ice creams, pâtés, sausages, salad dressings, mayonnaise, and ready meals. Address: Cacoja, France.

5995. Vandemoortele, Philippe. 1990. Soymilk, a traditional milk substitute. Paper presented at the Eurosoya Conference. 5 p. Held 5-7 Sept. 1990 at Strasbourg, France.
• ***Summary:*** Contents: Tradition. Milk imitation or substitute? (It is a substitute). New process for making soymilk (giving improved taste and nutritional value). New products (such as dairylike products). Standards (a protein content of at least 3.6% should be guaranteed). Terminology (The terms "soya milk" and "soy-bean milk" have been used in published materials since 1897. Because of the protection of the word "milk," most soymilks in Europe are labeled "soya drink," except in the UK where the term "soymilk" has been legalized). Soymilk imitation (Soymilk made from soy protein isolates, fats, sugar, etc. is neither a natural nor a traditional product). The market. Producers. Future of soya milk. Negative perspectives. Conclusion.

"It is difficult to determine the amount of soymilk produced and consumed in Europe. In 1986-87 a number of enthusiastic reports drastically overestimated the European soymilk market. Some publications, for example, estimated that the market in the UK totalled about 30,000 metric tons (tonnes; i.e. about 30 million liters). The latest reports (1989) however seem to provide more reliable and realistic information. *Agrarwirtschaft* has recently [March 1989, 38(3):74-83] published figures stating that the market grew from 16,000 tonnes in 1986 to a projected 28,500 tonnes in 1992. There is no question however that soymilk consumption has risen substantially in the last 5 years. Yet soymilk remains a marginal market and accounts for less than 0.1% of the total dairy market. The U.S. market on the other hand is estimated at 16,000 tonnes for 1989.

"Today there are more than 14 commercial soymilk producers in Europe, producing and packaging soymilk in more than 200 different packages. Their total capacity is estimated at approximately 60,000 tonnes a year..."

Presently the two main disadvantages with soymilk are its taste, and its high price compared with cow's milk.
Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8560 Wevelgem, Belgium. Phone: (056) 43 22 11.

5996. Ford, Ashley. 1990. Milking the soybean: Asian firm opens drink plant. *Province* (*The*) (*or The Vancouver Sun*) (*Canada*). Oct. 3.
• ***Summary:*** "Yeo Hiap Seng Ltd. of Singapore has been turning Ontario's soybeans into high-protein drinks for over two decades... This week, the company will open a $13-million soybean-juice plant adjoining its juice-concentrate plant in Chilliwack... Chalk the investment up to a victory for the U.S.-Canadian free-trade agreement. Yeo says the agreement, plus the availability of high-quality soybeans, persuaded it to put in a plant at Chilliwack...

"In 1988, the company purchased the adjoining Pacific Fruit & Concentrates Ltd. from the East Chilliwack Co-operative for about $3 million. It is now known as YHS Pacific Fruit Concentrates Ltd. Last year, it also purchased Chun King, the oriental food division of RJR Nabisco, based in Windsor [Ontario, Canada]. The new plant will produce 300 cans a minute of a variety of soybean drinks for the Canadian and U.S. markets. The state-of-the art-factory will create 32 new jobs...

"At the beginning of the century [in 1900], family patriarch Yeo Keng Lian began fermenting and selling soya sauce in Fujian province... Initially, soya sauce provided Yeo's business success. In 1955, the company started producing soybean drinks, and has since gone on to produce

other foods."

A photo shows Bill Chia showing off the canning line at Yeo's new soymilk plant. Note: This factory is a major Canadian consumer of soybeans for food/beverage use, but about 90% of the finished soymilk is exported to Asia–especially Singapore. Address: Business Reporter, Canada.

5997. Lo, K.S. 1990. New developments at Vitasoy (Interview). *SoyaScan Notes.* Oct. 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Vitasoy factory opened in Hong Kong on 9 March 1990. The 50th anniversary was celebrated on about 22-23 March 1990 because the Trade Development Exhibition Hall in Hong Kong was booked up so far in advance. Concerning the 50th anniversary history of Vitasoy, the woman author, Choi Po-King, has a PhD from Oxford and is now teaching history in the School of Education at the Chinese University of Hong Kong. She originally approached K.S. Lo with the proposal to do a history of his company in English. She speaks good English, but it is her second language. They decided to do the first edition in Chinese since most of the company's customers are Chinese. Now he thinks he will go back to her and ask her if she would like to do an English-language edition. He has no idea when the English edition will be available.

His company has just finished changing its name. The new name, effective 24 Sept. 1990, is Vitasoy International Holdings Ltd.; the name expresses Mr. Lo's hope that soyfoods "will at all times remain the core of our business."

Mr. Lo has attended the Natural Foods Expo at Anaheim several times. That is probably where he first met John Paino many years ago.

Vitasoy in Hong Kong is doing development work on an aseptic Tetra Pak tofu, but the product is not yet on the market. Mr. Lo has seen the Tetra Pak tofu make by Yeo Hiap Seng in Singapore, but he would not say that it is a top quality product. Yeo tried to sell it in Hong Kong but without much success. It is a hard product to sell to people with a long tradition of consuming tofu. He was not aware that the product was sold in Italy. One of the reasons Vitasoy purchased Nasoya was so that Nasoya could eventually help Vitasoy to make and market an aseptic tofu in America. Address: Chairman, The Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd., Aberdeen, Hong Kong. Phone: 5-528211.

5998. Diamond, Harvey. 1990. Saving the planet with your knife and fork. Lecture presented at World Vegetarian Day. Held Oct. 6 at San Francisco State College.

• ***Summary:*** Cardiovascular disease kills 2,500 Americans per day, more than all other diseases combined. The main concern of meat eaters considering a switch to a vegetarian diet is "Where will I get my protein?" But where does a cow get its protein? And how about the strongest animals: the elephant, silverback gorilla, rhinoceros, oxen? All eat from the plant kingdom. None eat meat. A lion is strong and it eats meat, but it sleeps 20 hours a day. Americans have been conditioned by billions of dollars of advertising to think that protein equals meat. Conditioning works. Michael Jackson was paid $15 million to do Pepsi commercials but he doesn't drink Pepsi.

The recently released China-Cornell-Oxford diet study, which started in 1983, is one of the most important large scale studies to date. It was overseen by Dr. T. Colin Campbell. He said "We humans must recognize that we are a vegetarian species." He also showed that dairy products cause osteoporosis. A calf that is weaned will not drink cow's milk. Where does the cow get its calcium? Chinese get 7% of their protein from animal products; American's get 70%.

Americans eat 16 million animals a day, 6 billion a year. The system that raises these animals is tearing the environment apart. It uses huge amounts of fuel, water, and land. It takes 25 times as much fuel to get 1 lb of protein from beef as from the plant kingdom. The animal products industry uses more water than all other uses combined, then it pollutes the water. Hay is the No. 2 farm crop in America. It is subsidized, costing $10 to get $1 worth of hay. America is the world's No. 2 food producing country behind China. 95% of our land is used to grow crops that are fed to animals. 100 million acres of rain forests have been cut down in Brazil, 75% to clear land for raising animals.

The U.S. school lunch program requires meat and milk to be on every plate or the money will be withdrawn. Meat and dairy products are exempt from the new food labeling laws. There are 30 meat and dairy Political Action Committees. Diamond does book signing after his lecture. Address: Bradenton, Florida 34209.

5999. Wildwood Natural Foods. 1990. Re: Labels of all current Wildwood products. Letter to William Shurtleff at Soyfoods Center, Oct. 11. 6 p. On letterhead.

• ***Summary:*** On 11 Oct. 1990 someone at Wildwood in Fairfax sent Soyfoods Center all of Wildwood's current labels affixed to 6 pages of Wildwood letterhead. There is no cover letter but the postmark on the envelope shows the date and origin. Most of the colorful labels are for Wildwood's ready-to-eat tofu products. There are also labels for Yo Soy! [organic soymilk] in Rich, Cocoa, Maple, and Honey Vanilla flavors, Rice Pudding (dairyless, with organic soymilk), Curried rice salad with tempeh, Wildwood seitan (made the "Say-Tahn" Ron way). Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax, California 94930. Phone: 415-459-3919.

6000. Vandemoortele, Philippe. 1990. Vandemoortele to stop exporting soymilk (especially Sunsoy) to the USA (Interview). *SoyaScan Notes.* Oct. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Alpro is growing so fast and has so many priorities in Europe that he has decided to discontinue exporting his products (such as Sunsoy soymilk) to the USA. Alpro is doing very well in Europe, but the manufacturing and marketing efforts require a great deal of attention, time, and other resources. Because there is so much competition in the USA, he felt he should either make bigger efforts and spend much more time there, be much more aggressive, or stop. Basically, he does not know the American market. The problem is doubly difficult when exporting to the USA since the dollar is falling so low. Since Hong Kong is linked to the U.S. dollar, changing exchange rates are not problem for Vitasoy–a major competitor. FVO (Farm Verified Organic) is an American organic certification organization well known in Europe. Address: Managing Director, Alpro N.V., Vlamingstraat 28, B-8560 Wevelgem, Belgium. Phone: (056) 43 22 11.

6001. Gupta, Rajendra ("Raj") P. 1990. ProSoya is introducing SoyaCow, a small, low-cost soymilk system for Indian villages (Interview). *SoyaScan Notes.* Oct. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The new SoyaCow unit, which now sells for $2,000 and will eventually (hopefully) sell for $1,000 makes one 20-liter batch of low-beany-flavor soymilk every 30 minutes. The machine grinds the beans, cooks the slurry, and presses out the soymilk. It does not require the use of steam: any fuel can be used. The beans are cooked immersed in water with no air in the vessel, but they are not under a vacuum, since that is too high-tech for villages and developing countries, leading to maintenance problems.

By comparison the Mechanical Cow from Brazil makes 70 liters per batch, but requires the use of steam and costs $10,000 to $15,000. Address: 627 Gaines Dr., Ottawa, ONT, K1J 7W7, Canada. Phone: 613-744-4401.

6002. Starr, Sara M. 1990. Soyfoods: Are they a hit at last? More meat eaters switching to soy sometimes, says study. *Food Business.* Oct. 22. p. 37.
• ***Summary:*** "According to data from a new nationwide study by HealthFocus, a consulting firm specializing in the healthful foods market, about one in 10 food shoppers said they eat soyfoods once every two weeks or more... Twice as many people eat soyfoods regularly as are vegetarians... Sales of aseptically packed soymilk are expected to reach $75 million in 1991, up from $46 million in 1989, according to Soyatech Inc., publisher of a soy industry source book."

A photo shows 6 tempeh products made by Lightlife Foods. The company's sales are growing at a rate of about 30% annually. Address: Vice president, HealthFocus Inc., Emmaus, Pennsylvania. Phone: (215) 967-2233.

6003. Demos, Steve. 1990. Consultant report on training in the production and marketing of soy paneer / tofu at the cottage level. White Wave, Inc., Boulder, Colorado. 31 p. 28 cm.
• ***Summary:*** Submitted to Winrock International, Inst. for Agricultural Development (Contractor USAID). Date: Aug. 16–Sept. 15, 1990. New Delhi and Bhopal–India. Contents: Introduction. Background. Consultancy objectives. Soy paneer marketing: Observations, conclusions, recommendations, test market, experiment. Summary conclusion–Privatization. Appendix. Making sequence and standards. Preventive maintenance recommendations. Safety recommendations. Equipment recommendations. Sanitation recommendations. Further test recommendations. Opening procedure checklist. Closing procedure checklist. Economic analysis soy paneer production. Daily activities summary. Acknowledgements.

In India, 40% of the citizens fall below the poverty level. One serious consequence is a protein shortage. "During the past 15 years, the population of India has increased approximately 50%. Harvested tonnage of India's primary protein source, (legumes), has during this same period remained relatively constant at 12 mm tons per year. Thus the per capita availability of protein in India has actually decreased 50% within the past 15 years...

"The Soybean Processing and Utilization Project, (SPU) is a jointly funded US-Indo Project whose goal is to facilitate the processing of soy protein in cottage and small plant industries which effectively produce soy protein foods for human consumption.

"The SPU Project has been in effect for approximately 5 years...

"Currently the Central Institute of Agricultural Engineering (CIAE) in Bhopal has been the focal point of the SPU's work on soy paneer. The institute in 1990 purchased and installed a semi-automatic soy paneer making system in its pilot plant facility.

Sensory evaluations from SPU research show that a firm textured tofu–75% moisture–closely resembles dairy paneer texture and is acceptable to the Indian taste. However, there were objectionable 'beany' flavors found in soy paneer. Dairy paneer is considered a luxury item in India with only 2% of the population consuming the product. The primary reason for the limited usage was price. Current dairy paneer is produced almost exclusively in small cottage shops. All product made is sold within 48 hours, as the use of refrigerated storage in India is very limited. There is no retail or wholesale distribution network for dairy paneer. Indian staple protein is legumes (dahl). Soymilk sold in tetra pak cartons has failed. When the product was packaged in only polyethylene bags the price was reduced substantially and the product recognized greater consumer acceptance. Note: Noble Soya tried selling their soymilk in poly bags after their Tetra Brik venture failed. Lots of dairy milk in India is sold in poly bags. Most panir is curded with soured dairy milk whey. Address: President, White Wave Inc., 1990 North 57th

Court, Boulder, Colorado 80301. Phone: 303-443-3470.

6004. Golbitz, Peter. 1990. Trip report to Mexico City, Mexico, September 18-24, 1990 [for American Soybean Assoc. conference on soymilk and soy-based cheese products]. Soyatech, Inc., P.O. Box 84, Bar Harbor, ME 04609. 9 p. Oct. 8.
• ***Summary:*** Mr. Golbitz presented a paper titled "Soya and its Utilization in Cheese and Cheese-like Products" at the symposium in Mexico City. Interested people and companies include: Carlos Tejeda of Alimentos S.A. in Guatemala (which now makes textured soy flour, and a cereal-soy blend resembling Incaparina), Elena Dominguez of the Dominican Republic, Miguel Ruiz Puente of PROLESA in Mexico, Nestlé (which is now successfully marketing Bonus, a powdered 50:50 cow's milk:soymilk blend; their soymilk plant is in Veracruz). Dairy interests perceive soy products as potential competition and a threat to their industry, but there is no longer enough cow's milk to go around and the price of nonfat dry milk is rapidly increasing. Politicians are afraid of gradually adding soymilk to cow's milk and other dairy products for fear of accusations of adulteration. Address: Bar Harbor, Maine. Phone: 207-288-4969.

6005. Leatherhead Food Research Assoc. 1990. Vegetarian foods in the UK. Randalls Road, Leatherhead, Surrey, England. Report No. 40. Conducted June 1990. Price: £55 for non-members. *
• ***Summary:*** "The development of the vegetarian market was a significant factor influencing UK food sales in the late 1980s. The market has grown from a small largely specialist base into a more mainstream food sector. Not only do consumers tend to perceive vegetarianism as more healthy than a mixed diet, but publicity over inhumane treatment of animals has increased awareness of slaughtering processes. Also growth of some good vegetarian restaurants has shown that a vegetarian diet need not be dull or boring. The total vegetarian market for 1989 is estimated at £500m [million]. Soya products have not gained mass appeal as yet but have become an established part of the specialist health food market with soya milk sales valued at £20m and other soya products at £4m." Address: Leatherhead, Surrey, England.

6006. **Product Name:** Soya Burgers, Soy Milk [Chocolate, Cardamom, Vanilla, or Plain].
Manufacturer's Name: Lisa Camps.
Manufacturer's Address: 1694 Ouneachem Baht, Anjuna Bardez, Goa, India 403-507. Phone: 0091-0832-2273648.
Date of Introduction: 1990. October.
Ingredients: Soya Burgers: Okara, potato to bind, onion, garlic, capsicum; breaded with bread crumbs then deep fried in olive oil. Served with Cole Slaw and Hummus.
Wt/Vol., Packaging, Price: Burgers: Served on a plate to eat on site or take away in waxed paper. Price: 50/- rupees. Soya milk: Packed in 250 ml milk grade biodegradable bags, sealed with a machine, served with a straw–poked a hole in the bag. Price: 10/- rupees.
New Product–Documentation: Letter (e-mail) from Lisa Camps of Goa. 2005. May 15-17. These products were introduced in about 1990. In 1989-90. Lisa decided to settle in Goa. She ran a lingerie business and also sold soya burgers, hummus brown bread, and 4 flavors of soy milk every Wednesday in the Anjuna Flea Market, where she had a food stall; she made these in her home kitchen at 1694 Ouneachem Baht, Anjuna Bardez, Goa, India 403-507.

Letter (e-mail) from Lisa Camps. 2005. July 16. Lisa is not aware of anyone who sold soya burgers or soy milk in Goa before she did. These products were introduced in Oct. 1990; the season in Goa starts in October and ends in April. The business had no name at that time; it was just a nameless stall in the local market.

6007. Malloy, Michael H.; Willoughby, A.; Graubard, B.; et al. 1990. Exposure to a chloride-deficient formula during infancy: Outcome at ages 9 and 10 years. *Pediatrics* 86(4):601-10. Oct. [24 ref]
• ***Summary:*** A follow-up study on children who consumed chloride -deficient Neo-Mull-Soy during infancy. "171 of the exposed children and 261 soy control children were given a battery of psychologic tests in their homes to determine whether there had been any effect on intellectual development as a result of exposure to the chloride-deficient formulas. There were no differences in scores between the groups..." Address: National Inst. of Child Health and Human Development and the National Cancer Inst., Bethesda, Maryland.

6008. McDougall, John A. 1990. Tempest in a baby bottle? *Vegetarian Times.* Oct. p. 10-11. [2 ref]
• ***Summary:*** "Research has found high levels of aluminum, a potentially toxic mineral, in soy-based infant formulas." The author cites several medical studies which confirm this (Koo et al. 1988; Freundlich et al. 1985).

"The top source of aluminum in soy-based infant formulas is the soybean itself. Soybeans, and other plants as well, absorb aluminum from the soil. (Found naturally in soil, air, water and food, aluminum is the third most abundant element on earth.) Additional aluminum gets into soy-based infant formulas during manufacturing processes, such as the addition of calcium and phosphorus compounds (which also contain aluminum), and from storage containers, particularly glass. Aluminum can leach from these containers into the formula." Address: Medical Director, Lifestyle and Nutrition Program, St. Helena Hospital, Deer Park, California.

6009. ProSoya Foods International Inc. 1990. An affordable

soya milk technology: High quality soya milk production equipment for any budget (Leaflet). Ottawa, Ontario, Canada. 1 p. PSF-SC20. Oct.
• ***Summary:*** "ProSoya recently completed the development of equipment capable of making non-beany tasting soya milk in 20 litre batches every 30 minutes. The table top size equipment costing under $3,000 can use almost any source of electricity and heat. It is ideally suited for schools, hospitals, and other institutions, cottage industry, and second generation soymilk and tofu product manufacturers.

"The equipment, dubbed SoyaCow-20, has three components: an air-less grinder, a scraped surface pressure cooker, and a filter press. Steeped soya beans are put in the grinder through a hopper and the machine filled with water. The grinder motor is run for a few minutes and the ground bean slurry is transferred to the cooker by opening a valve. The slurry is cooked at 15 lb per square inch pressure by direct heat from a natural gas, kerosene, coal, or wood stove. The cooked slurry is expelled to the filter press to extract soya milk."

A table compares 4 processes for making soymilk: Cold grind, hot grind, hot blanch, and airless grind. Ten variables are compared, such as processing chemicals, grind (hot/cold), soya milk solids (dissolved/suspended), odour & taste, flavoring. etc. Concerning odour and taste: The cold grind is rancid and cereal, the hot grind is less rancid & cereal, the hot blanch is roasted nut & cereal, and the airless grind is cereal & cereal. Concerning mouth feel: The cold grind is smooth, the hot grind is chalky, the hot blanch is very chalky, and the airless grind is smooth. Concerning protein yield: The cold grind is 70-90%, the hot grind is 60-80%, the hot blanch is up to 98%, and the airless grind is 70-90%. Concerning basic plant cost: The cold grind is low, the hot grind is medium to very high, the hot blanch is high, and the airless grind is low.

"For more information, contact ProSoya Foods International, Inc. 627 Gaines Drive, Ottawa, Canada K1J 7W7, Telephone 613/745-9115, Fax 613/744-3548, or Raylons Metal Works, Ramkrishna Mandir Marg, J.B. Nagar, Andheri (East), Bombay, India 400 059, Telephone 022/632-3288."

Note: PSF stands for ProSoya Foods. SC20 stands for SoyaCow–20 liters/batch. Address: 627 Gaines Dr., Ottawa, ONT, Canada K1J 7W7.

6011. YHS Pacific Fruit Concentrates. 1990. YHS Pacific Fruit Concentrates in Chilliwack descendant of 90-year-old family company headquartered in Singapore (News release). Chilliwack, BC, Canada. 2 p. Oct.
• ***Summary:*** Contains a good history of the company. The history up to 1962 is basically the same as that given by Shurtleff & Aoyagi in Feb. 1984. Then it continues: "Throughout the next two decades, Yeo's continued to expand and innovate: this was the first company in the world to pack soya bean drinks in paper tetra-paks using the ultra high temperature process. In addition, the company acquired the franchises for international brands such as Pepsi and 7-Up, Mirinda and Schweppes.

"In 1989, Yeo's purchased Chun King, the oriental division of RJR Nabisco based in Windsor, Ontario, and bought Pacific Fruit & Concentrates Limited located in Chilliwack, B.C.

"Today with associated companies, plants and 4,000 staff members around the globe, and with its products exported to 35 countries, Yeo Hiap Seng Ltd. is still guided by the Yeo family and still adheres to the original formula for success: provide quality products and unite to succeed."

Note: The company's offices and headquarters are in Richmond, B.C. The soymilk plant is located in Chilliwack (population 9,000) about 55 miles to the east, on the south bank of the Fraser River, only about 10 miles north of the U.S.-Canada Border. Address: Chilliwack, BC, Canada. Phone: 604-277-7707.

6012. YHS Pacific Fruit Concentrates. 1990. Fact sheet: YHS Pacific Fruit Concentrates Ltd.: New soya bean drink plant opens (News release). Chilliwack, BC, Canada. 1 p. Plus 2 pages of flow charts. Oct.
• ***Summary:*** "The plant: 80,000 square foot plant on 4.5 acres. Construction and equipment cost: $13 million... Production capacity: 300 cans of soya bean drinks per minute. Employees: 32 full-time. Market: output will go to Canada and the U.S.A. At present, the parent company in Singapore exports the soya bean drink to its North American markets...

"The company: YHS Pacific Fruit Concentrates Ltd. bought from the East Chilliwack Cooperative in 1988 by Yeo Hiap Seng Ltd. of Singapore.

"Yeo Hiap Seng Ltd.: YHS began in 1900 in China manufacturing soya sauce. Canned food production added in the 50s, and in the 70s YHS acquired franchises from Pepsi-Cola International to pack and distribute products. Company now also into prawn farming and Budweiser beer distribution." Address: Chilliwack, BC, Canada. Phone: 604-277-7707.

6013. Greger, Janet L. 1990. Aluminum in infant formulas and foods (Interview). *SoyaScan Notes.* Nov. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In infant formulas, the main source of the aluminum is not the soybean but the calcium added for fortification. It is very difficult to precipitate calcium without getting aluminum contamination. Aluminum is toxic to most plants, so they have developed barriers and mechanisms for excreting it for detoxification; the exceptions are mostly

plants that are used to being grown on tropical soils, such as tea and herbs, and aluminum builds up in their leaves, not seeds. Researchers at Ross Laboratories have done extensive work on this subject, and about a year ago they invited in many researchers and regulators to prove their point.

Aluminum is only a problem for premature infants (preemies), all of whom have reduced kidney function which prevents them from eliminating aluminum properly. Pediatricians usually feed preemies a high-protein, high-calcium formula to make them grow as fast as possible to get them out of the high-risk area. They would usually only use a soy-based formula if it could help solve an infant's allergy problems. Soy-based infant formulas used for preemies have traditionally had a higher calcium content (to accelerate growth) than that used for regular infants, and thus a higher aluminum content. Since preemies and infants or children with kidney failure will almost always be under the close supervision of a pediatrician, who will now be aware of problems with aluminum toxicity, they would usually not feed these infants soy formula unless there was no other choice–due to allergy problems.

For all other human beings, except preemies and people with kidney problems, there is no need to be concerned about the aluminum content of any of their foods. If a person wants to do something, the first step is to stop taking antacids or buffered analgesics that contain aluminum. Janet personally has not stopped using aluminum pots or baking powder (the doses are too small to worry about), but she would not take an antacid that contains aluminum. The latter concern would be more with possible bone degeneration than with Alzheimer's disease.

Concerning the aluminum content of basic foods, probably the best source of data is Jean Pennington of the FDA Total Diet Study; she is in the Food and Nutrition Branch of FDA (Phone: 202-245-1064). Address: Prof., Dep. of Nutritional Sciences, Univ. of Wisconsin, 1415 Linden Dr., Madison, WI 53706. Phone: 608-262-9972.

6014. Boismenue, Clyde. 1990. The market for soy protein isolates, concentrates, textured soy protein products, and soy flour in America today (Interview). *SoyaScan Notes.* Nov. 13. With follow-up on 22 Jan. 1992. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soy protein isolates have been the big unfulfilled promise in the U.S. food industry during the last 2 decades. Since 1975 Clyde has been a wholesale distributor for ADM. Today only 2 companies in America make regular isolates: ADM and Protein Technologies International. ADM was weakest in isolates until they purchased the Central Soya line. ADM also bought Grain Processing Corporation's Pro-Fam line and closed it down to get rid of excess industry capacity. Then ADM hired Roger Kilburn away from Ralston Purina to improve the flavor of ADM's isolates. This upset Ralston greatly. Ralston Purina spun off Protein Technologies International primarily to make it available for sale; everyone in the industry knows this.

In recent years there has been a little resurgence in isolates for several reasons largely related to the rise in casein prices: (1) With the rise of free enterprise and economic flux in Eastern European countries, they are being used increasingly to extend meats; the problem for western suppliers is getting paid. (2) The Chernobyl nuclear disaster, which took place on 26 April 1986 in the Ukranian SSR, wiped out the Polish dairy industry. Casein prices rose and isolates filled part of the void. (3) Worldwide, the price of nonfat dry milk (NFDM) and casein has been very high since about 1986 due to short supplies. Casein has traditionally been more expensive than isolated soy protein, in part because it is more functional (it melts and binds water well) and most people like the taste better. Within a period of several years, the price of casein rose from $0.90/lb to $2.50/lb. Egg protein costs $4 to $5 per pound. All of these things helped the U.S. isolate industry. In the U.S. the main problem is the obnoxious meat labelling requirements. For example, if isolates are injected into ham, it must be sold as "Smoked pork ham with soy protein isolate product." The labeling problems are caused in part by the fact that USDA is staffed largely by veterinarians.

The main applications for soy protein isolates in America are in infant formulas (roughly 50% of the total), muscle powders (35%), diet beverages that are supposed to suppress appetite, and other (health food candy bars, etc., 15%). The use of isolates in meat products is very small.

Most isolates are not very bland and not very functional. PTI's are more bland than ADM's. The bulk of Clyde's isolate sales are for muscle powders, which are used to make shakes. The only isolate thick enough to work in a shake is the one with the most sodium proteinates, which has the poorest flavor.

Even textured soy flour (TSF/TVP) has not been very successful in food uses; Clyde sells several million pounds a year of it, but the industry is very sleepy. It is used mostly in spicy Mexican foods (mainly burritos, to add chunky texture), and pizza toppings (since labeling is not a problem). It is used in school lunch programs and by the military in meatloaf and braised beef. Seventh-day Adventist food companies buy quite a bit and repackage it. By far the biggest use of TSF is in pet foods. In California, what is commonly called the "Brigg's Amendment" (Food, Drug and Cosmetic Law, California code, Article 7, Section 26595-26599, "Hamburger and imitation hamburger," became effective in July 1974), effectively prevents the use of TSP in hamburger, even in restaurants. Ground beef or hamburger containing any extenders (such as TSP), binders, or added water must be called "imitation hamburger." If imitation hamburger is sold or served in a restaurant, a list of its ingredients must appear on the menu. Mr. Briggs, a state legislator from Orange County, had a friend with some

hamburger stands. This law is enforced, in practice, only with respect to hamburger patties, and especially when the price of hamburger rises; 80-85% of all ground beef is sold in the form of patties. It is not enforced when the ground beef is "cooked in a recipe" as in spaghetti sauce, taco filling, meat loaf, and sloppy joe mix. In these cases regulators do not enforce the law that requires the product to be called "imitation hamburger" if bread crumbs, rolled oats, or a soy protein product are added.

Concerning ADM's Veggie Burger, there are 4 kinds that come in dry form: Herbs & Spices Style, Curry, Meat-Style, and Gyros-Style. They were introduced about 4 years ago. ADM also makes pre-cooked, frozen patties.

Soy flour has two main applications: (1) As a replacer for non-fat dry milk (NFDM), usually sold mixed with whey and used in baked goods. Kraft makes one popular brand. (2) In calf milk replacers (CMR). Calva in Modesto makes lots of CMR using soy flour; not much soy protein concentrate is used in CMR. The key consideration is the "per pound protein basis." Meat protein costs $6/lb and soy flour protein costs $0.35/lb. Labeling regulations are the main barrier to more widespread use. Not much NFDM is used in breads today in America. Soy flour is more expensive than wheat flour, but it holds more water, and slows staling–two major sales points. Address: Basic Foods Co., 1211 E. Olympic Blvd. #204, Los Angeles, California 90021. Phone: 213-623-6686.

6015. Yu, Angie Elinon Yu. 1990. Re: Cherry Food Industry, APY Food Processing, and promoting tofu in the Philippines. Letter to William and Akiko Shurtleff at Soyfoods Center, Nov. 14. 2 p.

• ***Summary:*** "Sometime in the late 70's, you visited my parents-in-laws Tofu factory, then known as Cherry Food Industry here in the Philippines. I am married to their second, Jerry Joseph.

"The tofu business of my parents-in-law is still active but now registered under a new name, APY Food Processing, but located in the same address (74 Speaker Perez St., Santa Mesa Heights, Metro Manila). The plastic container of the Nippon Tofu (silken tofu), however, still carries the old name."

She and her husband operate a computer services firm. One of their business clients is Shoemart, a big chain of supermarkets, which is selling Nippon Tofu and other tofu products made by APT Food Processing. Shoemart has asked Angie and her husband to operate a portion of their Gourmet Shop (which presently has a salad bar and a Japanese sushi bar) located in the middle of their newest supermarket. They have agreed to do this

"I personally feel that the level of market awareness of what tofu really is, is relatively low. I have always suggested to my in-laws to invest in educating the market about it since five years ago. However not much has been done. By presenting our products in this Gourmet Shop we have found a vehicle to do exactly this."

She asks Shurtleff for ideas on promoting the use of tofu, and for updated materials. And she invites him to visit them any time.

"Our store will start operating on November 28 of this year. All information materials that I release to the public will be based on your Book of Tofu (1979). I bought a copy of it when I was in your country (New York) in 1988. I learned from my husband that you gave his parents an autographed original copy of the same book." Address: Elinon Yu EDP Services, International Corporation, 61 West Capitol Drive Bo, Kapitolyo, Pasig, Metro Manila, Philippines. Phone: 631-9451.

6016. *SoyaScan Notes.* 1990. How many bushels of soybeans per month are used by various American West Coast tofu and soymilk manufacturers (Overview). Nov. 28. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The following are ranked in descending order of bushels of soybeans used per month: House Foods & Yamauchi Inc. 12,000 (Los Angeles. This includes soybeans used to make soymilk for Westbrae's Ah Soy in 225 ml foil pouches), Azumaya 3,567 (San Francisco; buys from Minnesota in 60 lb bags. Uses 300 tons/month), Pacific Foods 2,250 (Tualatin, Oregon. This includes soymilk used to make Westbrae Aseptic WestSoy Lite), Quong Hop & Co. 2,000 (South San Francisco), Wy Ky 1,563 (Los Angeles), Wo Chong Co. 1,167 (San Francisco), Mighty Soy 1,117 (Los Angeles), American Foods 733 (Alhambra, California), San Diego Soy Dairy 467 (El Cajon, CA), Clearway Soy Foods 67 (Corralitos, CA), Fuji Fresh Tofu 50 (San Jose, CA), San Jose Tofu 50, Fresno Tofu 33 (Fresno, CA).

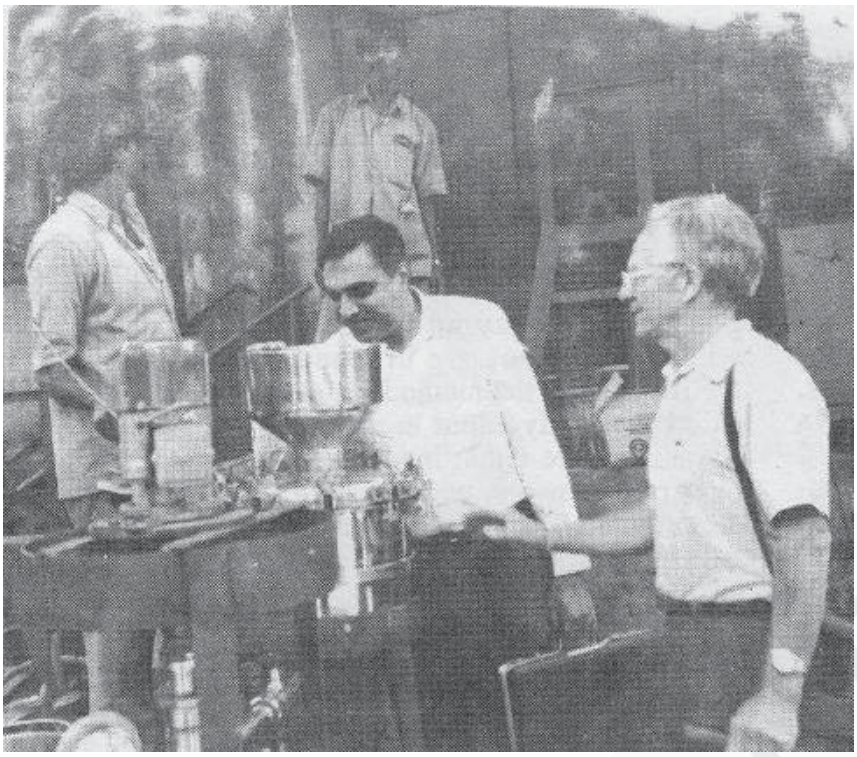
6017. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1990. CIDA grant for soya milk. Fall. p. 3.

• ***Summary:*** "CIDA (Canadian International Development Agency) has approved in principle a matching grant to Child Haven for our Soya Milk Program. While waiting for the CIDA decision, we thought the program was so important we should go ahead regardless, and our first soya milk machine is ready. A Bombay factory manufactured one, which is being installed at our Hyderabad Home by a factory technician who will stay a week to make sure it is working well.

"Bouquets to the Ottawa Committee that worked hard on the CIDA presentation: Hart Jansson, Arjun Patil, Jaya Subramaniam, Hema Raman, Raj Gupta.

"Groups of women are keenly interested to form soya milk co-operatives. The process was invented by Ottawa scientist Raj Gupta, of Pro Soya Foods (see next page)."

Photos show: (1) "Raj Gupta and Volunteer Ted Draper of Toronto inspect 'soya cow' at Bombay factory."



(2) "Finished soya milk going through filter into pail." A complete SoyaCow machine is visible in each photo.

Note 1. This is the earliest document seen (July 2013) that mentions "Child Haven International" in connection with soy, with soymilk, or with Raj Gupta. The SoyaCow is not mentioned.

Note 2. In the upper right corner of the front page of each issue of this newsletter is a prominent round illustration of Mahatma Gandhi. Fred Cappuccino wrote this newsletter. The name of the organization from the very beginning was "Child Haven International." Address: RR 1, Maxville, ON K0C 1T0 Canada. Phone: 613-527-2829.

6018. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1990. An affordable soya milk technology: High quality soya milk production equipment for any budget. Fall. p. 4.

• ***Summary:*** Note: This appears to be a reprint of a leaflet (8½ by 11 inches) from "PSF-SC20-C / November 1990"–probably written by Raj Gupta and first published by ProSoya Foods International.

"ProSoya recently completed the development of equipment capable of making non-beany tasting soya-milk in 20 L [litre] batches every 30 minutes. The table top size equipment, developed for *Child Haven* for their operation in India, can use almost any source of electricity and heat. It is ideally suited for schools, hospitals, and other institutions, cottage industry, and second generation soymilk and tofu product manufacturers. *Child Haven* plans to buy several such units under a CIDA project.

"The equipment, dubbed SoyaCow-20, has three components: an airless grinder, a scraped surface pressure cooker [15 psi pressure], and a filter press." The process is described.

A table in the middle of the publication compares the four methods for making soya milk: Traditional cold grind, hot grind (Cornell Univ.), hot blanch (Univ. of Illinois), and Canadian airless cold grind (patented by ProSoya). They are compared on the following variables: (1) Soya beans (whole or dehulled). (2) Processing chemicals (none, sodium bicarbonate, or hydrochloric acid). (3) Steeping (soaking) of soybeans (yes, no, or blanch). (4) Grind (hot, cold, or airless). (5) Cook then filter vs. filter then cook. (6) Soya milk solids (mostly dissolved or suspended). (7) Colour & taste. (8) Flavouring (Very difficult to easy). (9) Mouthfeel (smooth vs. chalky). (10) Protein yield (%). (11) Basic plant cost (low to high).

The Canadian system is shown to have several advantages, incl. low cost, good flavour, high protein yield, high level of dissolved solids, smooth mouthfeel, etc.

An illustration (line drawing) shows an Indian woman operating the "Soya-Cow-20."

"For more information, contact ProSoya Foods International, Inc., 627 Gaines Drive [the home of Raj and Rashmi Gupta], Ottawa, Canada K1J 7W7. Telephone 613 / 745-9115. Fax 613 / 744-3548. Or Raylons Metal Works, Ramkrishna Mandir Marg, J.B. Nagar, Andheri (East), Bombay, India 400 059. Telephone 022 / 632-3288."

Note 1. This is the earliest document seen (Oct. 2010) that mentions the "SoyaCow" or the "SoyaCow-20."

Note 2. The leaflet is apparently referring to the first SoyaCow (an SC-20) which was made in Bombay, India, according to designs by and supervision from Raj Gupta and ProSoya Foods International.

6019. Kalemi, Petraq T. 1990. Soja [Soya]. Albania: Shtëpia Botuese–8 Nentori. 139 p. Nov. Illust. 18 cm. [2 ref. Alb]

• ***Summary:*** Contents: Introduction (p. 3). 1. Significance of soya for Albania's economy (p. 5). 2. A brief history of soya (p. 8). 3. The use of soya in industry and other sectors of the economy (p. 10). 4. Special botanical features of the soybean (p. 25). 5. Biological features of the soybean (p. 42). 6. Soybean physiology (p. 49). 7. The growth process and metabolism (p. 62). 8. Soybean selection (p. 80). 9. Soybean cultivation technology (p. 98). 10. Soybean diseases and pests (p. 113). 11. The most significant soybean cultivars presently grown in Albania (p. 129).

Chapter 2, "A brief history of soya," does not say when the soybean first arrived in Albania or when it was first cultivated there. It notes that "it has been about 15 years that great scientific work [on soybeans] has been done in our country" (i.e., since about 1975). In 1987 soy milk was first produced in Albania to feed cattle (calves?).

Chapter 11 states that the most important cultivars presently grown in Albania are: Weber, Giada, Uells (Wells), Evans, Azurra, Hodson, Hark, UxF-90, Vnimk, Violet, Rampazh, Florida, Vatvorth (Wattworth), Depimore, Rendodora-627, Azurra nos. 2 and 3, Por, Inota, Adagg, Fiska-47A, Oka, Ada-66, BR-66, etc. Address: Albania.

6020. **Product Name:** Chocoya (Chocolate Soymilk), and Natura (Natural Soymilk) [Original, Strawberry, or Vanilla].
Manufacturer's Name: Nutrisoya, Inc.
Manufacturer's Address: 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.
Date of Introduction: 1990. November.
Wt/Vol., Packaging, Price: Natura: 250 ml and 1 liter Tetra Brik Aseptic cartons; Chocoya: 250 ml Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Leaflet from Quebec Government House in New York City. 1990. Oct. 15. This new line of natural soy beverages will be displayed at Booth #1346 at the Natural Foods Expo East in Philadelphia, Nov. 2-4. Contact: Mr. Giles Goulet.

Talk with Giles Goulet of Nutrisoya. 1990. Oct. 19. This company started making soyfoods in Oct. 1988, when they introduced tofu. Their next products will be the two soymilk products listed above, which will be launched in Canada in early November. The company has a large, modern plant. Chocoya, to be sold to the mass market, tastes as good as dairy milk. Natur-A, which comes in 3 flavors, is a purely natural soymilk, to be sold in natural stores. They use some (but not all) organic soybeans for the Natur-A. They grow their own soybeans on their own land. He is NOT a co-author (with main author J. Delisle) of the 1985 article titled "Nutritive value of soybean, rapeseed, and wheat proteins,..."

Ad in Natural Foods Merchandiser. 1990. Nov. "Rediscover a healthy drinking pleasure." Shows color photos of Chocoya and Natura (note spelling). Both are in French.

Talk with Johnathan Shore of Outremont, Quebec. 1994. Aug. 9. Natura is a Canadian soymilk product made in a government complex in St. Hyacinthe. It is made with added oil and honey, and sold in a Tetra Pak carton. It is marketed as a low-end (less expensive) product.

Update: 1995. May 15. Nick Feldman is president of the company (see 1995 interview). They are dependent to a significant degree on a government grant for their financial survival.

Update: As of Jan. 1998 their strawberry soymilk is still sold in New York City.

6021. **Product Name:** Surata Soy [Organic Original, or Honey-Vanilla].
Manufacturer's Name: Surata Soyfoods.
Manufacturer's Address: 302 Blair Blvd., Eugene, OR 97402. Phone: 503-343-8434.
Date of Introduction: 1990. November.
Ingredients: Honey-Vanilla: Organic soybeans, water, honey, vanilla. Original: Organic soybeans, water.
Wt/Vol., Packaging, Price: Bulk, or 1 pint retail plastic bottles.
How Stored: Refrigerated.

New Product–Documentation: Talk with Shevah Lambert. 1991. Jan. 15. This soymilk product was launched in Nov. 1990 in both bulk and retail bottles. The retail packs were temporarily discontinued, but will be back on the market in about April 1991. Labels sent by Shevah Lambert. 1991. Jan. 16. 1.5 by 4 inches. Magenta or dark blue on beige. Self adhesive. One label goes on the front of each bottle. The front label reads: "An Oregon cooperative." The back label reads: "Shake well. Keep refrigerated. Please recycle this container. Do not use as baby formula." UPC indicia.

6022. Takai Seisaku-sho. 1990. Modern soymilk plant: Makes delicious dairylike soymilk with no beany flavor. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 4 pages. Nov. Catalog. With 1-page color insert. 30 cm. [Eng]
• ***Summary:*** Page 2 is a flow chart of the modern soymilk

production process. Page 3 shows modern soymilk plant layouts, floor plans, and specifications. The color insert, which is titled "Modern soymilk plant: Makes delicious dairylike soymilk with off-beany flavor," is printed on both sides. The front shows 3 packaged soymilk products: Ah Soy, Hai-Meeru Soyalac (Made by San-iku Foods in Japan), and Soya Bean Milk (made by Guilin Sweets and Food Factory, Guangxi, China). Companies that make soymilk using Takai equipment include: Chung's Foods and Nam Yang Industries in Korea. Jinan Huifeng Bean Milk Product Factory in China. "One of our plants makes 1,000 liters of 5,000 x 200 ml packs of soymilk; another makes 10,000 or 20,000 packs of soymilk per hour. EMUL is a healthy soy-based frozen dessert. Contact Takai for an EMUL production plant." On the back is a plant layout. Address: Kanazawa, Ishikawa-ken, Japan. Phone: 0762-48-1355.

6023. Wicki, Maja. 1990. Sie hat das Soja in die Molkerei gebracht: Portraet der Biologin, Erfinderin und Geschaeftsfrau Suzanne Baroï de Stoutz [She has brought soya into the dairies: Portrait of biologist, inventor, and businesswoman Suzanne Baroï de Stoutz]. *Tages Anzeiger* (*Zurich, Switzerland*). Dec. 15. [Ger]
• ***Summary:*** A photo shows this 52-year-old woman from Geneva who won the Branco-Weiss prize for her achievements. In one of the suburbs of Lagos, the capital of Nigeria, stands the soymilk factory Farina. It was officially opened in the summer of 1990, but it has been in operation since the beginning of the year. Address: Switzerland.

6024. *SoyaScan Notes.* 1990. Europe's 20 largest tofu and soymilk companies (Overview). Dec. 23. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following summary is a combination of information from two sources: First, numerous interviews conducted by William Shurtleff of Soyfoods Center during 1990. And second, informed estimates by one of Europe's most knowledgeable soyfoods industry insiders. We give the ranking, company name, country, products (Tofu, Milk = Soymilk, Other), and number of metric tons of soybeans used per month.

1. Alpro. Belgium. Milk. Unknown.
2. Sojinal. France, Milk & Other. 417.
3. Heuschen-Schrouff. Netherlands. Tofu. 200.
4. DE-VAU-GE. Germany. Milk & Tofu. 100.
5. Aros Sojaprodukter. Sweden. Tofu, Milk & Other. 92.2.
6. Unisoy. England. Milk. 47.0.
7. Soya Health Foods. England, Milk. 45.0.
8. Soyana. Switzerland. Tofu & Milk. 32.0.

6025. Kubota, Brad. 1990. A history of tofu in Fresno and surrounding towns (Interview). *SoyaScan Notes.* Nov. 28 and Dec. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following information is based on Brad's personal recollections and interviews he conducted with various Japanese-American old-timers in Fresno. Brad now owns and runs Fresno Tofu Co. The lineage of his company is as follows:

He has heard from many people that there were two tofu shops in Fresno before World War II, but one went out of business. Also before World War II there was a company in Fresno named Tokubo Tofu, run by a Mr. Tokubo. Mr. Tokubo is said to have brought his company to Fresno from the countryside (from Fowler?) and it is not clear if he was part of the Fresno Tofu Company lineage or to whom he sold the company.

Mr. Sasaki may have owned a tofu company that was an early member of the Fresno Tofu Co. lineage. He sold it to Mr. Fukamoto, who renamed it Fukamoto Tofu.

Mr. Fukamoto sold his shop to Mr. Joe Hashimoto (a nisei or second generation Japanese American, who still lives in Fresno), who renamed the company Hashimoto Tofu in about 1947.

Joe Hashimoto sold his company to a Dr. Wilkinson, a Caucasian/American, who moved it away from Fresno, out into the country. He discontinued production of tofu, but started to make a type of soy cheese and soymilk. Dr. Wilkinson is no longer living.

It was probably Mr. Hashimoto who sold his company in about 1970 to Mr. Tokubo or David Goto, who renamed it Star Tofu Shop. David asked his younger brother, Nagaki, to come to America from Japan to help him make tofu. After a while, Nagaki took over the company. David left the business and started farming. Nagaki Goto renamed the company Goto Bean Factory in 1975.

Nagaki Goto sold his company to Brad Kubota, who renamed it Fresno Tofu Co. in Nov. 1982. Brad started by making the same two tofu products that Mr. Goto had made, medium-firm Japanese-style momen tofu, and agé (deep-fried tofu pouches).

After World War II there were at least two other tofu companies in Fresno: Nagahama Tofu, and Yokota Tofu-ya (which was in business in 1922). Before World War II there were at least two tofu companies in Fowler, California

(located about 10 miles southeast of Fresno): Soga Tofu and Harada Tofu. Mr. Hashimoto says that after the war, Mr. Tokubo also used have his tofu shop there in Fowler, whence he moved it to Fresno. In Dinuba (pronounced dai-NU-bah, and located about 30 miles southeast of Fresno) a tofu shop named Nii-Tofu was in business after World War II. Address: Fresno Tofu Co., Fresno, California.

6026. *SoyaScan Notes.* 1990. Soymilk and dairy milk prices in California, December 1990 (Overview). Dec. 28. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** At Berkeley Natural Grocery Co., a large natural food store at 1336 Gilman St. in Berkeley, California, unflavored (plain or original) soymilk made from organically grown soybeans retails for the following prices: Edensoy liter $1.69 (which is the equivalent of $1.60/quart), Vitasoy liter $1.79 ($1.69/qt), Pacific Soy Beverage quart $1.77, Westsoy liter $2.04 ($1.93/qt), Westsoy Lite liter $2.09 ($1.98/qt). Bob Gerner, the owner of Berkeley Natural Grocery Co., says that the last two products are more expensive because he buys them in small quantities. The average price of the quart equivalents of the first 3 products is $1.69 a quart. This is 4.6% lower than in Dec. 1988.

A quart of cow's milk (fortified with vitamins A and D) sells for the following prices at Safeway supermarkets: whole $0.67, low-fat (2% fat; protein fortified) $0.66, extra light (1% fat; protein fortified) $0.65, nonfat $0.62. The best-seller among these is extra light, which was introduced this year; low-fat was the best-seller last year. Thus soymilk in a liter or quart pack is 2.6 times as expensive as extra light dairy milk per unit volume. In Oct. 1987, after most soymilk brands were available in liter or quart sizes, soymilk was 3.42 times as expensive as dairy milk. This is a 24% drop in the price of soymilk relative to that of cow's milk over a period of about 3 years.

6027. Cederquist, Natalie; Levin, James. 1990. A vegetarians ecstasy: A healthy gourmet celebration of over 250 no cholesterol, no dairy, lowfat recipes devoted to long life and good taste. Glo, Inc., 2406 Fifth Ave., San Diego, CA 92101. 332 p. Dec. Illust. by Natalie Cederquist. Index. 28 cm. [13 ref]
• ***Summary:*** In this is innovative vegan cookbook, each recipe occupies 1 page and is accompanied by an illustration (line drawing). The glossary of ingredients mentions liquid aminos, miso, seitan, seaweeds, tamari, tempeh, and tofu. Page 28 is devoted to singing the praises of soy products. "Dairyless and eggless: With optimum health in mind, I have chosen to use soy products and egg replacer rather than dairy and eggs. Dairy is mucus forming, it contains cholesterol, fat and hormones, in addition to the pesticides and antibiotics used in the farming and dairy industry.

"Soy and seed cheeses, soy yogurts, soy cream cheese, soy sour cream, soy and rice based ice creams are delicious non-dairy products in the natural markets for you to try which are cholesterol free and low in fat."

The book contains 28 recipes for tofu, and 12 for tempeh. Other interesting recipes are: Sprouted soy salad (with 3 cups soy sprouts steamed for 3 minutes, p. 76). Orange miso dressing (p. 99). Miso soup (p. 162). Miso sesame rice (p. 206). Aduki bean and brown rice pot (p. 212). Féjoada (with soy sausages, p. 213). Mushroom seitan in wine sauce with wild rice (p. 241). Seitan sauté (p. 267). Amazake carob pudding (p. 290). Address: 2. M.D., San Diego, California. Phone: 1-800-854-2587.

6028. Dacosta, Yves. 1990. Lait de soja et tofu [Soymilk and tofu]. APRIA/CDIUPA, 1 avenue des Olympiades, 91300 Massy, France. 102 p. Dec. No index. 30 cm. Series: Actualités Scientifiques et Techniques en Industries Agro-Alimentaires. No. 45. [85 ref. Fre]
• ***Summary:*** Contents: Preliminary remarks. 1. Production of soymilk and tofu: Principles of production, the soybeans, cleaning/washing, soaking, grinding, cooking the slurry (*bouillie*), extraction of the soymilk, coagulation, separation of curds and whey, pressing the curds, removal of the tofu from the mold, cutting and packing the tofu, the need for water in a tofu ship, variations in production, storage and preservation of soymilk and tofu after their production, yuba, production of tofu from seeds other than soybeans.

2. Applications/uses of soymilk and tofu: Products: Soymilk and soymilk products (soymilk, sweetened soy beverages, dairylike soymilks, soy-based infant formulas, powdered soymilk, concentrated soymilks, soymilk mixed with other animal or vegetable milks, soy ice creams and frozen desserts, fermented soymilk products such as soy yogurt, various soymilk desserts [such as custards], sauces, dressings, and mayonnaises made from soymilk), tofu and tofu products (smoked tofu, fried tofu [*tofu frit*], marinated tofu, fermented tofu, breaded tofu, tofu mayonnaise and sauces, tofu spreads for bread, tofu sausages, pâtés, or biscuits/pancakes [galettes], tofu quenelles, quiches, fritters, raviolis, pizzas, mixed salads, prepared dishes (*plats cuisinés*), or sandwiches, tofu cakes, cheesecakes, or tarts, tofu desserts, ice creams, or chocolate bars), preparations based on okara (sausages, pâtés, croquettes, burgers, special breads or biscuits), the nutritional arguments for soymilk and tofu (rich in proteins, lipids, absence of cholesterol and lactose, low in sodium, an excellent ingredient in "light foods" [aliments allegés]).

3. A quick look at the major enterprises making and or selling soymilk, tofu, or their products in selected countries: France (Cacoja, Innoval, Soy [Société Soy], Sojadoc, Triballat, Celia, Celnat, Lima-Andiran, Maho Distribution, France-Proteines-Services), Great Britain (Plamil Foods Ltd., Itona Products Ltd., Soya Health Foods Ltd., British Arkady Co. Ltd. [subsidiary of ADM; incl. Haldane Foods Ltd., Regular Tofu Co., Tofeata Tofu], Granose Foods Ltd.,

Cauldron Foods, Dragon and Phoenix, Paul Jones (Tofu Shop), Full of Beans Soyfoods, Birchwood Health Products, White Waves, The Bean Machine Co-op Ltd., St. Ivel, St. Giles Foods Ltd., Yu's Tofu Shop, Tousoy Ltd., Allied Foods Ice Cream Co., Nexus Foods, Vegetarian Feasts, Unisoy Milk and By-Products Ltd.), Germany (DE-VAU-GE Gesundkostwerk GmbH, Soyastern Naturkost GmbH, Nuxo-Werke Rothfritz), Netherlands (Heuschen-Schrouff, Linn Oriental Products, Solnuts B.V., Manna Natuurvoeding), Belgium (Alpro, Jonathan P.V.B.A., Lima Foods, De Hobbit, Seven Arrows), Switzerland (Conserves Estavayer S.A., Soyana, Galactina), Sweden (Trensums Musteri, Aros Sojaprodukter), Italy (Crivellaro), Spain (Zuaitzo), USA, Japan, Hong Kong, Taiwan, Singapore. Bibliography.

Note: A great deal of the information in this report is taken, without permission or adequate citation, from books published by the Soyfoods Center in California. The statistics and dates given for the European, American, and Asian markets are taken almost completely from Soyfoods Center books. In some cases where the author relied on these books published more than 2 years ago, the information is presented as if it were current, whereas it is actually out of date and no longer correct. Dacosta's book, which might be called a "review of the literature," contains little or no new information. However his bibliography, based largely on a search of the CDIUPA database, with some original references, is quite good.

APRIA stands for Association pour la Promotion Industrie Agricole. APRIA administers CDIUPA. Address: Conseiller d'Entreprises, France: 47, rue Guersant–7015 Paris, France.

6033. *SoyaFoods* (*ASA, Europe*). 1990. New easy opening for Tetrapak. 1(2):3. Autumn/Winter.
• ***Summary:*** "A new easy opening pull-tab for the Tetra Brik Aseptic one litre carton is being test marketed in the UK. The carton makes use of two openings to ensure easy pouring and opening. The one for pouring features a plastic lip and the other as an air vent. To ensure the integrity of the aseptic seal, the pull-tab is in the form of a plastic and aluminium tear-strip. This type of pull-tab follows on from a similar device developed for portion packs but which only have one hole. Two holes are required for larger packs because of spillage problems when opening."

6034. Syntex Corp. 1990. Press backgrounder: Infant formula. 3401 Hillview Ave., P.O. Box 10850, Palo Alto, CA 94303. 2 p. Dec. Unpublished manuscript. [1 ref]
• ***Summary:*** "In 1967 The Borden Company developed Neo-Mull-Soy and Cho-Free, highly specialized infant feeding formulas designed for children who were allergic to milk products, or in the case of Cho-Free, to carbohydrates.

"In 1971 Syntex acquired the Neo-Mull-Soy and Cho-Free infant formula products [from Borden]. The acquisition included a primary manufacturing facility at Elgin, Illinois.

"In March-April 1978 Syntex ceased adding salt (sodium chloride) to the products out of concern that the sodium levels were too high and in the belief that adequate levels of essential nutrients were provided through other ingredients contained in the formulas. The company was mistaken.

"In July-August 1979 Syntex learned of an illness alleged to be related to the use of Neo-Mull-Soy and Cho-Free. Within days we notified pediatricians nationwide. The company determined that the products were low in chloride and promptly convened a panel of outstanding independent experts to review the reports and recommend corrective action.

"Within one week of discovering the chloride deficiency, Syntex initiated a voluntary recall of all Neo-Mull-Soy and Cho-Free products. The recall was a major effort involving first-class mailings to more than 100,000 physicians and pediatric nurses, mailgrams, nationally released media statements, and personal visits by Syntex representatives to

more than 26,000 stores. In total, nearly 8.5 million cans of the formulas were recalled and destroyed by Syntex.

"In Dec. 1979 the formulas were reformulated to assure adequate chloride levels and approved for marketing by the U.S. Food and Drug Administration.

"In Jan. 1980 the reformulated products were returned to market.

"In Dec. 1980 Syntex ceased production of infant formulas due to lack of demand. The company no longer manufactures any infant formula products.

"Syntex is very concerned with the health of children who used infant formulas which the company manufactured and marketed between April 1978 and August 1979. We deeply regret that for 16 months these formulas were made and sold with low levels of chloride, an essential nutrient. We are fully prepared to compensate children who suffered ill health because of insufficient chloride levels in these formulas.

"We intend, however, to defend ourselves vigorously against claims for alleged injuries or damages which were not caused by low chloride levels in the formulas, which we voluntarily recalled in 1979.

"We are pleased that we have not seen any substantial evidence that infants who used these formulas suffered long-term developmental problems. This was confirmed for children who used the chloride deficient formula but who did not develop metabolic alkalosis in a National Institutes of Health (NIH) study published in *Pediatrics* (October 1990). The NIH study of children using the chloride deficient formula and developing metabolic alkalosis has not been published.

"There is no doubt that many children who suffered metabolic alkalosis in 1978 or 1979 recovered quickly and suffered no permanent harm. This was documented by Dr. Stanley Hellerstein in an article published in *Pediatrics* (January 1985)." Address: Palo Alto, California. Phone: 415-855-5050.

6035. Taira, Harue. 1990. Quality of soybeans for processed foods in Japan. *JARQ* (*Japan Agricultural Research Quarterly*) 24(3):224-30. Dec. [7 ref. Eng]
• ***Summary:*** Contents: Abstract. Introduction. Quality for food processing: Tofu, miso, natto. Variation of bean quality and suitability for processing. Factors inducing variations in the chemical composition and suitabilities for processing.

Figures show: (1) Consumption of soybeans in Japan in 1988 (1,000 tonnes): Total: 4,663 tonnes. Oil and meal 77%. Food 19%. Other 4%. Food products: 886 tonnes. Tofu and abura-age 57%. Kori-tofu 3%. Miso 20%. Natto: 11%. Other 9%. Individual food products (* An additional 69,000 tonnes are consumed in the form of cooked whole soybeans, yuba, kinako, moyashi {sprouts}, and others). Tofu and abura-age 505 tonnes. IOM and other USA 83%. Japan 11%. China 6%. Kori-tofu 29 tonnes. IOM and other USA 72%. China 28%. Natto 100 tonnes. China 50%. USA and Canada 30%. Japan 20%. Miso 179 tonnes. China 86%. Japan 11%. IOM 3%. Soy sauce: Defatted soybean flakes 183 tonnes (97%) and whole soybeans 5 tonnes (3%).

(2) Frequency distribution of solid matter extractability in soybean milk (105 samples; 60 cultivars and 7 lines)–for varieties Enrei, Fukuyutaka, Akishirome, Akiyoshi, Tamahomare, Fujimijiro, Hyuuga, Shirosenari. Average value of U.S. soybeans. Mode: 79%. Range 70-82%.

(3) Correlation between protein and sucrose content in soybeans. Inversely correlated. The more protein, the less sucrose. (4) Correlation between hardness of steamed seeds and ammonia nitrogen content in natto. Directly correlated. The harder the steamed seeds, the more ammonia nitrogen in the finished natto.

(5) Variation in chemical composition and suitabilities of soybeans for processing: Raw soybeans for processing, soybean milk for tofu, steamed seeds for miso, natto, cooked soybeans.

Tables: (1) Relationship between soybeans and processed foods in raw soybeans, soybean milk, and steamed seeds. (2) Chemical composition and suitability of soybeans from USA, China, and Japan for processing into tofu, miso, natto, cooked soybeans. Varieties: Enrei, Fukuyutaka, IOM (USA; low protein, high oil), Tamahomare, Kitamusume, Miyagishirome (large seeded), Nattoshoryu (small seeded), Chinese (low protein, high carbohydrate). Address: Dep. of Utilization, National Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

6036. Vitasoy (USA) Inc. 1990. Vitasoy... Celebrating 50 years of healthy growth (Ad). *Vegetarian Times.* Dec. p. 83.
• ***Summary:*** "Since 1979, Vitasoy, packaged in convenient Tetra Pak cartons, has achieved international distribution to over 20 countries.

"Going into its 50th year, Vitasoy has moved into a new $20 million plant in Hong Kong equipped with state-of-the-art processing and packaging equipment for a daily capacity of 1.2 million units. Vitasoy now employs over 1,000 people. It has total annual sales of 300 million units with total sales revenue of over $100 million.

"Vitasoy (U.S.A.) Inc. was formed in 1979 to serve as the marketing arm of the Hong Kong headquarters. The full line of Vitasoy Tetra Pak products was brought into North America in 1980. A new formulation, made with organic soybeans and other wholesome ingredients, was introduced in 1984.

"For 50 years Vitasoy has been the world's favorite soymilk–because great ideas just naturally last a long time." Address: Brisbane, California.

6037. **Product Name:** [Soja Harmoniques: Soja Delights with Basmati Rice in Curry Sauce].
Foreign Name: Soja Harmoniques: Delice au Soja au Riz

Basmati Sauce Curry.
Manufacturer's Name: Biosoja.
Manufacturer's Address: 10 rue Lavoisier, F 68 000 Colmar, France. Phone: 89 74 53 74.
Date of Introduction: 1990.
Ingredients: Basmati rice (33%). Soya Delight (23%): Concentrated soymilk (50%), egg white, non-hydrogenated palm oil, flour, salt, seasonings. Sauce: Water, modified starch, soymilk, salt, seasonings, sugar, curry (0.5%). The soybeans are organically grown.
Wt/Vol., Packaging, Price: 280 gm can.
New Product–Documentation: Spot in SoyaFoods. 1991. Spring. p. 5. "Ready meals from Biosoja." The company's existing range of Soyabean Delights includes Financière Sauce, Basmati Rice and Curry Sauce, and Tofu Ravioli.

SoyaFoods. 1992. Autumn. p. 7. "A profile of Sojinal." See Table 2. "Biosoja retail food products." Canned ready meals with less than 300 calories.

Label sent by Heather Paine of SoyaFoods in London. 1993. Nov. 3.

6038. Cantani, A.; Ferrara, M.; et al. 1990. Efficacy and safety of a soy-protein formula for feeding babies with atopic dermatitis and cow's milk hypersensitivity. *European Review for Medical & Pharmaceutical Science* 12:311-18. *
• ***Summary:*** Soy-based formulas are an effective substitute for cow's milk in infants with atopic dermatitis. Although soy allergies do exist, they may be less common than previously believed, partly because heat processing greatly reduces soy antigenicity.

6039. Dashiell, K.E.; Singh, S.R.; Nakayama, O.; Ogundipe, H.O.; Akem, C.N. 1990. Soybean research at IITA. Ibadan, Nigeria: International Institute of Tropical Agriculture. 19 p. *

6040. **Product Name:** [Tofu, and Soymilk].
Manufacturer's Name: Die Tofukueche Muenster.
Manufacturer's Address: Rinkerodeweg 6, D-4400 Muenster, West Germany. Phone: 0251-785902.
Date of Introduction: 1990.
New Product–Documentation: Letter from Bernd Drosihn of Viana Naturkost. 1990. April 8. This new soyfoods company, run by Heinz-Gerd Bruns, distributes only fresh tofu in water and fresh soymilk. A brochure is enclosed.

Brochure. 8.5 by 11 inches. 6 panels. Photocopied black on gray-green. The fresh tofu is made from organically grown soybeans grown in France. The company describes its work as "Production, distribution, direct sale (Herstellung, Vertrieb und Direktverkauf)." The tofu is made with nigari. Contains 8 tofu recipes.

6041. **Product Name:** [Fit & Active Vitalkost Soya Dessert (Vanilla)].
Foreign Name: Fit & Aktiv Vitalkost Soja-Dessert (Vanille).
Manufacturer's Name: Dr. Fischer GmbH.
Manufacturer's Address: Postfach 13 20 43, D-2000 Hamburg 13, West Germany.
Date of Introduction: 1990.
Ingredients: Water, soybeans, cane sugar, modified starch, fructose, thickener, natural- and identical to natural aromas, salt.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton. Capacity not given. Retails for DM 2.49.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3 gm, fat 3 gm, usable carbohydrates 13 gm, calories (kcal) 79 (335 kJoules).
New Product–Documentation: Label sent by Anthony Marrese. 1990. Dec. 12. 3.63 by 3.5 by 2.5 inches. Light green, dark green, yellow, and red on white. Illustration of a bowl of pudding next to green soybean leaves with 4 pods below them. "The alternative from plants. Made 100% from plants. Cholesterol free (Die pflanzliche Alternative. 100% pflanzlich. Cholesterinfrei)."

6042. Engel, G. 1990. Vergleich von Quark mit Sojaprodukten: Herstellung, Mikroflora, Zusammensetzung, Sensork [Comparison of quark with soy products: Production, microflora, composition, and organoleptic properties]. *Deutsche Milchwirtschaft* 41(38):1272-75. 7 tables. Also published in Kieler Milchtage, 1990. [24 ref. Ger]*
• ***Summary:*** Compares the quality and nutritive value of cow's milk and soymilk, and discusses criteria for evaluating the chemical, microbiological, and organoleptic quality of tofu, okara, miso, tempeh, sufu, and other soyfoods. Address: Bundesanstalt Milchforschung, Inst. Mikrobiologie, Kiel, Germany.

6043. **Product Name:** Uncle Soyo Soydrinks, Soy Yogurt, Soy Ice Cream.
Manufacturer's Name: Farina Ltd.
Manufacturer's Address: Lagos, Nigeria.
Date of Introduction: 1990.
Ingredients: Soybeans, water, flavor, sugar.
Wt/Vol., Packaging, Price: Soymilk: 60 ml PE pouch; Yogurt & ice cream: Cup.
How Stored: Soymilk and Soy yogurt: Refrigerated. Soy ice cream: Frozen.
New Product–Documentation: J.L. Voisin. 1995, Oct. 3-5. Dairy like soyfoods in Africa: Evolution & perspectives. Paper presented at the Third Bi-Annual SoyAfrica

Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. Actimonde of Archamps, France, installed an Agrolactor (soymilk processing plant) at this company in 1990. This was the first commercial Agrolactor installed worldwide. Owned by a private Indian investor. After 3 extensions and an aggressive marketing policy, this company was selling more than 300,000 units per day of soydrinks (pouches), soy yogurt, and ice cream. After very good results and profitability, the plant has now been moved to India.

6044. **Product Name:** So Good Soycreem: Non-Dairy Cream Alternative.
Manufacturer's Name: Haldane Foods Ltd. (Marketer). Made in Clwyd, Wales, by Genice Foods Ltd.
Manufacturer's Address: 25 Hayhill, Sileby Road, Barrow upon Soar, Leicestershire LE12 8LD, England.
Date of Introduction: 1990.
Ingredients: Organic soya milk, vegetable oils, corn syrup, emulsifier (vegetable mono-diglycerides), stabilisers (xanthan gum, locust bean gum, guar gum), natural colour (beta-carotene).
Wt/Vol., Packaging, Price: 120 gm plastic cup.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Energy 1827 Kjoules / 437 Kcal (calories), protein 3 gm, carbohydrate 12 gm, fat 36 gm (of which polyunsaturates 47%, and saturates 23%), sodium 0.1%.
New Product–Documentation: Label sent by Leah Leneman of Scotland. 1992. Jan. 2. 2.75 inch diameter foil cup lid and 2.5 inch high cup. Yellow, white, gold and light green on green. Illustrations of yellow daffodils and a butterfly on foil lid. Lid: "High in polyunsaturates. Low in saturates. Cholesterol free." Cup: "Soycreem is a new, cholesterol-free alternative to cream, made without animal fats or milk derivatives. Pour over desserts in the same way as fresh cream. (Not recommended for use in coffee.) Suitable for vegetarians and vegans."

Talk with Ray Pierce of Genice. 1994. Feb. 10. In 1990 chilled So Good Soycreem was launched as a non-dairy alternative to dairy double cream, but low in cholesterol, high in polyunsaturates, and low in saturates. It was made for Haldane in a little beige plastic pot with a green foil lid, packed at the Genice plant. It contains a trace of cholesterol because law requires that it contain 36% oil, including some palm oil. In 1991 a shelf-stable UHT version (completely sterilized, with a 9-month shelf life), now named Granose Soya Creem, was launched in a 225 ml Combibloc pack, made for Genice by a large dairy in Ireland which had Combibloc packaging equipment. The chilled So Good Soycreem was discontinued.

6045. **Product Name:** [Milksoy].
Foreign Name: Milksoy.
Manufacturer's Name: Indulac and Protein Technologies International.
Manufacturer's Address: Venezuela.
Date of Introduction: 1990.
Ingredients: Milk powder, Supro isolated soy protein.
New Product–Documentation: Ralston Purina Company. 1991. First Quarter Report to Shareholders: Three months ended Dec. 31, 1990. Feb. p. 9. The company has recently developed "a significant new food product in Venezuela–Milksoy. Milksoy combines high quality milk powder with our *Supro* brand isolated soy protein. The launch of Milksoy has successfully established a new alternative food product for the Venezuelan consumer, a product which delivers the taste and nutrition of milk, but at a more affordable price. Consumer satisfaction with Milksoy is reflected in the brand capturing a 20% market share of all milk consumed."

SoyaFoods. 1991. 2(2):7. "New milk for Venezuela." Milksoy has recently been launched by Indulac (Venezuela) with technical support from PTI. It is composed of 90% cow's milk. Though it has a taste and texture similar to that of cow's milk, it contains only two-thirds as much fat and costs 20% less than conventional powdered milk.

6046. **Product Name:** [Innosty Soya Dessert].
Foreign Name: Innosty.
Manufacturer's Name: Innoval S.A. Affiliate of Coopérative Agricole Silos de Valence.
Manufacturer's Address: Allée Joule, Zone Industrial (Z.I.) des Auréats, B.P. 1418, 26014 Valence Cédex, France. Phone: 75.41.41.50.
Date of Introduction: 1990.
New Product–Documentation: Form filled out by Gilles Charriere of Innoval. 1989. Nov. This product will be launched by Innoval during 1990.

6047. Klatzmann, R.; Laurent, B. 1990. Riches en protéines, pauvres en calcium [Rich in protein–low in calcium]. *Que Choisir* No. 257. p. 33-36. [Fre]*

6048. **Product Name:** [Bonsoy (Soymilk)].
Manufacturer's Name: Mimasa (Importer). Made in Japan by Marusan. Imported via Muso Shokuhin.
Manufacturer's Address: Mimasa, Spain.
Date of Introduction: 1990.
Ingredients: Water, soybeans, pearl barley, kombu (sea vegetable), barley malt.
New Product–Documentation: Talk with Yuko Okada. 1992. July 16. Muso first exported Bonsoy soymilk to Mimasa in Spain in about 1990.

6049. **Product Name:** Nature Soy Tofu (Soybean Curd), Tofa (Sweetened Soy Bean Curd Dessert), and Soya Bean Drink.
Manufacturer's Name: Parma Soia (Marketer-Distributor).

Made in Singapore by Yeo Hiap Seng Ltd.
Manufacturer's Address: Strada Logheretto 2, 43010 Corcagnano (Parma), Italy. Phone: 0521-639-148.
Date of Introduction: 1990.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Parma Soia brochure. 1990. Photo shows aseptic package. Talk with Xavier Karis in Italy. 1990. June 25. On the side of the drink is written: "Made in Singapore by Yeo Hiap Seng Ltd." The brand "Nature Soy" is written in large bold letters across the top of all three packages. The tofu package design is very similar to that used by Morinaga. On the front of the tofu and curd packages the product name and volume are written in Chinese characters. The front panel of the tofu package shows an entire cake of tofu in a cylindrical bowl. The curd package shows a Chinese-style bowl filled with curds. On the front of the drink package is an abstract pointillist design in the shape of 2 overlapping soybeans. The ingredients are listed in both French and English.

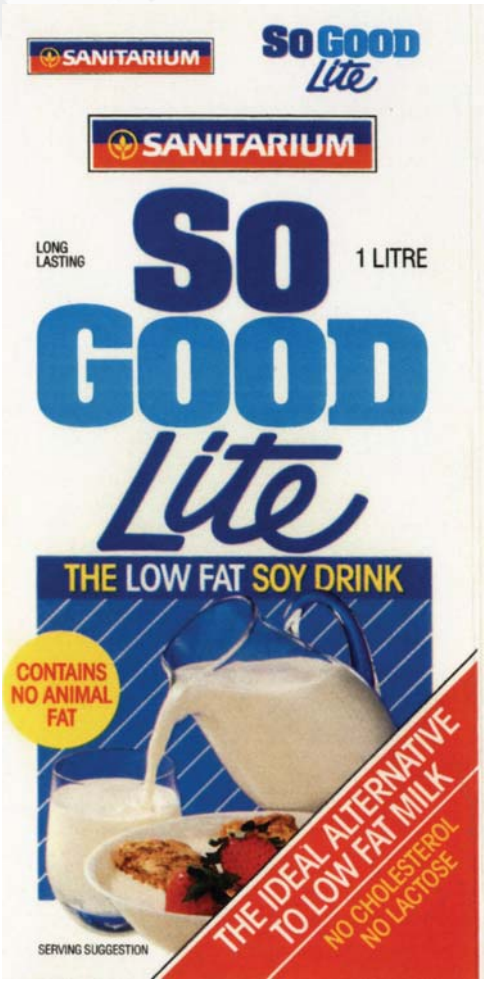
Note: Since Singapore is not a signatory to the International Patent Convention, companies based there are not obliged to respect international patents such as that held by Morinaga on the packaging of tofu in Tetra Brik Aseptic cartons.

6050. Parma Soia. 1990. La Soia dà sempre ottimi fruitti [The soybean always gives the best fruits (Catalog)]. Strada Logheretto 2, 43010 Corcagnano (Parma), Italy. 8 p. 29 x 84 cm. Color. [Ita]
• ***Summary:*** This handsome color catalog has 4 connected panels on each side. One side displays the company's new line of 21 soy products. Most of the products are in the line titled "Campi di Soia" (Fields of Soya), but several imported products (including tofu) are in the Nature Soy line. The other gives information about the company (a subsidiary of the Italian dairy giant, Parmalat) and its plans to promote the line. The Campi di Soya line is thought to be sold through supermarkets. This brochure was distributed at CIBUS, the biggest food fair in Italy, held annually in Parma, on 6-9 May 1990. Address: Corcagnano (Parma), Italy. Phone: 0521.639148.

6051. **Product Name:** [Soymilk].
Manufacturer's Name: Perlinger GmbH. Made in Belgium by Alpro.
Manufacturer's Address: A-6300 Itter 300, Austria. Phone: 5332-52440.
Date of Introduction: 1990.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Pierre Vandemoortele. 1990. June 4. Alpro makes and private labels soymilk for Perlinger, a health food company in Austria.

6052. Plamil Foods Ltd. 1990. Appetizing dishes–with Sandra. Plamil House, Bowles Well Gardens, Dover Rd., Folkestone, Kent CT19 6PQ, England. 8 p.
• ***Summary:*** "Sandra Hood has originated these inexpensive recipes for your enjoyment... She compiled the *Vegan Shopper's Guide* for some 2 years." With each recipe is given the number of servings, preparation time, and cooking time (overall time, often longer than preparation time). The recipes call for either Plamil Concentrated Soya Milk or the Ready-to-Use version. This in an updated version of these very popular recipes–20,000 having already been printed. Contents: Savouries (p. 2-5), and desserts (p. 5-7). On the last page is a list of the 20 vegan, non-dairy products in the current Plamil range, which consists of three lines: Soya milks, spreads and desserts, and confections. Address: Folkestone, Kent, England.

6053. **Product Name:** Sanitarium So Good Lite: The Low Fat Soy Drink.
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.



Date of Introduction: 1990.
Ingredients: Water (88.0%), soya isolate (4.0%), maltodextrin (3.3%), corn syrup solids (3.1%).
Wt/Vol., Packaging, Price: 1 liter Combibloc Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter and Label sent by Sanitarium Health Food Co. 1990. June 25. Gives product introduction date as 1990.

Sanitarium Nutrition Education Service. 1990. April. "So Good." This 4-page leaflet gives a clear explanation of each ingredient used, plus nutritional and other information.

Note: This is the earliest commercial soymilk product seen (July 2013) with the word "Lite" on the front panel (one of two products).

6054. **Product Name:** Selvi Soyas Soyalix (Soy Beverage).
Manufacturer's Name: Selvi Soyas (Marketer). Made by Arasi Food Processing.
Manufacturer's Address: Marketer: 16 West Canal Bank Rd., Kottur, Madras–85, India. Mfgr: Kottur, Madras–85, India.
Date of Introduction: 1990.
Ingredients: Soya, wheat, g.g. dal, barley, skimmed milk powder, sugar, sodium chloride, sodium bicarbonate, cardamom, badam.
Wt/Vol., Packaging, Price: 200 gm plastic bag.
How Stored: Shelf stable.
New Product–Documentation: Label sent from India by Anthony Marrese. 1990. Nov. 29. 6 by 3.5 inches. Plastic bag. Orange on white. Illustrations of two cups of steaming hot beverage, each with a handle on a saucer, like a coffee cup. Between them is a drawing of a ceremonial gong. "The natural energy food. For growing children and adults. Replace Soyalix to a bottle. Directions: Add a little hot water/milk to one teaspoonful of Soyalix in a cup. Stirring briskly, add hot water/milk."

6055. **Product Name:** Tofu, Soymilk, Fried Tofu, Soft Tofu, and Tofu Pudding.
Manufacturer's Name: Tan Tan Tofu.
Manufacturer's Address: 15084 Weststate St., Westminster, CA 92683. Phone: 714-895-3565.
Date of Introduction: 1990.
New Product–Documentation: Talk with Dana Jacobi of New York City. 1998. April 14. Tan Tan Tofu in southern California makes various types of tofu, including a delicious silken tofu, which she bought at Ranch 99, a Chinese supermarket chain in the Los Angeles area. The tofu pudding came curded in a one-quart plastic container (it filled the container like yogurt) with a caramel-colored ginger-flavored syrup on top in a little ½-pint Styrofoam cup with a plastic lid. To serve: Spoon the silken tofu into a bowl, pour the syrup over the top, and enjoy.

Talk with Kim Lai, manager of Tan Tan Tofu. 1998. April 15. This tofu company, run by Vietnamese-Americans, started making tofu in 1984 in San Diego, California. In 1990 they moved to their present location in Westminster, California. In Vietnamese soft tofu is called *Dau-hu wien* and tofu pudding is called *Dau-hu duong.*

6056. **Product Name:** [Tofu, Tofu Spreads, Soymilk].
Manufacturer's Name: Terra e Pane.
Manufacturer's Address: Via Canonica, 1009, 47038 S. Argangelo di Romagna (Forli), Italy. Phone: 0541/627-276.
Date of Introduction: 1990.
New Product–Documentation: Talk with Michael Brenger of La Fonte Della Vita. 1990. July 18. This company makes seitan, tofu, tofu spreads, and soymilk in Italy. Letter (fax) from Italian Trade Commission. 1990. Aug. 6. Gives address and phone number.

6057. **Product Name:** [Nature & Soya Drink (Dairylike, or Cocoa)].
Foreign Name: Natura & Soia Drink (Plain, or Al Cacao).
Manufacturer's Name: Wander SpA (Distributor). Made in Belgium (probably by Alpro).
Manufacturer's Address: Via Meucci 39, 20128 Milan, Italy.
Date of Introduction: 1990.
Ingredients: Plain: Water, dehulled soybeans, raw cane sugar, sea salt.
Wt/Vol., Packaging, Price: Plain: 1 liter Tetra Brik Aseptic carton. Chocolate: 500 ml.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein (N x 6.25) 3.6 gm, vegetable oil 2.1 gm, carbohydrates 3.4 gm, minerals (ash) 0.4 gm, calories 47.
New Product–Documentation: Label sent by Xavier Karis. 1990. June 27. 3.3 by 3.5 by 2.5 inches. Tetra Brik carton. Plain: Blue, yellow, red, and green on white. Chocolate uses brown instead of blue Illustration of a red-roofed farmhouse with green trees nearby surrounded by rolling fields. A glass full of blue (or brown) soymilk with a red striped straw in it is in the foreground. "Soy food (Soia Alimento). 100% vegetarian (vegetale)." Karis notes: "I know that "Natura e Soia" is a registered tradename of Lucas Meyer SrL."

6058. Alpro N.V. 1990. Ils sont nature grâce au soja [They are natural, thanks to soya (Leaflet)]. Wevelgem, Belgium. 2 panels each side. Each panel: 14 x 18 cm. [Fre]
• ***Summary:*** On the front panel of this full-color glossy leaflet, a color photo shows a little boy and girl, both laughing. To their right is a carton and glass of calcium-enriched Alpro Soya Drink. Below: "Alpro drinks and desserts. The power of soya."

Page 2 reads: "Soya is their natural side. Alpro soya drinks: The healthy drinks." Six packages are shown. Page 3

reads: Alpro soya desserts. 0% cholesterol. 0% lactose, 100% for you. A table compares the nutritional composition and the fatty acid composition of Alpro Soya Drink with whole and low-fat cow's milk. On the back: "Alpro is a complete line of delicacies based on soya." A photo shows the Alpro line. A clip-off form invites the reader to send for a Alpro brochure on soya. Address: Vlamingstraat 28, B-8610 Wevelgem, Belgium.

6059. Amrit Banaspati Company Ltd. 1990. 50th annual report. Ghaziabad, UP: India. 64 p. 24 cm.
• ***Summary:*** Pages 3-4 contain an overview of the company's 50-year history by N.K. Bajaj, the chairman. The company was registered and established in 1940 by Laxmi Narainji Bajaj, Rai Bahadur Girdharilal Bajaj, and Tulsi Prasad Khaitan. Activity began to set up a vanaspati factory of 25 tonnes per day capacity at Ghaziabad, India. The factory began commercial operations on 1 May 1941. "The Company enjoyed the fruits of the efforts and leadership of late Shri T.P. Khaitan who guided the destiny of the Company for nearly five decades through an unwavering pursuit of excellence. Amrit Banaspati is today one of the largest manufacturers of edible oils in the country with a capacity of 360 tons per day to manufacture vanaspati and refined oils at its two Units at Ghaziabad and Rajpura. Your Company's successful brands, like Gagan, Ginni and Bansari are virtually household names in many parts of the country. Amrit Paper is another example of success... Your Company achieved an all-time record turnover of Rs. 260 crores during the year 1989-1990 and highest-ever gross profit of Rs. 8.84 crores."

Note: 1 crore = 10 million.

Page 64 contains a chronology of the main events in the company's history. Address: G.T. Road, Ghaziabad 201 009, India.

6060. Cole, Candia Lea. 1990. Not milk... Nutmilks! 40 of the most original dairy-free milk recipes ever! Santa Barbara, California: Woodbridge Press. 124 p. Illust. 23 cm.
• ***Summary:*** Tells how to make 40 smooth-sipping and dairy-free beverages in only 3-5 minutes each, from almonds, cashews, pecans, pine nuts, walnuts, pumpkin seeds, sesame seeds, and sunflower seeds. 45 million people in the U.S. alone suffer from milk-related allergies. Address: Mahtomedi, Minnesota.

6061. Dunne, Lavon J. 1990. Nutrition almanac. 3rd ed. New York, NY: McGraw-Hill. vi + 340 p. Illust. Index. 26 cm. 1st ed. 1973. [185* ref]
• ***Summary:*** This book is divided into 8 sections; at the end of several of these is a glossary and bibliography. In Section VI, "Foods, beverages, supplementary foods, and eating to feel right," soy is mentioned In the subsection on "Legumes" (p. 243), which has its own subsection titled "Soybeans" (p. 243), which discusses the nutritional value of soybean products in a meatless diet. "Soy flour, oil and milk are used in a variety of home-cooked and commercial products." "Sprouted soybeans contain increased amounts of vitamin C." The subsection on "Milk and milk products" (p. 244) notes that people who are allergic to milk may substitute soy milk, although it lacks much of the nutritional value of cow's milk because it is low in calcium and phosphorus. The subsection on "Lecithin" (p. 249) begins: "Lecithin is a natural constituent of every cell of the body and helps to emulsify cholesterol in the body." The world's leading source of commercial lecithin is the soybean.

In the subsection titled "Some rich sources of nutrients" (p. 263-64) soybeans (or legumes) are listed as rich sources of protein, choline, pantothenic acid, vitamin E (cold-pressed oils), vitamin K, copper, and zinc.

Section VII, "Table of food composition" (p. 265) includes soy flour (p. 276), soybean oil (p. 283), soy sauce (p. 296), soybeans (cooked), soybean curd (tofu), soybean milk, and soybean sprouts (p. 306). Address: Nutrition Search, Inc., John D. Kirschmann, Director.

6062. Facciola, Stephen. 1990. Cornucopia: A source book of edible plants. Vista, California: Kampong Publications. ix + 678 p. Indexes (six!). 28 cm. [522* ref]
• ***Summary:*** "In your hands is one of the most remarkable efforts to come out of the struggle to preserve the genetic diversity of our planet... Steve Facciola has put together an easy-to-understand, easy-to-use compendium of the diversity of food plants available to consumer, gardener and scientist" (from the Preface). The largest and most comprehensive work of its kind, this book gives details on 3,000 edible plant species and 7,000 varieties.

Contents: Preface, by Noel Vietmeyer. Introduction. Acknowledgements. Botanical listings: Alphabetical listings of plant families (*Glycine max* and *Glycine tabacina* are listed in the family Fabaceae, pronounced fuh-BAY-see), fungi families, algae families, bacteria families. Cultivar listings (by common name for the most important and popular crops, e.g., shiitake, soybean, spinach, sprouting seeds). Sources (names, addresses and phone numbers of firms that sell seeds, plants, etc.: Domestic commercial, domestic non-commercial, overseas commercial, overseas non-commercial). Bibliography. Indices and appendixes: Index of principal vernacular names. Index of vernacular and other names occurring elsewhere in the text. Index of usage and edible parts. Index of species native to or naturalized in North America. Index of species not listed in Kunkel [Gunther Kunkel. 1984. Plants for human consumption. Koeltz Scientific Books, Germany]. Index of families and genera. Appendix A: Abbreviations used–For type of product offered, for annotated bibliographical citations, in descriptions for sources. Appendix B: Endnotes used in the cultivar listings.

As of Aug. 1994 an electronic version of this book is now available. It runs on Microsoft Windows and uses more than 25,000 hypertext links to cross reference information.

The main information on soybeans is found on pages 91 (Botanical listings for *Glycine max* and *Glycine tabacina*), p. 219 (*Aspergillus oryzae* culture), p. 221 (*Actinomucor elegans* culture for fermented tofu or sufu, and *Rhizopus* cultures for tempeh), p. 224 (*Bacillus subtilis* culture for natto), p. 482-83 (for "field soybeans," lists 5 black-skinned cultivars, and 7 yellow-skinned cultivars; plus 11 "vegetable soybeans"–Agate, Butterbeans, Envy, Extra Early, Fiskeby V, Hahto, Hakucho Early, Kanrich, Okuhara Early Green, Prize, and White Lion), p. 485-87 (sprouting seeds including soybean sprouts with directions for sprouting), and p. 500 (Soyfood cultures).

Additional information on food uses of soybeans is found throughout the book. Tofu: p. 9 (In Indonesia, a salt derived from the fruit of *Rhus javanica* (*Nurude, Muyen*) is used to coagulate tofu), p. 61 (In Japan the seeds of *Cannabis sativa,* called *asanomi,* are used in deep-fried tofu burgers (*ganmodoki*)), p. 76 (A vegetable curd similar to soybean tofu can be made from the seeds of the bottle gourd or calabash (*Lagenaria siceraria*)), p. 92 (The seeds of the Bonavista bean or hyacinth bean (*Lablab purpureus*) can be prepared as tofu), p. 127 (The seeds of okra, gumbo, or lady's finger (*Abelmoschus esculentus*) can be made into tofu or tempeh). Kecap (Indonesian soy sauce): p. 9 (In Indonesia, the plant tuberose (*Polianthes tuberosa*) is added to the substrate in making kecap), p. 191 (In Indonesia, fresh leaves of kaffir lime, also called ichang lime, makrut, or djeruk purut (*Citrus hystrx*) are used to flavor kecap). Miso: The following can be used as a substrate for miso–p. 88 (Peanuts), p. 94 (seeds of the velvet bean, also called cowitch, cowhage, benguk (*Mucuna pruriens*)), p. 155 (barley (*Hordeum vulgare*)), p. 156 (proso millet (*Panicum miliaceum*)). Address: 1870 Sunrise Dr., Vista, California 92084. Phone: (619) 726-0990.

6063. Finnegan, John; Cituk, Kathy. 1990. Amazake rice beverage. Celestial Arts, P.O. Box 7327, Berkeley, CA 94707. 80 p. No index. 21 cm. [80 ref]
• ***Summary:*** Contents: History and development. Making amazake. Complementary foods, spices and herbs. Why use amazake? Rice. Koji. Almond amazake. Nutritional analysis. Makers of amazake. Amazake kefir-yogurt. Amazake as a baby food (with Bifidus and *Streptococcus faecium*). Milk substitutes. The future of amazake. Recipes (29 recipes, including variations). About the ingredients (incl. miso) Appendixes: I. About aseptic packaging. II. Sources of amazake and koji. Bibliography. Glossary.

Note 1. This book contains extensive information from the book *Amazake and Amazake Frozen Desserts: Industry and Market in North America,* by Shurtleff and Aoyagi (Soyfoods Center, 1988), used without acknowledgment or permission. Except for the chapters on "Recipes," and "Amazake as a baby food," it contains almost no new research or information.

Talk with Benjamin Hills. 1991. Sept. 18. This book reads like an advertisement for amazake. Grainaissance was originally thinking of hiring John Finnegan to write a book on amazake, but they decided to withdraw from the deal, so he went ahead and did it on his own.

Talk with Celestial Arts. 1991. Sept. 27. John Finnegan used to be the head of Elysian Arts, 20 Sunnyside Ave. Suite A161, Mill Valley, CA 94941. He now resides in Santa Monica, California. The book has sold about 800 copies to date.

Note 2. This is the earliest English-language document seen (Aug. 2013) that uses the term "rice beverage" to refer to amazake and related products. Address: Santa Monica, California. Phone: 415-389-8925.

6064. Heiser, Charles B., Jr. 1990. Seed to civilization: The story of food. New ed. Cambridge, Massachusetts: Harvard University Press. vi + 228 p. Illust. Index. 24 cm. [83* ref]
• ***Summary:*** An outstanding work, written for the general reader. "This is a classic book about the origins of agriculture and the influence of its discovery on the development of civilization"–Ghillean T. Prance, Director of the Royal Botanic Gardens [England; on rear cover].

The Preface notes that this is a book about the plants (and animals) that stand between humans and starvation. The main subjects are ethnobiology, the study of plants and animals in relation to humans, and ecology, the study of organisms in relation to their environment. We humans "get all of our carbohydrates and nearly three-fourths of our protein from plant sources. Moreover, nearly all of the food we get from animals is in turn derived from plants. After all, life depends on photosynthesis; chlorophyll has been referred to as the green blood of the earth."

Table 5-1, "Estimated production of world's 32 major food crops" (p. 63) lists the top ten as (* = member of grass family; units in million metric tons): Sugar cane* 932. Wheat* 536. Corn* 481. Rice* 476. Potato 309. Sugar beet 286. Barley* 180. Manioc 137. Sweet potato 110. Soybean 95. Source: *FAO Production Yearbook,* 1986.

Chapter 7, "Legumes: The meat of the poor," contains a section on "Soybeans" (p. 129-33). It notes that there are no archaeological records of the soybean to help us determine when it was first cultivated, but it was mentioned in Chinese literature before 1000 B.C. Unlike most legumes, the beans are seldom eaten directly, but are used to make many different foods including bean sprouts, miso, tofu, soymilk (such as Vitasoy), tempeh, and soy sauce.

"The widespread cultivation and utilization of soybeans in the United States in the space of a few decades must be one of the most spectacular success stories in the recent history of agriculture."

Photos show: (1) A field of soybeans in the USA planted in rows, free of weeds. (2) Soybean plants ready for harvesting. (3) Soybean seeds. (4) A John Deere combine harvesting soybeans.

Note: Previous editions of this book were copyrighted in 1973 and 1981. Also discusses: Peanuts (p. 126-29). Potatoes and their remarkable history (p. 134-39). Tomatoes and their unusual history (p. 181, 206). Address: Distinguished Prof. Emeritus of Botany, Indiana Univ.

6065. Kolster, Uwe. 1990. Die gesunde Sojakueche: Koestlich und abwechslungsreich essen [Healthy soya cooking: Delicious and varied food]. Falken Verlag GmbH, 6272 Neidenhausen/Ts, Germany. 112 p. Illust. Recipe index. 21 cm. [Ger]

• ***Summary:*** This recipe book calls for the use of many DE-VAU-GE (GranoVita) products. Address: Germany.

6066. Medical Soy S.p.A. 1990. Medical Soy: l'alta gastronomia senza colesterolo [Medical Soy: The high gastronomy without cholesterol (Poster)]. Via Matteotti 55, 20068 Peschiera Borromeo (Milan), Italy. 1 p. 24 x 33 cm. [Ita]

• ***Summary:*** On the front of the poster, two subtitles read: "A revolution in gastronomy which will leave a sign to future generations is presented at a fair in Milan. More than 100 foods in all, and all resembling traditional foods such as yogurt, cheeses, and salami, yet all free of animal fats." All will be available from 15 Nov. 1989. Photos show: (1) a cylindrical head of cheese on a cheese board with a wedge cut out to show the inside. A knife, glass of wine, and bouquet of flowers are nearby; (2) A large cooler case, about 7 feet long and 4 feet high is packed with nothing but Amisoya fresh products, including milks, cheeses, yogurts, and soy protein-meat blends. At the top two identical signs, shaped like cartoon captions, read: "Amisoya, a new large line of foods"; (3) A woman standing in front of a portion of the case selecting and buying some of the items.

On the back of the poster is a large color close-up photo of each of the fresh soy products (Prodotti di Soya freschi). Above it is the caption: The Amisoya line: The alternate/high gastronomy. Products based on soya and all free of animal fats. Below it are listed 4 product lines and the individual flavors in each line: Tondelle firm non-dairy cheeses (7 flavors), Filante soft cheeses (7 flavors), Soy beverages (6 flavors), and Soy yogurts (7 flavors). The caption at the bottom in big bold letters reads: "Better nutrition for staying young."

Talk with Xavier Karis in Italy. 1990. June 25. This poster was published by Medical Soy to try to attract retailers and wholesalers for their products. It was distributed at CIBUS, the biggest food fair in Italy, held annually in Parma, on 6-9 May 1990. Address: Peschiera Borromeo (Milan), Italy. Phone: 02/547-5456.

6067. Morningstar, Amadea; Desai, Urmila. 1990. The ayurvedic cookbook: A personalized guide to good nutrition and health. Santa Fe, New Mexico: Lotus Press. 351 p. Foreword by Yogi Amrit Desai. Introduction by Dr. David Frawley. Illust. by Amadea Morningstar. Index. 23 cm. [40 ref]

• ***Summary:*** This is a lacto-ovo vegetarian cookbook based on Ayurvedic principles. Contents: Part I: General Information. History of Ayurveda. Nutrition from an Ayurvedic perspective. Discovering your constitution. Attributes and nutritional needs of each constitution. How to imbalance your constitution. Understanding Ayurvedic nutrition: Taste. Digestion. Food combining and preparation. Balancing *Agni.* The digestive organs. The *chakras* and dietary change. Eating with the seasons. Getting ready to cook. Planning balanced meals easily. Menus: *Tridoshic, Vata, Pitta, Kapha.* Part II: Recipes. Part III: Appendices. 1. Most frequently asked questions and answers. 2. Enlarged food guidelines for basic constitutional types (many soyfoods are included). 3. Some basic information about nutrients. 4. Glossary of English and Sanskrit terms. 5. Food name equivalents in Latin, Sanskrit, Hindi. 6. Bibliography. About the authors (autobiographical).

The three Vatas (tridosha, three doshas, constitutional or body types) are Vata (pure air, head/wisdom), Pitta (pure fire, action), and Kapha (pure water, love/heart). Tridoshic foods or herbs are suited to all 3 constitutions; these include ghee, basmati rice, and asparagus. Concerning soya: "Many *Vatas* handle certain well-spiced soy products well, like tofu or liquid soy milk. Some do not. Let your gut be your guide. Dairy is very calming to Vata, especially when it is warm" (p. 14).

"*Pittas* are often attracted to high-protein foods, and do seem to need a little more protein than other constitutions. Goat milk, cow milk, egg white souffles, tofu, tempeh, and the aforementioned cottage cheese are all effective in balancing Pitta. Most beans–with the exception of heating lentils–are excellent" (p. 16).

Anything which stimulates elimination tends to relieve *Kapha* (barley and beans being classic examples). Aduki beans are especially good, as are black turtle beans, though the latter are more difficult to digest. Soy beans and soy products are recommended less frequently. Over half of tofu's calories come from fat, surprisingly, while only 4% of black beans' do. Still, soy products like soy milk tend to be less Kapha-enhancing than dairy products" (p. 19).

"Examples of oily food include ghee, vegetable oils, animal fats, soybeans, many vegetables and citrus. Dry foods include corn, buckwheat, rye, millet, most beans and dark leafy greens, to list a few. These latter foods will need moistening of some sort to be more easily digested by most people" (p. 28).

In the menu section, under each constitutional type

(dosha, such as Vata), recommended menus are given by season for each meal. For example, soy-related foods included in Vata menus are: Summer: None. Fall: Dinner–Miso tofu, Amasake. Winter: None. Quick day: Breakfast–soymilk. Beverage–Amasake. Weekend day: Nothing. On the road (when travelling): Dinner' Chinese vegetables and rice (with tofu, if well tolerated).

Each recipe in the recipe section tells which constitution type it suits, how long it takes to prepare, in what seasons it is most healing, and how many it serves. For example,–Vata means that it calms Vata, + Vata means that it aggravates or increases Vata, and 0 Vata means that it is neutral for Vata. For brevity, we will give only Vata examples in the following. Soy-related recipes: About tofu (p. 102): Tofu and liquid soy milk tend to be cool and heavy, yet oilier than most other bean products. This oily lubricating quality helps their digestion, as does the pre-processing they have undergone as legumes... Eaten in excess, they will increase *Kapha.* Warming preparation, in the form of heat or warming spices such as ginger, tamari, cumin, turmeric, cinnamon or mustard seeds, aid their healthy breakdown in the system. Beans can be idiosyncratic in effect though; if your experience doesn't match the descriptions given here, trust your direct experience first. Some people have a hard time digesting tofu in almost any form; an allergy to soy may be present. It was popular in the sixties and seventies to serve tofu cold, cubed and plain at health food-type salad bars. This is about the most difficult way to try to consume an already chilling food. Try tofu marinated, spiced and cooked, then make up your mind about its digestibility for you."

Miso tofu (p. 102,–Vata). Tofu mushrooms (p. 104,–Vata). Tofu pesto (p. 104,–Vata). Sauteed tofu and vegetables (p. 105,–Vata, but mildly + Vata with frozen tofu). East Indian lima beans (with tofu, p. 114). Spicy rice and yogurt (with soy milk, p. 131,–Vata; "Made with soy milk, which is lighter and cooler than yogurt, it is suitable for Pitta and Kapha as well"). Vegetable barley soup (with tofu, p. 188, 0 Vata).

About oils (p. 202-03): "Ghee is the highly preferred fat in Ayurveda, being light, easy to digest and potentiating to many of the foods with which it is served." Sunflower oil is the next best choice, being agreeable to all doshas. "Sesame oil is specifically recommended when a warming effect is needed. It grounds Vata... The vast majority of oils are warming and heavy in quality, including..." soy oil. "Margarine is cold and difficult to digest and not often recommended by Ayurvedic physicians."

About condiments: Salt, tamari, miso, and pickled ginger all heat up a meal and stimulate agni (fire). A detailed discussion is given of the medicinal function of sea vegetables in Ayurveda (p. 216-17).

About soy milk: Liquid soy milk can be a good alternative to cow's milk, if you are sensitive to the latter. It is also less *Kaphagenic* (imbalancing to *Kapha*) than cow's milk, when properly prepared. Lighter than cow's milk in its effect on the body, it cooks up easily in recipes. Like most high protein foods it promotes building, not cleansing. It is best used in restorative and maintenance programs. It can be warmed with cinnamon, cardamom, nutmeg or ginger and black pepper. Some *Vatas* do not tolerate it well. Dried soy milk powder and soy protein powder are much more difficult to digest than the whole liquid soy milks. Only the most stalwart *Pitta* is likely to be able to consume them without gas, as they are cold, heavy and dry. Whole soybeans and tempeh are often gas-producing as well. For adequate digestion they require much cooking and spicing, good *agni,* and a *Pitta* constitution. Hot soy milk (p. 264).

Scrambled tofu (p. 281,–Vata).

In appendix II (p. 293). The following legumes, in moderation, calm Vata: Aduki beans, soy cheese, soy milk (liquid), tofu, black lentils, mung beans, red lentils, and tepery beans. But these aggravate Vata: Soy beans, soy flour, soy powder, tempeh, garbanzos and most other beans. Among beverages, icy cold drinks and many others aggravate Vata. Beverages that calm Vata are soy milk (well spiced and hot), miso broth, many herb teas. Tofu is calming to Pitta and mildly aggravating to Kapha. Cool in action, some Vatas tolerate it well, others do not.

Aduki beans are mentioned on p. 19, 106, 109, 116, 124, 293, 306. Address: 1. Faculty member, The Ayurvedic Inst., Albuquerque, New Mexico; 2. Wife of Yogi Amrit Desai, member of Kirpalu Center for Yoga and Health, Lenox, Massachusetts.

6068. Perché la soia [Why soya?]. 1990. Strada Logheretto 2, 43010 Corcagnano (Parma), Italy. 6 panels. Catalog. 29 x 21 cm. [Ita]

• ***Summary:*** In this brochure, a color photo shows the entire *Campi di Soia* and *Erboristeria* lines. The two are almost identical in terms of product names and packaging except that the word "Erboristeria" replaces the word "Campi di Soia" for products sold to the health food trade. The Erboristeria line has a bottled cooked soybeans (*Semi di Soia*), and a different shaped soy fortified pasta (*Soipast*). Both lines now have a soy lecithin (*Lecitina di Soia*). In both lines, the bottled soymilk is named Soidrink (3 flavors) and the soymilk in a Tetra Brik Aseptic carton is named Soilat (1 flavor). Address: Corcagnano (Parma), Italy. Phone: 0521.639148.

6069. Plamil Foods Ltd. 1990. Plamil nutritional information (Leaflet). Folkestone, Kent, England. 1 p. Single sided. 30 cm.

• ***Summary:*** Printed with green ink on white paper. A detailed nutritional analysis is given of Plamil concentrated soya milk (sugar free / blue label, and with sugar / green label), undiluted per 100 ml. The products are fortified with calcium, and vitamins D-2, and B-12. There is a section on

the disadvantages of the high calcium level of cow's milk. A color photo on the front panel shows the concentrated soya milk in both cans and 500 ml Tetra Brik Aseptic cartons, and sugar-free Plamil Soya Milk in 1 liter Tetra Brik cartons.

Side 2 gives nutritional information on Plamil Rice Pudding (sugar free, and with sugar), and confections: Chocolate or mint, carob or orange, carob with hazelnuts, carob with no added sugar, carob coated fruit and nut bar (apple, pear, or apricot). Note that no mention is made of the fact that Plamil is made with isolated soy proteins. Address: Plamil House, Bowles Well Gardens, Dover Rd., Folkestone, Kent CT19 6PQ, England.

6070. Plamil Foods Ltd. 1990. Plamil: Pioneers of British soya milk. Silver anniversary, 1965-1990 (Leaflet). Folkestone, Kent, England. 1 p. Front and back. 21 x 14 cm.
• ***Summary:*** Printed with green, purple, red, yellow, black and grey in on white paper. On the front, color illustrations of Plamil Soya Milk in five kinds of packages. The current Plamil range: Soya milks. Sugar free (Blue label; these contain no sweetener of any kind). Concentrated carton, 500 ml. Ready to use carton, 1 litre. Concentrated can, 420 ml. Sweetened (Green label). Concentrated carton, 500 ml. Concentrated can, 420 ml.

Provides essential calcium, vitamins B2, B12, and D2. The independent company specialising in non-animal quality foods.

On the rear, color illustrations of Plamil Soya Milk Rice Pudding (sweetened or sugar free) and Plamil Pease Pudding.

The Rice Pudding is made from Organically grown unpolished brown rice, with Sultanas; it is based on soya protein isolate, and includes sunflower oil. Information about the Pease Pudding (15½ oz can). Address: Plamil House, Bowles Well Gardens, Dover Rd., Folkestone, Kent CT19 6PQ, England.

6071. Seventh-day Adventist Dietetic Assoc. 1990. Diet manual, including a vegetarian meal plan. 7th ed. (Three-ring binder with dividers). Seventh-day Adventist Dietetic Assoc., P.O. Box 75, Loma Linda, California 92354. xv + 644 p. Index. 29 cm. In a 3-ring binder with tabbed dividers. Index. 30 x 29 cm.
• ***Summary:*** This comprehensive guide to planning, selection, and coordination of vegetarian diets, in the form of a three-ring binder with dividers, was edited by Georgia Hodgkin, M.S., R.D.; Susan Maloney, M.S., R.D., was the managing editor. Previous editions were published in 1960, 1965, 1970, 1975, 1978, and 1982. Each chapter has an author and a reviewer. References are found at the end of each chapter.

Contents: Introduction. Normal nutrient needs. Nutrition for pregnancy and lactation. Pediatric diets. Gastrointestinal diets. Renal diets. Cardiac diets. Diabetic and related diets. Mineral modified diets. Diet for acute care. Nutrition and immunity. Nutritional support and enteric feedings. Geriatric and rehabilitation diets. Test diets. Nutrition and drugs. Nutrition for exercise and weight control. Appendixes (11) including: Ingredients of selected vegetable protein foods. Nutrient composition of selected vegetable protein foods. Addresses of selected Seventh-day Adventist hospitals (16 hospitals). Selected vegetarian cookbooks (15 citations). Selected books concerning a vegetarian diet (7 citations). Tables (79 tables). List of figures (10 figures). Address: Loma Linda, California.

6072. Sunrise Markets Inc. 1990. Tofu cookbook: 60 quick & easy recipes. Vancouver, BC, Canada: Sunrise Markets Inc. 80 p. No index. 22 cm.
• ***Summary:*** Contents: Sunrise Markets Inc. What is tofu? Sunrise tofu (Extra Firm {green label}, moderately firm {yellow/red label}, soft {blue label}, tofu dessert {pink label}). Cooking hints. Recipes–Soups. Salads. Dressings and dips. Entrees. Desserts. Nutritional breakdown of Sunrise Tofu. Other Sunrise products (Sunrise soya drinks {non-dairy in sweetened, unsweetened, vanilla/almond, and chocolate flavors}, Tofu-Rella {Tofu-based cheese in 5 flavors}, Mori-Nu Tofu, Sunrise Tofu Puffs {deep fried} and Dried Flavour Tofu, Tofreezi {non-dairy tofu-based frozen dessert in seven flavors}, Casa Del Norte Chili and Canadian Chef Beans & Tofu Wieners). Glossary. Substitutions and equivalents. Feedback.

A color photo on the front cover shows 8 different tofu dishes. On the rear cover are color photos of Sunrise's four tofu products. Address: 729 Powell St., Vancouver, BC V6A 1H5. Phone: 253-2326.

6073. The mission of Friar William of Rubruck: His journey to the court of the Great Khan Möngke 1253-1255. Translated by Peter Jackson. Introduction, notes and appendices by Peter Jackson and David Morgan. 1990. London: The Hakluyt Society. xvi + 312 p. Illust. Maps. Index. 23 cm. [268 + 300+ endnotes]
• ***Summary:*** Contents: Editorial note. Abbreviations. Chronology of Rubruck's mission (incl. Quraqorum / Karakorum / Har Horin in today's Mongolia). The Mongol imperial family: genealogical table (at the head is Temüchin / Temuchin = Chinggis Khan = Genghis Khan). Introduction: The Franciscans and the mission to the infidel, East and west before the advent of the Mongols, the rise of the Mongol empire (Tatars = Tartars; Qaghan = Kaghan = Great Khan), Religion and the Mongols, the first diplomatic contacts, map of the Mongol empire at the time of Rubruck's visit, the Mongols and Louis IX, Friar William of Rubruck and his mission, the report (in Latin to King Louis IX of France) and its value, manuscripts, editions and translations. Rubruck's report to King Louis IX of France. Appendices (I-IX).

William was sent by Louis IX of France to the khan.

He left France in 1253 and arrived in the Mongol capital of Karakorum in 1254. He was a keen observer. Although he never reached China, he was the first European to describe the Chinese script, the postal system, the Southern Song empire, and the Kingdom of Korea. He also described divination using the thigh bone of a sheep (a form of pyromancy) at the Mongol court. While there, he encountered a French goldsmith (Guillaume Boucher) working for the khan.

Note 1. Soy is not mentioned. However almond milk and comos = kumys, kumis, kumiss, koumiss, kymys, kimiz (a fermented drink traditionally made from the milk of horses {mares}) are mentioned on p. 81-83, and almonds on p. 207.

Note 2. This book replaces the older study, *The Journey of William of Rubruck to the Eastern Parts of the World, 1253-55,* translated by William W. Rockhill (London: Haklyut Society, 1900).

6074. Wagner, Lindsay; Spade, Ariane. 1990. The high road to health: A vegetarian cookbook. New York, NY: Simon & Schuster / Prentice Hall Press. xv + 288 p. Foreword by E. Lee Rice. Index. 24 cm. [54 ref]
• ***Summary:*** Lindsay Wagner, whose lovely color photo appears on the cover, first achieved widespread television in the early 1970s as "The Bionic Woman." Recently she starred in the Academy-Award winning film *The Paper Chase.* This vegan cookbook uses no meat, dairy products, or eggs. A section titled "Raising the Dairy Question" (p. 13) discusses problems with milk and concludes: "A terrific substitute for milk products comes from that little marvel, the soy bean. Soy milk has the look and consistency of milk, and some brands even taste like it. Try some on your breakfast cereal, top your pies with our creamless Whipped Cream, spread your sandwiches with eggless Mayo Spread and enjoy Huevos-less Rancheros for brunch. You'll never look at another carton of milk."

Chapter 4, "About the ingredients," includes discussions of Braggs Aminos, cold-pressed oil, kuzu, lecithin, miso, mochi, nori, soy milk, soy sauce, tempeh, tofu. Soy-related recipes include: Huevo-less rancheros (with tofu and soy milk, p. 65). Vegetarian "salami" (with firm tofu, p. 82-83). Mayo spread II (with soy milk, p. 88). Ginger tamari dressing (p. 131). Creamy oil substitute (with soy milk, p. 134). Tofu sour cream (p. 134). Eden cheesy sauce (with soy milk, p. 136).

Chapter 10 (p. 141-59) is titled "Entrées for the meat lover"; most of the recipes are based on soyfoods: Marinated tempeh (p. 141). Marinated tofu. Barbecued tofu or tempeh. Tempeh marinade. Teriyaki tofu. Polynesian tofu. Tofu piquant. Tofu ribs. Grilled tofu with summer vegetables. Japanese eggplant and tofu Romano. Pecan herb loaf (with tofu and soy flour). Easy tofu burgers. Easy easy burgers (with Marinated tempeh or tofu). New Age Italian sausage I (with Marinated tempeh and Marinated tofu). New Age Italian sausage II (with Marinated tofu). Spicy tempeh stir fry. Tofu cacciatore.

Lasagna with zucchini and mushrooms (in Light sauce with soy milk, p. 166). Manicotti stuffed with zucchini and tofu cheese (p. 175). Tacos (with Marinated tofu and tempeh, p. 187). Eggplant al forno (with tofu, p. 213). Banana-strawberry tofu pudding (p. 231). Italian cheesecake (with tofu, p. 243). Coconut-mocha cream frosting (with soy milk, p. 260). Tofu fruit sauce (p. 261). Mock whipped cream (with soy milk, p. 262).

An interesting last chapter titled "Afterword: Meat–We can live without it! Here's why" discusses the role of an "animal-based diet" on destruction of the environment. Address: 1. California; 2. Woodland Hills, California.

6075. Wasserman, Debra; Stahler, Charles. eds. 1990. *Vegetarian Journal* reports. Baltimore, Maryland: Vegetarian Resource Group. 110 p. Illust. No index. 28 cm. [10 ref]
• ***Summary:*** This is a compilation of articles by various authors that originally appeared in *Vegetarian Journal.* Soyfoods are mentioned or included in recipes throughout. For example: "What is osteoporosis" (p. 48-57), mentions tofu as a good source of calcium. "Tips for changing your diet" (p. 70-71), mentions tofu and soy milk. "Eggless Recipes" (p. 81), includes tofu. Address: Baltimore, Maryland.

6076. Laiteries Triballat. 1990? Plaisir et vitalite [Pleasure and vitality (Leaflet)]. Noyal-sur-Vilaine, France. 2 p. Front and back. Undated. [Fre]
• ***Summary:*** A photo (see next page) on side 1 of this handsome full-color leaflet (8.5 by 11.75 inches) shows six 4-pack Sojasun yogurt-style desserts, one Sojasun with cereals and fruits, and two Tetra Brik cartons of Sojasun soymilk (*Boisson à base de Soja*). Side 2 gives nutritional analyses of each product and packaging specifications. Address: B.P. 21, 35530 Noyal-sur-Vilaine, Prov. Brittany, France. Phone: 99 00 51 01.

6077. **Product Name:** Sweet Soy Drink.
Manufacturer's Name: Sacramento Tofu Co.
Manufacturer's Address: 1915 Sixth St., Sacramento, CA 95814. Phone: 916-447-2682.
Date of Introduction: 1990?
Ingredients: Water, organically grown soy bean, sugar.
Wt/Vol., Packaging, Price: ½-gallon plastic jug.
How Stored: Refrigerated.
New Product–Documentation: Talk with Martin Lin of Wa Heng Tofu Co. in Sacramento, California. 1991. Nov. 19. Sacramento Tofu sells soymilk in a ½-gallon plastic jug (like milk is sold in). It has a 20-day shelf life. Martin is unable to get a shelf life of more than 10 days without preservatives. Does Sacramento Tofu use preservatives in their soymilk?

Photocopy of Label sent by Martin Lin. 1991. Nov. 1.5 by 2.5 inches. "Fresh. Perishable. Keep refrigerated." Contains the Chinese characters for "Tou Chiang." Note that preservatives are not listed on the label.

6078. Sanitarium Health Food Co. 1990? Our story (Leaflet). 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia. 2 panels on each side. Each panel 30 x 21 cm. Undated.
• ***Summary:*** This glossy, color leaflet gives a brief history of the company, interspersed with many color photos. The company's export division is at Hudson Ave., Castle Hill, NSW 2154, Australia.

"The fascinating history of the Sanitarium Health Food Company started in the late 19th century when a group of highly motivated immigrants from the United States decided to make their living by distributing health foods that they had imported from Battle Creek, in Michigan, USA. Battle Creek was famous then for its Sanitarium, the health retreat based on a Swiss model, where the rich and famous from all parts of the United States and Europe came for a relaxing health holiday. One of the draw cards of this place was a breakfast cereal and health food manufacturing plant, the purpose of which was to supply food to the institution as well as to the neighbouring districts.

"A selection of these products was sent to Melbourne, Australia, in 1897, but before too long the demand for these unique foods outstripped the availability. Local production was inevitable...

"The name, Sanitarium Health Food Company, was adopted in 1898."

Photos show: (1-4 on front panel) Weet-Bix in a white bowl. A man on a bicycle pedaling a wheeled cart in front of him; on it is written Sanitarium Health Food Co. A modern factory with a company flag flying over it. Veggies in a wrap on a plate. (5) The old Battle Creek Sanitarium. (6) A hand pouring a pack of So Good Soymilk. (7) A very old photo showing an early food factory along the banks for a river. (8) An aerial view of a modern food factory. (9) A bottling line. (10) A breakfast table on which Sanitarium breakfast food products are served. (11) A Sanitarium food delivery truck. (12) Packages of the leading Sanitarium food products: Weet-Bix. Corn Flakes. Weet Bix Hi-Bran. Puffed Wheat. Weeta Puffs. Good Start. Ricies (rice cereal). Honey. Peanut Butter (Smooth or Crunchy). Crunchy Granola. Caffex. Golden Toasted Meusli. So Good (soymilk). Vegetarian Sausages (canned). Vegetarian Bologna (canned). Address: Wahroonga, Australia. Phone: (02) 487 1711.

6079. Sanitarium Health Food Co. 1990? Product range. 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia. 6 p. Catalog. Undated. 30 cm.
• ***Summary:*** Product lines include: Flake biscuit range (incl. Weet-Bix ["Australia's favourite whole wheat malted breakfast biscuits"], Corn Flakes, and Muesli). Loose cereal range. Sundry cereal range. Drinks and beverages (incl. So Good soymilk). Spreads (peanut butter and marmite). Legumes, grains, seeds (incl. soya beans in 500 gm bag). Dried fruits. Nuts. Mixes (such as nuts & raisins). Canned vegetarian meals (24 meatlike products, 3 of which are dry TVP in boxes). Misc. foods (incl. natural lecithin and lecithin granules).

The company also has an export division at Hudson Ave., Castle Hill, NSW 2154. Address: Wahroonga, Australia. Phone: (02) 487 1711.

6080. Tofu Shop Deli and Specialty Foods Co. (The). 1990? Fine tofu: Hand crafted in small batches for a sweet, delicate flavor and texture (Ad). Arcata, California. ½ p. Undated.
• ***Summary:*** This ad occupies the top half of an unknown page in the "Wholefood Express" distributor catalog in about 1990. The text reads: "Here in the far reaches of California's misty North Coast is produced a special tofu in the tradition of the great tofus of the East.

"For it's in the small, traditional shops of China and Japan where the magic of tofu as a world-class food has slowly developed over the ages, where generations of tofu makers have mastered the subtle arts and skills of tofu making, and where countless connoisseurs of fine foods have savored the sweet, delicate flavors and textures of truly fresh tofu–an experience few in the West know.

"Honoring this lineage in our own shop, we work to keep the tofu making as simple, handmade, and traditional as possible. A single trained tofu-maker carefully guides each batch through the entire tofu-making process.

"Small batches, open-cauldron cooking, sanitary conditions, and the finest organic ingredients are all magically combined to produce our unique tofu, one we describe as sweet and delicate. According to a elderly Japanese grandmother who recently visited our shop, it's like the tofu of her childhood.

"We hope you will try this fine tofu and also our full line of soy milk, tofu cold-cuts, salads, and desserts, all prepared with the same attention to authenticity, quality, and freshness."

"Makers of freshly-prepared natural foods since 1977."

An illustration across the bottom of the ad shows a small tofu shop on stilts on a cliff by the ocean, with an Oriental-style roof and a wind-blown tree arching overhead.

On the bottom half of this page is an ad from Turtle Island Soy Dairy. Address: 768 18th St., Arcata, California 95521.

6081. Lo, K.S. 1991. Re: Cultivation of soybeans in Hong Kong. Letter to William Shurtleff at Soyfoods Center, Jan. 9–in reply to inquiry. 2 p. Typed, with signature on personal letterhead.
• ***Summary:*** Mr. Lo has been making soymilk in Hong Kong on an increasingly large scale since 1940, but the soybeans

he has used have always been imported. 1. As far as I am aware, "soya bean has never been grown on a commercial scale in Hong Kong. Some of the New Territories farmers might have grown some in small patches on and off, but, to my knowledge, nobody has ever grown sufficient quantity to harvest it for sale in cash.

"2. I have not come across any document, either in Chinese or English, stating that soya beans were grown in Hong Kong at any time. There is a book by the former professor of Botany, the late Dr. Herclotts, called *The Local Plants and Flowers.* In it, there was no mention about soya bean.

"3. I have not seen any document stating that soya beans were in Hong Kong before 1872. However, Hong Kong has been handling the re-export of soya beans, soya bean cakes and oil which were imported from China. This trade had been going on before the war and probably from the last quarter of the 19th century." Address: Chairman, The Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd., Aberdeen, Hong Kong. Phone: 5-528211.

6082. *Times of India* (*The*) (*Bombay*). 1991. Friday's traded scrips. Stock quote. Jan. 12. p. 18.
• ***Summary:*** On the Bombay Stock Exchange (BSE), "Other securities" are listed alphabetically by ticker symbol. Soya companies include: Noble Soya 14, 16 (dropped after merger with Vegepro).
Ruchi Soya 20.0, 21.00, 19.00.
Sagar Soya 8.00, 10.00.
Sakthi Soya 15.00, 16.00.

6083. Noble Soya House. 1991. Notices: In the high court of judicature of Madhya Pradesh at Jabalpur. *Times of India* (*The*) (*Bombay*). Jan. 19. p. 20.
• ***Summary:*** "Ordinary original civil jurisdiction. Company petition No. 7 of 1990. In the matter of the Companies Act 1956 and in the matter of a scheme of amalgamation of Vegoils Limited with Noble Soya House Limited. Noble Soya House Limited–Petitioner.

"A petition under Section 391 and 394 of the Companies Act, 1956, for sanctioning the scheme of amalgamation of Vegoils Limited and Noble Soya House Limited was presented by Shri Ashutosh Singh Gaharwar, Advocate, on the 30th day of November, 1990 (Filed 8-10-1990) and the said petition is fixed for hearing before the Company judge on 8-2-1991 [8 Feb. 1991]. Any person desirous of supporting or opposing the said petition should send to the petitioner's advocate, notice of his intention, signed by him, or his advocate, with his name and address so as to reach the petitioner's advocate not later than two days before the date fixed for the hearing of the petition. Where he seeks to oppose the petition, the grounds of opposition... Signed, Ashutosh Singh Gaharwar, Advocate for Petitioner. Address: A-24 Rattan Nagar, Opposite L.I.C. Building, Madan Mahal, Jabalpur, Madhya Pradesh." Dated: 17-12-1990 [17 Dec. 1990]. Address: Jabalpur, Madhya Pradesh.

6084. Moore, Stephen D. 1991. Tetra Pak proposes friendly takeover of Alfa-Laval valued at $2.91 billion. *Wall Street Journal.* Jan. 29. p. A13.
• ***Summary:*** "If successful, the union would spawn one of the world's biggest producers of food packaging and processing equipment." Alfa-Laval's board unanimously endorsed the Tetra Pak Group's offer. "The surprise bid also promised further financial relief for Sweden's Wallenberg group, Alfa-Laval's biggest owner, which has struggled in recent months to digest a spate of expensive takeovers. Alfa-Laval is a venerable, Stockholm-based industrial concern and well-known maker of farm equipment. But in recent years, Alfa-Laval's fastest growth has come in its industrial division which produces complete dairy and food processing factories.

"Tetra Pak is a private company, founded in southern Sweden but now head-quartered in Lausanne, Switzerland, and owned by a Liechtenstein-based family foundation. It claims to be one of the world's biggest manufacturers of paper beverage cartons. The proposed takeover would open a spate of potential synergies.

"Tetra Pak's Mr. Hagman said that average annual sales growth of 18% during the 1980s had opened possibilities for aggressive expansion... Tetra Pak will concentrate its resources toward the goal of being world leader in food packaging and distribution.

"But Mr. Hagman ruled out any interest in packing or distributing non-foods. That policy led Tetra Pak to spurn an approach from Procter & Gamble Co. of the U.S. about using Tetra Pak's cartons to package detergents or shampoos."

Tetra Pak's CEO, Bertil Hagman, said Tetra Pak's sales last year exceeded $4,835 million and industry analysts estimate that before tax profit will probably approach $717 million. Alfa-Laval expects 1990 sales of $3,136 million with pretax profits of $292 million.

In a display of its financial clout, Tetra Pak said it would finance the Alfa-Laval acquisition from internal funds.

6085. **Product Name:** [Soya Based Drink (Natural)].
Foreign Name: Soja Drink (Natur).
Manufacturer's Name: Bruno Fischer GmbH (Importer-Distributor). Made in France.
Manufacturer's Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1991. January.
Ingredients: Water, soybeans* (9%). * = Organically grown.
Wt/Vol., Packaging, Price: 1 liter glass bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter/Order for the book *Tofu & Soymilk Production* from "Bruno Fischer jun [Jr.]."

1979. Oct. 7. He is located at Taunusstrasse 13, 5000 Köln [Cologne] 91, West Germany. Phone: 02 21 / 83 26 51.

Talk with Bruno Fischer, who calls from Germany. 1993. Nov. 25. He sells soymilk, which he introduced in Jan. 1991, in glass bottles in Germany. In the unique sterile-filling process, developed by Alfa-Laval and Bosch, the soymilk is first UHT sterilized, then packed and sealed in sterile bottles. It is sold non-refrigerated with a 9-month shelf life. He does not make this soymilk; he imports it from a soymilk maker in France.

He is a Seventh-day Adventist who is the fifth generation of a family of butchers. His family quickly stopped making pork products and closed their shop on Saturday, the Sabbath–which was formerly their busiest day. Now he is gradually switching the company from meat products to alternatives. On 7-8 Oct. 1979 he visited Shurtleff and Aoyagi in Lafayette, California.

Labels sent by Bruno Fischer GmbH. 1994. Jan. 6. On each bottle are two labels, each 6 by 3.75 inches. The front label has white letters with dark blue borders on a pastel blue and green background. Four small square drawings show that this soymilk can be used like milk, drunk from a glass, poured on Muesli, or used in cooking. "Made purely from plants. No added sugar. Versatile–use like milk." The back panel gives the product name and ingredients in six languages. By each name is the flag of that country.

Product with Label sent by Bruno Fischer. 1998. April 15. Soja Drink–Natur. No added sugar. Ingredients and nutritional value are given in five languages, each with the flag of that country by the product name: German, English, Italian, French, and Dutch. Talk with Bruno Fischer. 1998. May 14. This product was named Soja Drink from the beginning; The name Tônyû was used only in-house. The current milk is made from organic soybeans grown mostly in southern France. The resulting soymilk is the highest in mono- and di-saccharides, and in lactones of any European soymilk. Bruno thinks that his is the only soymilk in the Western world today that is sold in a glass bottle. This is the kind of environmentally-friendly container that his customers at natural food stores in Germany want; Tetra-Pack is a symbol of an environmentally unfriendly container. The bottle and cap are steam sterilized, then filled with UHT-treated soymilk in a sterile environment. The filling plant is at Rugensburg; the bottles are then shipped to a storehouse at Saarbruecken, on the Saar River near the French-German border. Sold in a brown 1-liter glass bottle, this soymilk has a shelf life of 1½ years. It is made from soybeans that are dry-dehulled. Bruno has been in the plant where it is made and seen the whole process.

6086. Fowler Brothers. 1991. Catalog: January 1991. P.O. Box 2324, San Rafael, CA 94912. 79 p. 28 cm.
• ***Summary:*** The company is a "distributor of natural foods." The following makers, distributors, and brands of soyfood products are listed: I. Bulk Products: Miso (American Miso, 8 products), Soy foods (Turtle Island tempeh and Soy Deli tofu burger). Soy Sauce & tamari (San-J domestic shoyu and tamari, Westbrae Johsen shoyu), Tofu (Quong Hop, 6 products).

II. Packaged products: Ah Soy (Westbrae, 7 soy drinks), Eden Foods (Edensoy, 6 soy drinks), Pacific Soyfoods (6 types of soysage), Pacific Tempeh (4 products), Quong Hop (11 soymilk and 4 tofu products), San-J (tamari crackers, 14 soy sauce & tamari products), Soy Deli (Quong Hop, 5 soy foods, 8 vacuum pack tofu), Sweet Earth (3 vegeburgers), Turtle Island (10 tempeh products), Vitasoy (7 soy drinks), Westbrae (2 instant miso soups, 14 soy drinks, 14 types of soy sauce and tamari). Address: San Rafael, California. Phone: 415-459-3406.

6087. Nichii Company of America, Inc. Mycal Group. 1991. Are you tired of soaking overnight? (Ad). *Natural Foods Merchandiser.* Jan. p. 64.
• ***Summary:*** This is an ad for "revolutionary new MicroSoy flakes," an alternative to whole soybeans in making tofu or soymilk. They eliminate all washing and rinsing, all soaking water and time, waste water disposal, grinding, and save considerable floor space. You can save up to 2,400 lb of water per ton of soybeans. Call or fax for a free sample.

6088. Norumu, Wayne W.; Baqar, M.R.; Board, P. 1991. Acceptability of soymilk to young Papua New Guineans. *ASEAN Food Journal* (*Malaysia*) 6(1):24-27. Jan. [14 ref]
• ***Summary:*** Plain and flavored soymilks were made from soybeans grown in Papua New Guinea and from a commercial soy protein isolate (Ardex F, made by ADM). Soymilk favored with cacao was accepted by these youth. These products are a good source of energy and protein. Their nutritive value is given. Address: Dep. of Chemical Technology, Papua New Guinea Univ. of Technology, Lae, PNG.

6089. Reisner, Marc. 1991. The real cause of water shortages in California is irrigated forage crops and the dairy cows that eat them (Interview). *VegeScan Notes.* Feb. 2. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** The California agricultural industry uses 80 to 85% of California's stored water. In the Jan/Feb. 1991 issue of *Western Water,* published by the Water Education Foundation (Phone 916-444-6240) is a long interview with Marc titled "Agricultural Water Use." It is followed by a rebuttal from the agricultural industry, in which they argue basically that if they cannot grow alfalfa within 200 miles of Los Angeles, none of the babies there will have any milk to drink.

The article contains two tables of statistics from the California Department of Water Resources (DWR). One table shows the number of acres of irrigated land used to

grow major crops in California in 1988, and the other shows the average evapotranspiration rate for each crop. Cotton is grown on 1,382,700 acres and each acre uses 2.7 feet of water per year. Alfalfa is grown on 1,086,900 acres and each acre uses 4.1 feet of water per year. Pasture (mainly grass and clover) is grown on 939,400 acres and each acre uses 4.1 feet of water per year. And rice is grown on 468,200 acres and each acre uses 3.3 feet of water per year. "These four low-value crops use 14 million acre-feet of water each year. That is enough water to support 70 million people, or 2.5 times California's present population of 28.3 million people. The state of California uses 36-37 million acre feet of water in a normal year. A single forage crop (irrigated pasture) uses more water than all Californians use in and around their homes. Then you have another forage crop (alfalfa) that does exactly the same again. These two forage crops alone, alfalfa and pasture, use about 8 million acre feet, or 22% of all stored water used in California. It offends me that we give three times more water to cows than we give to people in California. Livestock is the largest consumer of water in California."

When you add up the amount of livestock grown in the 11 western states and compare it to the amount of livestock grown nationwide, it is not that much. "We've built all these dams, messed up so many wonderful rivers and valleys, decimated so many salmon runs, caused so much erosion and siltation for the benefit of 15-18% of the national meat and dairy consumption–which is already too high.

In California, rice is grown in standing water. But in Louisiana, Arkansas, and Mississippi, rice is grown without standing water. We use standing water in California because the water is so cheap and it is a convenient way to kill the weeds. The PureHarvest method, if universally adopted, could cut the rice crop consumption of water by about 500,000 acre feet a year; that is enough to take care of Los Angeles. But California rice farmers hate the weeds. The only people who dispute Marc's figures are the rice farmers; they say that a lot of the water that they apply to their fields runs back into the Sacramento River whence it is available for reuse. But reuse by whom? It enters the river full of herbicides and pesticides, and is probably a major factor in the decline of the striped bass because it is killing a lot of the subaquatic vegetation in the Delta.

Los Angeles uses only 5-6% of the water in California for all purposes–only 2 million acre feet per year. Yet in the Central Valley, which is 400 miles long and 40-60 miles wide, virtually every acre of land gets 2-7 feet of water put on it each year.

The Bureau of Reclamation is one of the most stubborn bureaucracies. There is the unholy Trinity of engineering companies that want to build dams, farmers who like cheap water, and the Bureau of Reclamation that sells cheap water so it gets to build more dams. The Bureau sets the water rates to farmers, and sets them far below the cost to deliver the water. So citizens subsidize farm water and farmers have little incentive to conserve water. There are no more rivers (that are not wild and scenic) to dam. We've already built 1,400 dams. The only answer is to use our water more efficiently. One-seventh of the water used in California goes to irrigated pasture, which produces about $100 million worth of income; this is less than 1/5,000th of the total state revenues. So a lot of water is used to produce relatively little revenue.

Marc is not a vegetarian, but he feels that "cows are the worst thing that ever happened to the American west. They have become a mythic creature; people can't imagine the west without cattle. Mark feels we should get rid of all cattle in the western states, bring back the wild ungulates and raise oranges, peaches, fresh vegetables, etc." Marc feels that milk should be produced in other parts of the U.S. and shipped to California. That is his real agenda. Note: In California, the main agencies governing water are the state Water Resources Control Board. David Kennedy is the State Water Resources Director. Most of the homes in the Stockton, Sacramento, and Fresno area have no water meters; there is a flat water fee of $5/month and each household can use as much water as it likes.

Marc is doing a new edition of *Cadillac Desert* that is due to be published later this year. Address: 738 Arkansas St., San Francisco, California 94107. Phone: 415-981-2609.

6090. Richardson, Al A. 1991. Trip report and market analysis–Europe. Torrance, California: Nichii Company of America. Feb. 4. Unpublished typescript.
• ***Summary:*** This trip report describes visits to various companies. Contents: Unisoy Company, Manchester, England. Dragon & Phoenix, London, England. Cauldron Foods, Manchester, England. Sojinal, Issenheim, France. Alpro, Wevelgem, Belgium. Heuschen-Schrouff, Landgraff, Netherlands. Galactina AG, Belp, Switzerland. Trip and European market summary. Top soyfoods manufacturers in Europe. Address: Director, Marketing & Sales, Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505. Phone: (213) 791-0010.

6091. Tetra Pak Inc. 1991. Use of UHT/Aseptic white dairy milk in Europe and other countries, 1989. 889 Bridgeport Ave., Shelton, CT 06489. 2 p. Feb. 5. Unpublished manuscript.
• ***Summary:*** The following statistics are from Tetra Pak Statistics in Lausanne, Switzerland. In western Europe, 27,896 million liters of milk are consumed in total. Of this, 24,108 million liters are consumed in the eleven EEC countries. Countries not in the EEC are Austria, Cyprus, Finland, Iceland, Norway, Sweden, Switzerland, and Turkey. The four countries with the largest total milk consumption are the UK (6,687 million liters), France (3,735), Spain

(3,624), and Germany (3,470). Of the all the milk consumed in Europe, 9,660 million liters (35% of the total) is packaged in UHT/Aseptic cartons. Of the all the milk consumed in the EEC, 9,376 million liters (39% of the EEC total) is packaged in UHT/Aseptic cartons. The four countries in which UHT/Aseptic packaging is most widely used are France (3,000 million liters; 80% of all milk in France), Spain (2,125; 59%), Germany (1,578; 45%), and Italy (1,497; 52%).

Outside of Europe, the world's biggest dairy milk consumers are: USA (24,429 million liters; 0.2% UHT/Aseptic), India (5,001; 0.4%), Japan (4,803; 4%), Mexico (2,895; 8%), and Canada (2,504; 0%). Countries with the highest percentage of UHT packaging are Yemen (39 million liters of milk consumed; 95% in UHT), Pakistan (97; 92%), Saudi Arabia (158; 82%), Thailand (34; 70%), Singapore (28; 64%), and Chile (151; 61%). Address: Shelton, Connecticut.

6092. *Toyo Shinpo* (*Soyfoods News*). 1991. Beikoku de daizu origo-to. Karupisu, Mitsubishi Shôji to kyôdô [Soybean oligosaccharides in the USA. Calpis and Mitsubishi joint venture with Central Soya]. Feb. 21. p. 13. [Jap]
• ***Summary:*** It has been announced that Calpis Food Co. (Shokuhin Kogyo; maker of a very popular Japanese non-alcoholic beverage) and Mitsubishi Shoji are going to establish a jointly owned company with Central Soya (Indiana) to produce and sell soybean oligosaccharides in 3 of Central Soya's plants in America. Oligosaccharides, which have the ability to condition the intestines, have been produced by several food companies in Japan. But Calpis got safety approval from the U.S. Food and Drug Administration as the first company in Japan. They are planning to sell the product aggressively overseas, to Unilever in Europe, and also in Korea. They are trying to capture the growing awareness of health. They are hoping to reach 5,000 million yen [about $39.3 million] sales during the first three years, selling mainly to confectionery manufacturers as a sweetener. They hope to begin shipping to Unilever this year for use in boosting the nutrition of infant formulas.

In Korea, they plan to supply the largest tofu maker and food manufacturer, Purumuwon in Seoul, with a powdered soy oligosaccharide sweetener, private labeled.

Oligosaccharides promote the growth of Bifidus (Bifidobacterium; beneficial bacteria) in the intestinal tract. In Japan, the market for products that include oligosaccharides is estimated at 150,000 million yen ($1,195 million), growing at about 20% a year due to consumer health awareness. But this concept and the resulting products are not yet popular overseas. There are several types of oligosaccharides. The one Calpis developed from soybeans is widely available in these beans and is getting the most attention. Their product has about 20% of the Japanese market. Calpis established a company named Soya Oligo Japan (president, Mr. Kôkichi Sato) with Mitsubishi in 1989 and has been preparing for overseas expansion.

A shorter, similar, follow-up article was published in *Toyo Shinpo* on 21 March 1991, p. 3. Address: Japan.

6093. McDermott, Ron. 1991. New developments at Worthington Foods (Interview). *SoyaScan Notes.* Feb. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron was at Loma Linda Foods for 4 years, and before that at Ross Laboratories for 9 years. When Worthington Foods acquired Loma Linda Foods, it got all the meat analogs and the Soyagen soymilk, which is sold only in dry form to adults. Now Worthington has Soyagen and Soyamel brand soymilks. The last production of Loma Linda brand products in Riverside was completed under contract by Nutricia at the end of August, 1990. Then the unique and necessary equipment was taken to Worthington, Ohio, in the fall and set up there. Since December, Worthington has been working to bring the formulas back into production. A number of similar products were discontinued. Even after these were eliminated, Worthington still has a line of 180 products! This includes all Worthington products! The Morningstar Farms line accounts for the great majority of sales. The canned meat analogs account for about 20% of total Worthington sales. The rest is sales of frozen Worthington products, the Natural Touch line, beverages, etc. The best-selling product in the Natural Touch line has been the okara patties.

Nutricia had decided to consolidate their soymilk production in Riverside and to sell their old soymilk plant in Mount Vernon, Ohio. In fact, they set up a soymilk production line in Riverside, but they had problems with the aseptic part of it. But within the last 2 months they have decided to consolidate soymilk production at Mt. Vernon instead.

Jim Hagle, chairman of the board of Worthington Foods, died on 18 Oct. 1990 at age 78 at his home. Alan Buller has taken his place as chairman of the board. Dale Twomley is now president and CEO of Worthington Foods. Bob Clark (who came from Haagen-Dazs-Pillsbury) is the new vice president for marketing and Steve Dunson is vice president for corporate strategy & planning. Address: Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

6094. Nordquist, Ted. 1991. Changes in structure and ownership at Aros Sojaprodukter in Sweden (Interview). *SoyaScan Notes.* Feb. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** On 31 Dec. 1990 Ted sold Aros. He now owns one-third of the new corporation named Aros Sojaprodukter AB. Eric Kennhed owns one-third and Blekinge Invest (which owns 100% of Trensums Musteri, a juice company) owns the other one-third. There is a five-person board of directors, and Ted is CEO.

He is trying to find companies to license his new technology and process for making soybase. He has a contract that offers a commission of 3% of the sales of each product for the first year after production starts, plus reimbursement for all travel if it leads to the signing of a licensing contract.

Anders Lindner is now part of Ted's group. William Shurtleff introduced and recommended Ted to him. Anders recently did a soymilk market study for Vitasoy in Australia.

Danish Nutana is in bad shape. Address: CEO, Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

6095. Damerow, Gail. 1991. Ice cream! The whole scoop. Macomb, Illinois: Glenbridge Publishing Ltd. xix + 384 p. See p. 133-53, 362-63. Illust. Index. 26 cm. [10 ref]
• ***Summary:*** Chapter 9, titled "Dairy alternatives," has a recipe for "Soy 'n' Rice Cream" (made with soymilk), discusses "Amasaki" [sic, amazake] and Rice Dream, and has a recipe for "Amasaki Sherbet."

Note: This is the earliest English-language document seen (March 2007) that uses the term "Dairy alternatives" (or "Dairy alternative") to refer to soy ice cream.

Chapter 10, titled "Soy Ice Cream," discusses Tofutti, soy protein, soy milk, milking the bean, soy ice cream, and flavors. Eight recipes (mostly made with soymilk) follow. Part II of this chapter is about soy yogurt (cultured; p. 145-47), with 2 recipes for frozen soy yogurt. Part III is on tofu and tofu ice cream, with 6 recipes, including a tofu sherbet. Part IV is soy sundaes; one topping includes soynuts. There is also a recipe for "Whipped Tofu Cream." The appendix on supplies gives two sources of powdered soymilk.

The hardcover book features 8 full-color photos, 24 black-and-white photos, 50 illustrations (line drawings), 200 home recipes, and a glossary of ice cream lover's jargon. Address: Tennessee Technological Univ., Cookeville, TN.

6096. Eden Foods, Inc. 1991. Eden Foods product overview (Leaflet). Clinton, Michigan. 6 panels each side. Each panel: 23 x 10 cm. Feb.
• ***Summary:*** Two panels of this color leaflet contain a brief history of Eden Foods, plus a chronology of key events in the history of Eden Foods: 1967–The first checking account was opened for Eden Foods, a source of macrobiotic and organic foods in Ann Arbor, Michigan. 1968–Eden Foods, Incorporated became a registered business, with food service, retailing and food processing operations. 1970–Eden Organic Certification Standards were implemented. Eden products were distributed in Michigan and Ohio. 1972–Trade relationship began with Muso Company, Ltd. of Osaka, Japan. 1979–Fire at warehouse reduced records, equipment and inventory to rubble. Two weeks later Eden Foods reopened. 1982–Schmidt Noodle Company, maker of Eden organic pasta since 1976, was acquired by Eden Foods. 1983–Edensoy soy beverage introduced; historic new item in natural foods market. 1985–San Francisco, California sales office and warehouse opened to service the West Coast. 1986–American Soy Products opened to produce Edensoy in Michigan; first aseptic soy beverage plant in the United States. 1988–Eden Foods joined OCIA, Organic Crop Improvement Association, for independent certification of crops. 1989–Eden and OCIA established standards for food processing as well as growing crops.

Six panels inside the leaflet describe the company's main product lines and give color photos of leading products from each line: Edensoy soy beverage. Organic durum pasta. Organic tomatoes. Organic grain sweetener (100% barley malt). Oils & vinegars. Beans & grains. Fruit products. Seasonings (Sesame Shake = gomashio). Traditional Japanese pasta. Traditional Japanese miso. Japanese soy sauces. Japanese sea vegetables. Japanese oils & vinegars. Japanese chips & crackers. Japanese pickles. Japanese concentrated foods (plum, garlic, kombu). Japanese teas. Japanese specialty foods (macrobiotic).

The company's trademark is now "Making a tradition of good health." Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

6097. Rasyid, F.; Hansen, P.M.T. 1991. Stabilization of soy milk fortified with calcium gluconate. *Food Hydrocolloids* 4(5):415-22. Feb. [15 ref]
Address: Dep. of Food Science and Technology, The Ohio State Univ., Columbus, Ohio.

6098. **Product Name:** Tofu, Soymilk, Deep-fried Tofu, Five-Spice Flavored Tofu.
Manufacturer's Name: Sun Kee.
Manufacturer's Address: 448-452 North 12th St., Philadelphia, PA 19123. Phone: 215-625-3818.
Date of Introduction: 1991. February.
New Product–Documentation: Talk with Yatsun Wen. 1990. March 22. He now lives in Philadelphia and plans to start a tofu shop there. Talk with Yatsun Wen. 1991. Feb. 8. He hopes to open his shop in several weeks. His native language is Cantonese. He plans to make tofu, soymilk, deep-fried tofu, and flavored tofu. He has moved his residence into his business location. He is looking for nigari to use in making fried tofu.

6099. *Guardian* (*England*). 1991. Beans mean tofu: Most of us are familiar with baked beans. But you can also use beans to discover the secrets of seeds, and the growth of plants and the food we eat. March 5. p. A6.
• ***Summary:*** An excellent article for children about learning from beans about plants. Learn how to make a sprouting chamber and to sprout beans. Note: So specific types of beans are mentioned or suggested for sprouting.

Learn how to make a tofu press, then make tofu at home

(detailed instructions are given)–using lemon juice to curd packaged soya milk.

Illustrations show: Cross section of a bean, labeled. (2) A sprouting chamber. (3) Utensils (including a "tofu press") and ingredients needed to make tofu at home.

Photos show: (1) A soya bean plant. (2) A bean curd factory in China. (3) Many different tofu products–plus soya milk in an aseptic carton.

6100. **Product Name:** Pureharvest Soy Drink [Natural, or Vanilla].
Manufacturer's Name: Ceres Natural Foods Pty. Ltd. (Importer & Distributor).
Manufacturer's Address: East Bentleigh, Victoria, Australia.
Date of Introduction: 1991. March.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik carton.
How Stored: Shelf stable.
New Product–Documentation: Letter (fax) from Don Lazzaro of Ceres Natural Foods. 1995. June 15. In March 19891 they introduced a 1 liter Lite Soy Milk in Tetra Pak. It is not clear where it was made or in what flavors.

6101. Ferreira, Sila Mary R.; Serpe, Eliane Rose. 1991. Obtençao de leite condensado a partir de uma mistura com extrato hidrossoluvel de soja em po e leite de vaca [Condensed milk obtained from a mixture of powdered soymilk and cow's milk]. *Archivos Latinoamericanos de Nutricion* 41(1):92-101. March. [25 ref. Por; eng]
• ***Summary:*** The mixture is concentrated until it contains 31-33.65% dry matter, in an evaporator under a pressure of 540 m of mercury at 45 and 50ºC respectively. The resulting product has organoleptic characteristics similar to those of condensed cow's milk. Address: Univ. Federal Parana, Parana, Brazil.

6102. Heaney, Robert P.; Weaver, C.M.; Fitzsimmons, M.L. 1991. Soybean phytate content: effect on calcium absorption. *American J. of Clinical Nutrition* 53(3):745-47. March. [21 ref]
• ***Summary:*** Phytate, the storage form of phosphorus in plants, reduces the bioavailability of calcium, but to a much lesser degree than oxalate. Using hydroponic growth media, soybeans were cultivated in solutions containing radioactive calcium in the for of 45Ca along with different levels of phosphorus to produce seeds that varied significantly in phytate content. Calcium absorption from high-phytate seeds was significantly lower at 31.0% ± 7% compared with low-phytate soybeans and milk for which absorptions averaged 41.4% ± 7.4% and 37.7% ± 5.6% respectively. Address: 1. Creighton Univ., Omaha, Nebraska 68178; 2. Dep. of Foods and Nutrition, Purdue Univ., West Lafayette, Indiana; 3. The Center for Hard Tissue Research, Creighton Univ., Omaha, Nebraska 68178.

6103. **Product Name:** Rice Dream 1% Fat Non-Dairy Beverage (in Quart Tetra Brik Carton) [Original, Vanilla, Carob (Carob reformulated)].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Rice Beverage made by California Natural Products, Manteca, Calif.
Manufacturer's Address: 299 California Ave. #305, Palo Alto, CA 94306. Phone: 415-327-1444.
Date of Introduction: 1991. March.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Robert Nissenbaum, president of Imagine Foods. 1993. Dec. 8. This product was launched in March 1991.

6104. **Product Name:** [Cerelac Soymilk].
Foreign Name: Cerelac.
Manufacturer's Name: Instituto de Investigaciones Para la Industria Alimenticia (IIIA–Food Industry Research Institute (FIRI)).
Manufacturer's Address: Carretera al Guatao KM 3.5, La Lisa, Ciudad de Habana, Cuba.
Date of Introduction: 1991. March.
Ingredients: Defatted soy flour (40%, all imported), whole milk powder (15%), sugar, calcium, vitamins, vanilla flavor.
New Product–Documentation: Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. "Recent history of soyfoods in Cuba." Part II (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center. After the dissolution of the Socialist/Soviet Bloc in late 1989 and 1990, Cuba's milk supply dropped dramatically. Between 1989 and 1995, consumption of dairy milk in Cuba fell by 70%. Alvaro and his co-workers worked to solve this immense problem. The first product they developed was named Cerelac. Introduced in March 1991, it contained 15% whole milk powder, 40% defatted soy flour (all imported), plus sugar, calcium, vitamins, and vanilla flavor. It was sold at subsidized prices to kids ages 7-13 and seniors over age 65. These people found the product acceptable. Soon 7,000 to 8,000 tonnes per year of Cerelac were being mixed in plants inside of ten of Cuba's dairy processing factories.

6105. Kerntke, Ulrich. 1991. Soya: Not just for eccentrics. *Dragoco Report* No. 3. p. 83-97. [5 ref. Eng]
• ***Summary:*** An interesting overview of soybean production worldwide and the markets for tofu and soymilk in Europe. Figure 1 is a bar chart ranking countries that produce more than 1 million tonnes of soybeans by their yields in tonnes per hectare. The country with the highest yield by far is Italy (approx. 3.1 tonnes/ha), followed by Canada (2.3), USA (2.2), Argentina (2.1), Paraguay (1.8), Brazil (1.7), China (1.3), Indonesia (1.1), and India (0.8 tonnes/ha).

Figure 2 is a graph of soybean production in 4 major countries and others from 1935 to 1990.

Figure 3 shows world market share of soybean production among 4 major countries and others from 1935 to 1990. The U.S. market share grew steadily until about 1965, but has fallen ever since. Brazil's market share showed significant growth after 1965, and Argentina's after 1975.

Figure 4 shows the number of countries producing more than 100,000 tonnes of soybeans from 1935 to 1990. This number stayed steady at about 6-7 from 1935 to 1965, then rapidly increased to 15 in 1975 and 27 in 1990. Figures 6 and 7 are bar charts showing consumption of tofu in 1986, with projections to 1992 in France, Great Britain, Germany, Netherlands, and the rest of the EC (especially Switzerland). In 1992 for tofu, Germany is expected to be the leader followed by Great Britain and France. For soymilk, Great Britain is expected to be by far the leader, followed by Germany and France. The source of the tofu and soymilk information is Institut für Agrarpolitik, Stuttgart. Address: Product Manager, Flavor Div., Dragoco, Gerberding & Co. GmbH, D-3450 Holzminden, Germany. Phone: (05531) 704 327.

6106. Wasserman, Debra; Mangels, Reed. 1991. Simply vegan: Quick vegetarian meals. Vegetarian Resource Group, P.O. Box 1463, Baltimore, MD 21203. 224 p. March. Illust. General index. Index of tables. 23 cm. [117 ref]
• ***Summary:*** A vegan cookbook. Contents: Foreword. Time-saving cooking suggestions: Microwave cooking. Sample menus: Menu analysis. Top recipes for calcium and vitamin C. Top recipes for iron. Recipes (one section is titled Soy Products: Tempeh Dishes, Tofu Dishes). Food definitions and origins. Herbs and spices. Vegan nutrition (written by Reed Mangels, PhD, RD. Each of the 18 topics is followed by a bibliography; includes a section on each major nutrient, pregnancy, lactation, feeding vegan kids, nutrition glossary, recommended reading list). Cruelty-free shopping by mail.

The Vegetarian Resource Group. The group also publishes a bimonthly magazine, *Vegetarian Journal,* and is considered by dietitians to be a good source of nutrition information for vegans.

This book contains more than 20 tofu recipes and 6 tempeh recipes.

Note from VRG: As of Dec. 2012 this pioneering book has 100,000 copies in print and a 5th edition has recently been sent to the printer. Address: VRG, Baltimore, Maryland. Phone: 301-366-8343.

6107. *SoyaScan Notes.* 1991. Global Harvest (Overview). April 4. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Global Harvest (located at 1420 Sams Ave., Jefferson [a suburb of New Orleans], Louisiana) was started in Jan. 1991 by Tom Futch, a brilliant PhD and food scientist, who formerly worked with many large food companies and just before this with a soyfoods company in Louisiana that is now in bankruptcy [probably Manna International]. The former company was founded in 1983, but there were management problems so Tom left in early 1991 and started his own new company. Tom buys soy protein products [textured concentrates] from ADM and blends them with other ingredients to make meatless meals. Global Harvest's biggest market is to prison systems (correctional institutions); their budgets are being cut and they want more nutrition for their dollar. The company has 10-12 soy products on the market, plus some other products (mainly beverages) that do not contain soy. They also have a soymilk product at the R&D stage. Tom has a strong personal interest in soyfoods. The company is now trying to raise new capital.

In an interview with Greg Caton of Lumen Food Corp. in Louisiana on 1 Nov. 1988, he noted: Contact Dr. Tom Futch of Manna International in New Orleans, Louisiana, for info on TVP. He is a born-again Christian of the best type. A PhD in food science, he worked with Staley in extrusion of soy protein concentrates. Phone: 504-254-3333.

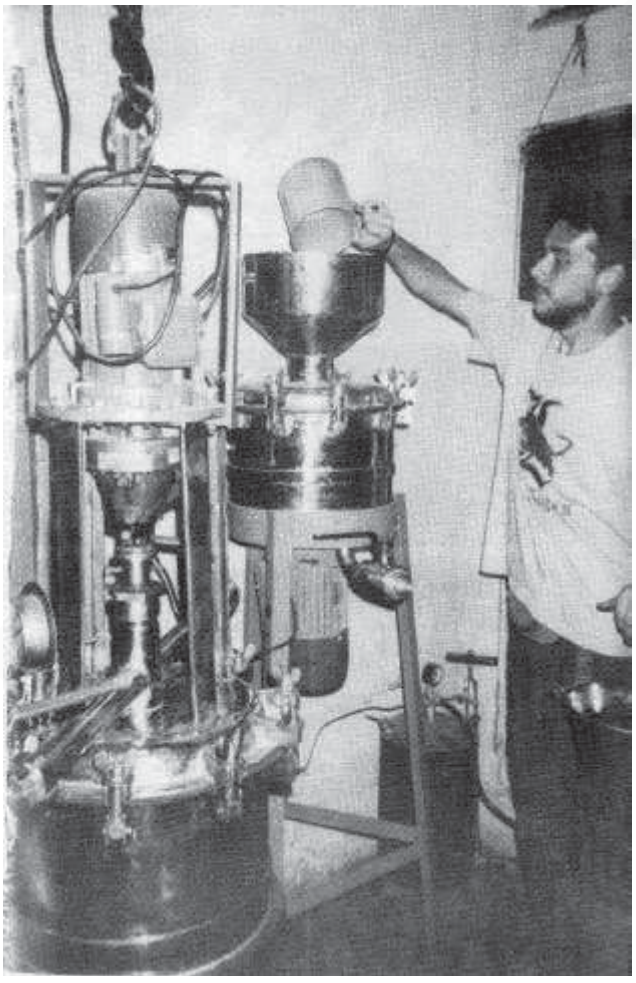
6108. **Product Name:** [Soja Cracoja].
Foreign Name: Soja Cracoja.
Manufacturer's Name: Biosoja [Sojinal].
Manufacturer's Address: 10 rue Lavoisier, F 68000 Colmar, France.
Date of Introduction: 1991. April.
Ingredients: Sugar, cocoa butter, powdered soymilk (jus de soja déshydraté e poudre; 20%), cocoa powder strongly defatted (8%), pure vanilla extract, emulsifier: soy lecithin. Cocoa: 37%.
Wt/Vol., Packaging, Price: 100 gm bar wrapped in foil.
How Stored: Refrigerated preferably.
Nutrition: Per 100 gm.: Protein 10.3 gm, fats (lipids) 34.3 gm, carbohydrates (glucides) 51.4 gm, calories (Kcal) 556 (2322 kJoules).
New Product–Documentation: Photocopy of Label sent by Heather Paine of SoyaFoods in London. 1991. April 23. 8 by 8.5 inches (foil opened out). "Confisirie Cacaotee au Soja. Ligne 'S' Nutrition Plaisir." UPC indicia.

6109. **Product Name:** [Forme Soja: Chocolate with Gianduja Hazelnuts and Soya].
Foreign Name: Chocolat aux Noisettes Gianduja et au Soja.
Manufacturer's Name: Cemoi.
Manufacturer's Address: B.P. 2006–66011 Perpignan Cedex, France.
Date of Introduction: 1991. April.
Ingredients: Cocoa (32% minimum), sugar, roasted and ground hazelnuts (20%), cocoa butter, cocoa paste, spray-dried soymilk (flocons de jus de soja; 10%), vegetable fiber, emulsifier (soy lecithin), natural aroma: vanilla pods.
Wt/Vol., Packaging, Price: 100 gm bar wrapped in foil.
How Stored: Refrigerated preferably.

New Product–Documentation: Photocopy of Label sent by Heather Paine of SoyaFoods in London. 1991. April 23. 7.5 by 8.5 inches (foil opened out). Illustration of two small elflike men carrying a huge bar of chocolate. Above them is written "The pleasure of good chocolate." Below is written, "Very low in cholesterol." UPC indicia. A photo shows a man tossing something into a garbage can. "Let's protect nature."

6110. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1991. The Ottawa dinner. Spring.
• ***Summary:*** "The Ottawa Dinner is on Saturday, 20 April, 1991 at Tudor Hall. Special Guest is His Excellency, Mr. Girish Narain Mahra, High Commissioner of India to Canada. Speaker will be Tom Schatzky, of CIDA, who visited our Hyderabad project and helped us in our successful effort to receive CIDA funding for our soya milk program. Rashmi Gupta will also speak. Master of Ceremonies is Judy Darling of CBC TV. Our soya milk machine will be at the dinner for the official Canada unveiling. For reservations call Daniella [wife of Hart Jansson] at 837-2235.

A photo (nearby in this issue of the newsletter) shows a Canadian volunteer at the Child Haven home in Hyderabad pouring soybeans into the hopper of the first ("big Monster"), or one of the first, SoyaCows.



6111. Child Haven International. 1991. Soya milk cottage industry: A request for funding to the NGO division of CIDA. Maxville, Ontario, Canada. 36 p. April.
• ***Summary:*** The Project originally requested a grant from CIDA for $120,000 over two years. The first phase of CIDA approved funding was $13,025 in Nov. 1990.

Page 17: "Implementation schedule: Project milestone chart. Period: 0-5 months (* Phase I, just finished). Milestone: First 2 Soya-Cows fully operational near Hyderabad. Accomplishments: 100 children and 1,000 other persons receive improved diet. 10 persons employed; most technical problems resolved. Total: $30,300.

Period: 6-16 months. Milestone: 6 other Soya-Cows installed and operating at additional sites; very strong demand for additional machines. Accomplishments: Good-tasting soya milk available locally at 1/3 the price of cow's milk. Dozens of persons gainfully employed. Proof of self-sufficiency established. Total: $83,000.

Continues for two more periods: 17-28 months (Total of 14 Soya-Cows operating. Total: $95,000) and 29-40 months (Introduction of Soya-Cow to additional third world countries. Total: To be determined). Address: SoyaCow Committee, Child Haven International, Maxville, Ontario.

6112. **Product Name:** [Céréal Natura Soja: Natural Soya Drink].
Foreign Name: Céréal Natura Soja.
Manufacturer's Name: Céréal Wander Nutrition SA.
Manufacturer's Address: Z1 La Lombardière, 07100 Annonay, France. Phone: 75 33 22 31.
Date of Introduction: 1991. April.
Wt/Vol., Packaging, Price: 1 liter carton.
New Product–Documentation: Spot in SoyaFoods. 1991. Spring. p. 4. "Natura Soja." Products include a natural soya drink in 1 liter cartons.

6113. **Product Name:** [Céréal Natura Soja: Soya Dessert (Chocolate, or Vanilla)].
Foreign Name: Céréal Natura Soja.
Manufacturer's Name: Céréal Wander Nutrition SA.
Manufacturer's Address: Z1 La Lombardière, 07100 Annonay, France. Phone: 75 33 22 31.
Date of Introduction: 1991. April.
Wt/Vol., Packaging, Price: 0.5 liter packs.
New Product–Documentation: Spot in SoyaFoods. 1991. Spring. p. 4. "Natura Soja." Products include a soya dessert in 2 flavors.

6114. Eden Foods, Inc. 1991. Edensoy organic soy beverage: Delicious, dairy-free, nutritious (Leaflet). Clinton, Michigan. 4 panels each side. Each panel: 23 x 10 cm. April.

• ***Summary:*** A color leaflet. Contents: Edensoy, a wholesome new food. Recipes (3). What goes into Edensoy (ingredients)? What can you do with Edensoy? The right choice for health-conscious consumers. What does certified organic mean? Produced in the U.S.A. with pride, skill, and care. Environmentally responsible, inside and out.

The company's trademark is now "Making a tradition of good health." Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

6115. Paine, Heather. 1991. Soya and SIAL '90: Editorial. *SoyaFoods* (*ASA, Europe*) 2(1):1. Spring.
• ***Summary:*** "Last year's SIAL (Salon International de L'Alimentaire) was certainly impressive and all the more so because soyafoods and products containing soya had a remarkably good presence... French soyafoods companies were well represented with many new products... In the 'new products' section a soya-oil based margarine from Denmark (Margarines AMA-Dragsbaek Margarine Fabrik S A) won a SIAL D'Or award and a soyamilk from Argentina (AdeS) was highly commended." Address: editor, SoyaFoods, 27a Santos Rd., London SW18 1NT, UK. Phone: 081-874-5059.

6116. *Plenty Bulletin* (*Davis, California*). 1991. A visit to the soy dairy in Guatemala. 7(1):3. Spring.
• ***Summary:*** "In 1979, at the peak of Plenty's integrated village development program in Guatemala, we bought 3,200 sq. meters of land (0.8 acre) in the village of San Bartolo in the central highlands. With the help of local Mayan volunteers a soy dairy was built on that land. In February of 1980, the dairy was open and running. Eleven years later it is still going and producing tempeh, tofu, soy flour, soy milk and soy ice-cream which are sold in nearby markets and in Guatemala City."

Alan Praskin, at the invitation of the village, returned to Guatemala and on 7 March 1991 signed title to the land over to the community and "Alimentos de San Bartolo," which is now the name of the soyfoods enterprise. The community of San Bartolo and the managers and staff of the soy dairy are Cakchiquel Mayas.

Three photos shown: Alan surrounded by San Bartolo elementary students, some of San Bartolo's soy-fed children, and a Guatemala highland family enjoying soy ice cream cones.

6117. *SoyaFoods* (*ASA, Europe*). 1991. AdeS Alimentos de Soja–Soya beverages from Argentina. 2(1):6-7. Spring.
• ***Summary:*** A new soy beverage named AdeS was launched in October 1990 at the SIAL exhibition in Paris. Made in Argentina by AdeS Alimentos de Soja SA, it was officially commended at the show. This is a new company organized by a leading soybean production firm, Establecimientos Agropecuarios Patricia María SA, located in northwest Argentina. The plant is based at La Cocha in the province of Tucuman [Tucumán], with a head office in Buenos Aires. The soymilk is made using Alfa-Laval equipment with a capacity of 6,000 liters/hour, and it contains more protein than whole cow's milk (3.2% vs. 2.9%), less fat (2.3% vs. 3.3%), and less calories (47.5 vs. 59.0). The UHT treated product is aseptically packaged using the Tetra Brik aseptic system in 200 ml and 1 liter packages. Aseptic bag-in-box and drum filling systems of 200, 300, and 500 liters are also used. Flavors currently in the market include natural, chocolate, orange, and apple. Ingredients include spring water, whole selected soybeans, sugar, authorized flavors, pectin (as an emulsifier), and added vitamins A and D. The product is now sold in Argentina, Uruguay, Paraguay, Chile, and Mexico, with plans to market in Brazil in the near future. The company is located at Avenida Vélez Sarsfield 1744 (1285), Buenos Aires, Argentina. Phone: (541) 21-8228 (8964). Fax: (541) 21-9632.

6118. Osho, S.M. 1991. Soybean recipes. Nigeria: Canada Fund, and Better Life Programme for Rural Women. 26 p. Illust. 24 cm.
• ***Summary:*** On front cover: "For a National Workshop on Soybean Processing and Utilization for Women Groups in Nigeria (20-24 May 1991)."

Contents: (1) Whole soybean recipes: Soy iru or soybean dawadawa. Soy milk. Soy nuts. Soy cheese (Tofu). Scrambled tofu (wara). Fried tofu (wara) in Vegetable soup. Ikokore with tofu (wara). Fried plantain with tofu (wara) stew. Tofu plantain pottage.

(2) Soybean cereal recipes: Soy steamed fresh maize. Soy ogi. Soy Jollof rice. Soy tuwo. Soy corn snack.

(3) Soybean / legumes: Soy moinmoin (with "½ cup soybean paste"). Soy akara.

(4) Soybean in roots and tubers. Soy ikokore. Soy ebe. Sweet cassava soy balls. Soy cassava flow cookies. (5) Snacks: Soybean / wheat puff puff. Soybean cakes. Soybean eba.

(6) Soybean milk residue [okara] recipes: Soybean bits. Soybean balls.

Note: On the white cover are the logos of the Canada Fund and Better Life Programme for Rural Women. Address: 1. Food Technologist and Coordinator, IDRC/IITA Soybean Utilization Project, International Institute of Tropical Agriculture, Oyo Road, PMB 5320, Ibadan, Nigeria.

6119. **Product Name:** Vegelicious (Non-dairy Milk Made Mainly from Potatoes).
Manufacturer's Name: Abersold Foods.
Manufacturer's Address: 2730 Morley Way, Sacramento, CA 95864. Phone: 1-800-275-1437.
Date of Introduction: 1991. May.
Ingredients: Incl. potatoes, isolated soy protein.
New Product–Documentation: Ad in Health Foods Business. 1991. May. p. 11. "Its more than delicious, it's

Vegelicious. Creamy taste similar to milk. $200.00 per month–with 6 inches of shelf space?" Free sample offer to retailers.

Ad (half page, color) in Vegetarian Times. 1992. May. p. 9. "Vegelicious: New milk option made from potatoes for superior taste and health." Neither the company name nor address are given. The phone number is 1-916-972-9142. A table compares Vegelicious in terms of 6 variables with the following products: Better than Milk?, Tofu White, Soyagen, Vitasoy, Edensoy, Westsoy, Rice Dream. 1. Dairy free–without potassium or sodium caseinate (as found in Better than Milk? and Tofu White). 2. Free of tropical hydrogenated oils and partially hydrogenated oils (as found in Better than Milk?, Tofu White, and Soyagen). 3. Convenience of premeasured 2 quart packets in a cold water dry mix. 4. As rich in calcium as milk (only Better than Milk? and Tofu White are also as rich in calcium as milk). 5. Fat grams per 8 oz (2, versus 3-7 for the others; Rice Dream is 3 and Vitasoy in 7). Calories per 8 oz (100, versus 90 to 150 for the others).

6120. Carper, Jean. 1991. The food pharmacy guide to good eating: More than 200 totally healthy recipes. New York, NY: Bantam Books. xxiv + 422 p. Index. 24 cm.
• ***Summary:*** This is a book about the medicinal and therapeutic properties of food. Part I has a long section (p. 9-13) titled "The vegetarian advantage," extolling the many health benefits of a vegetarian diet–based on many different scientific studies. However the book also contains an even longer section (p. 265-326) titled "Seafood, poultry, and meat main dishes"–with sidebars about how eating fish is good for your health.

The index contains 9 entries for tofu, 6 for soy sauce and for whole soybeans, 5 for miso, 2 for soy oil and its omega-3 fatty acids, and 1 for soy milk.

6121. INTSOY. 1991. Highlights of International Conference on Soybean Processing and Utilization. Plus closing statements and recommendations, and a directory of participants. Urbana, Illinois. 3 p. Unpublished manuscript. 28 cm.
• ***Summary:*** Organizers: Jilin Academy of Agricultural Sciences (JAAS), China–host; Chinese Academy of Agricultural Sciences (CAAS), China–co-host; International Soybean Program (INTSOY) at the University of Illinois; Ministry of Agriculture, Forestry, and Fisheries (MAFF), Japan; International Institute of Tropical Agriculture (IITA), Nigeria; Scientific Research Institute of Foods and Fermentation Industries (SRIFFI), China"

Participants: 100 foreign participants from 25 different countries and 150 participants from throughout China. 58 people from developing countries and 40 people from developed countries. Regional distribution of foreign participants: Southeast Asia–25 people from 4 countries. East Asia–23 from 3 countries. North America–17 from 1 country. Africa–13 from 5 countries. South Asia–12 from 5 countries. Europe–5 from 3 countries. Central America–2 from 1 country. Middle East–1 from 1 country.

Program: 80 research/development/policy papers presented. Topics: Research (processing/products): Breeding/germplasm 10, extrusion 9, tofu 8, fermented products 4, nutrition 4, soymilk & ice cream 3, edamame (vegetable) 2, soy protein isolates and concentrates 2, lecithin 2, other 3. Development: Country reports 21 project reports 6. Policy/economic 3.

Demonstrations and exhibitions by 37 companies from throughout China (including soy milk and ice cream).

Local visits: Modern tofu plant. Modern solvent extraction plant. Farms. Local markets/stores. Soybean research institute of Jilin Academy of Agricultural Sciences. Headquarters of the Gene Bank of Chinese Academy of Agricultural Sciences. Labs and pilot plant of Scientific Research Institute of Foods and Fermentation Industries. Address: INTSOY, 113 Mumford Hall, Urbana, Illinois 61801. Phone: 217-333-6422.

6122. Starr, Sara. 1991. Soyfoods: Pleasing to the palate, easy on the planet. *Health Foods Business.* May. p. 34-39. [1 ref]
• ***Summary:*** "Based on data from the nation-wide study, 1990 HealthFocus on U.S. Consumers, about one in ten health active food shoppers say they eat soyfoods once every two weeks or more." Address: Vice President, Health Focus Inc., Emmaus, Pennsylvania.

6123. Vandemoortele, Ph. 1991. Il latte di soia: dalla tradizione asiatica al supermarket europeo [Soymilk: From the Asiatic tradition to the European supermarket]. *Giornale della Soia* (*Il*) (*Italy*) 7(3):16-17. May. [Ita]
• ***Summary:*** From a speech presented at the Euro Soja conference in Strasbourg, France. Discusses: The tradition. Imitation or substitute for milk? New production techniques. New products. Quality standards. Terminology. The market. Soymilk production. The future. Conclusion.

Agrarwirtschaft recently published figures estimating that soymilk production in the EEC grew from 16,000 tonnes in 1986 to an estimated 28,000 tons in 1992. A color photo shows the following products: Soja Styl' (French), Drink Soja Chocolat (Formoja, France), Soyeux (Dessert in yogurt cup), Inno Fun (Innoval, France), Soja Dessert (in Yogurt cup, France), Drink Bar (Ligne S, France), Soja Biostar (Nectar Framboise, France). Address: Alpro, Belgium.

6124. Kane, Marion. 1991. Nifty Canadian invention a boon to the Third World. *Toronto Star* (*Ontario, Canada*). June 19. p. D2.
• ***Summary:*** In Maxville, eastern Ontario, the Cappuccinos are known as Reverend Fred and Bionic Bonnie. But the fame of this warm-hearted, dynamic couple, who have been

helping underprivileged children from around the world for the past 35 years, does not stop there. Over the years they have adopted 20 children from 11 different countries–an addition to having two children of their own. Now their fame has spread to India, where their relief organization, Child Haven International operates three homes for poor children.

Their latest project is the Soya Cow [SoyaCow], invented by Raj Gupta, a machine that makes palatable, low-cost, high-protein soymilk. One is in operation in Hyderabad, India, at one of the homes for poor children run by Child Haven.

The machine is a breakthrough in technology; no oxygen enters during the grinding of the soybeans, and this eliminates the "beany" flavor found in most soymilks. A photo shows two workers near the compact machine. Note: This article was reprinted in the Child Haven Newsletter (Summer 1991).

6125. *Contact* (*Plenty Canada*). 1991. A hopeful effort: San Bartolo soy products [in Guatemala]. 1(3):4-5.
• ***Summary:*** A photo shows 5 Guatemalans, 3 in traditional Mayan dress, standing behind an ice cream and popsicle truck labeled Ricos Helados de Soya. "After ten years of operation, Plenty's Soy Centre in [Solola], Guatemala, is approaching self-sufficiency... the centre is now an established micro-enterprise with a proven product line." It is administered by ADEEC (Guatemalan Association of Economic, Cultural and Educational Development), a native-based non-governmental organization (NGO) directed by Roderico Teni, with Sebastian Sub Xol as Asst. Director. "As in Sri Lanka, the introduction of soy products to the general population is much faster when sold as ready-to-eat items or when easily incorporated into a traditional dish." Soy ice cream and popsicles are extremely popular, but "the most accepted product has been the soy cheese, tofu, which is cooked with tomatoes and other vegetables instead of or as a supplement to eggs.

"The major success, however, has been in the approach to other Guatemalan institutions. 'Now we are beginning to see much larger orders, particularly the soy milk and the tofu,' Sub Xol said. 'Even commercial ice-cream makers, who use a lot of dairy milk, are starting to use our soy milk, which is about half the price of dairy milk.' Teni emphasized that by selling soy products to the larger institutions, particularly schools, orphanages and hospitals, the protein-rich supplement gets to the people who need it most."

Note: Plenty International (Jan. 1994) notes that this company is now named Alimentos San Bartolo, located at Apartado Postal 118, Solola, San Bartolo, Guatemala. Phone: 502-514896. Address: R.R. #3, Lanark, ONT, K0G 9Z9, Canada. Phone: (613) 278-2215.

6126. Durning, Alan B. 1991. Fat of the land. *World Watch* 4(3):11-17. May/June. [2 ref]
• ***Summary:*** "The American meat-centered diet fouls the air and depletes and contaminates groundwater. For the sake of the environment, we may have to eat lower on the food chain... While beef consumption per person has declined slowly since 1976 and per-capita egg consumption peaked decades ago, poultry has more than taken up the slack... Annual consumption of red meat and poultry together is at an all-time high of 178 pounds per person, up from about 137 pounds in 1955. Last year, Americans each ate about 65 pounds of beef and veal, 63 pounds of poultry, and 49 pounds of pork, plus 139 eggs and dairy products made from 70 gallons of milk... Of all farm animals in industrial countries, only cattle spend most of their lives in daylight... Taken as a whole, livestock rearing is the most ecologically damaging part of American agriculture.

"Animal farms use mountains of grain. Nearly 40 percent of the world's total, and more than 70 percent of U.S. production, is fed to livestock... No other country in the world can afford to feed so much grain to animals. Were all of that grain consumed directly by humans, it would nourish five times as many people as it does after being converted into meat, milk, and eggs... Such calculations don't mean that if Americans ate less meat, hungry people would be fed. Worldwide, 630 million people are hungry today–because they're too poor to buy food, not because food is in short supply...

"Almost half of the energy used in American agriculture goes into livestock production, the majority of it for meat... Feed grain guzzles water, too. In California, now the nation's leading dairy producer, livestock agriculture takes nearly a third–the largest share–of irrigation water.

"Jim Oltjen, professor of animal science at the University of California, Davis, estimates that half of the grain and hay fed to American livestock grows on irrigated land. He calculates that it takes about 430 gallons of water to produce a pound of pork, 390 gallons for a pound of beef, and 375 gallons per pound of chicken. Thus the water used to supply Americans with meat comes to about 190 gallons per person per day, or twice what typical Americans use at home for all purposes.

"The livestock industry uses half the territory of the continental United States for feed crops, pasture, and range... In Central America, beef exports to the United States have played a part in the tragedy of forest destruction...

"Cattle and other ruminants such as goats and sheep emit methane, a potent greenhouse gas, as they digest grass and other fibrous plants... Every pound of steak has the same greenhouse-warming effect as a 25-mile drive in a typical American car.

"The federal government also takes the blame for some waste of irrigation water through what Congress estimates is a $2.2-billion annual subsidy to western water projects. Between $500 million and $1 billion of that amount goes to feed and fodder growers... Supporting just the world's

current population of 5.3 billion people on an American-style diet would require as much energy as the world now uses for all purposes, along with two-and-a-half times as much grain as all the world's farmers produce...

"If the global food system is not to destroy its ecological base, the onus will be on rich nations to shift from consumption of resource-intensive foodstuffs toward modest fare." Address: Senior Research, Worldwatch Inst., Washington, DC.

6127. Eden Foods, Inc. 1991. Eden Foods: Healthy recipes (Brochure). Clinton, Michigan. 28 p. Each page: 23 x 10 cm. June.
